being the Charybdis of total oblivion to one's ethnic, religious and cultural roots. Another major challenge comes from the necessity to reach a harmonious juxtaposition, if not mere compromise, between these cultural roots of one's upbringing and formative days and the cultural influences that one has become exposed to in the new environment. For this reason, soon after I "touched the ground at JFK"¹²⁵⁹ and set my foot on this new continent, on the afternoon of April 1, 2006, where, I, a Serb, was waited for at the airport, greeted, fed and taken care of for two whole weeks by a beloved Albanian family¹²⁶⁰, my mind started getting filled with an array of dichotomies arising from the incessant comparisons between this land and what I have considered home (my family "tree-house" → Zvezdara → Belgrade → Serbia → Yugoslavia → Europe) that my mind was processing in the back. Occasionally, as I said, I have felt like Jesus crucified between the world permeated with the purest and the most gracious form of love I could ever imagine and the world permeated with the most up-to-date worldly organization, communicational richness and conditions for fostering my professional, scientific productivity. Why do I need to follow the faith of Biblical refugees, which ought to be expatriated from their own land in order to find their way to God? After all, that is the one greatest thing the American continent symbolizes to me – becoming the most powerful and influential country on the globe while essentially being composed of expatriates, people who fled from their own homes and who must have ever since carried a homesick melancholy deep in their hearts. Ever since the Little Prince left his beloved rose on a distant planet, continuing to carry the careworn visions of her anchored to his heart everywhere he'd go, we have been given a hint as to how letting the sense of missing beautiful things in life shimmer our views of the world on its melancholic waves is the fuel for launching the rocket of stellar creativity from the seat of our soul. America, a country that has conquered the globe with its culture of jazzy joyousness, having had its spirit crafted by social rejects, adventurers and wanderers into the unknown, creatures who had known that being found is possible only insofar as we get lost first, stands forth as a perfect example of this statement. Even so, jazz music and the boundlessly cheerful, celebratory lifestyle that paralleled it, which, by the way, provided the most innovative ingredient to the American culture since its earliest days and which capitalist America used to allure the rest of the world to before clasp its neocolonial paws around the enticed spirits, was created by none other but African slaves nostalgically longing for liberty on a new continent to which they had been shipped against their will. It was their, former slaves' way of expressing the yearning for liberty through rejection of instrumental rigidity and installment of improvisatory freedoms in music that, ironically, became subsequently used by the American imperialists as a secret cultural weapon¹²⁶¹ to extend their influence across the globe and subjugate further freedoms to their neocolonial claws. Not only had rock 'n' roll, from which the entire modern pop sound originated¹²⁶², been born from the jazz style of swing and its branch called boogie-woogie, but throughout the history it has always been the music through which outsiders and social rejects expressed the homesick ache of their soul. With the vision of a whistling train disappearing into the night, carrying the apple of one's eye in the distance and leaving one all alone amidst the starry sky, the legendary Serbian rock 'n' roll critic, Žikica Simić noticed how "winners

¹²⁵⁹ Listen to U2's Angel of Harlem on Rattle and Hum, Island Records (1988).

¹²⁶⁰ I have yet to hear of a Serb who was welcomed to America by Albanians or *vice versa*, a situation as improbable as that of a Jew being welcomed by a Palestinian or *vice versa*. This does not only speak of how much of an outlier I have been all my life, but also of how little nationalism means in my cosmopolitan head.

¹²⁶¹ See Billy Perrigo's How the U.S. Used Jazz as a Cold War Secret Weapon, *Time* (December 22, 2017), retrieved from <http://time.com/5056351/cold-war-jazz-ambassadors/>.

¹²⁶² French chansons with their classical and ethnic musical roots presented another major source of influence.

are boring; it is losers that hold this whole wide world up on their shoulders”¹²⁶³. I, who have lived among both the weedy poor lining up the gutters of the society and the chubby riches discussing world politics in hot pools and lavish mansions, cordially agree with this statement. For, once we recognize that success is reserved for people who stand on top of hierarchical ladders and stomp over those under them, utilizing them as sheer tools, and that the consciousness striving for success is such that it nourishes the seeds of evil to sprout, stem and fill its every corner, our perspective on life changes and we begin to turn to those who have had the statuses of losers, for in them a greater holiness resides. Moreover, it should be recognized that the pervasive materialism and the definition of success in terms of the accrual of financial assets that are authentically American could be traced back to the historically steady increase in the inflation-adjusted workers’ output and wages over 150 years¹²⁶⁴, from 1820s to 1970s, a trend supposedly unrivaled in the history of humanity, which is to say that the constancy of success is a great demerit for the progress along spiritual, moral and intellectual planes. For this reason, as my own experience has taught me, winners consistently fail to give the right advice and paint the road toward salvation and happiness before souls on the losing streak, souls that, as it were, need a lifesaving advice most in life, simply because most of these toffee-nosed achievers have never been in their raddled shoes. And if one cannot be a lamplight for souls lost in the darkness, then one’s existence loses its theological objective and can be considered exiguous from the most fundamental ontological perspective

¹²⁶³ Watch the documentary entitled *Is There Really a Man Named Žikica Simić* directed by Ivan Andrijačić, Faculty of Arts, University of Belgrade, Belgrade, Serbia (1996).

¹²⁶⁴ Watch Richard Wolff on the Economic Meltdown: *Capitalism Hits the Fan*, Media Education Foundation, Kanopy Films (2009). It is also said that even during the Great Depression, the wages dropped, but so did the prices, meaning that the positivity of this trend went unabated. Four reasons were outlined that contributed to the decline in wages in the 1970s: the advent of computers leading to job cuts; companies’ moving abroad because of globalization and because local production could not compete anymore with the output in certain sectors of foreign economies that got fully recovered by then from World War II; women entering the job market; and massive immigration. To compensate for stagnating wages, people started to work more hours and also took more and more credit, which banks allowed as a remedy to boost consumption. This, however, led to a reduction in the quality of personal, family and social lives among now overworked working class population and an epidemic of anxiety in a situation where the average annual income of individuals was lower than their average total debt. At the same time, since the onset of the wage stagnation crisis in the 1970s, businesses were able to produce a constant increase in productivity because of replacing workers with machines. With constant wages, this meant that shareholders and corporate executives would reap most of the profits, creating ever greater social inequalities. These unprecedentedly enormous corporate profits ended up deposited in banks and soon thereafter banks and corporations started lending that surplus money to the working class in search of more profits for banks and for corporations as asset holders and increased overall consumption for the benefit of economy. The ensuing dot-com bubble burst of 2000 and the mortgage bubble burst of 2008 were testimonies to the fallacies of this type of economy, where a plethora of instruments in the hands of the capitalists were now standing unused to the fullest of their potential because of the desperate state in which the working class, overworked and drowning in debt, has found itself. As it is ever the case, both were blaming one another: the holders of the economic power and decision-making were pointing in the direction of the workers and *vice versa*. As my personal morale of the story goes, the depression of the working class has infected the capitalists, who have fallen prey to the age-old problem summed in one of my friends’ noticing how Great Britain, if not Western Europe as a whole, worked to europize the Balkans, but ended up balkanizing itself. And if the death of the machine and the rebirth of humaneness awaits us at the end of this sitting atop one bursting bubble after another, as in Chaplin’s *Modern Times*, then perhaps it is worth sticking around till the end of the movie. Richard Wolff is of an opinion that the increased amount of regulations, which were followed in the last 30-year long period when wages increased, that is, from the Great Depression until the 1970s, will not fix the issue because they relate to the boards of directors of companies, that is, to people with an incentive to evade or undo these regulations. Instead, the focus should be on empowering the working class and focusing most, if not all, of economic policies on this population rather than on the capitalist corporate cream. This, sadly, becomes equated with the philosophy of communism and has very little prospect ahead of it, meaning that it is unsure how and when, if not if, the US economy will emerge from the ongoing crisis.

conceivable. Hence, when the Kosovar midfielders of the Swiss national team denounced Serbs as “natural born losers” prior to the epic loss of Serbia at the soccer pitch, that modern battlefield, in Kaliningrad on June 22, 2018, the day of the summer equinox, they spoke the language of thuggery but spoke truth dear to my heart nonetheless, for Serbs have indeed traditionally nurtured the grace found in historic losses and sacrifices made by their nation, urging me to respond to these denouncements by wholeheartedly embracing them, saying that from now until a million light years ahead I would rather assume the role of a loser, soft, gracious, authentically Christian, than strive to be a winner, a term that connotes cutthroat vulgarity and myopic egotism like rarely any other in life in my eyes. After all, remember how in Michelangelo Antonioni’s *Eclipse*, the door to an inflow of waves that coalesced Yin and Yang opened when Vittoria, the film’s epitome of Yin energy, in her dreamingly floating through space picked the biggest loser of the day at the Rome stock exchange, followed him to a nearby outdoor café, where he sat by a table, ordered a glass of mineral water, drew a few flowers on a paper sheet, took a single sip of water, paid, stood up and left. Vittoria picked that mysterious piece of paper, gazed at it for a while, entered through a nearest door and hit it off right away with the personification of Yang energy that the stockbroker Piero was. Likewise, it is following losers, not winners, in every other aspect of life that will harmonize antagonistic forces within ourselves and build the bases for our ascents to some starry realms of being. Hence, I reckon, the unrivalled vulgarity of Freddie Mercury’s call to have “no time for losers ‘cause we are the champions”¹²⁶⁵, a call that terribly disregards the generations of sages who advised standing on the side of losers, not winners, of the last and the lowest who, under strange twists of circumstances in this magical reality of ours, manage to work their way to the top of the spiritual pyramid, become the first and the tallest on it and make the all-seeing Eye of the omnipresent divinity gleefully smile over them like millions of crescent moons, evoking the vision of Little Miss Sunshine in the distance and her demonstrating that the world is illuminated not by being a winner, but by losing battles in the inherently corrupt and unjust world that we inhabit, for only in such a way could the purity of our untainted spirits be saved and we become the last that are, in fact, the first in the eyes of the Heavens (Matthew 20:16), and prompting us to realize that losing things to which we have attached immense value as we walk along the paths of our lifetimes may be akin to dropping pebbles that drag us down and thus enabling our spirits to lightly soar into the skies of the most creatively fulfilling being imaginable. Ornithological studies have, for example, confirmed the superior capacity for memorization of migratory birds relative to that of their resident counterparts¹²⁶⁶. Also, Israelites, members of a stateless nation for such a long time, are frequently typified by extraordinary cleverness¹²⁶⁷ and astuteness, an insight which Igor

¹²⁶⁵ Listen to Queen’s *We are the Champions* on *News of the World*, EMI (1977).

¹²⁶⁶ See Claudia Mettke-Hofmann and Eberhard Gwinner’s *Long-Term Memory for a Life on the Move*, *PNAS* 100, 5863 – 6 (2003).

¹²⁶⁷ This cleverness has had its darker side throughout the history and many relate the series of tragedies that struck Israelites, like that which struck Serbs, to be a corollary of this dark side, which, albeit a stranger to Serbs, takes the form of the extraordinary skill for mercenary ventures. Here, I am recalling a rabbi with sunshine in his eyes who approached us selling, not giving away, his book about ethics and cooking while the Little Bear and I were sitting on a bench on Pacific Avenue in Santa Cruz, a few blocks north of the punk mecca a.k.a. the Blue Lagoon, ate an ice cream and listened to a band of hippies singing *Oh Happy Day* to our ears. This cheerful ensemble composed of the blind and the elderly asked for nothing in return for their delivering the vibe of happiness straight into our hearts and was thus seen in my eyes as a far greater emanation of divinity than the distorted form thereof that the attitude of selling oneself or one’s works under any conditions connotes. Concordantly, I also recall the story of a Jewish survivor of Auschwitz in which he described his travelling as a captive in a German train in which people were not given food for days and were so tightly packed that they were completely immovable. According to the survivor, those in the middle of the car were asking for some snow from the car window from those who happened to stand next to it to

Stravinsky, another casual drawer of “polarizing moral distinctions”¹²⁶⁸, having himself noticed that “Jews are more complex than Gentiles”, would have surely agreed with; it is as if their knowledge of the nature of society is “as habitual to them as the mechanic’s knowledge of his tools”¹²⁶⁹, as Robert Warshaw noted. I have naturally wondered if the reason may lie in the fact that they have historically been deprived of their own land, predestined to be refugees and expatriates away from the territory that they claimed as their own. Likewise, although the current theories predict that all humans originated from East Africa, the fiery stamp of escapism and emigration that South Slavs carry “like a seal upon their hearts” (Song of Solomon 8:6) is fresher than that of any other European nation - as a result of the massive migration they underwent between the 6th and the 8th Century AD from the piece of land ranging as far as Caucasian mountains in the south and as far as the Pripet marshes in the north to the Balkan Peninsula - and may explain for the unusual combination of versatile creative forces that have collided in them ever since and that have made them a magnet for various conquerors throughout the history, certainly contributing to the fact that my hometown, Belgrade, the most populous of all the southern Slavic cities, rose from ashes more than 40 times since its founding by the blood-drinking and Mars-worshipping Gallic Iron Age tribe of Scordisci in the 3rd century BC. Contributing to this thesis that draws tight ties between homesickness and creativity is the fact that some of the most beautiful Serbian traditional songs were written far away from the Serbian land, be it *Tamo Daleko* composed in the vicinity of the Greek city of Thessaloniki, where the Serbian army had been in exile, preparing for the decisive battles of World War I, or *Srpska mi truba trubaše* sung for the first time before and after the 1907 battle between Serbian and Bulgarian forces in the village of Drenovo in today's Macedonia. Similarly, some of the most striking songs that portray the dazzling charms of city lights have been made by those who have assumed the role of deserters from concrete jungles and dwellers of “desolation rows”, if we were to use Bob Dylan’s famous phrase¹²⁷⁰, of space bubbles of imaginative loneliness that rest on a different plane from ordinary

satisfy their thirst. The survivor was able to stretch a sleeping bag all across the car ceiling and sell the snow he could grasp for crumbs of bread from the pockets of those who could not reach it. For more details on this real-life story, which is not meant to have any anti-Semitic character, of course, you may want to consult Art Spiegelman’s *Maus: A Survivor’s Tale*, Pantheon, New York, NY (1991), pp. 246. This story comes forth as a reminder that too much cleverness focused on ensuring profit for oneself on the expense of the sacrificially selfless sense of brotherhood and unity can be damaging for one’s happiness and wellbeing in life as much as a complete lack of it can. If the American society can be envisaged today as embodying an imbalance deep in its core, it would be one such celebration of reciprocal smartness on the account of a diminished sense of blunt, simplistic and unconditional companionship. The very same dichotomy, perhaps justifying Blaise Pascal’s saying that “either Jews or Christians must be wicked” (See Blaise Pascal’s *Pensée* No. 102, Translated by A. J. Krailsheimer, Penguin, Harmondsworth, UK (1669), may be said to have existed between the unconditional love and charity that stood at the basis of the moral philosophy of the Christ and the apostles and the conditionality and reciprocity that dominated the teachings of the antecedent Jewish theological moralists. Along with its (a) unforgiving, “eye for an eye” ideology, later challenged by the Christ (Matthew 5:38-42), (b) culture of exclusivity epitomized by the concept of the Holy Land - a piece of land that is as holy as any other on this pitiful planet inhabited by the populace whose tribal backwardness is oh so often backed by these and similar beliefs, (c) religion that resembles a history book more than a cosmopolitan theosophy, and (d) fearful image of God whose cruelty justifies the barbarism of the tribal leaders, a God that, as we see, conditions his love for humans on their obedience of innumerable behavioral precepts, this comprises only one more reason why, out of all the religions of the world, Judaism remains the most outdated in my theological universe, notwithstanding the brilliance of its mystical tradition from which Christianity and Islam came to life.

social milieus wherein each inhabitant thereof is the slave of other inhabitants' values and expectations, drowning altogether in the vicious vortices of peer pressure. For the very same reasons, I have never regretted my roaming across the uncharted territories of science, traveling from one to another one of its ends, never settling anywhere for good, but always being on the road, like an intellectual nomad of a kind; for, I have known that such a lack of a scientific home of a kind, a sea in swimming in which I would be specialized and comfortably diving like a dolphin, is what would sow seeds of wisdom in my worldviews. Apparently, not perfectly fitting the environment of ours, but being immersed in the sea of feelings that neatly reflect Psalm 137¹²⁷¹ is when people are urged to walk towards Heavens and bring them close to the Earth with their creative actions. It is as if we ought to let a teardrop of sadness for the Paradise Lost fall and produce a gap in our lives which we would then try to fill with bricks of some marvelous creativeness before we realize one day that such bricks have made up for a wonderful tower of knowledge with views for all to enjoy. Likewise, these very words would have never been written had each one of them not represented a teardrop shed as a sign of chaste sadness for my own expulsion from Eden of my childhood and the sea of parental and brotherly love in which I had swum once. Namely, only after I left my native country and found myself a refugee on a foreign soil had the drive to express myself artistically, in musical and literary domains, took over my being, reminding me that one has to be expelled from Paradise in order for one's immense creative potentials to be fertilized and made bear fruit for the benefit of humankind one day. Why is it, though, that human creatures are most productive when they live and work so as to occasionally look up to the mysterious and beautiful starry sky and recollect the famous saying of Saint-Exupery's Little Prince: "The stars are beautiful because of the rose one does not see"? Did the little man with a heart stretching all the way to the end of the galaxy fall into a desert accidentally to find the storytelling pilot stranded in it or it was done deliberately, so as to show us that the most beautiful oases are drawn in the desert? "What makes the desert beautiful", after all, "is that somewhere it hides a well"¹²⁷², the little wizard said once, instructing inconspicuously the dull and forlorn adult in us that not all battles have been lost, that even in the darkest and loneliest landscapes imaginable a channel stays always open, sometimes as tiny as a pinhole, leading to the light of otherworldly beauties. And why else would it rain in the desert the first time I would venture to it, in forty or so years of my life, as snow-covered Joshua trees awaited me tromping through the flooded streets of Twentynine Palms Oasis, with sleet smudging my preppy shoes and snowballs sooting my robe, if not to tell me that such is the story of my life, to go against the predicaments and probabilities, from the moment I was born, against all medical odds, to this very day when I gamble with my life and career like Misha Tal on the chessboard did in his prime, as

¹²⁷¹ "By the rivers of Babylon, there we sat down, yea, we wept, when we remembered Zion. We hanged our harps upon the willows in the midst thereof. For there they that carried us away captive required of us a song; and they that wasted us required of us mirth, saying, Sing us one of the songs of Zion. How shall we sing the Lord's song in a strange land?" (Psalm 137:1-4). Unforgettably, years ago, as I entered the church of St. Mary the Virgin, the biggest one in Oxford, the city of the fastest travelling clouds I could recall and the thrilling natural light shows that they produced on the local meadows, amidst the musty and greasy walls of Wadham College which I climbed against, I casually dropped my glance to an open Bible that silently and lonely stood in the midst of it, with no one around, and magically found exactly this utmost inspiring passage in it, the one that I would repeatedly revolve around the thought of how spending time in Eden of one's childhood and then being sent like a sheep among the wolves, once enwrapped in the protective bubble of care and love and then suddenly finding oneself like a nomad on an open and desolate field, far away from home, could be the missionary road in life assigned to us to follow by the hand of God, not standing for the embodiment of the ancient Jewish curse, "May you first have and then have not", but being a divine spur for our creativity and spiritual powers to gain angelic wings and soar into some heavenly skies.

¹²⁷² See Antoine de Saint-Exupery's *The Little Prince*, Mladost, Zagreb, Croatia (1943).

well as to water the arid landscapes of human thought with words like this, words that crave with all my heart to rise from the dead and yet words whose magic, as it were, could be born in the desert and desert only. And yet, the wonder remains and sadness runs through its veins, for only by embracing them, I know, these fireworks of imaginative and insightful thought could be given life to. Was it necessary for me to go? Could I have stayed near the motherly nest and still be as creative and inspired to write as I am now? Why did I have to leave my family oasis of peace and beauty and enter the emotionally arid western world, wherein the goddesses of poetry were kept imprisoned by the guards of dry practicality, for the desire to transmute these visions of beauty seeded inside of me to a sacred word to gain wings? Like seagulls that the further they are from the sea, the higher they soar, so as to keep the sea in their sight, and at the same time have ever greater views of the land below, humans may similarly broaden their views of the world and soar in the creative flights of their spirit in so far as they distance themselves from their homes and oases of protection. The Little Prince left his rose, the creature he loved most, alone on his planet before adventurously setting off to explore other planets of the solar system. It was exactly this secret sadness living within his heart and mind that sustained the mystical glow of love and wonder that uplift and inspire the soul like an aureole of stardust around his being and his actions in his exploratory hopping from one planet of human eyes to another in this infinitely sad and beautiful world of ours.

S.F.4.5. What would happen, I often wonder, to a soul with the face of the Christ, softly choking in tears, crushed by excruciating sadness felt for this world in contemporary America, the candy-colored culture wherein the slightest signs of depression are pointed as abnormal and treated with isolation, not open encouragements. Whether he would be prescribed medication, counseling sessions, straightforwardly laid off of work or quietly finger-pointed in the public, his face would be seen as symptomatic of a “condition”, a sign of abnormality that need be fixed. The Rolling Stones wondered what His face looked like in one of the fieriest moments of their Exile on Main St.¹²⁷³ and I wonder how erroneous a culture must be not to recognize how more spiritually precious and sublime the states of sadness are than the affected exhibitions of happiness and how magnificent of creative powers, even if they be tiny percentages of those that had been displayed by the Christ, are being lost irrevocably through these systematic suppressions of sadness that are subtly at work in today’s America. Indeed, notable exceptions notwithstanding, failing to recognize one such compassionate, careworn melancholy on the faces and in the hearts of American people has prompted me to often think about the immenseness of its role for the true benefit and happiness of man. “Whenever the beautiful loses its melancholy, it degenerates into prettiness”¹²⁷⁴, John Ruskin noticed while musing on the Italian lowland cottages and the same phrase can be invoked in response to gazing at the shallow eyes glassily reflecting everything that bounces off of them, being wholly deprived of the depth of the eyes of the poets that look at the world with love and absorb all around them the way treasures sink into melancholically swaying seas. And when *weltschmerz*¹²⁷⁵, the melancholy arising from the depths of a sensitive, poetic soul swamped with the worldly pettiness, flies away from the revolving carousel of our spirit and all that remains on it are joys and joys only, the inability to empathize with the fates of nearby souls will settle in our minds in place of genuine compassion and we will detach ourselves from the

world in a process that may seem relieving in the short-run, but is nothing short of devastating for the long-term fruition of the divine seed implanted in us. And for as long as self-centered ambitions flourish atop a systematic absence of care for fellow human souls in one's immediate vicinity, no suns will be seen shining from these eyes and their spiritual vacuity will continue to abound. Feelings I have nurtured within myself have taught me that only through worryingly caring about another can we expand the tiny bottle of our ego and become an ocean of spirit wherein many a river of the nearby hearts will find solace and safe haven, a voyage in the course of which our facial features and posture will become wearier, but shinier too. If this is true, then arduous traces of saddening care on people's faces and bodily expressions can be an indication of empathically rich social ties amongst them that naturally cater to people's spirits, whereas polished and silky countenances and attitudes dominated by carefree, Barbie-doll-like leisureliness can be taken as signs that the ills of coldness, distantness and spiritual indigence have taken over social relationships. In a highly competitive, pressure-cooker society, such as the American one has traditionally been, wherein most people are focused on their own success, ties that connect us to creatures around us become weakened, leading to intellectually detrimental mindsets, aside from emotionally impoverished hearts. Kindness and politeness to another thus most frequently appear as reflections of people's nurture rather than coming straight from their hearts, in full honesty and compassion. To a large extent, exceptional kindness one encounters on the North American continent is a professional deformation of subsiding in a deliberately insecure, capitalistic socioeconomic system where job is a religion, so to speak, as blasphemous as this can sound. For, 'tis a system where most employers, so-called superiors, hire not living souls, but mops to wipe the floor with if they want to, screws in the machinery of their selfish dreams. In one such system where the only vision that a regular Joe or Mr. Jones¹²⁷⁶ is allowed to pursue is that of a capital, which has no vision but to accrue more of it, most people have no choice but to fawn on these phony gods with equal doses of affectedness as those with which they are treated, craftily and cunningly. Lest they be kicked to the curb if they only maintain their dignity before the abusive employer, who expects a man paid well to be a mop and waits for any slightest sign of independence to stamp on it the mark of unaccountability, irresponsibility and disloyalty, they must show how badly they would sell their soul to the devil by pretending to be who they are not, thus distancing each day further and further away from the divine essence of their soul. These acts of pretense, however, including the phony smiles behind which sinister traps of commerce usually lie hidden, are mostly missing in social systems such as the European, where greater job securities are provided and where people can afford to be more who they are, without fearing that they would lose their jobs and end up in the trashcan if they turn out to be too moody or cranky on a wrong day. In contrast, such instances of expressing one's darker, albeit fully natural, sides as an employee in America are strongly prohibited and severely punished, for which reason people resort to phony displays of affection and smiles that are icy, prickly and horrifically vacuous. Most of the time, the exquisite expressions that people in America drop so casually become vulgarly misused to bring one closer to selfishly drawn aims rather than to benevolently alleviate the states of distress that rupture other people's spirits, logically turning their deliverers into epitomes of those who "come to you in sheep's clothing, but inwardly they are ravaging wolves" (Matthew 7:15). Of course, smiles in the icy form in which they are being thrown at us on the American continent can be traced back to the fundamental problem of capitalism, as outlined by Marx, which is that distribution and consumption must be coupled to production to keep it going, explaining why in a capitalist economy, the investments in marketing greatly outnumber those in

¹²⁷⁶ Listen to Bob Dylan's *Ballad of a Thin Man on Highway 61 Revisited*, Columbia (1965).

innovation¹²⁷⁷. The phony smiles, therefore, can be seen as a behavioral deformation of living in a world where selling oneself is the prime way of succeeding professionally, if not surviving at all. They are the products of a system built on avaricious advertisements that appeal to the deepest spheres of the human psyche to make it crave what it needs not to regain the happiness lost, just so that the wheels of the consumerist machinery keep on spinning and the profit continues to flow uninterrupted into the pockets of the capitalists. And yet, just like ads on the TV shed the illusion that consumption of material products is the path to reaching true happiness, which is emotional in essence and determined by the quality of social bonding and cannot be replaced by material objects, so do smiles of the conceited and affected kind send us one step away from the holy embraces of the spiritual and one step closer to the dark chasms of the material. In spite of their evocation of bliss and sunshine, they isolate and put apart instead of connecting and illuminating, serving the opposite nature of that which a smile rooted in the soul and emanating like a flower on a stem of sincerity is to symbolize and inspire: giving rather than grabbing. For, only by giving ourselves to the world through love and affection can we reach true happiness, a message that echoes that age-old Christian proverb that “it is more blessed to give than to receive” (Acts 20:35). Of course, nothing in life is black and white and there is an admirable beauty in people’s working their ways, strenuously, through the tangled dark forests of their souls to smile in the times of great infliction and adversity. Such smiles act as resistance shields against the tidal waves of apathy that patiently wait to get hold of their treasured joys and drown them in a sea of indifference. Those who try hard to be sweet and polite on all occasions, even when their spirits are evidently burning with flames of fiery anger, may even reasonably argue that our emotions and expressions form a closed loop so that enlightening one spurs enlightenment of the other, regardless of what side of this wheel we spin first: the inner or the outer. Be that as it may, what is lost and what is gained with a transition to a society that is profoundly insincere and hypocritical, but extraordinarily productive at the same time, is not an easy question. High productivity resulting from a competitive capitalist social organization vs. less compassionate worldviews and less cordial human relationships, as compared to its opposites that naturally emanate from a socialist social organization, such as the one I originated from, calls for complex ethical and aesthetical discussions to play. A most optimistic perspective on capitalism I could think of can suggest that its giving rise to high social standards despite being essentially based on premises of selfishness and greed are proofs that morality and compassion, which may be assumed to be vital preconditions for any strivings to build social peace and prosperity, such as the one we witness around us, to succeed in reality, are ineradicable traits of human creatures. In other words, for every dozen of men whose heart rots in greed - like that of the towering pale man who stood in front of the Shoreline Amphitheater in Mountain View during one of Neil Young’s Bridge School Benefit concerts, as the voice of Cat Power echoed in the distance, grabbed the extra ticket I had had in my pocket and that I shyly offered to him for as much money as he could afford, saying that he simply wanted to look at it, then said that he could report me to the bouncers for trying to resell it, put it in his pocket and walked away after I nodded my head humbly to signal that it is okay to simply take it after all, and then popped out before me inside the venue, hours later, when I roamed around thirstily in search of water, holding dozens of water bottles for sale at some astronomical price, looked at me when I asked him for water and sold it without blinking twice - oh yes, for every dozen of such walking devils bred by the evils of capitalism, there will be a soul immune to their diabolical calls, a soul that would give the one in need everything it has, for at the end of the day, Gregory Bateson’s words apply well to any system set up to run according to an intrinsically

¹²⁷⁷ Watch Advertising at the Edge of the Apocalypse written and directed by Sut Jhally (2017).

wicked mechanism: “There seems to be something like a Gresham’s law of cultural evolution according to which the oversimplified ideas will always displace the sophisticated and the vulgar and hateful will always displace the beautiful. And yet the beautiful persists”¹²⁷⁸. Nevertheless, strictly speaking, exceptional productivity and economic dominance cannot be used as indicators of true benevolence and long-term prosperity of a society, just as any quantities or measures of popularity have ever since been all but good indicators of true quality. To conclude that the capitalist foundations of a society are right because its economic productivity is high and that socialism is wrong because the economic productivity in it has not been able to keep up with that in capitalist countries presents a major logical error, familiar to all those who learned in philosophy classes in school or college that no empirical observations made on the basis of certain premises can ever prove these premises right or wrong. They can only validate or refute specific logical arguments built on the basis of those very same premises, but the premises *per se* are untouchable by them. In a way, the logical fallacy of using the exceptional productivity spurred by capitalism as an indicator of its goodness as an economic system is the same fundamental error in reasoning as that committed by the western European colonists when they infiltrated the New World with Christian missions, assuming that Christianity must be superior to any of the hundreds, if not thousands of religious views cultivated all across Americas simply because of the greater level of development of European countries as compared to that of the native American. As for myself, decades of philosophizing on the nature of existence have led me to conclude that paths in life matter far more than the destinations and that fellow humans, as per Kant’s categorical imperative, should never be used as sole means to achieve a goal. For this reason, capitalism, with its yielding good products, but through horrendous, soul-sucking means, like America as a whole, gets to be denounced most severely in my universe in favor of a more socially benevolent philosophy, even at the cost of subpar products stemming from it. As George and Ira Gershwin had it long ago, “A lucky star’s above, but not for me”¹²⁷⁹, meaning that all this bed of opportunism on which capitalism flowers is simply to be smooched and these flowers strewn in the wind by the muses adorning with their ethereal presence my inner and outer worlds. However, note that the same economic arguments are used today to promote STEM¹²⁸⁰ education on the account of disparaging arts and humanities¹²⁸¹, threatening to turn universities, those age-old centers and carriers of humanitarian thought, into vocational, craft schools and having potentially catastrophic repercussions on scientific creativity if artistic sensibility, humanistic benevolence and social awareness truly become wiped out of the STEM practitioners’ hearts. Today, in early 2010s, we already see glimpses of the tragic route that this fosterage of scientific reason without an equal emphasis on artistic sensibility puts humanity on, with scientific studies being carried out without even an iota of wonder, dryly and unimaginatively, with technologies being developed solely for the technology’s sake, with contents brought about by them, be it news articles, songs, children’s stories, TV shows or internet discussions being more vacuous than ever, and with the words I let boldly echo in the classroom, saying that “the purpose of science is to build flourishing grounds for the thriving and the evolution of our spirits”, sounding so common sense and yet more foreign to those who hear it than at any previous point in the history of our civilization. For, if the ultimate

¹²⁸⁰ STEM stands for Science, Technology, Engineering and Mathematics.

¹²⁸¹ See L. D. Burnett’s *Holding On to What Makes Us Human: Defending the Humanities in a Skills-Obsessed University*, *The Chronicle of Higher Education* (August 7, 2016), retrieved from http://chronicle.com/article/Holding-On-to-What-Makes-Us/237381?cid=trend_right_h.

goal of science is to increase the quality of human life, which has a spiritual component alongside the medical and technological¹²⁸², then why has science become so remote from anything artistic, that is, anything that ennobles and enlightens the human soul, as it is today? In a way, this sad state of affairs marks the triumph of knowledge over sheer power, as the young hearts hearing my words, I know, crave to gain practical know-how, ideally quickly, in the blink of an eye, if possible, so typical for this age of blitz, Twitter-like communication and symptomatic attention deficits, in order to profit from it and traverse the way from rags to riches, leaving the philosophical foundations and the poetic subtleties that would guide them toward a long-term success and toward the fulfillment on more profound intellectual and spiritual planes behind. Indeed, after more than a decade of teaching in the US, I have come to conclusion that no generation of young people pursuing hard science degrees at universities in the western hemisphere has been as devoid of noble ideals and alienated from the quests for holy grails in their lives, whatever they are, as today's. Theirs, in turn, most commonly, is the quest for monetizing the knowledge gained at school and filling up their pockets and bank accounts as fast as possible, leaving the ideals of revolutionizing humanity and instilling the sublime streams of holy goodness into human hearts through one's science in as selfless manners as possible, with nil considerations of the monetary benefits for oneself and one's immediate family, to decay in the dust, along with the tender smiles of gods and goddesses, which are always posed over such ideals, but which they would never hear nor even intuit in their wildest dreams. Most tragically of all, the contemporary instructors and scientists, who ought to be recognizing these key demerits of curricula and teaching styles in today's academia, are blind to this pervasive vulgarization of education that results from the systematic expulsion of the Renaissance spirit from it and continue to imprudently perpetuate this trend of taking life out of science, that most sophisticated of all components of human knowledge. And so, the vicious circle becomes spun: the interest for philosophy, poetry and systemic sciences is virtually none at the fundamental, educational social level and it figures as no measure for success at the highest, socioeconomic social scales either. But if we use the indubitably high rate of development of new technologies to approve of this new model of education, where everything artistic and humanistic is tossed out of the window and everything scientific and technological is kept in, we commit the same error as that made by the simpleminded followers of cruel, fascistic and imperialistic regimes, who would go on to faultily conclude that the power of their tyrants and the luxury in which they abide and which they allow to trickle copiously to those below them must be the sign of their rightness. Of course, when it comes to states with imperialistic cravings, theirs has historically not been the mission to immerse their populace in a broad, classicist education. For, all throughout the ages, philosophizing has been perceived as the enemy of productivity, productivity that is the first and foremost goal of every empire under the sun. Empires have traditionally strived after training a specialized and efficient workforce rather than the education of enlightened souls who will indulge in poetry, dancing and music, who will create community around artistic events, who will shun robotization of humans and embrace humaneness with all its glitches and quirks, and who will, most critically of all, question the sovereigns and potentially, god forbid, disobey its rules. Every exceptional productivity, therefore, as I say, has its dark side and whenever we come across systems that function with seemingly perfect smoothness and efficiency, we should smell something fishy in them. In fact, every time we use ends to justify the means, be it large revenues to justify the positivity of our economic activities or the social approval

¹²⁸² For, were science to somehow make everyone on Earth healthy and sound, we would, ideally, not sit idly from that hour on, but would rather go on to strive to ennoble our spirits with the indirect aid of science embodied in countless technological inventions.

to justify the social responsibility and benevolence of our actions or the earning of awards and tenures to justify the tendency to craft academic lectures by piling up the data to the point of suffocation, taking no heed of order, structure, the inspirational potential or the inability of the audience to absorb the data presented in such a form, we should know that we have fallen prey to a profound epistemological error. Neither can, of course, the failure of our schemes be used as an indicator of their wrongness. For example, the poverty and underdevelopment of India cannot be used as a proof that mysticism and spirituality, more pervasive on this subcontinent than in the West, are backward and unnecessary elements of the social scheme of progress. The disputes over whether greenhouse gases released by humans are the decisive contributor to the global warming or not have taught us that the absence of evidence is not the same as the evidence of absence, and in this particular case we could resort to the inequality between the evidence of existence (*i.e.*, of relative welfare born out of a capitalistic social order) and the evidence of evidence (*i.e.*, of the benevolence and progressiveness of greed-, animosity- and alienation-fostering capitalism). As I claim, this welfare at which the supporters of capitalism proudly point as the evidence of the rightness of their political system can only be indicators of the stage in the evolution of consciousness and ethical and aesthetical awareness that humankind has occupied in the recent times. Namely, the fact that socialism has trailed behind the capitalist societies in terms of the overall productivity and economic dominance can only signify that what the majority of people in present and past have needed to spur their working performance was not freedom and loving words but rough conditioning and implicit treating thereof as selfish and competitive animals oriented towards their own survival and success only. A socialist society would be a paradise for those who do not need the system to spur their working habits incessantly. Those who possess the urge to create for the benefit of the society deeply ingrained within themselves would mostly find the socialist environments more humane and just fine enough for their creative existence compared to the cruel capitalist ones. However, the fact that the latter has proven as the one leading to greater accomplishments among the societies that embraced it signifies, quite sadly, nothing other than that the majority of humans are intrinsically lazy and irresponsible creatures, who need a system to whip and threaten them in order to make their developmental and working efficacies satisfactory. Ironically, hardcore capitalists have been aware of this key demerit of the human consciousness at its current stage of evolution, claiming at their wisest and most humanistic that all the idealists and believers in building society around the credo that human nature is intrinsically good “are not constructing a better machine for propelling the existing forces, but rather constructing a machine for propelling forces better than the existing ones”¹²⁸³. However, what they have relentlessly overlooked in their effort to incarnate the idea that “self-interest transmuted by competition yields social harmony best”¹²⁸⁴ is that the continuous subjugation of people to an inhumane, intrinsically wicked system of values that capitalism is will never make them evolve into morally immaculate creatures that could be parts of a productive socialist or, even more ideally, anarchist political system, to which end we simply get returned to the original argument in question: some productivity must be sacrificed with the establishment of a humane political system or else humans will be preserved in a frustrated, unhappy and spiritually unfulfilled state, which is all but the endpoint of our ventures on planet Earth. For, perpetuation of selfishness may bring about an excellent productivity of the social organization, but such progress is destined to be short-lived, let alone abrasive for the spiritual essence of the man, which, at the end of the day, is

¹²⁸³ See Alan Gowans’ *The Restless Art: A History of Painters and Painting, 1760 – 1960*, J. B. Lippincott Company, Philadelphia, PA (1966), pp. 351.

¹²⁸⁴ *Watch Best Laid Plans* directed by Mike Barker (1999).

all that matters and all that the produced social goods are to feed. Socialism from this angle becomes a far more favorable political system for the elicitation of enlightening features out of people and thus the system to adopt for the sake of the future of our children, whereas capitalism, especially in view of the unsustainable levels of production and consumption that it bases itself on, becomes seen as an intrinsically selfish philosophy that may bring abundance to more people than socialism can, but at the cost of keeping people suppressed inside spiritually primitive, backward states, providing them with a lesser chance of progressing toward enlightenment, which is, as we know, always other-centered in its essence. What is more, despite all the collected wealth in capitalism, the man in one such system knows not how to find enjoyment for the soul, knows not how to discover that wonder and love that feed the human spirit with enlightening energies, the reason for which his astonishment is intense over and over again when he realizes that people from poorer but more egalitarian socialist societies know how to enjoy life far more than him, albeit without recognizing that the culprit, to a large extent, is the political system that he has been brought up in. Modern America, of course, having been formed in its nascent days from people who had passed the selection of individualism and alienation from their own kind by taking the transatlantic trips and saying goodbye for good to their homelands, has been predisposed more than any other country in the world¹²⁸⁵ toward the adoption of the intrinsically selfish political system such as capitalism is, which feeds on the inter-individual competition and animosities. However, the fact that many traditionally socialist countries, such as those in Eastern Europe in the 1990s and 2000s, failed the transition from the state to the free economy, yielding corrupt oligarchies in incredibly short periods of time instead, does not speak about the moral fallacies of people in these countries, but quite contrary: it speaks about their greater social consciousness, which took a wrong turn and showed its ugly side in a capitalist social setting by having cordial connections between the individuals form the ties of political corruption. The failure of these social systems to yield anything but toxic oligarchies is, more than anything, a sign that the social intelligence comprising them has been higher and more emotional than that in America; for, capitalism, as we see, can only work well if people in it are intrinsically alienated from one another and devoid of the idea that work could be done for common good, without any desires for selfish profiteering. Another important point to bring here is that one way by which a political system such as capitalism, focused on each person's striving to provide benefits for oneself and oneself only, can get quietly besmirched, albeit without collapsing, is through the leader's tendency to surround themselves by people who are less competent than them, lest their own presupposed greatness come under threat. However, since every leader is led by a leader more powerful than oneself, the curse for this ill course of action comes in the form of Plato's age-old proverb: "Those who do not work for common good are destined to be led by people less competent than them"¹²⁸⁶. And in an ego-eats-ego shark tank, the values celebrated by Christianity and all the world's religions are simply left to corrode, leaving the occupiers of this selfishly competitive world devoid of the spiritual shine needed to enjoy the indisputably rich products of this relentless battle of the selves. Therefore, all these immense accomplishments and earthly treasures aside, a question still remains whether that is the path for emanation of lasting love and divinity throughout the human societies, or a big change in common values and detailed revisiting of the foundations of our approaches to managing human organizations and social wholes are required. To a creature

¹²⁸⁵ Australia, New Zealand and the immigrant countries of South America could be added to the list as well.

sensitive enough, a detail as miniscule as the a 0.99 decimal digit in price tags¹²⁸⁷, comparable in its vileness to 666, the number of the beast (Revelations 13:18), would be sufficient to recognize in it a legitimized intention to deceive and defraud another and conclude that the western mode of economic transactions, even if it brings the most paradisiacal prosperity on the material scale, is guided by greed that corrodes the human soul and corrupts the human spirit and that, therefore, it cannot be sustained in the frame of the strivings of humankind to establish the emanations of divinity on the face of this planet. The Biblical question, “What shall it profit a man, if he shall gain the whole world, and lose his own soul?” (Mark 8:36), should thus often be posed in front of our runs after worldly success, rewards and recognition so as to remind us that measures of the world and measures of the divine normally widely differ from each other. For, if the history of humanity teaches us something, it is that the most progressive conceptions, expressions and worldviews are, as a rule, not welcomed and widely embraced by human societies, but rejected and misunderstood, while mediocre ones are placed on the social pedestals to be adored and celebrated. In turn, however, just as it is human ethical fallacies and not the rules of the game that are to be blamed for the collapse of countless authentic socialist systems throughout the history, the same applies to neoliberalism that holds the globe in its ravenous clutches as we speak, the main cause for the fall from grace of which may be thus said not to lie in the materialistic reciprocity embedded in the core of capitalist economies and self-centered views that it naturally bears, but in the ills of hypocrisies that have crept into the souls of its residents, as the classis POW film, *Stalag 17*, for example, illustrates, teaching them to keep their words and thoughts at perpetual odds with one another. The contemporary American culture colored with exceptional politeness and incessant smiling, of the necessity to wrap everything into chic and sassy, all-smiles-flowers-and-sunshine packages, even when the insides of their bearers are brewing with malice and abhorrence, has often made me contemplate about its pros and cons, especially when compared to my home culture dominated by more direct and sincere forms of expression, including the freedom to show signs of depression, moodiness, aversion and sadness, as much as those of happiness that makes one leaps up and sings aloud and hugs and kisses everyone in the vicinity. In contrast, when one becomes greeted on the way out of an elevator, as it happened to myself in the high-rise I lived in Chicago, with a smilingly poised remark that some people ought to be quarantined for their incurably introvert moodiness, one may be sure that this freedom is wholly absent at the societal level and that its place is being occupied by the fascistic demands to be joyous and joyous only, at all times, from dawn to dusk. As I was left alone in the elevator following this remark, as confused as Thom Yorke with his plastic bags and the stuffy “smell of air conditioning”¹²⁸⁸ in *Lift*, wondering if this was karma striking back for that whole jet-lagged night of sitting in an apartment in a Hong Kong high-rise with my cousin, Pepe, and, out of hundreds of TV channels available, watching the one broadcasting the interior of the elevator and commenting on people in it, I recalled that in the city of Alphaville, where men and women alike have become desensitized machines, crying was forbidden and our hero from the Outlands, Lemmy Caution, got released from interrogation by an Alpha computer after the interrogator realized that Lemmy was “hiding something”, insinuating the natural tendency for lies and hypocrisy, for the

¹²⁸⁷ This is not even to mention not mentioning tax in price tags and at the same time reporting exclusively gross, untaxed salaries (unlike in Europe where strictly net salaries are being reported), being yet another reflection of the omnipresent attempt to create the illusion of a greater welfare than the real and allure people into usually unnecessary and in the long term detrimental consumption, benefitting but the crèmes of the American society, which become ever richer on the account the poor’s becoming poorer with every economic transaction made.

¹²⁸⁸ Watch the video for the song *Lift* by Radiohead, retrieved from <https://www.youtube.com/watch?v=QBGaO89cBMI> (2018).

concealment of one's real feelings in this inhumane world that America streams to become, dragging the rest of the world by its sleeve to this inglorious destination too. I am very much aware of Lao-Tzu's saying that being one with Tao, with Te or with the departure from Tao or Te is equivalent to accepting Tao, Te and leaving them, respectively, with joy (Tao-Te-Xing 23) and thus insinuating that absolute empathy yields absolute joy, but forcing one to put on the clothes of pretense and display happiness when one is, in fact, lost and perplexed can only have a counterproductive effect on the quest for this sublime spiritual destination where joy awaits one eager to infiltrate their soul. But honesty, of course, is penalized harshly on the American continent, just like exhibitions of many other sacred values, given that to openly be sad and moody is to be sidelined by the peers and the employers as professionally incompetent and destined to be passed over on the career path by the devilish critters with smiles as masks on their faces. Resultantly, people hiding their faces behind a veil of sadness, or becoming simply touched by the daily events until their eyes become all watery, let alone spending their prayers at dusk underneath an imaginary wailing wall, crying their hearts out day by day, I missed to notice as parts of the modern American culture. Instead, what prevailed were cold and plastic smiles stamped on people's faces, bearing resemblance to frozen facial twitches, icy and cynical, "a mixture of arrogance and happiness"¹²⁸⁹, as well as sweet congratulatory statements, which, as I was sad to notice, were most of the time insincere, springing from the way people were nurtured to behave and a lack of free spirit rather than from the real feelings. Indeed, innumerable times in the midst of public gatherings I would feel like Peter Marwood, a protagonist of the classic British movie *Withnail and I*, when he noticed that he could not have another cup of coffee because he "got a cramp in his mouth grinning", drained of any enthusiasm to erupt with the enchanting flows of inspiration before my rigidly smiling companions. Who would have thought back then that I would even develop appreciation for Victoria Beckham, if for nothing else, then for one thing only, which is her choice to live in LA and never ever smile, lest her cheekbones, as I read in one Serbian magazine ages ago, disappear from view and diminish her pretty looks. Hence, when the Scottish National Theater had a guest appearance at the American Conservatory Theater in SF, pamphlets describing the play that its troupe had chosen to perform¹²⁹⁰ were handed over to the visitors and in them, amazingly, not a single one of the actors' photos displayed a smiling face, while, in contrast, all of the local hosts presented in it had smiles forcibly sealed on their faces, quite neatly illustrating the Europeans' aversion to the affected smiles and the Americans' sadly succumbing thereto. For, whereas a typical European person tends to find such unnecessary and phony posing with grins comparatively vulgar and repulsive, a typical American mindset finds overly serious faces uncomfortable and thus seeks solace in sunny smiles. It would be a mistake not to mention that similar, though significantly subtler miscues when it comes to interpreting other people's body language signs exist within the American continent itself, as, for example, a native of Chicago, seen by his fellow Chicagoans as just a regular guy, might be classified in California as a complete jerk at the very first sight, whereas it might not take too long before a prototypical Californian earns the epithet of a fake and affected, a bit plastic persona in the city of Chicago, despite the fact that to his fellow Californians he would appear as an average person, quite natural in his own right. Hence, given a much greater cultural divide between the Old World and the New World, it comes as no surprise that what Europeans see as natural seriousness or simple and unaffected relaxedness

¹²⁸⁹ See Housley Dave's *On Sunday Will Be Clown*, In: Ryan Seacrest is Famous, Breakthrough Strategies, Washington, DC (2008), pp. 32.

¹²⁹⁰ The play was *The Black Watch*, written by Gregory Burke and directed by John Tiffany and it was performed in May 2013.

often becomes misinterpreted by Americans as an irritatingly cool pretense, while the exuberant politeness with which Americans approach others is seen as an overly naïve stupidity and plane phoniness by the average European, over and over again reminding us of the ridiculousness of judging about foreign cultural cues while standing on the pedestals of presuppositions of our native culture. Still, people who are aware of the irreconcilable logical inconsistencies that arise from inferring about phenomena from inappropriate tautological bases are not too many. Or, is it that their silent reservation becomes easily eclipsed by the loudness of those who judge groundlessly and impulsively? In any case, human happiness is inevitably conditioned by one's being who one is rather than conforming one's behavior to externally imposed templates, and for that reason, not letting people slide on the rollercoaster of their shifty feelings and freely exhibit their natural mood swings, like changing seasons, being dark and gloomy on one days and jumpily joyous and ecstatic on others, as is the case with the modern day America, comes as strangely repressive for a culture proud of its freeness and tolerance. As if nothing has been learned from the vilification of "pixilated" Longfellow Deeds in Frank Capra's classic, *Mr. Deeds Goes to Town*, by the psychiatric rep of greedy, corporate America, with the memorable courtroom drawing of sinusoid waves that was to signify manic depression after he decided to split his fortune among the poor farmers, such and similar cases of denigration of any natural mood swings continue to this very day on all levels of the American social life, even though these internal rollercoaster rides are the signs of the dialectical crucifixion of the mind from which divine outbursts of creativity are free to emanate. Whoever's behavior cannot be classified as that of a lukewarm and listless sheep, exhibiting moving emotional outbursts grounded in the lust to love and be loved instead, will be readily marked as a toxic persona non grata in almost any given American professional institution, in spite of the fact that all the geniuses and creative giants of the past, with no exception, would have been labeled as such too. But were a hypersensitive persona to remind his supervisors or peers that neuroticism is a personality trait, not a medical condition, and that it is a consequence to the flow of powerful energies through their bearer and a prerequisite for magnificent outbursts of creativity, this would be met with little sympathy and the twisted grinners would be soon mercilessly kicking the poet to the curb and to the trashcan to search for the food. And then, repeated discriminations of this kind would tend to prompt all those who once underwent the mood swings of a child to shyly suppress their truest feelings under the weight of the accusations of infantilism and social irresponsibility, all until nothing is left of this natural liveliness of the human spirit in them and they are being fabricated into yet another responsible screw in the social machinery, a cog in the wheel of a meat grinder crushing life out of humans that come in line, one after the other, as in the glum vision of Pink Floyd's *The Wall*. But whether they, the real humans with real emotions, or the robots working to turn them into yet another one of them will win depends on their readiness to yell back at the top of our lungs with exclamations that affirm life inside them and say No to the imminent death of their spirit under these oppressive sociopolitical forces. "When people don't express themselves, they die one piece at a time; it's the saddest thing I know"¹²⁹¹, said an art teacher and posed before us a simple choice: to express ourselves honestly, in concert with our emotions, and remain alive, or to hinder this expression, act as the "Great Pretender"¹²⁹², the patron saint for an average American citizen, and die on the inside. Expressional sincerity, to that end, becomes a matter of life and death, spiritual and perhaps physical too if we were to go on, expand our imagination and theorize that neoplastic and autoimmune disease epidemics in the western world may be caused by one's eating oneself from the inside due to the

¹²⁹¹ See Laurie Halse Anderson's and Emily Carroll's *Speak*, Farrar Strauss Giroux, New York, NY (2018), pp. 214.

¹²⁹² Listen to the Platters' *The Great Pretender*, Mercury (1955).

confinement of emotions that do not escape outside. That much broader and more natural mood spectra are unanimously allowed to be exhibited in the professional realm in practically all European countries, including those that spent a large portion of the 20th Century under quite repressive governments, while mood swings alongside melancholy, shyness and many other normal states of a compassionate mind, let alone asocial anarchism and the tendency to be in permanent opposition to the powers that be, are all listed as mental disorders¹²⁹³ advised to be treated with medicaments in what has traditionally been considered “the land of freedom”, further adds up to this paradox, the paradox that becomes even stranger when we consider that no physical autocrats abolished these freedoms; rather, a system of checks and balances, with neither a steersman nor a navigator, a freedom, as it were, killed freedom itself – it took humaneness, brotherliness, imagination and life out of people to such an extent that freedoms became an unbearable burden to them, more oppressive than slavery, and they willingly shunned its directionless blessings and an infinitude of possibilities to install self-restraint, conservative temperateness and a stiff upper lip in their psyches and expel any traces of the sea of compassionate melancholy, all along with the boats of beautiful looks on life, from there. To someone firmly believing not only in the benefits of fosterage of perfect freedom of behavior, but also that genuine joy able to shake stars off the sky with its lovingness always floats on the oceanic waves of compassionate sadness, it comes as a tragic failure of the modern American society to systematically suppress this sadness that entails the natural, the empathic and the only truly fulfilling way of human being. That the western world has largely lost the ability to grieve and let the spirit loose on the waves of the sea of eternal melancholy that pervades all things can be exemplified by the fact that allegedly two thirds of funeral ceremonies in America today include the reading of Dylan Thomas’ famous poem opening with “do not go gentle into that good night, old age should burn and rave at close of day; rage, rage against the dying of the light”¹²⁹⁴. In other words, rage in America has substituted grief as a dominant emotion responding to the witnessing of events that pluck our hearts and draw tears from our eyes, reinforcing the state of the world brimming with animosities and cold shoulders in lieu of cordiality and warm embraces. How deeply this loathing of cosmic grief, that godliest of all human emotions, has penetrated the American society can also be exemplified by the recently proposed amendment of the definition of depression so that grieving is diagnosed as a disorder for the treatment of which the same pharmaceuticals are meant to be prescribed as those used to ameliorate the conditions of severe depression¹²⁹⁵. By advocating the abnormality of the feelings of grief and trying to uproot them from the human psyches like weed of a kind, a profoundly wrong message is sent out to people, prompting them to believe that suppression of sadness and artificial affectation are okay, when, in fact, they stand as impassable obstacles on the human way to reach true happiness in life. For, in reality, looking solely after preservation of happy feelings tickling one’s insides like a thousand butterflies can only make us miserable at the end of the day, whereas plunging the roots of our heart into waters of melancholy is needed for it to take the form of a gorgeous lotus flower and for the sunrays of profoundest happiness to begin to glisten all over it, the reason for which Immanuel

¹²⁹⁵ See Benedict Carey’s Grief Could Join List of Disorders, The New York Times (January, 24, 2012), available at www.nytimes.com/2012/01/25/health/depressions-criteria-may-be-changed-to-include-grieving.html?_r=1.

Kant notably stated that “the principle of happiness may, indeed, furnish maxims, but never such as would be competent to be laws of the will, even if universal happiness were made the object”¹²⁹⁶, the words to which today’s stereotypical American consumers and employers, demanding happy and happy only, with not even a taint of sadness, are nothing short of deaf. Consequently, as for the American culture itself as a whole, one could observe its sad streaming to become an emotionally repressive environment where everyone is worked to be made essentially the same as everyone else, a sterilely homogenous milieu that this culture feared most of becoming when it had the horrors of totalitarian communism to fight against globally. This process of molding the individual outlooks to a same mold, expectedly, starts from the *crème de la crème* of the society, that is, of its artists and intellectuals, which have been discarded and repressed in both communism and capitalism because their social criticism was perceived as dangerous for the establishment. As a result, the pyramid of diverse perspectives on life becomes chopped at the top and then flattened out, all until the spirit of bourgeois mediocrity, needing nothing more than bread and circuses to be kept in check, gets evenly distributed across the whole system. But what else to expect from a country in which diversity ends with the color of the skin and gender and rarely ever includes the diversity of ideas, of different pathways of thought and of expressional peculiarities, but one such neo-fascistic fosterage of sameness under the pretentious veil of diversity? The superficiality of the understanding of the concept of diversity in America can be easily proven by simply parachuting an average French person into a traditionalist working environ and counting days before his habit of frowning when focused will be interpreted as combativeness and his waving hands while speaking as the sign of neuroticism, giving the authorities enough reason to lay him off. Of course, the French person I have in mind here was born and raised in a system that allowed for the exhibitions of far greater freedoms of behavior at work than those that the average American person has. It is normal, for example, for a salesman in a French store to argue against the customer’s opinion and pay not even a slightest heed to that “customer is always right” motto¹²⁹⁷, or to freely express one’s own opinion regarding which product in the store is nice and which one sucks¹²⁹⁸ because under the premises of socialism, he would get no reward if he sells more or less of the product in question and so his freedoms at work are a million times more than those of a salesman in capitalism, where one’s free and autonomous opinion is always subdued to the profit-generating goals of the company. This is not even to say that the ethnic categories in America do not include any that would fit the given person and he would have to categorize himself as “white”, even though his cultural traits are not even vaguely similar to those commonly ascribed to “white” Americans and the expectance of the latter for the Frenchman to fit the stereotypical behavior of a white person would obviously flop in reality. Deep down, the historical discrimination of people of color in America was not because of their different skin color, but because of the disparity between the behavior associated with the culture of those people and the behavior considered appropriate by the dominant white man’s culture and the only reason why this essentially behavioral discrimination was substituted with racial discrimination is because the latter was easier and less ambiguous to implement by formal means. And because Caucasian cultures nurturing types of behavior that are considered inappropriate in America – such as open displays of moodiness, critical tirades against the authority and frequent outbursts of anger, all of which are common in, say, my home country – are difficult to label by means as simplistic as the skin color,

they become overlooked and fail to be added to the list of species to be protected by the diversity mandates. As a result, I have often refused to classify myself as any race and even when I do encircle “white”, I make it patent that my heart and mind are, as it were, “black”. It is for these reasons that the classroom experience I create is that of acceptance of both logical and analogical routes to new ideas, of both paradigmatic and antiestablishment stances, of hard science and soft science, of empiricism and emotionality, of logicity and intuition, and so on, knowing that in parallel sustainment of them all lies the sustainability of our culture as a whole. Moreover, being born to a given culture implies confinement in countless blind spots corresponding to cultural cues that appear quite natural to the natives and incredibly phony or even sinister to the outsiders. No wonder then that Americans are normally blind to the phoniness of stiff simpers that come out as if being stamped onto people’s faces and all that strikes their attention are occasions where people unexplainably shed tears for the sad state of the world or act all moody and mystical, with facial gestures so vivid and yet so fine that they remain thoroughly imperceptible to those who have gotten used to loud and exuberant communicational manners. “Why is everything weighed down by some heavy and sinister burden, as if paying back who knows what kind of ancient and eternal debt”¹²⁹⁹, asked a critic as a response to the characters emerging like ghosts from the books about the Bosnian folklore and culture by the Nobel Laureate, Ivo Andrić, prompting many to believe that 500 years of Turkish occupation is responsible for what seem as unassailable lethargy and depression among the southern Slavs to a jazzy American eye and for today’s ranking of my home country, Serbia as the one with by far the saddest feeling people in Europe¹³⁰⁰. Namely, many historians explain the development of this gravely sad and somberly withdrawn attitude as a defense mechanism against the so-called Sick Man of Europe, that is, the Ottomans who would literally come, grab and take away from whatever was revealed to them as overly profuse and luxuriant. Another historical reason behind this somberness woven deep into the heart of my fellow countrymen, to whom exhibitions of jolliness or, in fact, of any exaggerated emotions devoid of the room for melancholic quietude usually seem deadly shallow or pathetically phony, is, of course, that Serbian is the culture of martyrdom and ‘tis “a nation that from its suffering raised the throne of its holy motherland”¹³⁰¹, as put into words by the Serbian poet, Vladislav Petković Dis and as supported by the facts that a barrier of blood and bones of Serbian people obstructed the Ottomans in their attempts to cross into and conquer continental Europe for five hundred years, that every other Serbian man died as a hero in World War I¹³⁰², and that losses were tremendous in World War II too as well as in wars waged by numerous imperialists over its territory every thirty or so years on average throughout the history. Having found itself at “the crossroad of mighty empires” ever since the Middle Ages, “the Balkans was where those empires all met and where they often fought to secure their interests and consolidate their power”, so that “the economic and political development of the Balkans never was allowed to advance ‘normally’”, as pointed out by the political analyst, Steven Meier, calling to our mind how this recurrent state of affairs may have produced a diametrical pull in the directions of (a) explosive rebelliousness and nonconformity and (b) becoming submissively “intimidated and mesmerized by psychological dependency on

¹³⁰² According to the historical data, Serbia suffered the largest number of casualties per capita in World War I. See https://en.wikipedia.org/wiki/World_War_I (2017).

self-serving advice of Western policy makers”¹³⁰³, explaining for the striking blends of passionate vigor and mournful lethargy shimmering in the eyes of Yugoslavs¹³⁰⁴. On the other hand, however, these sad and solemn, soft and gentle eyes of which Andrić wrote would certainly see nothing but infantile, pampered lavishness and a superficial blend of Barbie-doll transparency and pinup-girl frivolousness in the eyes and gestures celebrated as beautiful on the American continent. They may lament over the unfortunate fate of the bearers of this gestural plasticity, craving to show these “transparent people”¹³⁰⁵ how infinitely deeper and more magnificent the beauty of grief is compared to that of polished shallowness, in just about the same way Gram Parsons showed the American country scene indulged in fake smiles the beauty of honest grievousness, notwithstanding the singer’s recognition by this scene only after he passed away in a Joshua Tree motel by which I drove a week or so ago and had his ashes scattered at a nearby UFO sighting. In a moment of limpidity, they may also recognize that the slow, elegiac pieces of classical music have stood the passage of time far better than those where the composers craved for the conveyance of joy and joy only and that this may be because sadness is stronger, if not older and profounder emotion than joy, an insight they may share with the plastic people who have extirpated every last trace of compassionate sorrows from their souls in the effort to assure them that “love will never be a product of plasticity”¹³⁰⁶, as the fellow San Franciscan, Frank Zappa would have had it. They may not go as far as to indignantly declaim the verses of a song by EMA, “F*** California, you made me boring; I’ve bled all my blood out but these red pants, they don’t show that”¹³⁰⁷, let alone forthrightly sympathize with Thurston Moore’s figurative call to “kill the California girls”¹³⁰⁸, presumably because most of them have undergone that transition from “firstborn unicorn”, a symbol of infinite cuteness of preteen girls, to “hardcore soft porn”¹³⁰⁹, although there will always be in them a mild tear of resentment over the tendency of shallow Californians to drool their hearts over the stylish surface, be it glossy garments or glamorous gestures, while being insensitive to the vibe of the essence, including the invisible bleeding of the human hearts all around them. If they, like myself, happened to have become California residents, at least for a while, they may sense how the touch with their holiest essence has been lost after years of enforced smiling and suppressed sadness on these grounds, and this darkness to which the Californian sun, ironically, pushed them may make their emotions for California resonate with those of the protagonist of Douglas Coupland’s *Miss Wyoming* as he recalled memories of Needles, California and of how “the sun was radiating black sunbeams down onto the Earth”¹³¹⁰, memories that echo Michael

¹³⁰⁴ Some have said that faulty society cannot bear impeccable men and women, which prompts me to think of the extent to which this cultural tendency summed up in Steven Meier’s words could be blamed for my own inclinations to exhibit passivity and submissiveness in social relationships: “This long history of domination by others has established a psychology of ‘willing victimhood’ in the Balkans. As a result, the people and leaders in the Balkans have learned to look to others for answers. There is a fear of accepting responsibility, a fear of independent action, a rejection of the idea that it is possible for the people and leaders in the Balkans to chart their own futures. Many people and leaders in the Balkans have been so conditioned by centuries of external domination that they are intimidated by Western officials”.

Stipe's murmuring about "redwood trees, bumper cars and wolverines"¹³¹¹ in a song titled I Remember California, portraying the dark side of this state that lies "at the edge of the continent"¹³¹², memories that make David Hockney's decision to move from Bradford, England to southern California because of the strong shadows in it gain an eerier connotation than one could have ever thought. And so, as I, who have fought myriads of shadows in my karate kata routines since the earliest childhood, sat on a bench next to Vallejo Street stairs in the Russian Hill neighborhood, in the shade of a tree that is no longer there, under the Royal Towers where, amidst many cool cats, lived the Nobel laureate, hard-core libertarian and preacher of "profits-are-everything philosophy"¹³¹³, Milton Friedman, the man who slid too far left on the economics sphere and emerged on the far right, watching the Transamerica Pyramid and the rest of the SF skyline with tears in my eyes and face buried in the palms of my hands, lamenting over the swarms of tragedies that strike our world on daily basis, I heard a school tutor on the roof of the nearby Jean Parker elementary school teach the children how to yell "whoa" altogether from the top of their lungs. It screamed different kind of shallow from the Lakeside middle school kids I would witness years later in Irvine, "a green plastic"¹³¹⁴ town in southern California, doing pull-ups in series, like robots in training to become reverend denizens of Alphaville, to the sound of a tape resembling a broken record repeating "up, down, up, down" for twenty or so minutes and two fascistoid trainers monitoring the routine, but it was equally depressing and made me sink deeper and deeper into a mental canal wherefrom the aforementioned Manic Street Preachers' question in an answer, "If you tolerate this, then your children will be next"¹³¹⁵, could be heard reverberating and instilling drives for enlightening action in me, as all the altruistic anxieties and melancholies do. Then, as I sat on the vista's bench enfolded in worrisome thoughts, I went on to compare what I heard with my own being hushed and plunged into reverent silence as I would be taken along with my classmates to pay tribute to the sites of atrocities caused by the monsters of war that had caught the heroic people of Serbia with its filthy paw in the past, such as the iconic V₃ monument in the city of Kragujevac, raised in honor of the whole generation of high school students who were taken directly from their classes onto a rustic meadow where they were executed by Nazi soldiers. Naturally, most people raised in one such culture of daily remembrance of the crushing reasons to feel dejected and sad about the state of the world would find the stereotypically American outbursts of shallow positivity distasteful and ignorant. And yet, shallowness of the intellect need not be an obstacle for passions, as exemplified by Sovay, the British female folk tale character to whom materialism was the substitute for love and who disguised herself as a male bandit to ambush her fiancé and kill him if he would give her the ring from his finger under a death threat. This implies that shallow is not necessarily languid too, but can be as persistent in the effort to fulfill its goals as the deep and the profound can. In fact, considering the frequent breakdowns of a heart burdened by the emotional weight and the limpid, easygoing flow of the one who had let go off this drag, it can be even argued that shallow personalities go farther in their worldly goals than the deep and complex ones. A heart that harbors no great emotional treasures cannot easily break; even when it breaks, it is easier to repair than a heart complex in its makeup and weighed

down by the gravity of cumbersome emotions. Compared to this hypothetical heart adorned with a lesser emotional content, a typical Serbian heart brims with yearnings, with passions, with lust for life, all of which give the dreams that a youthful spirit nurtures inside one a tremendous power and resonance; when these dreams dissipate due to tragic circumstances in life, desperation becomes equally emotionally powerful and leads to wretched gazes and outlooks that are much more despondent than what can be experienced on the American continent. Often appearing enwrapped in pathos in a bright sunny world that swears by its idyll, like Christina in her world tempera-painted by Andrew Wyeth in Mid Coast Maine in 1948, these wretched spirits stand out with their soulful sincerities in an artificially sweetened American reality and get impressed deeply into the grooves of people's memory, albeit inevitably being labeled as lunatics and miscreants and shoved to the sides of the road by those who have taken upon themselves the hardship of hiding these feelings under the feigned mask of happiness. Yet, here again, there is positivity in wretchedness, for deep inside it lie alive the remnants of the dreams that once elated human spirits and painted everything in the colors of eternal spring, dreams that I absorb with the sponge of my soul every time I return to my hometown, Belgrade and walk down its shadowy memory lanes, dreams that remind me that the most important thing is to never cease to dream, to continue to burst with that lust for life, to continue to live like Pet Shop Boys' ones who are "never bored because they are never boring"¹³¹⁶ and like Jack Kerouac's "ones who never yawn or say a commonplace thing, but burn, burn, burn, like fabulous yellow roman candles exploding like spiders across the stars and in the middle you see the blue centerlight pop and everybody goes 'Awww!'"¹³¹⁷, to continue to burn like stars across the night skies and resist becoming "vain, superficial, materialistic slobs with the cultural development of the common field asparagus..."¹³¹⁸, braindead humanoids as members of "a depressing gathering of hick & rube simpletons who vie with each other over who has the largest pig or bakes the best apple pie"¹³¹⁹ and who populate the wealthy United States burbs from Orange County to Long Island, lulled to sleep in the lukewarm bubble of comfort, luxury, boredom and happiness that is but a Prozac artifice, with even the finest displays of sadness shunned as it were a plague. Hence, as I write these words from one such cookie-cutter bubble that the artificial, beige suburban city of Irvine is, "a turned back world" where my dream of enacting "pillow fights" on "earlier nights" and living the Beach Boys' Disney Girls¹³²⁰ came true, I know that the vast majority of the human race dreams of a southern Californian scenery from places plagued by moroseness and misery, but I, I belong to a small, very small group of people, involving very specific individuals, who sit in this immaculately tidy landscape, with eternal summer and swimming pools and sunshine and smiles and rarely ever a cloud in sight, but share thoughts with Neneh Cherry, as she, with oranges rolling down the Stockholm streets in her head, enters Sigurd Lewerentz's Church of Saint Mark in her hometown, thinking that "these medieval buildings are better at sadness, despair than all our clean-lined, democratic ones"¹³²¹, with their soul longing for such architectural, musical and other cultural embodiment of mourning and gloom, yet sensing none of it around them, save the oppression to be bright and happy at all times. Like the saint on Geertgen tot Sint Jans' painting

called Saint John the Baptist in the Wilderness, sitting despondently in a garden of paradise, thinking perhaps of how even the most luscious of landscapes are not *it*, as they can never deliver the satisfaction to our spiritual longings, which only putting our heart and soul at stake by walking down that Christ's road back to Rome to be put on cross again and again can, so have I spent many hours, days, months and years in a similarly morose state of mind amidst all the spotless sceneries and luxury of Orange County. 'Tis, by the way, the symptoms of rare but characteristic, "Orange County" type of melancholy that I and many other poetic souls suffered from for as long as we lived in this part of America, which I have considered a testimony to the fact that a first and a most essential thing that the wealthy people in power do is deprive the young from the freedom to live, and which the SF writer, Philip K. Dick, yet another Bay Area expatriate who referred to his transition to the O.C. as the passage "from the gutter to the plastic container"¹³²², a living proof of "how dumb and dull and futile and empty middle-class life is"¹³²³. Not coincidentally at all, the theme of Dick's novels written in this conservative chimera that he described as "no culture, only trash"¹³²⁴ and that was the home to Richard Nixon and the 1970s right-wing reactionism against the civil rights movement and liberal voices that had emerged in the 1960s - the US never recovered from this conservative wave of suburban bourgeois culture, cultureless at heart, and have sunk deeper and deeper into social decline with each new day ever since - were persistently the same: "the plight of small men struggling under the imperatives of capitalism"¹³²⁵ and the rebellion of the oppressed dopers, representing the liberal subculture and likened by Dick to innocent "children playing in the street"¹³²⁶, against "a future, dystopian U.S.A., a fascist police state"¹³²⁷ demanding the same "auras that smile and never frown"¹³²⁸ as those envisaged by Jello Biafra and the Dead Kennedys in California Über Alles. If I wished to further accentuate the intrinsic demerits of the insistence on the promotion of happy attitudes on the account of driving

On a side note, it is worth reckoning that Orange County, "a built environment that reinforced privacy, individual property rights, home ownership, and isolation at the expense of public space and town centers that could have created a sense of public and community responsibility", has been traditionally governed by cowboy capitalists and anticollectivist conservatives in whose laissez-faire minds the obsolete connections between anticommunism and prosperity have, according to my own conversations with its inhabitants, thrived solidly, for generations now. The historians tend to blame the absence of the counterbalancing forces, such as "liberal Jewish Democrats, organized workers, and vocal minorities", which have existed in the neighboring Los Angeles and San Diego counties, for turning Orange County into the home of the most intellectual, grassroots conservative movement in the United States. This is how Orange County turned into a kind of locality that Ronald Reagan called "the place where good Republicans went to die" (See Steve Chiotakis' A More Purple County: Columnist Reflects on Big Changes in Orange County, KCRW, December 22, 2022, retrieved from <https://www.kcrw.com/news/shows/greater-la/holidays-oc/board-supervisors-democratic>). any grains of compassionate sadness out of people's hearts, I would refer to the recently conducted psychological study¹³²⁹ that demonstrated that merry people are more prone to find justification for the morally dubious decisions of theirs and push another person into chasms to save themselves, which on the other, theological side of the coin that the human mind is reconnects us with the Christ's words: "Blessed are they that mourn: for they shall be comforted... ye shall weep and lament, but the world shall rejoice: and ye shall be sorrowful, but your sorrow shall be turned into joy" (Matthew 5:4... John 16:20). For, if "Jesus wept" (John 11:35), as the shortest verse in the King James version of the Bible tells us, and if Wotan, the God of Gods in Wagner's Ring of the Nibelung, pierced Heaven with a cry, "I am the saddest of all beings"¹³³⁰, then every human craving for divinity in one's expressions and sensations must set the sails of one's soul onto the sea of holy melancholy. Still, the American culture has indubitably won the hearts of many, all over the globe, with its celebration of jazzy joyousness and free spiritedness. Only after it penetrated these foreign cultures with the one of its own did it send its economic and, oftentimes, military powers so as to fortify itself and satisfy its interests, aside from those of the local communities. For, it is no secret that infiltration by the glamorous celebratory lifestyles under the headlines of feisty Americanism, rather than by marching soldiers, commandments and clerks, as Nazis deemed it doable, has presented the first step in America's attempt to take over the world. For this reason, the heralds disseminating the jazzy values of the American society could be considered as none other but the cultural conquistadors of the modern age. They open deeper and subtler doors in a foreign society than mere borderline crossings, doors lying in the depths of the human heart, thus enabling an effortless penetration of other, economic, technological and military forces. However, as it usually happens that the dagger by means of which one climbed to the great heights ends up being what one stabs oneself against and from then on plummets back to the rock bottoms of life, this culture of joy and sheer eye-candy sassiness, devastatingly prioritizing entertainment over art, the culture from which seeds of mystical awe and ecstatic compassionateness have been carefully uprooted, is the core from which a descent thereof, should it happen, would start from. If what goes around really ends up coming around, then a culture that has used entertainment as a means of conquering the planet and sucking its resources to satisfy the self-interests is, thus, doomed by fate to "amuse itself to death"¹³³¹. The best way to counter this shallow focus on "fun, fun, fun"¹³³² is, therefore, with the grace and gravity of deep emotions that shake the human spirit like the leaf on a tree. In the most memorable section of the first movement of Shostakovich's 7th Symphony, descriptive of the siege of Saint Petersburg by the German invaders and the heroic effort of the millions of Soviets who died defending it, the marching drums start to sound louder and louder, which is followed by the eerily jolly sound evocative of the invasive spirit of Anglo-Saxons, totally devoid of depth and gravity, sounding a bit like a variation to that jolly-old-fellow-like, colonial British melody to which the zamindar from Satyajit Ray's Music Room famously shot his ears in revulsion. At its loudest, suggestive of the frontline, the place where the two armies and cultures collide, the sound turns dark and frighteningly emotional, as expansive in its breadth "as the Russian tundra", as the Serbian saying goes, evoking the defensive spirit of the Slavs, impregnable, unyielding and, as we might be tempted to conclude,

victorious exactly because of this complex spirit that it embodies, the spirit arisen from the awareness that no soars in grace are possible without parallel plunges in gravity. After all, this dwelling in the darkest depths of the human mind, wherefrom the sprites of lamentation, despair, gloom and storminess emerge their frightening heads, is what allows us to empathize with the omnipresent suffering of man, when constant enforcements of cheerfulness would make us desensitized and incapable of conjoining our hearts with those who are most in need of uniting hearts with others. In a painting that circled the Internet, an anonymous painter depicted a group of men standing in the street under an array of gray skyscrapers, watching the reflections of a turquoise sky in a puddle and paying no attention to an injured body stretched across the pavement right next to them, and it is one such world wherein each soul finds it normal to look away from the suffering of another and into superficial patches of pleasure that this modern American culture of the celebration of jazzy joys and systematic suppression of compassionate melancholies has given rise to, a world that cannot be sustained for a long time in one such form wherein “we could see humans, but no humanity”, as Banksy stenciled on a musty brick wall. For, expressions of friendliness and spirit of companionship that are phony and insincere, and behind which sheer self-interests or sense of insecurity and the need to be loved stand, abound in contemporary America, and if something threatens its sustainability and prosperity, it is this feigned relationship of common people with the root elements of the American culture. Then, when one witnesses a president who launches new wars right after being awarded a Nobel Peace Prize¹³³³, the prize that was never awarded to one Mahatma Gandhi, a peacemaker that inspired millions, despite a dozen nominations, or federal spies accusing those who reveal their spying activities for espionage¹³³⁴, one should see such tragic instances of hypocrisy as a most natural corollary of a culture wherein people are being trained from an earliest age how to “fake it till you make it”, so to speak, that is, how to feel one thing and exclaim another, finding pride in following the way of the duck, whose invisible movements under water and visible ones above it are in striking disparity with one another, disvaluing truth and honesty on each corner, fearing that, if it were not so, they might become labeled either as a Lennie Small¹³³⁵, a genuinely good guy that emerged from the pen of John Steinbeck and dreamt of rabbits, the symbols of pureness of the heart, of snow-white goodness, of frail honesty and of chaste dreaminess that heartless hunters all the world over chase after, killed in the end by his best buddy, out of cunning self-regard masked as brotherly love, as it were, or as an epitome of Dostoyevsky’s Idiot, a prince who always spoke his heartfelt credos out and who was thereupon a worthy holder of the sacred belief that beauty must be able to save the world, but who ended up being exiled to a cuckoo’s nest. Yet, to be a person such as Prince Myshkin, trembling like a frail steppe flower open to the winds from the north and the south and the east and the west, “choking out of pure simplicity and goodness of heart”¹³³⁶, is to be undoubtedly classified as an idiot by the bona fide bearers of the new American culture dressed in the clothes of sympathy and kindness, but holding a heart rough and tough, grabby and ignoble, grilling on the fire of hellish emotions underneath it. For years I wondered how come after so many

¹³³⁶ A comment by Adelaida in Fyodor Dostoyevsky’s *The Idiot*, Part IV, Book VII, translated by Eva Martin, retrieved from <http://www.gutenberg.org/files/2638/2638-h/2638-h.htm> (1869).

years of living in America I had yet to hear someone in it describe a fellow man or a woman as a “good person”, something which I had heard daily in my native habitat, and now I am on the brink of concluding boldly that to a mind rooted in the soil of warped values, counting self-interest, avarice and the ravenous thirst to use another as a tool, a ladder for one’s own climbing higher and higher on the ladder of worldly success¹³³⁷, this sacred quality, goodness of the heart, simply matters not to all but a few lustrous exceptions rare as diamonds in the dust. It is left to disintegrate all alone on the side of the road by the colony of worshippers of the word, not the deed or the emotion underlying it, bound to continue to walk in the opposite direction from the path of dreams dreamt by the divine depths of their psyche as the result of their being guided on the surface not by godly guardians of the sacramental truths of being, but by demons of hypocrisies and forked tongues. Unlike in my home culture, where the epithet of “good” stands for a highest quality ascribable to a man, invariably referring to his humaneness, altruism, empathy, devotion to another and other signs of moral excellence, “good” as a personal attribute, as I have learnt over the years, means “successful” or “powerful” on this continent where the ideals of cold and spiritless practicality have pulled the heart out of man long ago. In parallel, heroes on the TV screen and in other popular media for disseminating narratives are no longer good and innocent souls imagined by the likes of Walt Disney, Frank Capra or Charlie Chaplin; rather, these are cunning souls who outsmart other cunning souls while displaying just a titbit more empathy than them. The stereotypical hero in America is no longer a frank and innocent man or woman, but rather the one bearing resemblance to the false wife of Harry Kenyon, the protagonist of the 1980s B film and the only movie I remember to have been recommended by the co-owner of a small video store tucked in the back of my building in Belgrade at the time, *Vanishing Act*, who employs her pretense to reveal that Harry is not an honest searcher for his missing wife, but rather her murderer. Sugarcoated on the surface and self-interest-driven and materialistic at its core, faking everything with supreme skill, including the fakeness itself, a character like hers could be considered the symbol of the new American culture, which has turned into a battleground where various hypocrisies contend one another and those that are most skilled in their methods win. Like in the Russian folktale, *Kolobok*, where the cake that has fallen off the windowsill and started rolling through the countryside successfully escapes the sweet teeth of animals who openly assert their wish to eat it, but falls prey to the flattery and feigned admiration of the cunning fox, those with the highest disparity between the avaricious desires nurtured in their hearts and the benevolent phrases resting on their lips tend to be the winners in the rat race for success on the American continent. Yet, where hypocrisies reign, Truth with the capital T is feared most and wanted most; once apprehended, it gets to be thrown mercilessly into the darkest slammers of professional isolation, the type of expulsion that I have felt on my skin too, considering that my excommunication from academia was due to speaking truth and truth only and thus upsetting both peers and people in power, all of whom collectively and willfully denounced Truth so as to prostitute their souls and reap rewards for their pockets and for their egos. But if you wish to hear the truth, this pervasive hypocrisy of the American culture, which makes it rot from its core, along with the Alphavillian zombification of spirits roaming through it, disseminating their devilishness into the most distant corners of the planet on the wings of presumed cultural supremacy, are some of the reasons why I decided to set off to America, the land where freedom, ironically, has gained a fascistic connotation, to fulfill my mission in life. Just as Frodo Baggins had to head nowhere other than to Morhordh, to the heart of the axis of evil in order to prevail over its forces, I felt as

¹³³⁷ Or “suckcess”, the way Bob Dylan spelled it in his video for the song *Subterranean Homesick Blues* from *Bringing It All Back Home*, Columbia Records (1965); retrieved from <http://www.youtube.com/watch?v=VY4HtQ-XJQE>.

if the same mission of traveling into the heart of this modern Jerusalem, the cultural and economic center of the planet, so as to reveal its rotten facets and draw the way to rejuvenate them and restore the divine light therein, was bestowed upon me. For, in my clairvoyant nightmares I could see the American culture spreading like cancer across the face of the planet; if you ask me why, I would cite three of its qualities that bear striking resemblance to those of malignant tissues: (a) excessive individualism, self-centered and covetous, showing no concern for the wellbeing of the neighbor; (b) callousness reflected in the unequivocal disparagement of inspired lyricism, almost as if being a poet, once the most revered quality a human being can have, is made equivalent to being a creep; and (c) spreading globally while caring little or none about preserving the integrity of the invaded cultures and saving them from descents into oblivion. Each of these three features of contemporary Americanism, of course, is a deviation from the values that used to make this culture great and globally unique, even if it is not so anymore. As for the individualistic spirit, its rugged and shortsighted current version is the deterioration of the type of individualism that typified American pioneers, social outcasts and lone wolves, Shanes riding off into sunsets, John Sloan's solo starboard dwellers¹³³⁸, Edward Hopper's urbanites of whom Jim Morrison would have sung that famous "never saw a woman so alone"¹³³⁹ line, or James Deans gazing at them atop rusty motor vehicles. For, how else to explain that I, whose personality has been a most genuine incarnation of this American image of a lone rebel, of a subversive dissenter, of one against the world amongst all the people I have met in this country, am nowadays most fiercely disparaged and hunted by the very same powers that perceive themselves emblematic of this authentic American individualism? These powers iron out the ripples of dissension less rowdily than the angry mob that "was shocked to encounter displays of the United Nations in school hallways"¹³⁴⁰, that disparaged "one-worlders"¹³⁴¹ and that shut down *The Black Flag: A Journal of Opinions* in 1960 at Fullerton College in Orange County after attaching the label "subversive" to it¹³⁴² - thus sparking the right-wing reactionism that would soon counterbalance the liberal movement all across the US, result in the election of a republican, Richard Nixon for the President at the least likely of times in the American history and be felt strongly on my own skin as an academic member of an ultraconservative higher education institution less than 10 miles away from Fullerton College almost six decades later - but they still do enforce conformity whenever a creative voice breaks the deadening pattern of uniformity. Since the times the House Un-American Activities Committee and its likes were busy homogenizing the modes of thinking of the populace by making the loyalty to the reigning ideologies compulsory, nothing much has changed at the fundamental level, that is, deeper than the level of the skin, the garments or the superficial vocal phrases, and the electronic banner displayed at the gates of the LAX airport in 2019, "Different is dangerous", speaks millions about the way dissidence is treated in the US: as an eradicable disease rather than a merit. Moreover, to endow the holders of the capital with the freedom to display individualistic traits, but to demand from those deprived of the capital to yield to the caprices of these higher powers has created a prostituted, submissive culture in place of the "land of freedom" envisioned by the pioneers. As for the pervasively prosaic pragmatism, it is so remote from anything lyrical that

Thoreau, Emerson, Edgar Allan Poe, Walt Whitman and John Muir must be spinning in their graves if they could hear the vacuity present in anything that comes out of the pen of journalists and writers from the days of beatniks onward. The ultimate message of *Moby-Dick* seems to have been implanted in the hearts of most American men and women, urging them to give up on pursuing big dreams and to lock themselves instead in chains of a more prosaic and predictable existence and get on with more mundane tasks – “choose life, choose a job, choose a career” and so on¹³⁴³ - lest they become as sour, spiteful and difficult to handle by the family and friends and the society as a whole as Captain Ahab, the chaser of Melville’s mysterious whale. As for the colonial thirsts, they are currently greater than anytime in this country’s history, albeit working through more clandestine and softer channels than in the past. Yet, until the cultural values exported to seize the attention of the aliens and allure them to the economic offerings of this country become tied to arts, philosophy, poetry, profound, not shallow technologies, and science with a soul, not science as the right hand of commerce, the foreign American influence will not cease to be noxious rather than salutary. To journey straight into the heart of this consumerist culture that disseminates toxic values across even the remotest corners of the planet is, clearly, the only way to save humanity as a whole from declining into pathetic states of being, states that must be an insult to the teachings of world religions and to the visions of seers and prophets all the world over, typifying heartless, self-replicating and pervasively malicious robots rather than truly divine emanations of life. No doubt that the metaphor of the expedition to Morhdorh applies to finding solutions to every problem in life; namely, travelling straight to its core, to the invisible and hidden foundations is the only ultimate key thereto. “For if the first fruit be holy, the lump is also holy: and if the root be holy, so are the branches.... While we look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal” (Romans 11:16... Corinthians II 4:18), as St. Paul the Apostle prophesied. Likewise, my aim in the adventure of life has been to travel down the visible stem of the appearances of the world and enter their foundations, bringing the light of salvation therein. And this light, as I have claimed, can be produced only insofar as balances are sustained. In this particular case, it is the balance between joyfulness and sadness that I have had in mind. Just as jazz is music beautiful but incomplete in its essence since it lacks the elements of mystical awe, pathos and sorrow in its exhilarating expressions, the same can be said for the American culture from which this musical genre emerged. However, if we pay attention to how innumerable musical streams have developed over time, we could conclude that expressions of sheer joyfulness, without any seeds of cosmic sadness and dark alleys of mystery in them, are incomplete. For example, the classical music developed from the overly light and jingly music of baroque ballrooms and pre-classical waltzes to romantic flights of the darkest passions, the great crossroad of which was certainly the music of Ludwig van Beethoven. One of his most popular romantic successors, Felix Mendelssohn-Bartholdy was, however, relentlessly criticized because of the emphasis on the fanciful on the account of the neglect of the emotional and the passionate. In the context of one of such critiques, the 19th century musical scholar, Frederick Niecks had claimed that “fancy is the lowest of the three art-producing faculties – the emotional, the imaginative and the fanciful”¹³⁴⁴, before he went on to recall John Ruskin’s view of it as something that “plays like a squirrel in its circular prison, and is happy”¹³⁴⁵, the statement that could be readily used to accentuate the

¹³⁴⁵ *Ibid.*

incompleteness of jazz as a musical expression of the human spirit. Namely, jazz experienced phenomenal progress in the forty years since its inception on the Mississippi Delta, having first become liberated by the bebop whizzes from the rigid confines of harmonies defined by the tune's chord progression and then substituted the naïve chord changes of the pop song format first with the modal harmonic structure and then with a complete freedom of expression, thus bringing itself closer to a veritable reflection of life, all together with its improvisatory character and the desire to express itself in incessantly novel ways that propelled it forward; however, owing to its failure to become infused with the spirit of awe, of mystery, of trepidation and of the evocations of profound somberness deep in its core, it went into oblivion and is, as of today, officially dead. If there is something to be learned from the death of jazz as, conceptually, the most advanced musical form that ever evolved on this planet, it is that the dark depths of depression are to be jumped into, not over. Music, so to speak, must not resist becoming creepier than it is, for on its infusion with ever more elaborate expression of gravity will the timelessness of its grace come to depend. And verily, countless little branches of the flourishing tree of human musicality demonstrate that their growth is being paralleled by such draws of inspiration from something dark and dreary moving through the mazes of our consciousness. Thus, ragtime, jig, cakewalk, boogie-woogie and the hoppy rock 'n' roll of 1950s and early 1960s ceded their ways to deeper and more awesome, in the literal sense of the word, songs and streams, as exemplifiable by Brian Hyland's Sealed with a Kiss, Harry Nilsson's Everybody's Talkin', which appeared in the movie Midnight Cowboy in 1966, Henry Mancini's Moon River that was sung by Audrey Hepburn in Breakfast at Tiffany's, the Rolling Stones' Paint It, Black, Don't Worry Baby by the Beach Boys, Phil Spector's Be My Baby, Beechwood Park by the Zombies, Burt Bacharach's Baby It's You performed by the Shirelles, or the dark I'll Be Back with which the Beatles unexpectedly closed their lucrative and light A Hard Day's Night. João Gilberto and Stan Getz endowed the sound of samba with a sense of sadness and melancholy, thus sowing seeds of timeless beauty therein. Julie Andrews sang a dozen songs in The Sound of Music, but a real bright sparkle in her exaggerated cheerfulness was the gloomy My Favorite Things, for which the musical is nowadays mostly remembered. Many jazz critics unanimously agree that John Coltrane's A Love Supreme stands for the greatest monument of jazz music, and yet with its prayerful solemnity and depth it went long way from the early days of bebop and swing. The melancholic sound of Miles Davis' trumpet likewise infused the overly druggy and shallow sound of bebop jazz with an eternal splendor and brought this musical genre to a whole new level wherefrom it began to rival the complexity of classical music for the very first time. The overly light and leisured, although still beautiful sound of the Beach Boys underwent a colossal change of the heart when they recorded Pet Sounds, which nowadays holds an undisputable supremacy within their plentiful musical oeuvre. The modern music should be indebted to the Beatles not for their early jolly phase, but for the later, far more serious one, spanning from Revolver to Abbey Road. Countless other mainstream artists established their artistic relevancy by similarly breathing compassionate sense of wonder and awe in their works, aside from the regular expressions of unbound joy that they may have carried. Louise Ciccone's Live to Tell presents one such monumental moment that now demonstrates seriousness and awe in what is otherwise considered as naively light and sunshiny synthesizer sound of the mainstream 1980s. Other examples may include the Bangles' Eternal Flame, Cindy Lauper's Time After Time, and Pet Shop Boys' Being Boring, which closed this musical decade, so to say, and raised the curtain for the entrance of the gloomy drum 'n' bass, jungle and weedy era of the 1990s. Johnny Marr mocked some of the British bands from the C86 compilation, including the Pastels, the Bodines and the Close Lobsters, who all sounded very similar to the Smiths, and denounced them

as “the clichéd indie vibe” mainly because their sound lacked the dark and the deep element in it; or, as he noted word by word, “It sounded like some weird Xerox of what we were supposed to sound like two years earlier. It might have our instrumentation, but it just didn’t have the darkness. Or the heaviness”¹³⁴⁶. Furthermore, the pentatonic music once popular in Asia gave rise to much deeper and more complex musical expressions, while the African tribal drums have given way to more passionate cries with a whole lot of pathos of African pop singers. Even the brightest pop songs that arrest our attention with their joyful sunny sounds and keep us stunningly amazed hide in the midst of them something deep and *awesome*, again in the real sense of the word, be it a bass line or a subtle harmonic turn or something else. For, without standing on the foundations of love, compassion and cosmically deep wonder, in all their somberness, all our expressions of joy would sooner or later crumble down. In spite of this, though, the mainstream American culture is still regularly posing gates to the inflow of any emotions that spring from sincere compassion, from heartrending sadness for the state of the world or from mystical awe, readily rejecting them as pathetic, cheesy and creepy, respectively. This comes as no wonder to anyone who has realized that this country has managed to redefine the whole notion of happiness from the biblical equivalence of happiness with “suffering for righteousness’ sake” (Peter I 3:14), “being reproached for one’s chastity” (Peter I 4:14), and “having mercy on the poor” (Proverbs 14:21), all of which are infused with careworn sadness that shatters our hearts to pieces and thus produces the enlightening glow of happiness, to that outlined by the Greek-American journalist, Arianna Huffington in her essay that explains why America is on the road to become a Third World country: “From the beginning, America has been dedicated to Life, Liberty, and the pursuit of Happiness... the happiness to be pursued was not the buzz of a shopping spree high... it was the happiness that comes from feeling good by doing good. But, in a spiritual fire sale, too often over the past fifty years, happiness has been reduced to instant gratification”¹³⁴⁷. To make things even worse, the American culture, beneath whose gnawing arcade I, its outcast, walk whistling that “I’m free to be whatever I, whatever I choose and I’ll sing the blues if I want”¹³⁴⁸, has even succeeded in selling this repackaged definition of happiness deprived of its empathic core all across the globe as one of its central products, alluring many to embrace this shallow, eye-candy, instant-smiley-pill image of happiness, leaving its true form as ultimately ungraspable as a fanciful cloud that tops the sky on a pleasant summer day. However, without being grounded in compassion and sacrificial love, the future of this culture does not seem bright, for it would continue to consider it quite ethical to be all smiles and seemingly radiate with joy, but with hearts, in fact, stony and hostile, alienated from others, posing barbed wires around rather than offering home and opening itself in truth and honesty to everyone. For, smiles on the American continent, regardless of how sincere and cordial they may seem to the inexperienced newcomer, do not emanate from the heart most of the time and do not signal the existence of empathic joys inside their bearers, but have rather evolved into sheer survival mechanisms, the way koalas and wolverines have evolved their sharp claws to keep their prey at bay and ensure sustenance for themselves and their progeny. The chance is, therefore, that all those genuine spirits who, like myself, aspire to become like children again, to find the way to the Paradise lost upon growing up rather than oppressively instruct the infants how to become awkwardly stiffened individuals, and who may thus look after embodying the authentically artistic Balkan nature, the way it was defined by the Serbian composer, Isidora Žebljan, that is, as “a

specific type of temperament and energy that yields itself with nothing to remain, that is not calculative; an art that screams when it feels like screaming, that, if it wishes so, also cries and sobs and laughs and frowns and punches; an art that loves, that hugs, that asks and gives, that is forceful in nature and, therefore, gallant and uncompromising, exactly such as we who were born here are”¹³⁴⁹, will be labeled as creeps and weirdoes by all but a small fraction of culturally and intellectually advanced American for many years to come. They would recognize the colossal degree to which the stiff adults are stuffy on the inside, as if knowing that were they to open their mouths and speak their minds honestly, with no inhibitions whatsoever, they would reveal to the world all the ugliness nested inside them and would fall into the ravines of rancor and the abysses of avarice that traverse their souls. This awareness, however, along with their countering this stiffness by letting all the emotional seasons, from the fieriest to the iciest, emerge freely on the surface of their beings, would produce a strong animosity among these parched and locked-up souls, who would try to persecute and punish them for their free-spiritedness on every possible occasion. Theirs is, therefore, bound to be the fate strangely akin to that of the Serbian tennis superstar, Novak Đoković, who was despite being arguably the greatest player of all times, a player who epitomized fair-play by clapping to the opponents midgame, correcting the referees’ wrong calls that went in his favor, gate-crashing the ethnic and racial boundaries off-court and sending hearts in all the directions after his every victory on the court, utterly despised by the Western spectators with respect to whom he nurtured a rather ambivalent relationship: on one hand, their stereotypical uneasiness he strongly felt as a burden and wished to soften with the outbursts of spontaneous expressions of his authentically Serbian emotionality, while on the other hand he perceived these very same - in his eyes flawed - westerners as authorities before which he ought to prove himself¹³⁵⁰. This, however, produced a thoroughly opposite response of the intended invocation of acceptance and adoration by the westerners; for, as if saying, “Who is he to show his emotions so openly when we make so much effort and look like fools by keeping it all tight? He must be whistling underneath his breath that line about ‘all these weird creatures who lock up their spirits, drill holes in themselves and live for their secrets - they’re all uptight, uptight, uptight, uptight, uptight, uptight’¹³⁵¹, so let us let him just go down the drain”, their great majority would withhold their affection for him and zealously root for the opponent, whoever he was¹³⁵². And yet the mission of the one determined to enlighten those who live in a state of ignorance, of course, cannot be to withdraw into a cave and break down under the pressure of asking “What’s wrong with me? Why don’t they love me?”¹³⁵³, the question I, myself, spun in vortices over many sleepless nights in this country; rather, theirs must be the mission of continuing to talk to these walls of ignorance all until they start to weep, hoping that, somehow, over time, they will begin to

¹³⁴⁹ See Sindromi nacionalnog poremećaja, Tamara Nikčević’s interview with Isidora Žebljan, Buka (2013), retrieved from www.6yka.com/mobile/novost/48207.

¹³⁵⁰ Note that this ambivalence is common to practically all progressive scientists, artists and thinkers in general – on one hand, in order to come up with progressive ideas, they must perceive faults in the ways by which the mainstream and their contemporaries approach their disciplines and thus intrinsically consider them backwards, while on the other hand they must rely on these very same individuals to provide the necessary approvals for their works to reach wider audiences and influence humanity.

soften up and become receptive to this illuminative display of exuberance that they were being gifted to see before their eyes. But until this blend of ecstatic joy and compassionate sadness becomes inculcated in the American mindsets, we will be bound to remain profoundly misunderstood, as every exhibition of poetic passion of ours will be seen as an instance of lunacy, whereas the flights of their own birds of spirit will continue to be far away from those of true birds of paradise. For, the tear of compassionate sadness, of sacrificial love for another, hanging from the corner of one's eye, a little and yet a mountainously great thing from which creative avalanches that its falling down one's cheek symbolizes may begin from, has been thoroughly missing from the American culture that I have witnessed. Yet, in that tiny little tear I could see a sprout for many trees of immense happiness in life to arise. For, "sad is the spirit that is not sad for the state of the world", as I commented after an article of mine was rejected because of its off-putting tone by the weekly UCSF magazine, Synapse, which has valued bubbly, airheaded writings more than profound critical observations, depicting a disappointing state of affairs for the entire academic world of the modern age, where honest inquiry and selfless excavations of the treasures of truth and beauty have been substituted with a stuck-up and self-centered entrepreneurial spirit, while me, myself stood there firmly believing that empathy with the miseries around us present an essential ingredient of the magic fuel that launches our spirit straight to the stars. As the end of this passage rapidly approaches, it is worth mentioning that this belief of mine conforms to perhaps the most beautiful definition ever given of Serbian people, which is attributed to an anonymous monk from the medieval times and which hints at Serbs' perpetually standing on the edge of fatality, yet possessing something undyingly beautiful within: "We, Serbs, are flowers on the edge of the grave. Something frail, tender and beautiful, always standing on the edge of something deadly and tragic, something that would define our place and help locating us until the holocaust"¹³⁵⁴. A twist to this remarkably accurate definition of the spirit that Serbs have traditionally embodied, being itself a twist to the ancient Indian description of life as "a droplet of water sitting on a lotus leaf", was given in the final shot of the Serbian cinematic classic from the 2000s, *Munje*, showing two characters sitting in a car that swings uncontrollably atop a tall building, one second having a gorgeous view of the world open before their bold, sublime selves and another second feeling as if they are unavoidably plunging to the ground, and so on and on as they swing with no end in sight, symbolically interrupting the tragicomic situation of theirs with an occasional eruptive cry: "Serbia!"¹³⁵⁵ In fact, the culture of poets and warriors, as I often call my native tradition, has implied that the emotional and the heroic, the flower and the grave, so to speak, must always go together, hand-in-hand, for had there been no Yin, emotional and artistic elements in one's personality, fed on empathy and love that tend to shake our beings from their cores, there could be no fully developed Yang, willful and powerful personality traits either. Without the snow-white and solemn ships of our attention drifting on a sea of compassionate melancholy and surrounded by the sunny joy that resolutely shines with love for the world and sparkly stars of glamour and wonder, no new and exciting lands could ever be journeyed to and discovered in our own Little-

¹³⁵⁴ See Lazar Džamić's Najčešći stereotipi o Srbima: 10 pojmova balkanskog mentaliteta, B92 News (November 15, 2015), retrieved from http://bulevar.b92.net/srpska-posla.php?yyyy=2015&mm=11&dd=15&nav_id=1063357.

¹³⁵⁵ In fact, while one of the guys screams "Serbia", the other one yells another classic line, "C'mon, play some music, *id'u pičku materinu*", evoking through the fog one of my grandpa's World War II stories, wherein he and his buddies, as the air raids began, would hop into the shelter, then gather guitars and drinks and throw a giant party, saying that if the bomb hits, at least they will be singing and dancing, to the end of the world, as it were. Hereafter I talk about poetry and martyrdom concocting in the pot of the Serbian soul, boiling its contents on the fire of passions and emotionality and yielding something hot but mellow by the end of the process.

Prince-like, hippy-hoppy-happy-go-lucky exploration of the spirit of the world, of that great and divine essence which pervades all things and upon which all visible things float and are sustained.

S.F.4.6. The lack of compassionate emotionality and the use of insincere language just so as to appear kind and polite and defend one's own positions in life, rather than being fully honest, openly direct and holding an entire ocean in one's heart, are a few of the reasons behind the fiery critiques that some of my European friends direct at their American contemporaries. Indeed, I have come across many people in my native country who insultingly criticized the American society because of its pervasive hypocrisies. They would, for example, recollect the scenes of American visitors being openly shocked by the way Serbian kids play with plastic machine guns and arrogantly adding that such requisites are almost strictly prohibited for the play of American children by their parents, pretending not to know that military expenditures of the US government surpass the educational and health ones combined by more than five times, that the US is by far the largest provider of weapons to the developing world¹³⁵⁶, that nine out of ten Republicans and one out of three Democrats in the US Senate are gun owners¹³⁵⁷, that an automatic gun for children, a.k.a. JR-15, branded with a logo showing two skulls sucking on a pacifier, is being legitimately sold in America¹³⁵⁸, that the major basketball team from the US capital, Washington, D.C., was legitimately named Bullets for 25 years, that machine gun advertisements are posted in the midst of some of the densest public spaces in America, that hundreds of thousands of American troupes are deployed in more than 150 countries and on all the continents of the world, using real grenades and machine guns to spread the economic, cultural and political influence of their motherland, that elementary schools prohibit the wearing of beanies and caps worn sideways¹³⁵⁹, but allow first-graders, like one of my daughter's classmates, to pose for yearbook photos in military uniforms, and that, ironically, the kids they reprimand for licking plastic knives and waving fake machine guns, such as those I get to see in my local playground in Belgrade every once in a while, have learnt to do so from none other but the very American movies. In fact, even the American YouTube kids channel, whose creators boast of it being a website free of any violent, adulterated content, keeps permanently posted a militaristic Bob the Train episode that is seen by dozens of thousands of toddlers and preschool children every day, teaching them through a song and funny animation about a bomber whose bombs "can destroy all targets on the land or in the sea", a transport helicopter that "carries the troupes through the air and takes them places far or near", an army truck that "delivers goods to the soldiers", and an armored personnel carrier that "carries military forces to the battlefield"¹³⁶⁰. This is a couple of decades after the gun ads - such as that I bumped into on the first page of a Disney's Super Goof comic book from 1973, showing a children's playroom and the photo of a shotgun with the ammunition and starting with "we'd like every boy

to have the thrill of owning a Daisy B•B gun” note¹³⁶¹ - littering popular magazines, from the kids’ to the adult ones, were faced with some restrictions. I, myself, standing before a life-sized ad hanging off one of the glittery walls at Las Vegas International Airport and showing a blonde with a broad smile on her face, holding a machine gun in her hands and inviting the visitors to come buy them from a local gun store and then “shoot from a real machine gun”, could not help but recall Erasmus’ words, “What had you to do with Mars, the stupidest of all the poet's gods, you who were consecrated to the Muses, nay to Christ? Your youth, your beauty, your gentle nature, your honest mind - what had they to do with the flourishing of trumpets, the bombards, the swords?”¹³⁶² For, when violations of freedom are invoked to fight back any weapon sale prohibition proposals to the congress, this adds one more nail to the coffin of freedom, a most sacred and beautiful notion in human vocabulary. As a result, the vulgarization of this notion in America of the 21st century is beyond comprehension and is rivaled only by that achieved by the enforcers of the erroneous etymological link between the Serbian political leader of the 1990s, Slobodan Milošević, and the meaning of his first name, that is, “free”¹³⁶³, which were, ironically, people who defiled my youth and made it resemble more of a prison cell than the sky fostering free flights of the birds of spirit. Related to this, the very next thing my companions may notice are the countless double standards of the foreign policy of the US, especially pronounced when it comes to its military engagements, including its insistence on prosecution of war criminals all around the world while committers of My Lai and many other massacres for which US forces were found guilty freely roam the American land, and its penalization of any countries with nuclear weaponry programs while it, on the other hand, committed a never penalized genocidal nuclear assault against the people of Japan in 1944. And yet, it is exposers of war crimes that are being chased by the American security agencies all across the globe as safety threats, when their information could be used as precious evidence helping the prosecution of US Army leaders responsible for crimes against humanity committed during military operations abroad. This, needless to add, would be an act of good will contributing to creation of a safer and happier planet overall. In contrast, however, the state we are in is such that America, to a considerable extent, continues to act in a similar fashion as racketeers from my hometown, Belgrade did during the civil war of the 1990s, offering military protection against an enemy, real or imaginary, in exchange for some material goods via various trade treaties, be it oil from Saudi Arabia, minerals from Kosovo or vehicles and electrical machinery from Japan and South Korea. Then again, why is it that the US is a proud chaser of terrorists all over the globe, but, on the other hand, it readily terrorizes innocent citizens of entire countries by imposing economic sanctions thereon or sending choppers and warplanes to hover over their heads, may be the next remark of theirs sent out to echo through the air. For, if we recall that terrorism is defined as the use of violence and intimidation in the pursuit of political aims, it could be immediately concluded that the US as a country, is partially terroristic, just about as much as the insurgents that it is after are. Regardless of my stating calmly that American foreign operations need not be necessarily the corollaries of bad intentions, but that the cordial wish to bring peace where hostilities causing human suffering reign may rather, like all benevolent philosophies, turn into a utilitarian machinery after a while,

¹³⁶³ “Slobo, slobodo” was a common chant at the pro-government rallies in the 1990s, with “Slobo” being Milošević’s nickname, short for Slobodan, and “slobodo” meaning “freedom”.

when peacemakers lose view of their original purpose and begin to focus on self-interest in lieu of a selfless imposition of a peaceful state of affairs, the pitiless condemnation of this vile strategy would continue to flow through the air, like fumes from a dragon's lair. Next on the line of disparagement would be the hypocrisy of claiming to "defend" the country by invading corner after corner of the globe outside of it and setting up army bases and money-centered corporations all over it. Like the plonker who elbowed me on a soccer field in Irvine after nearly a hundred hours of us playing together and almost struck my heart out, after which he noted remorselessly that his act was the one of self-protection, ignoring all the while that I am not only the one to always raise my arms to signal no mean intentions to a player in a duel, but also usually the most empathic player on the field, the first to go and help an injured player and the one who always applauds the opponents and roots for their squad when they start losing, the US with respect to its militarism is very much the same, justifying aggressive foreign operations as self-defensive ones, while ignoring the fallacy and injustice of this approach. This inherently bullish attitude was perfectly portrayed by the face of Donald Trump, the US president, buttoning his jacket right after he shoved the Montenegrin prime minister at a NATO summit in Brussels from behind to come to the front of the group¹³⁶⁴, the face that is bound, sooner or later, to transform into that of General Buck in Kubrick's *Dr. Strangelove* when he realizes that the path toward a complete wipeout, a total destruction of humanity, and a triumph of fatuity and ugliness over reason and beauty, paved by this thuggish arrogance, cannot be avoided anymore. The very same bullishness came out of the opinion of the former CIA director, John Brennan, when he described his agency's approach to dealing with alleged bullies, which is that "unless they get their nose bloodied a little bit", they would not stop intimidating and so "Mr. Putin really needed to get his nose bloodied and it would have caused him to back off because like most bullies, he knows that he can't stand up to others – it's a lot of bluster"¹³⁶⁵, ignoring all the while that resorting to bullying in response to bullying, especially that which itself may be response to bullying in response to bullying in response to bullying and so on *ad infinitum*, is an equally belligerent expression as that which it attempts to suppress, an attitude with which, as Mahatma Gandhi would have said it, exchanged is "eye for an eye", with the whole world soon going blind. Related to this denouncement of militaristic invasiveness under the pretense of self-defense may also come the various hypocrisies pointed out by the Russian-American journalist and political analyst, Vladimir Pozner¹³⁶⁶, including (a) the American readiness to start World War III by setting out to destroy the Cuban missiles supplied

¹³⁶⁶ Watch Vladimir Pozner's lecture at Yale University, How the United States Created Vladimir Putin (September 27, 2018), retrieved from <https://www.youtube.com/watch?v=8X7Ng75e5gQ>. Admirably, countering the "cancel culture" of his times, the term that, like many today, presents but one of many recycled terms of the past, including "disposability" of which Cerys Matthews sang in her ode to the shallow Californian lifestyle, *Dead from the Waist Down* ("We chose to court and flatter greed, ego, disposability, I caught a glimpse, and it's not me", In: *Catantonia, Equally Cursed and Blessed, Blanco y Negro*, 1999), Pozner ends the talk by citing the German Nazi commander, Hermann Goering during the Nuremberg trials: "Naturally, the common people don't want war... but it is the leaders of the country who determine the policy, and it is always a simple matter to drag the people along, whether it is the democracy or a fascist dictatorship or a parliament or a communist dictatorship. Voice or no voice, people can always be brought to the bidding of the leaders. That is easy. All you have to do is tell them they are being attacked and denounce the peacemakers for a lack of patriotism and exposing the country to danger. It works the same in any country".

by the Soviets in 1962 because of their proximity to the United States while finding it acceptable that the American troops be deployed near the borders of Russia, (b) the complain about the possible Russian interference with the 2018 elections in the US while having the US regularly intervene in elections in various countries of the world, and (c) the fact that the US righteously denounces the government censorship in a country such as Russia or Serbia during the Milošević reign, but fails to look deep enough into its own backyard and realize that the corporate censorship in it has been equally strong and detrimental to the genuine preservation of liberties and democracies, the values by which, as it appears, this country swears but seldom lives up to. Neither can the point that money is the central commander over decisions made by the leaders in any social sphere in this country that some may christen “an economic trade area of 325 million people who essentially hate each other and are held together by force”¹³⁶⁷ be avoided after one realizes that the bond between the former first man and the first lady of America, Donald and Melania Trump, presumable role models for the people of this country, is nothing but money, that object of avarice that has enslaved the true wealth of humanity, from knowledge in entrepreneurial academia to spirit in corporate churches to goodness of goods produced by today’s industries devoid of humanitarian values in their unscrupulous searches for financial profit and profit only, earning America the nickname Nina Simone attached to it when she left it for good: “United Snakes of America”¹³⁶⁸. When it comes to nicknames of this kind given to the USA, another one that stands out is the United States of Denial, which was used in a lecture by Sarah Schulman at one of the first LGBTQ conferences, held in 1990 at San Francisco’s Cathedral Hill Hotel, not far from my Nob Hill abode. This phrase was used with the goal of urging people to recognize the widespread mental repression spreading like plague across this country and resolutely stand against it; or, as Sarah, herself, said on that day, March 3, 1990, exactly 23 years before my son, Theo, would be born in SF, “the image created by the male intellectual model of an enlightened elite who claims that its artwork *is* its political work is parasitic and useless for us. At the same time, I don’t think that any writer must write about any specific topics or in any specific way – writers have to be free of formal and political constraints so that the community can grow in many directions. But when they’re finished with their work, they need to be at demonstrations, licking envelopes and putting their bodies on the line with everybody else. We live in the United States of Denial, a country where there is no justice. The way we get justice is by confronting structures that oppress us in the manner that is most threatening to those structures. That means in person as well as in print”¹³⁶⁹. The rise of oppression in all these social domains that feed on freedoms, as my critical compatriots are further bound to notice, is in opposition to the traditional celebration of these very same freedoms by the enforcers of this oppression, who continue to blatantly swear by “the land of freedom” that the US Constitution has destined America to be. And to anyone who persists in having faith in this freedom where all that there was left of it rots in slammers shackled by the fetters of money and prestige, the lyrics from a song by Steely Dan can present a wakeup call: “I

¹³⁶⁸ In a similarly derogatory mood, upon his release from the mental hospital and arrival at Naples in 1958, Ezra Pound, asked by a journalist whether he was released from the mental institution for good, remarked, “I never was. When I left the hospital I was still in America, and all America is an insane asylum”. See the Wikipedia page on Ezra Pound retrieved from https://en.wikipedia.org/wiki/Ezra_Pound (2020).

heard it was you talking ‘bout a world where all is free, it just couldn’t be and only a fool would say that”¹³⁷⁰. Right after these points, rhetorical and musical, they may resort to a founder of the World Wide Web, Tim Berners-Lee’s accusations of the US government for hypocritically denouncing repressive leaders elsewhere on the planet for using Internet to spy on people, while doing exactly the same behind the closed doors¹³⁷¹. In this alleged land of the free, not only do federal security agencies engage in surveillance of people through various electronic communication channels, but, even more critically, private corporations do the same, surveilling the users of the Internet to an extent that may be unrivaled by the surveillance run by even the most authoritarian countries in the digital domain¹³⁷². Then, my hypercritical friends could be similarly heard sharing the sentiment of many progressive political dissidents on the American continent who have claimed that “people who are quickest to mock, ridicule, and denounce dissenters in America are the same ones who come out of the woodwork to ‘defend human rights’ elsewhere”¹³⁷³, referring to the double standards with which the US interacts with the rest of the world on the political plane, condemning actions that are approved of or excused when performed on their home soil by the American compatriots. For example, while the US is considered by many to have supported the breakup of Yugoslavia¹³⁷⁴, once home to the unprecedented spirit of

¹³⁷⁴ For many, the key support for the breakup came indirectly, through the interventions of the Ronald Reagan’s administration and the International Monetary Fund (IMF) and the World Bank in the late 1980s, which ordered devaluation, wage freezes and price decontrols to drive the wage rates down to internationally competitive levels (See Criton Zaokos’ IMF’s Shock Therapy is True Culprit in Former Yugoslavia, World Socialist Web Site (1999), retrieved from <https://www.wsws.org/en/articles/1999/04/imf-a17.html>). This, however, contracted the economy, reducing the revenues to the central government, which prompted the IMF to raise the taxes to restore the federal budget, producing a backlash among the local state governments, which then created a series of measures to divert the flow of these taxes to federal funds, thus creating the first fissures in the fabric of the federal constitution, only later to have the ethno-nationalist rhetoric added to the table. The massive devaluation of the Yugoslav currency, dinar, from \$22 in 1986 to €11 by December 1989 occurred during this process. Subsequent economic reforms heralded by Ante Marković, who sought the gradual transition to market economy while preserving the integrity of the country were not met positively and did not receive the requested financial support from the IMF, leading to the further drop of the dinar down to half-a-cent by December 1991, which is another reason why many blame the American influence for the breakup of Yugoslavia. For others, this influence came in the form of an unilateral approach to the solution of the Yugoslav crisis in the midst of the civil war, blaming only one side for it when the case was apparently all but black-and-white. Finally, in search of a blatant evidence, according to some, one need not look deep into top-secret files. The fact that the US soccer national team went down in history as the first out of 200+ FIFA members to have played a soccer game, be it friendly or official, against a non-independent country, that is, Croatia while Yugoslavia was still intact, on October 17, 1990, to fierce opposition of the Serbian soccer federation (See Jugoslavija rušena i kroz fudbal – Hrvati 1990. odigrali prvi meč sa SAD, B92 News (October 17, 2018), retrieved from https://www.b92.net/sport/fudbal/vesti.php?yyyy=2018&mm=10&dd=17&nav_id=1457131), is perhaps sufficient to hint at this intention to support the separatist aspirations of the Slovenian, Croatian and, finally, Bosnian leaders in Yugoslavia. Still, the adding of the fuel to the fire by the foreign factors notwithstanding, Yugoslavia broke up primarily from the inside out, due to the sudden rise of historically backed nationalism, demonstrating the explosive rate at which a relatively progressive society can sometimes regress.

solidarity and camaraderie in spite of the ethnic, linguistic and religious diversities that it gathered under one hat, “the odds of the American government granting any state permission to go its own way are on par with winning the lottery while getting hit by a meteor while seeing Bigfoot while finding gluten-free pizza that tastes like the real thing”¹³⁷⁵, as pointed out by an American journalist. Likewise, the criminal engagements and the political corruptness of Slobodan Milošević, the Serbian president at the time of the bloody breakup of Yugoslavia, and the thuggish tycoons he gathered under his umbrella aside, against whom I fervently protested day and night, risking my life and my career along the way, all through my teens and early twenties, my fellow condemners of all things American might be next heard noticing out loud that this leader so intensely vilified by the American media, despite his infamous rally statement that “we”, meaning Serbs, “may not know how to work, but we sure know how to fight”, which regressed the cultural makeup of the Serbian nation for many decades to come, actually never ordered the beatings of student protesters who, including myself, protested against his rule vigorously, which is so unlike the literal shooting of students on campuses such as those of Kent State and Jackson State Colleges upon their protesting peacefully against the American engagement in wars in Vietnam and Cambodia. As expected, this did not prevent the average American ignoramuses to believe that theirs is the country with unprecedented human rights and that the rest of the world need be conquered and taught to “think as I think”¹³⁷⁶, thus endangering its cultural diversities and putting its socioeconomic prospects at stake. Alas, sanctimoniousness installed itself quickly in the American politicians’ and public personas’ hearts, turning them into haughty preachers who give lessons on equality and human rights all over the planet, occasionally saying things such as “the Europeans were behind the Americans when it came to accepting equality”¹³⁷⁷, while disregarding that the racial discrimination in the US was made illegal in 1964, 3 years after the Non-Aligned Movement was founded in my hometown and 130 years after the Article 118 from the Serbian Candlerman Constitution declared any slave who stepped on the Serbian territory to be instantly freed¹³⁷⁸, that not so long ago the US committed a genocide by throwing atomic bombs onto innocent Japanese civilians in Hiroshima and Nagasaki, that only 0.8 % of the American population consists of the descendants of the natives to this land, and that inequalities are embedded so deeply within the politico-economic fabric of the American society that their role as a driver of the materialistic progress is being callously utilized by the powers that be. In fact, it can be argued that the ratio between the quality of life of the privileged descendants of the pioneers and that of their slaves during the times when slavery was legit on the American continent is not significantly different, if not being even lower, than the ratio between the quality of life of the so-called 1 % versus that of the working class in this land where freedom is an illusion and a word colloquially used barely to mask one or another form of lasso tied around the poor and the middle-

See also the Wikipedia article titled Timeline of Abolition of Slavery and Serfdom at https://en.wikipedia.org/wiki/Timeline_of_abolition_of_slavery_and_serfdom, where it says that as of 1835, “Freedom (is) granted to all slaves in the moment they step on Serb soil”.

class people's necks. In other words, it is likely that the ruling class has recognized that controlled social inequalities are directly proportional to the rate of economic and technological progress, all until, at least, the system implodes once and for all under the weight of animosities caused by these inequalities spread so leisurely on the bed of materialism. Dehumanization of people and the destruction of the cordial connections between them dampens the pressure of inequalities that threaten to burst this social bubble, whereas the promotion of honesty as uncool and sly sanctimony as cool is an important contributor to the preservation of huge distances between human hearts in America and, thus, to the resistance of the bubble to this pressure. This is how America ends up with a situation where a singer, namely Lady Gaga, promotes equality and rights for the poor at a major political rally in November, sings the national anthem at the inauguration of the country's new president in January two months later and then in February offers half a million dollars in rewards to whoever helps in finding her two stolen bulldogs, Koji and Gustav, and only in a follow-up message thanks her dog walker who received four bullets by the thieves and fought for his life at that very instant. However, this nurturing of materialism and empathic hollowness on the backbone of the alleged care for higher moral values has become more of a rule than exception in today's America, especially among the people of influence. For, as one of my compatriots noted once, in America, everything is democratized except money and power, which are being monopolized, remaining in the hands of but a few and speaking millions about the hypocrisies that rule this land. In fact, in this vastly duplicitous land in which sugarcoated phrases rest on the lips and backstabbing intentions in the heart of the majority of dwellers on it, so my friends might say next, one should make sure to recognize the hypocrisy of renaming the phrase Merry Xmas to Happy Holidays and bashing all those who still use the old phrase, while still celebrating none other but Christmas as that very same Holiday in question. By reminding me of this superficiality of political correctness imposed on the American continent, which most often rests at the level of words and does not even graze the essence, these keen faultfinders would immediately appeal on my memory to bring back the images of post-Xmas SF streets lined up with dead young pine trees, a million-word-worth portrait of hypocritical dwellers of the given city of tree huggers. Many of them might tell you then that this instance of tree-hugging hypocrisy comes nowhere near that surrounding the infamous Hetch Hetchy project, as a part of which one hundred years ago, in 1913, a dam was built that flooded one half of Yosemite National Park. Built and preserved over the years on the back of a predatory political clout, the cause of the first large environmental dispute in the US, O'Shaughnessy Dam led to an irreversible destruction of wildlife habitats and wastefully uncurbed usage of its water supplies even in the midst of historic droughts. During one such drought, of 2014, for example, double standards, so typical of the mainstream American governances, became employed with water restrictions being imposed on Californian farmers in the name of biological species conservation, while SF Bay Area residents continued to enjoy unlimited supplies of this vital resource thanks to tapping it with an ever more environmentally destructive effect from the Hetch Hetchy Valley¹³⁷⁹. Another image simultaneously popping up on the screen of my consciousness would be that of people boasting with a lifesaving pretense in front of overflowing compostable and recyclable garbage cans, when, on the other hand, they remain blind to the fact that by spending more than the planet can sustain they damage the chances for prosperous living of future generations with every breath they take. This short excursions into the environmental realm in search of the survival-threatening hypocrisies that it brims with reminds

¹³⁷⁹ See Chriss W. Street's Lawsuit Accuses San Francisco of Environmental Hypocrisy, Breitbart (August 22, 2014), retrieved from <http://www.breitbart.com/Breitbart-California/2014/08/22/Lawsuit-Accuses-San-Francisco-of-Environmental-Hypocrisy>.

me not only of that “underwater guy who controlled the sea” and who “got killed by ten million pounds of sludge from New York and New Jersey”¹³⁸⁰, but also of a bud who visited America from a relatively desolate Serbian village and who would be saying for years after his visit that the most impressive thing he saw in the New World were chopped bananas and oranges enwrapped in plastic packages and sold as such in supermarkets. The sight of this “modern marvel”, albeit deeply set within the blind spots of most westerners’ psyches, made him wonder endlessly about the fallacies of a society that preaches environmental preservation, but then strips this basic fruit of its natural protective coating, which is fully compostable, and substitutes it with unnecessary plastic packaging, which takes thousands of years to degrade and precious resources to produce. He and his friends may also be heard mentioning an equal abhorrence of these American visitors over the habit of Serbian parents to send their kids to the store to buy beer for them or even drink it in front of their and other kids, while these very same American parents massively indulge in excessive drinking at parties and in bars. Theirs is the country in which some states, such as Illinois, prohibit underage persons to even touch the bottles of alcoholic drinks, needing the assistance of adults when working in a grocery store to place drinks on shelves or hand them over to customers, while on the other hand pharmacies, such as Walgreens, sometimes hold the collection of alcoholic drinks at display and on sale greater than the regular supermarkets and most liquor stores¹³⁸¹. Americans, furthermore, they say, as strangely as this may sound, have even succeeded in vulgarizing cursing words, the words from the human vocabulary that are the least prone to hypocrisies, the words in which “there are no lies, as opposed to sugarcoated words and all other lies in which we live”¹³⁸². For, swearwords, as they deem, are to be used as verbal channels for venting the steams of passion inside one, as tempestuously as it can be, as opposed to being used as coldblooded adjectives, as American liberals do it on a regular basis, having thus infected foul mouths, those rare heralds of honesty in human language, with the virus of hypocrisy too. They would then appeal to our memory of the US presidents’ traditionally, every Thanksgiving Day, the day, incidentally or not, in honor of the pilgrims who slaughtered the Native Americans who had brought them food on their plates to save them from starvation, pardoning two turkeys in the White House while millions of these birds end up being baked and eaten by the Americans on that very same day, wishing to let us think of how many spirits on this continent attempt to be similarly ravaged on daily basis while the tops that represent the ravagers hypocritically hold lifesaving smiles on their faces and words of utter benevolence on their lips. Thanks-Killing Day is thus the name Morrissey, an aggressive advocate of strict vegetarianism, assigned to this traditional American holiday¹³⁸³, outlining its etymological fallacy, whereas, on the other hand, many may point out that his playing live music for the meat-eaters he so intensely despises and, in return, accepting bestowals from them, mirroring the army of organic-food-proponing liberals inhabiting SF, who stomp over any worldviews that differ from their own and, as such, live up to the ideals of utterly tolerant and all-accepting liberalism in their heads only, holding a handful of liberal convictions therein but living not even slightly according to them, constitutes yet another act of hypocrisy, which is to remind us that a sin we judgmentally finger-point in others is usually the

¹³⁸⁰ Listen to the Pixies’s *This Monkey’s Gone to Heaven* on Doolittle, 4AD (1989).

¹³⁸¹ In the dozen of blocks surrounding my residence in the Lincoln Park neighborhood of Chicago, Walgreens on the corner of Diversey, Broadway and Clark streets had the largest choice of alcoholic drinks on sale, more than any liquor stores or nearby supermarkets close to it, including the Market Place and Trader Joe’s on Diversey Street.

¹³⁸² See the comment by дpаgаn on Kovač objasnio zašto je opsovao na tajm-autu, B92 News (October 12, 2019), retrieved from https://www.b92.net/sport/komentari.php?nav_id=1602854.

¹³⁸³ See Morisi: “Nema razlike između pedofilije i jedenja mesa”, B92 News (January 5, 2014), retrieved from www.b92.net/zivot/vesti.php?yyyy=2014&mm=01&dd=05&nav_id=796617.

very same one that has gripped our whole being from the inside. To make things worse, these pervasive condemnations of one's planetary brethren by the modern liberal are paired with the current epidemics of the lack of empathy fueled by the alienating effect of high technologies. As a result, people denounced by these so-called protectors of social values are usually thrown down the cliff, heartlessly, and wished never to be seen again, as opposed to being stood by and nurtured to change with an angelic care, thus revealing yet another form of hypocrisy tied to this new generation of liberalism, namely that of pretending to care about the society and to live with one's heart and soul to change it for better, when in reality this care and these noble aspirations are as thin as the edge of the knife. Plus, if we remember that "whenever you say, 'That isn't right' or 'That's not fair', you're being violent"¹³⁸⁴, we should know that this knife is always on the edge of being pulled by the supposedly peacemaking modern liberals in a manner similar to that of Radha Chandrasekhar: "'Imperialist'... 'the West'... 'bourgeois'... 'capitalist'... these words would fly from her lips like tiny little swastikas, her knuckles turning white, her jaw clenched, her eyes hard as Siberian pickaxes as she sentenced most of the world to the gulag for their crimes against ideology. Any counterargument was met with contempt, the automatic response of the recent convert. 'Trickle down! It's trickling up, for God's sake!', or 'Do you think the workers are so stupid they can't manage their own factories?' or 'Have you talked to any peasants about that?'"¹³⁸⁵ And yet, how in the world this desire to flatten the ideological lays of the land and dumb down the differing points of view can claim the attribute of "liberal" is a problem that only the future generations of progressives will be able to solve. It will be up to these future problem-solvers also to find out how a social and political philosophy built on ideals such as "(open) access, free speech, transparency, equal opportunity, publicity, and meritocracy"¹³⁸⁶ could deteriorate into one implementing their exact opposites. Liberalism, therefore, as it stands today, is a philosophy of hypocrisy enacted by the grabby careerists and other opportunists and yet another one in a streak of ideologies that underwent the conversion from beautiful in theory to menacing in practice. One unfortunate consequence of this failure of liberalism at its most fundamental epistemic levels is its fall from the grace of depth and into the ravines of deadening superficiality. As a result, even in the most progressive centers of the American culture, such as SF, liberalism has become limited to the surface only, usually applying to freakishness in external appearance, vacuous extravagance, unconventional sexual orientation and mild outlandishness within narrow and well-defined norms of behavior. And yet, while the appropriate attire and minor nutritional or sexual preferences are discussed at length among the supposed liberals, the planet is deteriorating at far deeper and more global levels, namely from within the human hearts and in polluted forests and rivers, silently as it were, just as Rachel Carson wanted to insinuate in *Silent Spring*. However, the mainstream liberals, with the herd mentality of a mountain built into their brains, are too preoccupied with discussing the issues with Safeway broccoli or transsexualism in Duboce Triangle to be able to notice this deterioration of human values and the biosphere, which lies far out of their shortsighted views. When someone, like my SF friend, Piper, posts a United Nations report on climate change as the link to a take on the 2022 Oscars slap incident worth reading, it is a commendable, but also futile attempt to glue the attention of the masses onto issues that are far more pressing than the

¹³⁸⁴ See Rajeev Balasubramanyam's *Professor Chandra Follows His Bliss*, Chatto & Windus, London, UK (2019), pp. 57.

¹³⁸⁵ *Ibid.*, pp 164.

¹³⁸⁶ See Gabriella Coleman's *Coding Freedom: The Ethics and Aesthetics of Hacking*, Princeton University Press, Princeton, NJ (2013). Cited in Miriam Matthiessen's and Anne Lee Steele's *Rendering Supply Chains Research and Its (Dis)contents: An Anti-Paper on Open Knowledge and Maintenance as a Research Ethos*, *APRJA* 11 (1) 10 – 27 (2022).

trivial ones, sexual preferences included, that they are busy discussing today, resembling that grandma from a popular Serbian proverb, who “combs her hair while the village is burning”¹³⁸⁷. Because deep down all these publicity stunts channeled through the mainstream media and talks about rights revolving around sexual orientations and freedoms serve the purpose of a veil, which the powers that be hold in front of the eyes of the public so that the deeper issues where human rights and the rights to life of millions of species to which this planet is the only home can go by unnoticed. For example, when Gavin Newsom and the governance of California refused to do business with Walgreens because the pharmacy chain stopped dispensing contraceptives in different states¹³⁸⁸, it was only one out of many instances of handwashing – not literal, of course, but moral and metaphoric, akin to that performed by the likes of Pontius Pilate or Shakespeare’s Lady Macbeth – where this alleged respect of human rights served the role of a veil that hides from public view the nil job securities under the at-will capitalist rule not only at Walgreens, but in every business in this country. Similarly, when the neoliberal mogul and the former US president, Donald Trump, was brought to court in the wake of his presidency, to a ridiculous media attention, it was neither because of inherently unfair capitalist practices nor because of possibly provoking a new civil war by encouraging the protesters to storm the Capitol, but rather because he was being sued over a confidentiality agreement he cosigned with, symbolically, a porn star¹³⁸⁹, by no means an exemplar of chastity. This bizarre case of inverted priorities is sufficient to make any thinking brain wonder in which direction this country is heading, including myself, who was being fired for political reasons from work despite being the best performing faculty in research at the entire university and was told afterwards, by the legal advisors that the times were not right, if they had ever been, for all those who were neither women nor minorities, but whose careers had been nevertheless shut or suppressed for political reasons to seek compensation from their employers through the court because they would, simply, not get it. What additionally underlies this prioritization of queer sexual preferences over ecology or the rights of the working class is, of course, nothing other but the evils of capitalism, given that there are direct financial interests emerging from the appeal to young consumers obsessed with sex as opposed to nil such interests associated with the preservation of natural resources and biodiversity, let alone with the topics of religion, spirituality, moral virtue and all other essential ideas that are virtually evicted from the contemporary discourse. But how sad and disappointing it is that these inverted priorities bring people down to the level of animals rather than closer to angels, demonstrating how money can be a guide only on a downward path, but not the path that soars us to sublime skies of emotion and intellect. Hence the wittiness of a responder to the complaint of a couple of Londoners about the train operator’s greeting “ladies and gentlemen, boys and girls” at the beginning of the ride and thus allegedly insulting people with a non-binary sexual orientation, saying that perhaps he should have added “animals”¹³⁹⁰ to his greeting and all would have been fine. For, in the end, when the freedom fights of the ostentatious liberals revolve around sexual identities while the planet is soaked in angels’ tears over the physical, mental and spiritual diseases striking humanity, then there is no other epithet but that of animals that such people righteously deserve. At the same time,

¹³⁸⁷ “*Selo gori, a baba se češlja*”, is a common Serbian proverb.

a fundamental paradox is being overlooked, namely the fact that the LGBT+ social movement arose from the aspiration to break down the categorization of people based on gender and “challenge dominant constructions of masculinity and femininity”¹³⁹¹, but has now evolved into a state where heterosexuals feel obligated to declare themselves with a “him” or a “her” pronoun in their email signatures, allegedly so as to help people with queer sexual orientations to freely denote their sexual identities as well. As strangely as it seems, this movement to cancel the sexual classifications has led to an uncontrolled growth of such classifications and sub-classifications, creating preposterous acronyms such as LGBTQIAUCT_s2S_aPHO and turning into yet another phenomenon hiding in it the sprout of the idea that whenever a movement goes mainstream, its essence gets corrupted and it strays from its original mission into a diametrically opposite direction. And like the adverse effects of consumerism on ecology, neither are the rights of the working class the subject of discourse and concern for today’s liberal mob, even though they shrink almost daily in the hands of the aforementioned people in power, who work slyly behind the veil of pretense, allegedly respecting human rights by prohibiting on the paper the discrimination of people with unusual sexual preferences, racial minorities and women, but then leaving workers virtually rightless, oftentimes devoid of the pension support, health insurance and other benefits, let alone severely underpaid compared to the corporate managements. Any balancing acts from the perspective of diversity that people from these higher administrative strata do is under the pressure of regulation, which is provisional at best, that is, such that should this pressure ever be removed, these folk would be quickly back to commitment to their good old exploitative and abusive business practices. If anyone wonders why, for example, women have been the most employed minority in academic workplaces through the federally or state supported affirmative action plans and why people with disabilities, physical or mental, have been ignored in just about the same way as Big Pharma ignores to develop drugs and medical devices for rare diseases, that is, because of the low patient populations and, thus, low potential for profit, it is not because men in charge have recognized that virtually every human society through the present and past has been sustained on the shoulders of women, whose contribution has been symptomatically misstated and whose professional development hampered by the virtue of their being tied to child rearing and household maintenance, but rather because many, if not most, of these male administrators are, based on my experience, creeps in their heads, who would always pick a women in lieu of men to show off in front of, just like college rugby players boast and burst on the field best when cheerleaders and female classmates watch them from the sweats. This and the common lack of independence of stereotypical female scientists comply with the territoriality of their male counterparts’ handling of the workplace and the profession, which is done at the dire cost of leaving out many other minorities, including people with disabilities or other medical conditions as well as people with queer ideologies and queer types of behavior, out of the equation simply because they are not vocal enough or do not have a sufficiently powerful political backing to support their rights. It is thus, through this disparity between the talk and the walk one walks, that the liberals in America, who should be nurturing freedoms of all types, have turned into the most dogmatic breed of people on these grounds, most prone to diabolic *ad hominem* argumentation and more obsessed with the material wealth and the surface appearance than their conservative nemeses have ever been. And if Alexander Lowen was right when he defined narcissists as people “more concerned with how they appear than what they feel”¹³⁹², then this warped understanding

¹³⁹¹ See Mary Bernstein’s *Identities and Politics: Toward a Historical Understanding of the Lesbian and Gay Movement*, *Social Science History* 26 (3): 531–581 (2002).

¹³⁹² See Alexander Lowen’s *Narcissism: Denial of the True Self*, Simon and Schuster, New York, NY (1984).

what liberality means amongst those self-proclaimed liberals is tied to the global rise of narcissism as a personality disorder. Differing from social standards by significant amounts and in more profound directions, such as in terms of one's theosophical views or with regard to one's amiable intrusiveness and peering imaginatively behind the walls of ego and into the Garden of Eden that each surrounding personal space is, then touching the objects of fond memories, lying at the rocky bottoms of emotional seas, gently caressed by their waves, all in the spirit of the Little Prince's interplanetary journeys fueled by the energy of cosmic Love, will be, on the other hand, heartlessly ostracized by the society, like a beautiful ripple that glistens with sunlight and reflects it straight into our eyes, but is surrounded by the forces of the mainstream that work in the direction of ironing it out and merging it with the smooth, unidirectional flow of its neighbors. Still, true liberalism, a genuine concern about human rights and the wellbeing of another, is deep-down a social philosophy that begins and ends with looking deep into the eyes of this fellow another. This ideal, however, which appeared to have been sprouting into something beautiful in the 1960s, was let drown in the mud of Woodstock and the dust of Altamont¹³⁹³ in the summer and fall of 1969, respectively, ceding place to shallow and phony liberalism of racial equality, sexual freedoms, unconventional attires and extravagant behavior that the 1970s brought to the American doorstep, followed by the revival of fiscal conservatism and egotistic aerobics in the 1980s. As the note I glimpsed on the wall of the Broad Museum in Los Angeles, written next to Cady Noland's silkscreen ink called MR. SIR from 1993 said, "She sought to hold up a mirror to a superficially prosperous but complex country that had willfully unlearned the social, economic, and political lessons of the 1960s and 70s". For, indeed, all the progress that America made in these two decades got erased in the 1980s and, culturally, this country has not moved forward by even an inch since then. Rather, it continues to depart farther and farther from the humanistic horizons that seemed within reach around the time the man landed on the Moon. A big hole was thus left in the place of this powerful liberal ideology that never really was and there is nothing, really nothing in sight with a prospect to take its place except a distant hope that the ongoing rise of right-wing politics, cutthroat capitalism, widespread alienation, cunning cynicism and smiley prostitution would make way for an authoritarian tyranny, in the wake of which genuine liberalism, rooted in heart and acceptance, not surface and finger-pointing, would be awakened from deep slumber and prevail on this continent. The early digital age was a promising era, handing us a glimpse of the revival of liberal values and a hope that they could take over economy, science, technology and other traditionally conservative realms of society, before getting spilled into politics too and perhaps creating a bipartisan system where not far-right Republicans and centered Democrats, but the latter and the far-left greens, socialists and anarchists would fight against one another in the political arena, but it was a short-lived one, quickly dissipating in the wind when the very same economic aspirations that typified their forefathers were found in the hearts of these flush hackers and IT engineers, as underground internet networks were taken over and turned into mainstream marketing channels à la Fox TV. At best, this digital culture finds itself as of now at a fork in the road, wherefrom it could prove itself either as a conservative niche founded on the shortsighted and voracious cravings for self-profiting on shallowness, on "selling fog", as it were, or a good virus that spreads to other domains, including science, which is not only the main sphere of my professional interest, but also, more importantly, the site of a great strife and effort to breathe a new liberal life into it. And if that infusion ever happens, I will make sure that liberalism does not end with making somersaults off the lab bench, with Falcon tubes and Erlenmeyer flasks in my

¹³⁹³ Watch, for example, Gimme Shelter directed by directed by Albert Maysles, David Maysles and Charlotte Zwerin (1970) or Crossfire Hurricane directed by Brett Morgan (2012).

hands, and lecturing with the cool of Lou Reed circa 1967 or with the spiritedness of a sorcerer on the stage, but that it is enwrapped in the most glorious emanations of Love, delightful and divine, that are conceivable to our mortal minds. On top of all of this, chewing popular liberal issues that we have today not because they really concern the chewers, but because they give them a sense of belonging to a “herd” and feeling safe therein, I must add, is a desecration of as benevolent of an ideology as liberalism is, especially when one adds that bigoted finger-pointing that these vacuous discussions usually boil down to are removed by a thousand or more parsecs from what authentic liberalism ought to represent. No wonder that faced with such a discouraging social surrounding, the fate of imaginative spirits is on most occasions such that they wither from the inside and all that they have courage to do from then on is to pay lip service to the beauty of genuine liberalism that exists in their heads only, for in reality, in their behavior, they have wholly given up and now march in step with the stale social norms of their times. But progressiveness and mainstream are entirely incompatible and if we ever embrace values that are shared by large portions of humanity, we should know that they must be rethought and revised before considered truly progressive, implying that the colloquial attribute of “progressive” attached to the democratic agendas in the US must be a vast misnomer. Rather, in both democracy and autocracy, as I have learned on my own skin, the most gifted and inventive minds, always presenting a thorn in the eyes of autocratic authorities and democratic mediocrities alike, will be left to roll in the mud and look in the back of those who are inferior to them. This is to say that no political system can be conceived of and put in place to alleviate the principle embedded deep into the fabric of social consciousness, according to which the über-progressive spirits will always feel demeaned and demonized by the reigning social classes, irrespective of the size and the type of the social systems in question. Here it is worth adding that while right-wing conservatism I have always foreseen as a philosophy of the past, a philosophy that will all by itself, without any significant external effort, get drowned in the river of time, these instances of backwardness and hypocrisy intrinsic to liberal viewpoints, the way they are being held today, have bugged me more because I have known that they outline the ideological future for humanity. Even more so, the tragedy of our times, in fact, is that the resurgence of right-wing reactionaries owes largely to the hypocrisies and vanities of those who dare to call themselves progressives. For, when people who declare themselves as liberals exhibit staggering instances of bigotry and shallowness, that is, the diametrical opposites of values that they profess, this can only put fuel on the fire of conservative ideologies. The irony here is that this reactionism of conservatives, at least in theory, should be a response to revolutionariness of the liberals, but there is less than a teaspoonful of this revolutionary spirit left in the lives and beds of beliefs of people who dare call themselves today liberals and progressives. In that sense, I might be even accused of sharing the opinion of Malcolm X when he observed that “the white liberal differs from the white conservative only in one way: the liberal is more deceitful than the conservative”¹³⁹⁴. At this point, it may also be time to notice that the very fact that American liberals regard the freedom-limiting function of the government as indispensable for the social wellbeing, whereas conservatives work in the direction of shrinking the governmental powers, fearing its inefficiencies, meddlesomeness and potential oppressiveness, when the authentic meanings of liberalism and conservatism should be logically tied to inverted beliefs from the given ones, can indicate that the grounds for exceptional hypocrisies are set on the American continent already at its most elementary political platforms. The scholarly inclined among my friends might

¹³⁹⁴ See Malcolm X’s God’s Judgement of White America (The Chickens Come Home to Roost), Speech delivered on December 4, 1963, retrieved from <http://malcolmxfiles.blogspot.com/2013/06/gods-judgement-of-white-america.html>.

then go ahead and wonder out loud how it is that left and right in the US education is being announced as a universal right when in reality it is privilege for the rich, the living proof of which can be found in countless of its urban centers, including Chicago, wherein the falling apart of a public university system, University of Illinois, is often cited as the consequence of its being an “orphan” surrounded by its private counterparts, including University of Chicago, Northwestern University, Loyola University and Illinois Institute of Technology. This type of reasoning, of course, is utterly puzzling to anyone assuming that education should indeed be a universal right, including Europeans in general, who have gotten used to a thoroughly opposite state of affairs, with the public European universities being far more renowned and reputable than the private ones, the latter of which are often accused of handing so-called Mickey Mouse degrees because of the inherently corruptive, pay-for-schooling basis on which they operate. If we were to jump now into the ocean of language from the top of this Ivory Tower, being a jump that awaits all those who dig deep enough through the contents of their academic fields and hit the philosophical grounds thereby, we might first notice how individualism is being worshipped on the American continent like the greatest treasure, when on the other hand everybody in the US speaks with a same dialect, with barely hearable differences in intonation and none in pronunciation between any two of the geographical areas of choice. If originality and difference were truly spurred, language, that immaculate reflector of human inner worlds in the subtlest of its sounds, would mirror it and a similar diversity as that existing in dialects in, say, Great Britain or Yugoslavia could be expected to arise. Only in my hometown, Belgrade, for example, not only do people from the suburbs speak with a set of wholly different accents compared to the authentic Belgrade one and are often derided for that among the urban center dwellers, but even within the city, some neighborhoods display characteristic speech patterns, as is the case with the blended ć and ĉ among females of a generation of inhabitants of a neighborhood called Dorćol¹³⁹⁵. On the other hand, when a single dialect evolves on such an enormous ground as that covered by the United States, it can be justified only by the speakers’ subconscious craving to be just like their neighbor, a distant relative or an authority they embraced via some more remote communication channels. Also, thanks largely to the financial debt in which most Americans spend their entire lives, running all throughout them hastily, like a hamster chasing a carrot, albeit caged inside a spinning wheel whose one end is the enslavement by the credit-lending usurers and the other one is the enticement by the demons of comfort, the traditionally individualistic American mind, a dissenting pioneer and an independent thinker, has become an extinct species on this continent today and its progeny, ironically, is a personality far more obedient and conformist¹³⁹⁶, especially when it comes to professional milieus, than its average transatlantic brethren are. Hence, when I come across the video footages of the spiteful American stars of the likes of Jack Kerouac, Jimmy Dean, Bobby Fischer or John McEnroe, I get the glimpse of a country that it no longer is, a country that once, when I was young, was that of rebels and troublemakers and dudes with an attitude turning winners, but now is the haven for politically correct sycophants, timid minions and insidious hypocrites. Should the antiauthoritarian antecessors of today’s spineless souls who bow down to authority’s every whim somehow make an appearance in the modern world, it would not take too long before they would be sidelined and sent into the trenches of the society, oddly enough by their own descendants,

who'd remain thoroughly incognizant of the path that these pioneers have laid down for them. In a way, as young Bertolt Brecht observed already in the 1920s, a century ago, "the individual fell apart in the depersonalization age of advanced capitalism"¹³⁹⁷, hinting at the fundamental paradox destined to strike every ideology after its sufficiently long implementation in reality; namely, its twisting and turning and ending up completely at odds with its original form as envisioned by the pioneers. This is to say that individuality that was deemed as intrinsic to America as the Sun is to the solar system has been devoured by the very individuality that placed its mirror image as the subject of worship onto the altar of idolatry, in other words by itself, thus attesting to its false glory and its being an ideal whose worshipping is as dim as standing by the idea that the cosmos revolves around the Earth. How in the world did a lone hero riding off into the sunset, having escaped a pack of bigoted and ravenous wolves that everywhere and at all times crave to lynch him, being a figure traditionally worshipped in the American cultural milieu, vanish and become a sheepish conformist, a cowardly respecter of rules and regulations, a passive and obedient marcher in the long and lusterless procession of dead souls is a strange and unexpected transition that will surely keep the historians of human culture busy and amused on a future day. This paradox where individuality and collectivity swap their places after being pushed beyond their extremes brings to mind my perpetual wonder over whether selfies present an ultimate act of self-obsession or an obsession with the opinion of the neighbor, given that their purpose is to allure the world, not oneself, as well as whether the LA culture, the global capital of self-centeredness, is, in fact, the culture of excessive preoccupation with the opinion of another, given that the goal of most of its dwellers is to appear cool to others and their greatest joy is to send a Xmas postcard to their Midwest families as a proof that they made it in life. When self-centeredness becomes probed deep enough, does it reveal the vision of another human person or perhaps humanity as a whole in its center, just as much as the ultimately benevolent thought, centered around another being, reveals deep rootedness within the center of one's being, is the question naturally popping from there on. Musings like this usually end with the spring and the spin of the silhouette of the Tai chi symbol in the astral space before my mind to remind me that the heart of anything in life is made of the diametrical opposite of the thing in question, with black resting in the center of white and white in the center of black, proving the meaninglessness of all the engagements in fiery conflicts of opposites in life. Another example of this kind comes from the ironic case of Mark Zuckerberg, the founder and the CEO of Facebook, the social networking platform, hastily purchasing the property surrounding his house in Palo Alto to protect his privacy¹³⁹⁸ and then building a wall around his residence and land on the island of Kauai to block the people's view of it¹³⁹⁹. Some may say that in this irony of a person's becoming wealthy by promoting certain values, i.e., the merits of sharing and transparency, while on the other hand abolishing them in his private life neatly reflects the fabric of hypocrisy of which the American culture is largely made. This hypocrisy is observable everywhere one turns one's head on the American grounds, as my critical compatriots would have it, reminding me further of the fact that individuals are often prohibited to perform the simplest and the most natural of acts, such as changing the lightbulb or advising a coworker on a sensitive personal issue, lest they become penalized for impinging on someone

else's professional territory, whereas in most parts of the country people are forced to engage in the act whose performance should be the strict privilege of professionals, the act whose performance is more dangerous than handling weapons, as it can take the life of oneself and of others too, the act a.k.a. driving. As they stop by a fast food drive-thru to order a burger, that authentically Warholian work of art that will adorn museums of human history in the far future, and become intercepted in my dreaminess by the question "What cheese would you like – American or Swiss", slapping one in the face every time with a stunning reminder of how little diverse this country that swears by diversity is, albeit blind to the lack of it, especially in the life of an American commoner. Next, right after the food is paid and the receipt grabbed, I would be impelled to refresh my memory of Californians disapprovingly rolling their eyes when I would be telling them how common bribery is in some parts of the world, my native one included¹⁴⁰⁰, while seconds later they would be tipping chauffeurs and bellboys by handing them bills of money, subtly and inconspicuously fostering the culture of greed and favoritism, the same one that exists in other, less developed countries on a blunter scale, though without being aware of this. That gratuity is not only a remnant of the prohibition era, but also institutionalized bribery is understandable and is an unassailable fact, but the extent to which it corrodes the heart and soul of service givers is a question that has not been analyzed enough yet in spite of its omnipresence. Still, regular fat tippers ought to know that, although the poor ones of this world could be said to deserve far more kindness and a bit better service than the wealthy ones, with their habit they actually contribute to the opposite: continued neglect of those who do not have money to spare and even greater pampering of the riches. Studies have indeed shown that perception of a customer as a good tipper tends to greatly improve the quality of service to satisfy his needs on the account of diminishing it for customers whose look or behavior does not suggest the bestowal of generous gratuities¹⁴⁰¹. Other studies have demonstrated that on average there is no correlation between the quality of service and the amount of tip received¹⁴⁰². If we add to this that by fixing the tip to 15 – 25 % of the service cost, regardless of its value, as is the case today, the providers of expensive services are guaranteed more extra cash than the providers of cheap ones, even though the quality of their service may be just the same, another factor in favor of the economic segregation of the service industry would appear before our eyes. These generous tippers would also be surely asked by my critical compatriots how come waitresses, cab drivers, pizza deliverers and hairdressers deserve tips while some other, equally or even more hardworking individuals, be they construction workers, miners, truck drivers or fruit pickers do not, or living in a culture where double standards are the norm makes one blind to such disparities. Moreover, by denying the service workers a real job, which

¹⁴⁰⁰ The aversion I have of tipping for services is inexpressibly immense, the reasons for which include (a) corrupting the giver of the service, who finds purpose for his work in greedily collecting money rather than in selflessly giving service to another, (b) substituting kindness emerging straight from the bottom of one's heart with handing a few bills of money, fostering cold and desensitized materialism thereby, and (c) making me spend precious seconds of this majestic cosmic experience called life in calculating money, when the same time could have been spent simply wondering about the nature of the existence or conceiving more imaginative ways on how to enlighten others than by using a smattering of money, that age-old symbol of greed, the placing of which in the center of one's attention has never brought anything good and spiritually enriching to one. This, of course, is a view of one who has always smiled in sympathy upon the remembrance of Ludwig Wittgenstein's leaving his wealth to his already wealthy relatives, when he could have donated it to the poor, justifying his choice by saying that "money corrupts so it better be given to those who have already been corrupted by it".

¹⁴⁰¹ See Elizabeth Gunnison Dunn's Ban Tipping: This Custom is Awkward, Unfair and Just Plain Bad Economics, *The Guardian* (March 19, 2014), retrieved from <http://www.theguardian.com/commentisfree/2014/mar/19/ban-tipping-restaurants-debate-bad-economics?commentpage=1>.

¹⁴⁰² John M. Diniz, Private communication, University of California campus, Santa Cruz, CA (May 11, 2018).

was to bring them secure wage and benefits and which would be taxed properly, and immersing them instead in an insecure working environment, where they could lose a job at any moment and where their salaries are set for constant fluctuation, filling them up with ever more stress with every new day, which they are supposed to mask with fake smiles, without which no tips would be earned, worldly hypocrisies are merely being multiplied, more nails are being added to the coffin of the exploitation of slavish workers in the US and no favor is done to the social system as a whole. Therefore, when during the recent visit of my hometown I waited in the line for food before the Paun BBQ joint near my home and one of its workers refused to take the tip from the person ordering a burger ahead of me, I heard inside my head a proud explanation, sweeter than the rockfoils in the summertime, that went, “No, son, the quality of my service cannot be bribed, as everybody here gets as best of the service as I could give, regardless of whether they are rich or poor, whether they have enough for the tip or not, and besides I may not have much with my salary that earns me \$1 an hour, but I have enough and that, son, is what makes me rich”, and I knew that this semantic string, albeit self-made, was the real stuff; ‘twas the signpost for the future rooted in a glorious past. Of course, to snatch without any scruples or consideration of the common good is an elementary skill that one is swiftly being taught in the US, and if anyone objects to this statement that I have just made, some of my comrades would be quick to denounce him in return for not only the fact that this criticism is not much different from Mayakovsky’s setting off on a journey to America to write down in his diary that “any form of profiteering is encouraged”¹⁴⁰³ in it, but also for the slavery to money and material wealth that lies at the foundations of what the modern natives like to proclaim “the land of the free”, without ever realizing the irony of this slogan. A similar instance of sanctimoniously calling attention to a speck of sawdust in another’s eyes while ignoring “the beam that is in thine own eye” (Matthew 7:3) occurs anytime one in favor of the US policy and particularly its neocolonialist foreign module condemns the demerits of the undeniably existent corruption in most underdeveloped and developing countries at the same time as bluntly tolerating openly institutionalized lobbying practices in their own backyard and closing eyes before the fact that the governmental support for big businesses is virtually buyable through these inherently corrupt, but fully legalized channels. For example, the average amount of money that newly appointed US ambassadors and other diplomats donated to the Obama campaign equals \$1.8 million¹⁴⁰⁴, while listing all the socially devastating corporate activities legislatively backed by their large power on the market, thereby avoiding innovational restructuring into more sustainable and humane business practices, would make them quite certainly brim over the pages of this book. In any case, a society in which politicians, whose role should ideally be to serve the society and humankind as a whole, are allowed to be corporate leaders and shareholders, profiting from them individually and tending to become increasingly wealthier as the result of their playing the role of public representatives, is doomed to be torn into pieces by this Janus-faced divergence of interests. This teaching that money is the cornerstone of personal influence, sadly, starts from an early age, as I learned by watching a rowdy kid from my son’s third grade elementary school class strut around like a proud partridge on the days when he was chosen to act as the school’s principal only because his parents donated most money to the school that year. And when the roots are implanted into the soil of vile values at this young and tender of an age, only a small step needs

¹⁴⁰⁴ See Dan Roberts’ US Diplomats Cry Foul as Obama Donors Take Over Top Embassy Jobs, *The Guardian* (July 10, 2013), available at www.guardian.co.uk/world/2013/jul/10/obama-donors-top-embassy-jobs-rewards.

to be made to arrive at the doorstep of John Gardner's quote opening the webpage of the American hacktivist, Jeremy Hammond: "When one may pay out over two million dollars to presidential and Congressional campaigns, the U.S. government is virtually up for sale"¹⁴⁰⁵. Thereafter, to arrogantly and aggressively export democracy to the rest of the world while ignoring the fact that the electoral choices in the US, being defined by an exceptionally small margin of the richest Americans¹⁴⁰⁶, are all but democratically derived is an instance of horrid hypocrisy on behalf of the defenders of hardcore Americanism. Indeed, how hypocritical is it from the major US politicians to boast about the respect of democracy on the American soil and deploy troops wherever the ideals of democracy are being threatened on the face of this planet, while this country, itself, has not even been conceived as a democracy? Rather, as it is being taught at the political science schools all over the US, it is a plutocratic polyarchy, "a system in which power resides in the hands of those who Madison called the wealth of the nation"¹⁴⁰⁷, that is, experts in moneymaking and not the average populace, as it would hold in a true democracy. In one such plutocratic system, those in hold of money are in hold of power too, which includes the power to silence the voices that challenge the existing rapacious practices, as through employment selection and legal proceedings, as well as to exploit the underprivileged to such an extent that ever lower percentages of the populace get to be in grasp of ever more capital, the result of which is the systematic extermination of Robin Hoods, that is, those who take from the rich and give back to the poor, and the propagation of Superhicks, that is, those who take from the poor to give to the rich, all in spite of the politicians' mouths' spilling over the sickening phrases that swear by the alleged equality and the protection of the poor. Speaking of the astronomical hypocrisies of political voices in the US, enough has been said about those that come from their conservative streams, particularly notable in circumstances wherein expositions of faith in God would be coupled with negation of the benefits of universal healthcare, making them thus more similar to the Biblical description of Sodom, for "neither did she strengthen the hand of the poor and needy" (Ezekiel 16:49), than to the apostolic visions of a new generation of man who would love his neighbor as much as oneself (Galatians 5:14). However, hypocrisies that typify the American liberals span to equally great heights¹⁴⁰⁸, in my opinion, and are evident in the situations wherein the proponents of these political views refuse to let other people live according to their own convictions and rather wait like ambushed animals for any signs of beliefs contrary to theirs to give them the reason to attack their holders like hordes of ravenous vultures. They somehow fail

¹⁴⁰⁷ See the comment by Noam Chomsky in the documentary movie Ethos directed by Pete McGrain (2011).

¹⁴⁰⁸ As ever before, primitive nationalists, including the American tea-partiers, have never been as much of a thorn in my side as the America's alleged progressives, simply because their time will pass, whereas the negative influence of the so-called progressives is far more durable, as they will continue to disseminate their obsolete views and ways of being long after I depart from this planet. Hence, when the playwright, Craig Lucas points out in an OutWrite conference speech that got published in *Gay Community News* in the late 1990s that "political correctness may threaten artists from one side, but it pales next to the blind vitriol and venomous uses of reactionary political agendas from the other" (See Craig Lucas' Making a Fresh Start: The Challenge of Queer Writers, In: OutWrite: The Speeches that Shaped LGBTQ Literary Culture, edited by Julie R. Enszer and Elena Gross, Rutgers University Press, New Brunswick, NJ (2022), pp. 262), his roots in "conservative, white, suburban Philadelphia", born to parents who "made anti-Semitic remarks, employed the N-word, homosexuals were fairies, Nixon was a god, Communists were always the enemy, schoolteachers were cut from the similar cloth" (*Ibid.*, pp. 254), must be kept in mind. For someone like myself, whose roots as far as the American culture is concerned, are in the liberal mecca of San Francisco, it is natural that the order of deterrents in his stament is reversed.

to notice that with this intolerant and bullying attitude of theirs, they go quite against the grain of what true liberalism was supposed to signify: a worldview in which the spirit of acceptance of it all has its secure place. For, exhibiting bigotry against bigotry is yet another instance of bigotry, just like war against war is still a war, usually as damaging as the one that it is being waged against. Thus, for example, turning oneself from a humble emanation of divine grace into “an angry, maniac depressive activist”¹⁴⁰⁹ - and coming to epitomize the unfortunate, stereotypical mindset of liberal America as such - while fighting wholeheartedly against the loveless and desensitized humanoid machines that have taken over the western world is a battle wholly lost, not won, as in its course one has essentially become what one has opposed. This is how a whole gamut of paradoxes is being given rise to in neoliberal political settings, where the discriminators discriminating to counter the adverse effects of historical discriminations turn out to be the biggest discriminators of the day, where the bullied reveal themselves as far fiercer bullies than those who had bullied them in the first place, where antiwar wars against wars can be severer than the wars objected to, and where Don Quixotes’ fights against windmills are often more destructive than the working of the windmills *per se*. They include the fact that the biggest sexists in today’s western world are feminists accusing the opposite sex for sexism, the fact that some of the most blatant racists belong to races considered the subjects of largest racial discrimination, the fact that the most ethnically biased of all people in America, Serbs included, belong to ethnic categories known to have been the traditional victims of ethnic bias, and so on, all of which throws light on that age-old, albeit largely forgotten moral principle warning us that ends cannot justify the means. Now, could it be that it was exactly this series of mismatches between the surface and the essence that prompted Igor to observe that “all is an illusion on the American continent”, the words which I, sitting on the dull sandy shore of a cold and choppy ocean celebrated all across the globe as the gold coast worth selling one’s soul to get to, dreaming of the pebbly Adriatic coast and the warm sea waves gently splashing it, of which most people around here may have only remotely heard of, and wondering how come sugarcoated words and seemingly friendly shoulder pats so often come to belittle and push us aside, incessantly revert to? *En passant*, never was this dichotomy between the Californian coast and the Adriatic coast, symbolically representative of this whole discourse on the cultural differences between the New World and the Old World, as striking as on the day on which I stood wistfully on a Santa Cruz beach, during a trip that began with a touch of magic that were the surfing waves for the soul of Pet Sounds to a play button pressed on an old and dusty music station in a beach house on the 35th Avenue of the local surfer’s paradise that the Pleasure Point neighborhood of the town is, and looked at the gray sands, metallic seas, tons of algae, seaweed, foam and dirt, underwater sharks, overcast skies, sinisterly foggy air, chilling to the bone, and freezing waters, mostly unapproachable and ready to smash the oncoming swimmers against the seashore rocks with their giant waves at any time, or at least take them into the murky ocean depths on their perilous rip currents. Only days earlier, I remember, I stood on the Montenegrin shoreline and gazed at a diametrically opposite kind of sea, with its calm and warm waters, loads of sunshine, azure transparency and amiable approachability, so that the contrast between the two could have hardly ever been more intense. At a moment, on a vista overseeing the pier known as the Wharf Road, I felt like Munch’s carrier of that infamous scream, as if my complete insides began to reverberate with the Thrills’ anthem to Santa Cruz, “the town where it all went wrong, the town where you lost those damn songs”¹⁴¹⁰, in an opening of the record that prompted me to throw the anchor of the ship of my spirit for a while in this region of the world.

¹⁴⁰⁹ Watch the movie *Before Sunset* directed by Richard Linklater (2004).

¹⁴¹⁰ Listen to the Thrills’ *Santa Cruz (You’re Not That Far)* on *So Much for the City, Virgin* (2003).

For, standing on this cold, cold Californian gold coast with these thoughts swirling in vortices through my head, everything around me appeared as if being attempted to be made a brand of, like Coca-Cola, a fizzy drink delicious for the taste buds but carrying no nutritional value whatsoever. The vileness that this drink symbolizes at so many levels may be best represented by Marisol's sculpture Love, showing a marble-like face swallowing a half-full bottle of Coke and thus evoking sacred, sacrificial love that will take upon itself the greatest conceivable burdens and even swallow that "ego-loaded life lived like a comatose"¹⁴¹¹ pervading the worlds of commerce and consumerism, if not even bigger piles of shit on the road to redemption. And yet, nowhere does the slating of Coke, that is, Pepsi, Coke's closest cousin, appear wittier in the manic mansion of my memory than in Maniac Mansion, the seminal point 'n' click graphic adventure of the 1980s, where not only did the can of Pepsi need to be given to a man-eating plant right after a glass of radioactive water to make it grow big and then burp unstoppably, so as not to present a threat to the teenagers anymore, but also the serial number imprinted on a can of Pepsi obtainable, not incidentally, from the vending machine in the mad professor's lab was not a code for opening any secret door in this mansion, in spite of alluring myriads of user to the idea that it must have the meaning as a password of one type or another. However, to make it cool to drink Coke or be a Californian and yet to offer no food for the soul has been, in essence, the story of the American Dream, empty at its core to eyes that can penetrate into the center of things in search of Holy Spirit in them. Moreover, note that the light in which one sees the world one gradually becomes, and if all that we wish for is to sell material items to others with an avaricious state of mind, one day we will realize that we have sold our soul too, to the devil, as you may guess, having perpetuated that iniquitous lineage of the American way of life hinted at by the pioneer of American literary nationalism of the 19th Century, John Neal, in the preface to his novel, Rachel Dyer: "My countrymen are a thrifty, calculating people – they give nothing for the reputation of a man, till they are sure of selling it for more than they give"¹⁴¹². But if we plunge our soul in the ever-present sea of love in whatever the scenery we find ourselves in, and if the waves of this sea begin to crash over the signs, the symbols and the substance of things around us, melting the Coca-Cola sign into a smeared shape filled with garish hues and feverish paint drips like the one hanging on the wall of Claes Oldenburg's Lower East Side store selling plaster objects and advertising paraphernalia¹⁴¹³ in the effort to disprove the common assumption that art is solely for the pleasures of the bourgeoisie and the aristocracy and show to the mortals that the eye for perceiving beauty in every object, regardless of how platitudinous or commercialized it may be, need not ever be abandoned. Then, when the following online comment prompted me to draw a strange parallel between Mark David Chapman's killing of John Lennon on a New York City street in the effort to become famous and the killing of my contract at Chapman University¹⁴¹⁴ by the dull and

¹⁴¹³ The exhibition of Claes Oldenburg's works, including the plastered Pepsi-Cola sign created in 1961, I came across in Los Angeles Museum of Contemporary Arts on July 25, 2018.

¹⁴¹⁴ The most productive research scientist at the entire university during my two-year tenure, but also the most dedicated to teaching in terms of the scholarly work on educational sciences and of willing to teach beyond the "no teaching necessary" that my contract specified, and the senator for the school and the representative of its faculty before the university senate, I was perceived politically dangerous for the shallow, moneymaking mission of the school and was terminated from it in the most inhumane of manners after less than two years spent in it as an assistant professor. The following year and a half my entire family had to survive with zero income, as my job prospects were as bleak as those of Frank Oppenheimer after being accused by the House Un-American Activities Committee for being a communist because of objecting in 1937 to the practice of the Pasadena public swimming pool to allow the

corporate forces that govern today's academia, thus effectively expelling me from the Ivory Tower, ending my dreams of professorship and putting a full stop on my academic career, his was not only the overwhelmingly most upvoted comment on a news report pertaining to this tragic event, but it also highlighted the backward hypocrisies pervading the American society, around which this salvo of criticisms sent out by my compatriots revolves: "Lennon indeed stated (that the Beatles are bigger than Jesus), but it was more of a statement of fact that the Beatles meant more to the English youth than Jesus in those days. He declared that in England and that statement went down unnoticed. However, the American media got hung up on that statement and a real media lynch ensued. Their records were publicly burnt, they were stigmatized, ostracized by the media, and were threatened with death too. It could have been the first media excoriation of someone from the world of music and culture. It would turn out that, there, this Lennon's statement cost him life. Yes, he was killed by Chapman, but the main culprit are the American media and the American public. Lennon was killed by America"¹⁴¹⁵. At the end of the day, however, when I pondered deep enough, I would not know if John Lennon as a remote analogy of my creative superego was killed by finger-pointing America, as Aleksandar claimed, or by my compatriotic finger-pointers denouncing them. For, to anyone wearing the Christ's timeless mantra, "I came not to judge the world, but to save the world" (John 12:47), like a holy diadem on his transparent forehead, whereon the most beautiful visions that the world has known nest, judgment of the judgment is not fundamentally different from the judgment it decries and is equivalent to launching a war against war, thus reaping the same tragedies as those left in the wake of what is being protested against. Therefore, as Sarah Kay would have reminded us, "Your voice is small, but don't ever stop singing. And when they finally hand you heartache, when they slip war and hatred under your door and offer you handouts on street-corners of cynicism and defeat, you tell them that they really ought to meet your mother"¹⁴¹⁶, and oh how well my mother would have coped with this situation of having found oneself in the midst of a field where arrows of arrogance fly from one side to another and back. She sure would have found a way to soften them up and promote peace between the hostile sides with a single phrase uttered and a gesture made, drawing on the cords of grace and love only and nurturing not even an iota of irksomeness inside her. As for my father, his responses would be less eloquent, perhaps a bit more direct and less empathic, but very often making a fine point in defense of Americanism. Therefore, despite these barrages of denouncements coming out of the mouth of my anti-American compatriots, contrasting points of view could always be invoked to counter unilateral criticisms and in this case it may be the favorite, albeit slightly *ad hominem* one from my father's repertoire of responses to these frequently exaggerated critical stances of my fellow whataboutist countrymen. Namely, faced with the voices preoccupied with the fiery disparagement of all things American, he would routinely ask in turn if the expounders of these reproachful opinions have ever set their foot on the American continent. I mean, how can one not respect a society that in merely a few hundreds of years made such an immense progress and intensely influenced the sociocultural values and the physical appearance of the rest of the globe? It is true that if we were to look deep beneath its snazzy surface, we would be momentarily stupefied by the stiffness, sanctimoniousness and stone-heartedness of the western man, but it is

non-Whites to use it only on Wednesdays, after which the pool would be drained and water replaced to cleanse it. As a warning to the newcomers to this academic Hollywood of a school, I did advise its authorities to "do the world a favor – rename the school to M. D. Chapman, so any John Lennons out there should know".

¹⁴¹⁵ See the comment by Aleksandar on "Znala sam da će Lenon biti ubijen dva meseca pre tragedije", B92 News, retrieved from https://www.b92.net/zivot/komentari.php?nav_id=1427399 (August 5, 2018).

¹⁴¹⁶ Watch Sarah Kay's TED talk: If I Should Have a Daughter..., available at http://www.ted.com/talks/sarah_kay_if_i_should_have_a_daughter.html (March 2011).

equally true that if we were to fulfill the true Christian ideal of judging another based on his deeds, not words or mental plight, we would end up giving an unanimous credit to a society as diligent, productive and influential as the American, which has been exactly the point my father tried to put across. In fact, although I used to be regularly puzzled by my father's habit to engage in long conversations with the most savaged mindsets, a day came when I understood this. First of all, by doing so one avoids the tendency to plunge into social circles where people more or less agree with each other, but instead enters the fields where one can induce a profound change in someone else's view of the world. By dedicating time to carve brighter opinions and values of those who dwell in ignorance one truly changes the world, and not by nodding one's head in front of those who share opinions with us, standing at the same level of intellectual progress. Also, once one learns how to see the merits of communicating with those in which it initially seemed as if there were hardly any grounds for exchange and fertilization of mutually enriching insights at all, one becomes ready to enjoyably enter more profound and fulfilling communications around us. The same can be said for small and neglected things of the world; namely, by learning how to see deep meanings and values in them, our eyes would automatically be able to recognize sources of wonderful insights into the secrets of ourselves and the world alike in all the greater things in life. Now, going back to the story about traveling, undoubtedly ingrained in the very core of the American culture, not that I support the view that one has to physically visit a place before exerting an opinion about it. However, I definitely support the idea that people should travel. In particular, those from the rich countries should go visit the poor ones, and the ones from the underdeveloped societies should be given a chance to pay a visit to their fellow human beings in the most developed places on Earth, which brings back to mind Finley Peter Dunne's aforementioned motto to live by: "I am in the business to comfort the afflicted and afflict the comfortable". Or, as Lao-Tzu similarly pointed out, "the sage brings happiness to those who have too little and perplexity to those who have too much" (Tao-Te-Xing 22), helplessly making me recall that the true pieces of art are creative products that bring realization that happiness lies on a spiritual plane and not where material wealth is sought, thereby delivering warmhearted strength to those who rest in poverty and perplexing questions over the appropriateness of the selfish road taken in those who swim in the earthly pleasures of the modern world, whose people, as we all know, rarely recognize and reward those who opt for the most spiritually brilliant, selfless and benevolent road. An African-American girl from Oakland who recently visited Serbia thus came back full of realizations of how rich and beautiful her own culture is, prompting an anonymous reader to wonder "how locked we all are within our cultural cues until we step outside of them"¹⁴¹⁷, making the already mentioned Rudyard Kipling's thought, "Who knows England who only England knows", to flash again on the screen of my mind. And although the message carved on the tombstone of a Serbian immigrant to the US whose remains now lie buried in the graveyard of the Church of Saint Sava in Libertyville, Illinois built by my close relative and the first bishop of the Serbian Orthodox Church on the North American continent, Mardarije Uskoković¹⁴¹⁸, has a far more profound political connotation, it irresistibly reminds me of the Bombay-born British poet's succinct point demonstrating that moving away is sometimes the best way to ignite love for and boost the understanding of objects from our nearest surrounding: "You loved freedom and the homeland

¹⁴¹⁷ See *Black like Me: My Trip to Serbia* by Jamelah Isaac, available at <http://oaklandlocal.com/blogs/2010/09/black-me-my-trip-serbia> (September 18, 2010).

¹⁴¹⁸ Mardarije died on December 12, 1935, exactly 79 years before the December 12 on which my Mom would sail away into the Great Beyond. A few months after this sad and beautiful winter day of 2015, Mardarije was canonized and December 12 is now the day on which the Serbian Orthodox Church celebrates his sainthood.

immensely – therefore you were bound to be an alien forever”¹⁴¹⁹. To reiterate the point that journeying away from home is a way of reconnecting with it, we could also summon up a verse coming from the pen of the Greek poet and diplomat, George Seferis, “Wherever I travel, Greece wounds me”, and immediately thereafter recollect the life of Jovan Dučić, my most beloved Serbian poet: like myself in a way, it was while living abroad, as a diplomat, that he recognized the most beautiful traits of the culture of his home country and transformed from a cosmopolitan dreamer enchanted by the starry lights of a nationless universe to a hard core patriot and a passionate proponent of nationalist values and aspirations. At the same time, seeing the foreign cultures with fresh new eyes, he wrote prose that highlighted numerous points that are invisible to the natives, but that present cliffs from which their daily falls from grace occur, thus helping them, in theory, to improve their lifestyles, had they only had enough willingness to learn through them. For, in a way, just as it took Henri de Toulouse-Lautrec’s inability to dance to depict dancers with a naturalistic woe that no one before, Edgar Degas included, put on the masks of their faces, it could be that outsiders to any physical or abstract systems prove to be their best and most veritable portrayers. What’s more, by means of these crisscross visits and constant changes of perspectives, we might all, as a human race, arrive at the deeply humane and almost divine feeling that we are all one. One world. One love. One heart. One Gaia, breathing as a whole, with all the joys and troubles of humanity and every single one of its creatures. That would be the way to promote a sense of gratitude in people from affluent places for what they possess, while inhabitants of poor countries should ideally arrive at the same conclusion I came up to after my prolonged stay at the American continent. It was an impression that, all things considered, America is a poor country. On one hand, this explains why I always claim that I became an American for real nearly eight years after I became an American formally, in the summer of 2022 on a children’s train in Bakersfield Zoo¹⁴²⁰, which ran through a poor, poor landscape to the sound of Arlo Guthrie’s “good morning/night America, how are you”¹⁴²¹, but there is a different connotation to this claim that America, deep down, is as poor as some of the world’s poorest countries. As far as the material aspect is concerned, the glossiness of human products of creativity that ornament the daily lives often rest on unstable grounds and hollow cores, whereas technological advancements *per se* quickly become distributed all over the globalized world we live in. As for the human side, the polished and seemingly more sublime modes of behavior still largely contain the same primitive traits as those exhibited by tribal people, although masked by the face of modernity. As Victoria and I drove along Highway 101 once, we realized that a crash that caused a traffic jam in the opposite direction initiated a similar jam in our direction too, and that only because of the people in the cars who slowed down curious to catch a glimpse of the crash, apparently not because they wanted to see whether they could help someone, but to satisfy the primitive, parochial curiosity to witness a humiliating life-threatening situation and thus gain a sense of satisfaction over the fact that they are above it deep inside their minds. Years later, in the city of Chicago I would witness even longer queues of traffic, spanning dozens of miles and being caused by nothing else but the

¹⁴¹⁹ If I remember correctly, the exact inscription in Serbian says “Neizmerno si voleo slobodu i otadžbinu – zato ostade zauvek u tuđini”. This line I often invoke to portray my expulsion from academia, the reason behind which was not only my fanatic devotion to research and teaching, but also my immense love for academic freedoms and my ruthless engagement in defending them.

¹⁴²⁰ It was a moment when the people in my head got divorced from the workings of their government, when the love for man, direct and unconditional, prevailed over any considerations of politics, and when the mental state built on the foundations of acceptance of an ultimate social anarchy, where status is nil in importance and the soul of man all, was attained.

¹⁴²¹ Listen to Arlo Guthrie’s The City of New Orleans on Steve Goodman, Buddha (1971).

drivers' slowing down their cars to gawk at an ambulance with rotating beacon lights parked on the side of the road, proving poorness and primitivism of human spirits in the world today despite the poshest clothes in which they are wrapped. "Who is rich and who is poor I cannot say"¹⁴²², Morrissey sang, reflecting my feelings on that day and ever since, as I continue to watch the exhibitions of backwardness behind the veil of arrogant pretense and realize over and over again the spiritual destitution concealed in the core of ostensible profuseness on the American continent and a complete opposite in the place of my birth and upbringing: a greater spiritual richness hidden beneath the ragged clothes of material poverty. Recognizing this disparity has helped me remain immune to rampant materialism in America, where everything, even the most abstract of "things", from scientific and philosophical knowledge to musical pieces, are measured by monetary units. Occasionally, along this line of thought, the image of Diego Velazquez's Christ in the House of Martha and Mary, before which I stood in mesmerized admiration when I visited the National Gallery in London in 2005, would pop up before me, depicting a world, as actual as that of 17th Century Europe, with a missing Christ and missing words of wisdom that would tell the many Marthas and Marys of this world that hard work is not all that matters and that instances when one can build one's spirit from the outside in so that it can radiate with beauties that bless all around them from the inside out are equally, if not more important, for the salvation of humanity. In view of this, I would often instruct my children that the only wealth that matters is spiritual in nature and that one who does not invest in one's spiritual development in spite of hard work, especially if solely profit-driven, can end up being like a big-headed walrus with \$10 million in his pouch staring emptily at a most glorious seascape from a most glorious house by the sea, whereas one who has invested in this inner development at the expense of investing in one's career can end up being as poor as a beggar at the end of the day, but if a sunset, a withering flower sprinkled by dust or a glister in the eye of a fellow soul can bring him to tears, then he is far wealthier, in a truer, spiritual sense of the word, than this puffed-up walrus, the likes of whom come in unexplainably large numbers in this land of "opportunity". Hence, what on the North American continent often seems on the surface to be a progressive social order composed of individuals with enlightened consciousness could be seen as a state permeated with but a well tamed carnal nature of the man if we only dug deeper into it. When Hud, for example, originally conceived as a cinematic antihero like the world had never seen, from its first appearance on the screen to the last, with not even an iota of regret in him about his blasphemous acts, having been intended by the directors to be interpreted as a mirror of "the corruption of modern capitalism"¹⁴²³, became puzzlingly perceived by the American audiences as a hero, as "likable, smart and with the potential to measure up to his tough, honorable father", it came as a surprise to everyone involved in its making, including the actor who played Hud, Paul Newman, who thought that "the last thing people would do was accept Hud as a heroic character... his amorality just went over the audience's head and all they saw was this western, heroic individual". To me, however, this has hinted at the real objects of worship of the median American viewer: unscrupulous roughness, robustness and rapaciousness, rather than devotion, humbleness and sublime ethics, the three qualities symbolized by the three side characters that gradually distance themselves from Hud in the course of the movie, the qualities that are most of the time posed as an alluring garment to hide the voracious hearts of the holders of these erroneous stances. These animalistic tendencies disguised under the superficial veils of considerateness and kindheartedness rise to the surface most pronouncedly when the social system

¹⁴²² Listen to the Smiths' You've Got Everything Now on the Smiths, Rough Trade (1983).

¹⁴²³ See the Wikipedia article on the movie Hud directed by Martin Ritt and based on Larry McMurtry's 1961 novel Horseman, Pass By for the sources of all the quotations given in reference to it.

is imposed a significant stress on and could be unleashed in a matter of minutes should the economic wellbeing that keeps people satisfied and under control collapse, as was the case following the Katrina hurricane in New Orleans. In such dramatic circumstances, when good old Nyegosh's proverb, "It is easy to be good in good times, in tribulations are heroes recognized"¹⁴²⁴, comes to eminence, it becomes clear that a capitalistic system, based on tremendous distances between human hearts, each a ravenous wolf to one another, is verily akin to that evangelical house built upon the sand, which, when "the rain descended, and the floods came, and the winds blew... fell: and great was the fall of it" (Matthew 7:27). Hence, when the two trees closest to our home at the very foothill of Laguna Hills, at the borderline of Irvine, a suburban sprawl in South California, the American center of plasticity and surface aesthetics, were uprooted and fell during a windy episode paired with a little bit more than a drizzle, symbolically on the day of my father's first arrival to it, joining the third tree, which had fallen earlier just outside our window, it was just a metaphor of what the US culture is being made of: looking solid, sturdy and immaculate on the surface, but falling apart under the most minor impositions of stress because of being shallowly rooted in the soil of divine spirit. In contrast to the havoc arisen in the wake of the Katrina hurricane, when an earthquake hit the Serbian city of Kraljevo in 2010, all stores in the downtown were left unsecured, but not a single robbery occurred. In fact, it never ceased to amaze me with how much dignity most people in my native country lived through the past quarter of a century, the times dominated by extraordinary poverty and devastatingly harsh and rapidly deteriorated living conditions, when under the same circumstances most people in the Americas would sink low into the stale waters of immorality and insolence. This phenomenon can be explained by the greater level of cordiality and concern about other people's affairs in my homeland, as opposed to somehow seeing a lack of care for another and a complete disregard of another's opinion as a virtue in the American culture, explaining my grandma's story of her engaging, as a child, along with her parents and siblings, in the daily routine of clanging spoons against plates during lunchtime so that the neighbors would think that they were eating when, in fact, they were so poor that they had nothing to eat would routinely bring tears in the eyes of my fellow Europeans and provoke bewildering gapes among my American buddies. Again, more homogenized social circles and neighborhoods, whereby the affluent and educated typically have equal numbers of the wealthy and erudite and the poor and unschooled as friends, as found in my native social milieu, have had an ameliorating effect on high crime rates. A typical get-together event with friends in Belgrade involved people from a wide variety of social and professional circles: a scientist, a building contractor, a banker, a surveyor, an architect, a night guard, a sports coach, a painter, a driver, a hard worker, a filmmaker, a musician, an orchestra conductor, a translator, a curator, a lawyer and a few unemployed deadbeats, including occasionally someone fresh off the jail or mental hospital, would be thus all seen rejoicing in togetherness, refreshing each other's worldviews, shattering any glassy barriers of the sense of alienation posed around us into pieces and installing the free-flying spirit of openness and sociability deep into our hearts, as opposed to closed and narrow, all but Olympic, social circles existing in the US, whose monotonousness makes sure that mutual drowsing of spirits chained in them is bound to take place. Even worse, artificial attempts to bridge these chasms between people caused by differences in race, ethnicity, cultural or subcultural leanings, age, family status, wealth or education using planned, top-down political incentives, as it is has been customary in the US, have achieved little, with segregations continuing to accumulate, day by day, spitefully, straight in the face of these measures. For

¹⁴²⁴ "U dobru je lako dobar biti, na mucu se poznaju junaci" is the original Nyegosh's line from the Mountain Wreath, George Allen & Unwin, London, UK (1846).

example, by promoting career paths for minorities via a direct support of their associations and societies, more damage than benefit appears to have been imposed on the social fabric. On one hand, supporting someone's employment or academic enrollment solely because of their skin color or gender inherently slashes the noble ideals of meritocracy and equally secretly feeds the ideologies of inverted racism and sexism, which hold that race or gender are more important than what one holds inside when it comes to ensuring solid employment or admission to an educational institution. Secondly and more subtly, by trying to correct historical injustices by artificially providing career opportunities to people based on their race, gender or sexual - not intellectual or behavioral - queerness establishes an opinion among this population that continuing to operate within such exclusive circles is the path to success, thanks to which they begin to increasingly ignore everything outside of their own circles. This, in turn, forces those who fall outside of those circles, such as regular white dudes, to stick to themselves, even when they wish to see the social cards thoroughly mixed and the social equity gaps thoroughly erased. Even when their convictions are superbly liberal, in such scenarios where diversity is being imposed artificially, these white males may find themselves, to their horror, agreeing with social philosophies as prevalently toxic as that of Ayn Rand's objectivism, as when the proponents of this philosophy denounce affirmative action programs and multiculturalism, "arguing that they are based on racist premises that ignore the commonality of a shared humanity"¹⁴²⁵. I, myself, would readily hand over my employment to a minority and accept that my career has come to an end as a collateral damage of an affirmative action program if I knew that this would create a greater harmony between races and genders in a country of 300 million, yet the only thing I see is how programs like this set up even deeper chasms between these social groups, deepening the animosities that they feel for one another. Decades of abiding in the academic multiverse have shown me at first hand how affirmative action programs turn liberal whites into misogynists and women in science into misandrists, turning me, who had no dog in that fight at that instant, into a perpetual skeptic regarding their prospect. When three shady reasons, boiling down, respectively, to money, sex/pleasure and ego/power, the three roots of perhaps all evil, underlie the employment of women as minorities by men in academia in lieu of on average more competent men, namely (i) the financial motives, given the state or federal income support and more money for the departments to spend on other activities, (ii) the physical attractiveness, making the workplace more entertaining, and (iii) the preserved territoriality, given that women are on average more dependent and less power-thirsty than men, one cannot but doubt that the outcomes of these inherently sexist programs would end up in any good except in shattering the principles of meritocracy, just as well as no inverted racism campaigns can ever be hoped to erase racism *per se* and create a truly egalitarian community. This implicit sexism of affirmative action programs, of course, starts from the recognition that they stem from an intrinsic assignment of power to white males, which, of course, is a racist and sexist remark in its essence. Because, after all, the implicit premise of programs such as the affirmative action is that women, for one, cannot compete with men in most professions when they both start from the same starting positions, which is only due to the greater drive for competition present in the male brain, alongside the distribution of intellectual powers in it such that their analytical components are favored at the expense of the emotional ones¹⁴²⁶. It is, of course, the tragedy of our times that marketable social

¹⁴²⁵ See the Wikipedia article about the Ayn Rand Institute available at https://en.wikipedia.org/wiki/Ayn_Rand_Institute (2022).

¹⁴²⁶ To conclude this, I need not stray farther than my own parents. Namely, while my dad has had the ability of ultrafast processing of mathematical operations and patterns, such as those on the chessboard, and while his analytical intelligence has been, therefore, higher than my mom's, my mom's verbal, social and emotional intelligences exceeded

skills revolve more around the analytical than the emotional intelligence, as a proof of which one need look no farther than the poor fate of poets and other artists throughout the ages and compare it with the lavish lifestyles of bankers, brokers, investors, estate agents and other professions where emotions are, fundamentally, a deterrent. Hence, when people such as myself, then, who yearn for diversity with all their hearts fall into this category labeled with epithets such as “straight”, “male” and “white”, and become forced to limit their outreach to other races or genders, this amounts to a petite tragedy, albeit an expected one, given that, as I, myself, can attest to, most connections of such individuals extending beyond the social circles where they are being placed by force will produce next to nothing in terms of value, whether we have success in collaborative research, fundraising or various career opportunities in mind. This contributes to the tightening of the already exclusive social circles rather than to their loosening and fusing, creating quite the opposite effect of the intended and demonstrating for one millionth time that no fundamental social changes can be brought about by planned, top-down political influences, a phenomenon that should be well-known to the western cultural milieu because of their long time raveling in the failures of the planned market economies in the east. This is how the US continues to approach a sad social realm wherein hearts are separated by colossal cosmic distances and wherein everyone struggles to ensure one’s own wellbeing rather than working for the sake of bringing benefits to another, as more communal social orders, such as that in which I spent the golden days of my childhood, naturally lead to. A comfortable prison for the soul – that is how I have christened the American society upon inspecting this separation of the hearts by humongous distances, similar to those standing between the planets of the imaginary cosmos traversed by the Little Prince on wings of love and wonder. To those who swear by this autistic isolation of a soul from its brethren, theirs have been the path of resistance to the traditionally European “empowered patronage, such as that of the monarchy of the church”¹⁴²⁷, evincible every time one looks at American paintings that decorate the walls of galleries and museums and recognizes that the best and the most authentic of them depict empty landscapes, characterless, with not even a trace, let alone the presence of a fellow man or woman in sight. But to me, these have been solely the signs of a social system wholly inhumane and torturous for the soul, prisonous in essence, justifyingly earning the nickname the Cuban emigres gave to it after the classic western: *La Yuma*¹⁴²⁸. Compared to it, the social order in my homeland I continue to see in my lucid daydreams as its total opposite, *i.e.*, as wholly uncomfortable freedom, soaked in blood, sweat, tears and not even a hint of chocolate, making me wonder which of these worlds is realer and more prolific for the evolution of our spirits into something dazzlingly divine. As dull as the sandy beach whereon every grain wishes to be indistinguishable from any other America has become in the course of its sanctimonious insistence on equality in a world that crumbles apart on every corner under the pressure of social segregation and the failure to admire the exact opposite: the inequality, the uniqueness of every spirit under the sun, and the unconditional embracement of everyone just the way one is, without pretense or preachy intentions. Indeed, how sad it must be to realize for the first time that behind the

my dad’s by a lot and, overall and all-around, she has simply been, in my opinion, a more intelligent person. In fact, if I were able to pick whether I would be endowed in life with my mom’s or my dad’s intelligence alone, it is always the former that I would choose. I am lucky and blessed, though, that I have earned through the genetic lottery a combination of both. Mom and dad, I love you both, equally.

¹⁴²⁷ See Jean Stern’s Impressionism in Southern California, 1890 – 1930, In: All Things Bright & Beautiful: California Impressionist Paintings from the Irvine Museum, edited by William H. Gerds, The Irvine Museum, Irvine, CA (1998), pp. 94.

¹⁴²⁸ See Brett Sokol’s 3:10 to Yuma in Cuba, *Slate* (October 8, 2007), retrieved from <https://slate.com/human-interest/2007/10/how-3-10-to-yuma-changed-the-way-cubans-speak.html>.

pretentious veil of equality preached by the proponents of the American social order lies segregation on so many different socioeconomic levels, of which the expectation that families live in family-friendly neighborhoods, yuppies live in trendy neighborhoods and blacks live in ghettos is but a rough indicator. Moreover, when I think of the unceasing epidemic of migration of young educated families from urban centers to the suburbs, I am prompted to think that at some levels the relationship between the cities and their rustic counterparts in America has not advanced much from that present in medieval Europe¹⁴²⁹, when city dwellers were massively escaping the sewage issues, the plague and the wars and moving to roadless pastoral abodes for the sake of safety and greater quality of life. A great conspiracist in me holds that American cities are planned for continuous decay – ‘tis, ironically, in a country that has traditionally abhorred planned economy while engaging in the notoriously dull and inhumane urban planning whose outcome are unwalkable parkways interspersed with sterile shopping malls and gas stations, craving for “a little more Hack Finn ... to kick tin cans down the street”¹⁴³⁰ – so as to ensure a steady population flow out of them and into the suburbs – typically as soon as one enters parenthood – and the continuous utilization of humans as a workforce that turns the American wildernesses into prosperous habitats as homes for future enterprises and guarantees the unremitting imperialistic dominance of the US over the rest of the planet. In contrast to European states, where intellectuals gravitate around cities and the less intellectual populace inhabits smaller towns and villages, the plan for sustaining and growing the American empire may involve this strategic decay of big cities, along with a myriad of other, plainer and more overt incentives, to instigate the migration of the educated people from cities into suburbs and help the latter develop from wilderness into new urban centers, before another “white flight” is forced upon their citizens, thus maintaining the physical and spiritual distance within the population most prone to unite and stand as a community against the dark oppressive forces of the capitalistic, money-centered machinery of the West and preventing a “white riot”¹⁴³¹ before the idea of it crystallizes in people’s heads. Practically all reputable universities in Europe are built in urban environments under the assumption that they are the integral parts of the cultural makeup of the society, thus belonging to spaces where the cultural flow is at its most concentrated, so that the academic creativity can feed on this flow and, conversely, influence it. Where the cultural flow is the densest, the political ideas challenging the current reign are usually found and the American concept of separating universities, those centers for nucleation of the most progressive ideas, from cities as cultural hubs of a nation can be seen as a blunt attempt to depoliticize the academia and keep progressives distanced from the sites at which they can influence the society, including its political puppet masters, most. Intellectuals may

¹⁴³⁰ This is the complaint a resident of Mission Viejo in California’s Orange County had about its sleepy suburban town, urbanely planned like the entirety of Orange County, a place where property rights have evidently won a victory over civil rights. See Edward W. Soja’s *My Los Angeles: From Urban Restructuring to Regional Urbanization*, University of California Press, Berkeley, CA (2014), pp. 100. I, myself, along with Theo and Evangelina, have done it all to bring this spirit of Hack Finn kicking cans down the street to sterile and spoiled rich Orange County during my academic post in it. So we snuck through backdoors, jumped over fences half-naked, in torn clothes, like Mowgli and his jungle chums, with “scraped feet and dirty faces” (listen to *Zabranjeno pušenje’s Pklatovi 2: Veliki bijeg* on *Male priče o velikoj ljubavi*, Diskoton, 1989), while Pklat, icy and alienated, “hearing neither the scream of the neighbor nor the smell of the gas” (listen to *Zabranjeno pušenje’s Pklatovi 1: Invazija pklatova* on *Male priče o velikoj ljubavi*, Diskoton, 1989), watched us disapprovingly, with \$\$\$ flashing angrily from their beady eyes, sitting idly in imaginary shop-windows and worrying only that the value of the articles that they guard, a.k.a. “real estate”, would drop.

¹⁴³¹ Listen to the Clash’s *White Riot* on *The Clash*, CBS (1977).

indeed be more productive working in such isolated, rural centers simply because of having nothing much to do outside work, but the cost of this disconnect is not only that this exceptional productivity is often deprived of revolutionary, groundbreaking inventiveness and that the social consciousness of the scientists becomes dwarfed and withered over time, endowing them with a dubious capacity to engage in research and development of truly altruistic concepts, but a myriad of other instances of narrow-mindedness that living in a bubble breeds as well. Ultimately, rare exceptions aside, including people like you and I, who could find eternal amusement and source of wonder in the dance of a swaying shadow of a seedling, the flight to the suburb is, as Damon Albarn of Blur noticed, “a helping hand that makes you feel wonderfully bland”, and this blandness slowly, unnoticeably, creeps into one’s being at all possible levels whenever one substitutes the “centuries’ anxiety” of a city dweller with the “centuries’ remedy” of “watching afternoon repeats... reading Balzac and knocking back Prozac”¹⁴³² in the country. As I found myself repeatedly erring by being convinced that every shopping mall of San Jose I had entered before because they all look like carbon copies of one another, I would also wonder how different this suburban architecture is from the matchbox building pileups of post-World War II socialism. “Why do we bust our butts if all they want is hotdog stands”¹⁴³³, asks a despondent architect in Peter Kahane’s movie *The Architects* after his group’s project proposal for a new cultural center gets rejected by the East German bureaucrats for being too radical, and this comment can be easily transplanted from its communist source of origin to the capitalist grounds of the modern US. Of course, this or any other parallel between the outcomes of communist and capitalist social orders should not surprise anyone familiar with the fact that communism is but capitalism in its centralized, state-governed form rather than the privatized and libertarian one, as practiced in the West. For, how else to explain the American foreign involvement undermining every single leftist and communist political system everywhere on the globe but as a critical instance of bigotry, alongside the poor understanding of the notion of diversity, which is being promoted in America and by America elsewhere at only the surface levels of skin color and sexual identities, but is ignored at the deeper levels of socioeconomics, politics and human beliefs and behavior? After all, capitalism in its early days, like communism, was a vastly inhumane political system, but it had enough time and freedom to evolve into something more regulated and humane, and the same fate may have been shared by some of the leftist political systems tested in other countries; yet, instead of perceiving such leftism as experimental grounds to be at least partially supported for the good of the diversity of the planet and the humanity, the American foreign philosophy has been to eradicate every last trace of them, as if they were a disease of a kind, thus facilitating a homogenous hegemony, unsustainable in essence, instead. In other words, when political systems swing too much to the left or too much to the right, at some point they disconnect from people, who ought to be the heart and soul of every one of such systems, and their workings become strangely similar in outcome and in the degree of estrangement between people that they provoke, despite being different in terms of the motive and the method. For example, although the monotony of the matchbox architecture, such as that present in the New Belgrade municipality of my hometown, Belgrade, was justified in Eastern Europe by the need for everyone, from the least to the most educated and productive, to be exposed to the same comfort of living, the fact that the American suburban architecture is typified by the very same monotony must be blamable on other causes, including the systematic lack of imagination and focus on only what can be sold amongst the

¹⁴³² Listen to Blur’s *Country House* on *The Great Escape*, Food (1995).

¹⁴³³ “I became an architect to build cities for living people, not cemeteries”, comments another despondent architect from the same team in another scene of this East German film released in 1990.

American populace and the elites alike. Deep down, however, both the communist party and the western oligarchs deprive people of art, especially that with the flavor of dissent, so as to keep them dumb and incapable of questioning their rulers. As a result, in the American suburbs, art is found only in the thinnest tinges, which are so pale that they can only throw a true artist, such as myself, in a state of despair. Moreover, when monotony and fear to be different prevail over the courage to be unique and over the fosterage of diversity that embraces different styles of thinking and unique behavioral traits, regardless of how quirky they may be, and not the one that does not go farther than the color of the skin of the general populace, as it is mostly the case in the US, then one logically ends up drowning in the mud of insipid social life dominated by awkwardness and pathetic cries of the souls to escape from, not get closer to one another. The monotony of such life is neatly illustrated by the response I received some time ago while visiting Sioux Falls, a small American town in the Great Plains, and inquiring about commodities and supplies in it: “Big cities around here have five Walmarts, medium-sized ones have three, and we have one”. One of the grandest illusions of capitalism and laissez-faire neoliberalism is that competition between private business owners leads to diversity in supplies and prices for the consumers, when in reality a deregulated market leads to an effect analogous to Ostwald ripening in the materials science world and the growth of a few massive businesses that begin to monopolize the market with artificially inflated prices and monotony of goods and services¹⁴³⁴. The ongoing transition to online commerce is further aggravating this trend by narrowing the access to goods through the market control of the middlemen, such as Amazon or Alibaba, thereby quietly reducing their quality and favoring businesses that compensate the provision of poor quality with opportunistic marketing campaigns. No wonder then that not equality, but ever deeper segregation based on race, income, professional reputation and myriads of other features is spurred in one such social setting left to its own devices to evolve. In fact, if the actual trend of ever farther setting apart of those who have from those who haven’t continues, and the current economic settings wherein the income growth rate from capital investment (4 – 5 % per annum) is greater than the overall economic growth rate (1 – 2 % per annum) do favor it by all means¹⁴³⁵, it will have been seen as coinciding with a tragic neglect of one of the biggest economic lessons of the 20th Century, which is that phenomenal productivity and the explosion of creativity that caused it are tied to little or moderate social inequalities. And as physicists who love to apply the metaphors of scientific phenomena to social systems can tell us, a difference in electrical potentials in a circuit, a.k.a. voltage, is necessary for the current to flow through it and perform work, but if it becomes too large, a short circuit will eventually form, leading to sparks suggestive of a massive distemper that can bring down the social system as a whole in the blink of an eye. Now, as it usually happens, this segregation is systemic in nature and is apparent in many different social aspects, including the segregated urban planning, something that antennas of an ET spaceship hovering over the Earth might pick as an invaluable groove on the skin of humanity, a surface trait that unarguably reveals the problematic essence. Thus, whereas the block of San Francisco’s Nob Hill on which I live, bordered by Clay on the north, Sacramento on the south, Hyde on the west and Leavenworth on the east, all in a neighborhood considered to be highly urban compared to the rest of the city, let alone country, has about twenty Victorian residential houses in it, one grocery store, a laundrette and two trolley stops of a single trolley line, No.1, the block in which my Belgrade home is located, bordered by Milana Rakića on the

¹⁴³⁴ See Stacy Mitchell’s 6 Ways to Rein in Today’s Toxic Monopolies, *The Nation* (February 16, 2018), retrieved from <https://www.thenation.com/article/six-ways-to-rein-in-todays-toxic-monopolies/>.

north, Bulevar revolucije on the south, Čede Mijatovića on the west and Zečevićeva on the east, has contained all of this in the last decade: two grocery stores, three bakeries, a sandwich shop, a burger lounge, a video store, a CD store, an auto repair service, a yoga studio, a penny arcade, a pizzeria and a pub, a baby store, a private clinic, two photo shops, a hairdresser, a hotel, a stop for three different trams, two newspaper and tobacco kiosks, a millinery, a gambling house and a sweets and cake parlor, a tavern and an indoor café, a fast food joint, a clothing store, a tire care service, a tailor shop, a hardware service, a consulate, a kindergarten, a candy store, a pedestrian crossing to a high school and a public park, and, again, about twenty or so residential houses with two or three stories each. In fact, only the very three-story house on this block in whose ground floor apartment I lived from the time I was born until I relocated first to Ljubljana and then to the US housed a number of businesses on its front side, facing the street, and in its back entrance, including an automobile tire repair shop, a tailor shop turned a computer repair service, a video store, and a café and a pizzeria that was first called Pegaz - where, *en passant*, one of the first shootings between the Belgrade gangs that would take over the criminal life of Belgrade in the notorious 1990s took place¹⁴³⁶ - before changing its name and the type of service offered many times, from baked goods to beer and brandy to barbequed meat of one type and then the other, over the years. Unlike what an average American citizen may be tempted to conclude from this high concentration of small businesses in the block around my apartment in Belgrade compared to that around my apartment in San Francisco, the public lives in my hometown are significantly less governed by business corporations than in any given American city. From the fashionable streets surrounding Tiffany at Union Square to the backstreets of Mission, their makeup is fundamentally the same, containing businesses, be they posh or indie, whose premises are capitalist in essence, built on the assumption that engagement in economic transactions, usually guided by the piddling light of self-interest, is a prerequisite for human interactions. In contrast, in my hometown there is a greater degree of interactions that are noneconomic in nature and these are exactly the kinds of interactions I seek when I visit any new American town, even though I know in advance that my quests would usually fail. The large density of stores and other services in the block around my home in Belgrade, thus, speaks mostly about the general diversity of social populace rather than the business-mindedness of the citizenry. Naturally, such locally diversified neighborhoods go hand-in-hand with the great level of mingling of different social groups, something that is thoroughly absent in the devastatingly dull American suburban sprawls where all things stand divided and apart from one another, from people in the streets to people in the cars to people inside giant houses, the obsession with acquiring of which reflects the craving to separate from, not bond with, one's neighbor, naturally breeding individual spirits confined in sarcophaguses of their lone mental universes, a phenomenon that naturally, with every passing second, bears ever more self-centered and narcissistic perspectives on life where the ethical dwarfs of reciprocity and dominion have pushed the glorious giants of selfless giving and serving off their thrones. The consequence of this is seen in the American cities' serving the purpose opposite to their very nature: instead of

¹⁴³⁶ Watch Iza Rešetaka episode entitled Ispovest žestokog momka koji je preživio krvave ulične ratove u Beogradu, YouTube (2019), retrieved from <https://www.youtube.com/watch?v=5Sp8oyw1Njg>. The story goes that the gang from my, Zvezdara neighborhood sat in the café, while the car riding the members of the rival Voždovac neighborhood gang drove by and their leader, certain Kristijan fired a few shots in the direction of the café, breaking its front window and hitting the façade of the house. During that time, the apartment where I lived shared both the living room wall and the phone line with the café. This event makes my house a landmark spot where the war between Belgrade gangs stopped being about fist fights and started involving firearms. This war was soon to take over the entire city, like an epidemic, with the inflow of weaponry from the military and paramilitary forces raiding the war zones first in Croatia and then in Bosnia & Herzegovina.

bringing the flowers of human hearts together and opening their petals, they separate them by the gaps of compassionless animosity and antisocial awkwardness to ever more critical degrees. On the first floor of the Los Angeles County Museum of Arts the last time I visited it, there was a walkable map of an ancient colonial city somewhere in the Americas in the 16th Century¹⁴³⁷, spanning across the floor of an entire room, but what was most striking in it was how the orderly colonial settlements in the center looked so lifeless as compared to the indigenous sites scattered around the outskirts of the map, which flourished with life, and this is exactly the type of transition, from life to nonlife, that came out of the westernization of the new world in the style of endless segregations. Hence, as I sit and write these words in a bland and lifeless suburb of Los Angeles, the apparition of Judge Doom from Robert Zemeckis' *Who Framed Roger Rabbit* and his dystopian vision of "a place where people get on and off the freeway, on and off, off and on, all day, all night... (next to) a string of gas stations, inexpensive motels, restaurants that serve rapidly prepared food, tire salons, automobile dealerships and wonderful, wonderful billboards reaching as far as the eye can see" suddenly spring before me, followed by that of trolleys that ran through this pale semblance of a city a century ago "as an alternative to cars and buses"¹⁴³⁸ before being purchased by General Motors and given the final blow by "the promoters of decentralized suburban development"¹⁴³⁹, thus creating a world that may never know the beauty of whistling that opening verse of Alvvays' *Dreams Tonite*, "Rode here on the bus, now you're one of us, it was magic hour"¹⁴⁴⁰, a world destined never to encounter the splendor of the soul like that which befell an American traveler who voyaged through all 200 or so countries of the world and had the most memorable event occur to him, as per his memoirs, on a bus in Iran when a woman handed him the phone from which the voice said, "My mom, who does not speak English, sits next to you and wonders, since you look foreign, if you are hungry - if so, she can feed you"; 'tis, verily, a world individualized to pathological proportions, a world of the spirit muted and monotone, like in the barren landscapes and pallid sceneries painted by Silke Otto-Knapp, an artist who lived and worked in this city, a world that, as Roman Polanski described it, "looks best when viewed from darkness and from afar"¹⁴⁴¹. Although gridded street arrangements in American cities in theory served the purpose to connect by easily mapping the location of each business site and the spatial relation to it¹⁴⁴², in reality it has permitted separation and classificatory discrimination of individual cells on it, contributing to the alienation of the residents from one another, alongside dulling their minds by promoting architectural monotonousness and predictability. Following the establishment of the grid as an organizing device of urban areas in the late 18th Century, the assignment of value to each parcel of land became easy to perform, resulting in the naturally fostered segregation of city blocks and neighborhoods based on social status, cultural inclinations, race, income, *etc.* And for as long as diversity and equality are underlined as priorities on the paper, but ignored in reality, maintaining the trend of limitedly diverse social circles to which any given person belongs, aside from neighborhood populations defined by affluence and race, crime in the American cities will persist. For, as every dog trainer would be able to tell us¹⁴⁴³, insufficient

socialization is a main cause of aggression among canines, and the same logic, quite confidently, applies to people. If the fact that the worryingly common cases of mass murderers who randomly begin to shoot at people for no reason whatsoever in America outnumber those in my native country despite the fact that the US and Serbia top the list of countries with most guns per capita indicates something, it is that social isolation, giving rise to the pressure of revulsion that turns on some pathological switches in people's brains on certain occasions and prompts them to carry out such monstrous acts that live up to the premise that "loneliness is a gun"¹⁴⁴⁴, is far more pervasive on the American soil than on my native one. As I was growing up in Yugoslavia in the late 1980s, we knew of bank robberies or similar felonies only from the American movies, even though the standard of living was significantly lower than in America. Despite the recent history of war, poverty and corruption at all levels of the social order, the United Nations report published in 2008 concluded that "the Balkan area is, surprisingly, one of the safest in Europe", having, for example, fifteen times lesser rate of robbery per capita compared to the Western Europe, with Belgrade being a big city with one of the lowest crime rates on the entire planet¹⁴⁴⁵. Yet, as cultures all over the world have been massively accepting values delivered by Hollywood, E! and MTV, vanity, superficiality and self-indulgence have entered people's minds and many of the traditionally nonviolent cultures have descended in morality, leading to increased crime rates. For example, back in the 1970s it was estimated that an average person in America saw more than a thousand murders on the TV screen in a single calendar year¹⁴⁴⁶, a phenomenon that quite certainly contributes to feeding a suppressed obsession with violence that always has a tendency to uncontrollably explode and leave tragic consequences in the community. Notwithstanding that murders in movies can be often interpreted as metaphors of the killing of the human spirit, an act in which almost every human is engaged on a daily basis, in one way or the other, directly or indirectly, this incentive to frighten the viewer in such crude ways originates to a large extent from the desire to appeal not to dilapidated American inner cities, to whose citizens homicides often present regular occurrences, but to American suburbia, whose inhabitants live in unnatural bubbles of comfort and safety and need a dose of horror in their lives, even when it is artificially produced, lest their spirits descend into an even deeper sleep than that in which they otherwise sit squatted. And any time senses are being exposed to a specific stimulus, the saturation effect is immanent and the dose of it must be increased to maintain the same intensity of the effect. Therefore, it should not surprise us that violence emerging from TV screens has multiplied since the 1970s. The extent to which the average American viewer of primetime shows has become accustomed to seeing murders on the TV screen is illustratable by innumerable scenes of popular TV shows where the soap opera detectives could regularly be seen standing by decaying bodies and cracking incongruous jokes or engaging in a mouthwatering chitchat. The American audience on one side of this mainstream cinematic whirl and the directors, screenwriters and producers on the other have thus been clearly caught in a vicious circle whose spinning results in an ever greater desensitization of human spirits, going quite against the grain of the ultimate purpose of arts: to endow bodies with the sensibility of gods. Music accompanying these violent visual displays and emerging from the mainstream communication channels in general all across America does an equal disfavor to this catastrophic trend; compared to the general musical sentiment still hovering over the Balkans, far more emotional, loving and chaste in nature, this music has descended into implicit celebration

¹⁴⁴⁴ Listen to the House of Love's *Loneliness is a Gun*, The German Album, Creation Records (1987).

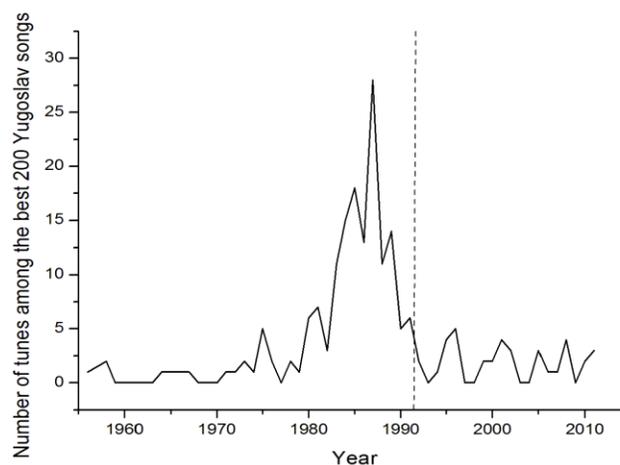

¹⁴⁴⁵ See the United Nations Office on Drugs and Crime report "Crime and Its Impact on the Balkans and Affected Countries" (March 2008), available at http://www.unodc.org/documents/data-and-analysis/Balkan_study.pdf.

¹⁴⁴⁶ See Klaus Mehnert's *Twilight of the Young*, Hoover Institution Press, Stanford, CA (1976), pp. 275.

of aggression of one form or the other and its avid listeners have become akin to frogs slowly cooked alive: just as sweet is no longer sweet enough for an average American accustomed to pervasively sweetened food, so do they not even recognize this music as abnormal and spiritually corruptive, needing daily doses thereof to be motivated to get out of bed and keep on walking through life, believing that they “stand a little taller”¹⁴⁴⁷ with its every beat, but becoming of an ever blinder spirit and less capable of seeing that invisible light that pervades the world, ever more merged with a long procession of the biblical blind leading the blind (Matthew 15:13-14). Coupled with the implicit demands for one to be kind and considerate even to people that one does not hold in particularly high regard, being a cap of a kind that pressurizes the mental contents of human minds, particularly when they are colored with dissatisfaction and hurtfulness, these violent visions that swirl inside one’s head and venomous spears of aggressive negativity piercing one’s heart can suddenly burst out if only the right circumstances are provided. This effect is much less probable in cultures such as my native one, wherein social circles intersect to a greater extent and wherein, consequently, a greater sense of communion exists, alongside the traditionally more open, honest and direct expressions of personal likes or dislikes pertaining to features of both animate and inanimate objects around one. Aware of how such directedness in communication can vent one’s insides and prevent cracking under pressure and the ensuing angry outbursts, I have been fond of the habit of freely expressing one’s aversions as well as unreservedly displaying any instances of occasional moodiness. Could it be that babies, after all, develop so intensely because of their unconstrained expressiveness of every single emotion arising in them, from the ear-piercing outbursts of fury to the heartwarming outflows of sympathy? Conversely, could it be that every time we fall back on insincerities that the shitty spirit of adulthood is all about, we automatically shut the door to our advancement on the spiritual plane? It is for this reason that I have considered sugarcoated insincerities as the unsurpassable evil of the modern age and the underlying cause behind the spiritual impoverishment that has plagued the Western man in the recent decades. For, so incredibly common has it become for those who slide the knives into the backs or the hearts of other men to do so with angelic smiles on their faces, just like the dude who wished to run me over in his car right in front of Beach Blanket Babylon, stepped on the gas pedal and, when I rolled over to the side of the pavement, looked at me with an innocent smirk on his face, that being a rapacious wolf in sheep’s clothing is now more of a socially accepted norm rather than an ugly and immoral exception on the American continent. Yet, when it comes to the choice between “not being a jerk, but trying hard to look like one”, as the mediator lady pointed out to Mark Zuckerberg in the last sentence of the script for the movie *Social Network*, and being a creature whose mental universe stands wholly corrupted, while he tries hard to appear spotless like a sheep in spite of the wolfish, ravenous insides, I would always embrace the former option to follow. Besides, given my given name, Vuk, meaning Wolf, how loyal to it would I be had I not despised sheepish sycophants of all kinds and devoured them for dinner in loads? Those familiar with Puzo’s and Coppola’s *Godfather* may remember with how much intuitive easiness the Don Corleone recognized Barzini, not Tattaglia, to be the archenemy of his family at the dinner for the Five Families, only based on the surface sweetness and refinement of the former and ostensive roughness and raffishness of the latter and a similar cue could bring us over to the conclusion that gods overseeing the Earth must be saddened far more by seeing the polished and polite bodily surfaces concealing hollow spirits rotting in greed and vanity than by glimpsing the childish impulsive psyches with volatile emotions, irrationally maddened and destructive in one moment and lovingly benevolent in

¹⁴⁴⁷ Listen to Kelly Clarkson’s *Stronger*, RCA (2012).

another. When Chinese tourists threw candies at North Korean children¹⁴⁴⁸, it seemed to me that it enraged the public more than if they were to throw rocks; similarly, owing to a combination of arrogance, loftiness and refined hatred inherent in polished and sugarcoated appearances underneath of which cold and careless hearts reside, I would always more gladly receive smites than smirks from those whose views stood in opposition to mine. Also, somewhere deep inside of myself I have always instinctively felt that aggressive attitudes concealed within them hide a door that could be, with a little bit of stylishness, used to readily get in touch with the human heart underneath, a door that is much more accessible and easier to locate than that concealed in the back of dishonestly dulcified and pathetically phony appearances of the creatures of the world. All this is to say that all the world over and all through the ages the relevance of the ancient Lao-Tzu's message dazzlingly revives itself in front of our sunlit faces: "He who accepts the sins of the world upon oneself will become the king of the world" (Tao-Te-Xing 78). After all, it is not to those who bluntly wash their hands in view of the worldly sins, like Pontius Pilate did (Matthew 27:24), and convey the responsibility for causing them onto others, but to those who identify with the sinners and their blasphemies alike, like Simba from the animated story of the Lion King, humbly allowing himself to be persuaded by foreign voices that it was his fault for the death of his father, that the sunrises of the divine soul, as glorious as those overlooking the luscious African valleys from the Pride Rock, belong.

As the planet Earth was entering the Chinese year of the Dragon in its relentless spinning across the vast cosmic distances, I was busy carrying out a very tedious and seemingly useless task of figuring out the years of release of the 200 Yugoslav tunes I selected as worth sending on a spaceship ride across these very same cosmic spaces, being decent representative images, signs of the times of a dying country, to extraterrestrial inhabitants of the Universe. What a surprise it was to realize that this daunting task yielded a fabulous connection upon plotting the number of songs on this list as a function of the years of their release, the graph you could glance at right here, quite clearly indicating the direct correlation between the artistic values fabricated within a society and the wellbeing of its members. As visible from the graph, 1987 was the year when this creativity peaked and then began to suddenly plummet, with the beginning of the civil war, the explosive outbreak of hatred among the Yugoslav people, the onset of which is indicated with the dashed

¹⁴⁴⁸ See Heather Timmons' Chinese Tourists Appall North Koreans by Throwing Candy at Their Kids, *Quartz* (August 5, 2013), available at <http://qz.com/111634/north-korea-is-the-latest-country-to-be-appalled-by-chinese-tourists/>.

line, logically coinciding with the rapid approach of a trough on this graph, the sinking trend that has not recovered itself up to this date. The observation of these trends should not be surprising when it is considered that popular art in Yugoslavia, which was “from the 1950s onwards characterized it as the most culturally liberal state in Eastern Europe”¹⁴⁴⁹, was fostered with strong pan-national connotations, specifically with the goal of transcending the national boundaries, for which reason popular music presented, logically, “an arena for the conflict and negotiation of cultural and political identities in Yugoslavia”¹⁴⁵⁰. The tight connection between art and every other aspect of the society is further iterated by the fact that the period of time corresponding to the slump on this graph, which brought about the crashing of the society at so many different levels and led to the bloody breakup of the whole country, was foreseen by multiple musicians whose works represent the data points on it, including Đorđe Balašević’s 1986 record *Panta Rei*, Zabranjeno pušenje’s 1989 record *Male priče of velikoj ljubavi* and, to some extent, EKV’s 1989 record *Samo par godina za nas*. Hence, to anyone who does not believe that investments in culture and dissemination of divine values throughout the society are unrelated to its stability and prosperity, I can show this curve and shatter these flawed beliefs in a matter of seconds. Sadly but true, societies in which indecencies and profanities have been integrated into their culture, including the South and Central American and African ones, as well as the Balkans, the latest wars in which coincided with the popularity of the artistically horrible and obscene turbo-folk culture, have traditionally had higher sporadic crime rates than those in which more traditional values were respected, where violence steaming from human hotheads would be typically channeled in more global and explosive ways. As a matter of fact, the story of the Roman city of Pompeii in which the oldest historically preserved monuments to ongoing prostitution were found and which symbolically got swallowed by red hot lava ejected from Mount Vesuvius has stood before the human race as an incessant reminder of the destructive traps which we may fall into should we follow the scarlet line of lust in life. The global human understanding, however, has a long way to go before accepting that outward prosperities and intrinsic spirituality advance hand-in-hand and that no amount of external restrictions can channel spirits that have strayed from the inner glow of divine goodness along prosperous ways. Despite the sky-high sentences issued by the American courts for illegal activities whose committers would have barely been punished by imprisonment at all in my native country, in the present and past alike, the crime rates in the US have been markedly higher, indicating that the American society with its merciless capitalist values rests on rotten foundations of immorality and may not be as perfect and ideal, Disney-like as it seems to an ordinary and naïve mind focused merely on the surface. For this reason, I have claimed that the culture of tipping and the pervasiveness of criminal minds may seem unrelated to each other, though in reality they represent interconnected links of a single looped chain. Hence, although the capitalist culture may seem to have given rise to peaceful social milieus, lift this carpet of materialistic prosperity under the human feet and it would all turn into an animalistic big-fish-eat-small-fish jungle described in R.E.M.’s *It’s the End of the World as We Know It*¹⁴⁵¹. This is why I claim that imposing harsh legal constraints on an inherently immoral society, fostered to function in accordance with the selfish principles of capitalism so as to have its productivity boosted, in the long run inescapably leads to its cracking and collapsing under this immense environmental pressure exerted on top of a rotten core and crumbling foundations. Besides, what good are we,

humans, if we do not elevate ourselves over the bloodthirsty and fierce predatory likes of the animal world, indulge in the riches of not mammon, but sublime spirituality and continue the upward spiraling path of evolution from the corporeal to the divine that we are destined to follow? Truly, then, I am free to conclude that as a human society, the North American one has not gone much far ahead compared to the poorest and least progressive societies of the world. Even if this difference appears striking by putting them side by side, as you introduce a third reference which could be a futuristic vision of the bright days to come, we would all look nowadays as tremendously away from it, practically at the same starting line, America, Europe and Africa alike. Essentially the same methods and concepts are still used by entire humanity, irrespective of the level of development of its societies. No one can dispute that the so-called developed societies are more complexly organized than the underdeveloped ones, yet both could be seen as occupying an equally rudimentary stage of development when compared with a hypothetical SF city of the future, mentally and materially far more enlightened than even the most advanced islands of humankind of the day. This is to say that everyone's is a developing country, so to speak, which is a stance whose proliferation may, first of all, melt the strenuous sense of unjust gap separating the so-called developed from the underdeveloped and, then, impel those who have come to believe that they have reached the highest attainable stage of development to embrace the spirit of innovation and continue to spin the wheel of progress on which they stand. With a secret smile underneath my breath and a smirk on my face, not spiteful at all, but more akin to that adorning a child's face just as he is about to smear the mashed remnants of a juicy peach off his mouth with the back of his hand, is thus how I await all those comments that are hearable everywhere we turn our heads these days, explicating the need for the developing societies to mature and catch up with the developed ones, which are epitomized by none other but America. For, I have known that in many respects, spiritual at the forefront, the US culture, despite its arrogance, quite conversely, works well in some of its most progressive cultural centers, such as SF¹⁴⁵², to catch up with the culture of immaterialism, humbleness, sensibility, genuine cordiality and friendship that typified the one I consider my native one, very underdeveloped in a median American eye, must I say, let alone move away from the primitive and evolutionarily backward presumptions of capitalism to those rated far higher on the ladder of divine being and belonging to a more enlightened social consciousness that churns not the selfish cravings to greedily amass money, fame and sensual pleasures for oneself only, but creative ambitions springing from the yearnings to contribute to collective wellbeing with one's work. This is why there is so much sense in the Egyptian film director's, Youssef Chahine's reacting angrily to a question about moviemaking "in the Third World"¹⁴⁵³ by pointing out first that a poor and limping Egyptian man from that Third World would walk on his crutches to his neighbor to borrow some bread to feed the stranger¹⁴⁵⁴, while that very same stranger could have dropped dead on the streets of an American or Western European city and no one would have blinked, and then proceeding to wonder out loudly who is more civilized

¹⁴⁵³ Watch The Story of Film: An Odyssey, Season 1, Episode 11, directed by Mark Cousins (2011).

¹⁴⁵⁴ Graham Hughes, who travelled across all 193 countries of the world without flying, said that the most beautiful thing that happened to him during his four-year long voyage was when he rode on a bus in Iran and an older woman called her English-speaking grandson over the cell phone so that he could tell Graham that she invites him over for a breakfast, fearing that he might stay hungry because of being foreign and not knowing anyone. Commenting to this, a certain man named Edis said, "Strah je bilo da ne bude gladan... kakva zena Bog joj se smilovao AMIN", meaning "She feared that he might stay hungry... what a woman, God bless her, Amen". in reality and who actually trails behind whom on the scale of true, spiritual development and in the grand scheme of things: the so-called Third behind the so-called First or *vice versa*. For, when compared to my home culture, the American culture of pervasive awkwardness, egotistic self-centeredness and emotional disconnectedness from a fellow human being, yielding robots and zombies more than genuine spirits that glow with something divine, can be indeed christened a Third World from the perspective of social intelligence, just in about the same way as the roles of the First and the Third would flip if things were viewed from the economic development perspective. Of course, the world would have been pleased with this authentic American arrogance, in the eyes of which America is but a standard for the rest of the globe to be spurred to catch, arrogance epitomized by Father Barry's lighting up a cigarette while being lifted on a crane from the waterline to the upper deck of a ship, as if ascending into heaven, after delivering a sermon of his life to a pack of goons and converting a bum into a Christ-like star¹⁴⁵⁵, had the moral grounds on which contemporary Americanism stands not become dangerously shaky in the meantime, all as a result of its world status' corruption by (a) the perpetual workings of its war-waging machinery, (b) the defense of the country's integrity everywhere but within and at its borders, (c) the export of democracy at the price of economic enslavement of the underdeveloped, (d) the fosterage of neoliberal capitalism, which reiterates selfishness and greed, pulls hearts out of people and erases their souls, (e) the culture of entertainment and intellectual shallowness that it installs in people, (f) the urban and suburban landscapes facilitating the spiritual disconnect from the neighbors, and a plethora of other negative effects. Note, moreover, in this context, that negative traits common to human societies worldwide will always appear more striking than positive features that they all share. Or, in other words, a thousand houses being built is not a material for the news coverage as much as a report of a single house blown apart. When the war raged in former Yugoslavia, the worldwide news coverage had daily reports on it, while today not even domestic papers report on the instances of rebuilt friendship, cooperation and the spirit of brotherhood that crosses borders drawn earlier by ethnic xenophobia, as exemplified by the recently self-organized collection of donations from demobilized soldiers who had participated as one side in the civil war for their colleagues on the other side who happened to become deprived of the \$200 of monthly retirement funds that the former still regularly receive, the case that, sadly, remained reported only in local newspapers and rarely visited internet portals¹⁴⁵⁶. Such and similar instances of bridges being built, humbly and unnoticeably, tend to be eclipsed by those depicting bridges being burnt, bombed and fallen, all veiled by the anger-provoking, accusatory finger-pointing under the gloomy clouds that spell corruption and spiced up with the trivializing and asinine entertainment news à la one of the top daily stories reporting Kim Kardashian, a reality show vacuity that emerged straight from one of Public Enemy's channels zero¹⁴⁵⁷, choosing sandals over stilettos for her lunch in downtown LA¹⁴⁵⁸. Similarly, the accounts of Renato, a fisherman and an owner of a seafood restaurant who saved 43 lives of people drowning in the waters of Danube while fishing on a small boat underneath one of the dirtiest bridges in Belgrade, or of an anonymous resident of a Serbian

town who donated skin from both of his legs to a neighbor who suffered from burns in a fire accident, praying only that he would be able to work on the building site to feed his family afterwards, are likely to end up drowned in a flood of stories that highlight instances of political corruption, religious fanaticism, falling bombs and banging brawls. Needless to add, this traditional tendency of journalists to disregard little stories that highlight human goodness on the account of news that capture our attention like an informational blitzkrieg, bombing heads with shocking images of human destructiveness, is inherently wrong from the ethical standpoint as it secretly suggests to potentially psychopaths that overcoming their destructive tendencies and being good to another will predestine them to be remain unrecognized, while committing horrible deeds they see as the mechanism to reach the front pages of newspapers. Still, recognizing the same sprouts of unconditional goodness in some of the most primitive aborigines on the planet and a handful of overeducated intellectuals alike is highly unlikely to be seen as spectacular as realizing that the same greed that moves muddy hunters for human heads and diamonds in the Congo Basin lies engrained in the hearts of sleek bankers on the Wall Street, or a stereotypical, sophisticated and sugarcoated dweller of the Western world, from whose mouth “milk and honey” pour out, as we, Yugoslavs, say, while his hypocritical heart rots in greed. “If we wish to kill a man, we approach him, we eat, drink, sleep, work and rest with him. It may be for several moons. We bide our time. We call him friend”¹⁴⁵⁹; this is how Ruth Benedict described the essence of the murderous thought of Dubo islanders, which had been instructed through generations to cultivate utmost insincerity and “keep friends close, but enemies even closer”, as Michael Corleone said his father, Don Vito, had taught him to do in the first sequel to the Godfather saga, a pharisaical, Janus-faced style of thought that neatly resembles that of the modern man, lying millions of moonlit miles away from the antipodal cultural branch envisaged by Ruth, that of Zuni Pueblos, a matriarchal native American society that had not known of any form of aggression nor exertion of force of any kind nor physical or mental punishment, presumably owing to their rejection of any thirst to possess or attach value to material objects. This is how we are flown straight to the stunning movie scene wherein Conrad, the astronaut from an episode of the Twilight Zone entitled People are Alike All Over, realizes that extraterrestrial inhabitants of the planet that his spaceship crashed on, sweet and shiny on the surface, were about to lock him in a cage of an intergalactic zoo garden for life, and cries out behind the bars, “People are alike everywhere”. For, unfair judgments whereby the judges hypocritically condemn the very same personality traits as those that have rested deep inside of them and actions that they, themselves, could have committed had circumstances around them been different; tendencies to have one’s elatedness and spiritedness boosted in the face of human misery; readiness to plunge deep into a selfish big-fish-eat-small-fish jungle of competitive relationships and a greedy contest for money and prestige that lets the angelic wings of one’s spirit wither away is what enlightened and effervescent eyes that have a whole cosmos reflected in their shadowy pools can glimpse as poison ivies growing in truly each corner of the world. Besides, what is often ignored is that despite the fact that near 99 % of people bred in conditions that foster selfishness, such as those that the American sociopolitical system provides, would classify as toxically self-centered, the remaining 1 % would be interspersed with saintly selfless souls, meaning that while the median personality in one such intrinsically vile social system may be exceptionally selfish, the average personality may still be as altruistic as that in the most socially conscious of environments. And all these thoughts have been a prelude to the conclusion that pitiful should be all, the wealthiest and the most developed as well as the poorest and the most underdeveloped, in the eyes of us, the poets and the dreamers, the mournful and the melancholic

¹⁴⁵⁹ See Ruth Benedict’s *Patterns of Culture*, Houghton Mifflin, New York, NY (1934).

ones of this world to whom the happiness in the heavenly realm has been promised by the seers of the past (Matthew 5:4). A turning point of the American classic, *To Kill a Mockingbird*, the movie that elevated the cosmic laws of karma high above the human courts of justice, is the moment when a black man accused of clobbering a white woman, who had been, in fact, beaten by her husband, announces his feeling sorry for her, and this sense of pity for this Brave New World dressed up in glossiness and luxury, awakened in me, a soul that sprang to life like a lotus flower, through the mud of ethnic enmities, poverty and distress, though rooted in the spirit of infinite motherly love and the ideals of divine goodness, sacrificial selflessness, brotherhood and unity that filled my expansive soul in the days of my growing up and coming of age, and now forced to speak the language of cold and rough, foreign seas and become accustomed to the daily exhibits of selfishness, hypocrisy, arrogance and avarice, is the moment of a great transition that, I know, leads to a spiritual triumph like no other, as it signifies leaving behind the world of sheer materialism, wherefrom only feelings of jealousy or resentment could result, and beginning to float on the sea of spirit that pervades it all with its gentle waves that stir the seat of the sentiments of the superman in me.

S.F.4.7. We all know that a perfect world could not exist. Had we found one, all the conditions for the evolution of both the world and ourselves would vanish. As a consequence, wherever we look, we could discern adorable traits blended with repulsive ones. In anything we place on the palms of our hands and subject to kindhearted scrutiny, be it individual human creations or collectivistic ones, such as human cultures as suites of spontaneously developed values and outlooks, we would recognize strikingly beautiful and horrendously repelling features mixed with each other. Therefore, you can guess that there are things I highly esteem and things I am not really fond of in the modern North American culture. For example, every time I come across an electrifying expression of joyful freedom of being untouched by any opinions from its surrounding, I feel as if I have glimpsed beyond the horizons towards which exciting expressions of our emotional beings are heading. On the other hand, having grown up in a milieu wherein my Mom would, for example, in the true socialist spirit, always readily stand up to help lifeguards move beach chairs, waitresses fix restaurant tables or cleaning ladies collect leaves in the park, refusing to receive unnecessary service from anyone and teaching me that workers and little people, largely ignored and considered as unimportant by the capitalist crème, are those whose joy the new Christ-like creatures ought to awaken, seeing pampered Americans, who'd "come on like they're peaceful but inside they're so uptight"¹⁴⁶⁰, treat service workers like lower-rank creatures or, essentially, slaves would always fill me with a great dose of discomfort. Thus, for example, passing by people at the airports or the city streets who have their shoes polished with sneering grins on their faces, "Gucci little pigs"¹⁴⁶¹

¹⁴⁶⁰ Listen to the Beach Boys' *I Know There's an Answer on Pet Sounds*, Capitol (1966).

¹⁴⁶¹ Listen to Radiohead's *Paranoid Android* on *OK Computer*, Parlophone (1997). The given verse is said to describe a hysterical partier from *La La Land* screaming at someone who accidentally spilled a drink onto her Gucci garment, an expression of utmost evilness in the eyes of Thom Yorke, the vocalist of the band. Around the 20th anniversary of the release of *OK Computer*, at a party for the affluent in this very same *La La Land* I heard a story that echoed the sentiment expressed by Thom Yorke even more stridently. The first thing a female person I met at this party told me was how upset she was because that afternoon she had gone to Costco to buy a watermelon for the party. As she parked her car, a person next to her on the parking lot opened the door and scratched her car thereby. She got out, checked the car and found that the scratch was invisible, but still insisted that the person from the other car, who spoke no English, gives a testimony to the authorities and provides a personal identity information so that she could be contacted and forced to pay the damage once the damage becomes confirmed. When I asked her what the big fuss was because the scratch is just a scratch and, on top of it, this one was invisible, she said that "even though the scratch

more selfishly and superficially obsessed with glossy shoeshine than feeling compassionate discomfort over a human being humiliatingly kneeling in front of them, makes me utterly sick and aware that something is seriously wrong with the capitalist system where a lack of care about another is intrinsically being fostered. And yet, I have known that both things that I have just outlined as likable and dislikable – freeness from the creatively suffocating peer pressure and arrogant ignorance of human creatures whose spirits shine like guiding stars in our proximity – are derived from the same source: emotional detachment from human creatures surrounding us, naturally instigated in the capitalist social settings. For, the culture in which the rules of the game of interaction with adjacent creatures primarily highlight worshipping the self, and only then another, naturally spurs a sense of distantness from one another and causes spontaneous spiritual desensitization and descent of human spirits from the sublime vistas of stellar happiness. We may be told that communism failed because it illusorily believed in the goodness of all people, that capitalism crumbles as we speak owing to the equally erroneous presumption that only selfish motives drive individuals to create, and that social orders of the future day will naturally gravitate towards the middle and evolutionarily most optimal grounds where altruistic cooperativeness and self-centered competitiveness meet in equal measures. Or, as it was put into words by the UCSD professor of visual arts, Benjamin Bratton, in his authentically postmodern, self-referential TED talk whose subject was the denouncement of TED talks *per se*, baptizing them as “middlebrow megachurch infotainment”, “Communism in theory is an egalitarian utopia. Actually existing Communism meant ecological devastation, government spying, crappy cars and gulags. Capitalism in theory is rocket ships, nanomedicine, and Bono saving Africa. Actually existing Capitalism means Walmart jobs, McMansions, people living in the sewers under Las Vegas, Ryan Seacrest... plus ecological devastation, government spying, crappy public transportation and for-profit prisons. Our options for change range from basically what we have plus a little more Hayek plus a little more Keynes”¹⁴⁶². However, as is always the case in the feedback-looped biological reality of ours where every cause is also an effect of the effect it causes, creations co-define their creators and so do political systems redefine the minds of the populace that stood behind their social promotion. Political systems more humane than capitalism may thus have an essential role in humanizing the human beings, which, as we all know, rest on a thin boundary between angels and animals, between Heaven and Hell, ready to slip into one or the other domain at any given time, following the slightest of the pushes in one direction or the other. Or, as Blaise Pascal noted in a more poetic fashion, “Between us and heaven or hell there is only life half-way, the most fragile thing in the world”¹⁴⁶³. Therefore, having to choose between the most extreme forms of communism and capitalism, irrespective of how altruistic and compassionate by design I am or how capable of thriving in a lawless, animalistic, wild-west-like, big-fish-eat-small-fish environment I’d be, I would always pick the former. Of course, the communism that exists in my head as a political system closest to anarchic Christianity is quite different from most forms of this political ideology applied all across the planet, including my home country, Yugoslavia in the years following World War II. The bloody backdrop of communism in Yugoslavia and its fosterage of unprecedented conformity and subservience is the reason why my parents, for one, never accepted the offer to receive full ownership over an apartment or a house of their choice if

is invisible to the naked eye, it might still be present and the extent of the damage must be determined by the specialists”.

¹⁴⁶² See the transcript of Benjamin H. Bratton’s TEDx talk given in San Diego in 2013 and retrieved from <http://www.bratton.info/projects/talks/we-need-to-talk-about-ted/> (2013).

¹⁴⁶³ See Blaise Pascal’s *Pensée* No. 152, Translated by A. J. Krailsheimer, Penguin, Harmondsworth, UK (1669).

they joined the communist party, which today, when I return home and have no property of my own to stay in, makes me unusually proud and aware that sometimes, if not all of the time, having not makes a greater wealth than having. The tragic fate of my paternal grandfather, a Montenegrin priest sentenced to death by the Yugoslav communists in the dusk of World War II, adds up to the traditional rejection of communism, not so much as a political philosophy, but as a distinctive power structure, among my family members. My grandfather's sentence and execution justified solely by his priesthood is also an important reason why I, myself, would find any identification with historical communist practices immoral, even though I am aware that in a bigger frame, an endless array of human suffering, his fate included, has been caused by the irrational conflicts between these two probably purest social philosophies in existence: capitalism and communism. This is why the slaying of a sparrow by a hawk by that famous beginning of a road whereon the journey ends in Pier Paolo Pasolini's *Uccellacci e uccellini* contains a whole lot of meaning, given the story told in it about St. Francis's sending friars to convert both families of birds individually; they succeed in this task, having taught the sparrows how to live in peace with other sparrows and the hawks how to live in peace with other hawks, but still fail to stop the war between the two, the former being the metaphor of Christianity and the latter being the metaphor of communism. The latter, applied in reality, strangely, happened to be predominantly rightist, not leftist, as one would expect knowing its ideological essence, and what has never ceased to amaze me is how easily the naïve US public bought into the wicked portrayals of communism propagated by the voices of the corporate powers that be, despite the fact that what was at stake were its totalitarian, centralistic aspects, all of which are right, so to speak, not left, as *bona fide* communism has had little in common with its diametrically opposite applications throughout the history. Stalinism, for example, which has been sold by the cunning US politicians to the American populace as an authentic form of communism was all but that, having been more of an autocratic tyranny than *bona fide* communism, whereas contemporary Russia, still puzzlingly tied to the brute behemoth of communism in the American press, has embraced despotic oligarchy, the very same political system that is present in the US, the country that is with every passing moment ever farther from the ideal of democracy as "government of the people, by the people, for the people", as Abe Lincoln envisaged in the Gettysburg Address. How ironical, I often wonder, is it that far bigger communism than Russia has been since the days of Lenin and Trotsky is being given birth to in the government offices in Brussels and Paris, by the major ally, or, as some might say, the principal political seneschal of the US: European Union? Now, aside from the capitalist roots of the American economy, which foster selfish ignorance of the virtues of giving and sharing and prompt people to have faith in the overly competitive and empathically crippled Macbethian maxim, "Fair is foul and foul is fair", at No. 1 spot of the dislikable things I place the lack of universal education, pitiable social security and the missing health insurance coverage for all. Of course, there are other columns whereon a prolific society stands, such as independent judicature, free media and social equalities, which could all be questioned in America, starting from the justice system tainted by the political trends and legislatures favoring big business over common people¹⁴⁶⁴, then proceeding to the media controlled by the monetary interests of giant corporations and to critical levels of

¹⁴⁶⁴ One example of this is when prison sentences are imposed on ordinary marijuana users, while big pharma companies are not held accountable for mortalities caused by the opiod drugs they have developed and marketed. See Jon Woodhouse's *Tulsi Gabbard Emerges as Most Outspoken Anti-War Candidate in Decades*, *The Maui Independent* (Febriary 20, 2019), retrieved from <http://mauiindependent.org/tulsi-gabbard-emerges-as-most-outspoken-anti-war-candidate-in-decades/>, where "criminal justice system, which favors the rich and powerful and punishes the poor" is being briefly discussed.

inequalities in income and standard of living across social strata, but this I leave for another occasion to discuss. The reasons backing up my choice here may stem from the fact that I come from a culture in which the socialist way of living thrived for a long time, in which generous sharing and communion are still seen as perfectly natural and on which Julius Margolin, an American communist and union activist whom my Mom met while working as a tourist guide in Belgrade, dashed off the following words in his diary during the visit of the Yugoslav capital in August 1964: “Medical care is free... Dental care free... Peaceful + Active Coexistence... Capitalism is not growing in Yugoslavia. She is not reverting to capitalist economy”¹⁴⁶⁵. This was, of course, back in the days when Yugoslavia was neutral with respect to the Cold War and considered one of the freest countries in the world; when Yugoslav passport was the most expensive one on the black market; when the country was economically independent and self-sustainable, unlike today; when craftsmanship and the common sense of the peasantry was not spoiled yet by the lethargy of the proletariat; when grounds were set for the thriving of arts - musical, cinematic, dramaturgical, architectonic, you name it - prompting Yugo-nostalgic poets to christen the Yugoslavia of their youth as the very Atlantis¹⁴⁶⁶; when “socialist Yugoslavia became something of a European success story, having had one of the most vigorous growth rates in the world, a decent standard of living, free medical care and education, affordable public transportation, housing and utilities, a guaranteed right to a job, one-month vacation with pay, a literacy rate of over 90 percent, and a life expectancy of 72 years”¹⁴⁶⁷; when Yugoslavia was just about to introduce, a year later, in 1965, the package of reforms reinforcing open trade, more competitive markets, less regulated banking loan schemes, self-governing autonomy allowing enterprises to more freely distribute the residual between the investment and the income, and further decentralization¹⁴⁶⁸, providing, as some may claim, the optimally middle economic grounds between the planned and the free that held the key to the unprecedented growth of a European economy or, as others may point out, sowing the earliest seed of capitalist thinking into the heart of the Yugoslavian economy, wherefrom the evil baobab of discord and dissidence would eventually grow out; when Yugoslavia was by far the most developed and developing Eastern European country and among the world’s twenty biggest economies; when the United Nations Economic Commission found Yugoslavia to have the highest rate of expansion in Europe and when the same workers’ self-management system that is nowadays seen as the inevitable component of prosperous liberal economies of the future¹⁴⁶⁹ was inaugurated by the Yugoslavs and celebrated all over the world due to its innovativeness, inclusiveness, productiveness and

¹⁴⁶⁶ “Who am I? I am a child of the Yugoslav Atlantis, a large family with many members that comprise the pieces for a portrait of a lost civilization: a corner of Zagreb’s Trešnjevka neighbourhood in Seattle and a bar stool from Sarajevo’s Mudrac Bar in Washington DC, a coffee cup from a Zemun café in Calgary, and reflections of Ljubljana River under the bridges spanning the Amsterdam canals, gentle slopes of Fruška gora in Chicago’s black ghetto, and the sunlight rising above Šibenik and swirling around the base of the Eiffel Tower before disappearing into the gap between testimony and vision”, writes the Slovenian poet, Aleš Debeljak in his essay entitled *The Yugoslav Atlantis*; retrieved from <http://www.eurozine.com/articles/2016-03-01-debeljak-en.html> (2010).

worker-friendliness¹⁴⁷⁰. As pointed out by the University of Crete professor of economics, John Marangos, “In 1945, Yugoslavia was a poverty-stricken, largely preindustrial, war-damaged economy with a per capita income of only US\$100 per year. At its collapse, it had achieved a respectable middle-income status. During the transitional period of 1952 – 1960, when workers’ self-management was implemented, the Yugoslav economy boomed. At one point, it had achieved the highest growth rate in the world: per capita gross national product expanded at the rate of 8.5 percent per annum, agricultural output at the rate of 8.9 percent, and industrial output at the rate of 13.4 percent. Also, during this period, more than a million new jobs were created, and aside from a slight downturn in job creation in 1955, employment rose between 6 and 11 percent annually. Over the next four years, 1961 to 1965, labor productivity increased 7 percent annually and personal consumption increased by 50 percent. According to the World Bank, Yugoslav gross national product (GNP) per capita grew at an annual rate of 3.2 percent between 1965 and 1989, well above the 2.6 percent average rate for upper-middle-income developing countries”¹⁴⁷¹. Sadly but true, this very self-management system of corporate organization, now completely expelled from the region of the world that was once occupied by Yugoslavia, the capitalist West will gradually learn to adopt in its entirety and then, paradoxically, export it back to the former Yugoslav countries that will have by then completely embraced the capitalist economic policies, ironically in a form rougher and more deregulated than the historic ones that even the oldest members of the Anglosphere could recall. Although I have been tirelessly telling people around me that the so-called “frog leap” policies ought to be designed and implemented by the developing countries, in accordance to which the latter would not blindly follow all the steps made by the developed countries¹⁴⁷² and thereby fall into the very same traps that they have fallen into, but learn from their mistakes and avoid them timely, so as to catch up with their progress to some extent, the ears to which I whispered this message have mostly been deaf to this political preaching. Henceforth, instead of learning of all the benefits brought forth by the essentially anarchistic policy of involvement of all the employees in the decision-making process regarding the company’s development and going back to this golden path on which their recent ancestors have walked, the policy makers in former Yugoslav countries have decided on blindly pursuing the Western path. Despite all of this, the self-management system, known on the American continent as co-op or worker-ownership, did seem for a while as if it was gaining momentum among the intellectual elites in America¹⁴⁷³ and the reason was quite simple: a society that lives up to the ideals of democracy on the state level, but sticks to the principles of plutocracy or sheer totalitarianism on the corporate level is hypocritical down to its core. Indeed, to swear by constitutional democracies, but to allow the rotting of this noble concept at the corporate level, where most people spend most

¹⁴⁷¹ See John Marangos’ *Consistency and Viability of Socialist Economic Systems*, Palgrave Macmillan, New York, NY (2013).

¹⁴⁷² Needless to add, countries labeling themselves as developed today will be looked upon as cultures of savages to some future generations, which is why I resort to using this term only to conform to the reigning denominations, being aware of its shortcomings. Interestingly, in the recent years, the classical division of countries to developed, developing and underdeveloped has been perceived as offensive to the latter, which led to their being put under the hat of developing countries. At the same time, the countries calling themselves developed are not willing to renounce their status of supposed supremacy and so this ill terminology remains.

¹⁴⁷³ My first encounter of the advocacy of corporate self-management among American authors was in books by Fritjof Capra, including *The Turning Point: Science, Society, and the Rising Culture* (Bantam Books, New York, NY, 1982) and *The Hidden Connections: Integrating the Biological, Cognitive and Social, Dimensions of Life into a Science of Sustainability* (Doubleday, New York, NY, 2002).

of their daily lives, is to live a lie of lies. In one such inherently sanctimonious system, a huge divide opens in the minds of people, who act at work as crafty prostitutes, sleazy sycophants and servile yes-men that employers could wipe the floor with and outside of work maintain the aura of some sort of empowered, confident individuals. Religiously bowing before work, that highest alter in their houses of God, houses run by money and prestige, and looking down upon anyone who says no to prostitution and demonstrates with one's life the way out of this oppressive religion, as if saying, "If we could humiliate and prostitute ourselves, who are you to think that you are privileged and not have to undergo the same humiliation", they turn into sleazy adherents from 9 to 5, but then pretend to themselves and the world the rest of the time that they are the members of the strongest nation on Earth, when deep down their minds must smell slavery and feel the chains straggled out all around them. Over time, one such schizoid split widens and forms a microcrack and then a crack in the consciousness of people, who in a most pathological scenario go mad and turn from quiet lemmings into mass murderers, and in a less pathological scenario adopt robotic mannerism and withdraw into the shell of a seemingly friendly, but in reality unsociable and dysfunctional social creature, meanwhile making the managers, who collect the greatest monetary benefits from this current state of affairs, rub hands in satisfaction, knowing that such robots with low levels of social consciousness are easiest to manipulate, bearing no fear to the manipulator that they would organize around a strong communal spirit and turn against the oppressor. When it is added to the picture that the working class, once composed of factory-floor workers who were constantly in contact with one another, stands more disparate today than ever in its history, now being made of unskilled part-time workers from diverse minority backgrounds separated by hardly bridgeable cultural gaps¹⁴⁷⁴, it could be inferred that its drive to organize has likely never been lower, which is the effect that the capitalist powers have intended to produce and undoubtedly know how to capitalize on. However, in a society where every single major economic downfall in history, alongside countless ill personal and social traits, could be traced to this conflictual relationship between executives running the corporations and people working for them, the implementation of this self-management system of corporate governance may be the only solution visible on the horizon, or else the armadas of Friedmanian, free market economists and their Keynesian, regulation-professing adversaries will fight one another till cows come home, without realizing that neither provides a solid solution to the ailments of the American people and economy¹⁴⁷⁵. Self-management, of course, like any other political philosophy, comes with a definite set of demerits, the most prominent of which is the homogeneously distributed power in decision making across every corporation, where loudmouths with nothing much to say would regularly obfuscate the voice of the quiet and the shy who have a lot of smart things to say. In fact, the only reason why self-management is being idealized by some Marxian economists in America is because it has never been tried on their soil. Just as a tropical island seems exotic to continental Europeans only because they have never seen it, so is the case here and the disappointment with this political management system, where aristocratic, sublime concepts do get to be daily diluted in the tepid waters of mediocracy, would be immense if it were ever to be tested in the United States. This is to say that perhaps the healthiest economies are those where a balanced pull both ways exist: toward the end promoting a socialist safety of workers' jobs and a highly regulated business climate, abounding with a plethora of federal fiscal and monetary policies, but also toward

the end of free competition on the market and deregulation of corporate activities. For, freedoms are not to be stifled at any cost, even that of moderately sacrificing some crucial socioeconomic safeties. After all, as we could be told by many of those who are aware that only when one is overwhelmed by the feeling that the carpet beneath one's feet could be removed at any given time, leaving one levitate in vacuous nothingness, could one engage in truly creative flights of spirit, as magical as those from 1001 Arabian Nights, this lack of security on socioeconomic and healthcare levels must stand for one of the most vital driving forces for the engine of the American capitalist economy. It is the force that moves people to work as hard as possible and often, disappointingly, keep their entire lives, from cradle to grave, thoroughly planned in advance. For, when the loss of a job is seen as an equal tragedy as excommunication from the human race and when a young man looks at his elderly fellow with envy, as it is commonly seen in America, just because the latter has no worries about jobs anymore, and then goes on to conceive the entire path from the current point in his life and all the way to the grave, it tells that life in this new form of social slavery is devalued and subdued to a god called job and its demonic archangels a.k.a. \$ and ¢. As per Paul Tillich's philosophy, America is a culture of "democratic conformism"¹⁴⁷⁶ where "work is sacred"¹⁴⁷⁷ and where, as I, myself, might add it, employers are akin to gods, the workplaces to churches and the offices to altars, and the word "productivity" has the same connotation as "spiritual salvation", so that "the crisis of joblessness is far more than an economic one – to be without work is to be deprived of a role in the life process itself; it is the modern equivalent of being banished from the polis or excommunicated from the Church"¹⁴⁷⁸. Hence the truism of what a faculty member of George Washington University told me as we strolled around her campus one June afternoon in 2018, soon after I got excommunicated from academia, which is that jobless people in America are avoided by others as if they had plague, that is, in the same way as heretics were kept at bay by the alleged believers in the Middle Ages. This tradition of treating employers as gods also explains why the people of this country also find it extraordinarily funny instead of absolutely normal when someone like Mario Balotelli does not show up for a meeting with his boss and the manager of Inter, Jose Mourinho and attends a Formula 1 race on that day, justifying his decision later on with the remark that "meetings in your office I can have every day, but to see Formula 1 is only once a year in Italy"¹⁴⁷⁹. The consistent lack of social care in this culture from here on serves the role of substantiating this religious devotion to work, or, as Paul Tillich, himself, would have had it, "the courage to be *a part of*"¹⁴⁸⁰, as reactionary as it can be. Progressive economists have thus correctly correlated the absence of universal health care in the US with its relatively large GDP¹⁴⁸¹, high median salaries and low unemployment rate. However, having to create such cruel conditions for the thriving of the industrial machinery of a country is a poor and deeply saddening way to manage its economy and maintain this rather labile *status quo* on the

¹⁴⁸¹ It is no brainer that GDP, Gross Domestic Product, is a criminally misleading indicator of the economic prosperity, as some essential contributors to the economic wellbeing, such as household activities, remain unnoted by it, whereas, say, the increased purchase of bottled water due to water pollution or the increased number of medical treatments provided due to more pervasive illnesses among the populace are noted as positive contributors to it.

social welfare scale so as to maximize the economic output. For, people confined in such uncompassionate social networks end up having no life, if we were to speak in jargon, finding themselves amidst a luxurious abundance of goods and comfort, but with the threads of spirit, drawn via sacrificial friendship and love able to fill the ocean of one's heart, thin and torn most of the time, resting in withering spiritual poverty in turn. If their spirits were able to glimpse the reflections thereof in some magic mirrors, they might have had the words of the Serbian Patriarch Pavle being prophetically spoken to them: "Great indigence exists among our children today, to whom, but money, parents could give nothing else". Tumbling in his grave Pavle and who knows how many sages and prophets from the past would be upon hearing that in the heart of the most developed country of the world each and every one of the advices given by an adviser for a parenthood network on the topic of how to raise children that are less pampered is about money¹⁴⁸² – "hand out on a regular allowance", "keep their money where they can see it", "help them save but only to a point", "let them spend", "show them how you use your money", *et cetera*. The only logical conclusion deducible by these passed souls would be that man, a must-be automaton, the ultimate fulfillment of the Grand Inquisitor's dream, sheepish and easily made to aspire to and copy even the inanest ways of being, as hinted at in the very last scene of Apichatpong Weerasethakul's *Syndromes and a Century*, showing people in a park moving in synchrony to the moves of a silly stage dancer, still has a long way to go before his heart becomes purified and social consciousness elevated to such a level that impetuses for actions that bring about welfare for all, springing from infinite love for everything and everyone, can flow straight out of it. For, to the eyes shining with perennial wisdom, conscious about the invisible and undying spirit more than about the evanescent corporeal shell wrapped around it, no amount of material prosperity can justify the cutthroat, rapacious, dog-eat-dog substrate on which the latter thrives. Selfish ignorance of another blossoms like a poisonous orchid within people's hearts from such competitive grounds where empathy and a sense of spiritual oneness are thoroughly neglected, leaving them with vicious snarls on rather than drowning in teardrops when faced with misery of surrounding creatures. Yet, looking at things from a broad scale, we could sit and ceaselessly wonder how absurd it is that in a Christian society ill people lose their homes because of exorbitant medical bills. Really, how altruistic, how humane is a society whose members agree to support their pregnant fellows for no more than two weeks and go on to discriminate between those who should receive healthcare from those who shouldn't solely based on one's intelligence, one's motivation to do work, one's talent for entrepreneurship, and, worst of all, one's indisposition to disease? Indeed, every day one can hear about drugs being denied to tens of thousands of Alzheimer patients due to not being cost effective, the insurance coverage costs being increased to the ill ones up to the point when they cannot afford it anymore, or eye medicaments allowed to be prescribed only after the patient has become blind on one eye¹⁴⁸³. Even the Patient Protection and Affordable Care Act, a.k.a. Obamacare, which disallows the health insurance companies to turn down the health coverage applicants on the basis of preexisting conditions, can be seen as an inhumane capitalist joke on the idea of universal health care by its imposing penalties on all those who refuse to approach the insurance companies and purchase a healthcare plan for themselves and their families. In reality, it has been more of a sign of care for the parasitic, bloodsucking middleman

¹⁴⁸² See Whitney Buffa's 8 Simple Ways to Avoid Raising Spoiled Kids, *Time* (March 5, 2015), retrieved from <http://time.com/3732182/8-simple-ways-to-avoid-raising-spoiled-kids/>.

that the insurers are rather than for the common man¹⁴⁸⁴. And if Steve Albin is correct when he claims that “any time somebody says, ‘Let me take your band and give you some money so that I can make more money’, that person is evil”¹⁴⁸⁵, meaning that middlemen *per se*, regardless of what niche they occupy, are intrinsically adverse for the social good, then any governance prioritizing them over product creators can be denounced as being intrinsically wicked, taking on a stance that can all but present the grounds for healing the people. Plus, what most people allured by the phony premises of Obamacare do not know is that the healthcare plan proposed by none other but the former US President and a sworn Republican Richard Nixon in the early 1970s was far more beneficent for the populace¹⁴⁸⁶, having, for example, stipulated that all employers must provide basic health insurance to their employees and share its costs up to a certain level, with the federal subsidies aiding the employers, as opposed to Obamacare which requires only “employers with more than 50 employees to offer *affordable* insurance with a minimum set of benefits to *most* employees, or pay extra if their employees qualify for a tax credit to *buy* insurance on a marketplace instead”¹⁴⁸⁷. At the same time, however, while medical expenses keep on being the leading cause of personal bankruptcies in the US and the poorest American families continue to be deprived of decent health care, hundreds of billions of dollars are allocated from the federal sources for the bailouts of insurance corporations, such as AIG, suggesting “fundamental wrongness of the existing political system of social governance”¹⁴⁸⁸, as noted by Joseph Stiglitz, a Nobel laureate in economics and an eminent critic of the global economy that increases the divide between the rich and the poor with every new day¹⁴⁸⁹, threatening the world’s economic and social stability that is, as the history demonstrates, inversely proportional to the magnitude of this gap¹⁴⁹⁰.

¹⁴⁸⁴ Doing all I can to raise the awareness of the necessity to adopt a communal, universal healthcare system, which would make these middlemen from Hell wholly unnecessary and ready to vanish from the society, I have boycotted them and once, I remember, after being approach with the request to sign up for the life insurance, I remember I said two words, “Pascal’s wager”, before click-clacking away through the Steppenwolf hallways of my consciousness fragmented into freely flying demons of visions and memories. Pascal’s wager, of course, in its most brilliant interpretation is the idea that one must bet one’s life in order to prove the existence of God.

¹⁴⁸⁵ See the interview with Steve Albin, retrieved from smithlahrman.blogspot.com/2010/10/interview-with-steve-albin-1993.html?m=1 (April 14, 1993).

¹⁴⁸⁶ To make things even more ironic, already in the first year of his presidency, in 1969, Nixon advocated for the more stringent regulation of medical devices, which had caused in the 1960s a series of adverse events due to underregulation. This initiative led to the establishment of the Cooper Committee a year later, which defined the three classes of medical devices, the categorization which is used to this day, for both tangible devices and devices in the form of programming codes. See, for example, Kurt A. Yaeger, Michael Martini, Gal Yaniv, Eric K. Oermann, Anthony B. Costa – “United States regulatory approval of medical devices and software applications enhanced by artificial intelligence”, *Health Policy and Technology* Volume 8, Issue 2, Pages 192-197 (2019).

¹⁴⁸⁹ See, for example, Mark Karlin’s *Richest 300 Persons on Earth Have More Money Than Poorest 3 Billion*, The web page of Bernie Sanders, US Senator for Vermont, available at <http://www.sanders.senate.gov/newsroom/news/?id=a10e50a7-5b9d-4933-9bb8-decd3ce624dd> (July 18, 2013).

¹⁴⁹⁰ In 1929, the top 1 % of people on the income ladder held 25 % of the net income in the US, an effect that directly contributed to the economic crisis known as the Great Depression. Then, again, in 2007, just before the global economic meltdown, the income inequality reached its new maximum with 0.1 % of the richest population in the US

Quite in the spirit of the deceitful forefathers of the American culture, who massacred native Americans, waged unnecessary wars and invaded foreign lands “to civilize and Christianize them”¹⁴⁹¹, as the former US President, William McKinley asserted in 1898 before the invasion of the Philippines, and “to fulfill the manifest destiny to overspread the continent allotted by Providence for the free development of yearly multiplying millions”¹⁴⁹², as it was proclaimed by the pompously militant politicians on the eve of the Mexican war of 1846, and all that under the pretense of the defense of human rights, that is, “with God on their side”, as Bob Dylan noticed¹⁴⁹³, socialized in this case is not the access to health care, but the financial burden of corporations with privatized gains. Alas, when a healthcare system is “designed to profit from disease not health, reward quantity over quality, and promote high-tech over high-touch”¹⁴⁹⁴, no *ad hoc* alterations of it, such as Obamacare, can make it better, as what is needed is its overhauling, from the base to the top, starting with shaking the insurance middlemen off the boat and into the sea. And when the healthcare system that should be healing the sick is sicker than these sick, it is an irony that cuts through the heart and soul of Christianity, a microcosm of ethics wherein the more our acts benevolently orbit those who have the least power to help themselves, the more stellar they are¹⁴⁹⁵. Naturally, this has given rise to an endless stream of tragicomic cartoonish depictions of the Christ leaning over a poor homeless man and uttering an apology for not being able to heal him due to his preexisting condition, the same reason for which the health insurance companies, the middlemen from hell, as I love to call them, deny millions of Americans an access to affordable health care every year. How far has the American society then evolved from the one wherein ill native American servants used to be abandoned by the affluent households and let die in the street, just so that the family would not have to pay for the burial expenses, as it was documented to have happened in Los Angeles of 1850s¹⁴⁹⁶, when the city was inhabited by hordes of gamblers, bandits and other scavengers, I often ask myself? Could it be that only walls of distantness were raised between people so that those on the rich side can now pretend that their signing death sentences to poor fellow citizens via selfish healthcare choices has never happened? After all, when patients with missing teeth, such as myself, are offered three choices to replace them, namely implants, bridges or dentures, depending solely on their monetary status and not even a slightest bit on their physiological predispositions for each of these options, it is a mirror in which the all-pervading inequity of access to healthcare in this country, where money in the pocket, not the true medical needs of the person, matters most at the end of the day, is being reflected. At the same time, it is an ethical nonsense that medical doctors and people from the biomedical industry are some of the richest members of the society, which further speaks about the state of corruptness of all things medical around here. This latter fact actually would not be that sad had the greatest drive that pushes youngsters to pursue medical and dental careers not been the astronomical salaries that

being in possession of 12 % of the country’s income. See the documentary movie, *The Flaw*, directed by David Sington (2010).

await them once they begin their professional practice. Even medical charities in the US usually have a strong business perspective, frequently allocating no more than 1 % of the solicited funds to those in need who these funds were indirectly donated to and filling the pockets of their holders instead¹⁴⁹⁷. That almost every third advertisement on TV in the US, one of the two countries in the world where direct-to-consumer ads for drugs are legal¹⁴⁹⁸, is about a drug while more than a half of all the bankruptcies are caused by exorbitant medical expenses tells one that the biomedical research is primarily about making profits, more than benevolently and selflessly helping ill-fated people. In a culture of profiteering like this, the medical community should be all but surprised upon realizing how the inevitably real health crises, such as that brought about by the COVID-19 pandemic, could be used for personal benefits of certain groups of people, be it IT engineers who have suddenly found the solution to the supersaturated market for their services by expanding this market through the shift to online communication channels, internet retailers who happen to be the biggest and monetarily most powerful corporations in the world, totalitarian governments or state employees who would rather sit at home, sip on a coffee and watch Netflix than grind hours in a cubicle; because, deep down, social values plaguing one social domain plague also all the others and if a professional branch such as medicine, which should have the status of the purest, is corrupted on the inside, at the spiritual level, then these ill values are likely to have spread everywhere. The stunning level to which people in the US have become accustomed to this state of affairs where money is the prime and often sole driver of biomedical businesses can come from Turing Pharmaceuticals' acquiring license over Daraprim, a 62-year old drug at the time, used to combat an array of infections, from malaria to infections in babies born to women affected with an infectious disease during pregnancy to those arisen as complications of AIDS and cancer, increasing its price overnight by 5,000 % and then having the CEO justify this decision with the intention to increase the company's budget for the research of new drugs¹⁴⁹⁹; interestingly, neither him nor the journalists nor the majority of the public found it ethically nauseating that ill people, not large-scale investors or taxpayers through state or federal funding, are being taken money from their already emptied pockets for this purpose and that the cycle of continued impoverishment of the poor and comfortableness for the well-off is being perpetuated thereby. The case of the jacked-up price of EpiPen, a simple device used to inject a dose of epinephrine for the emergency treatment of an anaphylactic attack, stored in the pocket of innumerable parents of children with life-threatening allergies, is similar: even though the company Mylan developed neither the drug nor the device, it did not shy away from acquiring the rights for its sale and then hiking its price by 500 % in sixteen increments in less than a decade long period of time, thus increasing the profit margin from 8.8 to 60.3 %¹⁵⁰⁰ and now delivering the dose of a drug valued one dollar for the price of \$600 charged to the users¹⁵⁰¹, simultaneously increasing the annual salary of the company's

CEO from \$2.8 to \$16 million and filling the pockets of other key executives with dozens of millions of dollars. Daraprim and EpiPen, of course, are all but isolated cases, given that there has been a plethora of other drugs similarly acquired by the Big Pharma companies and then had their prices increased by anywhere between 525 % for Rodelis Therapeutics' Cycloserine to 2,160 % for Valeant Pharmaceuticals' Isuprel to 9,245 % for the decades-old antibiotic doxycycline, while typically having the new acquirers collectively justify these decisions by the need to “stay in the business”¹⁵⁰². And if business is defined, as Mike Pearson, the CEO of Valeant Pharmaceuticals would have it, by the company's ability to bring revenue to shareholders¹⁵⁰³, regardless of any social consequences, then this statement is correct and presents the natural corollary of Big Pharma's foul prioritization of marketing and mergers over science underlying its products. Mike Pearson's mantra, “Bet on management, not science”, the same one I heard resonating in the heart of a southern Californian school of pharmacy that I worked in as a professor, is thus to be blamed for this fundamental flaw on which these corporations are built. Pearson's Valeant Pharmaceuticals, for example, built its growth model during the period of the explosive growth in its earnings and market value on the acquisition of new companies with licenses for selling new drugs and on simultaneously cutting down on research investments by whole 90 % on average, down to mere 3 % of total investment. To offset the loss of capital to mergers, the prices of these newly acquired drugs were jacked up by exorbitant amounts, as exemplified by the drug Syprine, whose monthly value on the market went up from \$650 in 2010 to over \$21,000 in 2015. And to illustrate that this model applies all across the pharmaceutical industry, the fact that for one time in late 2000s, “all of biopharma earnings growth came from drug price increases”¹⁵⁰⁴ could be invoked. At this point, it should also be noted that a very similar acquisition of independently developed, high-profile researchers is used by countless massive biotech labs in academia as the strategy for boosting the h-index and other markers of reputation of their leaders, principal investigators, who often understand neither the specifics nor the basics of research run in their labs, and we are bound to see ever more of this model of growth in the years to come as academic science continues to become ever more corporate. Still, unlike the Big Pharma companies, which are subjected to public scrutiny, there is still no one to point out the predatory nature of these giant labs, the fact that can be blamed partly on ignorance and partly on the fear for losing even the little means that one gains for the sophisticated work done in these settings. Be that as it may, another example in favor of the idea that callous capitalism breeds greed whose selfish, materialistic bias can eclipse even the brightest suns of love and care for another comes from the story behind Purdue Pharma¹⁵⁰⁵, a pharmaceutical corporation whose founder, Arthur Sackler, criticized in the 1970s the “weasel-worded warning” used by Tobacco companies on cigarette packages, but then proceeded by engaging in a similarly misleading marketing campaign for the opioid drug, OxyContin, which involved numerous conflicts of interest, from sponsoring and rewarding docs who were prescribing the drug to overturning the humanistic, public-health goal of “selling the least dose of the drug to the smallest number of patients” by aiming to achieve the exact opposite in the business plan, to targeting critical populations using the same strategy as that employed by Mexican heroin peddlers a.k.a. Xalisco boys, reaching out to underprivileged communities where poverty and lack of education were pervasive, offering free initial prescriptions to hook the patients

up on an addictive drug thanks to the use of which there is an ongoing opioid epidemics in the US now and an addicted baby is born every half hour, to using data on prescribing habits of individual doctors obtained by a company, I.M.S., cofounded by Sackler not to prevent illegal “pill mills”, but to boost the drug sales, fill the pockets of the company’s executives and continue to open halls of fame and research institutes named after the Sackler family in phony attempts at acting philanthropically. The further fact that not only have the pharmaceutical companies profited blatantly from the ongoing opioid epidemic in the US, but more than a half of all the opioid antidotes, which are used to save the lives of people who overdosed on the opioids, are being developed and marketed by the very same companies that develop and market the opioids on which the addicts overdose¹⁵⁰⁶ speaks in favor of the inherent unethality of their business practices, which, as ever in capitalism, prioritize profits and marginalize the genuine purpose of their existence: to heal life. Finally, the aforementioned strides made toward the ideal of personalized medicine have produced in their wake countless Big Pharma corporate loophole exploiters of the Orphan Drug Act of 1983, which was brought into force to encourage the development of drugs for rare diseases. Namely, personalized medicine has paved way for slicing common diseases into technically rare conditions, such that less than 200,000 people in the US are affected by them, which is what the cunning pharmaceutical companies indicate their new drugs for when seeking FDA approval, eventually earning a number of financial benefits, including subsidies, tax breaks and market exclusivity, but then repurposing the drugs for more common indications and turning them into blockbuster products¹⁵⁰⁷. Another one of such fads embraced by the pharmaceutical and biotech companies as of late 2010s in search of products sellable to as broad of populations as possible has been the collective swaying of the R&D focus from therapeutics to diagnostics. For, at a point when improvements in the survival or life quality of patients with some diseases has been at best marginal despite the colossal efforts invested in the R&D of therapeutic products and when slicing individual diseases to ever finer “personalized” segments has been diminishing the market for them, these companies have turned to the design of diagnostic products, which do not only target both healthy and diseased populations, oftentimes ranging in the order of billions of people, but also correlate the negative analytical response - easier to achieve than the positive one in the sphere of therapeutics - with the greatest user satisfaction. The ethical ramifications of this transition to medical prevention dressed not in the clothes of wise Yogis, but in those of cold medical professionals and their high-tech machines, are far-reaching, but there is rarely anyone with a neck twisty enough to glimpse what lies behind the horizon and see the Orwellian times where diagnostic screenings, such as those recommended now for colon cancer for people over 45, will be a mandatory precondition for various social functions, from employment to childrearing. But what else to expect from a hardcore capitalist society where every cost-benefit analysis for a medical product in R&D begins with the “cost of illness”¹⁵⁰⁸ analysis, where the disease in question is being converted to monetary units, neglecting all the while that to a person with a life-threatening condition, the lifesaving treatment has an infinite value, just as the value of human life is, simply, infinite, going beyond what any dollars and cents can measure? Still, on a more holistic note, the average human mind obviously has to go a long way before realizing that in a world where nothing is monotonous and linear and everything is feedback-looped and

nonlinear, more car lanes on suburban roads yield more traffic congestion¹⁵⁰⁹, and, similarly, more drugs on the market yield more illnesses around us. This is to say that the longer the reach of pharmacopeia, the right hand of the western medicine, the harder it is for it to cater to the need of those who are most in need of it, alongside producing far more costs than benefits. For example, the repeated spraying of plants with herbicides, including most notably Monsanto's Roundup, was shown to have induced the evolution of herbicide-resistant populations of weed that now contaminate millions of acres of once fertile soil in the US. Uncontrolled administration of antibiotics was similarly demonstrated to have led to the rise of many antibiotic-resistant populations of pathogens. This rapid development of resistance to antibiotic therapies by the pathogens has given a severe blow to the pharmaceutical businesses developing them because, as many brains behind their wheels have wondered, what is the purpose of investing 10 years of research and \$1 billion on average on a new antibiotic when the pathogens may become resistant to it in a couple of years only, making the drug virtually unsellable on the market after that time. The most striking recent example of how little trust investors put in pharmaceutical companies focused on the development of antibiotics comes from the case of Achaogen, a biotech company that was founded in 2002 and that spent the next 16 years developing a single antibiotic, plazomicin a.k.a. Zemdri. Amazingly, the day after the drug finally got approved by the FDA, in June 2018, the company's stock price dropped by 20 %, from \$12 before the day of the approval down to less than \$10 after the day of the approval, eventually plummeting down to \$1 by February 2019 and leading to the company's filing for bankruptcy two months later¹⁵¹⁰. After all, if the co-evolutionary nature of the origin of life in all its diversity can teach us something, it is that our arrows sent out to eliminate a seeming enemy eventually bounce off like boomerangs banging onto our heads as we become outsmarted by our opponents, whereas accepting the dialectical nature of life as inevitable and seeing thereupon even the harshest and most destructive biological entities and phenomena around us as equally vital for the evolution of life into ever more blissful emanations of divinity as ourselves is the key to finding solution to the malign egocentrism and anthropocentrism that have taken over the human minds like self-destructive plagues of a kind. Or, as Dean Burk, a founding member of the National Cancer Institute, noticed, "The more people making a living off cancer, the more impossible it is to get rid of it", echoing the thought of Benjamin Franklin: "He is the best physician that knows the worthlessness of most medicines"¹⁵¹¹. Hypocritical healers driven by greed and the thirst for fame can thus be said to be an equal ailment as those whose spreading they pretend to be preventing. Henceforth, it should not come as a surprise that in Val Lewton's and Jacques Tourneur's movie *Cat People*, the movie that depicts an intercultural encounter of opposites whereby a rise in the proto-American coldness, distantness and infidelity, all wrapped up in the envelope of prosaic practicality, becomes mirrored in arousal of an impassionate battle between darkness and light that rages within the Serbian, Slavic soul of a cat-woman portrayed in it and occasionally tears it apart, awakening of the demonic beasts of anger that inhabit the latter spirit, in love with the friendliness of the dark, silence and loneliness, culminates in mauling none other by the corrupt doctor and psychiatrist. In fact, realizing that every single comment in televised discussions on the health care system either implicitly or explicitly refers to money, an embodied craving for rewards for our hardworking dedication to

bring benefits to the world and an epitome of greediness, the cause of our fall from grace according to all theologies of the world, from Taoism to Hinduism to Islam, suggests an inherent selfishness of any strategy or a plan that health policy crafters will eventually come up with and can be said to deserve a new Christ to feverishly overturn their tables and kick the fake cures and advices that they are selling with self-interest to the floor. Yet, when one stands on specifically colored foundations for a long time, one naturally becomes blind to them. Hence, to describe those who defend the existence of social parasites called health insurance companies and see denial of insurance to those with preexisting conditions as economically sound, one could always revert to the words of John Kenneth Galbraith: “The modern conservative is engaged in one of man’s oldest exercises in moral philosophy; that is, the search for a superior moral justification for selfishness”¹⁵¹². Such ethical lowlanders, tending to value people in terms of their financial assets rather than in terms of their humane values, are blind to the fact that the foundations of humankind crumble under their feet as they keep on paying lip service to whoever pays their excessive salaries, acting more like well-trained dogs than like shiny stars of the night sky. On one hand they may wonder why no talented youngsters want to become basic scientists, philosophers, artists or any other creators of new knowledge, while on the other hand they negate the fact that capitalism has created an economic system that benefits the voracious middlemen¹⁵¹³, favoring self-promotion and exploitation of another over humble and altruistic creativeness. For, the key to success in capitalism is finding the right workforce to exploit; the effectiveness of this exploitation, conversely, is the determinant of success in a capitalist economy. And when the emphasis in strivings for success is on the exploitation of another, while the creative forces are by default confined to the roots and the heart of innovative efforts rather than to the administrative side of things, the most creative minds will always count among the exploited. Historically, I know that the essential premise of capitalism, which is that investments by the wealthy will lead to the creation of even more wealth that will trickle down to the poor, traces back to the discovery of America, a new continent allowing for the gaining of previously unthinkable returns to investment, explaining along the way why this political philosophy gained its deepest roots exactly here: in America, where it now seems indivisible from all other aspects of the country’s cultural makeup. One of these side products of colonization of America, which was done almost strictly by private companies¹⁵¹⁴ in the attempt to capitalize on the possibility to set up considerably larger production facilities and thus generate far more profit than in their European homelands, were slavery and racial segregation. Actually, the fact that the Adam Smith’s 18th century free market manifesto, *The Wealth of Nations*, was completely oblivious to the issues of slavery, which Great Britain at the time greatly capitalized on, was an early lesson on how capitalism building markets devoid of any humanitarian constraints could produce goods and multiply the capital, but at a grave cost for humanity. All this is to say that it should not be surprising at all that this grand inversion of skills, where the shallow take on the spot of the essence, while what should have been the essence ends up on the margins is nowhere in the world as pronounced as in America. This segregation, as I have concluded while sitting in the reception area of a vile University of Southern California dentist in Alhambra and watching a commercial TV show on facial massages and cosmetic

products with my research on the ways to treat bone infection and cancer unfolding in my head to the sound of Stravinsky's Fairy's Kiss, gradually downgrades the social system of values in a capitalist, *laissez faire* economy and substitutes the sublime in it with the shallow. The exploiters segregating at the top will thus hold onto mediocre ethical and aesthetical values, the most sublime torches of which will continue to be carried strictly along dark underground channels of the society and constantly appearing as if their flame will turn into a flicker and the flicker into embers and embers into ashes. Those willing to share the fate of myself, which was that of segregating at the top for a finite period of time, but then becoming repelled by the unfairness of a system that benefits the holders of the capital and the power the more they oppress the subservient ones and deciding to renounce the power of authority and go back underground, like in the Jam's song¹⁵¹⁵, can be counted on the fingers of one hand. For, even those who recognized the unfairness of this exploitative system when they counted among the oppressed almost never resist the corruptive temptations of the power once they become surrounded by the subservient souls who readily offer themselves as tools to use and mops to wipe the floors with and they quickly begin to think that they have somehow deserved all that power of influence and fruit that comes to ready to be picked without even slightest efforts made in growing it. And so the cycle keeps on spinning, shooting those with the talent for pathological self-promotion and manipulation of another to the tops and spitting those who find living off other people's backs ethically inappropriate and who strive to build independence and autonomy in others rather than serfdom and subordination to the bottoms. And yet, as if it has not happened large enough number of times throughout the history that the economic systems under its hat spontaneously segregated into a thin cream of wealthy slaveholders and the rest being chocolate-colored fudge, the imperialist powers of the day still work on exporting all over the world this inherently unfair economic system in which those who stand at the beginning of the pipeline of knowledge and all the material wealth that emanates from it earn least. The systemic nature of life suggests that the ideals inscribed at the foundations of a system usually become reflected in each and every visible facet of it, which explains why even the most seemingly benevolent health policy makers or professional healers in the US can often be found to rely on the same money-oriented inclinations as the greediest bankers on Wall Street, the financial center of the US whose name neatly describes the central concept of this society: building a wall and pushing others as much away from oneself as possible instead of crushing the walls of egotistic pretense and selfishness and conjoining the rivers of our hearts into powerful flows of love, and all that on the wings of blissful belief in the unity of all things. For, self-interested capitalist values are so deeply enrooted in the American society that the process of their deracination is guaranteed to be long-lasting. After all, this society is the one in which even churches are managed with business plans and seen as profitable projects, and wherein even the littlest children are conditioned with awards for the successful accomplishment of their chores. Yet, the more one is obsessed with gaining rewards for one's work, the farther one is from the destinations of genuine happiness and spiritual fulfillment, as Lao-Tzu, Krishna disguised as the charioteer in Bhagavad-Gita and many other sages and prophets that walked across this planet might have reminded us. In an ideal social system, one's dedication to medical profession would unequivocally entail one's readiness to selflessly give all that one has, one's entire being and all the powers dormant in it, for the benefit of others, without asking for anything in return. Yet, the breadth of medical professionals' understanding of the essence of their profession is not very praiseful, as any insightful visitor of a medical institution, able to penetrate through phony facial expressions and poses of its doctors and specialists and into their hearts, could confirm.

¹⁵¹⁵ Listen to the Jam's Going Underground, Polydor (1980).

Innumerable times have I, for example, witnessed people throwing parties to celebrate freshly received funds for their research on finding cure to a specific illness. Yet, every time we are granted research funds from the National Institutes of Health (NIH), we should be aware of the hypocrisy of celebrating one such occasion. For, the fact that someone is willing to fund our research that bears medical significance only means that somewhere down the line there are patients begging for help, while on the opposite side there are people trusting our ability to look deep into the secrets of Nature and find cure for their ailments. “I wish I live in a world where I would never receive one such funding”, I remember I responded to my colleagues who began to uncontrollably compliment me after I obtained one such award, and went on to add that “I would appreciate not being congratulated on having being given a chance to help the ill begging for help; only if and when the future research finds a solution to healing the given population of people may I accept such praise”. Indeed, it stands for a tragic paradox of these times that news of received funding usually cause an avalanche of congratulatory words from the department heads and colleagues, whereas news of published articles and other public disseminations of research findings usually go by unnoticed. It is a direct proof of ontological shortsightedness and egocentricity that drive today’s academia in place of altruism and holistic nous. To respond to the notification of received NIH funding with a glass of bubbly champagne in our hands and effervescent dreams of tenure, a new car, maybe a house and the dazzling clouds of bigness and esteem that we will leave behind our trail in elevators and hallways and use as a dust to throw into the eyes of envious colleagues presents nothing but a devastating ethical fallacy of our times. Instead, receiving such an award should signify humble beginnings of a long and strenuous work directed toward saving lives of our misfortunate planetary cohabitants. For, doing research on projects funded by the federal budget means that it should really be science “of the people, by the people, for the people”¹⁵¹⁶, and not science driven by the urge to gratify one’s petty ego. With passion and devotion in our heart and crystal clarity in our head, we should then begin to spend every hour and minute of our life laboring for the sake of justifying the faith that the kingdom of modern medicine has had in us. When it comes to transmitting our knowledge of biomedical relevance, we might also wish to resist fostering a fun and amusing atmosphere around us, so typical for the American educational institutions of the modern day, not immune to the plague of entertainment that has already trivialized and corrupted arts, politics, religion, journalism¹⁵¹⁷ and, more or less, every segment of life in America, and install instead a vibe reflected in the words with which I often begin my introductory class on biomaterials instead: “We are here not to feel good. We are here to feel the misery and the desperation of all those who sit at this moment tremblingly in a cold clinic somewhere in the world, with a ray of hope flickering in their heart that a material that is to be injected or implanted inside them will make them whole again”. The clouds of graveness that these words momentarily gather around the lecture hall makes the souls dwelling in them receptive to emotion as deep as the ocean and capable of being profoundly touched and inspired by what they will see and hear instead of yawning in boredom, spacing out in lukewarm indifference or giggling shallowly, in all cases squandering this divine gift called life from one of its magical moments to the next. With such a somber vibe sparked in the air, the students begin to feel the burden of sharing the world’s suffering and a step is being made toward the transmission of the impulse of divine creativity from one soul to another, as opposed to its erasure in a classroom that prioritizes

¹⁵¹⁷ For a brief discussion on devastating effects of the merging of entertainment industries and broadcast journalism in America on the minds of people, see George Saunders’ *Braindead Megaphone*, Riverhead Books, New York, NY (2007).

entertaining education over education as a holy endeavor, breeding uncommitted, flippant cripples who may feel good and light at all times, but who'd be in for a life time of spiritual aridness and infertility. The burden that this sense of responsibility places on our shoulders can feel unbearable at times, but it is a necessity if we wish to remain true to our professional calling and save a life with our gigantic devotion one bright day. And any time we come across a colleague who'd casually observe that "we are safe" now that we have secured funding for the next couple of years, we should simply tell ourselves that this is not about us, the healers, but about them, the to-be-healed ones, and that congratulating oneself on the achieved financial safety when the given funds are to be used to find cure for ailing human souls would present an instance of paramount unethicity in any truly beautiful universe of thought. For, being devoted to medical profession while guided not by yearning to help people with one's ideas and actions, but by a greedy desire to attain fame or material wealth, is nothing but monstrously hypocritical. This awareness of hypocrisy embedded in the bedrocks of the American society can only become aggravated by one's becoming more familiar with the aggressive foreign policy that the US has traditionally employed, the policy that, on the other hand, can be seen as a mere extension of the brutal capitalist principles of internally governing the society. For, the governance over international relations with the first and foremost aim to reap benefits for oneself is the only logical outgrowth of the culture that internally commodifies man, strips it off its spiritual value, turns it into an object and thus corrupts its soul, alienating one human from another in the process and minimizing chances for organized resistance to the powers that oversee the system and profit from it. Yet, what else to expect, some may ask, from a society that not so far away in the past had slavery legalized but the continued enforcement of the capitalistic manipulation of man and the enslavement of its soul by the curse of cash, albeit on the basis of more refined social laws and principles than it was the case in these dark days of the American history? Although the American society has made an enormous progress since the times when it indulged in blunt slavery and when the former African-American slave, Frederick Douglass proclaimed that "between the Christianity of this land, and the Christianity of the Christ, I recognize the widest possible difference – so wide, that to receive the one as good, pure, and holy, is of necessity to reject the other as bad, corrupt, and wicked... Indeed, I can see no reason, but the most deceitful one, for calling the religion of this land Christianity. I look upon it as the climax of all misnomers, the boldest of all frauds, and the grossest of all libels. Never was there a clearer case of 'stealing the livery of the court of heaven to serve the devil in'"¹⁵¹⁸, the instances of hypocrisy and superficially colored prejudices still pervade this society at its core. Seeing the troupe of Scottsboro boys wiping the mud of shame off their faces with white handkerchiefs close to the end of the musical¹⁵¹⁹ that describes their tragic case, one could not help but think of millions of little unfounded judgments and accusations derived on an everyday basis from this obsession with the face value of it all, through which dark skin was, of course, seen as muddy and predisposing one to be a slave. Side by side with this appreciation of the surface and the form on the account of neglect of the essence exists crass literalness that equally degrades the natural complexities in which all things beautiful reside, as inherent to mainstream Americanism as salt is innate to seas and oceans. The Christ's words on the sins of hypocrisy committed by the Pharisees (Matthew 23) and used by very Frederick Douglass during his verbal assault on the fraudulent and unfair American society of the 19th Century, culminating in the powerful message,

¹⁵¹⁸ See the Appendix of Frederick Douglass' Narrative of the Life of Frederick Douglass, an American Slave, Signet, New York, NY (1845), pp.120 - 126.

¹⁵¹⁹ The musical Scottsboro Boys I watched at the American Conservatory Theater in San Francisco on June 22, 2012 had been written by John Kander and Fred Ebb in 2004 and directed by Susan Stroman.

“O Jerusalem, Jerusalem, thou that killest the prophets, and stonest them which are sent unto thee”¹⁵²⁰ (Matthew 23:37), may thus be said to still hold. Indeed, many sleepless nights I spent wondering how puzzling it is that while the Christ (a) strived to heal each and every one, (b) denounced violence by asking his followers to “resist not evil: but whoever shall smite you on your right cheek, turn to him the other also” (Matthew 5:39), and (c) wished to see people converted to children who approach the world with an open heart, embracing each and every one, rather than pretending to be self-righteous judges, his most avowed followers in the US are on the front line of (a) denying the health care to those who cannot financially afford it, (b) supporting the rampant trend of gun ownership, and (c) condemning all those who happen to think differently and fumingly throwing judgmental stones of rejection everywhere around them. The mainstream culture in America, the country in which most people equate Christians with churchgoing conservatives¹⁵²¹, being “simultaneously the most professedly Christian of the developed nations and the least Christian in its behavior”¹⁵²², as remarked by Bill McKibben, is, in fact, so used to hypocritical embracement of maps over their territories that attempts to heal this disparity between belief and action are destined for devastation in the majority of cases. The roots of such pervasive hypocrisies, of course, could be sought partially in the very capitalist fabric of the American society. For, the wheels of hardcore capitalism can keep on spinning only insofar as there are people who are extremely wealthy, but also people who are or can at any time become extremely destitute. And because of this necessary presence of the misfortunate for the engine of capitalism to be working with a proper momentum, any explicit strivings for welfare in one such intrinsically cruel economy of broad social inequalities are hypocritical *per se* and it should not surprise that hypocrisy is the main mode of communication in it. Because of all of this, the American culture can be called the culture of unprecedented and unassailable pretense, and, as noticed by a character in Jordan Harrison’s play *Maple and Vine*, “the longer we pretend, the less precisely we can tell where our pretenses begin and where the real ends, and *vice versa*”. If we were to place side by side (a) the sugarcoated politeness with which most people approach each other and (b) their rare readiness to truly sacrifice their comfort for the benefit of another, the point of Bill Gates’ releasing mosquitoes at a TED talk to tell the viewers that hardly 1 % of the compounds marketed by the pharmaceutical companies targets diseases prevalent in the developing world¹⁵²³, adding up to the facts that “there is more money put into baldness drugs than into malaria”¹⁵²⁴ and that “nanotechnology promises new cancer treatments, cheaper energy, and purer water, but the first products offered to the public have been more airtight tennis balls, transparent sunblock and stain-resistant trousers”¹⁵²⁵, would become crystal clear; for, “drug companies spend more on advertising and marketing than on research, more on research on lifestyle drugs than on life saving drugs, and almost nothing on diseases that affect developing countries only”¹⁵²⁶, as the 2010 Nobel

laureate in economics, Joseph E. Stiglitz mentioned in the course of his fierce attack on the monopolistic pharmaceutical markets that favor high costs and limited access to medicines, all for the sake of ensuring the benefits for the patent holders who snatched up the fruits of the centuries of hard human work with their greedy paws, while appearing to others, as well as to themselves at times, as clean-handed lifesavers with their sweet talk, glossy cheeks and polished suits. For example, when Mike Laffarty, the vice-president of R&D in Fisher Scientific, told the students in my medical devices class at San Diego State University that the incentive for the big companies like his to develop assays for the developing world, for the price of a dollar or so, is nil because with the estimated sold units of, say, a million and around fifty millions that it would take the big company to collect and manage the clinical specimens only, let alone execute other aspects of the translation of the product to the market¹⁵²⁷, he mirrored scientists and innovators of this kind, genuinely humanitarian but within the frames defined by the rules of the libertarian, free market game. Alas, without questioning these rules, alongside all other foundations on which our actions in the world are based, there is no true humanism and all these very best of intentions may end up paving but a highway to hell, which is to say that the world today, more than perhaps at any time in its history, needs subversive thinkers willing to overturn the grounds on which they stand and draw lines outside of the paradigmatic boxes that confine their thinking, notwithstanding the symptomatic social exclusion and troubled lifetimes that they would sign themselves up for thereby. In the meantime, the contemporary culture where most people, especially in the liberal settlements in the US, condemn consumerism and capitalism and many other neoliberal economic premises in informal conversations, but then turn around and play by the rotten rules of the free market game in their day-to-day lives, contributes to the constant filling of a giant pool of hypocrisies, which is ready to spill its toxic contents over anyone, anywhere, anytime. Beside this, innumerable other examples can evidence that the amount of hypocrisies in the Western world has reached astronomic proportions, from the fact that Victoria's Secret, the company making fancy underwear, has used cotton produced by child labor in Burkina Faso for one of its glamorous apparels, all under the banner of Fair Trade, while at the same time donating some of its profits to none other but people of Burkina Faso, to the second largest ecological catastrophe on the European soil, right after that of explosion of the nuclear reactor in Chernobyl, when more than 20 million gallons of cyanide that lastingly contaminated the rivers Tisa and Danube in parts that run through Serbia were released from a mine with quite an exotic name, *Baia Mare*¹⁵²⁸, to 70 million tons of landmine waste being tossed to Ok Tedi river in Papua New Guinea every year by the mining company with a startling name, Sustainable Development Program Ltd.¹⁵²⁹, to one of the roughest American basketball players who recently changed his name to Metta World Peace and still continued to be involved in elbowing, vandalism and brawls, remaining the leader in the longest suspension in the history of the American major basketball league, to our being overflowed on everyday basis by showers of communicational clichés that appear polite and benevolent on their surface but whose cores of intentions rot in greed, prompting some of the sincerest among us

¹⁵²⁷ What this implies on a brighter side of things is that small innovation centers that are not driven by profits, but primarily by curiosity and selfless benevolence, as well as research innovation centers in the developing world are those from which the elegant solutions to the world's most pressing problems are expected to arise.

to start “twisting and turning to rid oneself of human language”¹⁵³⁰, as the former Dean of Yale and New York University Medical Schools advised the new generations to do, resort to silence and merely dance like a lip-syncing silhouette throughout the starry, yet incredibly corrupted by the dark spots of selfish ignorance, fields of the world. This widespread pervasion of hypocrisy struck me on a recent occasion when, as an employee of a medical institution, I had a choice of either being a patient treated by doctors in training, together with the poor people of San Francisco, or being a patient of renowned experts, together with those who were able to pay for that privilege, including my fellow employees. The latter were dazzled when I told them how my ethics does not let me be treated at any other place than together with the most ordinary and underprivileged patients. “You should be treated by the experts if you are already able to, for these students are not proficient enough”, I was repeatedly being told. So I recalled foxy farmers from my native country who use to cultivate organic produce to feed their own family and friends and fertilized fruits and veggies that would be later sold at the open market. No, I don’t want to be another Kurt Waldheim, I said to myself, the one who participated as a Nazi officer in the atrocities against Serbs and Jews in Yugoslavia during World War II, and then as General Secretary of the United Nations became the voice that was sent on Voyager 1 spacecraft, currently the most distant manmade object from the Earth, to greet the extraterrestrial friends. Needless to say, if ETs ever find this out, they would quite correctly conclude that humans, as of today, were, first and foremost, a culture of hypocrites, if not pure lunatics¹⁵³¹, to whom pairing of the sound of Lili Marleen on the lips and the horrors of Holocaust in the heart come as natural as the flow of a river stream over glistening rocks. Or, as Calvin figured it out, “Sometimes I think the surest sign that intelligent life exists elsewhere in the Universe is that none of it has tried to contact us”¹⁵³². After watching us from the stratosphere for some time, musing over the fact that “if all the insects were to disappear from the earth, within fifty years all life on earth would end, but if all human beings disappeared from the earth, within fifty years all forms of life would flourish”, as Jonas Salk noticed, they might merely shake their green heads from side to side as a sign of discontent and redirect their spaceships to another, more promising planet of the Milky Way. Truly, human nature has not changed much over time, as I claim. The cultures of the developing and “developed” worlds are much closer to each other than how close a super-advanced and truly SF society I envisage will be in relation to the most developed societies of this day. This is also why I claim at times that despite the fascinating progress on the material scale, from clothes people wear to technologies they utilize to the food they eat to interiors in which they convene and so on, if we were to estimate the level of spiritual development of the American culture pervaded by sluggish spirits wearing sunglasses of ego-shielding attitudes and coldblooded carelessness for the wellbeing of another by Buberian means¹⁵³³, which dictate that the extent of one’s holiness is proportional to the amount to which one faces another in beautiful honesty and purity of one’s being, we would conclude that it could be considered as markedly lower than practically anywhere else in the world. Indeed, thence, we ought to know that the paths in life are such, delusively complex, that they make it impossible to tell the crook from the saint, so to say. Likewise, a keen eye of petite gods on earth can often recognize corridors of demise and decline in avenues on which worldly journeyers appear to be

ascending to glorious heights, and *vice versa*: what a mediocre intellect will discern to be a wholly repulsive and decadent route frequently turns out to be the road of genuine salvation and beauty, lightened up by the sunshiny smiles of ethereal deities watching over the Earth in its hush spin through the azure cosmic nights.

S.F.4.8. Though I had known that America is the world leader in social prostitution in terms of selling oneself for money, fame, prestige and a sundry of other things, countless instances of superficial self-praising still stunned me to the bone after I moved to this new continent. Humble and self-critical to the point of exaggeration, I was explicitly advised to loudly speak in favor of myself if I wanted to secure my place in this highly competitive environment that the United States of Advertisement, as Bill Hicks christened USA once¹⁵³⁴, are. Yet, with Jean-Luc Godard's maxim, "Advertising is a pimp and we are its whores"¹⁵³⁵, anchored to the bottom of my heart, with the question mark levitating over my head and embodying the wonder of why sexual prostitution is banned in some parts of this country while social platforms such as LinkedIn are not, and with the memory of the fate of the protagonist of *Bos ili Hadžija* song by Zabranjeno Pušenje - who emigrated to the West to become a prostitute and, albeit sending lots of money to his family, became dead on the inside, to the soul, and on the outside, to the world¹⁵³⁶ - reverberating resonantly from head to toe of my entire being, I have decided to diverge from complying with this norm without ever thinking twice about it, even at the cost of shutting myself doors for the advancement in career and in other aspects of my social life. For, what is the use of materialistic victory if it is entailed by a moral and spiritual loss? Correspondingly, whenever I see people being interviewed and getting all dolled up for the occasion, I jokingly ask them if they really think that they look smarter dressed up to the nines, wearing business suits and skirts. I may proceed by wondering out loud if anything in this world, from the hallways of the building through which they roam to the exciting experiments run behind the closed lab doors to the surgeries saving human lives on floors of the clinic above or below them to the fertile fields cultivated in the suburbs and beyond to yield food that gives them energy to breathe, walk and talk has ever been created by men in suits. Since the answer is No, wouldn't wearing suits signal a rapacious desire to assume the corrupt position of the power and utilize the hardworking men and women with "no stitch to wear"¹⁵³⁷ as tools to secure oneself a stellar comfort of living, I may ask them if I am in the mood to extend my argumentation. Galileo Galilei, for one, got into a trouble for refusing to wear his honorary, professorial robe, citing his inability to run experiments in it¹⁵³⁸, the same argument that I often use when I, a perpetual "*Seicento giù di carrozzeria*"¹⁵³⁹, am accused of dressing up like beggar at work. What is more, wearing a suit, as I may proceed to tell them, cans parts or wholes of the infinite, unbound stellar sphere of one's mental universe, promoting conformist behavior and thought as opposed to creative difference and novelty without which no order in life could be

fundamentally questioned and, eventually, improved. As this normally results in bulgy stares as a response to my question, I usually end my spiel by referring to one of my maternal grandfather's favorite quotes, "A man in a suit looks just a bit more like a fool", followed by mumbling about "the royal fish trying to wear pants in a country as foreign as land". The latter verse, for your information, comes from a Hafiz's poem¹⁵⁴⁰, in which the Persian poet compared this awkward fish that tries to wear pants on land with a chaste soul plucked from the heavenly heights and feeling foreign on earth while trying to fit into the phony norms imposed on him by the social milieu. Shortly after making these or some other, similarly obnubilated points, I would turn around and leave, spinning thoughts through my head immersed in swarms of stars about how ethics is these days in a wholly upside-down position, while the perplexed souls left behind continue to wonder like those in the wake of Hafiz's musings about the royal fish, the pants, the golden fruit and God: "Hafiz, what are you talking about? Has something happened to your once Brilliant Mind?"¹⁵⁴¹ Now, speaking of this inverted ethics of our times, people often do not even recognize where behaving according to the law starts to eat up the elementary human ethics of their being and the other way around – where breaking the law and the rules of conduct bravely releases a shining ethics straight from our heart. The first time I had a chance to review the resumes of applicants for an academic position, it was for a research post open in the department at University of California in San Francisco at which I worked and it struck me the way the resume of an applicant that ended up being hired for the advertised position abounded with attributes intended to praise oneself, placed one after another: diverse, strong, substantial, sophisticated, excellent, exceptional, extensive, major, key, significant, and so forth. Of course, when you learn to question every single thing in the Universe, including every thread in the fabric of your own deepest convictions, allowing the thought "to become once again what it really is: dangerous to the thinker"¹⁵⁴², any such exhibitions of self-assurance in an attempt to sell oneself appear repugnantly fake and in stark contrast with what an authentic scientific mind ought to be like. Yet, to present oneself in light of such natural uncertainties is to impress but a few souls out there, as rare as diamonds in the dust, and be seen as a loser, who plays not by "the rules of the game", by most authorities in the academic realm. The hypocrisy of this customary expectation to elevate oneself in the eyes of another instead of the other way around becomes obvious when one realizes that if equal arrogance is displayed internally, within a company, it will give enough reasons to the leadership to have oneself booted out very promptly. For, to challenge the criticism filed against one, as in the case of annual performance reviews, instead of unquestionably accepting it, with a "Yes, Sir" salute of the submissive spirit, usually translates to a secure ticket out the company's door. Sadly, moreover, in today's world people in power often look more for creatures with mediocre ethics and inventiveness, more humble and obedient than smart, unpredictable and creative. If nothing else, they could be more easily kept under control, enslaved within the hierarchically imposed limits. On top of this, when money has become the key driver of science and when prostitution has become pervasive in its domain, which holds ever less of the romantic spirit and ever more of the corporate one with every passing moment, nothing but the gradual atrophy of humility, that virtue that has been the most faithful auxiliary, the closest accompaniment of science for millennia, and its substitution with phony self-confidence - thus also dangerously turning dissention into authoritarianism as the craved sentiment among scientific mindsets, as if

nothing has been learnt from the collapse of the totalitarian, far right ideologies in the 20th Century - will come out of this state of affairs, spoiling the fertile seed of creative thought and turning it into a sterile grain of dust in the long run. But me, myself and I will always continue to cultivate an upside-down philosophy: disgracing and presenting me and my works in the humblest possible clothes and waiting behind the curtain for the moment when some beautiful pairs of gracefully curious eyes will recognize an exalting luster behind the veil of mundaneness by which they are disguised. “Cynics will marvel and say ‘we confess, there were times when we thought it was just a dress, but now we have seen it and we know it’s Andromeda Heights’”¹⁵⁴³, is another rhyme I mildly misinterpreted (address → a dress), sung by Paddy McAloon at the ending of a superbly chaste and purifying airspace record by Prefab Sprout. Verily, it requires childish honesty to penetrate through the way things appear at the surface to the essence of theirs and the way they really are. Although seeing an elephant inside of a boa constrictor, as the Little Prince did, is bound to blacken us and label as crazy by the surface-valuing social mainstream, we ought to know that ours will then be perception that is a step away from the superficial nature of seeing and a step closer to judging with an insight whose profoundness is as deep as the darkest basins in the Pacific. Thus I have given myself a vow always to remain an innocent child deep inside my heart, knowing that nurturing a childlike amazement and humbleness stands forth as the only way to approach mysteries of Nature and make Her let us pluck a few of the precious stars from her celestial dress and bring them down to Earth, for all to enjoy in their heartwarming shine. Hence, similarly to Jónsi Birgisson’s giving a silent interview, not responding to any of the interviewer’s questions¹⁵⁴⁴, Jean-Luc Godard’s saying that he has nothing to say before getting up in front of an interviewer and starting to walk on his hands across the podium¹⁵⁴⁵, serving to this very day as the epitome of anarchically stonewalling the interviewers among intellectuals, or Bob Dylan’s dismantling each and every question he has been asked by the reporters at press conferences in SF and other American cities in the 1960s¹⁵⁴⁶, presenting himself in the light of an obtuse idiot and a pestilent troublemaker, presumably wishing to tell us that no words could ever come close to a decent description of artistic and any other true and blissful expressions of human beings, my mission is indeed to amaze. Every now and then you will find me breaking the pattern of a predictable flow of things or thoughts, just for the sake of bringing about a starry surprise. For, to amaze is to produce an act that raises a question and opens the doors of creative attentiveness in one’s mind. While sending out communicational clichés is analogous to yielding answers and locking the doors that are a part of the great quest through which the divine curiosity in us is awakened, the curiosity that preconditions the emanation of all the wonderful insights and discoveries that we will have ever arrived at, performing acts that bring forth questions by the merits of their magical mysteriousness is akin to opening the doors of people’s creative attentiveness and making them receptive thereby to the celestial signs that, like stardust, mostly unnoticeably fall all over them from the heavenly heights, craving to be picked up and used as tickets to enter the higher realms of being. What is essential to know, of course, is that to amaze *per se* is an incomplete mission in itself. For, fostering Wonder without Love or *vice versa* is a vain effort that results in all but

harmoniously electrifying ways of being. Hence, only after these doors opened in the earthlings' heads and hearts are used to let the waves of love, grace and beautiful knowledge quiescently and graciously enter their entire beings and permeate them with an enlivening energy could we say that our mission of enlightening the world has been carried out with success.

S.F.4.9. People around me then frequently point at the superficial character of the modern American culture, as if finding themselves on a similar boat as that on which Donald Fagen and Walter Becker of Steely Dan ran aground as they moved from New York to Malibu. Asked why they disliked the Southern Californian culture, Walter said the following: "I find it very difficult to relate to Angelinos, even of my own age, who presumably have the same cultural backdrop that I do, but of course, they don't. All they know about is what kind of wax you put on your surfboard and what different kinds of neuf bars you can get for your Chevy"¹⁵⁴⁷. Presumably alluding to polite sweetness supported not on pillars of sacramental devotion to another, but on cold and prosaic airs of sheer narcissism, Albert Einstein came to a similar conclusion during his journey on boat around the globe in the 1920s, around the time when he used to wear dock rope in place of belt to hold his pants up, noting a fascinating resemblance between the inhabitants of Pasadena, California and "scentless flowers" in his diary¹⁵⁴⁸. Roughly a century later, the Swedish bedroom producer, Molly Nilsson would echo the same sentiment when she called for the verse "the men who walk on waves walk on your graves" to be chanted in the city of Atlantis¹⁵⁴⁹, condemning the superficiality of the bleak Southern Californian culture as a deadly sin of a kind thereby. I am thinking that the Boss, that is, Bruce Springsteen wanted to make the same point when he sang about "kids with big amps sounding in the void, high society vamps... mistaking surf for soil"¹⁵⁵⁰ in his hymn to the orphan that lies in the heart of the asocial SoCal culture. Further, when Bob Dylan said "don't ask me nothing about nothing, I might just tell you the truth"¹⁵⁵¹ in the final verse of his unreleased song called California, it was yet another iteration of the idea that life is a prefabricated lie in California more than in any other American state, explaining why truth is so feared on these grounds and so powerful that it can almost kill. My answers to these accusations of deadening shallowness, though, often come as a surprise. Namely, as a person deep in love with the sapience of a genuine surface-oriented talk, always on the go to be "superficial out of profundity", as Nietzsche put in *Gay Science*, I routinely disagree with this finger-pointing, explaining how everything deep in life has to have its superficial side. Whatever it is that we pay an increasing and profound attention to, something else will be deprived of our attention and may end up being endowed with the attribute of shallowness. The whole system of ethics, in fact, boils down to finding the least painful solution to this problem of the necessity to implicitly depreciate one cosmic entity as we reach out to reward with flowers another one, that is, of the possibility to reach profundity with one part of our being only if we stay on the surface with another part of it. "Shall I be damned or condemned", Victor Hugo's Jean Valjean thought as he wondered out loud whether or not to present himself in front of the court as the prisoner 24601 and thus free of charge a wrongly accused person, but end up with hundreds of workers to whom he has provided food kicked out to the streets of Montreuil, and we too ought to know that perfect choices in life exist

not. If we pay too much attention to a single tree, other trees and the forest as a whole will be dispossessed of our loving focus, and *vice versa*; similarly, grazing the crust is a first step that will get us to the core, and yet the surface and the essence will always stand in direct opposition to each other. In view of this, I may state that the neo-American communication style is a viable channel for the transmittance of immense emotional contents between its participants. At least in theory it should be this way, of course, were it not for the thorough emotional deprivation of average American spirits and the empathic void in which they emptily exist, both of which have been caused by the systematic imposition of alienation from another from the upper cultural, economic and political scales. Possessing a significantly deeper aspect of emotional expression, however, frequently comes at the cost of superficial expression of reflective thought. Skin-deep mental reflections naturally lead to superficial conversations, but if a snotty philosopher in us happens to be too critical and accusatory of the latter, he risks being loudly laughed at by the witty spirits who enjoy leaping like dolphins in shallow waters, knowing that shallow seas contain far more life than the deep seas and that souls that are fresh off the ivory tower are also usually too schooled for cool, as the lady nicknamed Pink might have noticed¹⁵⁵², appearing as an insult to the aesthetics of physical expression with their unbearable awkwardness. As the result of this intellectual shallowness and the comparative naturalness that it entails, Americans are often typified as more childish and spontaneous than Europeans by the globetrotters. An average European is often befuddled in face of this characteristically American naiveté, having so much in common with the deliberately shallow pop artiness, and is unable to untangle whether it arises from a state of true enlightenment or from sheer stupidity and years of brainwashing with the surface values Jean-Luc Godard implied in that colorful graveyard composed of boxes of detergents and other inanimate denizens of supermarket shelves in the final frame of 2 or 3 Things I Know About Her. In the movie Before Sunrise, there is a scene wherein an American and a European sit on a pew inside of a Viennese church and confess to each other that in their minds they have felt like a thirteen-year old boy and an old lady on her deathbed, respectively, neatly representing this dichotomy between stereotypical American childishness and European reflectivity. Now, this attitude built on openness, directedness and embracement of freedoms, without almost any fear of appearing blunt or stupid in front of others, is undoubtedly instigated by the American educational method, which is dominated by much lesser insistence on memorizing and obeying strict rules of conduct set forth by the teachers than in the European schools, and that particularly the eastern ones. To pass the test, a kid does not need to memorize the derivation of an equation, for example, but only has to be able to recognize its final form amongst a couple of optional answers. As kids are not pressed to memorize and reproduce facts, it leaves many more gaps in their knowledge, prevents the kids' premature burnouts and endows them with greater freedoms, of choice and behavior alike, resulting in what Europeans often see as detrimentally naïve worldviews. The latter are paradigmatically exemplified by demonstrations of how little typical Americans know about geography and history of any continents other than their own, as well as of how oversimplified and stereotypical are the ways in which they describe what they know of any cultures foreign to theirs. Coupled to the habit of dichotomizing reality to its good guys and bad guys, this creates quite tragicomic worldviews in the heads of American mainstreamers, as could be exemplified by the trailer for the Hollywood movie Killing Season showing John Travolta playing a Serbian avenger on the US territory as a weirdly bearded, olive-colored-uniform-wearing handler of bow and arrow with the Russian accent, a combination of the three traditionally greatest enemies of the republican populace in one - a mujahedin, an Indian and a communist, in the end yielding a

¹⁵⁵² Listen to Pink's Raise Your Glass on Greatest Hits... So Far!!!, LaFace (2010).

character that looks like no Serb I have ever seen. But when mainstream media and shallow storytelling about historic events are dominant sources for understanding the multicultural globe, nothing else but such and similarly pathetic pictures of other cultures could be expected to result. Eventually, what is arrived at is a tragically warped view of the world, the boundaries of which are drawn by the outposts of Americanism and the bearers of which spontaneously and most frequently inadvertently, with no open maliciousness, disregard everything lying on the other side. And when one's world begins and ends with all things American, then one surely does not find it disturbing that the NBC's broadcast of the Olympic events does not bother to show non-American swimmers and runners in their lanes prior to the races or any non-American sportsmen or sportswomen on the gold medal pedestal. One may, likewise, not even notice that the teams winning the NBA championship are declared the champions of the world by the sports experts and the local news agencies and that the same title is being earned by the winners of the so arrogantly called World Series in baseball, the competitions for which, of course, no representatives of countries in which these sports are being equally loved and played are invited. The same blindness would entail the case when hours prior to their encounter of the US and Serbia in the 2014 World Championship final, American journalists asked the Serbian basketball legend, Saša Đorđević, then the coach of the Serbian national basketball team, if he thought that the American national team was better than his and he said that if they were they had to prove it on the court, unexplainably causing avalanches of accusations of arrogance by these very same journalists who disregarded that their question as well as the subsequent admonitory reaction were, in fact, arrogant *per se*. All of these instances of subtle cultural arrogance, speaking well in favor of whom the world spins around in self-centered heads, are reinforced by the fact that Americans generally do not speak a second language unless they belong to the first of the second generation of immigrants or to one of the major ethnic communities in US that are often culturally isolated within their little enclaves. However, the real problem begins when these naïve and oversimplified worldviews become infused with superficial values that dominate the culture of consumerism, which Americans, oblivious to the message of the "malaise" speech of their former president, Jimmy Carter¹⁵⁵³, have been immersed into more than any other society worldwide. This contributes to the fact that most Europeans inescapably see in their American contemporaries a dose of bluntness when it comes to the richness and depth of the meanings conveyed through communication. They would then readily use the metaphor of a Barbie doll to depict the contemporary American culture, clearly aiming to tell us how plastic, fake and superficial it indeed is. Immediately thereafter, they may summon up the moment when Igor Stravinsky characterized the "American style" as "fatuous in expression and in technique the vilest cliché"¹⁵⁵⁴ and claim that what is valid for the musical universe that encompasses us from all angles must be true for every other aspect of our interpersonal communication too. They would also often wonder over how Americans use serious European faces as an immediate sign of their not having a good time out there, while smiles are taken as indicators of satisfaction, screaming in frustration about the incapacity of Americans to

¹⁵⁵³ The speech, aired on the American television on July 15, 1979, at the moment when Carter "felt that the American people were no longer listening" (https://en.wikipedia.org/wiki/Presidency_of_Jimmy_Carter), contained the following remark: "In a nation that was proud of hard work, strong families, close-knit communities, and our faith in God, too many of us now tend to worship self-indulgence and consumption. Human identity is no longer defined by what one does, but by what one owns. But we've discovered that owning things and consuming things does not satisfy our longing for meaning. We've learned that piling up material goods cannot fill the emptiness of lives which have no confidence or purpose. The symptoms of this crisis of the American spirit are all around us".

¹⁵⁵⁴ See Robert Craft's *Conversations with Igor Stravinsky*, Doubleday & Company, Garden City, NY (1959), pp. 129.

dig deeper and not use surface value as the value of the essence. All of this aside, note that most Americans would, however, see such casual and shallow talk as a way of getting to know another person better and becoming more intimate therewith, while paying less attention to the content of the talk and more to the body language and voice melody, as if measuring levels of interestedness and conventionality, which, in turn, brings about awareness of the levels of carefulness, rationality and intellectual and emotional compatibility of another. Most Europeans would, on the other hand, stay on the surface and helplessly see such a talk as merely a vanity one, prompting us to raise a question who is, after all, more superficial then? Be that as it may, once we dig more, we could easily find out that Europeans may be, in general, considered as opposites with respect to the conversational attitudes that they foster. For that reason, as we shall see soon, they could also be considered as generally less spontaneous, less relaxed and stiffer in interaction with others. Needless to add, the true way forward would lie in a complementary combination of the two: of the warmhearted and ecstatic expression of emotions and the deep and profound expression of thought. In managing to achieve so, one would fill the pot of one's heart with a magical blend of childishness and wisdom. For, one can hardly conceive more elegantly displayed messages of wisdom than through a loosened childishness or a more inspiringly exerted juvenile behavior than through basing it on the rivers of wise aspirations and thought.

S.F.4.10. People in Europe are generally too critical and judgmental about each other, which has detrimental effects on freedom of their expressions. On one hand, honest expressions of opinions about each other inescapably lead to a history of being put down, which is readable in terms of many signs of insecurity that people tend to exhibit. On the other hand, there are also positive sides of this incessant judging about another straight into one's face, and that mainly in terms of correcting one's stances whenever some of their undesirable traits have fallen into the blind spot of one's awareness. The American trend of accepting it all with an "anything goes" nonchalance is thus strikingly different from the European habit of meticulously judging others, and although the American approach spontaneously boosts people's confidence, it turns into a deviant hypocritical force whenever it cares not to helpfully react upon the sight of another's blindly approaching an abyss in life with one's actions, but merely sits aside in self-satisfaction and watches another's fall from grace from a distance. Consequently, whereas European faces can often be recognized by their skeptical expression, unresponsive and aloof attitudes, Americans are more often childishly and trustingly reflecting the emotive expressions of people they face. (There is no doubt that this tradition of spontaneity and easiness in communication was shaped to a large extent by the nature of African-American people, in the same way as their spirit of unconstrained joyfulness was blended with the emotional propensities of white man to give jazz and, through its boogie-woogie branch, rock 'n' roll sound, and from there on the entire spectrum of genres of the modern pop music). The first thing that many Americans that come to visit the European continent for the first time, and specifically its southern parts, notice is the tendency of locals to stare at each other. Asked how they could spend a whole day at a beach in Málaga, four Swiss teenagers responded by saying, "We watch people; people watching is so much fun"¹⁵⁵⁵, candidly ascertaining the stereotypical South and Eastern European habit of staring at one another. These blunt gawks are typically followed by head-turns when the eyes cross, instead of smiles, giggles, sassy winks, sympathetic nods or other signs of courtesy and politeness. While most Americans find this habit of staring into another to be exceptionally "creepy", bordering utter rudeness, they ignore the fact that failure to engage oneself back in such stares results in one's being marked as

¹⁵⁵⁵ See Simon Brunner's and Maurice Haas' *Life's a Beach*, Credit Suisse Bulletin (5/2012), pp. 60.

disinterested in another and thus essentially ignorant, careless and indifferent. Hence, what is seen as gracious and kind acts from the eyes of one culture, in this case the American resistance to gawk at others, is often taken as a sign of arrogance, loftiness and disliking of another by members of another culture. From the other angle, raised eyebrows and gravely serious countenances, without even a hint of a smile in them, so typical for the European gestural standards, being more about sternness than about jolliness, are regularly mistakenly confused for arrogance by the Americans, or “the French-like snootiness”, as they, themselves, oftentimes call it, prompting many Europeans to counteract these falsely derived claims by invoking the popular reality shows as examples of how carnally cutthroat and careless about the wellbeing of others Americans become when placed in a competitive situation, representing instances of a much truer form of arrogance, that is, an inordinate self-esteem built on a belief that one is more superior than others. What can be concluded at this point is that reading through the lines of grimaces on people’s faces and judging about their intentions based on these superficial attributes, the habit which is significantly more common in America, a planetary leader in the promotion of surface values, presents a great mistake on our run through this lifetime towards becoming a creature that faces it all with open arms, welcoming all the pains and miseries of the world into the healing home of our heart. And if such simple body language instances can lead to such vast misunderstandings, how much more of those can result when linguistic expressional habits are included in the game? Therefore, we should keep in mind at all times that cultural cues can be grasped only when we direct our critical glances while standing on the bases of the corresponding cultural tradition, rather than one foreign to it. Be that as it may, most of the time this “European” criticality and the sense that there is always someone watching from aside disturb other people’s freedom of behavior, resulting in boring and uninspiring communications. People gradually start lacking self-esteem and become overly self-conscious and easily intimidated in communication. Over time, this timidity may lead to permanent dissatisfaction, which may also result in frequent explosive manifestations of aggressiveness. On another hand, this dissatisfaction with one’s performance in communication may lead to a complete renunciation thereof, all until one sinks into whirlpools of an illusory self-sufficiency. Only dreaming about sincere and fulfilling communication will then remain. Hence, when the German cleaning lady, Emmi tells the Arab immigrant, Ali, that her love for him spans from the outdoor café in which they were sitting to Morocco in Reiner Werner Fassbinder’s *Angst Consume Soul*, the frozen figures of the native bystanders, ceaselessly watching the couple from the distance and gawkily judging their every move, portray an exaggerated but veritable state of affairs on the European continent, undoubtedly taking toll on the freeness of human expressions, which red cheeks of shyness so often present on European faces are a direct reminder of. Moreover, this frame of mind dominated by a self-freezing obsession with what other, imaginary or real people watching one from aside will think of one, especially when spying faces behind the windowpanes are incessantly present in one’s imagination, often culminates in a one-against-the-world way of thinking and great conspiracy theories. One such frame of mind was famously portrayed by the Serbian playwright, Dušan Kovačević in *The Balkan Spy*, a veritable take on the persecution syndrome that has haunted the Serbian nation throughout the centuries, the syndrome traceable to relentless attacks this nation has suffered throughout the history, particularly fiercely when all it did was defend its home turf. There is no doubt, however, that being surrounded by people who tend to stick their noses into one’s life uninvited can be equally irritating as realizations of a complete lack of interest of others for the life of one. Both of these standpoints are deficient in their extremeness and only their merging with one another can yield a harmonious outlook on life. Thus, when a cowpoke comes to Patti Smith’s dream to tell her that “there’s nothing lonelier than

the land... because it's do damn free"¹⁵⁵⁶, he hints at this curse of alienation that comes at the cost of the authentically American detachment of individuals from their social milieus in search of freedom, whereas a deeper sense of social bonding, carrying the gifts of love on its wings, exists in Europe, albeit at the cost of diminished behavioral and creative freedoms. But while love deprived of freedom is frozen, unable to move or breathe and thus destined to suffocate, freedom without love is frivolous and empty, unable to move a speckle, let alone mountains, and none of them alone can be routes to divine experience. Therefore, whether sensing gossipy whispers behind the walls that separated my native home from those of our neighbors or perceiving utmost indifference of my American neighbors, remaining to be complete strangers even after years of living next to each other, in their trying to act as a perfect antipode to their South European counterparts, is worse I could not tell except that finding a balance between the two would present the key for unlocking the gates behind which the most fertile behavioral fields lie. For, while in the country of my origin I would be driven crazy by the neighbors and random passersby curving their necks behind the hedge of our backyard to check out what goes on the other side, in America I could hardly stand being immersed in a culture dominated by the attitude of minding one's own business and being emotionally disconnected from the nearby souls, while abstaining from judging others and tolerating, more or less, everything. The nurture of this school of considerateness that makes a full circle and turns into sheer ignorance, as all journeys towards farthest extremes do, has been the one to result in the wide pervasion of "anything goes" attitudes that defined the open-mindedness of the American culture. Freedom of behavior has thus been spontaneously fostered, though the downside occurs when one explores all there is to a communication with others and oneself. Then, a devastating depression may take over because the conditions for dreaming about wonderful communication we could engage ourselves into are gone. Note that by communication I hereby mean a sum of our acts, gestures, postures, speech and overall behavior, including mental and emotional processes that occur within us with the sole purpose of benefiting others. For, ever since Immanuel Kant formulated the categorical imperative¹⁵⁵⁷ which dictated that all human creatures, including humanity as a whole for those who tend to think in cosmic terms, ought to be always seen as ends and never as a means to an end with respect to our actions, humankind has been covered by an invisible mantle of sacred knowledge that has been here to remind us that even though we have to be plunged deep inside of the shiny meditative core of our being to pull out impulses for illuminative action, all that we do has to have an ultimate pragmatic aim of bringing light and harmony onto others. Yet, whether we spend time watching the most developed parts of our planet or the least developed ones, the feeling is that the human race as a whole resembles merely a loudly crying baby unaware of being dressed up in the colors of this profound ethical message, having a long way to go in front of it before it reaches maturity when this principle would be incessantly recognized and integrated within our deepest thoughts and the most subconscious actions.

S.F.4.11. Hence, one of the crucial differences between the American and European ways of thinking and behaving lies in the higher levels of self-consciousness in the latter. Europeans are generally more dependent on other people's opinions, which often leads one to exhibit a constrained and frozen behavior. I cannot help recalling my Grandma's stories from the times after World War I, when she as a child, together with her parents and a dozen of brothers and sisters, tinkled the dishes, just so that their neighbors would think that they ate. However, their plates were

¹⁵⁵⁶ See Patti Smith's *M Train*, Alfred A. Knopf, New York, NY (2015), pp. 207.

empty. But such was an obsession with what the neighbors would say or think. The feelings of shame are thus much more exhibited in the European lifestyle than in the American. Despite the fact that American is an incredibly richer society than Serbian, panhandlers abound in big American cities, while many poor people in Serbia have died of starvation without ever resorting to begging in the street. In America, when people are poverty-stricken and hungry, let alone out of their minds, they frequently end up in the street, just so that the whole world would know of their troubles. Most of them, resentful and desperate, would readily grab anything offered to them out of pure charity, which vastly contrasts the old lady my Mom saw on one of freezing and windy Belgrade winter days, digging through a rusty garbage can in the street and putting every piece of stale bread, hard like a rock, found in it into her mouth. When my Mom wanted to give her no more than \$10, the lady refused, humbly, through tears, saying that it is too much. Such is the sense of dignity amongst my native people, as opposed to careless American attitudes, not giving two cents as to what others will say of them. Americans may thus be said to truly live in the land of freedom, which is also reflected in people often talking loud about stupid and nonsensical things or walking naked in the gym without ever blushing because of that. Robert Brooke thus noticed in his *Letters from America* how “Americans walk better than we; more freely, with a taking swing, and almost with grace. How much of this is due to living in a democracy, and how much to wearing no braces, it is very difficult to determine”¹⁵⁵⁸. In behaving so, they only rarely let themselves stumble upon obstacles already left behind. Bright future, not regretful past has reigned strong inside of an authentic American mind, to which the European sense of nostalgia usually seems as foreign as the jungles of Burundi, ready to be heartlessly pierced with the saying uttered by King Philip in Schiller’s *Don Carlos*: “’Tis malice that speaks only of the past”¹⁵⁵⁹. Years of watching little American kids react to pleas turned down by their parents taught me that saying No to them leads to far lesser reflections and far less of the blushing sensations of guilt in their heads compared to their European counterparts. It is as if from the earliest age they are being taught that failures are not to be looked back at too seriously, as they present the elementary parts of every progress. At the same time, however, one could argue that these reckless attitudes exist on the basis of somewhat emotionally desensitized mindsets and very, very thin threads of empathic care for another. Therefore, it should not surprise us if we were about to notice that these signs of carelessness are as good as bad. Whereas they are on one hand a sign of a neat respect of other people’s private worlds, on the other hand they display a negligence about another, which is what eats up the American culture straight from its heart. For, the line between tolerance of it all and careless indifference is a rather thin one, and, remember, every time we tell ourselves how “we should not turn around, not respond, not care about another”, a seed of Cain’s sin, marked with his famous question “Am I my brother’s keeper” (Genesis 4:9), is let sprout within us. When Luiz left SF for the land of Oz, commenting upon the fact that he had never seen so many ugly people in his life as in SF, wondering out loudly what the reasons for that might be, a thought swiftly passed through my head, asking back a more beautiful question: “What can carelessness about others, carelessness to leave a good impression and beautify life seen through their eyes, yield other than spiritual ugliness”? Over time, thus, I began to be able to recognize this emotively dead indifference imprinted on people’s faces, plastically joyful, with eyes distant and cold, devoid of warm waves of profoundly empathic lovingness that I had known of as a child. That was when I

¹⁵⁵⁸ See Robin George Collingwood’s *Language and Languages* (1938), In: *What is Dance?* Edited by Roger Copeland and Marshall Cohen, Oxford University Press, New York, NY (1983), pp. 372.

came across Martin Heidegger's concordant consideration of Americanism as essentially identical to the Soviet culture in its "transformation of progress into an endless growth of indifference, desertification of spirit and perpetual reoccurrence of the same... an outbreak of what could be deemed demonic forces"¹⁵⁶⁰. Signs of such individualistic distantness from the lives of surrounding people could be readily glimpsed everywhere, from (a) the dreams of having large backyards and city streets broad as highways, where handshakes and shoulder taps with a person walking on the other side of it, let alone romantic winks and sweet brushings common in the narrow streets and arcades of some of the oldest European cities, are made all but possible, to (b) exaltation of privacy and thorough neglect of public spaces in the newly built American cities that spread like sprawls, adding houses to their fringes as if they are isolated urban entities, able to exist in disconnection with all else aside from the road and a bunch of electrical cables, while disregarding the fact that promoting private security over harmonious communality directly contributes to the decline of public safety¹⁵⁶¹ by fostering social segregation and alienation, to (c) people's inclinations to be shelled inside of cars and limousines, deaf to the real-life story of the rise and demise of the city of Detroit, both of which were brought forth by the antisocial cages for commute that cars are, to (d) my being fined hundreds and hundreds of dollars by a homeowner association simply for not keeping the garage of my temporary abode in a suburban southern Californian town of Irvine closed, an act that caused no harm nor risk to anyone, so as to teach me that open hearts and doors are all but tolerated in this culture that feeds on soul-acerbating alienation of one soul from another, to (e) many other instances of unsociability that, strangely, appear natural in this culture where the habit of sharing things, from communal transportation means to food eaten in public spaces to professional advices at workplaces, is wholly missing, to (f) the fact that even a team sport such as basketball, which used to involve a great deal of tactical profundity, has been reduced to one-on-one, run-and-gun exhibitions of sheer physical power on the American basketball courts¹⁵⁶², with the simple pick-and-roll being the most sublime tactical maneuver out there and the zone defense¹⁵⁶³ being bluntly prohibited by the rules of the American National Basketball Association (NBA) until 2001 in favor of the individualistic man-to-man and pressing defenses that are still predominantly employed by the NBA teams, all of which led to the renaming of the East and the West All-Stars Game teams in 2017 to the names of their major players, LeBron and Steph,

¹⁵⁶² This is how a journalist of the Rolling Stone Magazine, Tom Hawking summed up the dichotomy between the individualism of the American basketball school and the collectivism of the Yugoslavian/European basketball: "There've always been fundamental philosophical differences between European and American basketball, and put crudely, those differences come down to which side of the team/individual dichotomy they emphasize. European basketball has always prioritized teamwork and industriousness, while the American game has been more about individualism and entertainment. European basketball relies on fundamentals; the American game lauds athleticism and raw talent. The European game is about self-restraint; the American game is about self-expression. This is a simplification, of course, but it's a useful way of understanding two different approaches to the game". See Tom Hawking's *Why the Most Important Olympic Basketball Team Wasn't the Dream Team*, Rilling Stone (August 3, 2016), retrieved from <http://www.rollingstone.com/sports/yugoslavias-impact-on-modern-basketball-w432112>.

¹⁵⁶³ The extent to which the dichotomy between zonal defense, communal in essence, and man-on-man defense, individualistic in essence, extends into the ideological realm is best illustrated by the words of Victor Maslov, the Russian soccer coach credited with being the first person to have successfully applied the concept of zonal defense to the game of soccer: "Man-marking humiliates, insults and even morally oppresses the players who resort to it". See Jonathan Wilson's *Inverting the Pyramid*, Orion Books, London, UK (2008).

respectively, silently hinting at the triumph of the individual over the team¹⁵⁶⁴, as well as to the poet under the rims, an authentically European playmaker, Miloš Teodosić's allegedly telling his L.A. Clippers teammates at the practice, "You don't know what basketball is, what you do is athletics, basketball is something else"¹⁵⁶⁵ before being fired by the club, to (g) the visual arts crafted and music composed on this continent, where the sense of being cocooned inside of an otherworldly shelter of dreams, as if swimming inside of a cosmic bubble through space, rather than bursting like a supernova through one's wishes to seed the social spaces we inhabit with the light of love and salvation, is seen as the highest achievement, and so forth. Not that the opposite extreme where expressional frozenness due to ceaselessly worrying what others will say about our acts is any more desirable, of course. For, a balance between a carefree frame of mind, carrying us freely with the winds of the world, and a caring anchorage of its base onto the hearts of surrounding creatures is required to let the kite of our spirit wonderfully float through the translucent sky above us, lest it fly away or crash to the ground should the former or the latter extremes prevail, respectively.

S.F.4.12. We have seen in the previous section that moving between the extremes of being one with people we care for in empathy and compassion, and yet being distanced, giving them enough space to develop individually, is what keeps the angelic wings of Love tied to our arms. In that sense, I claim that the neo-American communication is leading the way in human progressing towards the balance between respectful privacy and curious interestedness. People in the most intellectually and culturally progressive environments thus normally respect each other's personal space, but also give out precious signs that they are there to be a friend and a helping hand for others should they show interest in that. In contrast, Europeans are, generally speaking, schizophrenically divided by the tendency to ungracefully lurk at others in apparent interestedness, while at the same time avoiding to openly face others because of their frequent fear of interacting in spontaneous and humane ways. It is a general feel I have had in Europe that whenever I am about to act in one way or the other in a space filled with people, there are ears focused on listening and judging from the distance about who I am, what I do, etc. On the contrary, in progressive urban centers in America, one could feel a perfect privacy even in a space completely packed with people. Although the way in which Clark Gable stared down Scarlett O'Hara in *Gone with the Wind*, flirtingly and seductively, as if he knew how she looked "without her shimmy", was thought to be not only a perfectly appropriate social gesture but an extraordinarily charming one too in its own times, today it would be considered unprecedentedly "creepy" by most of the modern Americans. The same label would be undoubtedly stuck next to the lethargically abrasive, criminally mysterious look of Humphrey Bogart, "a guy who never took shit from anybody"¹⁵⁶⁶, the reflection of yet another gestural style that was all rage half a century ago. The way legendary Bogie stared at Bacall in the steaming hot Martinique nightclub in *To Have and Have Not* would not only be considered scandalously creepy in the modern setting, but it might have easily caused the giver of these wistful looks to be given the boot or quite possibly have the police called on, making sure he

¹⁵⁶⁶ Read Pat Conroy's *The Water is Wide*, Random House, New York, NY (1972).

ends up in the gutter or a slammer by the end of the night. Yet, out of all the epithets people on the American continent ascribe to one another in the course of their daily judgments, creepiness counts as the most repugnant of them all in my universe. For, who can tell how many cordial contacts are kept at bay, walls built in their place and hearts shoved into isolation and deep depression every time an eye roll is made and the word “creepy” attached to a fellow human being? Of course, being called “creepy” in this world of enforced, robotic ignorance of another is a small price to pay for being curious about people, that sole path to stars, to knowing oneself and to everything divine in this life, let alone to breaking down the corrupt machinery of Alphaville and rescuing the human soul imprisoned by it. However, as is usually the case in this life wherein every judgment springs from the present or past existence of internal flaws of the very same type as those condemned in others and is, as such, an act of hypocrisy *per se*, accusing one of being creepy implicitly reveals many disappointing things about the accuser herself: namely, not only does the denouncer announce her own presumed attractiveness and wishful placement in the very center of others’ and quite possibly the world’s attention, but she simultaneously exerts an effort to humiliate another by uninvitingly attributing sleazy intentions to one. Needless to add, invoking this epithet is in the great majority of cases the result of the feelings of insecurity and attempts to overcome them by erroneous means: that is, by elevating one and disgracing another, rupturing many vital threads that connect our hearts with each other, threads whose weaving and strengthening stands for the only way to liberate us from this unpleasant diffidence. A natural outcome of this pervasive discouragement of casual contacts between foreigners is the establishment of a culture in which everybody digs their heads in their own personal bubbles of thoughts, disregarding spirits in their immediate vicinity, pretending not to recognize them and their cravings to love and be loved, thus going against the drives to reach warmhearted communal intimacy with others, drives which take us towards the destinations of ultimate happiness in life. Then, it comes as no surprise when I notice that where there is less watching others and censoring, there is also less care about others. Criticality and creativity thus exclude one another and the more we fill the cup of our mind with one, the less room will there be for the other, some may add¹⁵⁶⁷. In the end, however, this is one of the balances for which there are no permanent solutions. As in case of the balance outlined by the ideal of the Way of Love, or the one between oversight and freedom that every good parenting approach is based on, or the one between demands for discipline and instigations of independence in our mentoring activities and in managing social organizations, or even the one between political systems of socialism and capitalism, finding a perfect harmony between being (a) gently withdrawn and sanely grounded in the center of consciousness wherefrom impulses for authentic and utterly inspiring action originate, and (b) spontaneously receptive in relationships with strangers, readily forming cordial connections therewith, presents a permanent challenge. And if there is a Biblical message that the modern Americans, all of whom originate from foreigners and strangers, should be reminded of, it is the following one: “Love ye therefore the stranger: for ye were strangers in the land of Egypt” (Deuteronomy 10:19). When Jess, my native Angeleno friend, drops her jaw in surprise upon my telling her of my parents’ habit to stop at a bus stop outside the woods on the road to our house in the suburbs every Friday afternoon and pick up a complete stranger, squeeze him or her in the backseat between me and my brother, when her closest experience of trusting a stranger on a highway was hitchhiking in Malibu once, it reflects how far the modern-day Americans have descended into isolation and how much of the communal spirit has been uprooted from them by the callous machinery of capitalism and the idolatry to

¹⁵⁶⁷ See Camille Landau’s and Tiare White’s *What They Don’t Teach You at Film School: 161 Strategies for Making Your Own Movie No Matter What*, Hyperion, New York, NY (2000), pp. 41.

individualism. Early colonialists in Latin America used to intentionally kept the individual colonies isolated from one another¹⁵⁶⁸ and the same effect for the same purpose is being achieved in today's America, where the powers that be make sure that people's hearts remain distant from one another lest the cordial connections form and with them the potential to strike up the revolution against the oppressor. For, as Hannah Arendt wrote in *The Origins of Totalitarianism*, "Terror can rule absolutely only over men who are isolated against each other... isolated men are powerless by definition"¹⁵⁶⁹, explaining why totalitarian regimes of the present and past have always sought to expand the spaces and chasms between people as measures of control. The given quote also explains how come, as per my own personal experience, rarely anything makes authorities at work in America as uncomfortable as observing their subordinates to create a community in and out of the workplace, let alone collectively organize to form that association feared most in every capitalist system: the union. Although today's neoliberal democracies in power may justify this ongoing individuation of the American society with the fear of the rise of populist political factions carrying out "unsustainable" (read: socialist) economic policies should the cordial connections between people allowed to proliferate with no checkpoint in sight, this is, more or less, a fluke. Their stance, as a matter of fact, is to a greater extent driven by the desire to fortify the political powers in place, one means to which, we see, is the systematic severance of social links between individuals, a process in which the social animal a.k.a. *homo sapiens* is being sent down the track of clinical anxieties and various psychopathic deformities, from which it emerges as, effectively, a lobotomized zombie, the perfect population constituent for the manipulation of the masses without having to resort to political populism. Now, speaking from the perspective of the Way of Love, some sense of distantness from the neighbor is a good thing because it enables the sane and creative forms of social interaction, but once it eclipses the shine of empathy, it leaves dark and depressive gaps behind in our psyches. On top of all of this, as the Way of Love could further instruct us, continuously shining with love for another is possible only insofar as we leave room for the sprouting of that silence within in both ourselves and others, which is why it is essential to promote distance in our relationships as much as we foster intimacy and compassionate closeness. In fact, when it comes to the Way of Love, America, seen as a whole, something that skips the attention of all those tree watchers who find it impossible to see the forest, could be considered a solid proof of it. Namely, if the unrivaled productivity of the American society is correlated with the greater degree of self-isolation and remoteness from another in it compared to the European society where the total productivity is lower and there is an excessive closeness to another thanks to richer communal bonds, then it can be concluded that too much of amicability and too little of dwelling in "desolation rows"¹⁵⁷⁰ takes toll on the creative output of a cognitive system, regardless of whether it is a conscious creature or a social entity, as much as too much of seclusion and too little of social awareness and altruistic drives does. Which is why it is far more critical today to descend deep into oneself in search of enlightening behavioral impulses than to enter a submissive union with another. And which is, moreover, to say that American social experiment is an instructive example in spite its insistence of insularity being all but a road to follow in the evolution of the human consciousness. Although American people, regardless of the social group, often exhibit body language and other behavioral traits that can make one wonder if theirs is an

extraterrestrial experiment on types and intensity of pathological features emerging from symptomatic individuality and a sense of isolation from one another, it is always a balance between communality and independence that must be struck on the road to awakening stellar modes of being, which today mostly calls for one's descending deep, deeper than the deep, into "the belly of a whale at the bottom of the ocean"¹⁵⁷¹ to liberate oneself from phony social conformism and strike the chord of starriness in one.

S.F.4.13. Despite the traditional insistence on independence from social opinion, there is a plenty of signs of insecurities regularly seen in the behavior of American people. Just like exhibitions of violence are practically always a response to intrinsic fears and weaknesses, implicitly revealing low self-esteem of the abuser that he, in turn, tries to provoke in the abused, so are common outbursts of self-confidence among American people typically posed as shields against vulnerable and inherently insecure insides of the person in question. One of these signs of insecurity is the so-called question talk, also known as uptalk or high rising terminal among linguists. Often coupled to the so-called vocal frying¹⁵⁷², that is, characteristic croakiness intentionally introduced towards the end of vocal statements, yet another vocalization virus, as it were, that is spreading remarkably quickly among the youth, question talk is particularly common among teenagers and adolescents, and can be recognized by sentences ended with raising the pitch of one's voice, and thus turning even the most assertive claims into questions. If you are unsure what I am talking about, lean your ears onto a pair of pampered adolescent Californian females self-indulged in their so-called Valley girl talk, an open exhibition of vanity at its best, so strikingly self-gratifying that an impression is that one could pose a wall between the two conversers and nothing would change in the conversation; for, when one is so self-obsessed, talking to the wall or to another makes no big difference. For, the purpose of this question talk is largely to attract attention onto oneself. This is so because this rising inflection resembling questions naturally encourages creatures in close proximity to participate in conversation; yet, the purpose of its usage is, in fact, to merely throw lights onto oneself, all owing to insecurities rupturing one's psyche and asking for emotional endorsements everywhere one goes. These spikes in voice thus signify nothing other than insecurely seeking approval from the nearby peer. Clearly, not being brave enough to be oneself and instead clinging onto other people's opinions in forming ones of one's own and acting guided by their expectations stands behind this conversational phenomenon. Over time, this disparity between respectfully seeking approval for one's actions from another and yet selfishly looking after the benefit of one's own ego first and foremost cannot lead to anything good and fructifying in the garden of one's consciousness. The reason why I paid attention to these rising vocal frequencies at the end of many sentences proclaimed by the younger US population is that I could not discern the majority of individual words when I initially moved to America. Therefore, I focused on mere melodies and colors of the voices surrounding me. As I rode on trains during those fresh-off-the-boat days and listened to my fellow journeyers chatting, I would merely hear a bunch of gibberish intercepted by the word "like". I could not guess back then that this common word hid a universe of social meanings in it and that years later the entire generation of youngsters would come to be named Generation Like. For, no longer is the erratic use of this interjection the privilege of Valley Girls only, like Barbara Bimbo of Airhead, California from the 1980s Leisure

Suit Larry game series¹⁵⁷³. Rather, the allegedly bad habit has expanded to all corners of the English-speaking world and across all castes, speaking now millions about their users. For, slowly, over time, I learned to accept the word “like” as a clutch with the help of which one makes a shift from an experiential territory to its map. As such, it is yet another out of many signs of insecurity about oneself. Namely, when we cannot find a proper word for describing something, we drop a “like” and move into a different domain (a different logical level or type, Gregory Bateson, drawing on Bertrand Russell’s system of logic, would say¹⁵⁷⁴), which makes a more indirect description possible. Thus, on one hand, as the liveliness of our imagination increases, and as it gets harder and harder to express our thoughts using mere language, the more “like” we will hear. But also, it is predominantly the young population that uses propping words like these. Thus, their usage also reflects some insecurity in the way creatures express themselves. As they are not confident in the exposition of their opinions, using “like” every now and then helps in distancing the descriptions away from their true opinions and into some remote maps. Just like when we move from the realm of direct experience to that of dreams, we feel safer, but also more distant from the world. Note that a similar effect of insecurity-driven detachment and virtual estrangement of oneself from the subject matter is achieved by other common fillers, such as “kind of” or “sort of”¹⁵⁷⁵. However, as the very words depict maps of our thoughts that are maps of our *a priori* interpretations that are again maps of our prime experiences, with every new “like”, a copy of a map of a map of a map is formed. And we all must know how with photocopying photocopies, lines on them get paler and paler. Or, “love you like I love you”, as Karen O of Yeah Yeah Yeahs sang¹⁵⁷⁶, perhaps referring to love that is akin to Bowie’s “love of love, a love that is not loving”¹⁵⁷⁷, being not love, genuine and true, anymore, but a pallid and lifeless copy of it. Bleaching emotions underlying verbalized judgments and letting the sense of intimacy with words fly to ever more distant skies with every new “like” introduced to verbal assertions, distancing the speaker from the subjects spoken of, thus result from such linguistic habits of the modern youth that highlight its inherent insecurities much more than the polite need to soften and mitigate the intensity of exclaimed statements, as some linguists have claimed.

S.F.4.14. However, although most people show signs of insecurities in handling linguistic pointers, they also cling to them with all their strength. If a philosophically justified desire to clash with hypocrisies of the world that begin and end with words had stood behind the contemporary tendency of young people to engage in this Xeroxing of feelings and thought to the point of producing fully faded copies thereof, this would be a whole different story. But, it is not, since helpless adherence to language is most of the time coupled to this superficial handling thereof. Now, it is true that language presents a necessary aspect of the modern communication, but wishing it fill all the gaps in human relationships would be a big mistake. “What we cannot speak of, we must pass to each other in silence”, Ludwig Wittgenstein concluded at the end of his seminal work on analytical reasoning¹⁵⁷⁸, showing us how the most precious elements of our daily communications remain hidden, deeply buried at the foundations on top of which we face and

approach each other. And yet, everywhere I go, I see the majority of people judging others based on their linguistic skills. After Cecilia, a Swede living in SF, started shouting at the top of her lungs late night in the Lush gelato parlor in North Beach, airing her frustration over feelings of non-acceptance in the American society, I offered my reasons in a post to her: “One of the reasons is language. People communicate too much through language, and natives normally look for other natives to have their linguistic wittiness fit each other like a puzzle. Another reason is that you can hardly find such a division between extrovert (a.k.a. d-bags or bros) and introvert (a.k.a. hipsters or beats) personalities as in SF, which, when you make them face each other long enough with feelings of mutual repugnance, contributes to the former being even more, now unpleasantly and repulsively open, and the latter being even more shelled. And then it’s hard to be connected”. It is true that this rather rough division between “spiritual” and “physical” stereotypes of people is such that, finding oneself in the middle, makes it exceedingly hard to fit in. And the feedback adjustment of the behavioral traits of these two groups of people is truly fascinating. You could easily see the former literally shelling themselves, curving their spine, making their necks bowed and shoulders cold, stiff and immovable driven by the dislike of the latter people who on the other hand become even more spurred to foster their animalistic nature by behaving like loud and cocky monkeys by being disgusted by the former people. However, as we could readily learn from the phase of bitchy dissatisfaction that tends to naturally occur with the middle age amongst cultures wherein the drives to express one’s insides erupting with emotions in a free fashion are systematically suppressed, the inner need to express oneself in honest and genuine light is a vital need on which our happiness as human creatures pivotally depends. After all, suppressing our emotions, drives and dreams of blissful acting is a lie that ruptures the ties between the world “inside” and the world “outside”, on the equality of which, in the Christ’s words (Thomas 22), our attainment of the Kingdom of God depends, a lie quite like the one from which the Fall of an enlightened human society depicted in Dostoyevsky’s *Dream of a Ridiculous Man* had sprouted. On the other hand, expressing ourselves in such an honest and enchanting light that we leave eyes whose rays of attention land on us in a state of utter amazement possesses its dangerous lures in terms of discreetly impelling us to toxically manipulate with others and make them intentionally dependent on the power of our ego. Yet, by believing that the right path lies in manipulatively lifting ourselves up with respect to others and trying to treat them like puppets attached to the strings of our ego leads us towards similarly remote, detached and ultimately unhappy panoramas of being. In other words, whether we find strange attractors for the evolution of our being in solipsistic or sadistic centers, we are bound to fall into vortices of a vicious circle wherein with each second the imbalanced state of ours becomes aggravated a bit more. And yet, the saddest thing is that both cultural groups are disappointingly much tricked by the allures of the superficial judgment of people based on their clothes and initially expressed manners. Nevertheless, as far as the language is concerned, I always try my best to appear in communication as semi-literate, just so that I would break the barriers of commonality and ordinariness. Henceforth, if we ever happen to join the same conversation, you could easily witness my tendency to intentionally use broken grammar and incorrectly pronounce words, repeat a same epithet over and over again like a broken record, as if it is the only one I know of, while carefully sticking to the advice Bird gave to Miles on one occasion, “If you play something that seems to be wrong, play it again, then play the same thing a third time”¹⁵⁷⁹, and remembering all the way that timeless Yes that unrelentingly intercepts the last

¹⁵⁷⁹ See Ashley Kahn’s *Kind of Blue: The Making of the Miles Davis Masterpiece*, Da Capo Press, Cambridge, MA (2007), pp. 28.

lines of Molly Bloom's soliloquy¹⁵⁸⁰ as well as that Faulkner's fence maddeningly mentioned time and time again in the opening paragraph of *Sound and Fury* and Beckett's "time she stopped sitting at her window, quiet at her window, only window facing other windows, other only windows"¹⁵⁸¹. Or I may simply keep my mouth shut all the way through, resembling a blunt idiot with nothing much to say. In addition to my being a "Napoleon in rags"¹⁵⁸², this serves the purpose of discerning among the multitude of human eyes and finding only those that are able to penetrate through the apparent qualities of mine to the deep and invisible hum of the sea of my spirit. For, could there be a more rewarding discovery than the recognition of the infinite sources of profoundest beauty in what seemed on the surface to be negligible and valueless, quite like the moment when the girl named Scout identifies Boo Radley, a mysterious character from *To Kill a Mockingbird* whom she had believed to be a creature from hell, as the one who had broken the law and saved her and her brother's lives, without a single word said, never ceasing to give the appearance of an obtuse cretin, I often ask myself. Then I also recall Doris' blurb which says: "Strange things happen... when you can't hold in the secrets of your life, but to tell them in plain language will kill you"¹⁵⁸³. Simply trying to place all our feelings into words is, in fact, a process that can never be accomplished to the utmost extent. If our mission in this life is to find perfect words to express our feelings more than anything else, the creative birth of our shiny spirit in this world would be predestined never to reach completion. For, language is only a means to an end, and not an end in itself in our passionate search after expressing the shine of our soul in its brimming luster and touching brilliancy. The shine that in a matter of seconds surpasses all the glamour, majesty and charm of all the words we may have ever employed.

S.F.4.15. Knowing this, I do not mind – as many other non-natives apparently do¹⁵⁸⁴ – having people ask me how I am without obviously being interested to know the answer. As a matter of fact, I do occasionally respond to one such question with a spiel as long and odd as that slammed in the face of Agent Cooper by a waitress in *Twin Peaks* together with yet another one of his favorite cherry pies: "I'm fine. I'm weird, actually. I'm disoriented. I'm not sure where I am. I mean, I know where I am, but it feels odd being here. I'm OK. Listen to me. I've been out of circulation so long, I've completely forgotten the social niceties. I mean, you ask how I am, I'm not really supposed to say how I am. I'm supposed to say, 'I'm fine, thanks. How are you?' You

¹⁵⁸⁴ Years after I wrote this passage I came across the journalist, Dragana Matović's brief writings on the American customs irritating to her, a Serbian immigrant at Harvard University at the time. The newspaper text included the following critique of the habitually uttered phrase "How are you": "(In Serbia) if you ask someone 'how are you', even while passing one by in the street, it means that you have at least half an hour to hear how someone's salary is low, the health bad, the company bottlenecked, the marriage in crisis, the car under repair, the mother-in-law visiting and life deadlocked. Otherwise, the topic 'how are you' is not started. Yet Americans, apparently, do not know for this rule. They ask 'how are you' and then pass you by, leaving you with a torrent of words that hardly waited to be uttered to ease your soul, but that now have to be swallowed back because there is no one to hear them. Because the one who was to hear them cares not about either how you are or what bothers you, but rather asks just for the custom's sake. It is equally not understandable to Americans why someone cannot ask 'how are you' and pass by without the answer and to Serbs how come someone can ask 'how are you' and pass by without the answer". The title of Dragana's article is *U gostima kod neprijatelja ili kako sam postala Sibirka u Americi*, or, translated to English. A Guest at the Enemies' or How I Became a Siberian in America. Published in *Politika* (January 4, 2015), pp. 12.

must think I'm really strange. Well, with due respect to social niceties, even if you did think I was strange, you wouldn't tell me, would you?"¹⁵⁸⁵ On another day I might decide to turn the question into a more beautiful question instead of handing out a clichéd answer, somewhat similar to the way Soren Kierkegaard, standing on a meadow in a park where otherwise walking is prohibited, responded to a park ranger who asked him what he was doing there with "what are all of us doing here?", or to the way Thoreau, locked behind the bars after he refused to pay taxes because of not willing to support the war in Mexico, responded to Emerson who stood on the other side of the bars and asked him what he was doing there with "what are you doing *there*"? Thus, asked how I am, I may revert the question and answer that it is not about me; it is about the world instead. "How is the world, not how am I – that should be the question", I may be heard saying, echoing an egoless vibe which may splash the angels floating amidst the transcendental spaces in-between the lines of reality with the waves of pure beauty and pleasure for the soul. Then, sometimes I may respond to this question by snappily saying "terrible", just so as to face the questioner continuing to piffle along the rail of tedious routine and nauseating platitude and prove that she does not care even a little bit how I really am. Once, I remember, after I responded to this clichéd question with a "so-so", I was asked in turn if I had become offended by the question, which has stood in my head ever since as a solid proof that the questioner's attitude is in this case more often than not underlain by self-lovingness rather than genuine curiosity about the wellbeing of another. However, accustomed as I am to the usage of words not as reflectors of genuine feelings and thoughts of ours, but as pragmatic connectors of our spirits, free from any obligation to serve the tribunal of truth, I see this question and those similar to it - unless they are being mechanically uttered, thanks to the sheer habit and inertia of a zombified mind molded to the social convention - as casual invitations to connect, which I am always happy to hear. Even if these introductory words, resembling an easygoing, lightly openable surface, often unpretentious to the point of banality, fail to act as a gateway to depth, be it communicated in a verbally explicit or, even better, implicit manner, they will trivialize word *per se*, that false carrier of human feelings, thus, one way or the other, fulfilling a benevolent goal by their mere existence. In contrast, one will recognize a dislikable custom in them only if one identifies words as a reliable vessel for the transmission of our realest feelings. But if understood as a laidback and loose way of connecting with people, without necessary identifying our emotions and thoughts with what comes out of our mouths, we would be able to penetrate through the literal meanings all the way to the heart of intentions that beats in the background, and connect with it instead of with the superficial meanings that these words convey. Samuel Hayakawa has thus pointed out that some of the most common linguistic expressions, including "awesome", "cool" and thousands of other words and phrases, are strictly used to create a sense of social cohesion¹⁵⁸⁶ as their users and interpreters jump over any process of literal understanding thereof and on to the semantic connection at the level of mutual aspirations. Hence, what many see as a dislikeable and hypocritical custom in the neo-American communication, even more so when the small talk opens with a contrived and insincere compliment¹⁵⁸⁷, urging them to angrily steam with a thought that is akin to the title of a Manic Street Preachers' song, "ifwhiteamericatoldthetruthforonedayit'sworldwouldfallapart"¹⁵⁸⁸, I merely see as a common way of greeting and connecting, which makes me pleased compared to

shelled and mind-one's-own-business attitudes that the stereotypical European citizen is inclined to. It is true that the usual outcome of such a casual introductory conversation, during which two souls act as if they were best friends for a minute or so, is their swift separation and forgetting one another in the blink of an eye, proving their caring not even an iota about the wellbeing of each other all the while, but such common instances are the signs of the failure of practitioners of social customs, not of social customs *per se*, the same reason for which Christians, not the Christ, are to be blamed for the adversities caused by the practitioners of this religion throughout the centuries. It is people that are to be blamed in this case for transforming a communicational channel into a communicational barrier, not these very channels which were set to connect “wandering forlorn among the empty eternities”¹⁵⁸⁹ that individual human spirits are. After all, the first steps in everything in life ought to be light and leisured, in the same way as the Sun emerges to the sky at dawn, letting its light gently and gradually extinguish the darkness of the night sky. On the other hand, however, the dangers of superficially appearing kind and polite without any underlying desire to show up as a true helping hand are always imminent in this insincere communicational attitude. Today, for example, as a queer response to the world wherein hypocrisies multiply with each new day whilst “honesty is a dying art form”¹⁵⁹⁰, we evidence a rise in the aesthetics of irony, as among the population of so-called hipsters, one of the growing and most influential cultural and artistic forces in America¹⁵⁹¹. However, in their frequently unpleasantly ironic and world-weary comments, lying on the boundary of pure cynicism, they simply embody the curse of seeking freedom without noticing its meaningfulness and fulfillment only when paired with the power of love. Perhaps this falling prey to the pit of icy cynicism that freezes our soul and corrodes everything warm in it, a plague that originated from the heart of the American man in its most venomous forms and that currently runs around incurably infecting the rest of the world, is the curse caused by his leaving betrayingly his hearth and disobeying Fromm’s adage that “love is staying” in favor of the quest for freedom and freedom only, the curse that is, naturally, most ominous in California, that place where “you can check out any time you like, but you can never leave”¹⁵⁹², the farthest point in his journey away from home and away from love, that divinest gift of them all, which the notion of home symbolizes. Naturally, this curse of being goaded to repeatedly uproot oneself from one place and replant oneself at another, which an average American performs a dozen times in a lifetime¹⁵⁹³, has become deeply embedded in the capitalistic machinery of this country, strangely oblivious to its catastrophic side effects on the human psyche. On one hand, these repeated changes in the social surrounding pale the social identity of an individual and destroy the spirit of comradeship, thereby opening the way for an easier manipulation of the masses by this exploitative capitalistic machinery, without its ever having to

¹⁵⁹¹ The most fascinating definition of this irony I have found so far is the following: “Irony becomes romanticism. Irony is romanticism in its own place. Irony is when the abandoned space is revealed. Irony says of the space between signs, ‘You have not counted on this; you have no language for this; you are helpless in the face of a beauty you can only see as profanity’. Romanticism, though, is the same, but it says, ‘This is not your jurisdiction because you have made laws. You can rule the profane. You wield your power over it because you have called it your dominion. This is the sacred, and there are no prisons here. You, actually, are a heretic, but you are just’”. fear that people would rise against the oppression and strike up a social and human rights revolution. In that sense, this recurrent transplantation of people in America largely resembles the mechanism by which sects render the newcomers to their circles helpless and dependent on them, that is, by obliterating the people's connections with their prior social milieus, without which they have no comforting grounds to fall onto and become obsessed with that one and only thing in their lives that matters, namely the sect, that is, job, and can be manipulated by the people in charge of these organizations anyway they want. With such means, the spirit of solidarity is being diminished, not only leaving the individual out in the wind of the mercy of his employer, but also, more critically, increasing the potential for his exploitation. For, regardless of how cruelly and unfairly the worker has been treated by the employer in the US, there is rarely ever a comrade to support and defend him against this maltreatment. By then, this repetitive transplantation has already brought the sense of communal belonging to nil and promoted in its place a sense of detachment, with cordiality killed and icy individualism embedded deeply among people, all of which are traits that America has championed since its founding and sold as something very, very cool all across the globe, albeit only for the sake of the benefit of the brains behind the wheels of its capitalistic machinery. In that sense, this keeping of people in America at a fair distance from one another, first physical and then emotional, has played a historic role in the perpetuation of capitalism on its grounds and the unending cycle of transplantation of people from one social surrounding to another has been one of the key means for achieving these ends and keeping the ravines of emotional void posed in-between people gaping and unbridged. However, most critically, this endless shifting of the individual from one place he'd call home to another leads to the removal of a sense of foundation at many levels under one's feet, thus predisposing one to flakiness and lack of commitment, without which, as Fromm insinuated by his aphorism, empathy thins down and love becomes a foreign concept, a gap in the fabric of the soul that can only artificially be filled by the notion of freedom and cemented with cynicism. Yet, trying to reach the reigns of perfect freedom while grasping cynicism and thus plunging in the waters of dishonesty yields a paradox impossible to resolve and neatly described by "cyncerity", the term coined by Terre Thaemlitz, a well outspoken artist from the contemporary electronic dance music scene¹⁵⁹⁴. To battle the counterfeit culture and its stale spillovers using the brambly bludgeon of cynicism, which itself is nothing but an ugly head of spiritual destitution, discouragement and a missing faith in healing the world with the magic wand of love, is, however, fundamentally erroneous. Responding to hypocrisies of the mainstream social reality with blunt cynicism can be thus said to be akin to launching a war on war, i.e., essentially losing the battle despite seemingly winning it on the surface from time to time. It is for the same reason that masculine feminism as a response to fierce, robust and violent manliness from which wars, terror and immeasurable misery that struck this planet originated is by no means the way to lead the evolution of the Earth in a more sensible and peaceful direction. Likewise, embracing scornful sarcasm as a reaction to the world governed by greedy pretense should be seen as a sign of one's becoming the same kind of monster one fought against, as Friedrich Nietzsche would have put it¹⁵⁹⁵. Moreover, as I have claimed, cynicism with its presumptuous confidence in one's knowledge built on the pillars of arrogant self-importance, as opposed to trustful and humble welcoming everyone to the home of one's open heart, is akin to fortressing oneself and launching poisonous arrows from the platform of one's

heart and corrupting both one's and other people's spirit therewith. Erasing its taints from the screen of our mind with the rubber of nonjudgmental forgiveness and love for all I often see as the first step in our climbs from the earthly, spiritually muddy and purgatorial reigns which we currently occupy to more sublime and angelic domains of being. Yet, in the modern world in which being cynical is a practical prerequisite for being accepted as intellectually mature, people are naturally impelled to let the attitude of approaching each and every detail of the Universe with caring trust, built on realizations of the omnipresence of divine beauties, be drowned in the streams of their consciousness and engage in poking and piercing other people's hearts with prickly, cynical comments, albeit making the spiritually fertile soil of their spirit a bit more arid and deserted with each one of them. These modern inclinations to equalize the power of intellect with the stylishness of the coat of cynicism in which the opinions one exposes are dressed have slowly crept into the Western world and, as ever, multiple sociological factors could be held responsible for their rise, acting as both their causes and effects, from the transition from the open and honestly waged World War II to the clandestinely and deviously waged Cold War (which was not a war at all and naming something the exact opposite from what it represents in reality is the very definition of cynicism), to the expansion of the desirability of corporate lifestyles that foster phony smiles, polished suits and greed in the heart, to the triumph of hypocrisy over honesty in terms of bringing in more cash, popularity and sex appeal, to an upsurge in the Orwellian monitoring of human behavior and the corresponding pandemic rise in passive-aggressive attitudes, sugarcoated on the surface and malicious on the inside, to the suppression of the inherently empathic and sincerity-promoting theological thought by the metaphysically moronic literariness of scientific objectivism. However, as pointed out by two punks who anonymously wrote the book entitled *Off the Map*¹⁵⁹⁶, "One way cynicism, the other, dreams". Then, to approach everything with an utterly naïve state of mind, like the wide-eyed "river poet search naïvete"¹⁵⁹⁷, vowing "not to read between the lines"¹⁵⁹⁸, shunning the cynicism and the coldness of the analytical mind and embracing the celestial mind of a child, which goes with the flow of all things around him, pledging "never, ever, ever, ever to grow old again"¹⁵⁹⁹, is the way to rebel against these sardonic powers that be. Also, as derivable from the semantics of the signpost coined by the two punks, only by following the road interspersed with starry dreams and jaw-dropping honesty can we reach an absolute freedom of behavior and enlightening perspectives at reality. And as we begin to act in a way that is completely unconstrained and independent of our social surrounding, that is, in perfect harmony with the wildest dreams of ours, we may realize that shedding the most enchanting moves and acting as a celestial ballerina on the screen could be done only insofar as our love for others and the world is let permeate every single atom and wrinkle of our beings. Constructive freedoms are, after all, always rooted in subjugation to certain laws and limitations, as exemplified by a guitar string that could resonate with serene sounds only for as long as it is kept tightly fixed and stretched. To that end, the founders (of the US constitution) were wrong when they emphasized freedom as the supreme ideal to be aspired to, the idea that to this very day deploys itself in the minds of American people to terrifying proportions, alienating them with every blink of their eye from the sacred grounds of Love in the course of their incessant infantile search for new and exciting freedoms. Here and there throughout the history spirits did pop out with a banner held in

their hands, warning us of the spiritual devastation that this neglect of the goddesses of Love on the account of the sole worship of the muses of Freedom is bound to bring about. One of them was a former American president who observed that the proper sustainment of freedoms requires diligence, a form of commitment through which we bind ourselves to someone or something and, in essence, stand in direct opposition to our strivings towards freedom. This thought could be enriched by the words that came from the pen of the Serbian social critic from the 19th Century, Svetozar Marković: “If the aim of freedom were to be chattering idly in parliaments, in marketplaces, in clubs or blabbering in newspapers and books, then freedom would not only be not worth the blood being shed for it, but it would also not be worth either this little ink that I spilled while writing this article; freedom is precious only to the one who comprehends it according to the precious results that it brings”¹⁶⁰⁰. And for the kite of our being to open its sails to face the winds of the world and be freely carried in heavenward directions on their streams, it ought to be tied to a base in the ground, the anchorage that symbolizes none other but Love, the polar opposite to the power of freedom that soars us high in the worldly skies. Without this limit to our freedoms, our flights of fancy would quickly turn into Icarus-like plummeting to the sea, and this is what every seeker of truth, including us, running out to reach stars, stars that could be grasped only when we wish magnificently hard to bring them down to Earth and place on the palms of the hands of the loved ones, sooner or later comes to realize. That would be when we conclude that it is better to stay still and dry, like a stone in the desert, but with love enlightening our heart, than to be the springiest dancer of them all but with heart empty and dark. A stone, in fact, held in our hands should always remind us of its being a testimony to the triumph of love over freedom. To understand this analogy, we must go back to the laws of thermodynamics first and reiterate their relation to the crystal growth. Namely, as atomic solutes start to come close together, form bonds and settle down in a crystalline form, heat of formation is being released, constituting an enthalpically favorable process. In contrast, the transformation of atoms from their freely moving state in the solution to their confinement to the narrow bounds of fixed lattice sites bears a significant entropic cost, which needs to be overcome somehow if the crystal formation is to occur. What makes crystallization unfavorable in addition to the entropic cost is, according to the equation $\Delta G = \Delta H - T\Delta S$ ¹⁶⁰¹, the lowered temperature too. For, as counterintuitively as it seems, even though crystallizations are initiated at lower thermal energies of the system, this equation implies that decreasing temperature increases ΔG , which does not favor the crystallization process at all, given that $\Delta G < 0$ is a prerequisite for a physical process to occur spontaneously. With neither entropy nor temperature favoring crystallization, what steps forward is, as ever, the greatest savor of them all: Love. For what else is this enthalpic gain caused by atoms coming together and bonding but an emanation of Love, albeit between atomic actors and not human souls? It outweighs the entropic cost caused by the reduced freedom of movement of the atoms and, as a result, produces a crystal, an inanimate proof of the victory of love over freedom told to us in a subtle language of convoluted metaphors used by the greatest spiritual teacher and the guide of them all: the goddess called Nature. “What’s your freedom without love”, asks concordantly Tracey Thorn

¹⁶⁰⁰ See the comment by Misha to the article “Americans Have the Right to Be Stupid”, B92 (February 27, 2013), available at http://www.b92.net/zivot/komentari.php?nav_id=690554#rating.

¹⁶⁰¹ ΔG is the free energy change, ΔH is enthalpy change, ΔS is entropy change and T is the temperature. Note also that what constitutes gain or cost is not defined by the absolute direction of change in sign (+ or -), but in relation to its effect on the free energy term. More specifically, anything that increases G and makes ΔG of the process be > 0 is considered a cost, while anything that lowers G and makes ΔG of the process be < 0 is considered gain; hence, $\Delta H < 0$ is considered a gain and $\Delta S < 0$ a cost and *vice versa*.

in a landmark Massive Attack song¹⁶⁰², uttering the question that is a spinoff of an even more subtly winked neon sign that glows with the message that only when we lay our spirit as a bridge that crosses the troubled waters of life for beloved others do the doors to genuine freedom of being open in us, this time sung by Shara Nelson in the tune that opens the preceding record of the band from Bristol: “You can free the world, you can free my mind, just as long as my baby’s safe from harm tonight”¹⁶⁰³. Similarly, at the closing of the record Spirit of Eden, Mark Hollis of Talk Talk sang with heartbreaking powerfulness, “Take my freedom for giving me sacred love”¹⁶⁰⁴, prompting us to revisit all the aspirations of modern kids to reach the ideals of ultimate freedom of behavior but at the cost of burying the dreams of love, all until we glimpse these very same aspirations of theirs as akin to one’s attempts to build a house starting from windows, with no foundations at all. Likewise, James Murphy of LCD Soundsystem sings “If I am sewn into submission, I can always come home to this”¹⁶⁰⁵, bringing forth a delirious rhythm as a presupposed key to overcoming the creativity-draining submissiveness and conformism that arise from our natural tendencies to overly empathize with the surrounding creatures while ignoring the unique voice of the divine that reverberates within our hearts and floating on which would make us yield fabulously inspiring expressions. Yet, as the song approaches its explosive climax, James asks “where are your friends tonight, if I could see all my friends tonight”, saving the song at the very end of it and endowing it with timeless meaning with this cry for love on top of the fabulous freedom achieved but not fulfilling *per se*. This final turn of the song explains why it has been, in my opinion, the only one recorded by this band that is indeed precious with its holding the listener in a thrilling state as it rolls towards the explosion of craving for love and touch as the missing links in the chain of creative climbing to the stars that contemporary adolescents are engaged in while driven only by a thirst for freedom and failing to complement it with the powers of love. “We’re a little too free”, is thus the sigh that ends Belle & Sebastian’s Mornington Crescent and the whole Life Pursuit record in an instant, the sigh that, I remember, I let once into my downhearted self sitting slumped on a log on the hidden, shadowy Greenwich street stairs paralleling the clamorous and elated Lombard St. curves, surrounded by “ladies with chauffeurs, dogs wearing hats and jackets, rich apartments, old punk posters, tartan garments”¹⁶⁰⁶. A cultural sign of the times, as it were, this desperate outcry particularly powerfully reverberates in America of the modern day, a culture in decline as the result of its overpricing freedoms on the account of depreciating love. Finally, Douglas Coupland offers a similar point of view: “I think the price we paid for our golden life was an inability to fully believe in love; instead we gained an irony that scorched everything it touched. And I wonder if this irony is the price we paid for the loss of God”¹⁶⁰⁷. One such irony has truly turned hearts of the majority of alternative modern kids into stones, the moment they embraced the voice of their generation, the one of Kurt Cobain of Nirvana stating that famous “I found the heart it’s hard to find, but well, whatever, never mind”¹⁶⁰⁸, and bringing up the image of one who had found a mysterious and everlasting beauty, but instead of wondering with much care over it and holding it as a precious heart on the palms of one’s hands, with the guiding voices reverberating inside, felt invited to toss it and walk away in ironic and bitter ignorance. Sadly but true, this monumental moment may be only one of those milestones in

the evolution of our cultures into the unknown when what had been considered as alternative, a wrinkle on the fabric of our culture, all of a sudden became a part of the mainstream¹⁶⁰⁹, all ironed as it were, though, of course, only to delight of masses, not of the most profound proponents of these alternative ways of expression. For, whenever we approach the sin of Cain, of whispering “am I my brother’s keeper” (Genesis 4:9) in our head while dispelling the feelings of care and responsibility from the space of our heart, and move towards the common advice of the modern day, “Try not to care too much”, while urged to mechanically execute our tasks, like tin soldiers, we should know that we fall millions of light years from the sublime heights of graceful spirit and into the mud of purgatorial and hellishly heartless humanity. Someone said that “whatever” and “please love me” are two crucial phrases that describe the mindset of a modern adolescent in its celebrating freedom over love and neglecting to realize that singing from windows and balconies and gazing at stars from housetops can be done only insofar as the foundations of the edifices we occupy are firm and stable (Matthew 7:24-27). Yet, in their careless and self-centered rejection of love and care, the two fundamental qualities in which all the wonderful emanations of our creativity and the world are rooted, they become predestined to infinitely roam through the labyrinths of ethical and aesthetical perplexities, only once in a while able to glimpse the light from a distant daylight, while all the towers of their endeavors in this world become incessantly crushed and caved in, or washed by the sea, like castles made of sand. Locked in their irony and cynicism, without realizing that selfless love, with all the joy, honesty and gentleness that arise from it, is the key that unlocks all the bolted doors in this life, they will bump their heads into the walls that encompass them, unable to figure the way out. In that sense, despite pretending to oneself and the world to be at odds with the self-engrossed mainstream mindsets of the modern times, these counterfeit cultural renegades inadvertently shed the very same seeds of selfishness everywhere they go. Ask their prototypical representative a question and a chance is that you will get a response that implicitly highlights reasons for which their choices are good for oneself first and foremost and not for the world as a whole or a few precious creatures that they endearingly hold on the palms of their hands. Yet, I know that only when the typical answer to the question why get married, for example, begins to bring to light one’s wish to care for another, rather than continue to underline what one gains and what one loses by entering this formal union, will the sunlight of spiritual happiness spill itself all over the face of the Earth. Now, this ironic way of communicating, which nowadays spreads like a plague, can be considered a most common oppositional response and sign of resistance to the superficial communication pervading the contemporary American culture. Hence, after all, the hipsters know very well who they ought to blame: the overly compromising, compliant, conformist and, thereafter, genuinely unethical American personality, the personality unready to display the “arrogance of a hero”¹⁶¹⁰, as my native tradition has called for, and whistle “ten twisted grills grin back at me, bad money dies, I love the scene”¹⁶¹¹, as I, myself, did when I stood face to face with the morally and aesthetically

¹⁶⁰⁹ As for the moment in time when alternative music became the new mainstream, the California State University scholar, Lina Abascal cites the second season of *O.C.*, which is coincidentally where I write these words, aired in 2005, showing Modest Mouse and the Killers playing at a Newport Beach venue and Daft Punk and LCD Soundsystem providing a soundtrack for a house party somewhere in Orange County (See Lina Abascal’s *How Bloghouse’s Sweaty Neon Reign United the Internet*, *Wired* (January 28, 2022), retrieved from <https://www.wired.com/story/how-bloghouse-music-united-the-internet/>). Hence, not only can the rise of the reactionary Nixon – Ford - Reagan – Bushes – Trump lineage be traced to this conservative bedrock of California that Orange County is, but that evasive moment when the alternative music turned mainstream can be traced too.

corrupt powers that be, flagrant and fake, saying No straight into their faces and letting them “fry and melt”¹⁶¹². Yet, offering pure irony as a passively aggressive answer can only aggravate the problem. In a society in which instances of verbal or physical aggression are not tolerated by law, irony is, of course, as far as one can go in piercing the adversary without being held legally responsible for that. However, without invoking love as the key, the doors to truly profound ways of living will remain forever locked. A recent study carried out at Harvard University¹⁶¹³ has shown that hipsters are, sadly, less prone to make friends with people who influence their taste, as opposed to those who merely confirm it, rather choosing to walk away into a corner of reality and find even more obscure acts to worship than compassionately unite the vibe of their hearts with the music of emotions emanating from the surrounding souls. This is, of course, not to say that individualism is not okay, but only that it presents but a single side of the coin of fulfilled living, the other side of which, according to the Way of Love, belongs to passionate streams of empathy that blend our spirit with all that is. Although countless organic thinkers will try to convince us that individualism is cancerous in spiritual terms, as it separates us from the communal wholes to which we belong, no truly fulfilling sense of belonging in any social system is possible without being immersed deep into one’s unique, starry self and from there on digging the impulses for creative action. All of this thus simply suggests that in their opposition to hypocritical and shallow mainstream reality from which they have tried to escape, hipsters have crossed to the other side of the globe of the human mind and anchored themselves to the starting point of their journey, which happens to be exactly the place that they have been repugnantly running away from. And yet, they quite often do not realize this paradoxical parody on a search for the meaning of life in which they have found themselves and which gives a whole new meaning to the lame and lackluster irony with which they approach most things in life. The pervasive outbreak of cynicism certainly speaks in favor of such state of affairs where cold and disinterested *laissez faire* has been adopted as a response to equally cold and indifferent mainstream milieus. Communications ending up with superficial meanings of words and never penetrating beyond them, into the domain of ineffable expressions and language of the heart, go against my personal ideal of communication which has ethics implicit in it, as envisaged by Heinz von Foerster¹⁶¹⁴ along with many other religious and artistic figures of influence. Hence, if we want to solve the problem of a lack of sincerity and creativity in communication, we ought to start searching for the solution within the very foundations of it. The fact that the root of language lies in the domain of human aspirations and intentions tells us how deep we should dig. Once we get there, we should make sure to illuminate every hidden background intention of ours and make them follow an enlightened course, oriented towards selfless beautification and appreciation of the surrounding beings. Then, no matter what we talk about, be it rose-cheeked clowns, lorikeets at dawn, tamarinds in bloom or any other sensible or nonsensical things, as long as our heart radiates with love for another, ethics will be implicit in everything we communicate and our words and acts will carry on their wings an enlightening message thereto.

S.F.4.16. Hence, a hipster friend of mine whom I love to call Lea the Watermelon recently asked me in an SF dive bar on the corner of Mission and Valencia, a stone’s throw from the Knockout,

over a glass of the hoppiest brew in the house, with her bony arms intertwined and elbows leaning onto a spotted and stale table clothing, if she was one too sarcastic person. “You can be as sarcastic as you want if you care for others”, I said, gliding at the same time on the sacrosanct sound of the Stones’ Shine a Light that the jukebox, inebriating every atom of my body with the nectar of the holy spirit, began to play seconds ago. And we both knew she cared, which tickled her to smile with a shade of humble grace, triggering a myriad of colorful and plumped African vines to begin to bouncingly dance through my fizzy, effervescent head, bubbly boiling with thoughts that pinpoint one thing: boundlessness of the Universe enterable through the gate of any given object or insight statically standing or swiftly swooshing through the starry dome of our experience.

S.F.4.17. It also makes me recall a video for a krautrock tune composed by a band of Berliners who call themselves Thieves like Us¹⁶¹⁵, in which a group of hipsters exits a subway train station, and as they walk and run, walk and run, every now and then they slip on the tiled floor, intentionally or accidentally, falling and getting up, falling and getting up. Seeing that, I immediately understood the message. Oh my Gosh, they are literally tripping, I said to myself. Not only does it present a healing exercise to let ourselves simply fall down, touch the ground with our hands, our nose, cheeks and every part of our skin, like children. It is thus that we break the fears of falling, melt the icicles of anxiety in our mind and dissolve innumerable fears related to this instinctive and deeply rooted fear of falling lying within most of us. It is for this reason that the bioenergy therapist, Alexander Lowen, taught his patients a particular exercise in which they were about to release their bodies freely and simply fall on the ground¹⁶¹⁶, letting their spirits loose thereby, untying the knots of constricted energy flow in their bodies, enabling a graceful stream of movements once again and parachuting their hearts to new vistas of juvenile happiness. In that sense, first I remember how Dejo Savićević’s classmate described the way the future celebrated Montenegrin footballer and perhaps the greatest and the wittiest Yugoslav dribbler of all times, christened the Genius by his Italian teammates from Milano, ran, that is, as if he was about to fall and stumble at any time¹⁶¹⁷. Decades later, an online commentator would draw a parallel between Dejo’s gawky runs on the soccer pitch with those of another sports genius, the Serbian basketball player, Miloš Teodosić, describing him in the following way: “One would say that this man hardly stands on his feet - he knows not how to run, shambles like a penguin, looks as if he is going to fall on the ground with each physical contact, but then fires a three pointer or slides such a pass that they all stop and scratch heads in surprise”¹⁶¹⁸. Here, I also remember my Irvine neighbor and a former shooting guard for a number of top clubs in Europe, Ross Long’s answer to my asking him in a tub who the most impressive player he had played with or against in his career was, saying that it was, without a doubt, the Serbian basketball star, Dejan Bodiroga. The reason he cited, with which many basketball critics and fans would agree, is that Bodiroga not only had a relatively poor shot from downtown and was extremely slow with the ball and played mediocre defense, but his jump shot was also virtually nonexistent, as his feet could not lift from the ground by more than an inch, and yet he was unstoppable and he guided numerous teams to the tops of Europe and the world. All of this impels me to think back of a song by Hot Chip in which the verses “I am ready

for the floor” and “I am ready for the fall” are interchangeably used¹⁶¹⁹, wittily whispering to our ears that the readiness to fall presents an unavoidable step on our quest to pull off enchanting dancing movements and ascend to genuine heights of being in this life. It may be for this reason that Ophites, a Christian Gnostic sect of the 2nd century AD, believed that the Fall (Genesis 3) was *up*, not *down*¹⁶²⁰. For, this karmic plane of reality is such that falls *from* grace happen in it as frequently as falls *for* grace. Or, to fall is to climb, as I often love to notice, which brings me over to the final scene from Roberto Rossellini’s memorable neorealist collection of sketches from the life of St. Francis¹⁶²¹, wherein the saint from Assisi is shown telling his adherents that they should all separate now and go in opposite directions to spread their dharma to the world. When the confounded disciples ask the saint where to go, he tells them to pretend to be children and spin in circles until they fall to the ground. When they did so, the saint tells them that the direction each follower faced upon his fall is the one wherein he ought to be travelling in, wishing, of course, to symbolically emphasize that on one hand God is present everywhere, while, on the other hand, immersing oneself in the sea of adversities is the only way to reach ultimate happiness in life and climb on the ladder of divine spiritedness away from the sinful earthliness and straight into the heavens above. And just like figure skating judges will always rate a skater who tumbled once or twice onto the ice after attempting to land a jump on a single foot, boldly and gracefully, as this art of dancing on the edge dictates, higher than the one who stayed upright throughout the whole performance but made two-footed landings after critical spins, this *Lieber Gott* overseeing the Earth must be more gleeful in view of our beautiful falls than of standing tall fueled by the fear of falling, in any context or connotation conceivable. Moreover, as decades of research in biomechanics of walking have taught us, without the willingness to fall, no forward steps would ever be made and no strides on foot would be possible¹⁶²². Therefore, fall to the earth, freely, I say, for such is the way to launch yourself to the sublime skies of being in this inherently paradoxical reality wherein turning things upside down and inside out is a definite recipe for enlivening our relationships therewith and wherein bringing up what is down and down what is up, reshuffling the first and the last thereby, so to speak, is how we open gates to the inflow of the greatest epistemic bliss thinkable. Now, in the spirit of this guiding star that equates the fall on earth with an ascent towards heavenliness, the star that I imagine to be resting on my forehead at all times, I often recall what may have sounded like James Brown’s words, “I tell you children, I could lay right down”¹⁶²³, only seconds before I let myself limply drop down in front of numerous amazed faces at a party or in a company during a leisured walk. Thus I lay alone in a bush or below a tree or a table, dreaming for a few seconds, after which I get up and continue behaving as a regular person. Not to mention that only when I feel invited to sit on the ground and wriggle like a child rather than to stay courtly on chairs and sofas, I happily proclaim: “This is a comfy place!” But the main point of the video is another thing: merging map with a territory, turning something symbolic and indirect into livable and present “right here, right now”. Instead of merely tripping

in their fancy, they are truly tripping, which has a hilarious effect, provided we understand the secret message.

S.F.4.18. However, pointing at the essential human qualities, such as love and beauty, only on linguistic maps, without truly living them right down on their territories has contributed to rising of the entire new culture of hipster-like ironic and aspiration-emptying communication. The neo-American hypocritical insincerity, that is, talking about peace and love without really living up to these ideals, has thus produced a cultural stream that is, unfortunately, far from its opposite (which would be not mentioning these qualities but living them all of the time). In these streams are immersed perplexed modern kids who neglect the importance of love and other basic human qualities not only on maps of the language they use, but on the bases of their intentions, that is, the things they tend to convey in communication. The lack of the latter is actually critical in this whole story. Instead, these kids are being guided by the principle according to which freedom of behavior is attained on top of a total neglect of respect and love of the fellow earthlings surrounding us. What they have discovered is that one can look at the world and act in it relatively unconstrained and freely on the basis of emotions of hate, disgust and depreciation of others. “I believe that all people are stupid and meaningless” – that is what Top, an acquaintance of mine who, like me, had used to play in a band (the music of which, however, I described as the one that would have said more to the audience had the players put their instruments down and stayed seated in silence; for, silence is sometimes more thunderous and powerful than words and sounds, whereby, as Friedrich Nietzsche observed, “to talk much about oneself may also be a means of concealing oneself”¹⁶²⁴) and then pursued a scientific career which comprised a lot of public lecturing, said when he described to me the background of his mind that helped him attain a sense of freeness when he is out on the stage. A similar sentiment was reflected in the words of Ed Krug while presenting on the methods for overcoming the fear of public speaking at the National Postdoctoral Association Conference in Philly in 2010: “Imagine that the house of your neighbor whom you passionately hate is on fire; despite that, you go out and help him. The audience is your neighbor, and the water with which you extinguish the fire is your knowledge”. However, although such an attitude filled with deprecating others instead of elevating their importance and value in our eyes gives one a sense of superiority over others, exclusion of the sense of respect that it entails turns out to be nothing but ruinous in the long run. Although by killing all the respect for others and thus becoming untouched by their expectations and opinions one may feel as if the sense of perfect freedom has been attained, some time will pass before one starts to feel like David Bowie’s Major Tom¹⁶²⁵, enclosed in the terrifying capsule of his own self, unable to relate to others with love, compassion and respect. At first, of course, this sense of solipsistic confinement inside the bubble of one’s own aura seems magical and liberating, empowering oneself with an aerial arrogance and a sense of sublimity that the impression of levitating above the world and all of its muddy affairs produces in one, just as the sentiment of Bowie’s song about Major Tom’s “sitting in a tin can far above the world”, Space Oddity¹⁶²⁶, evoked, but as time passes by, this autistic alienation becomes unbearable and leads to the crashing of the spirit, of hitting the ground of a penitent lament of

¹⁶²⁴ See Friedrich Nietzsche’s *Beyond Good and Evil: Prelude to a Philosophy of the Future*; Aphorism 169, translated by Helen Zimmern, available at <http://www.authorama.com/beyond-good-and-evil-5.html> (1886).

¹⁶²⁵ Listen to David Bowie’s exhilarating Space Oddity, the first song about Major Tom, and then its apologetic sequel, Ashes to Ashes.

¹⁶²⁶ Listen to David Bowie’s Space Oddity, Philips, Eindhoven, Netherlands (1969).

Major Tom's confessions in Bowie's sequel to his story, *Ashes to Ashes*¹⁶²⁷. Only then may it become crystal clear that the pathway to oneness with the voice of our soul does not lead through neglecting the voices of other creatures, but through finding a compromise, a middle way, a path of Love between listening to the music of our own heart and listening to the music of the hearts of others, between acting in harmony with our own inner self and acting in ways that bring enlightenment to the surrounding creatures. Viktor Frankl recognized this when he recommended "that the Statue of Liberty on the East Coast be supplemented by a Statue of Responsibility on the West Coast"¹⁶²⁸. Charlie Chaplin, on the other hand, commented on viewing it for the first and the last time, when he arrived at "the land of freedom" and when he left it for good, having been prohibited to enter it for life, in a following manner: "I thought to myself what it had meant to me when I first saw the statue. It filled me with tremendous joy. It meant freedom and progress in America. But when I looked at it that day on my way out to sea, I found myself wondering how accurate a symbol it really was"¹⁶²⁹. If Noam Chomsky was correct, then freedom in America has been downgraded to the freedom of capitalists and their corporations to exploit the workers, having nothing to do anymore with the freedom of creative expression or the freedom to challenge the stale social norms that keep dollars and cents trickle up, to the pockets and the coffers of the intellectually mediocre riches. As for the Little Tramp, he was disappointed not only in restrictive demands for all to see the world with the same eyes and be molded into uniform behavioral modes under the disguise of fosterage of freedoms and diversities, but in the growing powers of cynicism among the youngsters, let alone the obsession with spectacles and extravaganzas as opposed to sentimental simplicity. He, himself, in contrast, continued to stick to the ancient norms of beauty in arts, which he summoned in the last words of one of his late life interviews: "As I get older I get more and more interested in beauty. I want things to be beautiful. I'm wondering whether this isn't a moribund period of art. Aesthetics have gone into things like space and science – those beautiful airships, utility at its height. No artist could compete with that"¹⁶³⁰. Resonating with the emotions elicited here is also the train of thoughts of Mr. Longfellow Deeds, a humanistic hero from one of the epic movies directed by Frank Capra, a rare artist in whose hands proclamations of the American nationalism still sound as benevolent and chaste as celebrations of cosmopolitanism, when he says to Babe on a New York City park bench the following: "People here are funny. They work so hard at living that they forget how to live. Last night, after I left you, I was walking along and looking at the tall buildings and I got to thinking about what Thoreau said. 'They created a lot of grand palaces here, but they forgot to create the noblemen to put in them'. I'd rather have Mandrake Falls". His and my own coming from a milieu in which honesty, humbleness and sacrificial sociability reigned over hypocrisies, greed and selfishness, of course, predisposed us both to readily recognize the breeding and proliferation of the exact opposites of all these homey qualities as taking place for generations in big American cities. Irony, indignity, deprecation of anything poetic and the neglect of qualities that have sustained humanity ever since and will forever and ever provide steps that elevate us to higher stages in the evolution of our consciousness and the whole planet can be thus said to seriously poison adolescent human minds nowadays. What they apparently believe in is that trying to convey emotions of love and care will

¹⁶²⁷ Listen to David Bowie's *Ashes to Ashes*, RCA, Los Angeles, CA (1980).

make them creepy and pathetic (the latter being my favorite non-favorite word of the urban slang, apparently belonging to the culture of irony that turns the French roots of the word for loving sensibility into something ugly and unattractive). However, in neglecting these foundations of love that are to be placed on the pedestal of our aspirations and intentions in the way we approach the sacred Thou seen in fellow beings, they will keep on living in a Zen emptiness of pure unpretentiousness attained by their total lack of desire to convey something intrinsically meaningful and beautiful through communication. In doing so, these young hipsters are merely standing on the dark side of the moon, never peering onto its sunlit side. But if we are to be whole and achieve the ideal of transmitting enchanting beauty to others, we need to believe deeply within ourselves that we are a sort of a superstar, unique and divinely beautiful. After all, if we do not love ourselves and enjoy in the glowing beauty radiating from the depths of our hearts, how do we expect to love others and see in them a similar glow of soulful beauty? Being unpretentiousness and humble is beautiful, but it is only one pole of an inspiring and fulfilled personality. So, my dear hipsters, why would you be afraid or hesitant to set your feet onto the sunlit face of the Moon, where you would be able to reflect the glow of the divine Sun of love in your heart to the Earth and other fellow creatures on it? The worldview of infinite depth summed up in the motto of David Bowie's muse from the mid-1960s, Lindsay Kemp, "I like to do most everything fully... I don't fancy people, I fall in love with them"¹⁶³¹ will remain unattainable to you and the key that unlocks the gate to holy living will be hidden in the forest for good. Balancing the attitude of a superstar who moves mountains in her desire to bring heavenly light to the people of the world with the attitude of humbleness, meekness and modesty, of course, is the key.

S.F.4.19. One of the most striking consequences of such a communicational superficiality rests in the mild but deeply carved and hardly erasable cultural tensions between different races on the American continent. Note that the attempt to produce a friendly mishmash of all races and ethnicities on Earth is the single most beautiful thing about the social experiment that the American culture is; yet, if it fails, it would set back the human race hundreds, if not thousands of years in the past, as it would take unimaginable amounts of time and energy until some new pioneers come up with the proposition to rebuild the bridge that once united different colors and nationalities, but was then destroyed, just like the Mehmed Paša Sokolović Bridge that was the subject of the Yugoslavian writer, Ivo Andrić's book that earned him the Nobel Prize in literature in 1961¹⁶³². And the signs that this bridge raised across the heart of the American cultural enterprise is shakier than it may seem to a casual observer are indeed everywhere. For example, although racial discrimination (whatever it really means since it is undoubtedly difficult to place the boundary between an offending discrimination and simply an acknowledgment of the innate tendencies of people belonging to different ethnic or cultural backgrounds, oftentimes racially colored, without ever questioning the fact that the genetic variability between races is trivial compared to that between individual members of any given race) is strictly prohibited almost everywhere, racial groups are still segregated. Racial and ethnic neighborhoods are not only common, but practically always present in the American cities. The recently drawn racial population maps of the biggest American cities have confirmed that the racial segregation therein is more of a rule rather than an

¹⁶³¹ See Wendy Leigh's *Bowie*, Gallery Books, New York, NY (2014), pp. 64.

¹⁶³² Read Ivo Andrić's *The Bridge over Drina*, Nolit, Belgrade (1945).

exception¹⁶³³. Even the Dolores park in San Francisco, which I occasion every so often and which turns on Sundays into the site of mesmerizing festivity and all-encompassing friendship, is segregated, with gays settling on its southwestern end, Latinos on the southeastern one, hipsters on the northeastern side, and frats, if any, on the tennis courts on the northwestern edge. What has always fascinated me is that there is a lesser difference in the accent between native Caucasians from any two parts of the country than between a white man and its nearest African-American neighbor who may happen to live right next door or around the block. This clearly speaks in favor of the racial segregation that people apparently ignore in their verbal communication only, but not in the way they act, in which domain it still stays subtly but additively supported. California is considered the most diverse American state, but is also the leader in the level of racial and ethnical segregation, which may be an example clearly speaking in favor of the parallel progress along these two lines in the American society: diversification and segregation. However, the extent to which frictions arising along the boundaries between segregated ethnic or racial groups can potentially threaten the social harmony was recognized by even the earliest American sociologists, such as Elwood Mead who stated that “if the immigrants do not intermarry, then each of our great valleys will be the home of racial friction which will make the Balkans seem like a prayer meeting”¹⁶³⁴. The progress has been undoubtedly made since the first pioneers stepped on the American continent; however, a lot more needs to be done. For, even if a decent level of communication nowadays exists between different racial groups, it usually falls down to mere tolerance (which is in its worst form merely another word for dull and careless indifference, and, as claimed by Aristotle, “tolerance and apathy are the last virtues of a dying society”), and not true enjoyment and curiosity in learning from different racial traditions of thought and behavior, except in a few of the most advanced urban centers. And this stupefying resting on superficial meanings of communicational norms prevents people from grasping the implicit meanings of their seemingly fair and friendly approaches. Thus, if one penetrates deep enough to where the implicit meanings lie, one would realize that promoting “tolerance” implies a dose of underlying dislike and dissension. Recently, just before the Olympic Games in Beijing were about to begin, the Spanish national team in basketball made a photo in which all the players strained their eyes so as to make them appear sidelong, almond-shaped, thus imitating their Asian hosts. The Serbian women volleyball team performed the same gesture nine years later, as it earned a place at the world championship in Japan. While both photographs caused avalanches of critiques in the US, unlike the slanting of the eyes by David Bowie in the official video for China Girl¹⁶³⁵, neither did the Spanish basketball players nor the Serbian volleyball players nor most Europeans understand the whole fuss about it. Neither did I, primarily because it was neglected that by criticizing the photo one actually pointed out the superiority of the white race compared to Asians. The “hypo” critics were here implicitly saying: “You should not have imitated slanted Asian eyes because your eyes are more beautiful than theirs, and that may make them feel inferior”. But for one who, quite reasonably, does not see why white people’s eyes should be more beautiful than Asian eyes, including my homefolks, for whom *kosooka*, an adjective ascribed to a female with slanted eyes, means mystical daintiness and delicate cuteness more than anything else, this whole conflict seems

quite unreasonable. After one pop celebrity had also recently been criticized because of using her fingers to make her eyes slant, I asked the criticizers around me if they thought Asians would insult Caucasians by squeezing their eyes and making them appear rounder than they are. No, of course, because what these hypocritical critics presume in the first place is the superiority of Caucasian eyes. The fact that the witty comment stating that “the three-point contest has been pretty much keeping the white guys relevant since 1986” circulated the internet without causing much controversies could now merely reinforce our awareness of the idea of supremacy of the white existing illusorily in the heads of majority of people. For, the very fact that the red flags of racism in the air are not lifted when the white race is being insulted speaks in favor of none other but its presumed superiority over other races, making these and similar criticisms mere instances of “liberal racism”¹⁶³⁶, as Linton Kwesi Johnson would have named it. Likewise, when Michael Moore, a renowned filmmaker and relentless criticizer of the neoliberal roots of the new American society, named his book “Stupid White Men”, the media did not complain, and by not complaining implicitly pointed out at a collective presumption of the superiority of the white race. Although one may be tempted to believe that this was an instance of well justified drawing of a line between two races, after observing the media’s relation and response to this book title at the implicit level, dominated by invisible human intentions, the foundations of all communications, one could conclude that this response was nothing but grossly hypocritical. The cheap, but bestselling title of Reni Eddo-Lodge’s book, *Why I’m No Longer Talking to White People About Race*, all along with its unambiguous social acceptance, has spoken about the same epistemological fallacy, where the artificial boundaries approached with an eraser end up being firmer and more fortified the more we try to erase them. Years later, in the days of the Black Lives Matter movement, it was hip for sports players and other popular persons to wear t-shirts that called for the arrest of the white people in power who killed innocent black people¹⁶³⁷, whereas calling for the opposite, if not stating that “all lives matter”¹⁶³⁸, would be prosecuted as a severest form of racism, ignoring thereby that by allowing for these statements to pass by as egalitarian ones instead of denouncing them as a similar form of racism as their opposites was, once again, nothing but an implicit reiteration of the supremacy of the white race. Likewise, when a course on microaggression was advertised by a center for “inclusive excellence” on a campus where I taught at the time¹⁶³⁹, defining microaggression in the very first sentence as “brief and commonplace daily verbal, behavioral, or environmental indignities, whether intentional or unintentional, that communicate hostile, derogatory, or negative racial slights and insults toward people of color”¹⁶⁴⁰, it misleadingly suggested that microaggression cannot be directed toward the Caucasian race and

¹⁶³⁹ Responding to Microaggressions workshop run by Frank Harris III at San Diego State University (November 17, 2021).

¹⁶⁴⁰ The quote comes from the first sentence of the abstract of Derald Wing Sue *et al.*, *Racial microaggressions in everyday life: implications for clinical practice*, *American Psychologist* 62, 271 – 286 (2007), with one important difference: namely, while this group of authors correctly defined “racial microaggression” with this phrase, the advertisers of the course misleadingly defined simple and general “microaggression” with it.

that it is, somehow, a one-way street, which cannot be and which could only reiterate the sense of claustrophobia, exclusiveness and inferiority of the people of color that courses like this are supposed to heal. Very often, this serves to promote a fundamental paradox, which is that of trying to erase the boundaries of racial division while, on the other hand, trying to preserve the status quo brought about by these boundaries and the steady flow of social benefits tied to them. For, if the inferiority of the black people becomes gotten away with at all social levels, then no such social benefits would be possible through state and federal subsidization programs. A similar situation occurs in the gender discourse, where armies of non-binary people and feminists who argue that “like race, gender is a construct designed to manipulate and solidify power to make one group (men, white people) dominant over another (women, non-white people)”¹⁶⁴¹ quietly prefer to preserve the status of inferiority and victimhood for women and queers so as to continue to milk the social programs designed to heal the gender-dependent inequalities in status. In any case, for this reason and because of the racial divide and quiet animosities that such misleading definitions of microaggression promote, we could reasonably conclude that this advertisement of the course on microaggression was an act of microaggression itself and wonder what in the world the instructors could instruct us if they resemble Nyegosh’s mirror-watchers who mock their own images in the mirror¹⁶⁴². Although I write these remarks as a complete outsider to the racial divides that have torn America over decades and centuries, with the heart naturally siding with the people of color, the minorities and all the marginal communities, I am certain that many would lift their bows and send their venomous arrows toward me, but oh how wrong their target would be. Something like this did occur when I stood up and yelled in a disco bar, “God, finally some white music”, and all of my companions went “shhhh” all at once, leaving my silenced self to enigmatically ponder over how it was perfectly allowed then for Brian Wilson to call the Beach Boys’ Pet Sounds “a white spiritual sound”¹⁶⁴³ or for Miles Davis, a jazz musician of African-American origins, to claim that he could “differ a white band from a black band from the distance”¹⁶⁴⁴ in the days when he decided to devote his career to what he considered as strictly black music. How come that “black music” can be used as a phrase left and right and bell hooks can teach a course entitled “Black Women Writers”¹⁶⁴⁵, when “white music” as a phrase or “White Women Writers” as a name for an academic course would be promptly accused of racism by the hypocritical neoliberal nitpickers? How could it be that thirty-five years after the Clash, a band known for its antiracist stances, released their single entitled White Riot and became automatically accused for the spread of xenophobia and beliefs in the superiority of the white race, the words of a comic book critic, Roger Sabin still hold true: “In terms of song lyrics, anybody who used the word ‘white’ could be asking for trouble”¹⁶⁴⁶? This, of course, applies strictly to the white users of the word “white” in a context that celebrates the achievements of the white man, which, itself,

is a part of a bigger conundrum that reflects the strange road of racial frictions and misunderstandings which I found myself on all of a sudden as I disembarked on this new land. Namely, being yet another instance of liberal, concealed racism, both whites and blacks in America call Caucasians white, not Euro-American, whereas using the epithet “black” by the white is a big no-no, even though the blacks themselves usually prefer to be called black rather than African-American, just as the Serbian gypsies prefer to be called “gypsies” rather than Roma, the latter being the “politically correct”¹⁶⁴⁷, *i.e.*, purely humbug terms, since most of the blacks have no connections whatsoever with their African motherland and feel predominantly American, just as most Serbian gypsies have never been to Romania or Rome or any other Romanic country. And how was I, having been taught to embrace the worldly diversities with an open heart, to sympathize with the way life appears in the eyes of another and to learn to speak in the tongues of endeared neighbors, to make sense of this convoluted situation wherein one had to constantly beat around the bush and navigate one’s way around the artificially placed posts of interracial awkwardness? This whole situation was especially puzzling to me because even before I came to America, I felt black on the inside and my racial sentiments were fully aligned with those of a white artist such as Keith Haring, who said in the early 1980s that “from the time I was a kid I felt a much closer affinity to culture and people of color than I did to white culture”¹⁶⁴⁸. In other words, I felt strongly for the African-American human rights cause, in a sense of sharing the shame and the resentment of the descendants of the African slaves due to the long history of humiliation suffered by the Serbs in the hands of various conquerors ever since they settled as a nation in the Balkans, including the humiliation I, myself, experienced at the international level during my formative days. Afterwards, I would come across various other corresponding parallels, including first the study in which the common history of enslavement and resistance to the imperial rules was used as the basis for the proposal of fraternity between the Serbs and the Blacks¹⁶⁴⁹ and of the simple equation “Blackness = Balkanness”¹⁶⁵⁰, and then the dialogue between Toni Morrison and Emir Kusturica whereby the American novelist and a Nobel prize winner observed that “you Serbs are like African-Americans”¹⁶⁵¹, a comment to which the Serbian filmmaker responded with a “yes, we are the blacks of Europe”^{1652,1653}. To the mindboggling irony of my being implicitly accused of semi-

¹⁶⁴⁷ As the Manic Street Preachers, a.k.a. Manics, put it in P. C. P. from the Holy Bible (Epic, 1994), “When I was young, P. C. meant Police Constable, nowadays I can’t seem to tell the difference”. Or, as a commenter named *Analni osvjetnici* defined the term “political correctness” on Vukajlija, “verbal fascism whose violation leads to a sentence without trial”, as I have translated it here from Serbian (2010). Others may tell us that “political correctness” as a term is an oxymoron because it puts together two terms that cannot go together, given that politicians, by default, can be all but correct.

¹⁶⁵² *Ibid.*

¹⁶⁵³ In this parallel between Serbs and American Blacks, one can also seek an answer to the question why so much politics in the core of this book, which is meant to be about everything but politics. Since the African-American writings have been traditionally created to disseminate a political message and produce a political impact and “even African-American texts that are not obviously part of a protest tradition are received in a political context” (see Pierre A. Walker’s Racial Protest, Identity, Words, and Form in Maya Angelou’s I Know Why the Caged Bird Sings, *College Literature* 22, 91 – 108 (1995)), it should not surprise that the same political nature of narration gets to be ascribed to that emanating from the pen of a Serb, such as myself. Equally humiliated and denigrated by countless imperialist cultures throughout the history, including the US in its recent course, Serbs can be considered as naturally prone to

racist stances by the descendants of the former colonizers, conquistadors and other imperialists, I, from this distant angle, cannot help but smile in sympathy, remembering that I was born a Yugoslav, a member of the nation that never enslaved nor colonized anyone and that fully embraced the poor African and Asian countries and offered them a passage to the developed world via the Non-Aligned Movement that it founded in my hometown, Belgrade, in 1961. Of course, back then, my naïve self stemming from upbringing wherein everybody was taken to be equal, without any pretense, regardless of the color of the skin, had no clue that North American is a racially deviant culture wherein, for example, puzzlingly, saying out loud, “I’m proud to be black” would make one a human rights protector and a seeker of justice in the weary eyes of the world, while exclaiming “I’m proud to be white” would make one be seen as a patent racist, the state of affairs that does not take a genius to reveal the presupposed supremacy of the white race in its background. Likewise, as I danced with Paula in Rogue the other night and made a comment how we were the only white people on the podium, she likewise said: “Shhh, it’s not an appropriate thing to say”. But how come that the first line of Joni Mitchell’s autobiography, “I was the only black person at the party”¹⁶⁵⁴, was politically sound and that my African-American friend, Norval Hickman, could make a similar comment about being the only “black person” in an uptight bar on the corner of Divisadero and California without anyone denouncing this remark as inapt? Just as in the previous example, by denoting Norval’s comment as appropriate and mine as unsuitable, one implicitly acknowledges the superiority of the white race, which, needless to say, I resist to accept. Or, when Ivana, sitting in an SF food joint and overhearing the conversation at another table, notices out loud that “there is this techy white guy talking about his work so loudly... a stereotypically modern day San Franciscan... so white and so annoying... to make it worse they refer to sharing something as ghetto... so of course they are racist too, you know how we white folks do”, she equally ignores the attribution of supremacy to the white race via her intrinsically racist comment, drawing artificial boundaries between races and ignoring that no such comment would have been made had the person she labeled as a racist simply because of using a word which might have millions of possible connotations been of a different race. Notwithstanding my own abominating the bleak wave of superficial techiness sweeping the essence of the magnificent cultural heritage of the city and tossing it across the Bay, her accusation was analogous to an attempt to chop the young man’s finger off without even looking in the direction at which he was pointing, exemplifying the ongoing growth of liberalism, an all-embracing social ideology, into its diametrical, fascistoid opposite, shallow, bigoted and hatefully intolerant, on the streets of San Francisco. And yet, no one should get me wrong here, for mine are not complains of inverted racism against myself being Caucasian; rather, what bleeds across these letters is a lament over the limitations of the human mind, where the social acceptance of the selective denigration of one social group only fails to be recognized as the implicit reiteration of its superiority over any other groups in the same category. After all, the fact that racial abusers are much more frequently members of the Caucasian race, while those finding themselves as victims of racial insult turn out

weave political messages into even the least political discourses as African-Americans are. However, there is a catch here and it is tied to the fact that these writings aired in western, neo-imperialist avenues, which are either explicitly or implicitly political, are accepted much less than those authored by African-Americans and touching the political issues of that portion of the American history. As it becomes reiterated over and over again in every social sphere, the new thought is inescapably political, requiring critical masses of people in favor of the given politics, primarily due to self-interest, to be disseminated to broader audiences and reach a higher social impact. If this political principle applies to science, art and philosophy, it should not surprise that it applies to political thought *per se*.

¹⁶⁵⁴ See Neil Strauss’ The Hissing of a Living Legend, *The New York Times* (October 4, 1998), retrieved from <https://www.nytimes.com/1998/10/04/magazine/the-hissing-of-a-living-legend.html?pagewanted=all>.

to be blacks, despite the fact that more feelings of indignation, justified by historic causes, lie on the African-American side of this racial gap, straightforwardly points at the socially implicit presupposition of the supremacy of the white race, as unfair and unpardonable as it can be. That Miles Davis, who could have sold records of him talking and still earned a lot of money owing to his soothing charisma, as one of his fans noticed, an artist *par excellence* in his realm, could get away with responding to a question posed by a white interviewer whether he is anti-white with “not all of the time”¹⁶⁵⁵, something which would involve an immediate prosecution had the races in this verbal exchange been reversed, is a direct proof of this statement. The same conclusion could be inferred by recalling how attaching the n-word attribute to an African-American person is absolutely prohibited in the American social milieu, whereas using epithets such as “cracker”, “bleacher”, “paleface” or “honkey” to describe white men is legal and socially accepted. Likewise, when white men use the word “ghetto”, it is considered as socially inadequate in the North American culture, and any users of this word may be advised to substitute it with “the politically correct” ones of “housing projects” or “social housings”. The members of the African-American community, however, are allowed to freely use the word “ghetto” on any occasion, claiming also that “only a Black can call another Black the n-word”. But what I claim is that if we are pure and chaste, believing deep inside that we are all truly one and the same, a part of a great whole that is linked by the ties of brotherhood and *esprit de corps*, irrespective of any racial differences that appear on the surface of our beings, we would spontaneously adopt the language used by cultures that others artificially desire to point out as foreign to us. That is exactly what happens when someone like myself, fully believing that we are one and the same, that we all come from the same roots, with the ideals of cosmopolitanism twinkling joyfully in his eyes, spreads arms to other cultures, desiring to speak their languages and see the world from their eyes; however, as it turns out, he becomes incessantly reminded of inappropriateness of doing so, just as my Mom, a newcomer to the American culture and an innocent soul in love with everybody, regardless of their ethnicity, skin color or social status, did, having received a number of angry stares when she fondled a cute four-year old black girl’s head in the House of Nanking on the corner of Kearney and Columbus, not knowing of the newest fascistoid neoliberal fad, which is that caressing a black person’s hair is classified as racist, even though the only racist can be called the one who disseminated the idea that it is racist to fondly pat another human being’s hair in the first place. And then a person like me, who has nurtured only egalitarian ideals and cosmopolitan views within one, believing, like Andy Warhol, that “everybody should like everybody”¹⁶⁵⁶, put in a situation like this, is impelled to vigorously protest, claiming how hearing a white man using African-American phrases and immediately seeing that as a provocation means that a presumed supremacy of the white race over the black one inevitably stands behind one such way of thinking. It is this, latter way of thinking that can be, therefore, considered inappropriate and sinful, while the former, that which tends to shatter the superficially imposed boundaries with one’s cosmopolitan chastity, can be seen as intrinsically good and benevolent. This is why I believe that political correctness, as the commons call it, is but an exercise of the ills of hypocrisy that plague the western world and poison its soul, breeding aggressive vultures on a mission to bloodthirstily ambush whoever has remained untainted by this pollutant of the mind. This is also why I claim that all these common accusations of people from foreign cultures who have colored their faces black or simply put halves

¹⁶⁵⁵ See a 1989 interview with Miles available at <http://www.youtube.com/watch?v=7ZHjGti2zH4&feature=related>.

of their faces in the shade to express solidarity with the oppressed blacks¹⁶⁵⁷ as racist are racist, themselves, because here it is the accuser who engages in the imperialistic, neocolonial imposition of models of interpretation of social cues onto people from cultures that one apparently feels superior to, to which end such accusations make up for far greater displays of “racism” than the rather naïve and benevolent instances provoking this accusatory reaction. This is also why I refuse to stop imitating the Native Americans in their shouting “howg” instead of “how” and exclaiming the funny whooping sounds that they uttered as they rode on their horses, all the while kissing in my daydreams the feet of my cheerfully handclapping Mom, who had recited the Langston Hughes’ poem about a “Negro speaking about rivers”¹⁶⁵⁸ and Abe Lincoln coming down to New Orleans to see “its muddy bosom turn all golden in the sunset”¹⁶⁵⁹ by heart even as a teenager and who had breathlessly sympathized with the adventures of Karl May’s Winnetou and Longfellow’s Hiawatha when she was even younger than that, in spite of the bitter faces of my Janus-faced Western companions who have become accustomed to hypocritically sugarcoated ways of speaking, so long as the senses of racial, ethnic or any other social class superiority stay submerged within, and whose shallowness does not allow them to penetrate beyond the surface and do not see it all as one giant racial remark; for, I have known that effacing the appraisable adherence to the semantic surface of our verbal exclamations is required to probe the depths of the human hearts that beat with the most beautiful cosmic music all around us, the mission that we, sacred strivers for the stars, are to be on at all times, and that this could be achieved best by relentlessly breaking the standards that dictate what constitutes the acceptable and what comprises intolerable wordings. For this reason, I often play with my students in the classroom a verbal game where one relentlessly repeats a word that has a derogatory meaning all until it completely loses its semantic echo in the speaker’s head, at which point the speaker is, ideally, to realize the meaninglessness of ascription of great meanings to words in communication, when what matters are intentions, emotions and touches. This is also why I claim that only when the white man begins to call the black man a spade or a coon, while the latter calls the former a paleface or any other derogatory term, and they both, at that very moment, feel a smiley sun rising in them, the sun that only an honest friendship and brotherhood can light up, as their hands clinch into a heartwarming handshake, will the American culture make a giant step from a regressive, lip servicing, surface-and-form-over-essence-like, hypocritical, inherently hostile and spiritless one to a far more progressive one where verbal communication would be openly acknowledged as a means to communication of the heart rather than *vice versa*. Indeed, the best of political times will come when members of one party, race or gender begin to declaim and defend the rights of their polar opposites at round tables, forums and seminaries instead of irefully pushing their own unilateral agendas and denigrating their contraries, all in concert with that aforementioned ancient norm, “If I honour myself, my honour is nothing” (John 8:54). But to be immersed in times where hearing of a comedian apologizing publicly for wearing a blackface in a sketch from twenty years ago¹⁶⁶⁰, spinelessly, with not even a zest of the desire to boldly stand behind one’s stance, all for money and money for none but one, as it were, and being the only one to whom this loud and “politically correct” denigration of a supposedly racist act seems late by far more than two decades – namely, this type

¹⁶⁵⁹ *Ibid.*

¹⁶⁶⁰ See Sandra E. Garcia’s Jimmy Fallon Apologizes for Blackface Skit, *The New York Times* (May 26, 2020), retrieved from <https://www.nytimes.com/2020/05/26/us/jimmy-fallon-chris-rock-blackface.html>.

of criticism might have been appropriate while MLK's blood was still fresh, in 1968 or so, but by now it is already the time for the racial divide to have healed itself instead of being deepened, as it is, with every new day and by now the blacks and the whites should all have had a good laugh with their making fun of each other's racial stereotypes in a warmhearted way, through humorous name-calling - is not to have too much confidence that these utopian visions will prevail over the bleak reality rooted in superficial segregation. For, all the current calls for politically correct verbalizations do is putting a lid on the pressure cooker of racial prejudices, which continue to boil under the surface, reaching far more violent and dangerous appearances on the surface than if they were allowed to vent through simple verbal expressions that hurt nobody except their crude and narrow-minded exclamers. Meanwhile, all this antipathy hidden under the carpet unceasingly works its way to the real world, where segregations can occur uninterruptedly, so long as they are not accompanied by their verbal proclamation. Stopping the word, of course, in this case and in many others, need not stop the thought; rather, since word can be imagined as but a mediator between the thought or the emotion and the act, all this does is provide a more direct route from the root of an action to its performance, thus adding fuel to the fire of racism instead of the intended extinguishment of it. However, for as long as we live in a world where cunning public reps in search of valuable political points accuse the words while closing their eyes in front of the deeds, we would be surrounded by cases such as the recent one when condemnations of not only Serbian hooligans' allegedly imitating monkeys in front of the English soccer players of African descent, but of the entire Serbian nation came from none other but the major British politicians¹⁶⁶¹, the representatives of a country with quite an inglorious colonial history of ruthless exploitation of the people of color all over the world under the hypocritical hat of gentility and benevolent pretense, pointing their fingers in the direction of a culture which founded the Non-Aligned Movement in the early 1960s and fostered interracial openness and inclusion of, not extraction from the heritage of poor states, if we were to use the recently proposed dichotomy between the thriving, inclusive nations and declining, extractive ones¹⁶⁶². We would also be blind to countless fine, implicitly committed instances of racial segregation, such as when Barack Obama as the President of the United States invited all African-Americans to vote for Hillary Clinton as the Democratic nominee in the 2016 presidential election, thus putting one race within specific community limits, while on the other hand belonging to the culture that harshly reprimands the assignment of racial attributes in daily communication, often asking, "What does it matter if the person was white, black, green or pink", and then answering it with "None". Neither would we be able to see how much hatred is being generated and then used by certain people and classes to profit from by labeling casual racial distinctions as racist, thus silencing the constructive social discourse over matters that could fix many of the racial issues and create a state of harmonious diversity in lieu of a society cracking under the pressure of racial tensions. After all, what is colloquially classified as instances of racism today are usually only racially biased prejudices and not the beliefs in an inherent cultural, let alone biological, superiority of one race over another, yet unless this etymological fallacy gets

¹⁶⁶¹ See The British Prime Minister on the Incident, B92 online edition (October 17, 2012), available at http://www.b92.net/sport/fudbal/vesti.php?yyyy=2012&mm=10&dd=17&nav_id=652513.

¹⁶⁶² See Daron Acemoglu's and James A. Robinson's *Why Nations Fail: The Origins of Power, Prosperity, and Poverty*, Crown Publishers, New York, NY (2012). Fidel Castro also described the aims toward which the Non-Aligned Movement ought to strive for: "The national independence, sovereignty, territorial integrity and security of non-aligned countries in their struggle against imperialism, colonialism, neo-colonialism, racism, and all forms of foreign aggression, occupation, domination, interference or hegemony as well as against great power and bloc politics". See Phil Butler's *A Yugoslavian Fantasy: 24th versus 149th Place*, *New Eastern Outlook* (February 22, 2016), retrieved from <http://journal-neo.org/2016/02/22/a-yugoslavian-fantasy-24th-versus-149th-place/>.

resolved, these racial tensions will continue to accrete and pose danger to the community. The way I see it, an enlightened extraterrestrial creature parachuted to the Earth would helplessly empathize with the language and communicational clichés of all races, cultures and ethnicities, but would be slammed in the face by the petite judges of the world who are on the wicked mission to accuse and find weakness in it all so to elevate their fancied perfection ever higher in relation thereto. For, every form of judgmental attitude is necessarily a way of lifting one up on the account of dropping precious things of this world, that are always in need of helping hands, down, or as Friedrich Nietzsche noticed, “He who despises himself, nevertheless esteems himself thereby, as a despiser”¹⁶⁶³. Need I add that an identical case of implicit recognition of the superiority of the disparaged exists during the increasingly frequent sexual harassment accusations of, typically, men who often had no filthy intentions in mind, but were simply being genuinely loving to women in their vicinity? As we have seen, a single accusation of such nature tends to trigger an avalanche of hysterical accusations from feminists who regularly neglect the fact that the acceptance of the status of the bullied is the first step towards becoming a bully *par excellence* as well as from the hypercritical American liberals, always eager to exercise hypocrisy, the cunning art presumably as old as the human race, and expose their intolerant, inherently non-liberal stances by pouring scorn on anything that differs from their own worldviews or habits. Having totally forgotten the Christ’s denouncing the primitive peasants’ stoning a prostitute and pointing out with an impeccable logical accuracy that one’s sinfulness is a prerequisite for exhibitions of criticality regarding someone else’s behavior (John 8:7), America as a whole has chosen to embrace the outlook of a wolf in sheep’s clothing, making itself the home for a horrific form of cultural totalitarianism whereby an intense behavioral repressiveness, naturally entailing the epidemics of spiritual impoverishment to which most Americans succumb, is being fostered under the banner of unprecedented freedoms and alleged cosmopolitanism. These enlightened creatures I envision on these evanescent pages, empathizing with every language and way of being around them, “rejoicing with them that do rejoice, and weeping with them that weep” (Romans 12:25), of course, would not mind this disparagement of their actions at all, gazing with eyes twinkling with the stars of wonder and the sun of love rolling like a ball of light in them, knowing deep inside that judgmental attacks always arise from feeling weak and victimized. They would compassionately understand each and every one, while keeping the screen of their minds untainted by judgments and pure as the whitest lotus flowers. And quite often I see Europeans who grew up in all but culturally diverse regions of the world coming to America and, astonished by the diversity of it all, point at each and every thing that is fascinatingly new to them, innocently introducing racial and ethnic attributes to their daily expressions. Before they enter the saturation phase, when they begin to compare the features of the diverse social makeup in America from more bitter angles, they, fascinated by this overwhelming diversity, the power of which dragged myself, always indifferent to financial reasons, to this country, bluntly point at its instances that are new to them and, like children, fondly smile thereat. In that sense, they behave quite similarly to this hypothetical enlightened ET; what they often face is, however, not flowery wreaths of sympathy, but walls of misunderstanding and accusatory eyebrows raised by their American peers, who tend to see such attributes of theirs as obnoxious and inappropriate detractors of a kind. The recent attempts to censor not only the contemporary language, but the language from the past too, including substitution of the n-word, which appears 219 times in Mark Twain’s *Adventures of Huckleberry Finn* and which has, believe it or not, made it the fourth most banned book in the American schools, with the word “slave” in

¹⁶⁶³ See Friedrich Nietzsche’s *Beyond Good and Evil: Prelude to a Philosophy of the Future*; Aphorism 78, translated by Helen Zimmern, available at <http://www.authorama.com/beyond-good-and-evil-5.html> (1886).

the 2011 edition of this American classic¹⁶⁶⁴, despite the fact that the very Mark Twain had pointed out that “the difference between an almost real word and the really real word is immensely great and important”, as well as that he jokingly issued an order for the shooting of the copy-editor who modified punctuation marks in his 1889 novel, *A Connecticut Yankee in King Arthur’s Court*, can thus be seen as nothing but ignorant and intellectually oppressive. Another instance of this censorship of the language of the past has come from the recent erasure of the poem *If-* by Rudyard Kipling off a wall on the campus of the University of Manchester because of his supposedly racist claims made elsewhere, including the poem *The White Man’s Burden*, prompting angered commentators on this event to notice that judging historical figures based on today’s standards of political correctness and out of their historical contexts would hardly leave a single unblemished soul worthy of appreciation, with one of them quoting the former Louisiana governor, Huey Long a.k.a. Kingfish, who, when asked if fascism would ever make it to the US, said, “Yes, but it will be called antifascism”¹⁶⁶⁵. Similarly, I, myself, once had the publication of one of my papers conditioned by the removal of the popular quote from Joseph Conrad’s *Heart of Darkness*, “Mistah Kurtz, he dead”, the one which T. S. Eliot used as one of the two epigraphs for his epic poem *The Hollow Men*, which itself contains “the most quoted lines of any 20th-century poet writing in English”¹⁶⁶⁶, only because a reviewer perceived it as a blatantly “racist” remark¹⁶⁶⁷. These shortsighted linguistic corrections, demanded or implemented in reality, could be seen as arising under the hypocritical hat of the principles of tolerance and freedom, which is why a farsighted eye could see them threatening to produce an exactly opposite effect on these longings after tolerance and freedom that have stood behind them, that is, repressively diminishing freedoms and the mixing of cultures and races driven by blunt benevolence and openhearted curiosity. Moreover, as I claim, to understand and learn to truly appreciate and enjoy racial cultures different from ours one has to acknowledge the difference: an innate easiness, openness and spontaneity of the black man; self-consciousness, gentility and tendency to engage in deep reflection of the white man; meditative mindfulness, inner peacefulness and balance of the yellow man; temperamental, fiery and passionate nature of the brown man. They all have to be acknowledged prior to understanding the beauty that each of these cultures (although, of course, there are exceptions, and this simplistic division should not be generalized, particularly in today’s highly globalized world where influences of different cultures quickly spread all over the globe) brings to the complex, combinatorial and globalized contemporary worldviews. How would one understand the emotional structure and origins of the modern popular music if not by referring to the encounter of the heart and mind of the white man and those of the black man, of lyrical sensibility and pensive dreaminess inclined to by the former and of naïve joys emerging from the heart of “the children of sun and fun”¹⁶⁶⁸, respectively? The crazy beat and passionate rhythm emerged straight from the

¹⁶⁶⁸ See Celeste Fraser Delgado’s and José Esteban Muñoz’s *Rebellions of Everynight Life*, In: *Everynight Life: Culture and Dance in Latin/o America*, edited by Celeste Fraser Delgado and José Esteban Muñoz, Duke University Press, Durham, NC (1997), pp. 19.

heart of Africa and warmhearted harmonies and melodies originated in Europe, the cultural cradle of white man, met somewhere along the banks of Mississippi river and in combination yielded fertilized aural seeds from which the entire spectrum of genres of the modern pop music sprouted. And that there is a deep, quite possibly innate attraction of the black man to the thumping rhythm and the white man to soul-soothing harmony comes from a plethora of examples from the history of modern music, from sampling as a technique to render instrumental passages repetitive and more danceable invented by hip-hop and rap artists, predominantly black, to the recognizable reggae dub arisen from behind the veil of dreamy haze surrounding Jamaican Rastafarians, to the fact that Kraftwerk, Manuel Göttsching and other inventive Europeans revealed the charms of electro music to the world but Larry Heard and other DJs, primarily black Detroiters and Chicagoans from the 1980s, infused rhythmical vivacity to it and introduced it to dance clubs and popular masses, to the fact that black musicians in the mid-to-late 1960s were busy flirting with throbbing funk bass lines and setting the foundations of free jazz by systematically deconstructing the concepts of melody and harmony, while the Beatles were crafting unprecedentedly melodic and catchy tunes and armies of whiteys were raving over them, and finally, to indie music scene, mainly culturally white, so to say, permeated by largely routine, unfelt and mechanical usage of rhythmic patterns. Yet, to acknowledge this way by which ebony and ivory, if I were to use the allegory coined by Stevie Wonder and Paul McCartney, are interspersed on musical surfaces on which the modern sound is being created, an imaginative boundary between white and black ought to be drawn and, of course, made freely crossable, for merging of styles and worldviews has ever since concealed keys to the most uplifting flights of spirit. If successful, the romance between black and white, such as that from which the child of rock 'n' roll was born, may be reignited in today's world of pop music weariness and heavily separated black and white countercultural scenes, potentially giving birth to something as artistically and politically potent as jazz, swing, blues and rock once were. This is why I claim that unless people quit placing political correctness in front of the genuine open-mindedness that freely and honestly talks about it all, the stirring passionate spirit in acting amongst American people will not be fully retrieved. But what else to expect from the culture that clandestinely penalizes people who openly react to injustice or territoriality with raised eyebrows or angry gestures, like many Europeans do, and rewards people when they are coy on the outside and ravenous wolves on the inside, being the exact type of people the Christ disparaged in his sermons (Matthew 7:15)? And when a nation is led by those who wear sheepish smiles à la Bill Clinton so proudly and only in the dark of their cabinets and when the cameras are turned off show their ravenous nature, uttering psychopathic lines, such as Hillary Clinton's "we came, we saw, he died"¹⁶⁶⁹, things, simply, cannot turn well. As for myself, having vowed to bounce as far as possible from the bleak, sugarcoated wall of the neoliberal communication of today's America and do all that is my powers to destroy the office culture of yawns and boredom intrinsic to it, I have often asserted that political correctness interests me not, as its goal is to soften and tone down the points, whereas my aim, as an artist, is to heighten and emotionally augment them. For, when verbosity is emphasized over actions, the fear of sounding politically incorrect rise, producing lameness and lukewarmth in its wake, alongside stifling the senses instead of developing them into something broad and beautiful. A century ago, Isadora Duncan wondered whether "it is the great, rough land of America, or the broad open wind-swept spaces, or the shadow of Abraham Lincoln that looms over all, as compared to French sensual

art”¹⁶⁷⁰ that explains what she saw as the uncontrollable proliferation of cold-bloodedly competitive and compassionately numb mindsets bred by the American culture, concluding that “one might say that the American trend of education is to reduce senses almost to nil”¹⁶⁷¹. To improve this unfavorable state of affairs expounded by the eminent ballerina, it would be worth teaching kids to openly express themselves and freely acknowledge all the artificial boundaries drawn by their forefathers before imaginatively erasing them with the mops of brotherhood and equality of all men. To unreservedly talk about the differences rather than spuriously pretend that they do not exist is the only way to ameliorate the cultural, racial and ethnic tensions on the American soil. When in the midst of a process of voting for the best logo for an association I belonged to, the organizers of the contest called for secret voting so as to avoid biased votes, I exclaimed the following: “I believe that we are here to openly discuss the issues rather than to offer opinions and then hide in the dark”, inviting people to argue their views and freely clash them against those of others. Calling for such an honest expression of opinions was, as I later found out, at odds with two-facedness embedded deeply in the Anglo-Saxon cultures, where it serves as a base for either subterfuge or perspicacity, depending on the point of view. This two-facedness, in fact, is so pervasive in these cultures that it made its way even into the repertoire of folk wisdom sayings by the Serbian old-timers, who would describe those who are aware of injustices committed around them, but choose to indifferently and expressionlessly stand aside, full of hypocritical pretense, as, simply, “Englishmen”. According to them, of course, this attitude is strikingly different from the brave and direct stances Serbian people have adopted throughout the ages, readily sacrificing their lives by choosing truth rather than hiding behind the veils of selfish hypocrisies. Henceforth, it does not come as a surprise that “having no hair on one’s tongue”, a saying that marks a person as utterly honest, never giving way to any thoughts to act as a hypocrite and be “like unto whited sepulchres, which indeed appear beautiful outward, but are within full of dead men’s bones, and of all uncleanness” (Matthew 23:27), is most of the time used as an undeniably positive quality among Serbs¹⁶⁷², as opposed to the cry to “tolerate all those people that you hate”¹⁶⁷³, inviting one to sugarcoat the surface rather than to fix the foundations, passing pervasively through the deep spheres and orbits of the prototypical American psyche. In that sense, remembering Wolf Vostell’s collage *Miss America*, where the artist overlaid Eddie Adams’ famous photograph capturing the coldblooded execution of an unarmed Viet Cong prisoner on the streets of Saigon by the image of a dancing beauty queen with a bloody veil covering her eyes, as well as Banksy’s piece named *Napalm*, showing Mickey Mouse and Ronald McDonald smilingly holding the hands of the Vietnamese girl captured on Nick Ut’s photo while fleeing a napalm attack on her village with severe burns on her back and walking her down the road of the American dream, of becoming yet another screw in the capitalist machinery of a culture of pretense, shallowness and nauseating hypocrisies, every now and then I remind myself of one of the greatest inventions of the colonially spirited Western world: self-interest-serving sugarcoated backstabbing. With such a language of double standards becoming predominant in the world, in step with the cultural conquest of the planet by its speakers, the imperious westerners, it comes as no surprise that those who adopt it will do better on the political world stage, the precept for success

¹⁶⁷² In view of this, it made a lot of sense when the creators of the film *Erin Brokovich* gave the eponymous heroine’s a surname that ended with a characteristically Serbo-Croatian suffix “-ich”, just as well as it would have been very much up to par if Douglas Day Stewart had extended the last name of Zack Mayo, the main character of *An Officer and A Gentleman*, into *Mayovich*.

on which has been best summed by John Lennon's famous verse engraved on the B side of his classic single Imagine: "There's room at the top they're telling you still, but first you must learn how to smile as you kill if you want to be like the folks on the hill"¹⁶⁷⁴. This can be exemplified by the global vilification of the Serbian nation in the course of and after the recent civil wars in Yugoslavia, mainly because its representatives refused to incorporate this language of hypocrisies in their negotiation repertoire and openly spoke their minds, in concert with what they were taught by the tradition, while shoving away its sister art called tattletale, incredibly common in the litigious Western world where suing another is as common as dirt, an art considered utterly unethical and vulgar in my native culture, though the one by whose means the wagers of the media war against the Serbs in the last twenty or so years fully succeeded in fulfilling their separatist political aims¹⁶⁷⁵. Hence, it is not surprising to realize the enormity of the extent to which brainwashed dwellers of the phony social reality in the US are able to tolerate perceived differences without saying a single word about them, let alone justly question their fundamental origins. Still, pretending that black and white are the same, while clearly perceiving the difference between them, yet refusing to stand up and loudly and honestly assert what one sees is only aggravating the existing gaps between the poles under tension in the American suburbs and cities. During the period of unionization of the University of California postdoctoral scholars, which was to make it the third and the biggest postdoctoral union in the world, when both the University and the union considered pro- or con-unionization opinions proclaimed on behalf of our association as unlawful, I called for the same: openly addressing all the concerns and issues and making our association an independent and open-minded platform for asking all the questions of relevance to the postdoctoral experience, since only through an open and intensive dialogue could we reach the best solutions to problems and challenges around us. There is no doubt that only by expressing our illuminative ideas openly we can change the outlook of some people for better. On the other hand, along the way we would inevitably face resistance of those whose comfort in leaning onto a given set of rigid beliefs would be threatened thereby and who would therefore arrogantly raise fences of anger between us and them, but such is the cost of doing anything creative in this life. The more of the latter our being bears, the more proponents and opponents will we be given rise to. And as I have already said, even the dichotomy between Americanism and Europeanism that I have based this discussion on in this section has been drawn with me being fully aware of the flaws of its overly generalized nature. However, to offer meaningful ideas and build a masterful thread of thought, a simple line, a plain division, as imperfect and general as it can be, has to be drawn in the first place.

S.F.4.20. Having mentioned the multicultural core of the modern popular music, I will remind you that, in my opinion, the encounter of sophisticated melodies coming from the heart of the white man, and the passionate rhythm, coming from the heart of the black man, have not only yielded the sounds of jazz, but are responsible for giving rise to the entire scheme of the modern popular music as well. "We want to have the place jumping... Traditional British people have to start reexamining themselves and their culture in terms of addressing the new age", Charlie Parker is remembered to have observed once, outlining the rhythmical liveliness that came from the essence

¹⁶⁷⁴ Listen to John Lennon's Working Class Hero, In: Imagine, 7-inch single, Apple (1971).

¹⁶⁷⁵ Ironically, as history lessons tell us, had Serbia not sacrificed millions in the 20th Century and provided generous help to liberate the given regions of the Balkans from the Austro-Hungarian, German and Italian conquerors, then resisted to simply occupy them and gathered them instead within a decentralized state of South Slavs initially named the Kingdom of Serbs, Croats and Slovenes and later renamed to the Kingdom of Yugoslavia, selflessly erasing any mention of Serbia from its name and fostering ethnic equality on all federal levels, none of them would have existed today as independent countries.

of the African-American understanding of music and engrained itself first in jazz and then in every piece of the popular contemporary sound. As observed in the previous paragraph, the difference in the accent between the white man and the black man is persistent, and yet by looking at the musical pieces of the modern times, we could recognize the rhythmically passionate sound of Africa and the melodically passionate sound of Europe juxtaposed in each thread thereof. A wonderful topic for contemplation at this point would be whether it has been the duty of artists and sublime creatures to combine the two and overcome the obstacles to communion that minds of ordinary men pose in front of themselves. For, one of the vital roots that support the economic and technological supremacy of the US versus the rest of the world certainly lies in the fantastic blend of cultures, ethnicities and races promoted on its soil. On the other hand, since human mind unconsciously absorbs the influences of the surrounding world, not even the minds of ordinary men are immune to adopting the traits of their neighbors. Now, as I already pointed out, one of the main features of the American culture is a lower degree of mental reflectivity compared to the levels present in typical European mindsets. “The people of the United States are inclined to focus too strongly on the present at the expense of past and future”¹⁶⁷⁶, Yehudi Menuhin noticed once, and this pro-European tendency to overly reflect on every single decision that one faces on daily basis, be it the most minor one, can have a freezing effect on one’s moving through the day gracefully and effortlessly. As I stood on Belgrade streets with friends unable to decide where to go and which action to pursue, contemplating and discussing every possible option in detail, I could not expect that years later I would find the same habit, apparently caused by an overly reflective nature, among almost exclusively Europeans in the US. That a European writer, Samuel Beckett, was the one who penned *Waiting for Godot* and the unforgettable Zen lines in it, “Vladimir: Well? Shall we go? Estragon: Yes, let’s go. (They do not move)”, recollecting words which my buddies and I proclaimed innumerable times in the streets, apartments and backyards of Belgrade, comes to me as no surprise thence, as one could hardly imagine this passively escapist situation to have been portrayed by a practical and pragmatic American mindset that is all about making determined steps toward things craved in life and grasping them without worrying about millions of options erased for good by their actual choices. Unlike the prototypic European mindset that indecisively dreams of countless paths that life could take on from the crossroad one is standing on, imagining things and circumstances hidden beyond the horizon of one’s experience, scattered among all directions, Americans are less prone to analyze in depth all the paths spread in front of them. Consequently, they also rarely let obstacles already crossed on the way be the source of their stumbling down, which often happens with highly reflective people (pay attention to scientists and their regular displays of sloppiness). Introspectively looking back at our own actions from the past is essential for the sake of learning about ourselves and maintaining a healthy sense of responsibility for our actions, but when it crosses the dose of normality it may become a mind-torturing mechanism, leading to a cage of mental constrictions behind which a spirit badly wanting to jump out and show its light to the world stays captured. And I am free to say that the American white man ought to be thankful to the black man for showing him the key to unlocking this cage. Without this key, spontaneously handed to him by the black man, he would have probably still been at the same level of behavioral progress at which his European white brothers are currently stuck. Slowly, over time, the influence of the black man has been taking over more and more aspects of behavior of the white man on the American continent, notwithstanding the influence of other races, including the reflective plasticity picked from the Asian-Americans, the self-interest-driven reciprocity from the immigrants from the Middle East, and the sunshiny diligence from the

¹⁶⁷⁶ See Yehudi Menuhin’s *Theme and Variations*, Stein and Day, New York, NY (1972), pp. 130.

Central and South Americans. Therefore, to explain the progressive mentality of the American culture, one ought to look at the meeting of the wise reflectivity, of the tendency to look back and ponder upon one's own interactions within the world, arising from the heart of the white man, and the tendency to be carried by the flow and enjoy spontaneity of the moment, brought forth by the black man, alongside a myriad of minor influences brought on boats other than the Lord Ligonier and its likes to the American continent by other cultures. For, if one thing distinguishes America from the rest of the world, it is its being *the* world more than anywhere else in the world.

S.F.4.21. Many people are nowadays aware of the dichotomy between the modern American and Arabic cultures worldwide. Freedoms fostered in the former are often posed as opposites to the cultural prejudices, discriminatory laws, oppressive policies and intolerant attitudes instigated in the latter. However, if you look closer, you could easily notice that the basics of the Sufi tradition as the most influential mystical Islamic subculture are enormously similar to the cultural features of the modern Western world. First of all, Sufis have practically never explicitly talked about God, knowing that these open theological discussions could hardly improve the religiousness of the world. "If you need to ask who a Sufi is, then a Sufi you are not"¹⁶⁷⁷, one Sufi replied to one who asked him who a Sufi is, aiming to instill in him awareness that wordy discussions cannot be a road to the recognition of the omnipresent divinities dormant in each and every detail of the sad and beautiful world of ours, the way Mark Linkous baptized it¹⁶⁷⁸. Instead of talking their way to the gate of God, Sufis have relied on dancing. Not in straight lines, but in circles. Always returning, returning, returning, as Love does, rather than leaving, distancing and growing ever more remote with every step made. Dancing was seen as the way to attain ecstatic, religious sensations, which is so much the same as in the modern Westernized societies, where heads shake on the dance floors and bodies grind in the party houses with the aim to attain the state of bliss in the head and heart. Moreover, in concert with the inauguration of freedom as the most revered quality in the Western World, Sufis have thought of their doctrine as none other but "freedom and generosity and absence of self-constraints"¹⁶⁷⁹. This all makes me wonder if this insight is a proof of the thesis that by journeying in one direction only, one eventually comes to the opposite extreme of the given thread of thought, just as traveling forward on the surface of the globe is the way to reach its other side first, before we find ourselves at the starting point of our journey. For example, many are people, including some of the most famous sages that this planet has nourished, who had relentlessly followed routes of utter malignancy in life, but only until they banged their head against the wall and emerged on the other side, thoroughly resurrected and enlightened, while there are those who have fallen into traps of hypocrisy, insincerity, narrow-minded judgments and lukewarm spiritedness in their dedication to exerting utmost humbleness and kindness in life, thereby gradually materializing themselves on the banks of spiritual treachery with the passage of the river of time. Outward expressions of kindness practiced in the US, coming rarely straight from the heart and more often as communicational clichés that people were early on in their lives trained to apply to get the gift they want, thus often produce their opposites on more profound personality planes. For example, although Americans are proud of their open fosterage of worldly diversities, they are blind to the fact that most of them judge cultural qualities around the globe from their

own, biased angle that emphasizes superiority of their own culture compared to all other, particularly Arabic ones. So, when Michael Phelps, the athlete most decorated with Olympic medals of them all, blatantly proclaims that USA is “the best country in the world”¹⁶⁸⁰, he explicates a shamelessly ignorant attitude that, unfortunately, thrives in the Freudian ids, the subconscious portions of the psyches of the majority of his compatriots. It securely rests there covered merely by the veil of hypocrisies, the veil that is, though, readily transparent to the rays of light emitted from the eyes of those able to effortlessly penetrate from the text to the subtext and from the gesture to the intention underlying it. While on the surface these snooty, toffee-nosed worldlings may seem open to accept all the cultures other than their own in their arms, most of them feel repelled by behavioral manners that do not conform to the American style that emphasizes stiff, smiley and overly confident acting. The slightest signs of body language foreign to their own are judged quietly but intensively as something different that ought to be pushed aside in the social realm instead of fostered and celebrated. Neither are they thus immune to being benevolently judgeless about things and traits that strikingly differ from standards that they have gotten used to. The mainstream forces tending to smooth off any ripples that disobey its unidirectional and uniform flow can thus be said to be strikingly and unexpectedly powerful on the American continent, when we consider the openness, diversity and multiculturalism that mouths of the prominent US politicians and social figures are full of. Igor Stravinsky thus wondered out loudly on one occasion “whether the United States is a common denominator society, using ‘individualism’ as a slogan”¹⁶⁸¹, wittily highlighting the trend towards prefabricating mindsets and behavioral patterns according to a single mold, which has become drastically more pervasive since the Russian composer recognized it exactly half a century ago, in 1962, and which has had its roots in the systematic substitution of not only freedoms with fears, but, more importantly, the divine gifts of Wonder and Love with deadening dullness and indifference. Therefore, sometimes it appears to me as if the American culture, once a proud holder of the epithet of the land of freedom and the cult of creative individualism, has given in to the implicit message of the animated story about the Smurfs, the way it was comprehended by one of the two cartoonists in Richard Linklater’s Austin classic called *Slacker*, which suggested that no one should leave the social group and dare be different, lest the evil forces of the forest befall upon them. Furthermore, the little Smurfs, if you remember, all wore Phrygian hats, the symbols of freedom in the era of the Roman Empire, but now only an allegory of the hypocritical two-sidedness of the guardians of the frontier of the American culture, preaching originality, but secretly worshipping sameness and the monotony of a sandy beach. Hence, by presenting itself as a force that runs away from the totalitarian intolerance of anything that differs from the customary and socially accepted, the conventional Americanism could be thus said to have fallen into the very traps that it ostensibly avoided. The highlight of the Canadian comic book writer, Guy Delisle’s cartooned depiction of a journey to North Korea was the moment when he saw local 8-year old girls performing orchestrated songs in honor of the country’s president with broad and frozen, miss-universe smiles on their faces. Startled by the insincerity and robotic training he recognized in the roots of their gesture, he concluded how “the little savant monkeys are displayed with great pride, as though the thin veneer of their smiles were proof that these young prodigies are flourishing here; it’s all so

¹⁶⁸⁰ Watch the interview with Michael Phelps aired on the NBC television on July 31, 2012, during the Olympic Games in London.

cold and sad, I could cry”¹⁶⁸², and quite the same feelings of emotionally isolating treachery washed over my heart whenever I sensed dishonesty and pretense behind phony smiles and sunshiny attitudes that everybody on the North American continent was supposed to be wearing, lest they be swiftly rejected from the social mainstream should they only allow themselves to be who they are, to spontaneously express other complex feelings from the wide-ranging spectrum of moods that humans are naturally endowed with. Those whose eyes drip with soggy sadness, whose appearance leaves traces as mystical as the tail of a comet smeared across the starry sky, or who gaze at the world with the laser-like focus and seriousness of a Shotokan karateka or of a soldier of the heavenly order, ready to sacrifice himself and jump onto the railroad tracks to save another being from an oncoming train at any given moment, but also redirect his ships away from the battlefield and back into the harbor whenever he senses that the innocent will be inflicted thereat, like the Greek martyr, Marinos Ritsoudis did¹⁶⁸³, will thus be heartlessly shrugged to the side in this brave new world that demands superficial outpours of happiness from each and every one, the world that worships diversities on paper and surface only and in which freedoms end in a kinky bedroom, rarely ever being elevated to the higher grounds of our stellar being, to the level of heart and soul and the eruptions of inspiring goodness and joy that they are capable of exhibiting. However, to fall into traps that represent the total opposites from the ideals one supposedly follows has been the fate of many great teachings superficially adopted by parts of humanity, from Christianity that substituted its anarchistic origins with authoritarian ones to communism that replaced freedoms it initially idealized with totalitarian governances, to Keynesian economics that originally advocated a dual, counter-cyclical role of the government, increasing expenditures during recessions and reducing spending in the times of welfare, but then got distorted into a partial system that calls for spending and spending only, pushing the entire modern US economy *en route* to a macroeconomic disaster, to the current state of political affairs in the US where republicans, as already mentioned, could be more accurately described as democrats and democrats as republicans, having both reversed their core political philosophies over time, to Hollywood that emerged as a result of independent filmmakers’ moving to California to escape from the Edison trust and its control of motion picture industry through patent litigation, though only to become yet another epitome of a hypocritical group of greedy and vacuous mindsets offering stupefying trash to their followers and fighting to gain an absolute control of copyrights for their creations and abolish the worldwide freedoms of online sharing¹⁶⁸⁴, despite the fact that peer networks “laid the foundation for the scientific revolution during the Enlightenment and have made possible the communications infrastructure of our age”¹⁶⁸⁵ by standing at the basis of the development and maintenance of most operating systems and Web software in usage today, to the art of medicine that let its selfless, Hippocratic roots cede place to selfish, hypocritical and greedy cravings to boost one’s ego and profit from the medical vocation more than anything else to, as we see, diversity shallowly fostered in the US and gradually turned into all-homogenizing bigotry, the very mirror image of itself. Although the North American culture truly stood out during its golden days compared to the rest of the planet with its genuine emphasis on the merits of individualistic dissent,

as opposed to deadening homogeneity thought to be fostered in the communist countries, the signs of its crisis that call for fundamental revitalization thereof are discernable to anyone able to realize this reversal of its compass of core values. Namely, the original embracement of the vision of the Land of Freedom and celebration of the art of differing which brought the North American culture to the summit of the world have been over time transformed into systematic extermination of the latter and support of intellectual bigotry, a total opposite of the former. As pointed out by the Housemartins in their song Freedom off of the legendary London 0 Hull 4 record, “They pretend they’re differing points of view, but it’s only different shades of blue”¹⁶⁸⁶, the verse that very well applies to contemporary American culture, homogenized to the bone, wherein standing out of the crowd and not fitting the box is a secure ticket to the gutter. The bipartisan political system supported in the US, implicitly encouraging people to draw things black and white and aggravate their already symptomatic tendency to form naïve stereotypes, is, of course, adding fuel to the fire of this state of affairs. For, when accepting each and every one as inherently imperfect, including oneself, is discouraged in favor of naively polarized views wherein not being a hero implies being a villain, a tragic state of social affairs is approached, in which bedazzling arrogance and a consternating fear of slipping from the trail of imaginary perfection claim dominion in individual spheres of thought to such an extent that, should the bombs ever start falling on American cities, the question that the citizenry would ask itself would probably be the same one that the inhabitants of Dresden asked themselves when the warplanes of the Allies began to nest over their heads in the last months of World War II with the intention to wipe their hometown off the face of the Earth: But we are the good guys, so who would ever want to bomb us? In any case, human prejudices are powerful forces that determine not only our daily outlooks, but draw the outlines of our spirit as well, especially because they are invisibly rooted within our minds and therefore difficult to uproot, modify and replant again. When I travelled across various regions of former Yugoslavia and Europe, declaring myself as a Serb, I frequently encountered people whose prejudices were so strong that I knew that I would be hated no matter what. Just like members of one racial community are shown in David Mamet’s play *Race*¹⁶⁸⁷ helplessly accusing those that belong to another one as inherently guilty, regardless of anything they could do or say, I have likewise experienced on innumerable occasions the feeling that if I say something under these flashlights of accusatory looks, I would be considered ignorantly lofty because I am a Serb, whereas if I opt for being quiet and remote, I would also be considered ignorantly lofty because I am a Serb. For, premises about the world are so powerful that they direct thoughts and behavior in ways that are often beyond control of the subject. Whenever we indulge in the act of judging, thus, we could be sure that we set ourselves off to an inert voyage across the seas of human reason. The more the latter are filled with beautiful, encouraging and empathic ships of thought, the greater the destinations our beings will reach thereby. However, the more they are pervaded with angrily flashy and violent mental strikes, the greater the chance that we will end up in hellish ditches in this life. And, as we see, this primitive drive of human beings to judge, generalize and reject differences exists all over the globe, somewhere hypocritically sugarcoated and elsewhere blatantly cried out, involving finger-pointing, frowned faces and a whole lot of driveling. Yet, when I look more at the historic cultural and religious powers around the globe, I see people being blind to their similarities and instead obsessed with pointing out their minor peculiarities. Still, it makes a lot of sense when someone observes how different religions of the world are merely

¹⁶⁸⁶ Listen to the Housemartins’ Freedom on London 0 Hull 4, Go! Discs (1986).

different paths to the same mountain peak. To those who have walked to the mountain top along all of these roads, they all fundamentally appear the same, and while standing on the peak, the question of which religion one belongs to can be answered in the same way as Mahatma Gandhi put it when he was asked whether he was Hindu: “Yes I am. I am also a Christian, a Muslim, a Buddhist and a Jew”. In quite a similar spirit, I replied once to one inquiring what religious order I consider myself a member of with the following rumination: “Because no religion worships the power of love more enthusiastically than Christianity, if you were to ask my heart what its religion is, it might pick Christianity. Due to the ethical excellence and elegant sublimity of moral principles interwoven in Taoist teachings, my head could select Taoism as its religion. My spirit might find itself most fit for Buddhism, owing to the purity and shine that it attains upon eradication of disruptive thoughts and adoption of meditative, empty-cupped state of mind. My soul, finally, due to its unending karmic voyage from one planet of the Universe to another, may be most enchanted by Hinduism. A composite of these various elements of my being, I thus truly embody a living temple of all religions of the world”. Quite concordantly, sometimes in my musings I dissect the giant organism that my philosophy is, only to realize the extent to which all the religions of the world are represented in it with their influence on my thought by their teachings. Thus, for example, the idea of co-creation can be traced back to the traditional Islamic belief in seeds of creative potency dispersed amongst the cores of both man and Nature, which in their semi-autonomous, semi-codependent interaction create the world as we perceive it¹⁶⁸⁸; the concept of dancing as the way to attain divine consciousness lies at the heart of Sufism; Buddhism enrooted itself in the framework of my thought with its ideal of erasing the content of the mind so as to let the sunshine of unspoiled spirit shine through the obstructive clouds of random thought and spontaneously wash over the world with its inextinguishable light; Zen Buddhism, on the other hand, thrives on the grounds of my worldviews with its beliefs in the rule-breaking nature of every personal growth and universal progress; anarchism as the key to divine acting can be said to have been picked from the philosophical system in which I have considered all subsequent religions neatly reflected – Taoism; the spirit of Christianity palpitates from within the semantic layers that comprise this book with its visions of the burning heart of love for another as the source of the greatest wisdom and satisfaction attainable in life; finally, the philosophy of Hinduism coincides with my finding merits in cultivation of a transcendental state of mind whose rays of attention rest on some distant, heavenly and blissful, out-of-this-world planes of being during our devoted performance of karmic activities. The first stage in my exploration of the parallels between different religions of the world was marked with my amazement with their complementarities, as between the nihilistic nature of Buddhism that emphasizes the merits of meditative withdrawnness and the practical nature of Christianity that highlights the value of acting in love-showing manner. However, when I looked deeper, I came to realize that their similarities are so huge that now I even miss more of the versatility in the ways of thinking within different civilizations, cultures, traditions and religions of the world. Yet, unfortunately, most people are busy pointing out minor incompatibilities and non-complementary relationships between them, without realizing that the human race has only slightly progressed from the most primitive to the most advanced religions of the world. On one hand, the foundations of human thinking set in the past amaze me with their punctilious nature and lucidity; on the other hand, to the ageless echo of *et in Arcadia ego* reverberating across the atria of our minds, accompanying Nicolas Poussin’s image of three Arcadians and a goddess discovering a tomb, the symbol of death, in their utopian land, we should

¹⁶⁸⁸ The following verse from Qur’an neatly describes this viewpoint: “Verily never will Allah change a condition of a people until they change what is within their souls” (Ra’d 13:11).

remember that even in the most progressive of thoughts, the sprouts of obsolescence invariably hide. The same insight can be derived for any other ideologies that have kept humanity divided along their lines; namely, an authentic intellectual is obliged to rest on the middle ground between them all and find both merits and demerits in each and every one of them. This is especially so because not the most prominent ideologies of the past, but their warped application in reality are to be blamed for their unsuccessful deliverance to the social realm. Therefore, in the spirit of Yehudi Menuhin's concluding out loud during one of his musicological musings, "I am a Communist with Jesus, a Democrat with Lincoln, a Monarchist with Asoka, a Republican with William Tell, a Theocrat with Moses, and within reason, a capitalist and a socialist"¹⁶⁸⁹, I also claim my ideological cosmopolitanism on each possible occasion, having been on the mission to embrace all things under the parasol of my mind that judges none and accepts it all.

S.F.4.22. Speaking of music, I am prompted to recollect the essential differences in the qualities of the mainstream sound between my home country and the Brave New World as a reflection of much deeper social values that music inconspicuously arises from. Namely, the popular music in Serbia can be best described as cheesy owing to clichéd melodies it contains (take Eurovision contest songs, for example), and what I have seen by penetrating with the Superman-like eyes of my attention deep inside of it is often an extraordinary emotional richness, pleasing to the soul, but also a critical void, a chasm in place of the knowledge or a skill to express these inner, emotional treasures to the world in sophisticated and artistically sensible ways. Over and over again thus we come to conclusion that the most beautiful artistic pieces lie concealed within some of the most ordinary human hearts, although mostly predestined never to be crafted into something tangible and communicable to others. And without knowing how to release the light of one's spirit to the world, no one may ever find out about it, and our divine mission may thus eventually remain unaccomplished. On the other hand, the Western music captivates with its expressional talents and capabilities. Much effort is invested in the production of the sound, but what the eyes of the wise could recognize underneath are often empty hearts and shallow wells of passion. These devastatingly vacuous kernels of popular music in America are but neat reflections of a systematic ignorance of the fact that "passions, only passions", as Diderot noticed, "can elevate the soul to great things"¹⁶⁹⁰ in the Western world. Amazingly, these differences may be seen as meaningful in a wide variety of contexts. By comparing the nature of characteristic European and American personalities, for example, one can conclude that the US abounds with the trends to show off and sell out one's qualities, even when they need much more crafting before becoming truly valuable from a spiritual point of view, whereas people from my home country are often hesitant to fully express themselves, even when they have a clear chance to bless the world with the lights of their spirit. It is as if the former are overly releasing their inner potentials without equally revisiting, reshaping and renewing them, whereas the latter spend too much time filling the wells of inspiration without finding enough stimulation to break through the self-reflective gates and bring these inner treasures to the world. And yet, the transfer of "energy" in the inside-out and the outside-in directions, as the Way of Love tells us, has to be carefully balanced. "I feel sometimes people aren't sincere", Rita told me as we leisurely swept through the nostalgic feelings shared by Serbian and Filipino expatriates whose hearts are divided between their native, highly family-oriented cultural roots and the Americanized cultural streams

along which we both floated then. “People are polite and friendly at surface only; scratch it and you recognize coldness and greed oftentimes, whereas over there it’s quite often the opposite – people are rude and such but once you break down this gate, you realize that the heart of a lifelong friend beats there”, I continued, loudly recollecting the dance critic, Deborah Jowitt’s remarking that politeness has been lost and aesthetics gained during her contemplation on the transition from the early ballet, rigid and clichéd in the eyes of contemporariness, to the modern one with its plethora of integrated free, spontaneous movements¹⁶⁹¹. With a little bit of zestful insight, I said, we could conclude that any transition from simper to sincere in the domain of human behavior is entailed by a corresponding rise in the aesthetic value. For a brief moment of a second, the plot of *Endless Sunshine of the Spotless Mind* sprang in my mind as I recollected how the main character of the movie sank in depression and reached an emotional rock bottom in a society ruled by insincerity and phoniness. I have believed the same threats of hypocrisies to hang over the modern American heads like dark clouds carrying torrential rains of which Bob Dylan sang in *A Hard Rain’s A-Gonna Fall*. Our reliance on circumlocutory, euphemistic ways of communicating, that is, on dropping subtle lies around which the spiders of our selfish and greedy souls could weave their greasy nets so as to make others attracted and stuck to would, however, lead to a sure fall from grace of our spirits. The only way to save humanity from this fall would be to deliver all our thoughts and acts softly and carefully, on the wings of an angelic honesty and trustfulness, walking with a crystal ball of beliefs in truthful openness illuminating our chests. Many things that we say then would resemble a confounding stream of consciousness, contradictory to our own thoughts seconds ago at times; yet, as in the aforementioned movie, such a way of expressing ourselves would have a psychologically uplifting and healing effect on us and the whole world alike. It would produce a stupefying chaos all around us; from it, however, many stars of thought and spirit would be born; many wells of aspirations, which stand as the end points between which threads of real-life relationships are stretched, would be purified, leading to a less spiritually tainted and more harmonious society. However, I said nothing of this thread of thought that zipped in a millisecond through my head like an ultrafast train or a supersonic meteorite; instead, I went on to describe my memories on how I have been warned by my good friends and family members how it is impolite to be overly polite in Serbia since it appears as if people there automatically assume an insincere and phony stance underneath these verbal expressions of respect and kindness. “You go say thanks to some strangers, not to me”, one of my Montenegrin uncles would say, softly slapping me on the head whenever I would tell him the “magic word”. When I think of it now, he might have had the same resistance to another phrase from the same repertoire of vacuous, canned phrases that serve as vain substitutes for helpful acts, namely “I’m sorry”, a phrase that, when uttered perfunctorily, as many of my compatriots would agree, translates to “I will not try to help you because deep down I care little about you, so just let me walk away”¹⁶⁹², alongside being, superbly selfishly, about the person feeling sorry rather than a person to be felt sorry about¹⁶⁹³. This is all to say that since the earliest age in my native social circles, especially among closest friends and family, one’s attention is being pointed at the phoniness and a sense of distantness, rather than of sincere sympathy and intimacy, that

¹⁶⁹¹ See Selma Jeanne Cohen’s *Problems of Definition* (1982), In: *What is Dance?* Edited by Roger Copeland and Marshall Cohen, Oxford University Press, New York, NY (1983), pp. 349.

one generates using such clichéd phrases as “thank you” or “I’m sorry”. Besides, by allowing a single verbal phrase, a simple movement of the tongue, the lips and the chests to substitute for a true emotion of gratefulness, which ought to be a drive for an infinite range of expressions, far more inventive and illuminative than any word could ever be, is to contribute to the killing of the divine spirit in us with the doubled-edged sword that word is, a process that has taken place to a finite extent in the mental spheres of practically every individual on Earth. This is why, even though it may seem shockingly radical, every attempt to stand in the way of ethical significance of even such nice and benevolent words as “thank you” could be justified. Babel, whose ascetic house by Highway 11 in Potsdam, New York for a long time used to be one of three institutions on the town’s Google map, the other two being the two universities, Clarkson and SUNY, all owing to an unprecedented hospitality that he offered to the newly arrived students from his native India, concordantly told me once that “thank you” is the phrase I would never hear him saying, exactly because of the uninventively habitual way of living that its usage furthers as well as of the distantness, not closeness, that it promotes. For, just like you normally do not thank yourself for doing things that benefit you, so is there no need for two creatures who empathize with one another to such a degree that they cannot tell anymore where one mind and body begins and the other ends to thank each other. Therefore, if you condition your doing favors to others on their expressions of thankfulness to you, it implies your lack of empathy for others and, in reality, makes you none but a self-loving schmuck. Correspondingly, all communicational clichés, American eruptions of politeness included, could be said to be equal to raising walls between people rather than tying their hearts together, which I have always secretly believed was one of the reasons why Alan Resnais ended his cinematic portrait of the fictional American dream with eight still shots moving closer and closer to a wall¹⁶⁹⁴. Smiling without sincere drives to do so enlightening one’s insides is therefore considered as quite vulgar and obnoxious in my native tradition¹⁶⁹⁵. In North America, however, grins are accepted as prerequisites for pleasurable communications to occur, casual and professional alike. As a result, Americans often confuse the European fishy faces for arrogance instead of naturalness, while Europeans tend to see the American habit of overly smiling as cheap and disingenuous. Hence, whereas Europeans may have an impression of American smiles and an overly emphasized politeness as disguising greedy and selfish vultures who are merely trying to sell something and who actually crave to be loved rather than to selflessly give love to the stranger, Americans often tend to take the European coolness to imply an intimidating showoff of cold pretense and self-importance. Furthermore, on both sides one could recognize a vicious circle of a kind: in the former case, the drive to blatantly sell something to others naturally produces self-advertising and self-congratulatory attitudes, pushing one even deeper into the shallow lowlands of self-centeredness and greed, while in the latter case one could recognize feelings of indignation to be naturally instigated from loathing of those who fly one’s own kite, so to say, leading to even more of quiet, remote and seemingly indifferent behavior and deepening the disparity between the two traditions. This whole gap undoubtedly contributes to producing in a European expatriate like me a sense of crucifixion between distant cultural coasts, of belonging everywhere and nowhere at the same, of being understood by all and yet by none. “Yes, but I want to be able to hold on to the same values and

¹⁶⁹⁴ Watch *Mon oncle d'Amérique* directed by Alan Resnais (1980). ¹⁶⁹⁵ The same observation could be made from other cultural perspectives - Pakistani, for example, as in this thread: http://www.chapatimystery.com/archives/homistan/smile_like_you_mean_it.html (2005).

traditions but it's hard over here”, Rita thought out loud about the new traits and values that our social environment inevitably imposes on us. And yet, there could be no more suitable people than us to stand along the Middle Ways and spread our arms to both directions, finding the ways to unite the heart of passion, of love and care, of inwardly oriented mindsets on one side with the strength and energy to release these passions in constructive and meaningful ways on another.

SF Grace Cathedral is a rarely stylistically diverse church wherein, side by side, one could find classical Catholic altars, frescoes of Orthodox saints, an icon of Martin Luther King signed with an Old Slavic, Cyrillic script, a stained glass window dedicated to Albert Einstein's celebrated formula, $E = mc^2$, the last work by the graffiti wizard and the street artist, Keith Haring, and all that under a pinnacle composed of eight fiery dragons. It also offers a fascinating glimpse into the difference between less passionate and more prosaic and practical Americana depictions of saintly acts (a, b) and emotively burning and wildly impassioned images derived from the European tradition of the monastic art (c-f). A similar parallel could be observed by placing side by side a comically kitschy detail (g) and then a mundanely glacial one (j) from a mural called the Dancing Saints that decorates one of the walls of St. Gregory of Nyssa Church in San Francisco and either Titian's Martyrdom of Saint Lawrence (h) and Caravaggio's Saint Francis in Ecstasy (i), with the central characters fainting beset by the troubles of the world rather than trouble-freely dancing in circles, or fiercely passionate figurines found in the first cathedral of the New World, the one in Santo Domingo, the oldest European city in the Americas (k-m). These frescoes and statues I photographed during my visit on July 1, 2011 were mostly made and brought in from Europe as the church was built during the early 16th Century. Of course, with the first European settlers on the American continent and the founders of the modern state being puritanical embodiments of the strange fusion of religious and venture capitalist spirits, the mix of unmixable in the blessed eyes of the Christ who had, remember, tossed and turned tables of greedy hucksters and usurers in the house of God, nothing other but one such lukewarm portrayal of religious figures could be expected. Consequently, as the history of art teaches us, "the painters in America throughout the 19th Century who

failed personally, or who in retrospect were outside the main American tradition were those who tried to idealize, who tried to follow doctrinaire aesthetic systems... and at the beginning of the 20th Century the situation had not changed¹⁶⁹⁶; in other words, to appeal to the popular interest, art in America, like its closest cousin, religion, have perpetually gravitated toward bleak realism rather than soul-elating abstractions, that is, toward the depiction of “things as they are rather than as imagined”¹⁶⁹⁷. With its origins in the spiritless Puritanical beliefs that truth could be found independently of beauty and the corresponding insistence on the usage of unadorned language and communication style free from “all the amplifications, digressions, and swellings of style”¹⁶⁹⁸, lest the authenticity of God’s word be obscured¹⁶⁹⁹, the modern Americanism has naturally found its way into prosaic, plain and exorbitantly dull manners of expression that send chill down the spine of us whose spirits can proudly swim only in the azure sea of graceful poetry in which the ancient goddesses of Beauty rest. Originally, these Lutheran and Calvinistic strivings to liberate the timeless truths from their superficial vestments had a whole lot of sense because they provided a vital opposition to the growing trend of tying religion to glitz and glamour during Renaissance¹⁷⁰⁰, particularly in its late, post-Raphaelite, mannerist and rococo days. However, as it often happens, instead of serving as an incentive for finding a middle ground between poetic ornamentation and succinct insight, these widely adopted beliefs have pushed their embracers to the other extreme, where they began to praise succinctness and stomp over any attempts to poetize the truth that they have beheld, if it could be still counted as such. Finally, to illustrate the same dichotomy, I pose side by side the so-called Presidio Mural that occupies a central place in the Presidio Chapel, one of the oldest buildings raised in this neighborhood of SF, yet another prosaic painting that banally documents a set of historic events, as well as a rather cold and emotionally detached image of Saint Francis found in it alongside the aforementioned mural (n, o), and two iconographic works I photographed in the Cathedral of Saint Tryphon in the Montenegrin coastal town of Kotor, depicting characters all enraptured in passion greater than life, tearing down the gates surrounding their saintly hearts to pieces in prayer and releasing their inner shine outwards, waving with their spirit to us thereby, softly and imperceptibly, like the little contour of a smiley ghost formed by a flash of light emitted from my camera, bouncing off the saint’s skirt and finding its solace in the glisters of the starry pool of my dazzled eyes (p, q).

¹⁶⁹⁹ See Richard Bauman’s *Let Your Words Be Few: Symbolism of Speaking and Silence among Seventeenth-Century Quakers*, Cambridge Studies in Oral and Literate Culture 8, Cambridge University Press, Cambridge, UK (1983), pp. 2.

¹⁷⁰⁰ See Jovan Dučić’s *First Letter from Switzerland*, In: *Cities and Chimeras*, Matica srpska, Belgrade, Serbia (1940), pp. 114. How higher the poet valued the Italian Renaissance over Germanic Lutheranism is nicely expressed in his opinion exposed in another one of his published letters, from France, fourteen years earlier: “Without German geniuses, the world would have looked the same, though with just a bit less of metaphysics and pianos in the rooms; without Italians, though, the world would have look profoundly different”.

Shown here are a couple of snapshots of the dimly lit hallway floor of the Belgrade apartment in which my starry self was hatched from a divine egg-shaped ellipsoid of light and has grown into the source of these peculiar ruminations afterwards. One could see asymmetrically positioned facets of natural stones of different colors and patterns embedded in a finely polished granite matrix composed of even smaller cemented grains. Built in the 1920s, this house has displayed other unusual architectonic forms, such as the round-shaped window positioned just above the staircases connecting other units with the entryway of the house. This uniquely built floor is displayed here to

confront the cliché that all Yugoslavs could create was Yugo, one of the least reliable cars ever to be sold on the US market, and that 'tis the culture of quixotic romanticists, poets and dreamers whose hands-on skills are equal to none. As a matter of fact, before the rise of socialism, the corruptive unionization of workers and the creeping-in of laziness and slyness into the mind of an average Yugoslav, my native culture was the home of excellent artisanship, loyal to the customer perhaps more than it has ever been seen in the West, given the cordial doing of favors to anyone in need and the traditional abhorrence of reciprocity on these grounds. Unfortunately, decades of neglect of this culture of craftsmanship on the small scale, of brain drain of devastating proportions, and of the arrival of the globalized, neoliberal market open to cheap foreign products whose repairs all but pay off have resulted in its literal disappearance. All a builder of a new unit in Belgrade could get today are massively fabricated square-shaped windows with third-world frames and sills and floors covered with similarly shaped plastic or ceramic tiles. Still, I am thankful for the fact that the place I will have called home for the rest of my life once had prayerfulness and practicality deeply woven into its heart. It is this glorious balance that I vow to promote, implicitly and explicitly, with every flip of the pages of this book and with every line drawn thereon using angel's wing's feathers, blood and a whit of chocolate.

S.F.4.23. One of the most striking peculiarities of the modern American culture in comparison with my native one has been an implicit derogation of any esotericism and intuitive, dreamy, prayerful aspects of our personalities, especially in the academic arenas in which I initially found myself. No doubt that an intense cultural clash stands behind the stereotypical Americans' seeing nothing but sickeningly pathetic sentiments in poetic flights of passion and Southern Slavs' seeing equally repugnant emptiness and vapidity in the Puritanical spirit of practicality that systematically suppresses any exhilarating lyrical leaps. The Serbian poet, Jovan Dučić, need not have ventured farther than the Swiss Alps to be stricken by the horrific coldness of the Western culture when compared to the gentle waves of the sea of poetry swaying his warm Slavic heart in rhythm and harmony with all things and this is what he noted upon gazing at the geometric gardens surrounding his crying soul like cruel centaurs: "These are gardens that conform to mind, not heart: line, order, law, proportion. All measured with a thread and tailored with scissors. Waters in big basins measured down to liters and rimmed in stone frames. Green cathedrals and showy salons. Nymphs and pheasants rooted in their place mathematically precise. Versailles and Chateaus, Louis XIV and duc d'Aumale, all aristocracy intellectualized, and loftiness of great provenance: the power expressed everywhere by lines, dots and borders towards the whole world"¹⁷⁰¹. Although I glimpsed the contours of this very same dichotomy between the poetic vivacity of the supreme South Slavic soul and the haughtily highbrow drawing of the blue-blooded borderlines by the sophisticated Anglo-Saxon soul while spending years on the other side of the Alpine mountain ranges, it was here, on the American continent, that a sense of spiritual impoverishment resulting from my transplantation to the Western grounds washed over me with an intensity of a tsunami for the first time. Finding myself in a society that heartlessly disparages poetic impulses naturally prompted me to spend many nights wondering about beautiful traits that vanish from our spirit as we fall into traps of passionless practicality while escaping from seemingly unproductive, although actually soul-filling dreaminess. Sometimes I was even tempted to envision Grand Inquisitors of a kind standing in the darkness behind the world stage and intentionally fostering the depiction of life in dry terms, numbing the sense of wonder from which individualistic touches with the divine originate and lowering the value of life in earthlings' eyes, thus enabling facile spreading of their native culture all over the globe with the aim to conquer it and eventually subjugate it to their political and economic interests. For, just like the Chinese government keeps the monetary value of locally produced goods markedly lower compared with the rest of the world so as to spur the

¹⁷⁰¹ *Ibid.*, pp. 100.

export of goods and hinder their import¹⁷⁰², so may this lowering of the value of life by stripping the descriptions of it off any lyrical adornments mainly serve the purpose of exporting the local culture to faraway lands, alluring the foreigners to its cheap and shallow attributes and then slyly seizing them under its voracious clutches. On the other hand, however, since economic deflation leads not only to a drop in the value of goods and services, but conversely to a rise in the value of money too, giving a false impression that great portions of life can be bought and privately possessed, a grand illusion like no other, it can be argued that one such diminishment of the value of life that entails burial of the poetic spirit enfolding even the most mundane things around us may be merely a natural corollary of the anthropocentric world that we live in, an unbalanced extreme with respect to the equality between the creative roles of the human mind and Nature in evolving the world towards ever brighter horizons proposed in the co-creational thesis. And since the powers that be have a direct interest in maintaining the social state of affairs wherein human beings resemble narrow-minded pawns that adherently obey the trendsetting authorities and walk in procession in pursuit of their phony guiding lights, there is no doubt that any arousals of poetic sensibility, being a natural corollary to profound reflections on the properness of our paths in life, potentially producing a social outcast and a creative rebel out of one, somewhat like the Christ was, are seen as highly unfavorable by these very same authorities. Now, the domains of sciences and arts present perfect provinces to evidence this deprivation of poetical flights of passion among their dwellers. It is no secret that scientists who systematically suppress any traces of poetry and instigate dry practicalities instead have consequently had a much greater chance of securing tenure positions at American universities than thinkers who have lived in harmony with the lifestyles of their academic predecessors, finding inexhaustible fountains of inspiration in religion, arts and fields that seem disconnectedly distant from their own areas of specialization. As far as the American arts are concerned, the emphasis on entertainment or exhibitions of indignity has over time almost fully eclipsed the soothing ardency and devotional glows of spirit in both popular and critically appraised forms thereof. The fate of the rarely touching and symbolically rich Hollywood movie, *A.I.*, having grossed twice more money overseas than it did in North America, can be a neat example of the degree to which the American culture is estranged from anything poetical and sentimental, making me wonder at times whether it, with its practical, hard-work mentality, is, in fact, a giant social conglomerate of the working class spirit of the modern world, wherein obsession with work has apparently taken horrendous tolls on people's social lives and a sense of happiness rooted in its profundity, while essentially far more aristocratic livings, whereby people more consume of the fruits of the hard work invested elsewhere rather than busily craft them, could be found in far less developed societies, including my native one. Ever since the ancient Greeks divided humans to run-of-the-mill workers and noble philosophers, it has been clear that the philosophical liveliness of one's spirit and beautiful flights of imagination arising from minds that house it – as opposed to its deadness that entails order-obeying conformism and has typified the workers' spirit in the given scheme of reasoning – go hand-in-hand with anarchistic dissent and passionate strivings to differ and be a unique sun of creativity on the skies of the world, all of which have been seen as undesirable human traits ever since the Romans crucified the Christ exactly because he bluntly exhibited them. Now, if the domains of sciences and arts seem too diverse and complex to be easily generalized upon, you need look no farther than churches and sports games to glimpse the reflections of this saddening lack of passions that typifies the average American mind. In fact, as I moved to the States, I became continuously overwhelmed by the

¹⁷⁰² See Glenn Hubbard's and Peter Navarro's *Seeds of Destruction: Why the Path to Economic Ruins Runs Through Washington, and How to Reclaim American Prosperity*, FT Press, Upper Saddle River, NJ (2011).

feelings of acceptance everywhere I went in such an extent that I had to consciously pinch and remind myself that I was, nonetheless, dwelling on a foreign soil. The only time I was prompted to question my belonging there was upon entering a church or watching an American sports event. Only then I felt as if I, in spite of everything, maybe did not belong there. Although countless striking cultural differences were reflected in the world of everyday impressions in which I was immersed, from cockily and debilitatingly aggressive and loud American ads on radio and TV versus soft and soothing commercial allurements on the European continent to spuriously broad smiles of models decorating billboards in the US versus pretty girls' faces filled with mystical gravity looking at the passersby on the streets of Europe, nothing measured up to the magnitude of this cultural contrast that I derived from comparing the houses of worship and spectator sports at the two continents. Both the American churches and sports events have lacked the passionate spirit that I have known of, a battle between darkness and light that moves mountains in its intensity. This, of course, seemed puzzling to me on the night I sat quietly on a living room sofa and watched a yellow crescent Moon and a soothing TV program meant to put children to sleep, recollecting the balmy ads from the times of my growing up and envisioning the American minds being whipped at all times and from every corner, from the strident and vacuous pop music on the radio, which, as good ol' Paddy would have had it, "offers infrared instead of sun and offers paper spoons and bubblegum"¹⁷⁰³, to the voraciously aggressive ads on tellies to megachurch preachers on the other side of the Bible Belt to traffic jams and crawling behind cars with "iwinwin" plates, as it happened to me on Highway 101, to joggers addicted to workouts that wear out the body and drain the divine nectar from their spirit, when they were supposed to revitalize the both, to the ravaging vibe of internally raging and demonically desensitized people walking by with dollar signs, the altars at which most pray, flashing in their eyes, altogether ending up in gritty ditches next to burly and putrid waterwheels, not glittering Ferris wheels, that they had spun all life long, like Milan Rakić's stallion¹⁷⁰⁴ predestined to perish from Earth due to an endless and exhaustive work for the work's sake, without ever stopping to wonder in silence about how to fulfill the spiritual purpose thereof. But I do wonder how it is that in spite of all these incentives to push, push, push and pump it up and up and up, crashing over the urban American souls from all angles, they are so tremendously far from the ideal depicted on the most delightful icon decorating the walls of St. Stephen's cathedral in Vienna, showing the Christ with the burning heart pulled out of his chests and held in his hands, ready to be given to another. How is it that they are so far from becoming a firework of energies that dazzle, inspire and heal, resembling more Oscar Wilde's rockets that shoot for fame, burn their fuel quickly and plummet to a swampy ground than setting/burning suns prophetically portrayed in Wilco's touching homage to Jesus¹⁷⁰⁵? These midnight ruminations of mine have also reinforced my faith in the fact that, in analogy with the silent and windless eye of every tornado on Earth, the deepest insides of a personality that shines like a sun to the world, whirls like a dancing dervish and blows away all the ills of lukewarm spirituality in front of it, just like a real whirlwind does, are similarly silent and calm. Hence, I, with the still and soundless center of my being, a torment of passions raging around it and the light of love blissfully shining through, felt a bit out of place in the new world in which the prosaic, the secular and the mundane eclipsed the poetic, the sacred and the angelically passionate, respectively. Looking up to the Heavens upon entering a church or scoring in a soccer game with devotion that quivers our hearts generates feelings that are larger than life, so to say. But such

feelings of awe and joy that shake the Adam's apple in our throat and make us sobbingly fly in ecstasy are practically wiped out of the American continent. Churches in the US have thus been left to remain only the metaphors of those in my motherland, which were again metaphors of the houses of Heavens. I, of course, have known that since the earliest days of Americanism, religion has been a mere means to the end of social progress and the acquisition of material wealth rather than an end in itself¹⁷⁰⁶. For, when spirituality is made to serve the social welfare and religious experience is advocated as a path to public prosperity rather than the other way around, when the idea that the ultimate goal of social structures and individual ventures is to allow the attainment of spiritual salvation is shunned by the utilitarian torchbearers of the nation, art, naturally, ceases to be a divine aesthetic experience and becomes a commodity, a profession subdued to populism, marketing and industrialization, while churches become such that they impress with how unimpressive they are, that are cold and callous on the inside, that are literal sacrileges of the architectural and artistic grandness of their Old World analogues. When Paul Tillich, yet another European who ended up as an academician in the US, noticed upon looking at the American churches sprouting like mushrooms all around him that "if we define religion as the state of being grasped by an infinite concern we must say: man in our time has lost such an infinite concern"¹⁷⁰⁷, he targeted with his sharp pen the mundane, prosaic and far more earthly than heavenly houses of God in America, devoid of the aura of passion and ecstatic strivings to reach this mysterious infinity that the idea of godliness represents, seeing them in the very same light of utter disappointment as I have seen them in. And, as far as my pious self is concerned, after a couple of years of futilely seeking an exception to this rule on this new continent, my abhorrence of the bleakness of the American houses of the Lord grew so strong that I began to substitute churches with chimneys, manly those that once belched smoke and now are standing retired, petrified and encircled by a thick layer of moss, as well as pews with meadows, icons with streetlights, and altars with the open skies. Antichrist, over a single night, became no longer a vehement, diabolic spirit striving to seed "swords, not peace" (Matthew 10:34) across the infertile face of the world, but a spirit sitting in a cozy house and saying grace before a pot full of potato and steaming turkey, with a belly brimming with wine, somehow not realizing that the comfort and the lukewarmth it breeds are infinitely far from the life of the Christ, the character which this spirit worships superficially, a man who wore raggedy clothes and discarded all the possession and belongings, sleeping in the ditches and striking up revolutions everywhere he went, being slapped and disparaged far more than loved, respected and pampered. It is no secret that antichrist spirits like these are bred like rabbits all across the American continent as these letters assemble into words and words into sentences, sentences into passages, lame and listless in my eyes. And if all things rest on invisible foundations of passion, love and other fiery emotions that burn our bodies and shred our hearts to pieces, then American churches with all their passionless disfigurements could crumble down in my starry eyes, for all I cared. As for soccer games, I still remember the butterflies in my belly and the throbbing of my guts to the deafening sound of the fans right as I entered through the southern gate of JNA stadium for the first time, on May 20, 1984, as a seven-year old boy, holding my Dad's hand on one side and my older brother Deki's on the other, to watch a

regular league game between Partizan and Hajduk¹⁷⁰⁸. Six years later I was at the southern section of the same stadium, the section wherein only the “fiery fans” of the club are found, ready to stand tall and sing their hearts out for the entire duration of the game, to support Partizan in their UEFA Cup game against the Dutch squad, Groningen, the game that my team won in the end by 3 goals to 1, when the winning, second goal sent the crowd into a delirium and me into the epicenter of a spinning laundromat, tumbling and turning through an invisible curtain of smoke, flares and earsplitting hubbub, creating a riot for which the club was penalized by having to play the first following European home game no nearer than 300 km away from Belgrade. Fast forward fifteen more years and I am at the biggest soccer stadium in the Romanian city of Temisoara, chanting songs of praise to Partizan in a closed cage, with fans around me resembling hyper-aggressive apes more than civilized humans, broken bottles flying back and forth, foul words, spits and punches being exchanged with the local policemen having water guns pointed our way, and the ground below our feet shaking and the concrete construction cracking. When I compare this with the prioritization of yummy hotdogs among the crowd I have seen at the SF Giants baseball games or New Jersey Nets basketball games, a sense of oppressive emptiness that only life un-lived can bear begins to wash over me. I have known, of course, that just as the corruption of art and religion through their embracing entertainment and turning into commercial commodities as in popular arts, cash cow churches and bleak industrial design has been the logical outcome of their subjugation to the sustenance of the social welfare rather than inauguration as the points of convergence of all social effort, so is sport in one such utilitarian society destined to serve the purpose of throwing dust in the public’s eye, of channeling its aggressive energies and keeping it in a numb and sluggish state, lest it, god forbid, organize and begin to question the instances of unfairness of the social order, which, it need not be said, there is no shortage of in an exploitative political system that capitalism is. And when numbness is what sports events produce, then this numbness must spread like plague over everyone involved in them, from the players to the spectators. And when I watch my fellow Europeans as newcomers to the American soccer scene, typically at the sunsets of their careers, and sense how they struggle to adapt to the vibe of indifference as to whether one would win or lose so long as dimes drip into one’s pockets, thus losing a bit after bit of passions with each new day spent under the downwardly gazes of the passionless, hot-dog-eating crowd, I see my soul mirrored in them and wonder if I have corrupted the divine creative forces in me in the same way by pursuing a similar path. Just as this cultural crevice has been difficult to cross to those players who, albeit seasoned, still starve for success, so have I fallen down its chasms day after day, being unable to adjust to a culture that sees in passions not the gateways to an otherworldly creativity, but the symptoms of lunacy that are to be kept at bay. The dichotomy between the collectivistic passion of my native culture and the individualistic detachment of the American one can also be illustrated by placing side by side my violist friend literally holding her thumbs with eyes closed and imagining the transmission of a triumphant energy to the Serbian basketball team during the final game of the World Championship in Indianapolis in 2002 and my hearing shouts from the apartment below my Nob Hill nest disconnected from the scores I, myself, was seeing while watching the seventh, decisive game of the 2010 NBA final series between the Lakers and the Celtics, wondering why that was so and then realizing that, while waiting on their friends who were late, the hosts paused the game so that everybody could watch it together, and leaving me puzzled how in the world anyone who supports

¹⁷⁰⁸ The game was won by Partizan with 1 goal to 0. The only goal was scored from the penalty spot by Ljubomir Radanović, the player native to the very same Montenegrin city of Cetinje that my father had been born and grown up in.

one's team with the wholeness of one's heart could ever do anything like that. Yet another example, though from a different arena, brings me over to my memory of sitting at packed Harry's Bar in San Francisco's Fillmore district and witnessing a similarly shallow, rather controlled and miniscule expression of joy when the news finally came that the elections for the US President on that November night of 2008 were won by Barack Obama, a bleak political tool during whose second inauguration ceremony, four years later, I wish I could hear a rendition of the tune Am I a Man or Am I a Muppet from the Muppets movie released a year earlier, an allusion to the sheer puppetry of his role as the president of the country that has been lately dragging the rest of the world towards both financial and spiritual bankruptcy. Also, comparing the fervent and raucous demonstrations against the Milošević's government in Belgrade in which I participated as a student, during which my body would become electrified by the energy of collective excitement that traversed the air, ears deafened with the thunderous sound of the masses, breath shortened, knees jerked and belly filled with millions of euphoric butterflies, with the lukewarm and lame street protests I have seen in the US, resembling "neat little marches down blind alley, (while) all around, malevolent bureaucracies mutated, large as dinosaurs"¹⁷⁰⁹, yields the same conclusions. The cult of individualism and sanity seemed to have destroyed the sublime and passionate feel that all these exhibitions of human creativeness are meant to shine with. "Individualism is a cheap commodity in America, because there's always a surplus of it; finding some sort of community is a much more difficult task"¹⁷¹⁰, pointed out the music critic, Dave Marsh in the course of his elaboration on the cultural evolution sparked by the arrival of the Beatles to America, before concluding that "the collective aspect" of rock 'n' roll music was, therefore, logically, what touched his heart most deeply and provided the healthiest effect on people. Now, mentioning sitting in a bar or a pub, a neat dichotomy between the cult of individualism dominant in the American culture and more pronounced collectivism of my native tradition comes from observing the way people deal with bills at the end of the night. Having grown up in the tradition in which people would start a friendly fight over who would pay for the entire group, oftentimes paying for strangers whom they will never see again in their life nor would expect anything ever in return from them, I was initially disgusted and repeatedly wanted to leave the table whenever a group of my American friends would begin to spend dozens of minutes calculating how much each one of us had to pay with a ten-cent precision. Only later, I learned to see mild merits of this American habit, which makes people feel that they can afford hanging out with friends even when they cannot pay for everything that all of them together have drunk or eaten during the time spent out. And this sense of individualism and focus on oneself, first and foremost, is ingrained in the American mindset to such an extent that paying for a drink or two to a newly made American friend or even to a long-time acquaintance is most of the time taken as an immediate sign that the person wants something from the payee, thus turning a generous act into a dishonest one. That this could be merely a selfless act of affection rarely arises even as a possibility in this hardcore individualist frame of mind. What is more, following my initial bursts of generosity and paying for my friends' drinks unreservedly, I learned that their ensuing train of thought was not necessarily driven by the spirit of bonding in friendship that one such act was meant to spur; rather, it often went something like this: "If he paid for me now, it means that I would have to pay for him next time; therefore, if I avoid our each subsequent meeting, I would never have to pay this back". And so, paradoxically, friendships were lost, not gained, through this selfless act of giving. Though my newly made friends did not go as far as the company of the American film producer, Billy Baxter at the Cannes

Film Festivals, who'd respond to his generously grabbing checks for rounds of drinks and paying for them all by signing his hotel room number to their bar bills, the reason for which he started after a while to wear a badge with his signature and a "none genuine without this mark"¹⁷¹¹ remark on it, they would still rupture the bonds of friendship with their reliance on the sole spirit of reciprocity. For, "to be servile and hospitable to them is to transgress the elementary code of hospitality: equality and reciprocity, which means erring to oneself and to them too; to shatter their delusion of the nature of our hospitality with a fair and reserved stance is to do a favor to oneself and to them too, avoiding an array of ugly and heavy misunderstandings, detriments and humiliations"¹⁷¹²; such was the way in which the Serbian Nobel Laureate, Ivo Andrić described the relationship of "average Germans" to the traditional Serbian hospitality and generosity, unmistakably applicable to the modern Americans these days too. From sports to politics to splurge bars and dives and back to sports we must go and as one of my routine examples that invoke comparisons between sport and culture I love to propose the analogy between the American cult of individualism and the successes that Americans bear in individual sports, which is, however, entailed by their lack of success in almost any team sport. Quite contrary, with the flame of team spirit burning much brighter in the heart of its people, Yugoslavia has been one of the most successful countries in a variety of team sports¹⁷¹³, but when it came to individual ones, the success was nowhere near. Even the unexpected and sudden rise of Serbian tennis players to the top of the world in the first decade of the 21st Century, in one of the rare individual sports that Serbs have become successful in, aside from chess, could be blamed on team efforts, as there was an impression that the successful individuals were at those times encouraged and inspired by successes of their fellow tennis martyrs. Clearly, in case of the US, the shift from the balance of the Way of Love to the side of individualism is apparent, suffocating the spirit of communion amongst people and giving rise to a society that "is not society at all, but a gathering of separate individuals"¹⁷¹⁴, whereas in case of Yugoslavia, the shift is made to the side of overly communal, logically on the account of crippled individualities. No wonder then that while one big star used to decorate the Yugoslav flag, symbolizing the spirit of communion, fifty of them are scattered in the corner of the American flag, indicating diversity and individuality as qualities valued more than the impetuses to unify in empathy and understanding. To illustrate this dichotomy, I often refer to how people treat one when one catches flu or any other viral infection in the US and in my native country. Namely, whereas I have witnessed some of my American companions explicitly telling

¹⁷¹¹ See Roger Ebert's *Two Weeks in the Midday Sun: A Cannes Notebook*, Andrews and McMeel, Kansas City, MO (1987), pp. 56.

¹⁷¹³ In addition to traditionally being successful in many team sports, from basketball to water polo to volleyball to handball, normalizing the number of points collected in FIFA World Cups (see <http://home.netvigator.com/~andrewshe/wcstatistics.html>) per capita leads one to observe how Yugoslavia may be the third most successful country in the soccer history, right after Uruguay and Sweden. The recently published list of the most successful countries in soccer based on the percentage of games won in the period from 1980 to 2001 confirms that by placing Yugoslavia (including Serbia and Montenegro as its successor) at the 7th place (Simon Kuper and Stefan Szymanski, *Soccernomics*, Nation Books, New York, NY (2009)). At 2010 World Cup in South Africa, the Serbian national team was ranked as the 10th most expensive team at the tournament with the price of the players estimated at €185 million (see <http://www.naslovi.net/2010-03-05/rts/orlovi-vredni-185-miliona/1582547>). However, if normalized per capita, Serbia would be ranked at No.2 spot with €25 per capita, right behind Portugal with €32 per capita. Add to this that only three cities have been homes to more than one participant of the finals of the Champions League/Cup: Milano, Madrid and my hometown, Belgrade.

¹⁷¹⁴ See the comment by cobo to the article *Čovek koji je uništio najbogatiju zemlju Latinske Amerike*, B92 News (May 21, 2016), retrieved from http://www.b92.net/biz/komentari.php?nav_id=1134162.

me that they would not want to go out with me if I happened to have flu, I illustrate the Serbian sense of sacrificial friendship and the spirit of selfless communion deeply ingrained in my native culture with my friend Čulaf's jumping up and kissing me in the first minutes of year 2000, when the new millennium knocked on our door, even though I politely warned him that I had a very nasty flu. This cultural difference has been so hard to grasp for some of my native buddies that I spent a long time convincing them that people in America cared about themselves not catching flu rather than about me, who they thought should stay in bed and timely recover, when they ordered me not to come to work if not feeling well. Drinking from the same cup or eating from the same plate is thus virtually nonexistent on the American continent, whereas while growing up I was taught always to offer anything I eat or drink to anyone who shares the social space with me, be it in a room, in a train coupe or at a picnic. While living in Slovenia for four years, I managed to maintain this beautiful habit in spite of its being quite foreign to the local customs, but after a few years of living in the US, this habit has sadly vanished. For, such are the social grounds in North America that they spontaneously foster the growth of trees of being and knowledge that first and foremost look after oneself and only then after another. If you have come to wonder why European basketball players entering the NBA very often start to refuse to join their national teams, the reason lies in one's systematic infusion with the individualistic spirit that living on the American continent exposes one to, leaving no one completely immune to it. Perhaps even the Serbian soccer legend, Dragan Stojković Piksi, who played indolently in the finals of the UEFA Champions Cup in 1991 for Marseille against his former club, Red Star Belgrade, and even refused to participate in the penalty shootout which determined the new champion of Europe, would have turned into an individualistic monster on the American continent and learned to share the stone-called emotions of a Serena Williams thrashing her sister with shrieks of joy and smirks on her face or of an Eli Manning when he watched restrainedly, as if he had just swallowed poop¹⁷¹⁵, his brother win the 2016 Super Bowl and become a player with an equal number of championship titles as he had at the time. Piksi was one of the old guard, whose performance and skill could not thrive in the artificial assembly of soccer superstars bursting with ego that Olympic Marseille was at the time and he, unlike what the members of the current generation of professional sportsmen, who, like zombies, drift solely where money and fame are, would do, began to wither, before moving to Japan, off the radar of the soccer world, where he rediscovered the soul that he had lost by emigrating from Yugoslavia, the soul that, as myself and all the poets all the world over could attest, could be found only away from the spotlights of vanity, wealth and prestige, and yet the question does not go away: would he, like many other, have lost that soul willingly had he come to America? Nevertheless, the fact that I still find Eli Manning's frowns, Serena William's fury and other exhibitions of sickening selfishness in this land toxic means that I have not become ill by the uncaring individualism to the bone; as Lao-Tzu would have told me, "the one who thinks he knows what he knows not is of a sick spirit, but the one who sees this spiritual sickness as a sickness is not of a sick spirit, albeit being sick from it" (Tao-Te-Xing 71). Thus, with much pity and sadness I listen to my American acquaintances whining occasionally when their roommates eat their food from the fridge. Needless to add, such implicit fosterages of selfishness I have found wholly sickening, and as I sit and listen to stories such as these I become overwhelmed with convictions that the times of the planetary primacy of the American culture of self-centeredness will sooner or later pass and be ceded place with more sociable modes of being where each and every communication will replenish the cups of human hearts rather than draining them, as is

¹⁷¹⁵ See Svi su srećni zbog Pejtona, osim Ilaja, *B92 News*, retrieved from www.b92.net/sport/ekipni/football.php?yyyy=2016&mm=02&dd=08&nav_id=1094461 (February 8, 2016).

mostly the case today. In a hypothetical society in which perfect justice would penetrate each one of its segments, in which each person would receive more than enough of rewards, recognition and means of sustenance for his creative inputs on visible and invisible planes alike, such culture of proportionality may have been attempted to be justified; however, the world which we inhabit, the world stricken by injustice on each and every corner, the world in which those who deserve to be the first are often pushed aside and left to rot in the last places, could be healed and saved only by exhibition of an unlimited love and the thirst to share all that one has, without asking for any gifts to be received in return. In that sense, the discomfort I feel when I watch my US friends pulling out calculators and dividing the common bill down to each cent is truly immense. Although paying only for oneself after a dinner with friends in my native country won't induce any unpleasant comments, it would be equal to lifting a mile high wall between one and others. My native culture is such that one either pays for all people sitting by the dinner table or for none, and from the perspective of the spirit of communality towards which the whole world evolves, this habit could be seen as million times more progressive than that witnessed on the most futuristic panoramas of the modern world, appealingly looking on the surface but plagued by selfishness and greed at their core. In contrast, when I, fresh off the boat on the American ground, paid at bars and restaurants for all parties seated at my table, most of the time it was, sadly, either looked at with suspicion, as if my intentions were impure, or seen as an opportunity to break away from the ties of friendship with a little financial interest gained. Today I place these words here as a warning to my compatriots as newcomers to the American culture, wishing to tell them that these casual acts of generosity will not tighten the ties of friendship, but will rupture them and have a diametrically opposite effect from the intended. For, a person accustomed to reciprocity, the concept so deeply embedded in the American society that no alternative seems conceivable to most people immersed in it, will most probably perceive the act of paying for her in a restaurant or a bar as a plea to obtain something at another level of their communication, undisclosed and thus potentially dishonest. If not considered an instance of surreptitious dishonesty, such a generous act might be seen as a display of pure madness and will result in similar distancing of the receiver from the giver. Finally, the third type of person bred by the malign capitalistic cultural premises will vanish in the distance because of believing that it will be up to her to pay the bill the next time she meets with this overly generous acquaintance, in which case the loss of friendship will have selfish financial reasons as the motive. All in all, the supreme dominance of the concept of reciprocity is the reason why these modest displays of bigheartedness are bound to lead to losing, not gaining a friend at the end of the day. This is how I came to conclusion that exposing one's self-interests and not thinking from the perspective of a social group to which one belongs is a perfect way to lose friends in my native culture, while, contrarily, not exposing intrinsic selfishness and letting one's actions be guided by what benefits others rather than oneself only is a wonderful way to lose friends on the American continent, which naturally brought me over to another conclusion: living in America provides for a constant challenge not to sell one's soul to the devil. Displaying the signs of selfless altruism therein is adequate to displaying the signs of a mental disease and people exhibiting these holy traits often get to be denoted as madmen and excluded from the social circles, just as I was laid off from an academic institution soon after it was found out that I relocated all of my bonus salary earned from the research grants back to the research funds because I deemed it unethical to earn extra money from the federal, that is, essentially taxpayers', peoples' investment in my work. Therefore, for many Europeans, such as myself, there has been a constant temptation to become more and more selfish every day for the sake of earning the respect of the society and succeeding in one's profession. Alas, the fate of many Americanized Europeans who return to Europe to take

on important public roles, including that of my relative, Goran Novaković, who gave up his post at Enron to become the Yugoslav minister for energetics in 2001, is to be denounced with pretty much the same words as those with which my former advisor, one of the pioneers of the field of nanomedicine, Mauro Ferrari, was sacked from the position of the president of the European Research Council (ERC), three months after he entered the office, namely “due to poor conduct in office, exploiting the position to further his own projects, and for consistently failing to represent the interests of the ERC”¹⁷¹⁶. Another example highlighting this erroneous emphasis on self-promotion in America comes from the comments offered by contestants in competitive reality shows to the question why the jury of judges should select exactly them as the winners. Namely, after years of watching such shows on the American continent I have yet to stumble across an answer not necessarily akin to Miss Wyoming’s placing the pageant crown she had received from the jury onto another person’s head¹⁷¹⁷ or Alan Sillitoe’s rebellious borstal boy’s leading a running race and then stopping a stone’s throw before its end to let his contender cross the finish line first¹⁷¹⁸, but at least humbly refusing to articulate one’s own supremacy over other competitors and calling for an objective and unbiased judgment. Rather, the response given to this question almost always comprises a list of qualities for which one should be considered better than anyone else. In contrast, the finale of the Yugoslavian edition of the Survivor reality show that took place in Costa Rica in 2012¹⁷¹⁹ ended so that the only one out of four finalists who praised himself and asked for the jury to vote for him received no vote, while the contestant who merely insinuated that the grand jury could have reasons to vote for him received only 20 % of votes that the two remaining finalists, none of whom called for themselves to be voted, collectively earned. The message was clear: whereas self-praising appears as a natural activity in the American culture of individualism, it is considered as quite unethical and revolting in the Yugoslav culture of communality. Yet another situation that exemplifies this dichotomy between the spirits of individuality and communion occurred to me when I was about to hop into a swimming lane at the UCSF Mission Bay pool and casually asked a person that was already swimming in it if I could “share a lane” with him, to which he replied, “No, but we can split the lane”¹⁷²⁰. Immediately, the vision of Walter Benjamin’s destructive character, who “knows only one watchword: make room”¹⁷²¹, popped up before me, and I was prompted to think. For, this minor difference upon which the fellow American swimmer insisted has hidden a sprout from which a cultural clue of an enormous relevance could be derived. Namely, just as some people see in a cup of water filled to a half of its volume a half-full cup while others see merely a half-empty one, so do we too have a choice of seeing the process of dividing

¹⁷²⁰ Speaking of swimming lanes, I noticed that every time I moved to an empty lane after I shared another one with another, one thing or another would go awry. It would be as if the whole heavens started to shake with unpleasantness in view of the disgraceful act of moving away from another and favoring solitariness over communion. Truly, Nature has a lesson to teach us at all times, thus I say.

¹⁷²¹ “The destructive character knows only one watchword: make room. And only one activity: clearing away. The destructive character is young and cheerful. For destroying rejuvenates, because it clears away the traces of our own age; it cheers, because everything cleared away means to the destroyer a complete reduction, indeed a rooting out, out of his own condition”, says Walter Benjamin in his essay from 1931 titled *The Destructive Character*. Quoted in Sandra Bettencourt’s *Materialities of the New: Processes of Destruction and Construction in the World of Einstürzende Neubauten*, In: *Keep It Simple, Make It Fast! An Approach to Underground Music Scenes*, edited by Paula Guerra and Tania Moreira, University of Porto, Porto, Portugal (2017).

what we hold to parts which we will continue to hold and parts which we will give to others as communal sharing or as selfish splitting. The picture of a pouty kid standing next to his pregnant mother and holding a banner saying “30 weeks” was consequently interpreted by my American buddies as a child not looking forward to learning the art of sharing when his new sibling arrives to the household and not as a sign of sympathy for the period of physical hardship that his Mom goes through, as I associated the child’s gesture with. And with many American adults never succeeding in learning this art of sharing that is apparently so challenging to master in their heads, the educational ball of yarn on their continent keeps on rolling on the grounds of disgraceful capitalistic values of greed, selfishness and competitiveness, allowing “the priest to continue where the nurse began, and thus the child impose on the man”, as John Dryden put it in his aforementioned 17th century poem, *The Hind and the Panther*. Whereas most of my native compatriots would look after the act of sharing and the openhearted embracement of another that the benevolent gestures that redirect the limelight from oneself to others bring forth, it seems as if the attitude of winding up in a cocoon and drawing boundaries that self-consumedly separate one from another is more common to the American culture, at least when we talk about the spiritual realm. After all, as each way in Nature, the symbolism of which stands at the core of the Philosophy of the Way which I am weaving throughout the pages of this and other books of mine, is an epitome of something that simultaneously unites and separates things in life, it is only a matter of perspective whether we will see the way as a means to unification or as a sign of inevitable separation, in spite of the fact that in the dialectic synthesis of the two lies the key, as much as it is concealed in the balance between the empathic spirit of communion of the Yugoslavian side and the reserved and individualistic spirit of the American pole, as the Way of Love could remind us. Indeed, looking at the old Yugoslav flag, with a single star decorating its center, as if symbolizing a grand unity of all people, and then shifting one’s view to the American flag, with a multitude of stars lying scattered on it, as if accentuating social diversity and versatility, whereby being different and original and thereby mildly distancing one’s heart from others is implicitly acknowledged as desirable, we could glimpse subtle signs of fundamental differences between these two cultures. Note that “individualism” in the connotation with which I have used it here is not necessarily the form of individualism that typifies the Way of Love wherein one digs moves and the music of one’s words straight from the bottom of one’s heart, without intentions to comply with the behavioral norms set by the social environment, and yet directed to bless and beautify every piece of the world around us, alive and inanimate alike, knowing that the heart of divine Nature beats in each and every one of the world’s details. Instead, individualism that I have in mind is the one that actually reverts itself in its extreme and becomes a frozen form of social conformism. It is individualism that is so obsessed about oneself that makes one eventually become a slave of social standards and turn into a minimally creative creature. Another example of how promoting a quality on one scale can lead to its annihilation on another and *vice versa* as well as of how, to put it bluntly, saying No to a part can mean saying Yes to the whole and *vice versa* comes from the notion of diversity: namely, by fostering the mixing of races and cultures in schools and neighborhoods, homogenous blends thereof are obtained and traits typifying each of these cultures alone prior to their mixing are being lost, resulting in a social system that the US is: diverse locally, at the level of a city or a school, but lacking diversity at the global level, where everybody speaks with the same dialect and virtually no regional cultures exist except for rare cases such as the Amish or the traditional Navajos. In contrast, in Europe, where driving along a straight line can sometimes immerse one into a region of a completely different dialect, lifestyle and understanding of life after each 10 miles or so, the rigid preservation of local cultures by preventing

their uncontrolled fusion has been a norm. Now, the difficulties with which lines separating individualism from collectivism or diversity from homogeneity are being drawn neatly demonstrate that extremes often blend into their opposites, which is why I repeatedly claim that an absolute responsibility and attachment to it all would equal no responsibility at all and an absolute freeness. Be that as it may, no wonder is it in view of this that Yugoslavia had been a fertile ground for socialist political movements for over a half of a century, whereas America has always showed inclination towards adopting capitalist policies. Capitalism, based on ruthless manipulation and abuse of another, naturally feeds on individualism, on non-empathic disconnectedness from one another, the reason for which literal distances between people have been deliberately conceived and put in place by the cunning crafters of the social order in America. Knowing that society is a complex cybernetic phenomenon wherein all segments are interconnected, they have acted simultaneously on a multitude of social levels to make sure that the sense of social cohesion does not prevail over the individualistic sense of isolation of one human being from another and that the working force does not lose its potential to be manipulated and utilized for the imperialistic, supremacist goals of the country. Like the manipulative misleader of the recursive, six-step-forward-six-step-backward story about Sátántangó, cunningly convincing the villagers that to establish a collective farm they must scatter across the countryside for an indefinite period of time, thus leading them to a quiet cataclysm rather than to welfare¹⁷²², so have the American leaders dispersed the population of this country to minimize the levels of cordiality and communality amongst the people, the fuels that drive every civil revolution against injustice, inequality and ruthless exploitation by the despots, “down-pressers”¹⁷²³ and plutocrats. The limits of the job market and the limits of the housing market are further tied so well together that people in search of career opportunities are forced to frequently change their domiciles, which cuts their communal roots very soon after they are being spread in a specific social milieu, causing a sense of alienation from the society and preventing any powerful collective organizing momenta that call for revolution to be sparked. As a result of this fosterage of continuous migrations in order to keep the spirit of foreignness amongst people alive, the concept of home, which is sacred to most European minds, has underwent centuries of continuous debasement, and home, in the heads of most American people, has been reduced to a bunch of soulless dollar signs. Alas, I, always seeking soul and nothing but soul in life, have been on the quest for a holier home than this, a home that, as Pico Iyer had it, “is not just the place where you sleep; it’s the place where you stand”¹⁷²⁴, but this utopian attitude did not only surprise my colleagues and supervisors at work who insisted that home is but a “financial investment”¹⁷²⁵, but it also clashed with the premises of the corrupt social norms fueled by the unrighteous American socioeconomic system and, as ever when holiness is brought into an unholy system, led to my professional and material demise, pushing the livelihood of me and my American family to the brink of existence, all because of the search for home, in the most sublime, but also the most palpable of senses¹⁷²⁶. Adding up to the

¹⁷²⁶ Towards the end of my 30 or so pages long response to the faulty accusations of poor performance as a faculty by the dean of the school at which I worked as a professor, I noted the following, referring to the cancelation of my trip to Belgrade, where I was to go to put a flower on my mother’s grave, after I criticized the school’s administration for its poor graduate program, on which the research excellence depends: “I will end this response by calling the readers to observe the broader, more archetypic parable projected on a simple level: a giant man has stood up against a little

individualism-fostering effects produced by continuous migrations of people from one workplace and domicile to another, the appalling suburban planning, where spaces for communal gatherings and civic engagements are rarer than mermaids in the sea and where even public transportation is viewed as a menace smelling of communism, is a part of this plan of the puppeteers behind the scene to atomize the American populace, the goal of which they have largely succeeded in, having created an antisocial society where loneliness and isolation from the neighbor are the norm and where the level of trust and solidarity have been continually declining for the last half a century¹⁷²⁷, going hand-in-hand with the rise of gated communities, exclusive private spaces and other forms of socioeconomic segregation serving as living proofs of the sad, sad victory that property rights won over civil rights. American suburbia, as such, brimming with gates, guards and other objects and stances that reinforce the sense of isolation, have a long way to go before they would reach the lifesaving spirit that the Serbian songwriter, Đorđe Balašević found in a pastoral scenery dominated by a linden tree, first planted and then burnt by the fellow men, evoking it in the beginning and at the end of his memorable song, *Jednom...*¹⁷²⁸, and squeezing the story about the troubles of the urban life in-between, thus insinuating that musing about the passing of life in the shade of a tree that was understood deeply, with one's whole heart, as per the lyrics of the song, lies the salvation for our souls. Alas, the conditions for such commotions of the heart by the ties of commonality between people are largely missing from the American suburbs and cities alike, in part because of their incompatibility with the capitalist philosophy rooted in the ruthless exploitation of the people, which is possible only insofar as these people are kept apart and not united by the spirit of solidarity. And when the roots are rotting and only the symptoms of the societal ills treated with the medication taking the form of rigorous jurisdiction and various forms of segregation, we end up with the American way of life, thoroughly antisocial and sickening for the spirit in spite of the superfluity of the surface. For, high-quality education, which includes the dissemination of moral and aesthetic values alongside the practical know-how, as well as the investment in art and humanities and provision of conditions for the connections between people to start quivering once again with strong emotion, honesty and love are the key to healing an ill society, and yet this approach goes against the grain of the capitalist philosophy, where the profit is, as we know, maximal when people are kept at a fair distance from one another and spurred to work not in conscious favor of, but against each other's interest. Every once in a while these shadowy puppeteers introduce bits and pieces of socialism into the society, but only to sinisterly laugh whenever, expectedly, it fails, being the only possible outcome in a world pervaded by the ideals of isolationism, self-centeredness and exploitation of another as the route to acquisition of material wealth. One of the examples is universal healthcare, spoon-fed to people only to see the concept break down because of becoming abused by weirdos who have become mentally ill in the first place thanks to the isolationist culture of capitalism, while the other example may be cities in decay, from Detroit to Chicago, as the result of worker unions, corrupt by their very nature in a society dominated by collective desensitization with respect to the feelings and needs of the neighboring souls. Therefore, when socialism in these American urban centers reveals its darkest side, darker than in any big European cities, it is not this political philosophy *per se* that is to be

one and denied him to go home. If ever in the history of humanity a conflict arises between one who wishes to go home, humbly, and one who authoritatively denies so, I will have no doubts as to who the moral victor will be".

¹⁷²⁷ See Jared Keller's Americans are Staying as Far Away from Each Other as Possible, Pacific Standard (June 11, 2015), retrieved from <https://psmag.com/social-justice/americans-are-staying-as-far-away-from-each-other-as-possible>.

blamed for its inefficiency or sheer vileness, as it is common among the American proponents of capitalism, but rather capitalism *per se*, which uprooted people from the soil of communion, wiped out the sense of social responsibility from them and reduced their altruism to nil, rendering them incapable of functioning properly in a perhaps less productive, but inherently fairer socialist system. Weirdly enough, but this even helps justify the pathological fear of socialism nurtured among the American traditionalists. This fear, namely, is justifiable on the basis of the argument that if socialist countries have certain degrees of corruption in them and people commonly exploit the social benefits, then a country that transitioned into socialism from capitalism, where man is taught better than by any other political system how to manipulate the social fabric for personal benefit, would likely find itself in a state of total socioeconomic collapse. The third example in this context may be employers, like myself at one point in my career, who would want to create workplaces that provide unconditional support to the employees and rely on no pressures and threats whatsoever to foster productivity; in a milieu of nil social consciousness, like the one America has nurtured to a great extent, such experiments, as I can heartily attest to, are destined for failure. One example suffices here: namely, it was early 2008 and I was a postdoctoral researcher who had come to the US for the second time a few months earlier. Wanting to see a dentist, I did not have to go very far because my office and research facilities were situated on the second floor of the dental school, but I was told that there are two offices in the building, the student one, on the third floor, and the faculty one, symbolically in the loft, that is, on the top, fourth floor of the building. When I consulted my colleagues about which office I should go to, they replied without hesitation that I should go to the faculty one, where professors and doctors of science, like me, should be seen, whereas the student practice, they deemed, was for lower-income people. Shocking as this seemed to me, a socialist at heart, I could not digest this segregation and I refused to go to the loft; instead, I booked my appointment in the student practice, so that I could be side by side with my people, the poor and underprivileged ones. Alas, when I finally got a chance to talk to the dentist there, after many hours of waiting despite the scheduled appointment, I was reprimanded for the chaos I was causing by making the queues even bigger and preventing people with emergencies to be timely seen when there should be enough slots for me in the loft, where my insurance would allow me to be treated anyway. The student practice, comparatively understaffed to be able to cope with the number of incoming patients with emergencies, had no way of timely checking and treating all of them, for which reason I felt as if my decision to go to it, albeit sublimely socially conscious in my opinion at first, ended up being seen as socially inapt and to some extent even selfish. This event became one of the first seeds of what was to grow soon into a strong and sturdy trunk of an idea that acting like a good socialist in a capitalist system only makes the problems of the latter worse and that, as ever, the solution to a problem is least painfully brought about by a systemic change starting from the political foundations; this insight would turn me a couple of years later, while I was still a scientist at UCSF, into a politician rather than an activist, allowing me to meet one of the darkest sides of humanity, the privilege of strictly those who have come to acquaint the ugly head of politics. And yet, in spite of my adopting far left political views so as to disseminate the socially aware, altruistic spirit in a milieu where such thinking has largely atrophied, all this time I have known that, as it usually happens when we invoke extremes in our philosophies, the most favorable stances are found on the middle grounds, which is why Martin Luther King claimed that whereas “capitalism inspires men to be more I-centered than thou-centered, communism has reduced men to a cog in the wheel of the state... communism fails to see the truth in individualism, while capitalism fails to recognize that life is

social”¹⁷²⁹, and called for finding a balance between the two. For, while privileging individuality over communality, which we have seen in the West, creates a sense of alienation and causes systematic deprivations of empathy, the fuel for our spiritual progress and the purpose of our stay on Earth, favoring communality over individuality, which we have seen in the Eastern Europe and in China, deadens the willpower and diminishes the wondrous cravings to dig out the drives for action from the deepest and the most divine wells of our being, so as to render us different from anything that is out there, unique, one and only in the universe as a whole, neither of which alone provides for ideal grounds for the growth of the most opulent trees of knowledge. Even though one could argue that, as in the story about the Wizard of Oz, the wicked witch of the West is far more dangerous than her sister from the East and that neglecting communality over the extensive emphasis on individuality is incomparably more threatening than the other way around for both the future of the human race and the spiritual wellbeing of man, who may need to admit his orbiting the Sun instead of claiming to be the center of the Universe in order to save himself from tremendous falls from grace, both of these extremes present aberrations from the perspective of an ideal mindset, which is woven out of parallel strands of communality interlaced by the perpendicular threads of individuality and made, as such, into a resilient microcosmic fabric. Should we allow the individualistic spirit to eclipse the one of collectivity, intrinsically toxic, cancerous relationships with our social milieu are bound to result, but should our appreciation of communality become so immense that it completely deprioritizes attempts to be one and only, different from anything that is, a sun of spirituality in the social swarm of dim stars, icy comets and black holes, we would be inclined to transform into yet another dull and uninventive “brick in the wall”¹⁷³⁰ and squander our untapped and limitless spiritual potentials. Two diametrical opposites, both imperfect in their own realms, thus present perfect grounds from merging them into a synergetic concoction wherein the flaws of both would be transcended by their respective strengths. Correspondingly, nothing but a combination of the two, as prophesied by the Way of Love and as represented by the image of the crucified Christ with one arm extended in the direction of the commandment that demands love of another to be equal as love for oneself (Matthew 22:39) and another one spread towards the commandment that calls for meditative immersion into the inner spheres of our spirit wherefrom the guiding voices of the Divine originate (Matthew 22:37), can be said to be the launch pad for our flights to the stars. Still, such are the forces of the cultural soil in which individual mindsets are being transplanted that they naturally begin to reflect the predominant social values after a sufficient amount of time of dwelling therein: more sociably predisposed Yugoslavs would thus regularly adopt more self-centered traits during their stay in the US, while the Americans, more or less careless about what others will say about their opinions or actions, become more socially aware and self-conscious of their acts after residing for some time in Europe. In that sense, when Teddy is given the advice to “not become a stranger” by his wife as he leaves for the US in Harold Pinter’s *Homecoming*, a play in which cold, utilitarian and passionless heed of an Americanized PhD degree holder is confronted face-to-face with the blood, sweat and tears, the lust and the pathos of his European family background, it depicts one such inevitable process of individualization and evaporation of the social spirit in those who embrace the American culture as their own. After all, some of this great adventurous and individualistic spirit that made the predecessors of modern Americans cast off their traditions, depart from the home soil, travel across the ocean and set on a new land may be still flowing in their blood, even

¹⁷²⁹ See Grace Lee Boggs’ *The Next American Revolution: Sustainable Activism for the Twenty-First Century*, University of California Press, Berkeley, CA (2011), pp. 92.

more so here, on the West Coast, the final post of the pioneers' and lone frontiersmen's journey away from the clutches of collectivist dilution of the sense of individual identity, earning America a righteous comparison with "a pool table that has been tilted so all its hopes and dreams roll to the west"¹⁷³¹. Every time I watch a baseball game – a sport that is, just as other sports in America, deprived of greater-than-life passions steaming from the players' heads and hearts, let alone debilitating in its simplicity and lack of strategic complexities – I cannot help seeing remnants of this great fugitive nature, where the aim is to go farther than anyone has ever been to, throw the ball of creativity even farther away, make everyone run to catch it and then make a home-run as quickly, with the victorious wind sifting through one's hair, as one can¹⁷³². And no doubt that great ideas and inventions can arise from spurring individualistic natures in human creatures, as the monologue offered by Karla to Dan in Douglas Coupland's *Microserfs* indicates: "You have to remember that most of us who've moved to Silicon Valley, we don't have the traditional identity-donating structures like other places in the world have: religion, politics, cohesive family structure, roots, a sense of history or other prescribed belief system that take the onus off individuals having to figure out who they are. You're on your own here. It's a big task, but just look at the flood of ideas emerging from the plastic!"¹⁷³³ When a giant Pygmalion repented in my vicinity one day over his fate of wondering how great foreign people's cultures on the American continent are, while he, himself, felt as if he had not even a fistful of it, all that swooshed through my head was the vision of the Little Prince, homeless and outcast and exactly as such able to curiously journey from one planet of human worldviews to another, enlightening them all with the stardust of divine grace falling off the eyes of his heart. On the other hand, the more one values the power of Wonder in one's dreams, while neglecting its complement in terms of Love, the less of the fulfillment for one's soul will one find in these heedless voyages from one place to another that have been baptized as authentically American. Then, the words of J. H. Kunstler could logically apply, all to the sound of heroin-like emptiness of the Talking Heads' *Road to Nowhere*¹⁷³⁴ and accompanied with the vision of bleak suburban US sprawls that strangely dare call themselves cities: "Our obsession with mobility, the urge to move on every few years, stands at odds with the wish to endure in a beloved place, and no place can be worthy of that kind of deep love if we are willing to abandon it on short notice for a few extra dollars. Rather, we choose to live in Noplace, and our dwellings show it. In every corner of the nation we have built places unworthy of love and move on from them without regret. But move on to what? Where is the ultimate destination when every place is Noplace?"¹⁷³⁵ Cutting bonds of cordiality and running away from anything that is "national, free, brotherly, comradely and bonded in friendship"¹⁷³⁶, as Jean-Luc Godard put it in his manifesto, in which he called for an artistic struggle against the total opposites of these values that typify the US industry that "rules cinema the world over"¹⁷³⁷, is thus a tragic natural corollary

¹⁷³¹ See Geoffrey Himes' *Surf Music*, In: *Rock and Roll: An American History*, retrieved from http://teachrock.org/wp-content/uploads/surf_himes_with_maia_edits_2.pdf?x78936 (2015).

¹⁷³² As pointed out by Pete Hamill on the cover of Bob Dylan's legendary *Blood on the Tracks*, "Here at home, something died. The bacillus moved among us, slaying that old America where the immigrants lit a million dreams in the shadows of the bridges, killing the great brawling country of barnstormers and wobblers and home-run hitters... Poor America. Tossed on a pilgrim tide. Land where the poets died".

¹⁷³⁷ *Ibid.*

of being immersed in the archetypical American atmosphere dominated by the spirit of individualism. It contrasts the spirit of communality that is spontaneously developed in societies where a profound sense of belonging and soulful intimacy with the native place is spurred since the earliest age, where the youngest and the oldest coexist under the same roof, as pointed out by cab driver Solo, yet another genuinely communal soul whose descent into this culture of individuality and a devastating toll that it takes on his wellbeing is portrayed in *Goodbye Solo*, a movie directed by Ramin Bahrani, the same Iranian-American moviemaker who would a year later go on to release another, this time shorter movie where the journey of a non-biodegradable plastic bag is depicted and which ends with the bag's plea to its creator, "I wish you had created me so that I could die"¹⁷³⁸, as if wishing to tell us that living in such a manner that our tiny self is made to die with every passing moment by selflessly serving the community is the only way in which ultimate happiness and bliss could be reached in this and, quite possibly, any other form of life in the endless universe that engulfs us with its mysterious greatness. Now, this dichotomy between individualism and collectivism can be readily recognized in the domain of human behavior: namely, whereas people in Yugoslavia and many other European countries frequently show implicit interests for what other people think of them, which often results in deadpan serious and almost pathologically constrained behavior, Americans are well known for their childish carelessness as to what their neighbors might think of them. Many people, therefore, refer to the so-called SF state of mind, which may literally be the sci-fi one in its progressiveness in the domain of freedom of expressions, or sometimes even to the Californian state of mind as the one that at its core has the ideal of acting without any worries with regard to what other people may say about it and in what light they will judge the subjects. Though impressed by it at first, it took me a while to realize that only when I recognize the obsolescence of the so-called SF state of mind would I be able to instill an authentic SF state of mind inside me. And I did, having seen prejudiced conservatism and blunt favoritism hidden behind the veil of all-embracing liberalism; scanty stiffness sold as poetic progressiveness; artsy-craftsy shallowness in place of true artistic depth; moneymaking, middleman poise that sells fog instead of sunshine, all under the pretense of tech savvy mambo jumbo; the passing of software coding as high tech; exuberance on the surface eclipsing in value that brewing in one's heart; judgments of people based on clothes they wear more than on the richness of their inner worlds; and so forth. And this is how I became first a privileged recipient and then a dedicated messenger of visions of truly progressive, futuristic, sci-fi ways of being. For, only when one recognizes the fadedness of the current ways of expression and thinking do the doors open for their further evolution on the ladder stretching from earthiness to starriness and from animalism to angelical beatitude. Still, though largely at stake in recent times, no one can dispute that the most progressive trait of the American way of being and seeing the world has traditionally been the tolerance stemming from the famous Christian norm instructing us to avoid judging others (Matthew 7:1). It is the same trait that attracts Europeans feeling repressed in their native conservative milieus and repels them when it gives rise to free exhibitions of crude and barbarian instincts latent in humans. In any case, the pressure to adopt a perceptive mindset according to which "the public face is a data-collection inducing function" rather than a judgmental one according to which "the public face is a decision inducing function", using the Myers-Briggs psychometric terminology, can be said to lie in the heart of the jazzy Californian culture, in the depths of which one could hear the Liberty Bell ringing with the profound message inscribed on its surface: "Proclaim Liberty throughout all the Land unto all the Inhabitants thereof". In my opinion, this mindset presents the first and foremost reason why an

¹⁷³⁸ Watch *Plastic Bag* directed by Ramin Bahrani (2009).

epithet of “the land of freedom” is regularly attached to this country, and why most Americans could be seen as true fans of the First Amendment, which emphasizes freedom, freedom and freedom, first and foremost. Hence, in the lowly raised hand of George Washington sculptured at the place where he took the oath of office as the first American president, right at the steps of what today is the Federal Hall on Wall Street and where the Dutch settlers “raised the wall in the face of boundlessness”¹⁷³⁹, as Speed Levitch pointed out, this eclectic New York City guide and a poet of paradox did not recognize apathetic frigidity, but “a declaration of the American need for intimacy”¹⁷⁴⁰, a parable of the lack of need for the aggressively raised hand as a sign of authority and imposition of strict rules on behalf of leaders in this “land of freedom”. And so, with their minds naively resting on the surface of it all, Americans taught to body forth the message of the First Amendment in their behavioral clichés can afford being silly, ignorant, decadent or whatever else, without really being obsessed with the opinion of their fellow beings, as long as their inner consciousness tells them they’re right. They live more in accordance with the Aristotle’s norm according to which “the high-minded man must care more for the truth than for what people think”, although at cost of neglecting the beauty of caringly looking at the world from the eyes of another. For, more often than not, unfortunately, Californian coolness is not that of Steve McQueen going on the Cooler King in the Great Escape, brightly banging a baseball against the slammer wall; rather, it is that of a socially inapt, sun-shaded soul on an awkward run to navigate through life with the only aim to evade any humane contact with nearby creatures while still sipping the precious nectar from their souls to a largest extent possible. As always, however, it is a balance between these two extremes – communal and individualistic - that we should strive to attain. Recognizing a beautiful responsibility and care for the worldviews of others in the former, Yugoslav attitudes, and faithfulness to one’s own heart as the fountainhead of creativity in the latter, American approach may present the first step. After it, we should make sure to follow the middle Way wherein we let our creative intentions freely and sanely become expressed from the core of our heart and yet always have the enrichment of eyes of another as their deepest purpose. Walking along this equilibrium between individualism and collectivism, we will realize that we are actually heading along the marvelous path of the Way of Love.

S.F.4.24. Speaking of the Liberty Bell and the First Amendment, recall that the freedoms so broadly proclaimed by them could be easily brought into question. Namely, after digging deeper into the nature of the modern American society one could recognize that the First Amendment in reality protects the delivered speech in question, but not the speaker as well. Or, as Victoria paraphrased this principle, which seems liberal on the surface, but is, like many things authentically American, anti-liberal at its core, “there is freedom, but there are also consequences to be faced for being free”. Namely, the US constitutional law stipulates that the constitutionality of writings or any other acts be contingent upon whether it creates a social or organizational distraction rather than whether it is faithful, benevolent and beneficent for all. In other words, despite all the loud proclamations of the freedom of speech and trumpeting about them on each corner, if these very words were found to create distraction at my working place, my employer would have all the right in the world to lay me off, irrespective of the political truthfulness, good intentions and relevancy that these words bear. Furthermore, the US constitution insists that no private institutions are required to conform to the ostensible freedom of speech granted by the First

¹⁷³⁹ See Timothy “Speed” Levitch’s Live from Shiva’s Dance Floor, available at <http://www.youtube.com/watch?v=5qsPNgIusrA> (2012).

¹⁷⁴⁰ *Ibid.*

Amendment¹⁷⁴¹, implying that any workers in the private sector, who, by the way, outnumber workers in the public sector fivefold¹⁷⁴², can have their freedoms of behavior crafted almost any way the policies of the employers dictate. Every society, of course, needs to set limits in terms of various rules and regulations for freedoms to sprout within it and while socialist countries of Europe have given their states and governments such roles to maintain the order so that regular folks can nurture their freedoms of opinion and speech and feel free, for example, to criticize their employers as much as they wish without the fear of job loss, these centers of regulation have been decentralized in America, taking the form of checks and balances at various levels of the social organization. This crucial difference between Europe and America means that a blue-collar worker in Europe can afford an open criticism of the state, of the government and of his employer as much as he wants it, while the regular Joe, that is, a person at the same level of the social hierarchy in America, has been reduced to an obedient slave wholly deprived of the freedom of speech, who must rather pretend to be in love with everything around him, including the things that exploit him most, and swallow this humiliation for the sake of survival. For this reason, after years of watching stiff soulless sticks in place of people with real thoughts and real emotions, I am free to say that the only freedom in America, the alleged “land of freedom”, is the freedom to fire an employee anytime the employer wants it, which is, once again, a selective freedom, freedom bestowed upon the powerful capitalist, but not the powerless workers and regular dudes, too. In Europe, in contrast, such freedoms to fire at will are, more or less, nil, but then there are, in turn, freedoms to express one’s moods and feelings anyway one wants. This disparity reminds us that, deep down, every natural system must have steady nodes set so that freedoms can reverberate throughout it. It would be silly to say that there is no freedom of speech in America, but this freedom is solely in the hands of people with power. In the world of science, which I have inhabited in America for quite some time, this freedom is in the possession of Edisonian scientists, who are made of one-third innovation, one-third self-promotion and one-third the imperialistic love to manipulate a fellow human being. If only one out of these three things is missing from a person’s mental makeup, he can say goodbye to success in science and I, myself, who have, like Nikola Tesla, been made of only the first of these three character traits, have been predisposed more to a life in the garbage can than to a stellar career in America of the early 21st Century. At this point in time, it is a country where the most progressive voices get to be ruthlessly silenced by the dictatorial threats of democratic mediocrities. But, in the end, what else but the deprivation of liberty and systematic suffocation of creative voices is to be expected from a society whose constitution and the bill of rights, under the pretense of the love of liberty, guarantee the freedom of speech, but not of the speaker too? Step by step, thus, the new American society has begun to increasingly approach the authoritarian visions of George Orwell’s 1984, wherein once boldly proclaimed freedom of thought has ceded its place to ever more pervasive posing restraints on unbound expressions of emotion and thought and wherein Paul Revere’s Freedom Trail can be said to be but an ironic leftover of the dream of freedom in this country: a load of bricks and nothing more. For, as I could exemplify by my own fate, there is always a chance that the mention of a single word, let alone an explication of a complex stance one adopts, could be found insulting by the mediocre majority, which would afterwards mob and persecute their proclaimer and bring about significant, oftentimes tragic repercussions for his wellbeing. Trivially speaking, if a person were to merely

¹⁷⁴¹ In other words, the US federal law assigns these freedoms to private companies, not their workers, reflecting the anti-proletarian, pro-capitalist and abusively usurious nature of the American social and economic system at its core.

¹⁷⁴² See Nick Gillespie’s Private Sector and Public Sector Job Trends, 1982 – 2012, Reason.com (June 11, 2012), available at <http://reason.com/blog/2012/06/11/private-sector-and-public-sector-job-tre>.

call someone using a denotation that is deemed passé or socially unacceptable, or start yelling with his hand clapping the mouth, without having any ill intentions in mind, he would be undoubtedly risking his reputation because such words or gestures might be found offensive based on the historic connotations that they invoke. Yet, if this trend of crippling the freedom of expression continues to grow along the same line, we may end up witnessing prohibited denotation of sexes because of similar historic reasons and then of thousands of other traits that make humanity beautifully diverse, which might indeed depersonalize the human societies in the end and reduce us all into impersonal ID numbers, as in the spirit of Orwell's 1984. Liberalness of letting everyone express freely and honestly has thus been gradually vanishing as the American culture appears to be walking in the direction of a totalitarian society, such as that of Soviet Union, which it intensively derided once for its lack of freedoms, while incarnating Friedrich Nietzsche's ominous thought: "He who fights with monsters should be careful lest he thereby become a monster; and if thou gaze long into an abyss, the abyss will also gaze into thee"¹⁷⁴³. For, like Howl, a wizardly character from the Studio Ghibli anime, *Howl's Moving Castle*, whose body turns into a stinky bird with hellishly steaming skin, slimy feathers and giant claws every time he engages in a battle against the firebirds that traverse the idyllic skies of his fairyland, so does the nature of life dictate that we too start to mirror the very same qualities that we intensely abhor in others whenever we fail in the game called understanding and sympathy and resort to accusatory finger-pointing or an open assault, verbal or physical, against them. In such a way, one could argue that the intense loathing of the Soviet repressiveness is to be blamed for the fact that the American society has become such that it logistically reverted the original principle behind the First Amendment, while symbolically and quite sinfully, I may add, embracing words and superficial meanings of expressions (= maps) instead of hearts of intentions and the windmills of willpower (= territories), thus giving rise to a spuriously puritanical society in which millions of perfidious porn watchers would shamelessly criticize someone like Melissa Petro¹⁷⁴⁴ for regretfully looking at her past, accuse her for the same sins that they clandestinely dream of and hypocritically call for her open rejection by the society. Although "condemnation of a hypocritical Victorian morality rooted in puritanism"¹⁷⁴⁵ has been the theme of countless works by prominent artists on the British and the American soil, including those by Charles Dickens, the Brontë sisters, Oscar Wilde and David Wark Griffith, ignorance of this vital social critique is still more of a rule than an exception among the commoners. Somewhat similar to the way in which the genuine principles of the Christ's teaching have been warped by the large body of Christianity practiced in the present and past, we could be sure that practically any human society will succeed in distorting the idealistic teachings sown in its soil into its total opposites by using the tool of hypocrisy. The voices hiding behind the veil of progressive thought will thus always be around to disingenuously act and invite the prophets to exclaim outcries akin to those offered by the Christ: "This people draweth nigh unto me with their mouth, and honoureth me with their lips; but their heart is far from me; but in vain they do worship me, teaching for doctrines the commandments of men" (Matthew 15:8-9). Yet, the presence of those who would bravely stand up against such hypocrisies and obsolete laws in effect will remain unspoiled, as they will always be here to silence the sinners of the world by inviting

them to throw stones at adulterers and other outlaws if they only be free of sin (John 8:3-11). For, even the Christ never claimed that he, himself, is free of sin; on one occasion, he is known to have said, “Why do you call me good? None is good, save one, that is, God” (Luke 18:19), and many people might agree that judging others and bragging about their skimpy acts has hardly ever made one a better person. Instead, forgiveness, unconditional love for all and nonjudgmental views of the world, starry and mystic or bright and sunshiny, all in accordance with one’s own nature, is the key that unlocks the secret gates through which the glow of divinity within our being is released to the world. As the Christ defended the prostitute from the angry crowd, the Bible says that he “stooped down, and with his finger wrote on the ground, as though he heard them not” (John 8:6), which brings to mind Archimedes’ circles in the sand and the timeless remark he made to a Roman legionary who was about to wipe them off with his boots, *noli turbare circulos meos*, lifting the world of spirit and fancy far above the one of politics and war thereby, and thence the analogy of the 15th Century mystic, Nicholas of Cusa, by means of which he claimed that rational knowledge is similar to an n-sided polygon nested inside a circle. The more complex and sophisticated it gets, the more sides pile up on it and it becomes ever closer to the circle; yet, as he claimed, the magnified close-up of its edges would reveal the tremendous difference – instead of a graceful, curved line, it would still be composed of a multitude of obtuse edges. Thus, becoming an enlightened person will not be possible for as long as we are confined into purely rational, polygonal thinking that insightfully judges the world, even if it is of an incredible richness; the only way to make a quantum leap in our worldviews and reach the ideal of a circle, the symbol of unity of all things, is to accept others as imperfect as they are and find lovable traits therein that would bind our hearts thereto, reaching an all-illuminating sense of unison thereby. On the wings of one such divine sense we could fly around, lightly like an angel with a trumpet in our hands, and whatever we’d do or say would shine a light onto others, while we would stream on our ways to become a genuine epitome of the Liberty Bell, ringing everywhere we’d go with the cosmically cheerful sounds of heavenly freedom.

S.F.4.25. The easiness with which friends in America depart from each other has always been fascinating to me. At first I was a bit shocked to hear only the briefest greetings, if any were said at all, upon having my acquaintances leave after spending an entire evening together in a merry mood. “I gotta cruise” could easily be the only thing said, followed by turning one’s back and simply walking away, leaving me somewhat intimidated and wondering if they enjoyed my presence at all. Even I, who have said countless Irish goodbyes, having disappeared into the night, like a ghost, without saying anything to anyone oh so many times, have found this custom of stepping out of the temporary union of hearts with lightness and ease, as if nothing drags one back and nothing in one’s body language speaks “I will cherish these moments spent together from here to eternity; thank you from the bottom of my heart for them”, appalling to the bone. Posing this habit against the long and comprehensive farewells customary in my native tradition, it often felt as if these brief goodbyes were a sign that my newly made friends might not be so reliable and could readily turn their backs to me should the need to request a more substantial help from them appear. Soon, however, I realized that this was merely a cultural thing and that in no way did it signify a lack of sincere amity and spirit of friendship. Looking back now to the way I acted while departing from others, I see myself almost suffocating people with my native cultural habit of expressing long and extensive feelings of gratitude and reflecting on the evening that had just passed. Over time I changed too, now in turn shocking my fellow natives with the Americanized lightness of saying goodbyes. Thus we come to Linda Ehrlich’s observation that relates to the

dichotomy between the Japanese and the American cultures: “In the United States, travel tends to be associated with the ‘new frontier’ and with a sense of hope, while in Japan the association tends to be that of poignant separation from the group”¹⁷⁴⁶. There is no doubt that the same sense of regret that fills one’s soul upon departure and most of the time eclipses the bright and joyous looking forward to upcoming destinations is deeply rooted in the European cognitive soil too, contrasting the easiness and not even a trace of sadness with which typical Americans bounce off each other. Yet, in a balance between the two, in simultaneously invoking the tears of sadness in view of our separation from endearing things and sparkles of joy in consideration of new destinations awaiting us on our journeys, lies the key to unlocking the gate to inflow and outflow of angelic energy to and fro our shiny spirit. Or, as the mysterious cab driver from the movie *Waking Life* pointed out in his leisured musings, “The idea is to remain in the state of constant departure, while always arriving”, envisioning rivers flowing into the sea that refuses not a single one of them, a delta of dreams that symbolizes simultaneous disappearance and appearance, movement and stillness, transience and constancy, all of which are epitomes of the balance of opposites engrained in the very heart of the Way of Love. Now, two main imbalanced sides exist that we could fall onto from the thin line of the Way of Love, resulting in either the tendencies to exhibit masochistic clinginess or sadistically manipulative attitudes in relationships with others. As I have always been more inclined to the former category, there is no wonder that I tended to sadly stare at people which I would be departing from. All the stars in my eyes would attain a sad sparkle with their droopy lids pressed down under the burden of my neediness for other people’s love. But then again, in one of the last scenes in the melancholic Krzysztof Kieslowski’s movie *Trois Couleurs: Bleu*, the camera encloses on the face of a girl kneeling in what seemed like a prayerful ecstasy, magnifying her eyes all until one sees an endlessly climbing stairs reflected in her pupils. They endlessly roll up, up, up, just like the physical energy of a Kundalini Yogi does. This is how I realized that life is like an endless elevator ride, in which we go up, collecting strengths within us, focusing the sunrays of spirit straight to our heart, ascending the hill of potential energy of ours, only to be then dropping down, spontaneously sending out the carefully collected rays of love for the benefit of all mankind. Should we spend too much time partying and expressing ourselves, we may end up hopelessly, deprived of our very essence, sitting on the ground floor and trying to find our way up again. But if we hesitate to express the beauty we keep in ourselves or do not find enough strength to break the barriers and dams imposed on our mind, feelings and bodies, and let go thoroughly, we may end up sitting forever and ever on top of the building, from where though we could have a beautiful view of the world below. The most fruitful scientists and artists were “blessed” with an inability to break these dams, and were thus captured on these wonderful rooftops. What they have delivered to us by sketching the landscapes they could see from above has been immaculately beautiful and enriching for the people who were not able to find their way to the heights to sublime feelings and thoughts where these angelically flying people have resided. No wonder, then, that standing on the rooftop, being immersed in the music of twinkling stars above and the millions of hearts beating with the sound of love below, has ever since been the secret landscape of inspiration that my heart painted somewhere deep in its background.

S.F.4.26. Logically, the next interesting cultural difference between the American and the European cultures comes from elevator rides. Namely, whereas in America people typically greet

¹⁷⁴⁶ See Linda C. Ehrlich’s *Travel Toward and Away*, In: *Tokyo Story*, edited by David Desser, Cambridge University Press, Cambridge, UK (1975), pp. 55.

each other upon entering an elevator and leave it with no words, not even nodding of the head, in Europe people most often enter elevators in silence, not paying attention to others, but greet people upon exiting, which is the habit I particularly noticed and thought about while living in Slovenia for four years. Now, this seemingly miniscule difference in customs can act as a trigger for an avalanche of related observations and inferences to a sensitive, Sherlock-Holmes-like mind. First of all, we may conclude that greeting people upon entering an elevator means that Americans are more open in communication and look forward to the moments of encountering others rather than parting from them. Whereas my native countrymen especially fiercely celebrate departures, almost to the point of living up to the phrase uttered by Sondra towards the end of Theodore Dreiser's ethically enigmatic *American Tragedy*, "It seems we spend the best of our time saying goodbyes", I have always felt as if the stereotypical American attitude is more oriented to the actual meeting moments. This, on one hand, corresponds well with the graveness and pathos that are woven into the core of the former culture and the jazzy joy lying in the heart of the latter. It is also indicative of the fact that the fear of interacting upon an initial contact with another creature is significantly lesser in America than in Europe. It is as if the burden of bonding and eventually having to say goodbye, painfully, stands in the back of the European mind at the entryway to a grandiose cathedral of divine spirit that a neighboring soul is, contrasting the Americans' lack of the sense of obligation to bond and utter long farewells upon coming in contact with another person. This is why Americans gladly say hello when they see you in the street, but might easily turn their back and neglect you at the party. They may think that if they are able to approach others lightly and fearlessly, anyone can do it, but this is a sign of ignorance of the different subconscious premises that people from different cultures approach the social contact with. Fear of establishing communication is, thus, in America almost a sign of mental disorder, whereas in Europe it is still a commonality. In contrast, articulating a greeting upon leaving reflects Europeans' greater inclination to adopt autistic attitudes, as if separating from others is what makes them satisfied. Usually, it is Europeans whom you will see waving at a friend who walks away all until he turns into a dot, like an airplane disappearing in the troposphere, taking that moment at times as the one of sacred and silent rumination on the beauties of friendship and sacrificial devotion to another, while letting the beams of the light of love emerge from one's heart so as to carry the departing souls towards some new horizons. When a Chinese father, Huang Haitao sent her daughter off to college by talking her from Nanjing to Seattle through 28 different countries, including Serbia¹⁷⁴⁷, this extreme would still lie closer to an authentic Serbian habit of walking a portion of the road to guide a friend home than the common American habit of separating from a friend in the blink of an eye, with no custom of sparking warmhearted feelings at the bottom of one's heart at these sacred moments. Being distanced is thus almost a norm in western European cultures, whereas appearing intimate and responsive is a norm on the North American continent. "Love will tear us apart", Ian Curtis of Joy Division sang, reminding us that being too much in love, symbiotically "glued" to another creature, is out of balance of the Way of Love, and once we find ourselves in such a state, our heart and mind will spontaneously push us in the direction of distancing from the creatures we are bound to until a balance between individuality and intimacy is established again. On the other hand, as we live in solitude, unable to relate in warmhearted and sincere ways to others, everything around us and in us will push us in the direction of expressing ourselves, making

¹⁷⁴⁷ See Yvette Tan's Dad Embarks on a 20,000 Mile Epic Road Trip to Send His Daughter to Her College Door in Seattle, *Mashable* (September 18, 2017), retrieved from <http://mashable.com/2017/09/19/road-trip-china-college-us/#YKwX7uX9mkqh>.

connections with the surrounding beings and getting closer to them, all guided by the feelings of love and empathy. Therefore, the discoursed difference between Americans and Europeans may be only a surface sign of people trying to push to the opposite sides: to the side of commonality in the American culture built on the merits of individualism, and to the side of individualism in the European cultures, many of which have been inclined to the socialist ways of governing the society.

S.F.4.27. When it comes to these political differences that marked the recent past of these two social environments, we can notice the following. Namely, many opposing individual traits endowing Americans and Europeans could be explained as springing from the different political soils of the two. For example, if one were to set two loudness detectors, one next to a typical American conversation and one next to a typical European one, there is no doubt that the value indicated by the former device would be significantly higher than that shown by the latter. In other words, Americans are way louder than Europeans. To begin with, one can point out that geographical characteristics, including climate, can be used to explain why people from colder areas speak in a lower voice, as if preserving energy that may be so precious in cold environment, whereas people from warmer areas more often tend to yell and be energetic in conversation. Linguists working in the field of language ecology could, in fact, pay our attention to the fact that by being a tool for interaction between people, language is inevitably immersed and developmentally defined by the ecological milieu in which the given society thrives¹⁷⁴⁸. With skyward-soaring seagulls, swaying coconut trees and glittering ocean waves filling one's views, alongside the tropical warmth that stimulates the senses and stirs the cauldrons of passions, one arrives at the naturalness of the birth of fiery and melodic dialects in such milieus, as opposed to far greater robustness, hoarseness and flatness of languages that originated in the cold areas of the Northern hemisphere. All of this may be no wonder to anyone familiar with the Dymaxion map constructed by Buckminster Fuller in the 1940s. Namely, the map represents colder areas of the planetary surface as those exhibiting greater temperature variations on the annual basis, which in turn leads to greater inventiveness of the inhabitants of these areas, according to the author of the map¹⁷⁴⁹. A Serbian geographer, Jovan Cvijić was, however, one of the first to elucidate such ecologically sensitive character of human beings. One of the central theses of his writings on geomorphology, released in the early 1920s, was that the characteristics of an ecosystem define the psychological characteristics of the society populating it. This hypothesis of geomorphic shaping of human traits partially explains why sometimes neighboring social cultures springing from different geographical conditions have less in common than distant cultures formed within similar ecological milieus. Having journeyed along the coasts of Dalmatia, Dominican Republic and Hawaii and had my ears leaned on sweet musical notes drifting through the air, I learned to recognize unequivocal similarities in the sound of the traditional songs of the respective coastal cultures, always being evocative of the melancholy of the sea as well as of sunshine, of splashy joys of playing in water, and of gentle, easygoing rocking of the sea waves and sailing boats on them, as if they originated from a same source, which they most probably did not. As I stood once before a mountain wall that separates Slovenia from Austria, bare and cold, surrounded by the pale and listless willow trees even in the midst of the luscious summer, first I brought to mind the lines from Jovan Dučić's First Letter from Switzerland, which reflected my impression of this landscape

¹⁷⁴⁸ See Encyclopedia of Language and Education, 2nd Edition, edited by A. Creese, P. Martin and N. H. Hornberger, Introduction to Volume 9: Ecology of Language, pp. i–vi, Springer, New York, NY (2008).

¹⁷⁴⁹ See R. Buckminster Fuller's Critical Path, St. Martin's Press, New York, NY (1981), pp. 3 - 4.

so very well - “To all my wishes now I see borders, as to this horizon; all my dreams end not far from me, like this rivulet that plunges into an abyss; all my intentions stand before me solved like the livid walls of these mountains; I feel here tied to a tree or nailed to a rock. Each row of these hills seems to have stood between us and something better and gentler”¹⁷⁵⁰ - and immediately thereafter recalled that what lay ahead of me, belonging to Austrian and Swiss territories, were Alpine landscapes flourishing on an authentic European bedrock, while what lay behind me, stretching throughout most of Slovenia and Italy, were the very same mountain ranges, although composed of the African rock, which immediately made me wonder if the mindsets standing on the solemn European stone have begun to reflect its essence over eons of their dwelling thereon, whereas those rising from the hot and fiery African rock similarly started to mirror its spirit in their far more frenzied heads and hearts. Years later, the Dutch paleogeographer, Douwe van Hinsbergen, discussing the lost, hundreds of million years old continent of the Greater Adria that once occupied the territory of my native land, would call it “a geological mess: everything is curved, broken, and stacked”¹⁷⁵¹, quite possibly explaining the predisposition of its inhabitants to engage in the endless alternate acts of chopping and conjoining a.k.a. balkanization since the earliest records. These musings next brought to mind the Slovenian story about God’s allocating pieces of the European land to different nations¹⁷⁵², giving the central position, from which all is within reach, to Germany to comply with its imperialistic cravings, a separate island, from which all could be overseen and the rest of the world reached, to the Brits to match their individualistic aspirations, and so on. Then, as modest Slovenes, who stood last in the line, came before God, it turned out that all land had already been allocated, at which point God, the celebrator of all things small and an undying giver, not taker, entered a deep thought process and said that there was this little piece of land that he reserved for himself, but since they asked for it, he would give it to them. This piece of land, as the story goes, became Slovenia, a small country filled with natural beauties and brimming with mysteries under the shroud of mundanity. In the context of geomorphology, though, this story has been a perpetual picturesque proof in my head that geographic features of the land define the traits of people inhabiting it. For, how else could one explain the toffee-nosed sense of specialty common among the Brits who levitate over Europe, a bit on the side of it, the Portuguese Fado melancholy that comes after centuries of confining oneself to a corner and watching the sea, the aggressive attitude of the Turks, who feel victimized and revengeful because of being relegated to the opposite corner as a form of punishment, with the sticker “not belonging here” stamped over their foreheads, if not by assuming a certain correspondence between the psychological features of humans and the geological features of the land, such that it is always mutual, bidirectional, allowing each to influence the other? And if we were to switch our gazes across the Atlantic, to the land of America and begin to wonder if the symptomatic shallowness of its people has roots in the geological traits of the terrains that they inhabit, we may bring to mind the advice Andrew Wyath often received from his fellow painters and art critics, “There’s no depth

¹⁷⁵⁰ See Jovan Dučić’s First Letter from Switzerland, In: *Cities and Chimeras*, Matica srpska, Belgrade, Serbia (1940), pp. 94.

¹⁷⁵¹ See the Utrecht University press note: Mountain range formation and plate tectonics in the Mediterranean region integrally studied for the first time (September 2, 2019), retrieved from <https://www.uu.nl/en/news/mountain-range-formation-and-plate-tectonics-in-the-mediterranean-region-integrally-studied-for-the>.

¹⁷⁵² The story was told to me by Danilo Suvorov, as we sat around midnight on a summer night (July 25, 2019) inside the Trinity Square Labyrinth in Toronto, overlooking the Church of the Holy Trinity in which 31 years and 8 months ago Cowboy Junkies recorded the Trinity Session on a single microphone and captured on tape an instance of an aural magic that can be explained only by invoking the inflow of a Holy Spirit to it, having no ties whatsoever with notes, colors and harmonies composing the music.

in American landscapes – you have got to go to Europe before you can get any depth”¹⁷⁵³, before imagining the dismissive wave of his painterly hand and a comment spat back: “If you want something profound, the American countryside is exactly the place”¹⁷⁵⁴. As I think this point over and over again while watching the trolley No.1 slide down the steep Sacramento Street between Leavenworth and Hyde from the third floor balcony of my Nob Hill hideout, I hypothesize that seeing oblique street angles through office windows must breed topsy-turvy mindsets and likewise expressions in the viewers and urge them to challenge the sense of normality and resist flatness in everything they do. Right afterwards I bring to mind how the rocky and hilly terrains of Montenegro and Herzegovina, frequently stricken by droughts, food shortages and wars have given rise to tough highlanders (certain regions of today’s Montenegro were the only part of the Balkans never conquered by the Turks during their half a millennia long reign over this peninsula, from the late 14th to the late 19th Century), known all around the Balkans for their physical strength and resilience, whereas Vojvodina, the flat northern region of Serbia, filled with fertile flatlands¹⁷⁵⁵ and markedly less hit by these very same problems that threaten people’s survival, has given rise to a calm and serene pastoral mentality among its people, certainly more pliable in comparison to rough and resistant mountaineers who fiercely rejected the intrusion of many conquerors to their regions. Somewhere in this rocky, serpentine soil of the Balkan Peninsula, one could find violet flowers of the plants *Ramonda serbica* and *Ramonda nathaliae* - or Serbian phoenix flower as it is often colloquially called - that are members of the Gesneriaceae family, Tertiary relicts from the tropical past of this part of Europe, once connected to Africa, and one of the few flowers in the Northern hemisphere that are hemicryptophytes, having the ability to ‘resurrect’ themselves from a fully desiccated state after rehydration. Discovered in 1884 by Sava Petrović, the doctor of the Serbian king Milan Obrenović, named after the Serbian queen Natalija Obrenović and first reported in literature by Josif Pančić, *Ramonda nathaliae* became the symbol of the resurrection of the Serbian army in World War I and is often worn as a woven insignia on garments as a sign of solidarity with the suffering of the Serbian soldiers and general populace in this world war¹⁷⁵⁶. And if one digs deep into the structure of this plant and inspects its seedlings, one would realize that they are extraordinarily small and vulnerable¹⁷⁵⁷, as if telling the researcher that only on the bases of such frailties and sensitivities could this superb regeneration capacity, of which numerous biomedical disciplines could benefit, arise. When one is so sensitive, of course, everything shakes one’s spirit, even the slightest breezes, swinging one alternatively toward the emotional zones of pain and joy, yet on the wings of such existential adversities something magnificent can come to life. Another example speaking in favor of the grounds of hardship and asperities as those from which the true strength and resilience springs into life comes from Amazon forest. Namely, although it is the densest and the most spacious forest in the world, oftentimes considered as the Earth’s respiratory system, its trees grow from a soil rarely shallow and deprived of nutrients and sunlight. Another, even more impoverished soil is the one of top of which I stand as I busily

¹⁷⁵³ See Wanda M. Corn’s *The Art of Andrew Wyeth*, New York Graphic Society, Greenwich, CN (1973), pp. 77.

¹⁷⁵⁴ *Ibid.*

¹⁷⁵⁵ Squeezed between some of these fertile meadows, it should be noted, is also the largest sand desert in Europe, covering around 300 km², called Deliblato Sands and formed upon the withdrawal of the prehistoric Pannonian Sea, whose waves crashed over the coast somewhere around my home in Belgrade.

¹⁷⁵⁶ See *Zbog fudbalera u centru pažnje: Šta simbolizuju ramonda i mak?* B92 News (November 8, 2018), retrieved from https://www.b92.net/zivot/vesti.php?yyyy=2018&mm=11&dd=08&nav_id=1466873.

¹⁷⁵⁷ Tamara Rakić, Maja Lazarević, Živko S. Jovanović, Svetlana Radović, Sonja Siljak-Yakovlev, Branka Stevanović, Vladimir Stevanović – “Resurrection plants of the genus *Ramonda*: prospective survival strategies – unlock further capacity of adaptation, or embark on the path of evolution?”, *Frontiers in Plant Science* 4, 550 (2014).

scribble these words. Yet, unlike the forest of Amazon, so luscious that it righteously deserved the epithet of “the planetary lungs”, not much more than ice plants, cacti and a few thorny bushes took root in this San Francisco soil before the pioneers came and transformed the sand dunes into verdant parks and neighborhoods. To visit a place where vegetation stands rooted in an even shallower land, one can drive to the southern parts of California, for example the town of Irvine in Orange County, where I lived for a couple of years and where it would take barely a strong summer breeze in Chicago, not to mention Belgrade’s *košava* on an average autumn day, to break branches, ravage bushes and uproot whole trees, the effect I witnessed multiple times therein. Likewise, after living on one such land for a while, as I can attest to, one would tend to become just like those trees: feeble, timorous and sensitive to the slightest turmoil. A harsh word that would go unnoticed in my hometown or an average European city might stir the spirit of a creature to such an extent that it could have it poisoned and blown away in an instant. The question then naturally arises that if other forms of life had not found this barren landscape worth thriving on, how can one expect a truly profuse human culture to have done so? For, a year after year of drought in this land on the edge of the desert, threatened to be swallowed by it anytime and combating its spread with bouts of artificiality, could, some may say, yield nothing but spirits with similar traits: dry, affected, factitious. Hence, should one become disappointed with the shallowness, remoteness and emotional aridity of the Californian culture, one can always look back to an equally shallow, barren and infertile terrain from which it arose. The next thing one could do is to gaze upwards, into the translucent Californian skies and recognize its deprivation of gloomy clouds occasionally scowling at the earth below and dropping thunderous flashes of fury on it, let alone shaking its trees by the hurricanes of fervid storminess or covering it with the snows of grace of queens and princesses, as in the places with four seasons on the planet Earth. With a lot of reason one could thus wonder if this mild climate has been an additional factor behind the rise of dull and lukewarm spirits that vacant and dummy silhouettes decorating the Californian land are. For, just like the Northern Californian weather, sunshiny, yet chilly all year long, never warm enough to melt our hearts out nor stormy enough to vigorously shake the trees of thoughts rising from our minds, Californian spirits are typified by mild and lukewarm smiles frozen on their faces all of the time, cool and chilling to the core, never overwhelming one with an unbearable radiance of love and summery sympathy nor with outbursts of fury, let alone saddened in sincere compassion so much that tears are shed to water the emotionally arid niche they inhabit. And so, as I stand in the midst of a stereotypical Northern Californian landscape with my arms spread horizontally, endlessly spinning like a dancing dervish and contemplating over the all but coincidentally developed culture of constant smiling and never shedding a tear or two, of cheerfulness that eclipsed all the traces of compassion in this climate where clouds that could bring saddening rains are as rare as diamonds in the dust and where the chilly Pacific air and its arduous waters also neatly resemble the cold breezes of indifference and aloofness emitted by the inhabitants of the West Coast, as mild and deprived of exhibitions of thunderous fury and stormy passions as the skies below which they dwell, I become overwhelmed by a wave after wave of an insight that systems and their environments indeed always co-create one another in the course of their mutual, co-dependent evolution. This unequivocally means that sustainability of a system is inextricably related to preservation of its healthy environment, and *vice versa*. That is, “If we survive in the forest, the forest will survive too”, as I saw written on the wall at a Green Design exhibition at Yerba Buena Center in San Francisco. After all, the co-creational thesis can be seen as the metaphysical foundation for describing all the man-environment feedback loops with a similar emphasis on an inextricable mutual dependence between the two. The most important insight that the science of

ecology has arrived at is that no single species can survive on its own, as its prosperity and wellbeing are directly dependent on the prosperity and wellbeing of endless other species in the web of life. This, of course, is Nature's way of telling us, through a subtle metaphor, as she routinely does, that more often than not giving is what constitutes the best way of taking. Knowing this, I have always maintained that what is good for the environment is the healthiest choice for us as well: eating simpler and less processed food, feeding on locally grown produce, showering with cold water, and, in general, producing less of the ecological footprint behind our consumption habits. Moreover, in my universe of thought, matter is an emanation of spirit and spirits can be made weary or exhilarated by means of our actions, observations or any other ways of treating them. It is from this assumptive angle that I explained my experience of symptomatic tiredness on the American continent, whereon matter I am being surrounded with is being routinely tormented, shipped across the globe, artificially fertilized, severed and shaved, while the very miracles of its existence are icily ignored, and of mysterious, rudimentary naturalness in my native region of the world, largely undeveloped and left to Nature's own devices to guide its growth. On the other hand, I have also always claimed that perfectly precise evaluations of the environmental effects of our actions are impossible¹⁷⁵⁸. Hence, although one may, for example, think that eating locally grown produce is always the best choice for the environment and us as its inextricable part, it is not always true. In fact, fostering production and consumption of many nonnative species cultivated in our immediate environment may be a very non-ecological choice. Growing cotton in California and Texas and requiring enormous amounts of water in their mostly dry climates is often cited as one of such examples of ecological shortsightedness. Hence, as usual, we come to the conclusion that the ultimate rule is that there is no rule at all, which implicitly invites the powers of human faith and prayerfulness back to the domain of assessing the favorableness of our acts in the world, eventually leading us to another conclusion, which says this: in the heart of our actions, that is, our very aspirations and intentions, lies the secret of the goodness of the traces that our actions will leave behind them. Be that as it may, the political differences can be crucial too. Namely, the capitalist grounds of American culture have reinforced the attitude of free expression and individualism, naturally resulting in louder people, less held back by the sense of authorities watching over them. In contrast, the socialist policies enforced a strict control of people's freedom of speech, which after years of suppressing their freeness and creativity in acting resulted in them speaking in a quieter manner, frequently appearing scared to the bone when they open their mouths, leaving the impression of being watched by a Big Brother from behind the corner of their eye. This, of course, is not to say that there are no Big Brothers monitoring one's actions from within the deepest chasms of people's minds in America. In fact, it can be argued that this sense of being watched is even more pronounced in the US than in Europe. Many times I have heard the advice of medical school professors, clinicians and researchers to always act as if one is being watched by an authority, to which I would repeatedly ask myself and others around me what the cost, inevitably astronomical, for one's creativity becomes when one subdues the quest for uniqueness to bleak conformity. However, while the spirit of the Big Brother in Europe appears to have taken the shape of a distillate of other people, the neighbors in the realest sense of the word, in America it assumes a more evasive, authentically Orwellian form, creating through omnipresent CCTVs, online espionage and shady Salesforce-like activities a society strangely similar to the utilitarian architectonic concept envisaged by Jeremy Bentham when he designed the so-called panopticon, an institutional penitentiary arranged in a circle, where the inmates, existing in

¹⁷⁵⁸ See my article entitled *Of Sustainability, Elephants and Prefab Sprouts* and published in *International Journal of Sustainable Society* 1 (1) 85 – 102 (2008).

complete isolation from one another, would guard one another and prevent each other's unruly behavior solely because of having the impression of being watched from the tower positioned in the center of the structure and seen from each point of the cell. Therefore, all this dilation on the Big Brother aside, it stands that Thom Yorke's riding in an elevator - or lift as he would deem it - downer and downer, claustrophobically, all until "the fish are belly-up"¹⁷⁵⁹ and everything cordial and divine inside has been stifled to death, is an immaculate metaphorical portrayal of the spiritual fate of a person ensnared by the opportunistic premises of the western world and the false gods of greed and glory that it bows before, while its soul cries and cries for help.

S.F.4.28. Now, as we step from an elevator to an interior of a house or an apartment, we can again look for the things around us and conclude enormously lot about the cultural aspects of the place we are in. In that sense, whatever we do or perceive on a foreign soil, we can make an exploration of the cultural treasures of both the place of our origins and the place in which we have found ourselves out of it. Hence, the true way of meeting the essence of the encountered things in life is always to alternately glare at them and then direct our attention away, towards some other surrounding details. And verily, the sign is everywhere. As we look around and carefully investigate the walls of the houses in America and compare them with those in Europe, we can infer the following. First of all, houses made of wood present an ordinary occurrence in most American towns and cities, whereas they are normally seen as a rarity in the majority of European cities and villages, where concrete and ceramic bricks reign. Then, whereas windows in America are exclusively made of a single layer of glass, double-layered ones are practically a standard in Europe (because the cushion of air sandwiched between the glass layers serves as an excellent thermal isolation), and some Scandinavian countries employ even triple-layered glass windows. In view of this, many of my friends firmly claim that the insistence on eco-friendly technologies in view of the weak thermal isolation in America is irrational and even slightly hypocritical in view of the ecological loftiness one can often encounter in some parts of the US. The consequence is now clear: European houses tend to be built with isolation, real and metaphorical alike, in mind, whereas American houses are more prone to transparency. From the discussion on elevators we have seen how Barbie-doll-like transparency and light carelessness are the attributes of an average American mindset, whereas European faculties of mind are placed more on the side of reflective introspectiveness. So, the space inside American and European houses can also be expected to be quite different. For a long time I have wondered why listening to music while lying down on the floor or being curled up in the corner of a dark room does not have such an enchanting feeling here in the US. Even though I would listen to music on more sophisticated sound systems than the old and dust-clogged 3-watt cassette player whose grainy sounds, in spite of their comparative quietness, induced the projection of the insides of my heart on the darkened ceiling into a visual fantasia, a background movie for the daily examination of my destiny, I would rarely come across insights as deep. Metaphorically speaking, not once did the epitome of the giant from Twin Peaks pop up in front of me to reveal a message only halfway as significant as "It is happening again"¹⁷⁶⁰.

¹⁷⁵⁹ Listen to Radiohead's Lift on OK Computer OKNOTOK 1997 2017, XL (2017).

¹⁷⁶⁰ The storyline preceding this memorable cinematic moment, one of the most powerful in the history of this art, is a strong homage to music *per se*. Namely, one afternoon the lady with the log showed up in the Twin Peaks police station to tell Agent Cooper that owls have gathered around the roadhouse. When Agent Cooper asked her if "something is happening", she replied "Yes". When Cooper came to the bar, what awaited him was Julee Cruise and her band on the stage, playing a beautiful set of Badalamenti's songs, one after the other. At one moment, the band on the stage disappeared in Cooper's eyes and was taken over by the giant who pronounced the epic phrase "It is happening again" and then vanished, ceding his place back to the band. In other words, what was happening that night

“I may be getting old and losing contact with the sense of magic in the air that follows youthful explorations of the world”, I thought despondently. What an uplifting moment for myself as a believer in the potentially eternal childlikeness and sensibility of our spirits it was when it came to me that the difference might not lie in me, but in different reverberation properties of the house walls in San Francisco and in Belgrade. Although the co-creational thesis directly implies that it is normally impossible to draw a line at the place where objective influences of the outer world end and subjective influences of the inner world begin, I strongly believe that in this case it was more about the external features of the reality, that is, the structure of house walls, than about the abating shine of adventurous curiosity spreading out from the cognitive and spiritual core of mine. Namely, wood absorbs sound much better than a bricked wall does. Consequently, the way music fills the space of a room in San Francisco, where wood is the predominant building material, and Belgrade, whose architecture is dominated by masonry, will greatly differ. In Europe, more of the reverberated sounds will stay in the air where they would mix, interfere with each other and produce unpredictable amplifications and cancelations of amplitudes, resulting overall in more waves travelling throughout the space. Music could be thus seen as filling house interiors in a much richer way in Europe than in America. But everything has its costs. The cost of transparency of the American lifestyle is that music inside of us may not reverberate so intensively should we become negligent about forming mild walls around us and the world. For, a balance between openness and closeness is inherent to truly balanced attitudes in life. But the cost of the European attitude is also apparent. Namely, being extensively immersed in the inner sounds of the house of our thoughts and emotions may isolate us from the world and make it exceedingly hard for us to tear down the self-imposed walls and let the inner shine of our soul wash the face of the world. After all, this whole talk reminds us that we are all music in a sense. Now, whereas Europeans would, roughly speaking, look more after the music within their hearts, Americans would feel that the space around them is the one that ought to be filled with their own vibe, and so they would leap around wishing to fill every tiny piece of it. In contrast, Europeans might just sit down immersed in the music of the heart ringing across the inner space of themselves, neglecting the need to jump up and strew the space around them with their inner treasures. But the ideal of the Way of Love is, of course, finding the balance: loading the space of one’s heart with the divine music and yet filling the space around us with the vibe of our inner self. “Now the curtain’s coming up, the audience is still, I’m struggling to cater for the space I’m meant to fill”¹⁷⁶¹, KT Tunstall sang, reminding us of the role of the real artist: to be immersed within oneself, sustaining the glow of the fire of eternal beauty and love deep inside, and yet blessedly filling the space around us with this inner shine, as if being emitted through the invisible, extraterrestrial antennas of our mind and body with everything we do, say, think or feel.

S.F.4.29. Although Europe still stands for the cultural stereotype of aristocracy and noble elitism, America is where one nowadays finds unprecedented levels of considerateness on this planet. Visiting Europe every now and then, and that particularly its southern and eastern countries, I am always amazed to see most people on the street walking with an almost complete disregard of other people’s paths. As if making way for other people by graciously deviating from one’s own path would ruin their human dignity, they would walk straight towards me, forcing me to exhibit a walking slalom and avoid bumping into them. As I engage in these maneuvers, my walking style

at the roadhouse, bringing Dale Cooper to an unforgettably deep insight that spanned across space and time, was music itself.

¹⁷⁶¹ Listen to KT Tunstall’s False Alarm on Eye to the Telescope, Virgin (2004).

would resemble at times that immortalized on the silver screen by the French comedian, Jacques Tati: namely, while in the comically aseptic Paris of the future in his anarchic chef-d'oeuvre, *Playtime*, where the director reduced language to ambient noise and himself, as the main actor, to a side character often unrecognized in the scenes, most people walked in straight lines and it was only him and his muse, a young American tourist, alongside a couple of drunkards, who turned and moved in circles. Another thing that my reminiscing over this landmark movie, a tremendous commercial failure and a tremendous artistic success, might bring about is Tati's witty depiction of the ambiguity and extremes that the American culture is being made of, given that the two main American characters in this film, the aforementioned young lady, a blithe, sweet and unstoppably smiling nonconformist at heart, who perpetually gets lost from her party of tourists, and the boisterous, bombastic, big-headed, bullish and manipulative man leading the party in the film, were conceived to stand far apart from each other in terms of their personality traits. Here, it is worth recollecting that this European habit of walking straight into another person out in the street is often perceived diametrically differently by the Americans and by the Europeans: while the former may interpret it as an instant of microaggression, the latter may perceive it as a sign of sympathy. For, "if a stranger wants to bump into me, it must be a sign that I have been found likable", is the thought that may run through the subliminal corridors of a European mind put in one such situation. Nonetheless, one always has to keep in mind the cultural differences that are obvious in this case: thus, in America, leaning onto another person while on the bus is considered inappropriate, whereas mildly leaning onto another may be seen as a sign of sympathy in southern Europe. As a matter of fact, the extent to which Americans and Germanic people in general find the act of touching each other foreign – being a foreignness that can be used as a direct indicator of how alienated members of a society are from one another – is nicely illustrated by the results of a recent experiment employed to measure the number of touches in public spaces in various cities of the world; namely, the frequency of touches in Rome ended up being ten times higher than that in New York City, Sydney and London combined¹⁷⁶². In fact, it took me a while to realize that unexplainable and sudden bursts of warm sensations washing over me while walking on a busy American street would be subconsciously triggered by my glimpsing a couple holding hands or, god forbid, walking hugged against one another, the same way I, as a youth, traversed the Belgrade street together with my parents, my brothers and my friends, male and female alike, an event so rare in this Alphaville of the modern times that weeks or months could pass before I would witness it again. Of course, whenever one forgets how alienated from touch the American culture is due to its relentless emphasis on sickening individualities, as a refresher one can watch a recent episode of *Sesame Street*¹⁷⁶³ in which children are, amazingly, instructed to hug oneself, not another, whenever they feel the impulse to shove that other person rising inside them. What is more, if our contact with God is possible only through a contact with a fellow human being, then some of us may go as far as to make a conclusion that the premises of the American culture stand in a diametrical opposition to a truly godly society. For example, how ironic it is, I have always wondered, that Los Angeles, a city that, judging by its name, should have been the home of angels, is actually the breeding ground of their thorough opposites, coming into contact with which, naturally, drove Brian Wilson, the creator of *Pet Sounds*, the music of and for real angels, nuts and inspired Natalie Merchant to wonder "where that halo that should grow around their faces and the

wings that should grow from their shoulder blades”¹⁷⁶⁴ are, for she had not seen even a shadow thereof, and conclude that, to her, ‘twas all “one rude awakening”¹⁷⁶⁵ in a “heaven”¹⁷⁶⁶ for the senses, but a hell for the soul, a place wherein isolation of neighboring spirits, all confined in metallic monsters a.k.a. automobiles, has reached inexplicable proportions, even greater than the cosmic vacuum, dark and cold, that separates the lonely planets on the Little Prince’s interstellar journey, and wherein touch has become a wholly forgotten notion, justifying the oft-explicated comparisons of this city with a cultural cancer metastasizing all across the Earth. My corresponding advice to fellas all the world over has been this: mistrust the healers who base their approach to healing on words only and who have renounced the touch as their tool, regardless of what crooked pathways of our beings they aspire to align, be they physical, psychological, epistemological, behavioral, *et cetera*. Even when they are versed on-spot about this matter, such as the shrink consoling a tearing patient seated on a chaise longue by saying that “maybe you talk when you should just be touched”¹⁷⁶⁷, they are to be mistrusted unless they, themselves, are not the first to resort to touch as the means for healing the wretched spirits of this world. But if we come across one of those lively spirits that “don’t read, just kiss”¹⁷⁶⁸, regardless of how illiterate, inapt and infelicitous they could be, we may unreservedly grab them by the hand, knowing that the corners and open spaces of reality that they would take us to will refresh our being from its toes to its nose. And with words being signposts pointing at the movement – or dance, if you will – and the movement being a prelude to the touch, the touch being a prerequisite for the healing of the human hearts and the fulfillment of our divine mission on Earth in my microcosm of thought, wherein all reverbs in accord with the verse of the Yugoslavian contribution to Bob Geldof’s Band Aid compilation from 1985, “When sparse words try to find an excuse, a hand is looking for you, wishing to give you a touch that would last you a million years”¹⁷⁶⁹, all I can say is that any society in which progress coincides with the deprivation of touch among its members is flawed in its foundations and cannot be said to be advancing in the right direction. Now, the new technologies offering people miniature windows to the world on the palms of their hands tend to aggravate this negative trend even more. In one of the psychological experiments conducted by Matthew Lieberman and his colleagues at UCLA¹⁷⁷⁰, gazing at the images of beloved persons on social networking platforms had a greater effect in alleviating pain than holding their hands, demonstrating that, as ever, every triumph is also a defeat, while every substantial gain bears a significant loss in this spirally evolving reality of ours where a forward step is always accompanied by a backward one. Namely, what these results suggest is that, on one hand, the tremendous amount of information flowing into our brains through the channels established by these new technologies has indeed succeeded in elevating our mind powers to higher levels, given that, as we see, sheer visualization induced by an image of a real person can be more psychologically stimulating than the real contact with him/her. On the other hand, however, the road stretching from the sprout of an idea to its embodiment in reality has simultaneously become ever longer, windier, thornier and more difficult to cross. And as Lao-Tzu, the Buddha, the Christ and many other sacramental souls,

who have embraced the ideal of sacred being and shunned word, the tool of the scribes and the hypocrites, would tell us, the traversal of this Faustian road, which begins at the holy word and ends at the holy being, taking us from the dreams of a blazingly radiant way of life to their incarnation in reality, is necessary should we wish to continue our spiritual growth on this planet and become a true star of spirit one gorgeous day. On that day, of course, touch, real and unaffected, will cast a long afternoon shadow on even the most cherishing words we could think of or any other impressions derivable from the vacuous distance between human hearts. Or, as pointed out by Jean-Luc Godard in one of his usual disparagements of the beauty of Word and celebrations of the beauty of Being, “The spirit is real only when it manifests itself, and it manifests itself through the hand. Love is the epitome of the spirit, and the love of one’s fellow man is an act, which means a hand held out, not a covered feeling”¹⁷⁷¹. And that touch is more vital for our wellbeing than even the food we eat has been already concluded following the infamous experiments conducted by Harry Harlow at the University of Wisconsin, during which the infant monkeys showed preference to the warm, soft and terry-cloth copy of their mother who gave them no food over the cold, unaffectionate and wire-mesh copy who nourished them¹⁷⁷². Combined with the images of severely mentally disturbed macaques that emerged from isolation chambers in another set of Harry Harlow’s experiments, this time on the effects of social isolation¹⁷⁷³, as well as of McGill rats who used to be licked and groomed by their mothers when they were babies and who are now able to navigate through mazes with far greater dexterity than their counterparts who grew up deprived of loving touch¹⁷⁷⁴, these insights may make us sit and endlessly wonder about the direction that the cultural evolution of this world is taking as its aesthetics becomes increasingly adjusted to Major Toms’ floating in the bubbles of their secluded selves through some starry spaces rather than to hands and hearts rejoicing in togetherness: forward or backward. If you ask me, I would tell you straight away that this Americanized world that grows cold and alienated souls from its secular soil and in which every touch is interpreted as an inevitable sign of romance, let alone that a strange blend of oppressive conservatism and concealed primitivism in it makes it impossible to hug, smooch or fondle a female friend without it being seen as “a date”, all along with its predatory connotations that stand in the way of building brotherly, sisterly, fatherly and motherly relationships with fellow humans, discouraging people from exploring and healing one another by means of the sense of touch and thus propelling them to ever remoter spiritual distances cannot be sustained as such if our evolution from the animalistic to the angelic is to continue. For, in my personal cosmos, trying to heal and rejuvenate the surrounding souls without relying on the grace of physical movements and without using the power of touch, a sense that, according to the tenets of Kundalini Yoga, is governed by the Anahata chakra, the lotus flower of the heart and the physical source of the greatest feeling that permeates the Universe, Love, is an endeavor inescapably predestined to end up in vain. Even Charles Bukowski noticed this in the beginning of one of his short stories: “I turned on the TV and watched a bag of doctors and nurses spew their love-troubles. They never touched. No wonder they were in trouble. All they did was talk, argue,

¹⁷⁷³ This is how Willard Gaylin described the outcomes of these experiments in his book *Adam and Eve and Pinocchio*, Viking Penguin, New York, NY (1990), pp. 142: “What emerged out of these studies were strange creatures, almost unidentifiable in psychological and social terms to their fellow monkeys. Their social behavior had been destroyed. If they had been children, we would have said they had lost their ‘humanness’”.

¹⁷⁷⁴ See Nicholas D. Kristof’s *Cuddle Your Kid!*, *The New York Times* (October 20, 2012), available at http://www.nytimes.com/2012/10/21/opinion/sunday/kristof-cuddle-your-kid.html?smid=fb-share&_r=0.

bitch, search. I went to sleep”¹⁷⁷⁵. Pediatric nurses, themselves, could, in fact, top these insights by telling us that there is no more effective way to warm up a mammalian infant than the body contact¹⁷⁷⁶, further accentuating the aversion to touch as unnatural and damaging for the spiritual wellbeing of humans as social creatures in their essence, unable to survive for too long without forming ties of mutual support within communities. Having realized the colossal extent to which a fond, warm embrace soothes an infant, while keeping it in a crib and feeding through a bottle makes a hysteric, sluggish and all but wondrous goofball out of it, I have sporadically asked around if there is a way to sue the new American society for a crime against humanity because of its allowing the postpartum women to spend only two months on average with their newborn children, forcing the infants to childcare centers instead and thus eventually giving rise to generations of cold, distant and desensitized members of humanity. I am tempted to wonder if this is a part of a preplanned regimen for the fabrication of awkward and alienated spirits deprived of the sense of communality, which is, in theory, the sole driving force of a revolutionary resistance against the suppressive and inherently unrighteous corporate capitalism that poisons the human soul, but it might have been too much of conspiracy theorizing on my part. In any case, I have found it quite tragic that during my attendances of large American family gatherings it would be impossible for me to figure out who the couples are, even after staying with them for extensive periods of time. For, so rare is the habit of romantic couples or people in brotherly, sisterly, fatherly or motherly love in America to hug each other, hold hands or smooch that seeing them abstain from any public displays of affection has saddened me over and over again, alongside sustaining the glow of the aforementioned wonder over whether this sense of foreignness and cold distantness has been intentionally instilled in people’s heads by the capitalist plutocrats and the media weaponry in their hands, all so as to make common man less cordial and communal as a part of this country’s systematic and relentless battle against anything that may be only tangentially related to the ideals of socialism or communism. For, to divide human hearts from one another has been over and over again proven to be the best way to keep them conquered by the powers that be, a concept that Stasis and Stalinists relied on in the past when they intentionally made citizens appear like potential informers in each other’s eyes and the one that we see at work today in the capitalist West, wherein, as pointed out by Chris Hedges, “it’s all just a game, because whether it’s Bush or whether it’s Obama, Goldman Sachs wins always”¹⁷⁷⁷, wherein the central banking system of the US, a.k.a. Fed, lends trillions of dollars at a zero interest rate to this very same corporation¹⁷⁷⁸ whose trucks aimlessly move thousands of tons of aluminum from one storage to another in order to raise its price on the market and fill the coffers of its owners¹⁷⁷⁹, wherein 40 % of Wall Street employees openly admit that they would commit an unlawful transaction, profitable but directly damaging for a certain population of people, if they knew that they would not be caught¹⁷⁸⁰, and wherein, all in

all, the pseudo-virtues of greed and selfishness are fostered so as to promote an ever greater and more vacuous emotional distance between people and thus uproot any traces of the spirit of communality from which a profound social change always begins. “We have unemployment and hunger and crumbling infrastructure and a tax system out of whack and a corrupt political system. Why are we not also taking to the streets is the question”¹⁷⁸¹, asked in the wake of the wave of worldwide protests against corrupted governments and corporations the University of Southern California media scholar, Marty Kaplan and yet the answer is so obvious, lying in the fact that upbringing of the American souls in a capitalist milieu, wherein personal interest presents the central decision-making criterion and the main value in the light of which the world is seen, distanced them from one another to such an extent that any attempts to draw threads that would interrelate and unite them around the spirit of revolutionary communality are predestined for failure. Still, though, it is not that I find either a touch-deprived society or the one wherein people are inconsiderate and ignorant about each other’s personal space truly fulfilling. For me, just as the Way of Love states, a balance involving one’s moving back and forth, incessantly fluctuating between being deeply alone, immersed into the essence of one’s heart and running to touch, play with and hug other creatures, as driven by lovingness, curiosity and compassionate wonder, presents the real thing. Moreover, the true charm and stylishness always lie in breaking the laws of normality, tradition and actual norms and trends, while carefully keeping the eternal, Christian virtues of wide awakening wonder and cosmic love deeply sealed within our hearts. As I strolled along a busy Sunset street on a sunny Sunday afternoon, I was astonished to see the way a mature girl rode her *trottinette*. She would disappear around the corner and then, after a few yards, turn around, increase its velocity as much as she could and while intensively propelling herself approach the same corner again, turn into the street full of people and ride, ride, ride, making people softly jump to the side. As I watched this gamin engaged in her magnificent act, the first thing brought to my mind was the recollection of a basic phenomenon from the science of diffusion: namely, the scent of roses placed in the center of a room would hardly ever reach the corner in which we sit squatted if it were to avoid the collisions with the molecules of air¹⁷⁸², in which case the molecular carriers of this sweet-scented odor would most probably coalesce into a scentless aggregate and sediment onto the floor. The sympathy I felt for this mischievous innamorata, bursting with the wishes to make sublime love to all things around her, could be explained by my own relishing in the role of a social butterfly that hops from one nectarous flower to another in his surrounding, charmingly colliding with and hugging every soul in sight, knowing all the while that only thereby could the delightful fragrances of the flower of my heart reach the condoling spirits on the other side of the room or the street or the globe. Needless to add, what she did was not aggressive and hostile, like Richard Ashcroft’s shouldering pedestrians on the streets of London¹⁷⁸³, but so loving that it became deeply impressed in my memory as a notice of how one should live one’s life: shocking people, taking their breath away, awakening them with breaking the laws of appropriateness and boring routine and regularity, and all that while letting the stars of wonder revolve around the shining core of love of our hearts. Viva punk, thus I claim! And having spoken of punk, the notion that exists in my head more as a representation of a

philosophy of life - a philosophy that demands rebellion against any surface around us for the sake of exposing the glowing heart underneath - than as a label of a musical movement of an era, I am free to recall an anonymous saying that whoever has not passed through the punk phase in one's coming of age would never become an ethically sublime persona. As I look around me, while standing on the American continent, I helplessly wonder if the conformism-going-on-adventurous-individualism and life-sucking stiffness of people on it, superficial down to their core, most of the time preferring corrupt spirits enwrapped in shiny, sugarcoated clothes than ethically stellar spirits appearing wretched, careworn and gloomy, is due to the fact that the US culture as a whole has never passed through this critical phase in its growth. For, who were the punk acts embraced by the American TV and radio in the late 1970s and early 1980s? Not the Sex Pistols, the Clash, the Jam, the Fall, the Smiths or other bands with "subversive political bent"¹⁷⁸⁴, but Blondie, Devo and Elvis Costello & the Attractions, which fit the conservative outlook of the mainstream American media of the present and past. With such an ignorance of the heart and soul of the punk movement, America has remained blind to the fact that to feel profoundly saddened for the state of the world is a necessary step in our development from the grimy dust wherein all is scattered and unrelated to one another to a shiny star wherein all things fuse with one another and in these moments of unification release light that illuminates the cold and blackened Universe in which we exist. Anything but this would imply a failure to recognize the ills that have befallen humanity and to empathize with souls suffering from them, and this is exactly a key trap into which spirits on the American continent, riding on the conveyor belt of commercial joys, fall each second, one after another, like the animated figurines sliding down the meat grinder in Pink Floyd's movie *The Wall*. And as Lao-Tzu would have told us now, those who recognize illness as an illness are the only ones who could be healthy at the end of the day (Tao-Te-Xing 71), an insight in the light of which the Christian mystics with their dreams of the "the dark night of the soul", a nightmare that is to be crossed if we wish our life to become a true dream once and for all, would smile in seraphic sympathy.

S.F.4.30. Another one of the things common to the modern American culture that has been especially striking to me is the tendency of people on the bus, in the library and practically everywhere else to appear so enormously relaxed. Whereas relaxed eyes and jaws, touching the edge of looking blunt, could be used to recognize Americans in a foreign country, constrained eyes and jaws, reflecting self-defensive attitudes, are a common facial trait among my native fellowmen. This enormous, almost affected relaxedness can be correlated with the Freudian norm of letting all the tensions in body and mind loose, lest, presumably, their piling up cause the cracking of the body and mind. But what this fallacious norm oversaw is that without stress there could be no room for progress and evolution. To equate stress with negativity, as one often finds in the popular press, is to be fundamentally wrong and ignorant about the step that inevitably constitutes the route to elevation to more prolific states of being. For, the only way to make a system more intricately ordered and structurally and functionally enriched is to move it away from the thermodynamic equilibrium, which requires investing some work in it. Energy appearing at first in the form of an unpleasant stress has to be imposed on the system if we are eager to make it evolve into a more ordered state. When we sit by the book and learn new things, for example, or face a work of art trying to understand and absorb its meaning, the success of ours will depend on our openness and ability to constructively impose stress on ourselves. This is the reason why a kid

¹⁷⁸⁴ See Theo Cateforis' *Are We Not New Wave?: Modern Pop at the Turn of the 1980s*, The University of Michigan Press, Ann Arbor, MI (2011), pp. 1.

becomes all cranky after a few hours of studying, and it also explains why becoming friends with truly valuable works of art requires hours of headache and whole days permeated with innumerable stressful attempts to decipher their meaning and find touching and moving messages in them. Only after these genuinely stressful moments of transcending the mountains of perplexity before us are surpassed and clear valleys of understanding become spread in front of our views, we get to be elevated to higher states of mind, from which we can always slide down, while enjoying the acquainted pieces of art or exhibiting the learned knowledge. Knowing this, I frequently look like an eagle focused on its prey when I read something. But this is not to say that I do not appreciate relaxed outlooks or do not know how to unleash at all. Just as the puzzling moments of getting acquainted with new pieces of art and the moments of letting loose in emotionally fulfilling mingling with them ought to be neatly balanced, the same can be said for every other situation where stress and relaxation alternately take place. (Recall now that as the whole Cosmos could be seen as a giant symphony, and as music itself is composed of alternate moments of stressing and relaxing of certain entities during their approaching and diverging in waves, the balance between these two can be inferred as universal and present within every natural system.) The message is now clear: do not be like those vain mortals who unfocusedly and fruitlessly stare at the book for hours, but when trying to relax, their body and mind spontaneously begin to float into stressed-out states. The right path lies in the balance; in this case, when we work, we might want to work intensely, but when we relax, it may be good to thoroughly relax. Hence, if you spend days in disciplined weaving of intellectual threads, wait for the orange sunset when prayers are sent as white doves from your heart to the worldly skies, dress up like a Superman and fly on from one star to another, dancingly spin on each one them, complementing the daily intellectual discipline of yours with unconstrained nightly flights of imagination and brilliant acting. After all, who works hard needs to dance hard because intellectual ponderousness and meditative absentmindedness should be always kept in balance. This is the principle deeply ingrained in the American lifestyle. Think, for example, of James Brown, christened “the hardest working man in show business”¹⁷⁸⁵, who would make up for the hard work on his art by jumping and screaming on the stage like a wild ape on the loose; such, undoubtedly, is the story of my life too, albeit in a different domain, namely the kingdom of science. The Earth has been rotating around its axis for billions of years, alternately turning its face to the oneness of the blazing Sun and to the multitude of twinkly stars. Not only does this daily shift symbolize the great balance between unity and diversity, but it also suggests the necessity of an alternate meditative immersion of our mind into the blank and shiny unity of all being and sensual dissipation thereof following endless colors, signals and impulses of the surrounding world. It also points to the balance between the daytime focus and nighttime explosion of our heart and mind into the state of utmost creative liberty, spontaneity and delight of the starry sky. So when you go out among people, make sure you know that a wise head is also an airhead in certain extent, and that floating through space empty-mindedly and freely dissipating tensions within our bodies and minds ought to entail the strenuous moments of hard work and deep concentration. Hear the advice of an imaginary performance art wiz disguised as a soccer tactician in your head to alternately overload and split the team on the pitch of your mental screen and physique, the way the matter in the Universe on all spatial scales constantly accrues and dissipates anyway, so as to make the act goal-scoring and victorious, which is to say that rhythm created by the alternation between focus and relaxation on microscales is what makes performances magical and gestures memorable and inspiring. Therefore, do not let your face be all snorky and fishy, but make it one blithely reflecting your feelings and impressions through the balance between

¹⁷⁸⁵ Listen to James Brown and the Famous Flames’ Live at the Apollo, King (1963).

relaxedness and excitement. The words of the Christ warn us of the need to avoid scowling at all costs and instead wear a merry face under all circumstances: “When ye fast, be not, as the hypocrites, of a sad countenance: for they disfigure their faces, that they may appear unto men to fast. Verily I say unto you, They have their reward. But thou, when thou fastest, anoint thine head, and wash thy face; That thou appear not unto men to fast, but unto thy Father which is in secret: and thy Father, which seeth in secret, shall reward thee openly” (Matthew 6:16-18). These words also implicitly point to an ecstatic joy and happiness that the true revelation of Christianity awakens in human hearts and expressions. When we succeed in permeating our minds and bodies with this utter joy that lies hidden as the greatest treasure within the foundations of Christianity and concoct it with the sublime compassionateness of our soul, we might find ourselves “tiptoeing around the ship going down”, as in the song by Eliza Doolittle about “packing our troubles and getting the old grin back”¹⁷⁸⁶, so common to the jazzy American attitude, and yet these actions of ours would not present a showoff of carelessness and selfish ignorance of another, but would live up to the ideal of saving the world with soulful sabers that send the lights of eternal joy everywhere around us. Yet, as previously annotated, blending these emanations of cosmic joy with colossal empathy, thus making our inner landscapes depict a dazzling sunburst with millions of joyfully twinkling stars in the back and a milky way sadness spreading across the galactic horizon of the ocean of our eyes, is the vital precondition for our success in saving souls with the sunshiny smile of our spirit.

S.F.4.31. An acquaintance of mine who years ago moved to New York City to pursue the career of a visual artist disappointedly mentioned how “in America going out is all about posing and releasing, whereas in Belgrade it is merely about posing and frustration”¹⁷⁸⁷. This is neatly seen in the way people from these cultures stare; whereas American gazes typically appear transparent, empty-minded and Barbie-doll-like, eyes of the people from my native places appear as if they are stuffed with emotions that hardly ever go out. As if placed under a high-pressure bolt, only in the moments of intense emotionality is one able to catch a glimpse of the flow of “bleeding” warmth finding its way out. As if building a mountain inside their hearts that topples down with heavy rocks and stones once in a while. But I have repeated countless times that stress is an ambivalent phenomenon. On one hand, too much thereof can break apart the structure that it is imposed on, but on the other hand, only through absorbing the energy of stress can one attain elevated states of mind in the way one thinks and shines with the beauty of one’s being to the world. So, neither of the two ways can be said to be intrinsically better than the other. Only the middle Way, for the reaching of which the only guiding line is that there are no guiding lines, can present the proper road to follow. The vivid and wondering transparency of American attitudes to being and communicating and the warm restraint, loving renunciation and “saving grace” of Europeanism are to me like two great pillars between which one can stretch the bridge of true and inspiring living. The philosophy of anarchism, which I have zealously and unappeasably embraced on the pages of this book, is often said to have emerged as a child from the love affair between European intellectualism and Native American tribalism¹⁷⁸⁸, but it presents one out of myriads of equally intriguing ideas ready to emerge as outcomes of the cross-fertilization of these two archetypically

distinct poles. In the end, it is possible that only via one such balance between “staying” lovingness of the Old Lady and adventurous and “moving” wonder of Americanism would one be able to build a bridge that delivers the inspiring ideals of a New Atlantis to the world. The goddesses of Wonder and Love who “make all things alive” (Timothy I 6:13) stand proudly on these pillars, like Victor and Victory in Belgrade and SF, respectively, and while the authentically European spirit is more inclined to bow before the altar of Love, the epitome of the true American spirit does so before the throne of Wonder. After all, weren’t the former those who had opted to stay and do not give in to the call for encounter of something new, wishing to embody instead Fromm’s famous maxim that “Love is staying”, and the latter those who, having become bedazzled by Wonder and its sister cravings for adventure and the discovery of new lands, decided to move on and leave their soul mates behind? If that is so, then it makes a whole lot of sense to expect that even today’s descendants of these generations at a crossroads would continue to exhibit similar traits, in Europe more readily embracing communal bondages, which Love is all about, and shunning Wonder instead, while in America being dazed and sparked by anything that is an emanation of Wonder, but remaining deaf to the music of Love? Yet, as we see, the laurel wreaths are reserved for those able to merge the spirit of devotion, of kneeling by the beloved souls and land and vowing never to leave their side, with the spirit of explorers and pioneers who’d “give all they have for something new”¹⁷⁸⁹ and any day leave their companions “poisoned with protection... for whom nothing was needed, nothing left to find”¹⁷⁹⁰, as it is said in the song Neil Young recorded in SF’s Boarding House, mere five blocks from my dwelling place in the Nob Hill neighborhood, and made a highlight of Rust Never Sleeps, his homage to rock ‘n’ roll. For those of us who stand on this bridge stretched across the Atlantic, connecting the coasts of authentic Americanism and Europeanism, the fusion of the essences of the two cultures seems necessary for the rise of modern beauty in our views, moves and attitudes, whereas moving back and forth between the two appears as natural as alternation of expulsions and entrainments of air during aspiration. And just as we breathe in and out, so should we know that the harmony of our lives is in each one of their elements based on alternately absorbing and giving, whilst on the other hand we should equally know that “a light that never goes out”¹⁷⁹¹ is always present in us. The ambivalence of this phrase neatly reflects the bafflingly oracular and enigmatic fabric of reality, as on one hand it may be an expression of joy over the fact that this inner light never extinguishes itself, while on the other hand, more in the spirit of the song, it is a lament over the fact that this light is a light that never emerges out to bless another, in spite of one’s best intentions. If both were true, we could conceal a secret joy in view of this eternal light that flushes our inside with its celestial energies, but also be infinitely sorrowful for its never ever being releasable outwardly. That is, no matter how hard we try to explicate it through our expressions, we ought to be positive that the essence of the shine of our heart will always remain hidden to others. Although we ought not to stop running towards an ever more impressive outward embodiment of this inner light, we should also not be desperate about the fact that a part of it is destined to always stay concealed inside of us. Most important of all, we should make sure and be glad that it is, after all, light, in which our spirits could swim at any time, like in a glistening sea of pearls.

S.F.4.32. However, despite my fondness of things hidden and mysterious, something I terribly miss when I find myself away from the American continent is the richness of the eye contact. An

unwritten ethical standard in American culture is should you come across someone else's eyes, make a gesture, give a sign that twinkles with liking, show that you are at least pleased to see another person, if not intrinsically happy about having to sit or stand face-to-face with someone else. In contrast, what you see in backward social milieus is quite the opposite: extensive staring at others while they do not look back at the gawker and then swiftly shifting the gaze away as soon as the eye contact is made. The more primitive the culture, one might say, the more of the voyeuristic staring at others when the others do not observe the observer can be observed. To give you an example, I will refer to an unforgettable event that occurred on a Sunday afternoon, as I was having lunch with my Dad in a Chinese restaurant in Ljubljana, Dragon Wall, right in front of the complex of four high-rises on Kedrova Street where I lived. Specifically, the complex comprised three tall yellow buildings and a claret-colored one, on the 11th floor of which I lived, surrounded by 13 pines and a number of whitish willow trees. Looking at these four high-rises from the ground level almost every time reminded me of the Christ and his three apostles asleep in the Garden of Gethsemane at the foot of the Mount of Olives (Matthew 26:38-40), and as such carried good news, just as the number 13 in general always did, being literally a Funstone Avenue of a kind in my head, akin to that decorating the SF Sunset network of pavements in place of the 13th Avenue. Now, a fight broke in the restaurant on that spring day and as the raging crowd moved to the street with me and my Dad trying to inculcate the words of peace and rationality into the hotheaded hooligans, I glimpsed the dozens of windows on the tall buildings facing us. Prior to that, I had never seen any single person on them, having wondered how in the world people in that hobbit-land lived so inaudibly and discreetly. But that day, there were innumerable immovable heads popping out from almost each one of them, staring at the street as me and my Dad walked back home like two cool cowboys in a western movie setting. As we gazed back at their confused little heads, I could not help but wonder how many of them would have acted exactly like the thirty-eight apathetic watchers of the half an hour long rape and murder of Katty Genovese on the street of Kew Gardens in New York City through which I would pass by later on many days and nights, without anyone of them trying to stop the assault or even call the police, claiming that it should have been the duty of another. Yet, in ordinary communication most of these people that lived in these sangria-colored thirteen-floor buildings had exhibited a shameful, unenthusiastic and dreadful distance, prompting me one day to head "out of Egypt, into the great laugh of mankind, and shake the dirt from my sandals"¹⁷⁹², as Sufjan Stevens prophetically whispered to me. Rewinding fast to the point of eye contact as the briefest one in time wherefrom the door to a whole new universe becomes either open or shut, I must expound my belief in the diversity and liveliness of the dance human eyes exhibit in everyday observation and communication developing in parallel with the informational and spiritual progress of human creatures and their environments, which, as I noted on many previous occasions, also occurs in an interdependent manner. If that is so, then it thoroughly makes sense when various peeps announce American culture nowadays as being just a stone's throw from the peak of its leading role in defining the most advanced cultural traits of humanity, analogous to that held by the Roman culture 2-3 millennia ago. All this makes me sigh wistfully and reminisce in awe over my mysterious ability to recognize people from different cultures and geographical areas based only on the way in which they "dance" with their eyes. Thus I claim that this eye dynamics can be used as a sort of a fingerprint for detecting the cultural traits of human beings.

¹⁷⁹² Listen to Sufjan Stevens' song of this title on record *Come on Feel the Illinoise*, Asthmatic Kitty (2004).

S.F.4.33. Another detail I often manage to read through the lines of visible traces human eyes follow in my hometown is an untranslatable form of pride, which we call *gordost*. It is because of this form of pride, so deeply instilled in my native fellows' gestures and hearts, that I have often joked how my native country, Serbia, could be renamed to Superbia, the definition of which I found in one dictionary as "unreasonable and inordinate self-esteem". In fact, a decade old sociological study whose goal was to rank different countries on the scale of self-esteem placed Serbia at the No.1 place, way ahead of Israel and the US¹⁷⁹³. This pride comes with good reason, the most genuine bearers of it will step up and boldly proclaim, before going on to great lengths to tell you about the self-sacrificial generosity that has endowed Serbs throughout the history, neglecting all the while, though, that just like praising anything comes at the cost of the implicit disparagement of everything else, so is this pride entailed by the morally elitist abhorrence of western hypocrisies, of northern coldness, of eastern awkwardness, of southern selling mommas for half a fudge, and so on. For this reason, the Biblical verse "Pride goes before the fall" (Proverbs 16:18) might indeed have an eternal relevance attached to it. To prove it, we could recall that Serbs, Jews and Germans were some of the proudest nations with respect to their recent histories and yet the saddest and some of the most suffering ones in the course of the same. The heroic stance taken on by Serbia in World War I, the self-liberation of the country in World War II, the subsequent political independence from both NATO and the Eastern Bloc, the implementation of the unprecedentedly advanced self-management system, the founding of the Non-Aligned Movement and the support of alternative music and film that were unrivaled in quality and style across all of the Eastern and much of the Western Europe all inculcated a plenty of pride in people's minds. This sense of specialness, however, as many hold¹⁷⁹⁴, served as a seed for the nationalistic animosities and the civil war that ensued, which would have been avoided had the country joined either of the two international political blocks in time. An enormous cultural cost would have been paid thereby, albeit with the gain of human life, given that the civil war would have likely been circumvented in those hypothetical scenarios. The demise of the Serbian nation in the early 1990s, nevertheless, began in parallel with the rise of nationalistic forces that sprang from this belief in supremacy of the Serbian nation on the Balkan Peninsula inculcated into many of the local hooligan hotheads. They, thus, managed to largely substitute the traditional Serbian spirit of humbleness, which had helped the country preserve its victoriousness throughout the past with a superior, overbearingly paeanistic stance with respect to the neighbors. The result is, however, such that it would be difficult to find a country on the map of the world that in the recent history became devastated to a similar extent as Serbia, having lost more than two-thirds of its territory, pushed itself into a decade of wars, dropped its life standard dozens of times, produced a devastating brain drain, and completely inverted its reputation in the eyes of the world that it had crafted for centuries, reverting its stereotype from the one of a humble and heroic nation that has always been on the side of justice to a savaging, atrocious and aggressive one. What turns out to be a trend for social entities can, of course, be said to be valid for individuals too; hence, a lot could be learned from these historical downfalls that apparently entail any system's attempt to raise its value high over that ascribed to others. However, *gordost* can be exerted within diverse attitudes and situations, and presents a much more complex form of pride. It can even be

¹⁷⁹³ See David P. Schmitt, Juri Allik – "Simultaneous Administration of the Rosenberg Self-Esteem Scale in 53 Nations: Exploring the Universal and Culture-Specific Features of Global Self-Esteem", *Journal of Personality and Social Psychology* 89, 623 – 642 (2005).

¹⁷⁹⁴ See the comment by Aron on "Gardijan ishvalio muziku u Jugoslaviji: 'Zemlja se zbog rata raspala, a kultura je preživela'", B92 (October 13, 2021), retrieved from https://www.b92.net/kultura/komentari.php?nav_id=1936327.

represented as utterly beautiful, as exemplified by the fact that it was the first epithet Jovan Dučić assigned to a beautiful girl, the metaphor for his poetry. Pride was also the essential trait that the Grand Inquisitor ascribed to the Christ as the one tightly linked with his rebellious divine nature and an incessant touch with God. “I left the proud and went back to the humble, for the happiness of the humble... Who scattered the flock and sent it astray on unknown paths? But the flock will come together again and will submit once more, and then it will be once for all. Then we shall give them the quiet humble happiness of weak creatures such as they are by nature. Oh, we shall persuade them at last not to be proud, for Thou didst lift them up and thereby taught them to be proud. We shall show them that they are weak”¹⁷⁹⁵, thus said the Grand Inquisitor, making us wonder whether mild and enlightening pride that arises in our beings may still be like a sun on the horizon that serves as a sign that we are on a good spiritual way in the corrupted and ethically vile world that we inhabit. And yet, by considering pride in its standard form of usage, that is, from an angle where one could see how it leads to pretentious and lofty closeness of one’s spirit and blindness to the beauty of humbly lowering oneself in front of others, like a sea into which all the rivers flow, one may agree with the advice once, I heard, was given by the Orthodox Christian priests, which was that transcendence of pride, or *gordost*, strictly speaking, stands at the beginning and the end of one’s spiritual evolution. Many theologians who claim that pride is not only the most serious, but also the most ancient of the seven deadly sins, from which all other sins originated, would readily agree with this point. For, one could see pride as nothing but an anchor of the ship of ego that lashes us to the rock bottoms in our attempts to lift our spirit high and soar it into Heavens above. Or, as Pascal, who had seen spiritual wretchedness as a gateway to the cracking of the soul and the letting of the divine light to permeate our insides and wash us thoroughly therewith, put it, “Pride is a counterweight and antidote for all forms of wretchedness... a strange monster, and a very palpable aberration”¹⁷⁹⁶. Knowing this, as a teenager I painted bloodily red letters on a black tee, saying “Stupid Pride, Selfish Pride”, in reference to a Hüsker Dü’s song¹⁷⁹⁷, during the recording of which the band tossed chairs against the walls of the studio, and made it my favorite piece of garment. As a contrast to a sense of pride which I saw then as the mental force that ties the wings of our infinitely creative beings down, I blissfully envisioned the ideal of caring only about how to save the world rather than being obsessed with how others will judge my behavior in a conformist spirit, posing myself in humbleness like the sea in front of others, never judging anyone, including myself, and letting all the rivers of human hearts thus find home in the stellar space of my soul. Henceforth, I get reminded of my Mom’s thought that two virtues can be used to assess the level of one’s spiritual evolution: empathy with the fellow beings and the extent of everyday forgiveness. These two traits, of course, naturally go together, since the more we forgive, the greater the flame of empathy for creatures around us will be. Deeply engrained in yet another untranslatable Serbian epithet, *dobrota*, meaning goodness, but in a far more ethereal and sublime sense of the word than that ascribable to it in the West¹⁷⁹⁸, as if grace,

¹⁷⁹⁷ Listen to Hüsker Dü’s *Pride* on Zen Arcade, SST Records (1984).

¹⁷⁹⁸ How warped and shallow the meaning of being “good” in the West is compared to the same notion in my native culture is best summed by the Christmas wish explicated in a letter to Santa by a 42-year old Serbian journalist and expatriate to Canada: “If, by any chance, you have come to exist, no matter what your name is, be a bud and fulfill only one wish for me. Do not ever let me become good in their way. Even if I do not ever find anything under the tree”. See Nebojša Milosavljević’s *Pismo Deda Mrazu*, In: *Zašto volim Kanadu*, Media Art, Novi Sad, Serbia (2012).

kindness, gentleness, benevolence and utmost internal pureness are all blended in it, is this spirit of forgiveness too and the extent to which this quality of *dobrota* has been traditionally unique to Slavic people is best described by the following excerpt from an essay by the aforementioned Serbian poet, Jovan Dučić: “Frenchmen know what is justice, Englishmen know what is righteousness, Americans know what is humanity, but only Slavs know what is *Dobrota*. This is why they are the highest degree of the human heart and of the human conscience”¹⁷⁹⁹. An even more touching account of this archetypal trait was given in the last sermon by the former German court clergyman for the last German emperor and King of Prussia, Wilhelm II, and a pastor for the Eversburg parish where a camp of Serbian prisoners of war was located, Friedrich Griesendorf, upon recounting the way the freed Serbian concentration camp prisoners played with their children when the allies finally won and the barbed wires were torn down¹⁸⁰⁰. From this angle, aficionados of the Serbian culture might go ahead and add that the goddesses of goodness stand supported on two pillars that often go unrecognized in the West: (a) emotionality nuanced with tear-smearing shades of pathos and (b) the long and exhaustive tradition of suffering, which directly ties ethicality with self-sacrifice, the quality without which no genuine goodness could be imagined. Now, drawing any quality, including goodness, into a situation where it is surrounded by the contrasts creates a tension of values which could lead either to its evolution or collapse or, very often, a strange mixture of both. For, displaying unconditional *dobrota* in a wicked world crucified the Christ, confined Dostoyevsky’s Prince Myshkin to a sanatorium for mentally ill, and predestined countless maidens who took pride in it and it only to remain maids for life in a social setting wherein most people’s thoughts reverberate in harmony with the response given by the dancer, Vanessa to her husband when he complemented her by saying that she is “a good woman”: “Have I become that dull?”¹⁸⁰¹ Many dark nights I have also spent wondering if this unconditional *dobrota* happened to be directly responsible for the collapse of Yugoslavia under the tension between its Eastern and Western cultural forces. For, the cracking of the country along the line dividing the Serbian cultural heritage from the Croatian one, most notably, I often picturesquely depict in my head as a dissolution of a marriage in which one person, the representative of the former, was an utterly good one, heavenly kindhearted and almost masochistically oriented towards doing everything for the sole benefit of its partner. To the latter, however, this generous cordiality

¹⁷⁹⁹ Jovan Dučić’s Letter from France, In: Cities and Chimeras, Matica srpska, Belgrade, Serbia (1927), pp. 127.

¹⁸⁰⁰ “Our country lost the war. The English, Americans and Russians won. However, here among us is one nation that won another much more beautiful victory, a victory of the soul, a victory of the heart and honesty, a victory of peace and Christian love. They are the Serbs. We knew them earlier, some a little and some not at all. But we all knew what we did in their homeland. We killed hundreds of the Serbs who defended their country for one of our soldiers who represented the occupier – the oppressor. And not only that, we looked favorably when others shot at the Serbs from all sides; the Croatian, the Italians, Albanians, Bulgarians and Hungarians. Yet we knew that among us in the prisoner of war camps were 5,000 Serbian officers, who earlier were the elite of the society and who now resembled living skeletons, exhausted and spent from hunger. We knew that among the Serbs smoldered the belief ‘He who does not revenge is not sanctified’. We were truly afraid of the revenge by these Serbian martyrs. We were afraid that after our capitulation they would do what we did to them. We imagined murder, plunder, rape, demolition and destruction of our homes. However, what happened? When the barbed wires were torn down and 5,000 living Serbian skeletons found themselves free in our midst, those skeletons caressed our children. Only now can we understand why our greatest poet, Goethe, studied the Serbian language. Only now can we comprehend why the last word for Bismarck, on his deathbed, was ‘Serbia!’ That kind of victory is more sublime than a material victory. It seems to me that only the Serbs could win such a victory, being brought up in their St. Sava’s spirit and epic poetry, which our Goethe loved so much. This victory will live for centuries in the souls of us Germans. I wanted to dedicate my last clergyman’s sermon to that victory and the Serbs who won it”. This last sermon was printed in the Eversburg Newspaper, Eversburg, Germany. See William Dorich’s *Jasenovac: Then and Now: A Conspiracy of Silence*.

bleeding with compassion, just as it often happens in real life too, began to appear creepy and he, being a far more selfish persona that long ago substituted a large portion of this authentically Serbian goodness with a sly attention paid to sustaining the pedigree and wellbeing of the self, decided to coldheartedly ditch his kindhearted spouse and pursue an independent path. Still, if you ask me a million times which way I would pick between the two, without thinking twice one million times I would assert that careworn eyes, dying to venerate all the worldly souls, with no exception, and deliver the water of life thereto from the palms of one's hands where invisible thirsty angels and bunnies gather together in love has got to be my way. On other dark nights, with thunder in my heart I wondered how come that this intrinsic goodness and trustworthiness typifying Serbian people could so easily turn into ineptitude, lethargy and, oftentimes, sheer fraudulency at work, as if a sense of starkest enslavement and humiliation must entail most of their professional obligations to employers. For, lustrous exceptions aside, the superior work ethics and habits have not been the stateliest traits amongst Serbs, in spite of, interestingly, the very rich tradition of household care, speaking again in favor of the entwinement of the human bests and the worsts around the white marble columns sustaining this native culture of mine on their stony shoulders. Now, not only that I come from a social setting wherein outbursts of both love and hate are way more intensive than those existing in the western world, but it is a milieu in which a much greater emphasis has been traditionally placed on the need to forgive others for their blemishing acts than in any other cultures I have known of, including both those of the West and of the Far East. Whereas some of my Taiwanese relatives, for example, have told me of holding grudges against their own relatives over some minor acts that happened decades ago, being the trait that, no doubt, lasts long on the soil of social disconnect, quite like the one that is found in today's America, I have always felt as if there is a magical switch somewhere back in my brain, be it culturally, parentally or genetically installed, which turns itself on every time the waves of anger wash over me to neutralize the latter and reinstall the peaceful forgiveness as a counterforce, eventually making me completely forget any evildoings performed with a sole aim to crush my integrity, as maliciously as they could be. Besides, as one of the most essential messages of my Mom's favorite movie, *Casablanca*, has it, the relationship between the biggest adversaries is the grounds for the best of friendships to arise, yet this message is the one that the neoliberal, hypercritical American culture is completely deaf to and the one that, ironically, lives much more truthfully in the heart of my compatriots on the Balkan Peninsula, where it becomes perpetually iterated, in bidirectional cycles, as it were. The Serbian word "*zlopamtilo*", for example, meaning literally "one who remembers evil", that is, a vengeful, rancorous person, holding perpetual grudges, is correspondingly one of the worst epithets ascribable to a person, having an effect of pushing people towards the opposite end of the spectrum where forgiveness and, hence, empathy flourish. In fact, having traversed many lands and seas on this blue planet of ours and having met many different cultures and mentalities, I became convinced that if there is a single trait that typifies Serbs and that may justify their own traditional ascription of the epithet of a Celestial Nation¹⁸⁰² thereto, it must be this accent on forgiveness placed on people's foreheads, lightly, as if by the act of a fairy, with a twinkly wand, during their gracious upbringing. For, Serbian is the tradition of perpetual losses and reasons for sadness, the tradition that has been repeatedly caught in the cultural crossfires and burnt to the ground as such, the tradition in which tears of repentance outweigh the snares of satisfaction, all of which has provided grounds for the loss of faith in the earthly justice and the rise of faith in the heavenly one, along with sublime forgiveness, that godly stem on top of which the flowers of Love blossom. Forgiveness is intrinsic to yet another

¹⁸⁰² *Nebeski narod* in Serbian.

untranslatable trait, which is *čednost*, being far more and beyond chastity or coyness, as regular dictionaries would tell you it is, encompassing kindness, prayerfulness, quiescent virginity, graciousness, childlike pureness and, more than anything, benevolent forgiveness in the most graceful of its forms. For, as put forth by the only person who received the Nobel Peace Prize posthumously, Dag Hammarskjöld, “Forgiveness is the answer to the child’s dream of a miracle by which what is broken is made whole again, what is soiled is again made clean”. Truly, when I imagine how human eyes and daily communications were to look should everyone forgive everyone else, a wonderful rainbow of vision washes over me. In relation to this, I love quoting a Zen story in which a samurai came to see a sage to ask him where the gates of Paradise and the gates of Hell lie. Upon hearing the question, the sage told the proud samurai: “You do not look like a samurai at all; you look to me more like a bag of oats”. “What! Apologize quickly for what you just said”, the startled samurai screamed and pulled the sword out of the scabbard, approaching the sage ready to cut his head off. The sage was, however, quietly sitting at his place and smilingly said: “Oh, you do have a sword. I bet it is too obtuse and you also must be too dull and meager to cut anything”. The samurai was at that point really ready to strike the sage with his sword, but a second or so before the sword landed on the sage with full force, the sage said: “This is where the gates of Hell open”! The samurai understood the message, put the sword back to the scabbard and took a bow. “This is where the doors of Paradise open”, mumbled the sage while walking away. For, “mutual forgiveness of each vice; such are the gates of paradise”, as William Blake put it in his Everlasting Gospel. Indeed, in a matter of seconds could the Heavens on the mercy seat of our mind cede their place to Hell, or Las Vegas, as Cocteau Twins would have it, and all we need for that to happen is to let greed, rage and condemnatory dissatisfaction penetrate the heavenly reigns of infinite love, peace of mind and thankfulness free from any judgments and conditioning attempts. Yet, just as a country waging war against other countries is unprepared to engage in peacefully edifying interactions with the rest of the world to its full capacity, so is with a mind poisoned with anger and hate against even the pettiest details of the world. Yet, by washing the space of our mind with bright and cheerful feelings enrooted in infinite empathy and a sense of oneness with every single creature and detail of the world, we truly enter the Garden of Eden, the expulsion from which could take place any time we bite again into the fruits hanging from the tree of knowledge and judgmentally start to accept one things and discard the other, when embracing it all in the stellar home of our heart is needed to shoot us again straight into Paradise.

S.F.4.34. To illustrate how San Francisco and my hometown differ to an extent comparable to Heaven and Earth with respect to certain social aspects, I could bring the Pride Parade in these two planetary spots to memory. While in SF you could come across streams and rivers of all kinds of people blending with each other, celebrating difference in a pompous, bountiful, flashy and vibrant way, people on the day of parade in my hometown, the Serbian capital, appear more like attending a funeral procession than a joyful festivity, holding grave expressions on their faces, surrounded by the angry crowd that tolerates almost no difference at all and, even worse, threatens it with outbursts of sheer violence. No better image could I pick to illustrate my response to the question of what the most striking difference in communicational attitudes of people in my native country and in the US is: “Right after lesser air pollution”, I tended to say naively, “it is the lack of diversity, cultural, ethnic and racial alike, and then, immediately thereafter, the lack of violence or internal suppression thereof in the latter compared to a frequent open expression thereof in the former”. To give but a single example, a recent survey concluded that one in four young men in Serbia does

not consider a slap in the face to be a violent act¹⁸⁰³, while the most rated comment to an article describing the new derogatory term used among children, “lil’ Lidl’s”, and directed at kids whose parents buy them clothes at this comparatively cheap store chain, said “Both my wife and I have salaries higher than the ministerial and I will always dress up my little one in Lidl and will teach him to beat the living crap out of children who call him or someone else a little Lidl”¹⁸⁰⁴ and earned 1489 votes for and only 62 votes against in the first six hours following its posting. Similarly scandalously, online commenters in Serbia were overwhelmingly in favor of applying physical violence against fellow passengers on a plane who would lower their seat in front of them without politely asking if that could be done, with a particularly striking comment threatening to “stab/beat up the person to the point of unrecognizability so that they would have to amass him into a formable shape and pull him out with hydraulics at the end of the flight because I am two meters tall, weigh 113 kg, am an active judoist and do not like when someone lowers the seat in front of me, not even on a bus”¹⁸⁰⁵ earning 12 times more votes for than votes against in the first ten hours after the posting of the article. Of course, it took me a while after I moved to this new continent to realize that chemical pollution on its soil is probably the same, if not greater than that experienced by my compatriots in smoggy Serbian cities and towns where lead is not banned from gasoline, inks and paints yet, where asbestos still decorates some building interiors and where blindingly black smoke is often seen coming out of car exhaust pipes and chimneys; that diversity on it is larger on surface and paper only and that it is systematically suppressed on any deeper level; that mental negativity and aggression on it is of, more or less, the same scale as that I have known of in my homeland¹⁸⁰⁶, though exhibited in subtler, more so-called passive-aggressive ways; and that, all in all, Nature has made it so that both those who seem as if they have it all and those who seem as if they have none have just about the same when all is counted, material and spiritual alike, at the end of the day, but I will skip that part of the story for now. What I would like to focus on instead is the recently released map of hate speech, which was drawn based on filtering billions of Twitter messages coupled to the location of their senders¹⁸⁰⁷. The map shows drastically more hateful and verbally violent expressions to originate in the eastern parts of the US compared to its western parts, and I have no doubts that if one were to extend this map across the Atlantic Ocean and onto the European soil, the intensity of hatefulness intrinsic to human behavior would continue to grow along the west-east direction. For, it is no secret that New Yorkers are ruder and more direct in terms of expressing their negativity compared to mellow Californians. Western Europeans would, on the other hand, beat the East coasters in all of these criteria, and yet they would lag far behind the Eastern Europeans. And if you imagine coupling the utter rudeness of the Eastern European

¹⁸⁰⁶ A simple example suffices here: that of sports stations’, such as ESPN, selling exclusive packages to their subscribers for the access to live streaming of boxing and ultimate fight matches for astronomical prices, making these violent sports the most expensive and elite to watch on American TV. If anything, this speaks about violence that is ever-present in this culture. Most worrisomely, the direct correlation between the watching of these sports and these exquisiteness of the experience ascribed to it says that violence rests abundantly at the tops, not only bottoms, of the social pyramid.

attitude with the fieriness of the South, you can get the idea of the explosive temperament of the South Slavs, along with outbursts of violence, mental and physical, that it carries along. A recent study carried out in Serbia has suggested that almost 75 % of children pass through one or another form of physical violence during their upbringing, which inevitably leaves long-lasting scars in their psyche. Not only was I, for example, as the shortest boy in the class, bullied in school on daily basis, pushed around and forced to participate in group fights, often returning home full of blue-green bruises and with pepper spray in my teary eyes, but even teachers frequently acted violently on me; consequently, I was being slapped in the face by my elementary and high school teachers, had my hair pulled, pointed finger at to be humiliated in front of everyone and forced to stand alone in the corner of the classroom and face the wall to be punished for my misbehaviors. That suppression of avalanches of aggression is also considered undesirable in my home country may be seen from the recently published satirical description of a fictive state firm employee backed by a considerable number of laymen and union workers who sued the whole country alongside her three colleagues and supervisors for simply urging her to be polite to her clients in repeated letters¹⁸⁰⁸, without ever threatening her with a layoff, which would have certainly happened in the US. Although this report was soon found out to be a humorous description, it was met with a critical dose of approval from the commentators on the web. This is all to say that behavioral bursts of violence in the form of yelling, beating or psychologically tormenting the kids are indeed quite common in my home country and are often justified by the traditional parental saying, “Bludgeon emerged from Paradise”¹⁸⁰⁹, which can be traced to the Old Testament verse, “He that spareth his rod hateth his son: but he that loveth him chasteneth him betimes” (Proverbs 13:24). Paradoxically, inflicting physical pain on children as a socially accepted element of the parental care in my home country has been often justified by the parents and guardians as a sign of their true love for their kids. For, as they say, had they not cared what their children would become, as they believe is the case with the cold parental hearts in the western world, they would have long given up on the usage of force in pinpointing the right ways for their offspring. Or, as an anonymous commentator at an online forum had it, “The parents of pampered children largely think that they love their kids too much to be hitting them, when the truth is the other way around: these people love themselves too much”. And only when I, myself, became a parent did I learn that being infuriated by the furious children is a sign of empathizing with their feelings, when remaining untouched by their frustrations would imply a sense of detachment from them and constitute a far greater parental failure than yelling at the kids because of sharing their frustrations in one’s heart. This is, of course, not a prelude to justification of the usage of physical force in rearing children; rather, it is a statement of support and understanding for all those parents out there who lose their temper every once in a while. For, I, myself, with my advocacy of parenthood based on infinite love and nothing but it, have everlastingly rested my mind under the parasol of Duško Radović’s witty parental norm, saying that “if you have to beat children, beat them with no reason whatsoever, because any other reason is dumber”¹⁸¹⁰. After all, in my approach to nurturing anything or anyone in this world, I have been perpetually sticking to the norms given forth by the Christ and Lao-Tzu, respectively, telling us that “all they that take the sword shall perish with the sword” (Matthew 26:52) and that “a violent man won’t die a peaceful death” (Tao-Te-Xing 42),

and prompting us to realize that peacefulness and forgiveness yield lightness and flexibility in our mind and soul, letting us float through the world and always triumphantly emerge on the other side of many problematic and challenging situations in life. Therefore, it has been my opinion that although children's survival in this world sometimes depends on the ability of their parents and other teachers to instill in them a sense of feeling queer upon doing things which may be threatening for their well-being and integrity, there may be no excuse for violence in nurture and teaching even when it is applied in situations in which one desires to prevent a child from doing something dangerous for its own life, like placing fingers in electrical sockets, for example. The consequence of such an ill approach to upbringing may easily turn out to be a pathological lack of self-confidence later in life. Feelings of guilt and inferiority will thus tend to naturally arise in the kids' minds, suppressing them in their deep pining to express themselves freely and naturally. There are furthermore chances that this feeling of guilt, if persistent, will turn into a sense of being victimized, which oftentimes leads to mental isolation, stress and anger, eventually resulting in revengeful aggressiveness. There will also always be a reference established in their minds as to what their parents and other protectors in life would have done in a problematic situation. Psychologically speaking, such enforced attuning of a child's behavior to the parents' demands not only inhibits the child's independence and the sense of agency, but predisposes it to depend on responses of others in any relationship it enters later in life, and thus exhibit the masochistic behavioral traits¹⁸¹¹. Realizing that they could not be themselves in a relationship and that instead of sanely governing their own behavior from the inside they let other people be in charge of setting the value standards and managing their behavior, they often tend to be socially withdrawn and avoid any deeper and more profound relationships. Furthermore, masochism and sadism are most often neatly balanced in different aspects of emanation of one's personality. Persons who are masochistic at work thus may be aggressive and sadistic in relationship with their partner or *vice versa*. Suppressed anger can thus often spontaneously explode when the right circumstances trigger it to emerge on the surface of one's being. In addition, using violence during upbringing becomes deeply rooted in kids' consciousness as a way of resolving problematic situations. People in my home country thus still often have an attitude of "if the things don't work out the way I want, I can always apply violence and blow everything apart". Recall, however, that violence is not merely about physical assaults. It is also about intruding cognitive and emotional safety and autonomy of our neighbors by any other means, including verbally or using ignorant or insulting gestures, for example. One such habit of routinely and sophisticatedly letting other people down, which is very common in some parts of Europe, can be seen as the reason why a large portion of Europeans happens to be hesitant about opening themselves up, naturally resisting any deeper and more open human contact. The way in which Americans carelessly jiggle with their eyes while Europeans often show signs of inert deadness in them can be easily correlated with this fosterage of self-confidence in the former and constraining of the same in the latter system of communicational values. As for the former case, this eye jiggle and the naturalness with which eye contact is made is the sign of healthy communication preparedness and openness to establishing intimacy with the world of another. On the other hand, in constrained eyes, gestures and acts of my native people I could always read a combination of a whole lot of inner potentials to yield creative incentives in interaction with others and the feel of being blocked to do so because of the pressure imposed by social standards and accustomed manners of being. No doubt that this inner energy, not channeled and gated by various mental constrains, is the key to explaining the

¹⁸¹¹ See Jean Knox – "The Fear of Love: The Denial of Self in Relationship", *Journal of Analytical Psychology* 52 (5) 543 – 563 (2007).

explosiveness of the melting pot of the Slavic spirit, steaming with passions from head to toe, yielding volatility so common to the parts of the world I originate from.

S.F.4.35. Despite all of this, America nurtures a high-pressure environment, at work and within families alike, and its role in crafting this body language sweetness, albeit mostly shallow and insincere at its core, ought not to be left out of discussion. Both the supervisors at work and parents as heads of the family will readily announce that they won't tolerate habits that are not marvelous enough, all in order to squeeze the best out of the working capacities of those whom they supervise or parent. On one hand, this key feature of the American culture gives it a certain "kick" by imposing stress onto the social system and impelling it to crack, crumble, shift around and fall apart, but also produce diamond-like pockets within itself, albeit as rare as, well, diamonds in the dust. This "kick", a frequent traveler might notice, is largely toned down in countries with higher levels of social care, be it Canada or Sweden. But on the other hand, this constant pressure arising from knowing that one could end up in the street should one show disrespect to the employer, even if one has the talent and the skill of a genius, tames the wildness of a curious spirit that loves and wonders with the energy of a shining star and equilibrates the creative energies within one, bringing them to standstill and making sure nothing great comes out of one, which is enough to make me reject this model and classify as its sworn enemy. What turned me down most when I considered enrolling fourteen-month old Theo in a fancy daycare center that in all aspects resembled a kindergarten was the supervisor's description of it as the beginning of the imposition of workplace habits on children. Need this be so at such a tender age when love and play is all the little ones need to grow properly and in a world wherein society extending beyond the family has a greater chance of spreading ill habits and feelings thereto than teaching them something that they would not have otherwise grasped, I wondered. Having seen no significant difference between shipping senescent, elderly parents into senior care centers and hospices and sending children to daycare, I heartily declined to enroll my children in these institutions wherein the corruption of their innocent and infinitely pure spirits by the sins of the society could take place once and for all. This decision of mine, I knew, had to come at the price of delayed development of the little ones into fully socially functional individuals. Being aware of this, yet paying no heed about it, seeing it rather as their extended time in the bliss of the Garden of Eden, raised many eyebrows of my American acquaintances in my nearest surrounding. For, in contrast to the American milieu wherein hardworking habits come first and love comes second, in most parts of Europe, particularly the ones where I come from, children by default expect to receive unconditional love from their parents, from the earliest childhood to forever and ever after. The parents are expected to be ready to submit their lives completely to the kids and give to them all that they have or can ever make. Assigning chores to kids since the earliest age, so as to instill working habits in them, is quite common to the American culture, but can be partly blamed for the subsequent development of diligence permeated with a sense of utilitarian reciprocity. It is not unheard of that American parents reward their three- to five-year olds with pocket money or other benefits for chores correctly done or deprive them thereof otherwise, but they rarely come to think of the sense of craving something in return for the work done that they infuse their little innocent heads with, thus corrupting their creative actions from the very core, as charioteer Krishna from Bhagavad-Gita, known to have said that "thy right is to work only, but never with its fruits; let not the fruits of actions be thy motive, nor let thy attachment be to inaction" (Gita 2:47), would have surely agreed. And as, I believe, Dostoyevsky pointed out in one of his books, "If you do a favor and expect something in return, it's not like you did a good deed; it's more like you sold your soul to the

devil”. Self-interestedness ingrained in any work one engages oneself later in life predestines one’s endeavors and deeds to hardly ever become heartily altruistic in their essence, distancing the doer ever more from the sense of utmost, spiritual fulfillment found in work, which, as we remember, was how doctor Faustus finally found stairways to the Heavens, something he had sought vainly all his life by roaming alone through the labyrinths of his luminous intellect. On the other side of the Atlantic Ocean, the nurturing approach followed by my Mom, for example, had the following message implicit in her gracious acts: “I will give it all for you and there is no need for you to work at all; for, once I am gone, all this care that I have directed to you will serve as a guiding light that will show you how to treat others in life”. She thus led me to realize the beauty and merits of unconditional love, the greatest power in the Universe, the one that heals it all and opens the steeliest gates in the darkest of the cosmic spaces. At the same time, such an approach enrooted the ideal of yielding immeasurable spiritual treasures by selflessly giving all that I have deep in my heart. The tradition of handing over the triumphant torch of utmost creativity and unreserved love through family bonds, however, clearly leads to their exceptional tightness in European social niches. Therefore, in return for this unconditional love provided by heads of the family, the entire lifetimes of individuals are often family-bound, with children not always separating from their parents after they enter adulthood. Even if separation of their dwelling places occurs, their relationships would remain much closer than what I have witnessed in America, where such an intimacy traditionally does not exist, or if it does, it certainly stands forth as a rarity. For, the word “family” in North America never ever implies the inclusion of one’s parents in it, as exemplified by the fact that one cannot add one’s retired parents as dependents to even the family-friendliest health insurance plans¹⁸¹². Having allowed personal comfort to eclipse in value that of emotional bonding with parents, beings that love us more than anyone ever will in life and beyond, the American culture, in my eyes, has slumped from grace once again and, I am sure, will need more spins of the Earth around its axis than we could count before the prodigality of its stonehearted children and the crudeness of its parents become mended and before “people will return to the love of the sons and the gentleness of the fathers” (Tao-Te-Xing 19). For, as I repeatedly tell to whoever comes to me with an idea that parents are to be dumped and independence from them sought avidly in order for our dreams of beautiful, free living to come true, live life rightly, by which I mean living as a journey whereon we become more emotional, cordial, kind, caring and truly beautiful from the inside and outside alike with every new day rather than roughened and insensitive, or else life will prove you wrong. The European way, on the other hand, as I call it - despite its not really being the European way in general, but rather an approach followed widely in the entire nonwestern world as well as a personal description of the particular family environment I grew up in - is reminiscent of handing a torch of love to the children, of living thoroughly every moment of one’s lives for the sake of benefitting and beautifying the loved ones in spite of the potential danger of this teaching method being a possible extinguishment of individualism and self-confidence in the beings being cared for. In contrast, whereas an upside of the American method lies in the instigation of individualism and self-confidence, its downside lies in the lack of passion that only a great care for a couple of chosen loved ones may awaken in us. Passionless attitudes, most strikingly seen in the difference between displays of soccer strikers’ joy after scoring a goal in Europe and in the States, are what stuns me every time I return to the New World after spending

¹⁸¹² “My family (wife and 3 children) and I are covered with decent coverage by my employer, but here ‘family’ does not include a parent (... in the country where I come from, ‘family’ also includes parents)”, thus notices a Korean expatriate on the American continent. Retrieved from <http://www.city-data.com/forum/health-insurance/1935679-taking-care-elderly-parent-under-aca.html> (August 19, 2013).

some time at home. This difference in nurture starting from the very family circles and the earliest childhood may also explain why Europe has always been a more fertile ground for adopting socialist policies, as compared with the capitalist system deeply embedded in the American culture, in family and in internal and foreign relations alike. It goes without saying that I have been a proponent of the European and not the American way when it comes to the relationship between children and their parents from the first day of college onwards. I smile in sympathy when Miles observes somewhere in the middle of Becca's and his intrinsically rebellious walk down the streets of LA in Jesse Shapiro's *Nobody Walks in LA* that in America the order of importance is "work, health, family" and not the other way around, as it should be, and Becca responds to it not with a reminiscence of a young couple waving goodbye to their parents from the back of "a souped-up jitney cherry red '53"¹⁸¹³ to the sound of "'twas a teenage wedding and the old folks wished them well"¹⁸¹⁴, but by saying, "I gotta move in with your parents", having them both conclude that it would be a route for a more fulfilling life in the long run. For, I personally benefitted most from the advices and the emotional solace my parents provided for me in the days long after I began to attend college. This is why I have come to strongly believe that the role of parents to guide their children increases over years and that only spiritual shortsightedness prevents one to realize that adolescence, the great crossroad between childhood and adulthood, the period in one's lifetime when one feels more lost and perplexed than ever before or after, is when one needs wisdom to guide one on one's path more than ever. Leaving young men and women at this stage in life without daily guidance makes them prone to tragic strays from the path than might have been beaten with extraordinary care and diligence for two to three decades, or even more in this new age when the wonders of the youth are being extended deep into adulthood. When children are little, they need to be physically lifted when they stumble and fall, but when they are bigger, in their twenties, thirties, forties and so on, they likewise need to be lifted oh so many times, but on spiritual planes, lest they descend into lowlands of avarice, vanity and cynicism, which even kids with the healthiest and the most harmonious upbringing until they are of full legal age, be it 18 or 21, are prone to after they become deprived of their guardians' care and entangled in the cruel and corrupt bonds of society. Hence my Montenegrin grandma's saying which she used to repeat even when her sons were in their fifties, "Little children, little worries; big children, big worries". At the same time, for the youth to hang out strictly in their own little enclaves and be isolated from the old man troubles coming amply into view in their family circles over time predisposes them to exhibit shallowness in life, being yet another tragic trait derived from the separation of parents from their children that is embedded deeply in the premises of the capitalist American society, to which materialistic productivity and the ease of living, sadly, mean more than the eternal flame of Love that has no purpose in sight but to sacrifice itself and, through blood, sweat and tears, carve a lifesaving path before another. In turn, not only do parents have an essential role to play in guiding their children towards the path of wisdom in life, but it appears to me at times that their conducting this guidance properly is also conditioned by their being guided by the very children that they are meant to guide, which is a thought that draws a closed circles all around us, from our feet to the top of the head, suggesting that, as ever in this quaint reality in which we abide, causes are the effects that are the causes that are the effects, as the two seem to merge into one on every possible occasion. Namely, it is children that most elegantly and effectively wipe the dust of sinful feeling and thought from the mirror of an adult soul. Depriving the grownups of the presence of children

¹⁸¹³ Listen to Chuck Berry's *You Never Can Tell*, Chess (1964), the song immortalized in the dance scene of Tarantino's *Pulp Fiction*.

¹⁸¹⁴ *Ibid.*

and grandchildren in the stage of life where their falls from the grace of innocent childhood is most evident and when the ills of venomous feelings and thoughts creep into their spirits is thus analogous to depriving them of a precious medicine for their ailed and aching souls. Note that even when there is an immense love present between parents and children, though exhibited on nuclear family grounds, it eventually turns into a love that “tears us apart”¹⁸¹⁵. For, the premises of the nuclear family, deeply embedded in the fabric of the American culture, can be said to originate from the sinful selfishness of the middle aged souls, souls who, per the nature of life, have entered the Dantean dark forest in this age that is but a dark and dreaded bridge between the spiritual purity, chastity and wisdom of the young and the old age. By wanting their children, the guiding stars for their lost souls, all for themselves, depriving them of the contact with the wiser and grander souls of their parents’ parents and, in some culture, close relatives, they and the society as a whole pay a dear price. This price is paid when their own children grow up and set off to found their own families, leaving now aging parents to wither in loneliness and only then oftentimes realize the demerits of the premises of the nuclear family, albeit without being able to stop this ambivalent cycle of selfishness from spinning. From this angle, the disconnect between generations emerging directly from this crack in the family grounds can be seen as nothing but devastating for the wellbeing of whole humanity and beyond. At the same time, finding the locus whereat the roots of a problem lie is the first step towards devising a solution for it. Correspondingly, everything stonehearted, cold, desensitized and straightforwardly vicious in the American culture could be momentarily healed if this gap were to be bridged with the rise of a genuine love of fathers and mothers and sons and daughters wherefrom no one is excluded. Like a sunup on the backdrop of a dry and deserted land craving for the sunlight to begin to flourish once again, this love will not consume anything, but will bless and beautify everything.

S.F.4.36. For me, then, the crucial difference between American and European cultures springs from the very foundations of upbringing. Whereas in most of Europe, and particularly in my home country, upbringing is in large extent family-oriented, with parents often expecting their children to remain to live with them for the rest of their lives, kids in America are from the earliest age fostered to do things alone, independently, with the day of enrollment in college normally being the last day of children’s sharing the household with their parents, to their mutual joy, as strangely and tragically as it may seem to a Slavic soul. If you tell me, for example, that such an early separation of children from their parents is natural and beneficial, I would readily go on to declare that statement untrue, as I, for one, learned most from my parents and spiritually benefitted from their presence well past my mid-twenties, the age by which I would be expected to be separated from them long ago per the American standards. In fact, considering the effect known in psychology as “reminiscence bump”¹⁸¹⁶, most memories we retain throughout adulthood and bring with us into the old age are those from the period of adolescence and early adulthood, which is an important reason underscoring the pity of physically and emotionally separating children from their parents so early, before these children have entered their twenties. Moreover, during teenage years one is heedlessly propelled by hormones and is at one’s most defiant and hostile with respect to the parental advice compared to any life stage before or after. Of course, there is “utility”¹⁸¹⁷ and there is beauty too in this silly sense of selfish omnipotence that peaks in these juvenescent,

¹⁸¹⁵ Listen to Joy Division’s Love Will Tear Us Apart, Factory (1980).

¹⁸¹⁶ Watch All These Sleepless Nights directed by Michal Marczak (2016).

¹⁸¹⁷ See the comment by đura krojač on De Brujne: Hoćemo titulu protiv Junajteda, B92 News (April 2, 2018), retrieved from https://www.b92.net/sport/komentari.php?nav_id=1376397.

late teenage years, but these are by all means the days when youth is least receptive to the parental advice and most prone go against it. To separate from parents at this tender age represented by the tail end of teenage years is, thus, a spiritual tragedy and a ticket to deprivation of (a) contact with mature worldviews wherefrom seeds of wisdom become fertilized and the deep intellect powers proliferate, and (b) far profounder bonding in love than offered by one's infantile peers. Yet, this tragic view of early separation of progenies from their biological progenitors and guardians is rarely ever shared by my American friends and acquaintances, most of whom were raised in their authentically callous, family-disoriented, "move-away-from-your-parents-or-you're-a-f***ing-loser"¹⁸¹⁸ culture. Because of the fundamental differences in the way children are being reared from an early age, this separation does not seem very emotionally painful neither to the parents nor the kids. The tighter legal constraints around the necks of American people, paradoxically contributing to a much more repressive social state than in any European socialist countries of the modern day in what was once, long time ago, "the land of freedom", also have their fair share in this. For, as previously mentioned, the more our social reality abounds with laws and punishments for their overstepping, the less sincere the threads of intimacy drawn between human hearts are. Over time, then, daily showoffs of benevolence become driven by self-interest and satisfaction found in obeying the Big Brother of jurisprudence, a faint imitation of social justice, watching us from hidden angles instead of springing from selfless empathy and the desire to establish another in firm spirit, while not asking for any reciprocity. For, every authoritatively imposed law breeds obedience, but does not necessarily promote understanding as to why obeying it is such an excellent thing to do. This understanding entails the freedom of choice between obedience and disobedience, freedom that, however, the very law abolishes. For similar reasons, legally obliging parents to take care of their children causes love between family members to shrink, which is why I have occasionally proclaimed that dissolving marriage as a legal institution would paradoxically promote more cordial relationships between its members and their progenies. The current state of affairs, supersaturated with a myriad of laws and constantly precipitating animate spirits into something dead and inert, erroneously prompts parents to believe that the excellence of their nurture could be measured by legal standards, when in reality it conforms to the timeless principle that says that "all the best things in life come for free"¹⁸¹⁹. As a result, much colder matrimonial relationships, deprived of passionate cordiality, had taken over the heart and soul of the American society. Now, I have already observed how one of the world's most renowned philanthropists, Andrew Carnegie, realized at one point in his life that he could just as well stop paying attention to what people around him say and only watch them; indeed, deep differences between the two approaches to upbringing can be discerned from simply watching the way parents treat kids in Europe and in America. Whereas I have regularly seen European parents ordering their kids, irrespective of their age, to do this or that, American kids are rarely being given explicit orders.

¹⁸¹⁸ See Schindog's comment to an Ask Me Anything discussion with Allen Wong, retrieved from https://www.reddit.com/r/IAMa/comments/17lwcs/iama_a_person_in_his_20s_who_went_from_rags_to/ (2015).

¹⁸¹⁹ To augment this veritable proverb, I could bring to mind yet another modern maxim, coming from the lingo of software engineers and referring to the load of bloatware usually installing itself together with freeware available on the Internet, spying on the user's online activity and sending the information about it to some collection centers that subsequently profit from it: "When the product is free, the real product is You" (See Lowell Heddings' Here's What Happens When You Install the Top 10 Download.com Apps, *How-to Geek*, retrieved from www.howtogeek.com/198622/heres-what-happens-when-you-install-the-top-10-download-com-apps/). The way in which I am free to interpret this maxim is in light of the augmented statement, a very positive one, must I say: once our actions become liberated from the thirst to profit by their means, the route to You, to the holy hub of the spirit of the creature our actions are directed to, becomes open in all its luster and beauty.

An impressive evidence of this is illustrated by the following example, which is a real life situation I had witnessed earlier. Namely, a bubbly kid was sliding down a steep SF street on roller skates. His dad, a dude with a baseball hat resembling the chap I'd see years later pick up a toddler by his hand only, as if he was a monkey, to put him into a swing, holding all the while a can of coke in his other hand, did not grip the kid when he swooshed by him, despite realizing that he won't be able to stop himself, having too high of an acceleration. Instead, he merely let him fly by, fall to the ground and start crying. The parent's idea was that once the kid makes the mistake and feels the pain, he won't repeat it again. In Europe, however, a parent in a similar situation would undoubtedly run after the child in a state of panic - as my Dad did when I, as a baby, slid down the hill in my stroller while slumbering in the local park - so as to protect it from falling down and injuring itself. On the other hand, when it does something inappropriate, the parents often won't hesitate to bluntly punish the child. Still, it will be the authentically European mind that will abhor the advice from the American Academy of Pediatrics to "whisper to a baby a few comforting words about how it's time to sleep before leaving the room and if she continues to cry, wait five minutes, then go back in and comfort her for a short time"¹⁸²⁰, having tried at all times to treat the crying baby with as much emotional focus as a sobbing beloved grownup would deserve, never even thinking about leaving it alone for whole five minutes in a room in terrifying darkness. This mind will also detest the breed of American parents who refuse to listen to their child cry for help, forcing her to "say what she wants", as I, myself, witnessed in the Carrotwood park in Irvine, thus implicitly favoring verblatancy over emotion, shallowness over depth and surface over essence, contributing to the upbringing of emotionally impoverished, puritanical spirits, dry and lifeless, to whom logic will always come before the instinct. This brings us over to "temper tantrum", a term invented and used almost strictly by Americans, having no analogy in my home culture in its giving the parent an excuse to ignore the child while the child throws itself on the floor like a beanbag packed with sheer hysteria, despite being visibly in a state of despair and needing the attention of the caregiver far more than when it is feeling fine. The European mind, like my own, will also stare with amazement at a rowdy American mom teaching her child how to swim by violently tossing the boy in the water and pulling him up only when the child visibly began to drown, having swallowed lots of water and started to choke, and then repeating this sequence of tossing and pulling over and over again, leaving me and my own children, who were taught at those very moments the complete opposite, stranded on the other end of the Lemongrass pool on that clement southern Californian day, recollecting the cry of a Serbian parent directed at the war-waging, world-bullying¹⁸²¹ American foreign policy makers, "God, look what people with a lack of parental love do to the world", and feeling a bit as if the scene was akin to the aforementioned one involving Greek and Anatolian fresco painters as they painted opposite walls of a Byzantine palace and, disliking each other's approach, were motivated to excel in their own, ending up with masterpieces on both ends. This is not even to mention the dozens of time I, helplessly living in concert with the socialist idea that "it takes a village to raise a child", stood behind toddlers climbing onto playground structures with open arms, ready to grab them if they slip or stumble

¹⁸²⁰ See *Your Baby's First Year*, edited by Steven P. Shelov, Bantam Books, New York, NY (2005), pp. 331.

¹⁸²¹ To illustrate the bullishness of imperial countries to my elementary school children, once I resorted to an impromptu allegory, asking them to imagine imperialists as bullies at school, who are stronger than anybody else and, in the absence of the teachers, would go around and smack smaller children on the playground simply for the kicks and to gain power. Over time, however, they would realize that they have become feared but unpopular among the classmates, which is when they begin to employ a new strategy, namely that of provoking situations in which conflicts arise, which they then step up to solve by beating up one of the sides and emerging as a savior of the oppressed. This promotes them to heroes and wins them girls' hearts, albeit with their bullish hearts never changing a bit.

and fall down, or the times I screamed, panicked and ran after kids who would fall off the bike, only to have their emotionally detached American parents watch them disinterestedly from afar, as if not caring whether they will be hurt or not. Having brought the image of a playground to mind, this difference between the socialist and the isolationist approach to parenting in my home country and in this new world, respectively, is neatly illustratable by the fact that a favorite pastime of elderly in my hometown, Belgrade, which is to sit by the edge of the playground and “watch the children play”¹⁸²², smiling at them and occasionally patting them if they come close, would surely be called police on by parents in America. My homies may say that back at home things are changing too and this beautiful custom will soon begin to fade and start appearing as creepy as in the West and will go down in history rather ingloriously; if, as they often hold, the increased material wealth and the allurements and attachments thereto are to be blamed for this cultural shift, then my growing up in poverty I should see as a greatest blessing and an eternal advocate of the aesthetics of poverty at all existential levels, socioeconomic, cultural, scientific and so on, I would declare myself for ages to come. After all, excessive affluence and supersaturation of senses with material sumptuousness often distract the viewer and prevent him from rejoicing in the beauty of children, whereas scanty settings refocus the parents’ attention on children and make the relationship between them emotionally richer and more spiritual. Now, when it comes to comparing the emotionally distant upbringing in the Western world with much emotionally closer upbringing in my native country, there is no permanent answer as to which approach is better. One can say that the American approach would make the child more independent, but the dark side of this independence comes often in the form of toxic selfishness and absence of empathy, which are, we know, far more prevalent in America than in Europe. On the other side, the European approach would more abundantly fill the cup of child’s spirit with love, the nectar of happiness in this life, but at the cost of producing not only far lesser independence, but also greater emotional fragility. The loss of the loved ones is, thus, for example, typically followed by more intensive heartrending instances of sadness and grieving recollections of memories in my native places than on the American continent. Paul Tillich, himself a European expatriate in America during the second part of his life, arrived at a very similar insight when he wrote down the following: “There is something astonishing in the American courage for an observer who comes from Europe: although mostly symbolized in the early pioneers it is present today in the large majority of people. A person may have experienced a tragedy, a destructive fate, the breakdown of convictions, even guilt and momentary despair: he feels neither destroyed nor meaningless nor condemned nor without hope. When the Roman Stoic experienced the same catastrophes he took them with the courage of resignation. The typical American, after he has lost the foundations of existence, works for new foundations”¹⁸²³. But this dichotomy between comparative coldness and emotionality is also readily reflected in the difference between the blunt openness of the American culture, in which people are more like the Nietzschean “self-rolling wheels, first movements, holy Yeas”¹⁸²⁴, and morose Europeans, who tend to be passive, self-confined, insecure and prone to exhibit the traits of followers more than those of leaders. “It seems that you badly crave to release that creative energy from within yourself, but it just stays there and jerks you from the inside, as you don’t really manage to make a move and reach out with than immense energy”, Tyra Banks said to a model who obviously had troubles letting go of her self-consciousness during a shootout, which

resulted in a frozen and uninspiring performance, thereby depicting the core of the European attitude. On the other side, however, Americans have been taught to be more expressive, although this readily active reaching out rarely produces a feeling that one has really channeled a beautiful, dreamy and loving energy from the inside out. This is why, in my eyes, Europe is literally “saving grace”, while Americans are often merely showing off flowers of grace.

S.F.4.37. All this over-thought on the balance between independence and loyalty aside, if you ask me what an ideal and utterly genuine approach to tutoring should be based on, I will cover my mouth - so as to signify the need to learn how to use the language of the heart, not of the mouth - and mutely point at the provision of unconditional love and protection to “the little ones”. Only after these solid grounds of every prolific relationship in life are in place can the process of spontaneously building the sense of responsibility and right working habits on top of them be set to begin. For, when reduced down to its core, everything in life falls back to love and love only. Only the foundations of love and respect can bring forth truly sustainable towers of knowledge. It is not hard to foster a steadfast working environment based on conditioning and threatening, but posing a gentle carpet of unconditional love below all the orders and advices we give to the people and yet making them understand the importance of not being idle but working hard for everyone’s benefit presents a real challenge. Sages and shrinks have all known that issuing orders and preaching as if one knows best what is good for another diminishes a sense of autonomy and self-responsibility in their disciples and patients, quite often causing a counter-effect from the intended navigating one towards the road to enlightenment. Just as the Christ taught in parables, Lao-Tzu raised “teaching without words” (Tao-Te-Xing 2) to stars and some of the best psychotherapists present themselves in the light of sympathetic uncertainty, often swapping roles with their patients so as to empower them and make them aware that it is only they, themselves, that hold the lantern of their mind and are in charge of its enlightenment, the best possible teaching approach in my head has always been the one that fosters unlimited freedoms on the grounds of giant goodwill and empathy. In fact, I developed myself as a social being and a scientist because of being given a lot of freedom on top of the foundations of an unconditional love and respect, and I claim as my teaching rights to provide my pupils exactly the same. Consequently, I tell them that it is only their own zeal and willingness that will drive them to become brilliantly inspiring personalities and professionals. No amount of blind obedience to rules and norms imposed by authorities will make them succeed in that. What great teachers do is provide a blanket of unconditional love and place them under their disciples’ feet, and then point to the mysteries of the starry sky and of majestic guiding voice of Nature hidden in each detail of the world. By inciting a sense of longing and wonder inside of them, and yet making them aware of standing on the pedestal of love, an inspiring magic blend of love and wonder is produced, which makes them shoot for the stars, and envision great, shiny paths for the future, and follow them determinedly, step by step. One Zen story described a warm and humid summer afternoon with one of the disciples ordered to guard the entrance to the shrine. He knew that the master was going to come back from the city soon and enter the door, but he could not resist falling asleep. He told himself: “I will take a nap just for a few minutes and will be able to hear the master’s steps. Then I will raise and pretend I was awake all of the time”. However, he felt asleep really tightly, and when the master entered the door, the first thing he saw was his disciple sprawled on the floor. The disciple heard his master’s steps, but too late. The master was already too close. So he decided to stay down and wait for the punishment. The master, upon noticing his disciple sleeping, merely began to step really lightly, and carefully and silently jumped over the disciple’s body, quietly whispering: “Sleep, sleep”. This story has

always served as a guiding light for my educational efforts and an invaluable pointer in the direction of true schooling. Another Zen story offers a similar message. In it, the master realized that one of his disciples had a habit of leaving the monastery by night by escaping through a cubicle window and heading over to the nearby city to party. During one of those nights, the Zen master waited for the irreverent disciple by the window and just when he was about to hop back in with the first rays of sunlight, the master handed him a hand as a help to jump down without hurting himself. As it was stated by Erma Louise Bombeck, “A child needs your love most when he deserves it least”, so strongly confronting the standards of the modern Western education in which centuries of coarse competition yielded a society where “if things go right, you probably won’t receive praise; if things go wrong, you will hear criticism”¹⁸²⁵. This is why I demand one thing first and foremost for my disciples: water jets of fanciful love reaching out like geysers from the teacher’s heart. And as proclaimed in the Bible, “Seek ya first the kingdom of God, and his righteousness; and all these things shall be added unto you” (Matthew 6:33). The legend says that when John Lennon was asked in the school to write an essay on what he wanted to be when he grows up, he drew a shining sun with a yellow crayon and a single word, “happy”, next to it; “because my Mom taught me that it is the one most important thing in life – being happy”. “They told me I didn’t understand the assignment, and I told them they didn’t understand life”, continued the celebrated musician to describe the nonconformist situation in the spirit of a sunny rebel, quite like the one I, myself, used to be in the classroom setting as a kid, sending forth flashes of angry looks and loudly protesting whenever I noticed the ideals of unconditional love and sublime beauty to be carelessly stomped over. What John Lennon hinted at was that foundations of enlightened spiritedness and stunning originality that are to be praised, not discouraged by the teachers, ought to be placed before we engage ourselves in any real-life tasks. For, when our insides shimmer with happiness like the azure sea on a warm summer day, with dolphins and mermaids leaping on its surface with subtle and playful grace and shedding sparkly pearls that amaze the world in all directions, anything we engage our creativity in simply could not fail; hence, the Christ’s metaphor of the tree whose every single fruit turns out to be luscious and of use (Luke 6:43) as well as the ultimate message of punk rock: even when you do not possess the most brilliant playing technique, if your heart burns with wishes to save the world, your art will glow with it and unstoppably live up to this ideal, subtly and imperceptibly at times, but still flawlessly and unfailingly in the eye of the whole. Or, as pointed out by Greta Gerwig in Mike Mills’ 20th Century Women in an attempt to describe the sound of the girlish punk band, Raincoats, self-referentially describing her own acting style too, unpolished and amateurish, never intending to become topnotch and exactly because of that being able to touch the hearts of millions, “It’s like they’ve got all this feeling and they have no skill and they don’t want skill because it’s really interesting what happens when your passion is bigger than the tools you have to deal with it - it creates this energy that is raw, isn’t that great”? “Does he suppose that I think of his wretched violin when the spirit speaks to me”¹⁸²⁶, said Ludwig van Beethoven on one occasion, reconnecting me with my own resisting to tune my electric guitar, my former best friend and a wife, for months at a time, asking myself what the use of tuning it is if the spirit of its holder is not tuned first to the right frequency in this world where the material is but a tip of the iceberg of the spiritual. And what better way to prove this overwhelming reign of the power of the spirit than by making it shine through disheveled

¹⁸²⁵ Jutta K. Neuenburg’s presentation on UCSF Center for AIDS Research Mentoring Program, National Postdoctoral Association Conference, March 11-12, 2005, San Diego, CA.

¹⁸²⁶ Cited in Paul Mies’ *Beethoven’s Sketches: An Analysis of His Style Based on a Study of his Sketch Books*, Translated by Doris L. Mackinnon, Dover, New York, NY (1929), pp. 162.

corporeality, I thought in the days when the sounds of joy and pain, mirroring the emotion of the universe as a whole, were emerging from the partially untuned guitar stroked by a mind immersed in the ocean of oneness and divine love encompassing it all. “Scenes of sadness, happiness and joy” was the concordant title for the opening movement of Hector Berlioz’s *Harold in Italy*, the classical piece evocable here because of its shunning of the notion of virtuosity at its earliest and most tumultuous in the history of art. The composition of the piece, namely, had been commissioned by Paganini for his new Stradivarius viola, but then it got rejected by the famous violinist when he realized that the character of Harold represented by the viola solos would have to watch quietly the intimate unfolding of the romance in the third movement. Even worse, the only thing it was to do in the final, fourth movement would be to intercept the riotous orchestra, presumably rebelling against the very notion of virtuosity and saying that there is no room for it on the romantic stage, albeit in vein, as its call for bringing order back to the sound would be quickly overrun by the mutinous band. Once again, complying with the philosophy of romanticism, this composition was to suggest that the heart expressing itself honestly, madly when it is mad and happily when it is happy, has a greater power concealed in itself than the most brilliant of technical skills, the point I have been reiterating in various domains, from art to science, all my life. Indeed, form a band driven by vanity in your heart, that is, a desire to show yourself off on the stage and be a rock star, and everything that comes out of your art will end up being vacuous and paltry, spreading waves of wickedness throughout the world; on the other hand, seed the background of your approach with wishes to save the world with divine harmonies and cries for otherworldly beauties that your music is to transmit, and, even if your musical talent or technical sophistication are not the greatest, the waves of this aural ocean emanating from you will flood the eyes of the wise with tears of devotional joy. For, how else to explain two dudes with guitars in their hands and not even a single day of education in music conservatories being able to strike them with timeless magic and sound more powerful than a symphonic orchestra, but by their sincerity and an immense desire to tell a simplest and yet a profoundest message to the world: “Take care, please take care”¹⁸²⁷. “These things have I spoken unto you, that my joy might remain in you, and that your joy might be full. This is my commandment, That ye love one another, as I have loved you. Greater love hath no man than this, that a man lay down his life for his friends” (John 15:11-13), the Christ thus said on one occasion, underlining the spiritual benefits of this inner happiness that, ultimately, as the Way of Love indicates, could be sustained only insofar as we reach out in wondrous lovingness towards others. By knowing that washing others with the waves of unconditional love is the first and the last step of an ultimate teaching method, one becomes ready to stream towards building the attitude of a mountainously powerful and potent teacher in this life. Even when hearts of the rebellious little ones start to open up like Pandora’s boxes, sending phantoms of hatred and anger to enwrap, horrify and destroy us, such teachers won’t even blink, knowing to recognize the foundations of bright hope that stand deeply impressed in their hearts, foundations that, they know, ought to be seeded with love to bring forth fruits of the marvelous tree of human knowledge.

S.F.4.38. Yet, an inspiring approach to tutoring should also comprise some witty cleverness mixed in with love and care. To illustrate this, I will head over to a local farmers’ market in my hometown, the place where one can find perhaps the politest of people (whether it is their contact with the earth, the hardworking nature and the avoidance of the classical socialist mentality of the social

¹⁸²⁷ Listen to Big Star’s *Take Care on Third* a.k.a. *Sister Lovers*, PVC Records (1974).

abuse, popularized in the saying “no one can pay me as little as little I can work”¹⁸²⁸ that is responsible for this, I know not), and the one in the US. Now, in the former case, one still finds perfectly glossy and fertilized apples more expensive than those full of bruises and imperfections but grown under organic conditions. Yet, people out there more look like those soiled, brown-spotted and ridged apples, although they apparently attach a higher value to things that stand out in their world and appear attractive as such. In the latter case, the situation is the opposite – organic produce is more valued than the chemically sprayed. Needless to add, people themselves on the North American continent more often resemble such perfectly glossy and spotless apples, which incessantly makes me wonder how what makes people lovable and beautiful is exactly their openness to exhibit fragileness and imperfections that all of us possess and that are actually the driving forces of our progress in life towards ever greater states of mind and the world. And so I notice this imperfection that is a hesitance to freely exhibit one’s imperfections, and have a feeling that I have perfected my understanding of being in this world a bit. What this means is that once we reach perfection in our observations of the world from the panorama of our mind, certainly spurred by noticing many of the imperfections in the world around us, we should descend down to it, gladly acting so as to show all of our imperfections, knowing that it is acting as such that would inspire the world to climb to the same panoramas of enchanting worldviews which we have occupied moments earlier. Getting back to the apples on the market after this short flyaway of my mind, you may wonder now what this has to do with education, but like Sherlock Holmes, focusing on small details and finding out their meaning for greater stories in life, I will point your attention to the fact that values can be looked for at the bases of anything in life, including apples at the farmers’ market. Here, one can conclude that in my native country, glossy and fertilized produce is, as of today, still considered as more valuable than the organic. Consequently, the evolution of the market will naturally move in the direction of lowering the price of the former and promoting their availability while decreasing the supply of the organic fruit. In that sense, a third world country, such as Serbia, will simply copy the historic line of development of the now developed countries and bluntly repeat their mistakes, when it could have been learning on these mistakes and making the so-called “frog leaps”. In other words, the development of an underdeveloped system is to ideally follow the shortest path to or beyond the current state occupied by the developed one instead of sluggishly walking in its sinusoidal, up-and-down footsteps made throughout the history. In reality, of course, although such bold choices were typically proposed by the true visionaries, they were prone to be systematically suppressed by the mediocre majorities that feared change and preferred a sparrow in their hands over a pigeon on the tree, as the Serbian proverb would have had it. Speaking of Serbia, my home country, a rather banal example comes to mind that I could use to illustrate a failure to make one such frog leap: the choice over the flag and the coat of arms that the country was bound to make following the secession of Montenegro in 2006 and the breakup of the last union of former Yugoslav republics in the Balkans. Namely, although it was a wonderful opportunity to design heraldic and vexillological emblems like the ones no one in the world had and demonstrate thereby the innovativeness of the path of development that the Serbian nation would be prepared to take from that moment on, the parliament settled on a conventional tricolor flag and a coat of arms depicting a two-headed eagle, a symbol of Byzantine origins. In my head, though, many reasons exist why I find this eagle rather aversive. First of all, a double-headed creature represents a genetic mutation; hence, deformability

¹⁸²⁸ *Radio ne radio, svira mi radio* is another common Serbian saying with the similar meaning: “whether I work or not, the radio is still playing”. The saying utilizes the same spelling and pronunciation of the words “working” and “radio”.

and oddity. Secondly, the two heads look away from each other, symbolizing not fondness of friendship and brotherhood, but mutual dislike at worst and being on watch for the enemy at best. Thirdly, although ornithologists would tell us that eight types of eagles build their nests on Serbian cliffs and trees, I have never seen one in flight over the Serbian land. In view of all of this, I believe that if a bird had to find its place on this coat of arms, would not it have been more beautiful if one more common to Serbian airs, let alone less predatory and more chirpy and flamboyant, was selected for this purpose. All in all, a wonderful opportunity to amaze the world in the most positive of its lights was thus squandered, and instead of making a giant frog leap forward, a rather modest step backwards was made. Still, these frog leaps will continue to present an essential strategy employable by underdeveloped countries in attempts to get closer to the level of progress of the developed ones by transcending the historical mistakes that the latter had made. Failure to implement them will imply tardiness of the progress of the poor countries of the world and their continual lagging behind the rich ones. In this particular case, therefore, instead of taking advantage of a relatively large supply of healthy, organic produce, there are threats that they will be diminished, just as they were a few decades ago in most Western countries of the world. No doubt that such a deviation of values between the proper and ideal ones and those cultivated in reality can be recognized in many other social domains as well as that education as the intelligent spread of values that inconspicuously guide the evolution of a given society can be seen as truly essential, foundational aspect of a healthy social progress. And, of course, what has led us to this brilliant discovery has been nothing other than Wonder over the nature of things in life.

S.F.4.39. This explains why my visions of an ultimate education are based on carrying it out with two sole criteria kept in mind: Love and Wonder. To hold them tightly and then go with the flow, release oneself to the spirit of the moment and tirelessly improvise one's way to the hearts of the tutored souls, never relying of preplanned schemes due to their futility, would correspondingly be my single advice to the educators of all times and from all walks of life. Unlike the currently dominant forms of education wherein answers come before children's questions, a more favorable approach would be based on instigating pupils to ask first, invoking in them a great curiosity, a divine wonder, waterfalls of questions that start to move the windmills of creative thinking. And when these waters of creativity start flowing within us, there is no return. The brainy windmills will start churning, producing food for thought, and we will forever be hooked up on the amusements of brilliant reflection. So, placing kids beneath a starry sky, making them wonder in front of it and ask themselves first about the origins of everything they see, has to be the first step. Each one of these inner and sincere questions is like an enlightening sparkle that brings about the dawn of bright intellect within them. Each question is a lantern that illuminates the way forward; for, "ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you" (Matthew 7:7). Only then will the descriptions that could be found in textbooks offered to them appear meaningful. In other words, there is no sense of bombarding them with bricks of knowledge unless the foundations of wonder and love are set within them. Only when the foundations are set, the factual bricks could be incorporated into the beautiful castles of knowledge within their minds. But awakening the senses of wonder and love in others is not easy. It requires a lifetime of learning to master the art of effectively providing lights that illuminate the ways for others to reach these destinations, and even then there is no recipe that works for everyone. In fact, each one of us requires a special approach. Besides, to make other people learn, it is us as the teachers that ought to be always on the learning path, never to cease questioning and wondering if we are to awaken the same sense of wonder in others. Should we stop wondering, the flame of that great adventurous

spirit would be extinguished inside of us, and just like a snuffed-out candle cannot light up other candles, neither would we be able to continue the chain of lighting up the flames of curiosity in others. Hence, when I am out there at the podium in the midst of a teaching hour, every now and then I act quirkily, say something unusual or inappropriate, just so as to sustain the spinning of the wheels of wonder within the children's minds. I ask myself questions, I express my insecurities freely. Just as Thom Yorke sat on a chair at the beginning of an unplugged show in Paris and said "Hello Thom" in French, only seconds before he and Jonny were about to start playing the song named I Might Be Wrong, I do the same, letting the audience know that it is each one of them that should always ask themselves first and only about the most crucial answers to the questions of life. In that sense, I fulfill my favorite morning mantra, "Pass the ball, pass the ball", the mantra which evokes Mladen Delić's timeless cry, "Ne sam, Safete"¹⁸²⁹, and also echoes the grace of the philosophy of the Way, of finding ultimate beauty in the pass we are about to make right now rather than in struggling to reach and score a goal. In other words, instead of pretending to be an omniscient king of knowledge and boosting my ego in front of the kids, I pass the ball to them, letting them be aware that they should be their own guides and authorities, lest they corrupt their actions by seeking approval for their decisions and modes of being in powerful personalities of the world. After all, a classic storyline that epitomizes American movies and novels has been the one wherein a hero disobeys the orders issued by the authority in order to accomplish the mission that the very authority is engaged in. The belief that to go against the law is necessary to comply with the greater grounds of the same law in question is thus a profound message implicit in many American movies, be they cinema blockbusters or B-rated ones. The importance of rebelliously listening to one's own voice of reason rather than blindly obeying the voice of the authority in any domain of human creativity we could think of as well as basing a supreme teaching method on fostering independent decision-making among pupils instead of urging them to become passive and sterile followers in life is what can be inferred from this viewpoint. The disciples, each and

¹⁸²⁹ This legendary comment by the Croatian commentator was made in the dying moments of the most beloved and fondly remembered soccer game in former Yugoslavia: 'twas the last game of the qualifiers for the EURO 1984 in France, played between Yugoslavia and Bulgaria at the Poljud stadium in Split. To qualify for this major competition, Yugoslavia needed victory, yet the score was 2-2 as the game went into the stoppage time and this comment, meaning "Not alone, Safet", was made as one of the best European midfielders at the time, Safet Sušić, who scored both goals for the Yugoslav team up to that point, failed in his attempt to dribble three players at once and get closer to the goal. He lost the ball and the Bulgarians launched a deadly counterattack, with three attackers ending up all alone, like ghosts, as the Serbian saying goes, in front of the Yugoslav goalkeeper, Zoran Simović, the scene I have not seen since then, yet the keeper managed to make the save somehow (he was chosen later as the Yugoslav soccer player of the year). The ball bounced back to the attackers and after another attempt at the goal and another save, all three of them ran to the ball in the penalty area, yet the keeper was faster once again and grabbed it first. He then leaped up and provided a phenomenal punting pass to Sulejman Halilović, who had entered the game instead of Gudelj in the 70th minute of the game and found himself in that instant on the left side of the midfield, even though he was instructed to stay on the right side and let the left side be covered by Marko Mlinarić (see cika tomo's *Ođzak nije dupe svijeta!*, retrieved from <http://odzak.blogger.ba/arhiva/2012/12/21>, 2012). Despite trapping the ball rather sloppily, he passed it on remarkably well ahead of Zlatko Vujović, the right-footed winger on the far left side of the field. Vujović stopped the ball on the left side of the penalty area and quickly sent it inside, after which Ljubomir Radanović, the native of my father's hometown of Cetinje, headed it into the net, sending the commentator into a delirium and prompting him to pronounce even more memorable words: "Pa ljudi, je li to moguće, ludnica, šta je ovo", meaning, "Well folks, is this possible, what is this, a madhouse?" It was the evening of December 21, 1983, shortly after the passing of my maternal grandfather, a native of the city of Split, in the heart of which this game was played. Most of the players of the Yugoslav team in this game, exactly 5 of them, namely Simović, Gudelj, Peruzović and the Vujović brothers, were either actual or former players of Hajduk Split, the team for which my grandpa played as a youth and the love for which he managed to install in my Mom too.

every one of them, should be consequently driven by genuine wonder enkindled in their hearts to set on the great quests for knowledge if this world is going to keep on evolving towards ever more beautiful horizons of being. So much for wonder. But what about love? How do I convey love to them, you may ask. The answer is simple: by love only. And this love is not exclusively directed to those whom we teach; rather, it encompasses the entire world with its shine. For, we should love the whole Nature and all the people, trees, flowers, pineapples, pebbles and computers in it if we are to awaken the light of love in others. Indeed, many are pieces of art around us, particularly movies and novels, from *Godfather* to *Grapes of Wrath*, that may serve as reminders that compensating love for chosen creatures dear to us with hate for the rest of the world eventually tears apart the aureole of lovingness in which we have wrapped the objects of our affection, leaving both us and them alone amidst alienating cold winds of spiritual destitution. And so, with the grand power of love for Nature and each one of her creatures and details let spontaneously sprout in my spirit, I enter the lecture hall stage. When I face the audience then, a magical moment it is. All the stars mingle up in me, and words, grammatical rules, none else indeed, do not matter at all anymore. In the spirit of Zen Buddhism, you may hear me bluntly contradict myself in a time span of a second or so, “not necessarily agreeing with everything I say”¹⁸³⁰, as Marshall McLuhan noted in one of his epistemic confessions, thereby spurring the disciples’ awareness that they have to embark on their own intellectual voyages and listen mainly to the music of their own hearts and minds in quests for answers in life rather than unquestioningly complying with standards set forth by the authorities. A legend tells of Frank Lloyd Wright’s returning one afternoon to the First Unitarian Church in Madison to check if the stonewalls had been rebuilt as he had demanded in the morning. No stones were touched, yet the architect mumbled, “It looks much better now”¹⁸³¹. In quite the same spirit, you may hear me discarding ideas I embraced seconds ago and the other way around, the implicit message of which is that all the dogmas and prejudgments are to cede place to a natural wonder that questions itself and everything in the universe from one moment to the next, alongside warning the adherents blindly sticking to my opinions to think with their own heads first, lest they be spun around in confounding circles and wholly disoriented as such. Simultaneously, with this art of cutting down the roots of relevance of my own statements I subtly insinuate that language is an imperfect tool for finding the essence of life and communicating it to others. At the end of the day, I aspire not to be a writer, even though I write with the zeal and the fury of a steam train, but an inspirer and a lifesaver. To accomplish this goal I have posed before myself, I, a literary hack, use spirit, not the word. Writing as an expression, of course, is as natural to an intellectual abiding in a world where the greatest intellectual treasures rest in the form of written word as it is to breathe out after breathing in, and yet the emphasis in my writing has never been on the word *per se*, but rather on the elated state of the spirit from which these words emerge and on the spiritual elation that they will elicit, someday, in the world. For this reason, I worry not when I recognize pieces of myself in the denouncement of today’s writers who “write more than they read and who would pull off a C on a themed essay in the high school of trade and commerce”¹⁸³². For, in the end, isn’t that what the beauty of punk, echoing the dawn of possibly every new discipline and worldview, destined to be in the hand of an amateur, is, *i.e.*, to succeed

in changing the world in spite of not knowing how to play music or even holding instruments in our hands properly? Concordantly, “to be a poet is to write without being a writer”, exclaims Jean Cocteau’s Orpheus during his interrogation by the authorities of the underworld, the realm in which all is about verdicts, orders and rules, quite unlike in the sunlit world of live spirits where breaking of the rules and abstinence from judgments are necessary steps that lead to magnificent achievements and enlightened states of being, respectively. Accordingly, I am aware that infringement of standards, including those of language, stands for a vital move beyond the limited stances that we may currently occupy and, at times, into sheer eternity. In such a way, also, pointed at is the significance of not surface features of our creations, but of impalpable and ineffable waves that underlie the visible edifices of things that we create in life. For, it is, first and foremost, the foundations of our love for the world that matter in anything creative that we engage our being in. And so, out there, on the stage, I am guided by none other but the greatness of the power of love. As I stand there and wait for the sign, I feel as if this cosmic love starts to move the carousel of inspiration inside of me, slowly and spontaneously. As it spins, it opens ever newer perspectives for all these childish eyes to wonder and occasionally let a tear or two drop down their cheeks in sensing an eternal beauty that we all are washed with at each and every moment of our lives. To be a great teacher is thus to be a rebel in one’s heart. To break down the rules and norms of teaching, acting and behaving. To let love and wonder burst like a supernova whose rays will penetrate every clink, chink and crack in the substratum of the Universe. To push the walls of fear, miscommunication and insincerity apart, like Samson did when he pushed the pillars of the temple of Dagon and caused all to crumble down and give rise to some new, brave world (Judges 16).

S.F.4.40. To constantly stun the world with our acts rather than lamely go with the flow of habit and regular expectations is thus inescapably related to our moving forward on the evolutionary train of being. When soon after the opening of the Golden Gate Bridge on May 28th, 1937, in the midst of the Great Depression, an interviewer asked Joseph Strauss, the chief engineer of the bridge building project, how long the bridge would last, Strauss merely mumbled, “Forever”, to which the interviewer asked back, “How long is forever”. This brief exchange was subsequently placed at very ending of Rob Kapilow’s composition Golden Gate Opus which I listened to at the Marin County Civic Center, the last and the largest architectural work commissioned by Frank Lloyd Wright. In it I have always seen a clash of archetypical misunderstanding between (a) poetic visionaries to whom words matter less than the emotions and aspirations underlying them and who thus always appear mysterious and impossible to understand by literal means, and (b) prosaic, strait-laced puritans who typically have a difficult time understanding anything figurative and unconventional. More often than not, however, it is not enigmatic answers, but striking questions that manage to break the pattern of habitual thought and enkindle our wonder about things fallen in deep sleep by the sideways of our consciousness. Since I am well aware that answers are analogous to shutting the gates of knowledge, locking them and tossing the key into the river, whereas questions epitomize the sunrise of human wonder, the beginning of knowledge and of ascent to more heavenly evolutionary vistas, there is a large chance that even the most definitive answers that I am about to give you will be spontaneously crafted so as to sound like questions, if not verily being questions that place the original question in question in an even wider context. For, to constantly make people aware that picture frames are also a part of the picture and that the end of the latter lies nowhere in sight, erasing all the boundaries, artificial frameworks and systems of rules along the way, has ever since been the mission imposed on my inner self from some great and transcendental heights. At times, I would transgress the limits of my workings barely

perceptibly, with a filigreed subtlety, similar to the way Hans Memling extended Madonna's red robe by a few millimeters or so into one corner of the frame of the Diptych of Maarten van Nieuwenhove he painted in Bruges in 1487. But sometimes, I would do so violently and bombastically, like Patos' schoolmate who came to the chemistry class wobblingly drunk and gave a surprisingly good presentation in front of the teacher, but then topped it by drawing number 4, the final subscript of the final compound he wrote on the blackboard that day, with a vertical line that went all the way to the bottom of the board and then moved to the wall, before ending on the floor, in the middle of the room, as if it was a minimalist medieval rubric to a signature display. This exact trick I employed once, during a lecture to science and arts students at UCLA, when I wanted to illustrate how the common criticism of students for their tangential thinking is wrong. To do so I drew a circle on the blackboard with a piece of chalk and pointed out that without any wandering off in tangents, we would be destined to run along the circumference of the circle *ad infinitum*. However, "if we follow a tangent, we might get to a wonderful place", I said and simultaneously started to draw one, extending from the edge of the circle down the blackboard and to the wall and the wooden floor of the lecture hall and toward one of the students, with whom I would do a high five clap and go back to the lectern, assuming that the message was taken up in good spirits: thinking in tangents, namely, is the only one of a kind that can take us some place surprising by the end of the day. Of course, the social reality that we inhabit is such that whenever we make an imaginative act that transgresses the map and steps onto the territory itself, an act of an intrinsic metalogical beauty, someone will pop out to point a finger at us and accuse us of profanity. This fate struck Patos' friend, it struck myself on innumerable occasions, it struck the Christ when he showed to the world that holy precepts remain dead letters in dead books if they are not being lived, and, as far as my favorite example from the chess world goes, it struck the German chess master, Curt von Bardebelen, in the more than a century long wake of his game with the first undisputed world chess champion, Wilhelm Steinitz at the tournament in Hastings in 1895, at the point when he was second in the lead, having scored 7.5 out of 9 possible points. This notable game, however, he lost after being forced to move his king from e8 to f8 to g8 to h8, the very edge of the board, with 21. Ng5+ Ke8 22. Rxe7+ Kf8 23. Rf7+ Kg8 24. Rg7+ Kh8 25. Rh7+, at which point he simply walked out of the hall, without officially resigning, and although this has been unequivocally denounced as an act of poor sportsmanship, I have always held it to be a classy act, with so much humor and positive spirit in it, because where else would he, the king go except beyond the board and who knows where after this masterful sequence of moves pulled off by Steinitz, starting with the remarkable, ahead-of-its-time sacrifice of the central d pawn? Regardless of the stylistics and consequences, therefore, I would always make sure that at least a single fine line comprising my articulate drawings by means of the music of words and gestures in this life finds its way out of the preset frames, whatever they may be, and, ideally, continues its way beyond the boards, the floors, the walls, the classrooms, the city blocks and limits and into the hearts of farthest stars and galaxies. To illustrate such answers that are basically questions that broaden the contexts in which the original questions were placed, we could bring to mind the case when an interviewer asked Igor Stravinsky "if there would be a time when Benjamin Britten would have a greater appreciation for his music", the composer looked at the questioner and said: "What is time?"¹⁸³³ A question that overturns one's habitual expectations and ignites flames of wonder and adventurousness was thus given to an ordinarily provoking question. "Please, Daddy. Don't do

¹⁸³³ Sri Ramana Maharshi apparently answered with the same question, "What is time", when a disciple asked him what the best time for meditation is. See Salvarajn Yesudian's *Yoga and Health*, Saznanja, Belgrade, Serbia (1969), pp. 321.

that. When we get near to asking a question, you jump away from it. There's always another question it seems. If you could answer one question. Just one"¹⁸³⁴, Gregory Bateson's daughter pleads her father during their dialogue which draws the curtain on Gregory's monumental book on the aesthetics of scientific reasoning. Yet, Gregory, drawing on e. e. cummings' saying that "every answer asks a more beautiful question", replies the following: "I am not asking another question each time. I am making the same question bigger". Now, I recently dreamed of a little girl pulling my skirt and asking me what came first: love or wonder. Well, what came first: a chicken or an egg, mind or Nature, a cloud that brings the rain that waters the forest or a tree that sends the water vapor up into the sky to feed the clouds, I remember I replied, guided by Gregory's mantra: "Always a more beautiful question to those who ask a beautiful question". No straight answer could be given to these questions because trying to trace our way to the first cause through the thick web of interwoven feedback cycles clearly presents an impossible task. When I mentioned in the previous passage that answers ought to come after questions, I skipped adding that every question arises on top of prior knowledge accepted by the subject as affirmed and reliable. In other words, questions can arise only upon a network of presupposed "answers" to some other questions in life. Consequently, a perfect, absolute wonder, questioning and doubt about everything, is utopian. It cannot exist because only by resting on some firm coasts of knowledge could we wonder over the mysterious oceanic streams that Nature abounds with. Every question resembles pining for bricks of knowledge that could be used to edify the towers of knowledge built in our minds. Only occasionally, when paradigmatic shifts in our reasoning and beliefs about the world occur is that we decide to renew the foundations of these towers. But it is a lengthy work to overturn the entire foundations of our thinking, which explains why only young, marvelous and brave in spirit are prepared to constantly rethink and revise these foundations, which are, however, crucial for judging and conducting our acts properly in this world, as the final message of the Christ's Sermon on the Mount suggests (Matthew 7). Setting the enlightening bases for the towers of my thought, which have, as ever, strived to pierce the clouds of the most divine epistemic loci, is an act to which I ascribe such an importance that, basically, all my life I considered myself to be a "debaser", the one who, as it was being hinted at in the classic Pixies' song¹⁸³⁵, relentlessly shocks the worldly minds by removing the carpet from under their feet, by questioning and shaking the profoundest foundations of their thinking and being, calling for their thorough inspection, the discovery of weaknesses and cracks therein and their eventual strengthening, all until they become wiser creatures at their very cores at the end of this introspective process. "Hey kid, shake the land, maybe you're crazy in the head", thus ring in my head the beginning verses of the No.1 guiding-star record of my life so far¹⁸³⁶. However, as I say, no questioning, no great spiritual quests, no divine wonder could exist without solid foundations of a kind. This is why we need to firmly believe in something in order for our mind to keep on traveling along its adventurous roads, revealing the hidden secrets of life. As claimed by Ludwig Wittgenstein, "an absolute doubt would not be a doubt at all"¹⁸³⁷. We need to firmly believe in something in order to be suspicious about something else. Such is the nature of human knowing. Not only could there be no completely disinterested, neutral observation of which empirical positivists have dreamt because every observation is akin to reaching out in search of answers to questions posed by the depths of our

mind, but each one of these questions that drives our perceptions and actions springs forth from specific presuppositions that comprise the bricks laid within the foundations of the epistemic microcosm of ours. Once we understand this, we come to the importance of the concepts of faith, hope and love. These three combined give rise to wonderful visions that we set at the bases of our mind, keeping us going forward, in the direction of their coming true. But as pointed out by St. Paul the Apostle, “Now abideth faith, hope, love, these three; but the greatest of these is love” (Corinthians I 13:13). Faith and hope are like great windows that we open in our soul, through which the inner light of love is enabled to shine and fall straight to the canvas of our mind, inscribing wonderful sights that propel us ahead. Love is thus the ultimate foundation of our knowing. It is wishing hard, hard, harder than ever, to catch a star from the sky and bring it down to the creatures we love that sets the bases for our loving determination and visionary mindsets. Hence, there is no wonder without visions that illuminate our mind and shine light onto the paths we should set on. After all, without any dose of determination within ourselves, our lust for life would simply crumble down. It was a combination of bright visions and starry wonder that made apes stand up, straighten up their spines, and keep on walking upright. Without this dose of determination instilled into ourselves we would eventually wind down and wither, with no willingness to live, breathe and walk. In order to be efficient and successful in anything we do in life, we need to have a bright vision in the back of our mind, spinning the music of inspiring songs or suggestive mantras that make atoms of our bodies dance with joy and that make us stronger, more resilient and powerful. When I sleep, I sometimes wonder in my dreams, and wake up to write down a few thoughts that miraculously arose in my head during sleep (which typically happens after a hard-thinking day, when my brain keeps on churning out ideas during sleep instead of taking a rest). Therefore, it is quite rarely that I go to bed without placing a pencil and a piece of paper next to me. And, of course, I am not the first artist to do so. Lewis Carroll, for example, made a cardboard alphabetic stencil and kept it under his pillow, whereas Charlie Chaplin held a recording device on his night table, so that he could wake up in the middle of the night with a melody in his head, hum a few notes and roll back to sleep¹⁸³⁸. To intimate that sleep can be a ladder leading to a harbor of dreams and wells wherefrom the inspiration for poetry can come alive, Andre Breton would leave a note on his bedroom door before going to sleep, saying, “Do not disturb. Poet at work”¹⁸³⁹. And yet, although I have reached a stage when I occasionally find myself elaborating complex paragraphs of thought in my sleep, reflecting on them and then realizing in the middle of the dream how amazing it is that one can craft ideas so sanely in a dream, more often than not I order my mind to, literally, go to sleep. Just as Napoleon used to do, I imagine my mind shutting all of its drawers, emptying its content, letting all the thoughts flying in it dispense and evaporate. Sleep, sleep, sleep, thus I repeat whenever I turn in my bed, and I strongly believe that powerful mantras reverberating over the mountaintops of my thoughts and sending ripples over the ocean of my mind with the message of “I am strong, I can make it, I am strong, I can make it” is what I should “blame” for the large part of my creativity. I feel as if these ripples of the background thought send winds that direct all the arrows of ideas that my mind send into its air to hit the centers of their targets. In addition, these ripples can reshape the coasts of one’s mind, truly changing the subject and making one become a better and a more inspiring person. Needless to say, some people choose to spin thoughts of anger, envy, hatred and destruction in the background spheres of their minds, which accordingly ruins their bodies and minds alike, poisoning their hearts with many hurtful spikes, ready to spontaneously prick the surrounding

¹⁸³⁸ See Alan Fletcher’s *The Art of Looking Sideways*, Phaidon, London, UK (2001).

¹⁸³⁹ Watch *Kindergarten Teacher* directed by Nadav Lapid (2014)

creatures at any moment. The main thing to keep in mind here is that living with one or another type of these background mantras swirling in our mind shapes the latter, so that eventually, whatever we do or say, these background vibrations will be implicitly present therein. So it is true: if we wish to become a creature that truly beautifies the world with every voice that comes out of our mouth, with every move we make, be it the subtlest and the most unnoticeable of them all, we should make sure that the foundations of our heart and mind remain shiny, flowery and beautiful. To sum up, it is through ceaseless wonder that we build and sustain the foundations of Love in our heart and mind, whereas only from the foundations of Love could we immerse our mind into timeless and celestial wonder that feeds our soul and opens up the ways for voyages to the stars.

S.F.4.41. Right after I moved to San Francisco, I recalled that already as a child I had been many times overwhelmed with mystical experiences during which it had become clear to me that this city was going to be one of the important stations on my way. In 1979, my Dad visited San Francisco and on the way home bought a touristy book about it. Out of all the books he brought to us from his travels, the one about San Francisco had always been the most fascinating to me. I still keep in mind its photographs of sandy dunes of the Pacific Coast, of Highway 101 with a yellow line drawn in the middle, of a clown playing guitar in front of the Carousel on Pier 39, of giant Sequoia trees and, more than anything, of 8-shaped Lombard Street between Hyde and Leavenworth, along the green fences and flowery bushes of which I imagined myself rolling, hiding and playing. At those imaginative days of my childhood, I also wished to be a computer scientist and had dreams of transferring the entire reality of ours, pixel by pixel, sprite by sprite, twitter by twitter, onto a virtual domain. At the very mention of Silicon Valley one day, I recall seeing a Sun-like vision in front of myself. In general, whenever I have come across signs in life that would have to tell me something important about the path of destiny stretching in front of me, I felt as if my heart would start beating with a Listen, and soon I would be overwhelmed with illuminating cognizing moments. In that sense, we should all be awakened to the right “frequency” of cognition if we are to successfully recognize the mysterious messages plentifully present everywhere in the world of ours. After all, “all the things around us incessantly preach to us”, as Emerson claimed, although who knows how many important signs like these we never get to recognize simply because our minds are not tuned to the “vibrations” that make them resonate with the surrounding reality. And do not forget that this special state of awareness is not mere alertness and reactivity. Instead, it lies someplace between a sense of perfect receptiveness and solid wakefulness on one side and absentminded, oceanic dreaminess on another; between an absolute attentiveness on one side and a soft, meditative slumber on another.

S.F.4.42. The first thing I remember I saw of San Francisco was truly a Sun. It was a big, big Sun shining behind the back of Nada, my Mom’s friend whose name in Serbian translates to Hope, waiting for me at the gate of SFO airport. My last night out in the Bay Area, right before the one I would squander quietly, night-swimming underneath a blood red sky filled with the sound of swooshing airplanes, I would spend in Nada’s company too and as her heart palpitated with great momentum under figurines of sharks and other oceanic fish in an eatery called Thea, I stood outside, in the middle of the night, held Theo in my arms and gazed at his eyes sparkling in speechless wonder as he, himself, gazed at the colorful fluorescent lights of a cinema, with the boy Bruno from the Bicycle Thieves on one side and the Little Tramp from the City Lights on the other. A beautiful finale to the peevish joyride that my stay in SF was it was, carrying a lesson of a lifetime importance, like all good endings: namely, seeing stars of Love and Wonder sparkling

in the eyes of a beloved soul as it looks up into the sky is one thing greater than looking at stars *per se* and awakening these two most fundamental cosmic qualities within oneself only. It is also a greatest guiding star that we could carry in our pockets for the rest of our lives. But then, with beginnings and ends flowing into one another in my head flooded with memories, at the very entrance to this magical fairytale that SF would present for me, as we rode in a taxicab to my new apartment in the Sunset, it zoomed through my head how good of a sign it was for the Sun to be the first thing I saw from SF, all under one friendly gleeful Hat of Hope. The name of this old family friend, the talkative benefactor like no other, however, means Nothing in Spanish and in combination with this imagery that symbolized my arrival at what I would later call the city of the Sci-Fi state of mind, it served as a reminder of the teaching of Swami Sivananda on the thought power that I had widely embraced in my youth¹⁸⁴⁰ and thus of the Sun of hope and beauty rising from a pure mind that has dumped all the unnecessary thoughts that tended to uncontrollably fly like phantoms through it, as if through an opened Pandora's box, and now, white and untainted as a lotus flower, pours out waves of sheer divinity through its antennas. Not only did this doctrine teach me that breathing through chakras, visualizing suns and stars in the microcosm of our mind and body and bathing others in the light of divine spirit upon which we all float all possess an incredible power to heal, sanctify and pose the paths to spiritual salvation in front of us, but it also instructed me to be unattached to anything in life, for this sense of nonattachment, epitomized in the slogan that has oh so often popped up in my head, "Life is a bridge; build no house on it", appears to be a prerequisite for journeying along the holy path. "We who had nothing shall teach them peace"¹⁸⁴¹ is thus the ending line of George Seferis' account of life as a refugee and a light shed on the idea that one must lose a world and become foreign to it if one wishes to illuminate it with the sun of one's soul and save it from slips into frippery and disgrace. This is why setting on the interstellar mission to save the Universe in the Hitchhiker's Guide to the Galaxy began the moment the hero's home was demolished by, symbolically, pragmatic rushers who wish to build a bypass through it all and ignore that Nature's paths are crooked and that lengthy tortuosity, not straightforward linearity, as the effect of catalysis teaches us and as implicated by this windy sentence¹⁸⁴², is how, paradoxically, the conditions for genuine speediness are achieved in the physical realm. Yet, despite being aware of the merits of nonattachment, after I settled down and started comparing this city with everything else I had seen up until then, I began to feel as if I had reached the top and my attachment to it grew strong. I persistently recalled what Voja told me as were sunbathing on a Herceg-Novi beach, just outside the Hotel Plaza, and watched the open seas of the Adriatic: "Dude, you are going home!" Truly, thence, I felt as if there could not be a better place to live in on this planet of ours. And so, spontaneously, my heart started throwing anchors all over this place, often without my mind being aware of it. For, deep inside of it, wavelets of mental impressions ceaselessly shimmered in harmony with another set of wavy words I saw written on one of the walls of the SF jazz venue, Yoshi's, when I entered it for the first time: "If

¹⁸⁴⁰ See Swami Sivananda's Thought-Power, The Divine Life Society, Uttar Pradesh, Himalayas, India, 11th Edition (1996).

¹⁸⁴¹ See George Seferis' Mythistorema, In: Collected Poems, 1924 – 1955, Bilingual Edition, Translated by Edmund Keeley and Philip Sherrard, Princeton University Press, New Jersey, NJ (1967), pp. 59. Another version of this verse is "We who had nothing shall school them in serenity".

¹⁸⁴² The correspondence between the microcosmic and the macrocosmic is more of a rule than the exception in this fractal universe of ours, as hinted at by the simultaneous demolition of the protagonist's home and of the whole Earth in this popular book. See Douglas Adams' The Hitchhiker's Guide to the Galaxy, Pan Books, London, UK (1979). Ideally, thus, every sentence is to reflect in its structure the ideas conveyed through it; hence the windiness of the sentence to which this footnote belongs.

you came to San Francisco, there was nowhere else to go”. Consequently, I became incredibly attached to this city, which has caused me a lot of problems since then. In a way, it was as if the ominous line voiced by Prof. Elvin Atombender at the starting point of the summersaulting man’s mission to penetrate the professor’s hideout and decrypt the password to a control room before the world is being destroyed by the deadly robots found a fertile ground in the depths of my mind and from there on managed to produce the toxic fruits of thought that only the attachment to material things not worth being attached to in life can yield: “Another visitor, stay a while, stay forever”¹⁸⁴³. What I could not have guessed nor sensed at the time was that the ardent attachment to SF and an immense wish to settle therein despite the unstable job market for my profession in the city was an incarnation of Aristotle’s idea that “greed is the cause of all sins”¹⁸⁴⁴ and the beginning of a massive fall from grace, straight from the divine loci whereon the world felt as if being my own, carried tenderly on the palms of my hands, all thanks to my sense of belonging nowhere and everywhere at the time of my arrival, and down to the dusty ground, cold and emotionless, landing on which with the smooshed nose would start the endless process of self-victimization and anger and contention and even more self-victimization and so on, all until the spiritual was lost and the material gained, through the vesuvian fire and the apocalyptic land-shake of the mind alike. While standing on the SF ground, for the first time in my life I sensed the desire in me to stay at one particular place and not move on ever again. Ann Magnuson of Bongwater compared LA once to “heroin in city form”¹⁸⁴⁵, but for me SF did the thing, clutching me with the power of ten thousand rivets or more. Despite the maritime, sailor-like spirit of mine, always looking forward to travel and see new places, the very joy of traveling became almost extinguished in me. Yet, deep inside of myself I knew that the only way to be a gorgeous, divine messenger in this world was to live like the Little Prince: tied in his heart to his faraway planet, always feeling as a tourist and a foreigner, and yet merging in sympathy and love with the beings he curiously leaps to meet. This ideal is nothing else but what the Way of Love has drawn upon the pages of this book. However, the curse of attachment to earthly treasures took its toll, lulling my spirit and freedoms and fostering feelings of panic and evanescence in me. This is understandable because after reaching the top, there is nothing else to be longed for. Frighteningly, when one finds oneself at the top, all of one’s glances are directed solely downwards, incessantly reminding oneself of an inevitable descending path and fall that will come sooner or later. Hence, the mountaintops drawn on the cover of *Kid A*, cold and snowy, resembling those gloomily overlooking me as I pirouetted in joy in a quiet Kotor marina at the dawn of the 21st Century, surrounded by evergreen trees swaying on the summer breeze, a pleiad of stars and a couple of softly murmuring statues, leaving a trace of awe in it swishy wake, as if secretly telling us that dispirited states of mind reflected in this barren landscape await all those who are on the mission to climb ever higher while using others as ladders on their ways. At the same time, as a contrast, this image distantly brings back fond memories of seaside in summertime, warm and cozy, prompting us to see humble descent to the lowest level we could occupy in relationships with others, that of the sea, letting all the rivers of surrounding hearts to flow into ours, as the path of true happiness and spiritual enrichment in this life. Thence I recalled how the last, 30th principle in my book *The Principles of a Holistic Science of the Future*,

written in Serbian, was that “the world is a picture/mirror/landscape of our soul”, a view that sprung from my sparkly seeing the world around me as a reflection of my spirit. Thus I clearly saw the days spent in Belgrade and Mala Moštanica as emblematic of the golden days of my childhood, of my time spent in Eden, as recorded on the grooves of the beautiful 10,000 Maniacs record. The days spent in Slovenia, the country of mountaineers and people addicted to lone climbing to any hill posed in their sight, have symbolized my own climbing up the slopes of the cognitive mountain of my life and toward its peaks, whereby reaching San Francisco, the city on the coast of Pacific Ocean, the vastest one on this planet, driven by my longing for the sea and the blood of sailors, epitomes of true adventurers, running along the rivers of my being, has stood for mine setting forth away from the safe parental harbors of my childhood and into the world of adulthood, the world where many new kingdoms were to be conquered. From one city that personifies the blend of the most sublime and the most tragic, my hometown, Belgrade, the railway tracks of destiny have thus glided me and my pen to another urban battlefield that in many respects symbolizes this very same juxtaposition of opposites, from the way the cold plasticity of the corporate culture collides with the sunshiny smiles of the dying hippie ethos to the way greed as the primary motivator of progress in the Western world mingles with sublime social consciousness and yields tremendous hypocrisies as their wicked offspring to the way deadening gentrification pulls out the heart and soul of what once was the refuge for the artist and the indie character to the way the promises of the brotherly love, gay in the most genuine sense conceivable, that poetic, jovial and platonic, are spoiled by the animalistic and deviant sexual appetites to the way dreams of cosmopolitan diversity crumble under the pressure of social inequalities to the way environmental activism is blemished by destructive consumerism to the way this home to the homeless, the city which Saint Francis of the modern day might be tempted to consider his natural habitat, becomes the starting point for the eviction of the poor and settling in of the wealthy: San Francisco. For, whereas the philistine masses in this city are mesmerized and star-struck by the limelight, expecting the second coming of the Christ to be on a main stage, bedazzling and enticing, engrossed in power, if not magic, Saint Francis, the protector of the poor, I know, would shun with a smile all these tainted points of view, knowing that a Christ-like creature could be found latent inside everyone, but especially among the deprived, as in the young man whom I saw once with a broken guitar in his hands and a sign that said, “Too pure to prostitute at work” or something along that line, somewhere in the dark corners of Tenderloin. Yet, despite my finding the brightest in the darkest in this city ever since I moved to it, my impression from nearly the first days in it was that of setting my feet onto the mountaintops of my life path. Therefore, after moving to SF I occasionally felt as if the process of aging had taken hold of my spirit, which was something completely new for my incessantly youthful and uplifting heart and mind, always looking forward in the optimistic visionariness of their togetherness. These feelings were only amplified by humongous talent-wasteness I had seen mirrored in the eyes of San Franciscans. Resigned spirits deprived of their natural kindhearted brightness owing to being trapped by the curse of intellectual, cultural and showbiz comfort of this metropolis I stunningly noticed shimmering behind those eyes. It was as if looking deep into them would make me recognize their being spellbound by the Sunset Boulevard, “the twisting boulevard”¹⁸⁴⁶ of phony fame and spurious starriness, having forfeited their goodhearted humbleness to the ignoble rule of the Norma Desmond represents and now doomed to share the fate of Joe Gillis¹⁸⁴⁷ by ending up being drowned in the pools of comfort for the sake of winning which they had sold their souls to the devil. Thus I recollected Jack

¹⁸⁴⁶ Listen to Terry Callier’s *Sunset Boulevard* on Lifetime, Blue Thumb (1999).

¹⁸⁴⁷ Watch *Sunset Boulevard* directed by Billy Wilder (1950).

Kerouac's impression of San Franciscans: "Everybody looked like a broken-down movie extra, a withered starlet; disenchanted stunt-men, midget auto racers, poignant California characters with their end-of-the-continent sadness, handsome decadent Casanovish men, puffy-eyed motel blondes, hustlers, pimps, whores, masseurs, bellhops, a lemon lot and how's a man going to make a living with a gang like that?"¹⁸⁴⁸ On another occasion, after he had raved over the fact that "San Francisco's new political regime is an antiregime set up to deflect the straight lines and bottom lines of American capitalism"¹⁸⁴⁹, a leftist SF hearty noticed how "depending on one's perspective, San Francisco is a free space or a decadent place, a melting pot of cultures or Pandemonium itself, a sanctuary of tolerance or a Sodom deserving plagues. The city attracts and repels; it even attracts those it repels"¹⁸⁵⁰. For this reason, the epithet of Balkans by the Bay¹⁸⁵¹ was ascribed to this city of contrasts that mesmerize and appeal to adventurous souls. Yet, being allured by earthly pleasures and finding sources of unassailable happiness therein flies us back straight to the epic entrance into the ominous story of Odysseus sailing in the proximity of the island of the seductively singing sirens, just before he had to navigate his ship between the monsters of Scylla and Charybdis, and makes us aware of all the traps imposed on our spiritual streaming to heavenly heights of being thereby. It was then, upon gazing at these sad, sad San Franciscan eyes that it came to me what the real and all-encompassing curse of the new American society is. First of all, it is worth recalling that the American culture is at its core based on people who decided to move away from their old habitats and jump into unknown landscapes of experience. However, if one were to disregard the fact that Americans accept moving from one city or state to another, selling and buying houses, with an incredible easiness, attaching very little emotional value to material objects in spite of their excessive materialism¹⁸⁵², as opposed to Europeans, including especially my fellow countrymen, who tend to be markedly more attached to their dwelling places, understanding deeply when the Serbian folk singer states in a song that his mother's photograph is more valuable than entire America¹⁸⁵³, the message by which most Americans would be befuddled, like arsars, it can be surmised that this great pining spirit has now, over generations, calmed down and a permanent satisfaction has crept into the typical American consciousness. In contrast, when I assert that I don't need no home in this life, that I will be a nomad for as long as I live and that I will build no abodes on the bridge that this life is, all in accordance with the Christ's telling his disciples that "the foxes have holes, and the birds of the air have nests; but the Son of man hath not where to lay his head" (Matthew 8:20) and advising them to "go into the world" (Mark 16:15) and leave behind the comfort and the coziness of hearth and home, even though I am a foreigner and an immigrant on the American soil, such a stance makes me an American bona fide a million times more than the natives to this country who have fallen prey to the plagues of phlegmatic, couch-ridden ways of being, who have transformed from pioneers in search of something new to hobbits living in holes in the ground and who have wholly lost any cravings to go beyond their nature and venture into the stellar fields of the unknown. For, aside from an attractive house, a tidy lawn, a golden retriever, a comfortable car, a good job, a travel every now

and then, and a little bit of showoff of luxury to the neighbor, there are no great things left to be yearned for in the life of an average American. And with nothing else to dream for, the wheels of artistic creativity and spiritual progress within us stop spinning, leaving us to bluntly and drowsily stare at the starry lights of the sky and humanity, feeling nothing at all, and just remembering how the vigorous dance of spirit used to produce breathtaking impressions in us by merely looking at them in the past. The loss of this sacred sense of wonder that drives us to explore the world and ourselves and evolve thereby into ever more divine emanations of being can be considered as the first sign of a dying civilization; “the high-born are full of lamentation... laughter has perished; grief walks the land”¹⁸⁵⁴, notes the record of a collapsing Egyptian society, circa 2100 BC, standing forth in this context as a worrying sign for the American culture composed greatly of spiritual zombies, drugged by disinterestedness, emotively vacuous and ruined by habit, having strayed from the path of genuine adventurousness that typified their pioneering predecessors. With our cravings for comfort satisfied and higher senses numbed, spiritual deadness begins to creep into us ever more with every new breath of our once stellar being, but now merely an extinguished dwarf on the sky of humanity, as we become free to recall what a witty joker ominously noted once: “The downside of the American dream is that one has to sleep to be in it”. “I’d bet they’re asleep in New York. I’d bet they’re asleep all over America”, Bogie concordantly mumbles in Casablanca while staring despondently at a wooden table with nothing on it except for an almost emptied bottle of bourbon and a glass, playing an American expatriate who had known all the way that comfort and habit must be sacrificed to bring life to life. Like barnyard chickens that lost the flying abilities of their nearest ancestor, the red jungle fowl of the Himalayas¹⁸⁵⁵, and degenerated their survival capacities owing to thousands of years of domestication, so could we expect humans to undergo the same process of regression under the conditions of exceptional comfort and safety. “The scholar who cherishes the love of comfort is not fit to be deemed a scholar”, Confucius pointed out millennia ago and, indeed, the curse of comfort will always present the first and foremost obstacle on our spiritual path, the most ostensive drag of the devil in opposition to our cravings to become the sacred embodiment of a divine sun of spirit on Earth. In that sense, we should be reminded that there always needs to be a balance between our satisfaction with who we are and where we are on one side and passionate striving towards new horizons on the other in the way we approach the ways of thinking and being in this world. Too much satisfaction and you’ll find yourself in the muddle, carrying a lazy and drowsy spirit, uninspiring to the world and yourself. But too much of yearning and an impatient desire will penetrate every part of your being, resulting in an inability to concentrate your powers and serenely and enduringly focus on the things examined. This element of calmness prevents us from impatiently jumping from one point of view to another, without being able to truly focus and suck the nectar of essential impressions that details of the surrounding world secretly possess. Although these two, a sea-calm sense of satisfaction and a mountain-moving spirit of yearning, seem thoroughly opposite and incompatible, the true mastery of being implies their dynamic balancing over the course of time.

S.F.4.43. In fact, when I dig deeper beneath the historic surface, I realize that America had been a desolate continent before its explosive growth began, and one day, sooner or later, it will return to its deserted beginnings once again. As I stood in the middle of Woodward Avenue, the oldest US street paved with concrete, synonymous with Detroit, the city hallmarked as the birthplace of the

American Dream¹⁸⁵⁶ and the one that was in the early days of the Great Depression, when Henry Ford declared his factories to be the substitute for religious expression, already dubbed by the visionary minds as the city of future¹⁸⁵⁷, in a most derogatory and ironic way conceivable, alluding to the inevitability of the collapse of its soulless industrialism, I, with legs stretched into an inverted V sign and feet placed onto two separate car lanes, holding arms parallel to the ground and blocking cars with this statuesque pose of mine, while gazing down the endless stretch of houses that were once luxurious mansions and now are ragged piles of abandoned woodwork surrounded by shabby shrubs sobbing and squalling in solitude, felt as if I glimpsed the images of a desolate and deserted land that America will one day become. For, all systems in Nature, regardless of their character or complexity, are predestined to follow a finite lifespan, starting with flexibly juvenile beginnings, continuing onto climactic arrivals at the triumphant mountain peaks and then stiffly falling into abysses of being, becoming inspirational food for the fresh and upcoming emanations of life. As for the North American culture, with a little bit of insight one could recognize its bright preludes epitomized by the cartoon character of Mickey Mouse, a little chaste creature that makes up for its lack of physical powers with an extraordinary heartedness and courage, and yet the more we gaze at the spiritually ruinous remnants of this Brave New World that surround us, the more we tell apart the instances of stiffness that entails every path of descent and downfall of natural systems. The American culture that infused minds in the most remote corners of the planet with its values owes its success and the secret to global prominence to promotion of the freedom of being different; however, witnessing its actual fosterage of frightening sameness and systematic rejection of those who do not conform to its standards of phony and polished behavior, alongside rotting from within its materialistic core, makes me realize that its peaks have been surpassed and all that its members could anticipate is a slow or rather rapid decline towards staleness, degradation, disappearance and rebirth in form of a new culture. As it usually happens in life, the very same things that provide the keys to success turn out to set traps for the eventual downfall of the system in question. In this case, the key has lain in the merits found in rebelliously standing in opposition to the opinion and behavioral standards of the majority, something that set the American culture light years apart and ahead of the autocratic and dictatorial governances that demanded idealistic uniformity and that abounded among its contemporaries a century or so ago, when its rapid ascent had begun. However, without its complementary aspect exhibited in the form of empathic closeness with fellow beings, sole individualism transforms into a disastrous imbalance on the Way of Love, which is exactly where this culture finds itself as these visionary lines are being written. For this reason, I am free to conclude that despite the fact that the American culture has conquered the globe by dispersing its fertile seeds onto every corner of it, its dying has begun and sooner or later it will be transformed into an arid culture devoid of spirit, the smell of which in the air invites prophets and visionaries to stand on the cliffs and seashores of life, gaze at the open seas spread in front of them and outline the shape of things to come in their clairvoyant musings and dreams. Of course, although this dire fate of imminent dying and desertification awaits every fresh fruit and fertile soil around us, be it of biological, sociological, psychological or any other origins, just like the turning of once luscious Sahara planes into a desert that we know a hundred thousand or so years ago may have impelled the early humans to leave Africa and humanize the rest of the globe, so may this fading of the American culture as we know it be a dusk after which

a new, far brighter dawn will rise, as it is usually the case in this sad and blissful universe wherein ends and beginnings are inextricably twined. But as it happens during every profound transformation at social and individual scales, a state of crisis has to be hit before this phase transition could occur and, according to the radio talk show host, Thom Hartmann, one such transformation has taken place on the North American ground every 70 - 80 years¹⁸⁵⁸, from the War of Independence (1775–1783) during which the colonial governance was abolished to the Civil War (1861–1865) during which slavery was prohibited to the Great Depression of the 1930s during which the strongest middle class on the planet was created, carrying the US on its wings to the economic and technological top of the world, and, finally, to the transformation gradually building its momentum that will topple many spirits and buildings alike with its tsunami-like waves and starting to slowly shake the world as these words are being written. “And there shall be signs in the sun, and in the moon, and in the stars; and upon the earth distress of nations, with perplexity; the sea and the waves roaring; men's hearts failing them for fear, and for looking after those things which are coming on the earth: for the powers of heaven shall be shaken. And then shall they see the Son of man coming in a cloud with power and great glory. And when these things begin to come to pass, then look up, and lift up your heads; for your redemption draweth nigh” (Luke 21:25-28), thus stands written in the Bible as a reminder that no transition to more sublime states of being is possible without passing through the stages I call “shakers of stars”, the stages wherein the reigning orders become shaken, reshuffled and brought to the edge of existence so that new ones could arise. I, of course, worry not even a slightest bit about arriving at this country right before the onset of a big economic crisis, the crisis which is to reveal the clear signs of rigidity and fragileness of the foundations upon which this imperfect, capitalist society, in which the balance between self and communion is inherently skewed, stands. Right before a big question mark began to ominously loom over the head of corporate oligarchy and its capitalist premises that have turned humans capable of overcoming gods who had created them in terms of their awesomeness into selfish and apathetic slaves to their cheap, materialistic cravings and that threaten to drive this whole world which took billions of years to evolve to its present state straight into an abyss and right before the stage was about to get darker and gloomier, I, always eager to live in the spirit of Schiller’s Johanna who “must be where the danger is”, appeared on it. Like my Mom, who would witness the beginnings of an inevitable collapse of every company he joined during her professional career, so have I had the habit of entering the shows in new milieus just prior to the onset of their decline into states of chaos, the states which would be, however, as a rule, ensued by arrivals to more prolific and advanced levels of being than any time before. In such a way, life has prepared me for lightheartedly entering the most adventurous arenas of human being, and, in fact, I have realized that whenever life around me gets to be dressed in colors of an excessive casualness and safety, my mind tends to put some of its essential qualities to sleep. Humans developed intellectual and physical skills during the evolution via keeping their senses awake by constantly facing fearful situations, and what we see today as the consequences of the relatively recent trends in the history of humanity wherein societies exist with entire lifetimes of their members lived without ever experiencing serious life threats, does not look too optimistic. Namely, instead of shifting human interests to the domains of arts, sciences and explorations of the sacred ways of how to celebrate each other, the curiosities and passions turn out to be lulled. Also, instead of instigating more of the ethics that shines with one’s readiness to give life for another creature

¹⁸⁵⁸ See Thom Hartmann’s *The Crash of 2016: The Plot to Destroy America--and What We Can Do to Stop It*, Twelve, New York, NY (2013).

should there be a need to do so, which is the ethics customarily adopted in the heroic tradition to which I have belonged, it obviously gets corrupted under the conditions in which extreme safety reigns. Moreover, although fears seem to have disappeared then, they are still with us, dormant within the depths of the human mind. This is so because they have been an essential part of the repertoire of human emotions throughout the evolution, and as pointed out by many sages, heroism does not consist in negating one's fears. It is about facing one's fears and, through one such facing, prompting oneself to develop an ever greater shine of one's ethical and aesthetical values and creative skills. Now, that fears are still concealed deeply within the layers of one's consciousness is best seen on rare occasions when a threat, distant or imminent, appears. Only voices screaming with panicky calls for preservation of one's safety, irrespective of the damage that is to be done thereby to the environment of the system that they belong to, or those that seem to be yelling "save yourself, serve yourself", as in the legendary R.E.M. song about the end of the world¹⁸⁵⁹, are thence heard. And yet, as I have said, I fear not. For, ever since I spent time looking up at stars and gently gliding along Belgrade city streets in the midst of wars and revolutions, with the purity of a lotus flower streaming towards the heavenly dome of stars above, all while the stem of my being was immersed in waters protruded with the violent storms of hatred and despair, I have known how it feels to listen carefully to the signs of the world with my instinctual senses and never let the dangerous and devastating floods of fear wash over the lotus flower of my mind, the one always staring up, at the angelic whiteness and purity of a sacred being coming down from the Heavens above to guard and guide us on the way. By cultivating such a spiritual chastity within ourselves, we would become like Arjuna from the epic of Bhagavad-Gita, safely journeying through the middles of the battlefields, without ever being hurt. Much to the amazement of his disciples, Zen master Joshu said once that he would be going to hell once his mission on Earth is over because "who would have otherwise been setting off to save the lost souls". And verily, bravely descending down to the hellish depths of the world while carrying the torch of love and beauty in our mind and heart, as well as entering the abysses of perplexity and unintelligibility of the world and its textbooks driven by the lustrous scholarly adventurous spirit of ours, has ever since been the mission for the greatest and the most enlightened ones in this world.

S.F.4.44. Hence, I strongly believe that if the fall of the American society is to occur, it will be anteceded by people's suffocating this inherent sense of adventure that has ever since presented the main progressive feature of the American culture. David Lynch said once that as people grow older, their windows to the world become closer¹⁸⁶⁰ and, similarly, the American culture, once with its windows fully open to the world, dancing on the starlit balconies as if no one is watching and enchanting the viewers for a lifetime, has begun to withdraw itself inside of a shadowy mansion on top of the hill, looking a bit like Citizen Kane's Xanadu from the distance, hiding in it with a spirit weary and icily cold, confined in a shell of fear and demands for security and conformism, approaching its decline and disappearance in the form which we have known it. Moreover, as observed by a protagonist of Joe Swanberg's *Easy*, "The more people talk about needing a safe space, the more I feel like they're creating a world where no one is safe"¹⁸⁶¹, hinting at the devilishly aggressive, neocolonial and imperialistic foreign policy as the dark other side of the coin of the internal obsessions with safety in modern day America. Perpetuation of these

¹⁸⁵⁹ Listen to R.E.M.'s *It's the End of the World as We Know It (And I Feel Fine)* on Document, I. R. S. (1987).

¹⁸⁶⁰ Watch *The Story of Film: An Odyssey*, Season 1, Episode 12: *Fight the Power: Protest in Film*, directed by Mark Cousins (2011).

¹⁸⁶¹ Watch *Easy: Side Hustle*, Season 2, Episode 3 directed by Joe Swanberg (2016).

obsessions, however, breeds an infertile and unsustainable monotony of worldviews, fascistic at its core and oppressive to any creative spirits aware of the need to differ from the mainstream in order to exhibit sparks of inventive behavior and thought, nonconformist, antiauthoritarian spirits that are being exterminated in today's America in the same the way the witches were burned at the stakes in the Dark Ages. Abandoning the qualities of exceptionality, extraordinariness and originality, the openness to which has driven America to the top of the world, and fostering safety and a hen-hearted closeness instead could be thus read as indubitable signs insinuating the beginnings of the fall. In that sense, the fall of the Roman Empire as seen by the eyes of Edward Gibbon, legendarily marked with the words "in the end they wanted security more than they wanted freedom"¹⁸⁶², could be expected to be analogous to the fall of the strongest cultural and economic power of the modern times, the one that has mastered the ancient Byzantine approach of conquering the new lands by penetrating them first with one's culture, values and ideals, and only then sending human crew to physically occupy them¹⁸⁶³, the model of which could be used nowadays as a systemic principle for steamrolling any powers in this world¹⁸⁶⁴. This is why I often claim that it was the American pie cooling down on Donald Duck's cottage window rather than the atomic bomb or the ultrasonic warplanes that the Americans conquered the world with. The Serbian blogger, Đorđe Kalijadis probably shares this opinion of mine, as he, himself, noticed that "pinball machine and jukebox are the two things that contributed to the fall of communism in the Eastern Bloc countries more than any serious CIA action or those few books by Solzhenitsyn, Kundera and Gombrowicz"¹⁸⁶⁵. When the whisky-drinking former Japanese naval officer reckons the consequences of losing World War II to Americans in Yasujirô Ozu's last movie, *An Autumn Afternoon*, and notices how "because we lost, our kids dance around and shake their rumps to American records, but if we had won, the blue-eyed ones would have chignon hairdos and chew gum while plunking tunes on the samisen", he eloquently portrays the unavoidable cultural conquests that have ensued and preceded each and every military invasion in both the present and the past. What is unique in the modern warfare which increasingly assumes the shape of economic and political battles for powers, rather than bluntly initiated armed combats, is the prime role of cultural weapons that rely on mass media to disseminate their poison gases, bombs and booby traps, all of which appear sweet and sugarcoated so as to allure human spirits with their appealing clothes and then seize them by surprise. Just as the American governors substituted land grants in form of "a rooster, two hens, some tools and supplies for a year"¹⁸⁶⁶ to 18th Century immigrants

¹⁸⁶² See Edward Gibbon's *The Decline and Fall of Roman Empire*, Penguin, London, UK (1776).

¹⁸⁶³ The Byzantium, most notably, restrained from occupying the northern states, including Russia, bluntly, with its armies, but rather built churches and sent preachers and emissaries to these lands, converting them in this process of cultural subjugation to what was to become Orthodox Christianity and ensuring that the religious and cultural heritage of the Empire continues to exist, albeit in a modified form, long after the Empire itself had been erased from the map of the world.

¹⁸⁶⁴ On top of this insight, it has never ceased to amaze me how the American culture rarely insisted on others' embracing its national heritage on the account of discarding those of cultures that influenced it. For example, this culture seems to have never felt threatened by the fact that it is English rather than American that is spoken by its citizens, as opposed to the modern trend among the former Yugoslav countries to slice a single language, Serbo-Croatian, into now four different languages: Serbian, Croatian, Bosnian, and Montenegrin, with innumerable dialects within them. That what matters are deep and impalpable social values and qualities rather than sheer names and declarations on paper is nicely shown by this example, which can serve as useful to the little countries of the world obsessed with conserving their narrow nationalistic worldviews.

¹⁸⁶⁵ See Đorđe Kalijadis' *Pinball Wizard*, retrieved from <http://jorgoslovlje.blogspot.com/2009/07/pinball-wizard.html> (July 22, 2009).

¹⁸⁶⁶ Paraphrased comment by my friend, Stanley Karana Olivier, Facebook post (January 16, 2018).

with the scientific research grants to appeal to 21st Century immigrants, so have guns and tanks been changed for music and movies during this sophistication of the means for manipulation, yet the imperialist cravings of the former colonizers have not ceased by even an iota. The fact that the British organizers of the 2012 Olympics dedicated almost the entire opening and closing ceremonies to the display of their recent musical heritage tells us that music, the most facile channel for the transmittance of cultural values, has been the strongest weapon of the neo-colonialists of the modern age in their attempts to conquer the less economically developed societies and take over the planet. Most of us remember how fiercely Winston Churchill defended in the House of Lords the proposed 12 % funding for arts and culture compared to 23 % for the military during World War II, howling “What are we fighting for then” to the opponents of this budget, but how many of us recognized that around this time, coinciding with Norbert Wiener’s description of multiple social effects using cybernetic principles, including feedback loops whose causes and effects blend into one, someone else recognized that aims and tools used to accomplish these aims can easily swap places, meaning that progress in arts and culture need not only be the intended outcome of war-waging, but also a weapon contributing to victories in these very same wars? As expected, massive commercialization of arts and their tight control via corrupt and biased channels of government funding followed after World War II, more often than not tragically converting them to sheer entertainment, all for the sake of boosting the morale of the locals and alluring the colonially clutched rests of the world towards their unnaturally sweet and unsour fruits. As I write these words, not only have I been for a couple of years now a citizen of Orange County, the home to that mouse who lives in “a million hearts”¹⁸⁶⁷, the Mickey Mouse, but I have also been well familiar with the fact that the rise of the right-wing politics and economic success in this region could be traced to the opening of Disneyland in 1955 and the sprouting of the military bases all through it in the 1940s, illustrating how the two central powers used by the United States to conquer the world have always been kept close to each other: entertainment and military. The most recent list of the world leaders in soft power, the term coined by Joseph Nye in 1990¹⁸⁶⁸ to describe exactly this usage of cultural weaponry, from arts to advertisement to positive economic and political reputation, as a means of persuasion in international relations, in fact, placed the UK on the No.1 spot¹⁸⁶⁹, right above the US, which has lately, as we have all come to know, substituted a whole lot of its soft power with the hard power centered around direct militaristic involvements and autocratic diplomatic attitudes. Hence, it came to me as no shocker to learn that Sid Meier’s Civilization, a strategic videogame developed in the early 1990s, now poses Hollywood as a most powerful Wonder of the World, by means of which the player is able to culturally control the entire virtual empire and eventually conquer the planet as a whole. What is more, the newest expansion pack for the game promises to introduce the concept of “cultural victory”, for which the training of artists and their commission in foreign countries will be the prerequisite¹⁸⁷⁰. A trite old story that took us back a couple of lines earlier to the cabinet of Winston Churchill in the early days of World War II and the moment at which an idea was proposed by one of its members that the budget of the Ministry of Culture be relocated to the Ministry of Defense, to which the Prime Minister replied with a “what would we be defending then”, is here to remind us that what lies at the

foundations is also at the frontier and that culture, the heart and soul of every human society throughout the ages, is as much of the greatest treasure to defend as the most potent weapon in our worldly conquests. For, after all, it is human values that every society is ultimately based on, and those are best shaped by means of subtle and impalpable qualities of human imagination and creativity falling in the domain of culture. Consequently, just as rises of human empires are based on progressive values, their falls begin from there as well - from the very foundations, as the Christ's final metaphor of his Sermon on the Mount, the one about the house built on sand (Matthew 7:24-29), tells us. Here it is also worth pointing out that the strategy of the American imperialism has been to precede militaristic and economic conquests with the cultural ones, whereas in reality the cultural conquests can also proceed as a counterforce against the militaristic occupations of territories, and one example comes from the antique times, specifically the Roman conquest of Greece. Namely, although Greece got occupied by the Roman Empire in the second century, as Johnny Štulić pointed out¹⁸⁷¹, its cultural conquest of the empire that militaristically conquered it began just then, as it is evident to the historians from the replacement of the Etruscan and southern Italian musical heritages of the Roman Empire with the Greek musical tradition, from the widespread adoption of the classical Greek tragedy, comedy, elegy and epic in theatre and literature and from Horace's revival of the ancient lyrical models of Sappho and Alcaeus, which had begun to be obsolete by the Hellenistic period, let alone the fact that the noble Roman families began to teach their children Greek language, philosophy and rhetoric¹⁸⁷². As a matter of fact, this cultural countercurrent was so strong that the remains of the Italian lyric, music or sculpture from the period before the Greek influence are either meager or nonexistent, implying that through quietness and stillness rather than with bombs, artilleries and loud campaigns is how the world can often be won best. Therefore, when I christen Europe as a continent that has been carefully saving grace, in a literal sense of the phrase, I do not imply its unreserved passivity with respect to the worldly dominion. Its cultural and not merely racial diversity has to pay off someday and win the battle between the two continents. Or, as pointed out by Le Corbusier in 1924, "Old Europe is not old at all. These are only words. Old Europe is still full of power. Our spirits, nourished by past ages, are alert and inventive; their strength is in the head, while America's strength is in its arms and in the noble sentimentality of its youthfulness. If in America they feel and produce, here we think! There is no reason why we should bury Old Europe"¹⁸⁷³. In contrast to this visionary sprout from which the blueprint of renewed Europe emerges, justifiably granting her the epithet of Europe Endless that Kraftwerk popularized in parallel with setting the pioneering steps for the birth of techno music¹⁸⁷⁴, the explosive growth of America may be reverted and turned onto itself, resulting in its becoming a desolate land, just as it had been centuries ago. As such, it may provide an example to the evolving humanity of how quickly a society can grow and yet how quickly it can disintegrate and vanish, at least in some of its aspects and elements. It is in the nature of development of natural systems, irrespective of their size and complexity, that only those growing slowly and carefully end up in the range of sustainable conditions that foster evolutionary prosperity, whereas what grows fast, starts to decay and wither fast as well. San Francisco can be

considered as the most culturally advanced point in North America, and by pointing to humbleness and relative scarcity in spirit and material abundance alike (instead of a sparkly, neon-like delirium of appealing signs strewn on the way), it may point to the future ways of the American culture. Together with New York City on the other side of the country, this city forms a creative axis around which the US culture evolves. And yet, both cities seem to an ordinary inland visitor as incredibly messy and confusing at the first sight. “If we compare New York with Stamboul, we may say that the one is cataclysmic and the other a terrestrial paradise... New York is not beautiful, and if it stimulates our practical activities, it also wounds our sense of happiness”¹⁸⁷⁵, as Le Corbusier would have further pointed out in his architectural musings. Living in those places can be truly tiring, but that is the cost one has to be prepared to pay for dwelling at the front line of progress. Should SF be tidy, polished and perfectly lustrous in its appearance, it would not be as progressive as it is. Standing at the frontiers of evolution of human spirit implies one’s readiness to challengingly rest in the midst of a dazzling and perplexing forest of impressions rather than to safely reside in perfectly ordered, sunny and summery pastures of human spirit. In that sense, SF may be seen these days as one of the symbols of the adventurous spirit that presented the crucial driving force behind the rise of the modern American culture. I have always been impressed by the upside-down map of the world hanging on one of the walls of UCSF Parnassus campus. Every time I’d pass by it, I would be reminded of how things that appear to us as perplexing and topsy-turvy, just as in Alice’s Adventure in Wonderland, are to be freely jumped in, for they necessarily mark the first steps of all the greatly rewarding adventures in life. SF thus stands forth as one of the rare contemporary reminders of the ultimate historic nature of the latter: the powerful human decisiveness to plunge into the unknown, to swim inside the sea of wonder and cope with its dazzling waves and overwhelmingly complex streams, knowing that one such adventurous voyage stands behind every form of evolution and progress in life. It embodies the beautiful willingness to set off to a desert and build an oasis in it, being the inner drive that has invisibly supported American culture at its foundations. This is why I have always felt as if the final message of my stay in America will not be to stay there for good, but to go back to the desert of my native country and start building oases therein. For, if there is one thing that my time spent in sunlit and serene, but gold-greed-ghosted California taught me, especially when compared to my upbringing in divine bliss through the times of war and poverty in my native country, it was that the heavenliest external settings could be hellish for our soul, turning it into a devil’s cove, whereas the hells on Earth could be heavens for our spiritual growth, the reason for which, like Zen master Joshu, who picked Hell, not Heaven, to go to because bringing the lit lanterns of love into the darkest regions of reality is the task, he deemed, for the most courageous and, I may add, chosen spirits, I might do the same one day and return to the least prolific places for the body, for the senses and for the material wealth piled up around us, but the best for the soul. The wonderful adventurous spirit of genuine Americanism that seeks flowers in the most deserted of places may thus make me return to the foundations of my own being, and realize an ever greater beauty sleeping therein. Ideally, of course, I will have traveled back and forth between the foundations and the front lines of progress, as in accordance with the way the nature of human thinking is: bringing the foundations of our thinking, our prejudgments, preconceptions and beliefs into constant correspondence with the perceptual impressions of ours. Be that as it may, Americanism at its core is all about making a move, as in harmony with the famous Heinz von Foerster’s aesthetic principle which tells us that

¹⁸⁷⁵ See Le Corbusier’s *The City of Tomorrow*, The M.I.T. Press, Cambridge, MA (1924), pp.64.

“in order to see, we ought to learn how to act”¹⁸⁷⁶, quite unlike the European sitting down with folded hands and dreamy eyes, looking for answer in everyone’s face with a wistful glance and resembling one’s waiting for a fairytale princess to come and take one by the hand into an idealized but utopian world. This has been the case ever since the pioneers renounced their European hearths and homes and sailed across the Atlantic in search of a new life. Along these treacherous ways, they embraced music that had the least emotional content in it, including polkas and fiddles, lest the feelings of guilt for leaving the beloved land and its people behind them amplify and consume them inside its ghastly chasms. In turn, they shunned the classical and chanson-like music that could soften the human heart and make it receptive to love, that most glorious and sublime of emotions raging inside us, whose fire urges one to stay near another rather than to move away. And so, while the children of the pioneers founded rowdy rock ‘n’ roll as the most influential movement in modern music, the children of those who remained faithful to their firesides, even at their most vociferous, substituted Chuck Berry’s epic “go, Johnny, go”¹⁸⁷⁷ call with a “stay, Jonny, stay”¹⁸⁷⁸ one, proving inconspicuously that the act of moving is as central to the American culture as deeply the drive to stay and resist moving into the unknown is embedded within the substratum of the European culture. In view of this, sometimes I wonder that it may be more than mere coincidence that the smallest of the four Galilean moons circling around Jupiter was named Europa, as if someone wished to tell us that the predisposition to be a passive satellite rather than that Nietzschean “self-rolling wheel, a first movement, a holy Yea”¹⁸⁷⁹ is so deeply woven into the European mind that its signs could be found even in the most distant sources of reflected sunlight in the sky. There are, though, dangers in the latter and a long-lasting beauty in the former stance. Permanent dreaminess nurtures a heart of beauty in us, whereas incessant moving towards fulfilling our dreams can lead to emptying of this inner source of aspirations that drive us to evolve both our inner and outer worlds. For, “it may be those who dream most do most”, Stephen Leacock jotted down¹⁸⁸⁰, while Novalis observed that only insofar as the world becomes a dream does the dream become a world¹⁸⁸¹, calling on our consciousness to realize that dreaming and actively living our dreams are inseparable and engaged in constant flow to and fro each other, like night and day, in the heads of the most imaginative creatures that inhabit this plane of reality. Hence, we should actively climb the ladder of spiritual progress, but still rest every once in a while, while dreamingly immersed in the mystery of the starry sky twinkling above our heads.

S.F.4.45. For, all life may be a dream of our soul. After the dream is over, we may wake up with our soul enriched and enter a new dream in the incessant stream of our soul’s ascension towards ever more lustrous spiritual shine. As an Oriental analogy tells us, what may be an end of the road for a caterpillar is actually the beginning of a flight of a butterfly. And like Chuang-Tzu who had dreamt he’d been a butterfly and when he woke up he could not remember anymore if he had been

a butterfly dreaming of being a man or the other way around, whenever I find myself at the borderline between my native home and my residing places in foreign countries, I wonder where I and the roots of my being truly belong. All the incessant moving back and forth between my native home, the oasis of love, protection and blissful carelessness, and the places at which I lived and worked, while deprived of the parental and brotherly care, continually produced an alternate switching of stressful and calming impressions. These switches might have been reflected in my intensive mood swings between the states of unusual and unconstrained happiness and occasional moodiness. I have felt like a tree that has been continuously transplanted from one soil to another. And still, I hope it would be, in the end, the way to make myself stronger, similarly to a sportsman who undergoes an intensive stress during exercise so as to become fitter and more resilient in the long run. Typically, upon moving to a new environment where I would be all by myself, my mercurial mood used to swing to harshness and slight impoliteness, like a cactus that releases new prickles when transplanted to a new soil, whereas when I would get back to the oasis of my parental home I would feel as if all the stresses and troubling thoughts dissipated away. And then, one day, I realized that all these cycles of moving abroad and returning home were there to make me learn that home could be truly everywhere. The real strength lies in finding the sense of being home, surrounded by the loving hands of motherly Nature, in every place we could think of. Instead of attempting to transcend a sense of not belonging anywhere and being an everlasting foreigner with a numb, indifferent and wholly emotionless attitude of mind, such as that typifying the majority of roamers of spiritless American cities, we should awaken the feeling of being always at home and be a carrier of the celestial joy naturally emanating from it everywhere we'd go. This is where the striking verse of a Travis' song, "I have the strangest feeling, you belong"¹⁸⁸², comes to light, signifying a magical change of the heart from the sense of being an outsider in any milieu to becoming an epitome of the sacred oneness that constantly renews itself while welcoming it all into the open home of one's heart and sending the sunrays of spirit, freely and unpretentiously, in all directions, without ever wishing to receive anything in reciprocation. In that sense, there is no need for the melancholy exhibited by the professor emeritus from Ingmar Bergman's *Wild Strawberries* when in his final days of life he envisions Paradise as his childhood or for the dejection of an old lady spending her last days squatted inside a boat in which her father departed, on a meadow that once was a sea, dreaming of being a girl in her father's embrace¹⁸⁸³, because no matter what, we have always been at home, cocooned under the starry hat of divine Universe, surrounded by airborne angels and snow-white rabbits freely drinking water from the palms of our hands, in the midst of a cosmic symphony of pure and inextinguishable joy. "Although we speak of attaining the Tao, there is really nothing to attain"¹⁸⁸⁴ (Ch'ing Ching Ching 14), a Taoist master wrote once, drawing the image of our being lulled in the arms of angels and floating on the clouds of divine spirit at all times, chaperoned by the birds of paradise led by Simorgh, the Sufi symbol of the attainment of something that we have always had in ourselves. A wayfarer distancing from the destination inasmuch as he strives to reach it and perpetually standing on the finish line of his life path, which could be likened to either Pascal's sphere whose center lay on every segment of its surface¹⁸⁸⁵ or his point "moving everywhere at an infinite speed... one and the same everywhere

and wholly present in every place”¹⁸⁸⁶, we have thus been all our lives. And should we live this life in openhearted ways, throwing stars of beauty and love all over the people and details of the world, engaging ourselves in innocent play with others in childishly compassionate ways, not being afraid to come close to the creatures of the world and listen to their hearts with patience and empathy, approaching them with joy in our heart and reflecting their emotions in each one of our moves, glances and feelings while still looking deeply within ourselves and pulling out brilliant sources of beauty straight from the creative core of our being, just as the Way of Love has taught us, the final days of our lives will be illuminated with plentiful of loving memories that will cheer us till the very end.

S.F.4.46. In fact, what my childhood and adolescence spent in the oases of love, care, protection and peacefulness have supplied me with is a well of an endless inspiration. Going back in my memories and envisioning the love that my parents and my entire family shined all over me turns my heart into a wheel of majestic creativity. If I were to imagine Paradise as a materialistic carnival wherein all the senses and desires would be tickled and satisfied, it would mean nothing compared to the beauty that the memories of my childhood and of fondness and affection, the loving palms on which I grew up, awaken in me. Offer me a million years in the biggest paradise in Cosmos, where rivers of wine and honey flow, exuberance explodes like erupting volcanoes day and night, senses are tickled to the point of bringing the utmost pleasures thereto, spirits glisten with starriest joys and all, I mean, all is in the state of greatest bliss imaginable or a day spent in a garden after the summer rain with my mother and my father and I would not think for even a second about what to choose. And how immense of a lesson I learned from the invisible divine forces that pervade life, having taught me how to find Eden on Earth, amidst pain and hardships and misery, on the karmic plane of reality whereon sacrificing the sensual satisfactions and dying in selfless devotion to another is the way to be ascended to Paradise. “I feel blessed for I lived my time in Paradise” – that is what I tell everyone. And this time spent in Paradise has taught me that love is the key that opens all the closed gates in the Universe, the steeliest and the heaviest ones, and provides solution to the most desperate solutions in life. It has showed me that love is able to turn the most deserted and impoverished landscapes and circumstances into flourishing oases of a godly beauty and that all the earthly treasures and materialistic feats in this world are miniscule compared to the tiniest ray of love radiated from the humblest heart in the Universe. It has cemented my faith in the verity of the final stanza of Love among the Ruins, a poem by Robert Browning, “Shut them in with their triumphs and their glories and the rest, Love is best!”, a line that tells us once and for all that no rewards reaped by argumentations, disputes or striving for success can beat a single look at life with love gleaming from our heart. Hence, I cannot imagine beauty greater than the one I have seen. It is this beauty ingrained in me that finds the way in every message that this book contains. The love that my parents have given me still stands forth as the greatest monument to what bears the true meaning in this life. It is not the material values that ought to allure us with their charms; spiritual values are rather those that we should seek with all our heart. Having been placed on a fork in the road where west of me lay Heaven in Hell, as I christened California once, a world of impeccable material tidiness and wealth, albeit immersed in an immense spiritual void and vanity, while east of me lay Hell in Heaven, a world of perpetual turmoil wherein I had grown, albeit embedded in the substrate of profuse spirituality, I would always travel east, in the footsteps of the apparition in St. Peter’s eyes on Via Appia, all thanks to what the odyssey of my life, over decades

¹⁸⁸⁶ See Blaise Pascal’s *Pensée* No. 420, Translated by A. J. Krailsheimer, Penguin, Harmondsworth, UK (1669), pp. 153.

of traveling west and east and east and west, has taught me. And now, as I look back at this sanctum of peace and love that I had left behind as the greatest blessing and profoundest treasure imaginable and compare it with the ruins in which it has lain as of a decade later, my feelings are mixed, concocting grief, guilt and gratefulness for the grace bestowed upon me, but my determination to recreate this beauty lost in space and time in my creative work has steadily grown. Therefore, I solemnly vow that the only compensation for this loss, for the expulsion from Eden that I experienced with my departure from these parental and brotherly havens of love and harmony and the entrance to America, stepmotherly resourceful but cruel, will have lain not in garnering material wealth for myself, but in creating spiritual treasures for generations on Earth to come – motherly beautiful notes, words and acts that will magically start the chain reactions of sanctifying the sinful souls swarming like stars on this sad and beautiful planet of ours, constituting living proofs that spirit rules over senses and mind over matter.

S.F.4.47. In the beautiful video clip for a beautiful song named Beautiful Life¹⁸⁸⁷, a family of four is shown as washed with the celestial waves of joy and happiness in an ordinary daily setting, as a boy is playing with his skateboard, the father is fixing an old radio, mom is preparing the lunch and drying clothes on a hanging rope, and the daughter is slumbering on this summer afternoon, waking up and stretching her arms only so as to write down the following words: “*A beleza da vida depende de como enxergamos o mundo*”. Translated from Portuguese, the line she wrote means “the beauty of life depends on how we see the world”, yielding words that, like all things around them, appear to be bathing in sunshine and floating on a lively summery beat of this progressive house tune. “I need someone who would see the obvious as something totally extraordinary” is a line that came years later from another Brazilian video art, namely a movie titled The Book of Delights¹⁸⁸⁸, and the impression was that the girl jolting these words on this ethereal summer afternoon was gifted with such eyes that perceived pure magnificence in even the most banal and commonplace of sceneries and objects. Surprisingly, then, as the video comes to an end, the camera zooms out, showing the family living underneath a skyway, surrounded by crisscrossing overpasses and highways along which thousands of cars pass by, homelessly ducked within a soulless south American megalopolis, although still finding beauty in each other and in the minimalistic sounds that they are immersed in. Seeing this video reminded me of my own time spent in the family circles of mine, which I now consider as days spent in Paradise. In a similar spirit, Pope Benedict XVI recently said that despite the harsh times in the midst of which he had grown up, his childhood and youth seemed to him the way Paradise should be like¹⁸⁸⁹, striking the chords of sympathy in my heart too. For, even though our little bubble swam in the sea of hatred, poverty, destructiveness, immorality and sadness, underneath the terrifying sounds of warplanes and the dark clouds of famine and global desperateness, our beings were enlightened with an immense and indestructible happiness. As if guided by the muses of celestial beauty, I see the chaste and pure spirit of myself during those days similarly carrying the lantern of the eternal Jovan Dučić’s thought, “*Stvari imaju onakav izgled kakav im dadne naša duša*”¹⁸⁹⁰, which translated from Serbian says, “The things have an appearance that our soul endows them with”, through the

¹⁸⁹⁰ See Jovan Dučić’s poem in prose Sunce, In: Antologija novije srpske lirike, edited by Bogdan Popović, Srpska književna zadruga, Belgrade (1936).

dark highways of human being, in which emotionally isolated and blinded creatures were seen as hurrying and fearfully passing through the night of human soul with lights illuminating only what stands in front of them. Such instances of ignorant, frightened and self-absorbed being dominated the world that spun around me, the world in the midst of which I stood carrying this glowing ball of beauty and eternal happiness on the angelic arms of my spirit, like a lotus spreading its white and heavenly clean petals from the muddy waters in which it has been planted. And then the magical phrase popped in my head: Love among the Ruins. Whether it was meant to symbolize a melancholic sunset of Love, the fragrance of the evanescent beauty of which will remain impressed for ages in the invisible memory of the Universe, in the midst of the crumbly stone walls of the Garden of Eden that my childhood and time spent with the guardians of spirit that my parents were, or my standing like a lantern that glows with luminous Love and a corona of ancient values conveyed to me by my parents, gently, on the palms of their prayerful and loving hands, but extinguished long time ago from the shallow and crusty western world at the rusty heart of which I have stood like a marble monument to the fortunes of Love, the world lying in spiritual ruins when looked at by the eyes of the heart of which the Little Prince poetized, it matters not. What matters is that the vow has been given, silent, uttered by the language of the heart and impossible to snatch by the net of words or imagery, that this Sun of Love of which the Serbian poet dreamed will remain shining inside of me, so as to illuminate the heavenward roads for the souls in need of salvation. As I envisaged this road inside of my starlit head, simple and strait, as usually the paths leading to the greatest ends of the journeys are, a line lying at its center suddenly became the Line that divides BC from AD in the course of an individual's life, the one before the crossing of which one's spirit, carefully protected and wrapped around by the angelic wings of parental, brotherly or romantic love, has bathed in Paradise, maybe as a reward for the good deeds one had committed in former lifetimes, and after passing of which one is to assume the role of a divine missionary, now with limits of ego fully erased around one and the spirit of unity of it all widely awake in one's heart, well nourished and instructed with knowledge that selflessly, like every emanation of divine ethics, highlights Love as higher than knowledge on the ladder of the latter and as the key to unlocking the gates of Paradise even in the grimmest and the most destitute landscapes of reality, and indeed make life a divine abode for one or a few or a dozen or a million of human creatures, thus continuing the sacrificial spin of the karmic wheel wherein Heaven and Hell take more material forms than thought by the religious transcendentalists of the present and past. After all, as insinuated by the story in which the residents of Hell and Heaven occupied exactly the same habitats and looked completely alike, all along with the long wooden spoons attached to their arms, starved in the former loci because of everyone's trying to feed oneself solely and well fed and sparkling with joy in the latter ambiances because of their prime orientation to feed another, with each thought that has Love at its foundations we pave the road to Paradise in the hearts surrounding us, as much as we lead the disheartening way to Hades with every feeling or thought that pierce with the arrows of anger and the bolts of judgmental antagonism. As it happens in all great fairytales in life, from one such minute thought in which seeds of the immensely beautiful and great were concealed, the whole world of my actual philosophy, which has had the idea of co-creation, of the belief that beauty and much more lie in the eye of beholder, at its foundations and the Way of Love as the gracious Doric pillars springing from them, sprouted in all its splendor and charm, showing once and for all that small things in life carry immaculate meanings and finding an everlasting beauty therein is what the true trainings in spiritedness teach us to be able to, while spreading the wings of our spirit for soaring into worlds far greater than this one on the way.

S.F.4.48. Verily, verily, many times during my childhood and adolescent days spent in this cosmic bubble washed by the waves of parental and brotherly love did I gleefully look up to the clear Belgrade skies, sending vibration of silent thankfulness to transcendental saints and gods for letting me be born in this oasis of mystical happiness and telling myself in ecstasy that had I been given all the hundreds of billions of galaxies in this universe with all their potential paradises to be mine, all mine, for the world I inhabited thence, my heart would have readily said, No. For, the greatest paradise I could imagine was where I was at the time, in the proximity of the most fulfilling constellation of stars of spirit I could envisage and the most inspiring environment that my consciousness could draw, reverberating in finest harmony with my karmic visions and dreams. It was then that I learned that Love can in the blink of an eye transform even the most destitute and adverse living conditions into Paradise. The divine seal thus became set upon my heart for good, affirming that no material fortunes and richness can make up for the blessing of Love, which is to be sought after like the greatest treasure in this Universe. For example, if someone were to tell me today that one trillion dollars would be deposited to my bank account if I separate from my children for ten years and come back at the time when they will be teenagers, I would say No before even blinking, just as I said No to my parents' idea of having moved to the US when I was a child at the cost of not bearing Fido, my little brother and the love of my life in teenage years. Hence, what spending time in the oasis of love that my parents have provided for me has taught me sometimes seems to me as the greatest gift that this life has given me. And yet, this wonderful thing to be learned is miraculously simple. It is that love is the most powerful force in the Cosmos. It is the one that true martyrs skillfully use to conquer anything. Just as Lao-Tzu once noticed, "Power based on exhibiting power is not a good power; the one based not on exhibiting power but love is the real one", or as William Gladstone corroborated this ancient wisdom by adding, "We look forward to the time when the Power of Love will replace the Love of Power; then will our world know the blessings of peace". Undoubtedly, I have directed all my visions of creative acting in this world in the same direction. And in doing so, I feel as if I am walking straight to the Sun of pure and divine light of being. For, by exerting an endless and tireless love in the world, we become like a Sun, while the surrounding others, those washed with our love, tend to be turned into planets orbiting us while enchanted by this stellar love of ours that feeds their soul. Thus, every time I would come from America to spend some time with my family, I would be transformed from a seemingly independent being, resisting for a while to feel the dragging force of the sunny love of my parents, into a mere satellite captured in an orbit around the shine of their endless love. It would not take too long before I would start to feel as if bowing in front of them and placing everything I owned and all the shining potentials that I would go and bless the world with beside their feet. In my eyes, they would thence be a living proof that only by wishing, praying and directing all of one's deeds for the sake of others to become angels can one become an angel too. Hence, following my return to the sterile Brave New World, I would often wake up in the middle of the night and gaze at the ceiling, spinning the visions of my Mom waking up at night to make sure all of us are covered with blankets and invoking many other instances of her immaculate goodness, and as if envisioning the red sun setting over the ruins of ancient cities where only remnants of Doric pillars now stand, symbolizing Love Among the Ruins, the ultimate symbol of my native places of origin in the recent years, wondering "what good is it for a man to gain the whole world, yet forfeit his soul" (Mark 8:36), and giving myself a vow that, forever and ever, I will live so as to enliven the devotional spirit that my parents have had while selflessly caring for me with so much love. In passing through such a transformation, which oftentimes looked intimidating to me because I had known it would happen without my will, a great thing would be relearned. It is, as I said, that love

bends with ease the swords of even the steeliest will, that love is the most powerful, yet the gentlest force in the Universe, and that only through love can we conquer the world in its entirety. And so, coming back to the Western dwelling places of mine, knowing that “no prophet is accepted in his own country” (Luke 4:24), I would apply this teaching and base every educational incentive of mine on the foundations of an endless love. Only on top of these foundations are rational messages and meaningful ideas fruitfully placed; only when rooted in love can the latter ideas find a fertile ground in other people’s minds.

S.F.4.49. If we were to look closer at the metaphoric roots of this guiding principle, we might be able to notice none other but the Way of Love implicitly inscribed in it. When we act in harmony with the Way of Love, we divide our mind between a pole resting deep within ourselves, forging beautiful emotions, visions and memories into an immaculate shine of our spirits, and a pole vigilantly oriented outwards so as to absorb the inspiring stimuli of the world and pick objects and creatures that we will shed this light of our mind and spirit onto. Similarly, although I live in the Western world and enchant people with the outpours of a loving creativity therein, I still partly rest my awareness on the memories and visions that draw impressions from my native places upon the canvas of my mind. Accidentally or not, whereas the former world is often criticized because of its accentuation of qualities of things and people visible on their surface only and deprivation of the real, deep love, the latter world has been praised for its possession of fascinating inner qualities, although often concealed by negligent and crumbly facades of being. As a picturesque illustration of this amusing dichotomy, one should merely look at American houses that normally appear perfect and flawless and yet become blown away by hurricanes, like the houses of the first and the second pig from the fable about the three little pigs, and compare them with the houses in which I grew up, as well as many similar ones lined up along enthralling Belgrade streets, displaying crumbly facades, frowzy gardens and often resembling ruins more than clean and stable dwelling places, while still hiding a whole lot of love inside of them, although concealed from the view of ordinary passersby, let alone the qualities of people, oftentimes cheerful and friendly on the surface and hiding coldness and emptiness in the former world and grumpy and ill-tempered ones but hiding a great deal of lovingness and faithfulness inside in the latter world. Note, as a side note, what an enlightening transition it is to shift from taking these external appearances for granted, i.e., as real reflections of people’s aspirations, to seeing them as mere mirrors of socially imposed modes of behavior, i.e., as a clichéd machinery of moves and gestures that should be approached and unlocked with the key of spontaneous sympathy and love, knowing that shiny potentials of thinking and behaving lie dormant underneath. And so, whenever I go back to Belgrade to spend time with my family, visit old friends and roam around its streets, whose little visual details and sounds awaken the magical spirit through which I floated in bliss, as if through a dream of a kind, during the days of my youth, I would feel as if I am exploring the essence of my soul, the deepest corners of my mind, those that inconspicuously define the goodness and brilliance of my acts in the world. For, just as pointed out on many occasions, not what we do, but how we do it, the extent of the glow of our dreams, visions, emotions and intentions inside of us sheds light of life and love onto the world around us and determines the true beauty of our deeds and our being in the world. In my case, I have always seen the memories of my native place as this infinite well from which the waters of creativity could be sucked every time my mind turns dry in the world permeated by the lack of trust and love. And although such existing in two worlds at the same time can often seem heartbreaking and mindboggling, resembling the crucifixion of the Christ, I have always been aware that this is the ultimate way to be. This is how the inexhaustible

rivers of creativity can be let flow within our beings in all their charm and splendor. To spread one hand of our creativity to this inner world of mine, overflowing with moving memories, to collect the pearls of beauty that the sea of these remembrances within which my awareness swims hides beneath its surface, and bring it to the people of the world is what I have assigned to myself as the mission of my being in this brave new world.

S.F.4.50. Be that as it may, the innate nature to move, travel and never firmly anchor one's feet and mind onto stable grounds and permanent impressions is, as we see, deeply ingrained in the hardcore American lifestyle. That is what keeps Americans from being attached either to their dwelling places or to other people most of the time. Namely, a sense of belonging to a particular place is largely uprooted from the spirit of most Americans, who can also act like best friends to a stranger for five minutes and then suddenly disappear in the distance, let alone rarely ever form friendships as tight and sacrificial as those I have known of during the days of my youth. I have always had an impression that these broken bondages are what deprives Americans of certain emotional richness that my native Europeans tend to exhibit. Grim faces of European people, including my Yugoslav compatriots in particular, are often the sign that their hearts and minds are literally packed with emotions. Americans, however, raised on the tenets of Freudian psychotherapy and the ideal of releasing all the emotional tensions within by expressing oneself thoroughly, normally possess relaxed, but rarely squared faces. "Love is staying", as one of my favorite Erich Fromm's quotes goes, telling us in this context that attaching one's heart to people and places in life is what makes it shine with the healing power of love. And without anchoring ourselves onto firm seafloors here and there, there is always a chance that the ship of our being will inertly float away on the currents of the worldly seas and sink in their turbulent waters. Or, as Jana Hunter of Lower Dens said in a song, "When I finally let my guard down, I was in the middle of the sea and drowning"¹⁸⁹¹, reminding us that the state of ultimate stresslessness is quite undesirable at the end of the day and that perfect freedom, hypothetically attainable by abandoning all the stressful forces that keep us partly shielded from our surrounding, in reality equals maximal entropy, the state of utmost disorder wherein all the parts scatter in their own directions, with no spirit of wholeness and unity anymore alive to keep them together. To release all the stress within us is to arrive at one such state of ultimate freeness, which, as we would not be around to find out, essentially equals death, the same state reachable by travelling to the opposite extreme, that is, negating the importance of causal randomizations on the account of worshipping order and predictability. Without internal barriers, both physical and mental, acting as banks, no rivers of energy moving the body across space and toward divine destinations would be possible; rather, these rivers and seas would dissipate into a homogeneously dispersed vapor wherewith no thirst could be quenched, wherein no mermaids could swim and whereon no ships could glide. Thus, when Iggy Pop, through earthquake and fire, lifts an equation mark and puts it between "pretty thing" and "no walls"¹⁸⁹², he does hand out a valuable guidance to the overly stressed and stiffened average inhabitant of the modern world, the following of which would bring one closer to the equilibrium between order and freedom wherefrom magical thoughts and acts could start to emanate once again, but he also neglects that the bringing down of all the walls raised inside us would cave in, not liberate, the spirits of freedom confined between these walls. Hence, there is no permanent answer as to which is more favorable: releasing all the stress within oneself or keeping it concealed deeply within until it turns out to form bricks for our ascending higher on the ladder

¹⁸⁹¹ Listen to Lower Dens' Brains on Nootropics, Ribbon Music (2012).

¹⁸⁹² Listen to the Stooges' Down on the Street on Fun House, Elektra (1970).

of evolutionary progress. The true way forward is apparently the middle Way, that is, the Way of Love: nourishing our heart with precious emotions, building the inner landscapes and monuments as great as wonders of the world, but being equally moved by the desire to roll on, to give the light enkindled within to the whole wide world. After all, the more of the spirit concealed within ourselves we give to the world, the more doors through which summer breezes of beautiful impressions blow would open for us, endlessly feeding our heart with the sparks of an enchanting and mysterious lovingness.

S.F.4.51. When I was a kid, one of my favorite movies, reflecting my love for the soccer game, was John Huston's *Escape to Victory*. In it, a group of allies imprisoned in Paris during World War II was invited to make a team and face the Germans on the soccer field. Throughout most of the movie, however, they plan an escape during the halftime, through an underground tunnel dug beneath the locker room. As they arrived to it for a fifteen-minute break, after the referee had blown the whistle to end the first half, they had everything ready and good to go: a narrow burrow that would take them from the dressing room to unguarded streets of the French capital, the safe temporary shelters and beyond, as well as fresh legs to carry them along the way. They did not sweat much during the first half of the game, so as to save energy, and they were consequently losing by a large margin. Then, however, all of a sudden they decide to make a brilliant change in their plan. Namely, they opt for staying and playing the game until the end instead. This storyline reflects my own frequent thinking of what the right way is to follow in this dissociation of myself between the two cultures and continents. Sometimes I feel as if the Ocean with its beautiful sounds and a spirit which blends the greatness of its gorgeous immensity with an incredible pacific energy speaks lullabies of a new home, and then sometimes I recall the warmth and the gracious peacefulness of the Adriatic sea, the sea of my nativity, my first and still the greatest sea love of my life, as incomparable in its beauty and lovingness to Pacific Ocean. Americans have launched the illusory image of the unsurpassable beauty of the West Coast as part of the Californian dream; however, its monotonous sandiness, the lack of islands and cold, arduous, dangerously whirling waters, with a whole lot of rip currents, are hardly comparable to warm and placid waters of the Adriatic Sea by which I have grown and its amiable seaside rich in lush vegetation, Mediterranean fragrances, dry and pleasant air and numerous islands. As I stand upon this seashore of my childhood in my dreams, able to sense a peaceful romanticism reflected in placid waters, its gentle splashes and glitters of sunlight or moonlight shimmering on them, amused by recognizing wonderful angelic shapes in the clouds above and in shapes, colors and ridges of pebbles rolling over the palms of our hands, and compare everything with the cruel waves and winds of the Pacific, its cloudless and foggy skies and sandy particles which merely sift through our hands in their bland uniformity achieved by millions of years of grinding, I could not help but wonder whether the former places are indeed like those adventurous ones that scare one to the core and repel one with outpours of unpleasantness, rudeness, dirtiness and squalor, but which somewhere deep in them conceal the true diamonds of the most precious beauty, the one attainable only by the most pertinent adventurers whose hearts and mind glow with an impeccable shine of spirit. Then I spin the verses of Jovan Dučić's poem in prose named *the Sun*, one of the most beautiful to ornament the Serbian literature. In it, the great poet, born on the coast of the sunlit and warm Ionian Sea, seeded with shadowy gardens and pale statues, bathing like a seagull in the azure sea, recalls of his moving to places with frozen skies wherein a white and cold Sun shone and at coasts of which winds cried. "Together with waves and winds, he cried sadly upon the beaches of a foreign, melancholic sea", Dučić, another one of Serbian emigrants to the US, laments. But when he

returned to see his native sea, he was already too old. Sadly, upon looking at it, he realized that although everything there was still the same as before, he, himself, was not. “For, things appear to us in a way our soul endows them with”, concludes the poet whom my Mom, whose life of selfless sacrifices for the benefit of her loved ones, containing not even a subtlest trace of selfish thought, having resembled that of Rakić’s marred stallion¹⁸⁹³, spent from the beginning to the end in daunting draught and draught only, instead of Dučić’s idyllic landscape for the soul, always placed above Rakić, the bearer of the name of the street in which she has lived all her life, and at the very top of the pantheon of poets known to her, illustrating the sublime ideal of “beauty that will save the world”, with head in the clouds and feet in the mud, like a true lotus flower, to which she wholeheartedly lived. And so I wonder, if I go, will I seed my heart with an eternal sadness and be a prodigal son for the rest of my life, straying away from the ways God has meant for me to follow? When the call of hardship and suffering of my beloved parents, the godly guardians who held my life like a lotus flower on the palms of their trembling hands, start to sound, will I pretend to be deaf to it and seek safe harbors instead of the frontiers where the good and evil clash and where all angels must be? Will I be like one of the flaky players from the aforementioned movie, who forced others to escape to freedom during the halftime? In the end, however, they changed their minds and joined the rest of the squad in their determination to stay and play against their wartime opponent. The team of our heroes won the game after a dramatic finish, causing the spectators from the entire stadium to rush onto the field and carry the winners on their shoulders. The gate of the stadium opened under the unstoppable stream of people, and the winning team reached freedom. Hence, maybe deciding to stay and build a winning team on the home soil is the right path to victory, the one that will take us to that brave new world, not in a sneaky way, but in a truly triumphant fashion. Just as my paternal grandfather, now canonized by the Serbian Orthodox Church, rejected the hand that offered him to escape to America on the night before his execution and rather decided to stay on his home soil and heroically die with his Christian brethren, maybe the path to true victory would lie in my discarding the pleasures of the Western world, too, and returning to the native fields of hardship and love. Maybe that would be the way to win the game of life, to accomplish its sacred mission and avoid coming across a “game over” sign before the triumphal arch of its blissful ending is reached. In my dreams, thus, I have always seen myself first as going back to the streets seeded with mystical cypresses, youthful stardust and cosmic silence of my hometown I had grown up on, becoming blindly immersed into the sunshine of my soul, putting my hat on, a squished straw hat like that worn by Nino Manfredi in *El Verdugo*, a hat like the one my Dalmatian grandfather refused to take off in front of a fanatical catholic procession before attempting to be lynched, a hat like that decorating the memorable front cover of the Jayhawks’ record *Smile*, one and only, symbolically, among an array of army helmets, and starting to play, sing and dance, bringing joy and happiness to the people around me, having cut the Gordian knot of sophisticated conceptualizations, escaped from the idea that God could be found in the mental mazes of science and philosophy and found the Faustian path to redemption and salvation in the return to my compatriot’s, in my heart the commonest and, thus, the most human of all European people, and only then as an old man standing at the cliff, shaking like a willow tree, facing the endless ocean with the Sun setting over it, surrounded by beautiful smiling creatures in which I have instilled the torch of cosmic beauty and love that my parents, my brothers and friends, my close and distant predecessors as well as little creatures and signs of Nature, clouds, stones, flowers, seashells and butterflies, handed to me in the divine relay of being.

¹⁸⁹³ See Milan Rakić’s *Dolap*, available at <http://www.poezijasustine.rs/milan-rakic/dolap> (1912).

S.F.4.52. In the stead of conclusion, I will sketch a bridging comparison between America on one side and my home, Belgrade, and many other places in my native country that I have regularly visited, lived in for short periods of time and, most importantly, loved in the sense of hearing the voice of Nature in the murmur of tree branches, sea waves and pebbles jingling beneath my feet, including our house in Mala Moštanica at the outskirts of Belgrade and a tiny resort town of Kumbor in Montenegro on another. When I draw the sense I have of the both on the canvas of my mind, I see the former as overflowing with sparkles of attractiveness, purity and grace at its surface. However, despite this outward appeal, its roots are frequently empty like the eyes of a Barbie Doll or rotten, enwrapped in moldy greed, jealousy and dissatisfaction. Smart and amiable eyes that often seemed as if sunk to these tiresome lowlands of the soul have thus been one of the most striking impressions in the city of San Francisco at the beginning. The soulfully colored memories and visions I have of my home have, on the other hand, always stood to me as depicting Love among the Ruins. In the midst of an unappealing, dusty, smoggy and largely devastated environment, the sunrays of my eyes, radiated from the peaks of the pyramid of my knowledge, could always penetrate straight to the wells of the blessing, divine Love, an omnipresent fountainhead of it all, deeply ingrained everywhere. Belgrade oak trees with their comforting and gracious beauty untouched by the filthy and toxic air around them have always been captivating to them as a reflection of the battle between dusty griminess and willingness to live and endow others with precious gifts of life, and may serve as an addition illustration of this ruinous Love that penetrates it all in the place of my origins. The same aesthetic confrontation could be seen in Belgrade backyards and parks, Kumbor's rusty marinas, crumbly stony walls and frowzy beaches, cracked pavements, murky meadows, dim orange lights and lovely human eyes. When Lena, my little niece, built a tower on a Belgrade playground, she did it using small dusty rocks picked from the ground and a tiny piece of a tree branch, and yet in my eyes this edifice was more beautiful than thousands of fancy towers built from Lego cubes and other sterilely clean, prefabricated building blocks used by kids in the Western world. As I write these words, the walls of Pompeii are falling, due to seasonal rains and landslides, approaching the day of their final disappearance from the face of the Earth, and yet even as such, as ruined as they are, their aesthetic appeal, epitomizing angelic fragilities dormant within all of us, beats by million miles the plastic culture of perfection, spotlessness and synthetic smoothness and shininess that I am immersed in. As ever, I have found myself standing in the middle, with the cosmopolitan stars glowing with the joyful spirit of the Little Prince that wondrously hops from one planet to another with a sense of belonging everywhere, orbiting around the burning sun of the belief that "love is staying", with the sad spirit of the Little Prince that wistfully gazes at the starry sky, feeling as if he belongs nowhere except to his own little remote planet, crucified between opposites and yet finding enlightening energies emanating from the heart of these crosses upon which our creative beings rest. With the world of futuristic sci-fi appeals, of untouchable visionary eyes ahead of me and the world of ancient, dusty and grainy beauties that touch the outmost orbits of the music of my heart behind me, I spin 'round and around, like a ballerina, not knowing where to go, wishing to embrace it all in my arms and never let go. Yet, the metaphor of the Way with its standing for simultaneous connectedness and separateness shows verily itself, that is, the way at this point. To be one with them both and yet to stay apart, I ought to transform myself into none other but a bridge stretched between the two. As of today, therefore, I keep on dreaming of setting myself as an arch between these two worlds. Lest I breed inside me either the flaky, flimsy, pliant state of mind represented by the Eurocentric sister Maria in Bergman's *Cries and Whispers* or the cold, callous, hardhearted state of mind represented by her Americanized sister Karin, I tell myself that I must blend the Europeanism and

Americanism, as depicted on these pages, into one, for only in such a way could I become a soul that helps the world heal itself and flourish in spirit. Resting on Middle Way is risky, though; it is comparable to walking over the edge with the incessant danger of falling onto one or the other side and wreck our ships thereby. It is also comparable to Maria's and Karin's sister Agnes' swinging on a swing in the dying seconds of Bergman's heartrending masterpiece, threatening to fall down any of the two extremes of the Way of Love, but retaining happiness only for as long as it keeps on swinging, as it keeps on maintaining this inconstant state of balance. Peacemakers deliberately standing on middle Ways can confirm that by being there they undergo attacks from both of the confronted sides, constantly repelling arrows that aim at piercing their hearts. And yet, they stand alone, without armies of opinions supporting them from behind, knowing that, regardless of it all, it is a place for the bravest ones to be in. In the spirit of these great peacemakers, as of today, I, too, will be like a golden dome spread between a sunset of the Modern Times and a sunrise above Love among the Ruins.

S.F.4.53. With this being said we have finally arrived at the end of the deck of cards that these individual passages have stood written on. By crumbling the tower made of them, a view appears ahead of us dominated by a majestic golden dome, a bridge between the two worlds on which you can see me standing, the final destination of this rather rough comparison between Europe and America. Rough, I say, because, as I remind the reader once again, with the broad, broad generalizations it is based on it served the purpose of presenting a childlike play with concepts and words that guided us straight to the doors of the Way of Love. Hence, the crushing of its oversimplified foundations while holding a joker, a sunny state of mind which can be one with everything in a true cosmopolitan sense of the word, in our hands. The Way of Love, again, is based on the balance between introspective withdrawnness and inward focusing of one's rays of creativity on one side, and expressive sending away the radiance of inner fireworks of warmhearted feelings and crystal clear thoughts of ours so as to endow the beings of the world with an immaculate beauty on the other. The modern American culture can serve as a metaphor of expressiveness, of the cult of giving, of letting go and unwinding the tangled pieces of beauty we keep inside of us, whereas Europeanism can teach us how to nurture these diamonds of grace within us. As the Way of Love has pointed out, one without the other could not exist, as surrendering our creativity to others may eventually exhaust the wells thereof in us, while solely taking care of sustaining the flame of wellbeing and satisfaction within us without passionately seeking the ways to selflessly endow others with the inner light of love will likewise make us incomplete. But to live in perfect harmony with ourselves and the world is to find the way for these two aspects of our being, inner and outer, invisible and apparent, impressing and giving, inwardly focusing and outwardly dissipating, dreaming and acting, to coexist together and, even more, to sustain and feed each other. The entire, you may say, artificial and overly generalized dichotomy introduced hereby has thus served to merely open up the way for us to catch a glimpse of the wonderful balance that the Way of Love symbolizes. After we see it once, we may forever be inspired by it; as if it becomes a star we could always locate on the sky of our mind and use to guide us across the endlessly divine Ocean of being. Hence, what this brief discussion shows is how by looking at the emanations of the Earthly life in any of its aspects, inanimate, cognitive, or social, we may truly reach for the stars. By spreading our hands to the world and yet gracefully bowing our mind and immersing it into the silence of being within us so as to listen to the quiet and almost inaudible divine music reverberating inside of us, somewhat like the Christ on the Cross, we set ourselves for the starry voyage, for becoming a cosmic creature, unbound to earth, a

star that inexhaustibly washes the face of the world with the blessing light of Love. With our heart embracing the homeward, Orthodox Christian tradition of approaching the spiritual essence of the world with humbleness, mystical quietness and a tear of compassion, and with the surface of our being giving life to the supersonic and ecstatic emanations of cosmic joy arising from the aesthetics of the new world, we accept it all and become like a sacred Taoist wheel of evolution, whose edges shiningly spin, but whose essence is still and rooted in bright and brilliant wishes and aspirations, thereby streaming towards some new and wonderful horizons of being. This is how we reach a truly cosmopolitan spirit of being in this world: by uniting rivers of various cultures that comprise human civilization into an endless ocean that our worldviews thus turn out to resemble. This is how a sacred Sun of Atlantis rises in place of our eyes, by our standing as a bridge between the Old World and the New World, like a divine Libra spreading one of our hands towards the Love among the Ruins, to the ancient and everlasting values that have sustained humanity ever since, though nowadays often forgotten and covered by dust, and the other hand to hold a dancing star of our spirit, the one that teaches us how to reach ultramodern, supersonic and stellar expressions of beauty and love.

Mind and heart as one

S.F.5.1. One of the most important conclusions derivable from the preceding section discussing merits and demerits of the new American culture is that the sense of individualism and the sense of collectivism are found well balanced within every harmonious personality. Our sense of uniqueness and originality thence stems from our relying on our own judgments and feelings, whereas everything we strive for in this life is still done for the sake of glorifying not ourselves, but others. In that sense, we are returned to the main point of the Way of Love, which actually opened up the way for our analysis of the partly real and partly imaginary dichotomy - just like every product of our perception is, as the co-creational thesis suggests - between Europeanism and Americanism. At the end of that discourse, we arrived at the wondrous gate where Love among the Ruins was seen bathing in the orange sunset, symbolizing great ends that are nothing but wonderful new beginnings. As in T. S. Eliot's 4 Quarters, we thus made the full circle and reached the starting point of our explorations, seeing it in a fresh new light. We had started off with numerous questions that engulfed us as falling stars in the moments of wondering perplexity of our standing between the two worlds, not knowing where we belonged, and ended up facing the same crossroad, although out there in the distance foreshadowing the path that takes both of these poles by their hand and enlighteningly stepping forward in the spirit of their togetherness.

S.F.5.2. To recollect the abovementioned, let us merely remind ourselves that the downside of excessive collectivism lies in people's lack of the ability to sanely judge, that is, remain immune to the corruptive desire to conform to opinions of others. These dark and mentally oppressive shades of longing to comply with the expectations and ideals of other creatures eclipse the sun of sanity that shines deep within us and incessantly radiates impulses that lead to enlightening action, which we are merely to grasp and ride on into the sunrises of enchanting ways of being, exhibiting unique creativity along the way. An exorbitant respect of the surrounding creatures typically results in an enormous desire to fit in and be accepted by them, which tends to drive all of one's actions in the wrong direction. Everything said appears out-of-place and phony whenever we betray our own sense of proper discernment and become guided by the aspiration to ingratiate ourselves to others, somewhat like politicians do when they act driven by the desire to attract

voters, pulling off fake smiles and uttering words that crush their own aura of trustworthiness in the eyes of chaste creatures able to read between their lines. Instead of being charmingly honest and starry sandy, we would thus end up mechanically nodding our head and confirming everything proclaimed. In an uptight manner, we may find ourselves staring at others, bulging our eyes whenever we open our mouth owing to an overdose of self-consciousness exhibited, and all that while typically holding a stiff grin on our face. By substituting the power of our own judgment with seeking approval from others, we become an open field for manipulation. Other people would be able to easily take advantage of us while we are passively, with low self-esteem, like a pet on a leash or a cow led around by the nose ring, following them and complying with their aims, having transformed into a humanoid doormat of a kind by means of our passive cravings to satisfy each and every one while neglecting to boldly walk in the direction of the fulfillment of our own dreams. When the collectivistic spirit in us starts to inflate and eat up the individualistic spirit in us, we may find ourselves on a wrong track, guided by the desire to impress others and not to live in harmony with the divine music beating within our own heart. Too much love for others and too little love for ourselves eventually implies less love for both others and ourselves in the long run. Sooner or later, this fall from grace of ours would result in the feelings of disappointment and dissatisfaction, possibly even turning our attitude upside-down and making us treat both ourselves and others with a dose of stringent bitchiness instead of passive meekness. But if we travel in the opposite direction, a similar disaster awaits us. By being overly individualistic, determined to pursue our dreams while disregarding the needs of others, we may only become a lunatic, unbound with the strings of love and respect to others. We would resemble a balloon let fly away into the stratosphere, all until it bursts by the force of its own inner pressure, which, as seen from the other, environmental side, comes from the lack of pressure/impressiveness accepted from the surrounding world. We must love and respect others to live a fulfilled life, and do so while finding a balance between living in concert with the music of our own heart and living for the sake of ornamenting others with the starry pearls of divine beauties we keep within ourselves, which is an art I have christened the Way of Love. As we walk along this way, we should know that respectfulness drawn on one side of the coin always draws mild shyness and timidity on the other side. Living perfectly freely, only in harmony with our own wishes and desires, implies autism on one side of the coin of our consciousness and ignorant disrespectfulness on the other. But to reach the stage where we would be like Alexander Pope's graceful angels that fear to tread where fools rush in, and yet find enough strength to make a step or two and bring the sunlight of loving creativity to the world, is to find oases of the Way of Love in our heart.

S.F.5.3. Why am I telling you now, you may ask, under the heading that, like a neon sign flashing flickeringly to the soft and soothing sound of water flowing down the underground pipes on a quiet city night, spelling the magical phrase, "Mind and Heart as One", about this balance between uniqueness and commonality that simply conforms to the already elaborated Way of Love. Well, it is because I claim that the balance between mind and heart, between mentally discerning the abstract and perceptive features of our experience and listening to our heart as a guide, is an essential lodestar that helps us find the heavenly fields of the Way of Love. Let us plunge for a second into the field of science to see how. There we could see how the romantic charm of the genuine way of doing science is slowly fading away and disappearing. Instead of being a profound devotion guided by an immense thirst for knowledge and a sacred quest to reveal answers to the fundamental questions of life, it has become a coldhearted profession, a business like any other, frequently distanced from the emotional content of our lives. The future historians of science will

be kept busy for a series of lifetimes by trying to explain the change of the heart that science has undergone in the last few decades, having been transformed from a discipline driven by curiosity and wonder to a moneymaking and approval-seeking entrepreneurship. How and when exactly science became no longer the determinant of a successful career in science is what will keep them awake at night for many, many centuries that follow. Whatever the solution agreed upon will be, whenever politics eclipses the true quality I see it as a sign that trueness to oneself has been sacrificed for the sake of finding safety in the mentality of a herd. And indeed, conforming to norms and paradigms set forth by distant authorities today appears to be more important than listening to one's own heart; or, as John C. Warner, the pioneer of green chemistry, told me, "Science today is in the midst of the teenage years of a human lifetime. My daughter had the most creative personality when she was 11. That is the age analogous to the one in which Galileo, Leonardo and other great minds thrived. They did not comply with any authorities. They were risking their lives, in fact, by fighting for the truth, against the repression of the church authorities. And also, they were artists and scientists at the same time. But then, my daughter became a teenager and, all of a sudden, she lost her unique personality. She started dressing up in exactly the same clothes as her friends. She began to listen to exactly the same music as her friends did. She started using the same vocabulary as they did. And so on. This is where science is right now: in times when everybody is streaming to satisfy one's own peers, not thinking self-responsibly and not basing decisions on foundations rising from the depths of one's own heart". On the other hemisphere of the globe of human thinking, the sex columnist, Dan Savage would have readily agreed with this viewpoint, as he recently wrote how "this is a country where the culture evolves and remains vibrant because people are free to challenge the existing order"¹⁸⁹⁴. This is why I have given myself a vow to always act in the arena of science in the same way as the Christ did: by punching its dwellers with arguments, passion and love alike, so as to let them see the omnipresent beauty of divine being and the essentiality of rescuing their sense of responsibility from the cruel castle of scientific enterprise and returning it partly into the home of their own heart. Of course, I emphasize "partly" because one part of our responsibility should still rest with the authorities of the world owing to an immense sense of respect for the tradition that every mature mind, including ours, should cultivate, knowing that, after all, all of us, everywhere and at all times, are "standing on the shoulders of giants", as Isaac Newton proclaimed.

S.F.5.4. Becoming emotionally involved has been considered as one of the greatest professional heresies in the Western world, somehow too prosaically narrow-minded and intellectually shortsighted to realize that no marvelous discoveries could have ever been arrived at had it not been due to strong emotional ties woven around them in their embryonic stages by their discoverers. Henceforth, it does not surprise that with too much of mind and too little of heart is how young scientists are nowadays trained to approach scientific tasks. Science as the reign of intelligence is thus getting more and more distanced from the private lives of the scientists where most of the love resides. Frank Lloyd Wright, who designed his family house in Oak Park, Illinois to also be a studio that employs and trains dozens of architects, as well as Federico Fellini, whose key message conveyed through his film about film, *8½*, was that "the true artist cannot separate his life from his art"¹⁸⁹⁵, would be spinning in their graves had they been able to witness the enormous degree of separation of today's science from everything that is humanistic in nature,

¹⁸⁹⁴ See Dan Savage's *Skipping Towards Gomorrah*, Penguin, New York, NY (2002), pp. 299.

¹⁸⁹⁵ See Charles B. Ketcham's *Federico Fellini: The Search for a New Mythology*, Paulist Press, New York, NY (1976), pp. 71.

from emotions to intuition to any other aspects of an artistic sensibility. Jean-Luc Godard is yet another artist who made the apartment in which he resided his shooting studio, abhorring the idea of disconnecting the professional from the private; “the shooting was very difficult because I didn’t know where work stopped and where private life began”¹⁸⁹⁶, said one of his actresses later. Of course, when such boundaries between the private and the professional become erased in our lives, our being accused of one of the two following things will always hang in the air: unseriousness and dilution of our devotion to profession due to petty private matters or a psychopathic obsession with work-related matters well into the hours that should be spent with family and friends. Through the character of Abe, however, Douglas Coupland questioned the appropriateness for someone as consumed by creative work as scientists and artists are to draw a line that separates work from life, and made him note the following in an e-mail message: “I suppose there’s nothing wrong with my not having a life. So many people no longer have lives that you really have to wonder if some new mode of existence is being created which is going to become so huge that it is no longer on the moral scale – simply the way people ARE. Maybe thinking you’re supposed to ‘have a life’ is a stupid way of buying into an untenable 1950s narrative of what life is *supposed* to be. How do we know that all of these people with ‘no lives’ aren’t really on the new frontier of human sentience and perceptions”¹⁸⁹⁷. And so, when I reminisce over Lola’s advising the stubborn warper of “the rules of the game” and lonely maverick, Von Bohm, to leave the city because “people here have private lives and public lives and these two have nothing to do with one another”¹⁸⁹⁸, my brain screams, “Run, run, run”, and when I see Blixa deliver one of his characteristically eccentric vocal performances by sharing the stage with his four-year old daughter, prompting a spectator to comment how “this is really cute....art and life comingling”¹⁸⁹⁹, I, who similarly used to bring four-year old Theo to my lectures at universities and who have always claimed that science sops up the most creative juices out of life, helplessly smile in sympathy. When one of the attendees of a conference on nanoscience whispered to my ear why I brought Theo, who just turned five at the time, to it and had him sit in the first row next to me as I chaired a five-hour long session and presented in it, my response was that science, dehumanized to the core by having everything artistic pull out of its heart, must be rehumanized and my holding hands with my little boy, having him lie on me and count stars during talks and make tents under the lecture hall seats, speaks this message from the top of my lungs. At a less trivial level, common to all the accomplished artists and scientists has been the harnessing of the deepest waters of inspiration, which, like everything professional, originate from the so-called private, albeit in reality societal domain, to spin the millwheels of their practical achievements. They all must have known that these two domains, of intellect and of emotions, could hardly ever be kept separate within a creatively powerful personality. First of all, human intentions and anticipations, comprising our deepest beliefs and drives, can be shown to stand at the basis of cognitive selections made during the processing of perceptive and reflective data that our consciousness collects. Emotions can be seen as the inner fire, the glow of which sustains and directs the rays of our intention. In view of that, love can be seen as the foundation of all reasoning. Despite the traditional reliance of scientific education on teaching dexterity in analytical processing of information, the latter stands for only one aspect of complete, multidimensional intelligence developable by human creatures. This absolute

intelligence involves multiple other facets, from emotionality to intuitiveness to spirituality. According to Howard Gardner's theory of multiple intelligences, for example, intelligence is multimodal, including the components such as logical, mathematical, verbal, visual-spatial, kinesthetic, musical, existential, interpersonal, intrapersonal, naturalistic, and pedagogical. From here on, the inability of the world's top female chess players to compete at the same level as their male counterparts can be justified not on the basis of the higher intelligence of the former, but rather on a different spectrum of intelligence, where, most commonly, the greater pronouncement of intelligences such as the logical, mathematical and kinesthetic amongst the former gets compensated for by the greater pronouncement of intelligences such as the interpersonal, verbal and naturalistic amongst the latter. This multidimensionality of intelligence also explains why just as the motoric intelligence of soccer players does not ensure their ethical and aesthetical sublimity, so do extraordinary skills in analytical problem-solving not guarantee the ability of scientists to steer the ships of science in the right direction and avoid the whirlpools of dogmatic bigotry and monstrous egotism that have spread like a plague across the academic realm if they are not complemented by the parallel nourishment of artistic and spiritual sensibility. Needless to add, using the standard tests of intelligence is thus a completely inappropriate approach to evaluating one's intellectual powers. The main message of the movie *Slumdog Millionaire*, in which the main character who has no education at all and barely can read finds correct answers to all of the quiz questions by simply reconnecting them with flashbacks of his past experiences, is that real-life puzzles cannot be solved without resorting to the assets of analogical, systemic reasoning. Intelligence is about intuitively recognizing such providential signs in daily happenings in our lives as much as it is about adeptly linking ideas in our head by means of logical operations. Sheer logical analyticity is therefore only a half of the story about what the true intelligence is about, as it is not indicative of one's capabilities to find solutions to real-life enigmas, including those that are the integral parts of scientific research. Consequently, as emotional and intuitive aspects of intelligence need time and patience to reach full bloom, we could be transferred straight to the doorstep of Alexander Pope's norm: "Some people will never learn anything because they understand everything too soon"¹⁹⁰⁰. From this perspective, given that intelligence is obviously multifaceted, excelling in purely analytical thinking, such as that required for IQ tests, calculus or chess, can be seen more as an intellectual defect than some pinnacle of intelligence, the reason being that the exhibition of excellence in purely analytical intelligence is preconditioned by the switching off of its complements in terms of emotional and social intelligence, an art in which men appear more skilled than women, even though these latter components of intelligence are needed to ensure a complete, consummate intelligence, which that build on sole analytical reasoning can never be. For this reason, all my research adventures have comprised trainings not only in these analytical skills, but also in their emotional complements, which are practiced through poetizing in any form or shape. When I embarked myself on a research voyage aimed at producing the first stable dispersions of cholesterol particles, I remember that I spent enormous amounts of time outside, walking next to the Raquette River, caressing trees, climbing their branches and rolling my back against their bark in an eruption of pastorally amiable emotions. For, ever since I played soccer with a schoolbook held in my hands, reading a few lines of poems that I was supposed to learn to recite by heart on a following day in-between running for the ball and then repeating them in my head during the play, I have done it all to prepare myself for becoming a grand confluence where the personal and professional streams of thought would merge and fertilize each other. At

¹⁹⁰⁰ See Alexander Pope's *Thoughts on Various Subjects*, In: *Miscellanies...* by Jonathan Swift, Alexander Pope, John Arbuthnot, John Gay, Ulan Press (1727).

the same time I was awakening in myself a great desire to attain the research aims posed in front of me, and that never for the sake of advancing in my career, but selflessly, for the sake of bringing forth discoveries that would benefit humanity. For, I have known that unless our steps in science or anything we engage our creativity in are not made with a silent prayer radiating from the depths of our heart, singing melodies that engrain a great wish to bring otherworldly beauties and the paths of salvation to the creatures of the world, whatever we do will not live up to the divine potentials our beings hold on within. If David Hume, a pioneer of the philosophy of Empiricism, spoke no nonsense when he exclaimed that “reason is, and ought only to be, the slave of the passions, and can never pretend to any other office than to serve and obey them”¹⁹⁰¹, then embarking on a voyage through the microcosmic muddle in our head wherein logical ideas are intertwined like twigs and branches of bushes and trees in an enchanted forest without the fuel of lifesaving aspirations, the fire of luminescent emotions and the steam of productive passions arising thence is a mission destined to remain unaccomplished before we have even begun our journey. Poetically and prayerfully, therefore, even though I dive for pearls in the sea of science, the kingdom where knowledge and reason occupy much higher place on the hierarchy of values compared to emotions and intuitions, I have ever since conducted my behavior in accordance with the simple guideline given by Blaise Pascal in his *Pensées*, “Heart. Instinct. Principles”¹⁹⁰², in no other order but this. Consciousness, constantly churning rationally derived principles in its core, is a great evolutionary gift that helps our creativity immensely; however, as cognitive scientists repeatedly remind us¹⁹⁰³, it presents only the tip of an iceberg compared to the subconscious parts of our minds and senses which are to be subdued to our will and brought to the surface of our being through intuitive spontaneity, lest we promptly freeze in awkwardness while standing on this tip of sheer reason and logic. Even though I am a scientist, I have thus valued brainlessness as much as I value the brainpowers that we are endowed with, as our blissful instinct and cold and sane logicity complement one another in an ultimate state of mind. Ever since my karate master sat me on his lap and told me the story of three martial artists who were given a task of opening a door behind which a person ready to attack them waited quietly, with the first one of them being inattentive enough to allow the attacker to hit his head with a bludgeon, the second one hearing the attacker making a move as soon as he opened the door and then beating his brains out in the blink of an eye, and the third one, a true artist, coming close to the door, sensing the silent attacker on the other side of it and warning him not to even try any ridiculous move when he steps into the room, I have been made aware of the enormous importance of the power of intuition, as essential as that of logic and analyticity in truly complete noesis. Although the mainstream thought pervading today’s academia dictates that intuition and its brethren, including passion and faith, are none but the grand spoilers and compromisers of the objectivist pureness of science, the thinkers of this thought have become blind to the way it has slowly carved deadening dryness into their spirits and turned scientists, the epitomes of high-spiritedness in an ideal world where the connections between the insides and the outsides of our beings would not be disconnected as they are today, into lifeless automata and passive processors of facts and figures, bonded to one another by the garrote vils of use and abuse rather than by the gentle threads of love and care. Ironically,

these people, these Pklats¹⁹⁰⁴ lost and confounded in the labyrinthine loops of logic devoid of anything artistic, that the superman in a Renaissance scientist tries to rescue from this dark Kafkaesque castle of science will be the very same people stepping on his cape, accusing him of bad science because of mixing its analytical rigors with the flows of poetry and intuition, in just about the same way the purists and the classicists denounced Jean-Luc Godard for his deliberately “bad”¹⁹⁰⁵ cuts, when all he had done was fostering creative thought by shattering the stale rules of convention and, in Pascal’s steps, favoring emotion over principles. Of course, this is not to negate that infusing science with artistic elements is a double-edged sword, given that the outcomes can be dual: diluted science, deprived of rigor and exactitude, on one extreme and divine science, full of sparkle and life, bursting with creativity, on the other. It is true that favoring aesthetics over pragmatics can lead to edifices resembling countless uninhabitable works of modernist architecture, whose designers’ “aesthetic interest was so strong that it routinely took precedence over considerations of efficiency”¹⁹⁰⁶. One of them was Le Corbusier’s Villa Savoye, which “might have looked like a practically minded machine, but it was in reality an artistically motivated folly”¹⁹⁰⁷ and which was so uninhabitable that its owner, Madame Savoye had to first move out of in the years following its opening because of innumerable leaks through its flat roof and rheumatism and pneumonia contracted by her and her son, and then have it refurbished by the Swiss architect under the threat of legal action. But it is equally true that if practicality is considered as a sole norm during the design and planning of our creations, pieces as lifeless and bland as the matchbox building blocks of social realism, such as those decorating most of New Belgrade and the Montenegrin capital of Podgorica, will be produced, inspiring no one and potentially bringing the spin of the evolution of humanity toward the creativity of gods to a complete halt. Needless to add, should the former path ever prevail and science gets devoid of its analytical rigor, I would consider all my efforts to instill the life of art and poetry into science to have grandly failed and rivers of tears would I cry over one such outcome and over my role in provoking it. In that sense, it is worth remembering that only when the dance of these two elemental brain powers occurs on the fire of sacrificial love for fellow earthlings can they reach these ideals of utter cognitive brilliancy. For, when we derive our actions from a heart burning with love and a mind filled with emotionally arousing visions, it is as if an army of angels walks together with us to protect us from danger and hold us in their arms. It is with sadness in our eyes that we could then observe the lifeless and passionless processions of modern professionals inertly following the streams of beliefs that any form of emotional involvement is a distraction rather than a motivation and drive essential for our endeavors in life to succeed. The world will continue to be divided between the listless hands at the bottom of the pyramid of social creation and the cold and apathetic brains at its tops until we fulfill the premise held on to by Maria, Freder’s muse in Fritz Lang’s Metropolis: “The mediator between head and hands must be the heart”. Like so many narratives before and since, this dystopian movie was yet another allegory of the Biblical story of the life of the Christ, presenting the savior as a passionate seeker of Love, if not Love *per se*, and a builder of the bridge between rationality and pragmatism, without which all human creations are expected to share the fate of the Tower of Babel and be swept away by the godly grace, with its tops, symbolically, as it is stated in the Midrash, being burnt by fire, the bottoms swallowed by the mouth of a giant abyss and the middles left intact. After all, the pragmatic nature of all scientific endeavors, be it direct or

¹⁹⁰⁷ *Ibid.*

indirect, implies that their products are designed to bring benefit, salvation and joy to those in need. And since pragmatic purposefulness stands at the root of all sciences, neglecting to cultivate altruistic, warmhearted feelings during even our most routine lab bench work means going against the grain of genuine scientific creativeness, predisposing the scientific edifices of ours to be erected on inherently unstable, shaky foundations. Empathic intuitiveness is thus depicted on the walls of the atria of my mind as a fundamental pillar on which the muses of scientific creativity dance and pluck the fruits off some heavenly vines of thought twined over their heads. And if the fact that a perfectly relaxed eye is open, not closed, has suggested something to me, it has undoubtedly been that subduing our will to instinct and letting the mysterious natural drive in us guide our behavior, surprising us and the world with an inexhaustible imaginativeness flowing thereby to the surface of our being, takes us to the daylight of existence rather than to its dark and regressive abysses. After all, unlike sciences that have traditionally insisted on cultivation of immaculately logically conceived and consistent visions prior to their experimental embedment in reality, arts have inherently engrained reliance on instinct and pure feeling. On most occasions, the quality of artistic expressions is directly proportional to one's trust of creative drives that lie far beyond the grasp of reason, which also implies that most of the time artists merely feel the striking importance of their work, without being able to explicate the reasons thereof in words. Restoring the artistic spirit in the heart of science directly calls for a greater influx of such intuitive feelings on behalf of scientists in their bench work, a process that I call Romanticization of science, in reference to Romanticism, the late 18th and early 19th Century movement in arts that emphasized the realm of sublime emotionality and intuition as the one occupying much higher altitude compared to the lowland provinces of reason in which the thinkers from the age of Enlightenment established their settlements. Hence, in selecting the experimental conditions for processing, I never follow a purely rational route of making logical, well calculated steps, precisely distanced from each other, and examining them one by one. Instead, as I know that empirical trial-and-error has to complement conceptual knowledge in discovering novel and attractive preparation procedures, I shoot here and then I shoot in a completely different direction. Where I opt to shoot is partly based on knowledge I am equipped with, but equally relies on my intuitions and emotions and on my following metaphoric and enlightening signs in the world around me. What playing guitar taught me was that when I immerse myself in the blissful, meditative oneness and then enrich such a state of mind with my "know-how", the learned technique of playing so as to find the most beautiful steps, my playing becomes endowed with sparkles of brilliancy. In such a semi-intuitive and semi-smart way of creation, I simultaneously express my spirit and yet let Nature have its say and instill some beautiful signs for me and the world alike in the music that is being sent into the space. And so, in the spirit of genuine punk rockers who would pick guitars with less than a modest technique, but with a great desire to transmit an illuminating message to others, and miraculously succeed in their sacred mission, I embarked on this research adventure with little knowledge and a whole lot of prayerful music ringing across the dome of my heart, as I ceaselessly hugged trees and rolled over meadows in quiet eruptions of pastoral ecstasy. In that sense, I was greatly reminiscent of Perseus, who, according to the Greek mythology, set off to the distant island of Cisthene to steal the head of Medusa, a gorgon who had previously turned innumerable similar searchers and other casual onlookers into stone, without any experience, with no weapons and without even a slightest clue as to how Medusa looks. Yet, what the Greek hero had in him ended up being far more precious: it was a powerful and resonant prayer, which he would invoke to get in touch with a supreme God when the moment of encounter with the monster whom he so strongly wished to conquer came close. However, instead of offering Perseus a straightforward idea as to how to proceed, God told

him to look for the advice from the nymphs, the mysterious creatures that dwelled among the trees, in the bushes, behind the rocks, in the grass and elsewhere in the natural world surrounding the heroic, sublime mind. And like the Greek hero in his conquest, gazing at the natural world around him in search of a clue, so did I spend most of my time seeking signs that would help me fulfill the aim of lifesaving importance in the shapes of clovers, pebbles, the crumbly soil, the tree branches, the clouds and wavelets of the Raquette River, hoping that my trustful change in interaction with these miniscule things would tip the boat of my intuitive mind in the right direction. And then, miraculously, one day, I made it¹⁹⁰⁸. There they were, swaying back and forth at the bottom of a beaker in front of me: perfectly uniform, stably dispersed particles of cholesterol, something no one had produced before. Oddly, shifting the conditions just a bit from those under which the particles were formed completely disrupted the outcomes. The desirable results could be obtained only under a narrow window of conditions, and by making random, unintuitive steps I could have easily skipped this magical range. As a person trying to solve the same enigma before me was laid off after two years of unsuccessful attempts, I figured out that the reasons were twosome. They lay both in the domains of intellect and emotions. Formerly, he attempted to use a slow crystallization procedure for producing small particles, which was an inherently wrong approach because small number of crystallization nuclei formed under such conditions would translate to large crystal sizes. Latterly, I assumed the lack of a great, selfless desire to find a solution that would benefit the whole wide world to have been partially responsible for the lack of success. Just like Jerry Maguire on his thorny road to success faithfully followed the advice given to him by his mentor, Dicky Fox, “If this (points at heart) is empty, this (points at head) doesn’t matter”, so did I in those days ceaselessly look back at the endless heritage of humanity that had fed me with the nectar of godly wisdom that in its entirety falls back to one simple principle: love for everything and everyone. Hence, knowledge-wise, I decided to use an abrupt precipitation procedure, which coupled with a great emotional thirst to find an answer that would open new ways for healing humanity, miraculously guiding my intuition, led to successful results. Long time ago, when I was a little kid, I learned that in order for our watering of trees and bushes to be truly effective, we need to water the plants with the warmhearted feelings of love and care emerging from our hearts too. For, by definition, “devoid of love, one cannot make a good deed”¹⁹⁰⁹, and no matter how hard we try to do something useful for the benefit of another, if we do it with an empty heart, our success is guaranteed to be only partial. Sitting still with the most blissful feelings in the universe, on the other hand, yields an equally limited approach should we only resist to transmute this bliss into something readily conferrable to another. Thus, regardless of what we do, spirit and matter ought to always travel hand-in-hand. We need to feed the spiritual roots of ourselves and the world as much as we take care to yield visible fruits of informational wealth and prosperity. We need to look no farther than any tree to realize that its invisible roots, analogically representing the spiritual domain, tap the underground waters so as to feed the tree, while it is by fructifying and letting the fruits fall down to the ground and rot that the trees disseminate their seeds and create new life. In other words, foundations sustain physical entities as much as their creations do. In the sociological domain, for example, this means that education, of which Nelson Mandela justifiably thought as “the most powerful weapon which you can use to change the world”, truly represents the basis of a prosperous social order, while the creative products of the society are

¹⁹⁰⁸ See Vuk Uskoković, Egon Matijević – “Uniform Particles of Pure and Silica Coated Cholesterol”, *Journal of Colloid and Interface Science* 315 (2) 500 – 511 (2007).

¹⁹⁰⁹ The saying is attributed to Orthodox Christian mystics. See Tomislav Gavrić’s *Pravoslavna mistika*, Lento, Belgrade, Serbia (2003), pp. 62.

equally important to keep the good educational efforts going, lest we become like my home country, Serbia, rated excellent in primary education and less than average in all the other indicators of social wellbeing¹⁹¹⁰, finding itself as the world leader in the rate of brain drain¹⁹¹¹ and, as the result, resting at the bottom of the ladder of development in Europe. This is all to say that, whatever the activity that we partake in, we should make sure to equally invest into the invisible and ineffable bases of the objects of our attention and into their manifest features. In the world of science of the day, its dwellers, of course, need to be primarily impelled to pay attention to the former, the art that they have largely forgotten as science has become less Romantic and Renaissance-like and more businesslike and utilitarian. After all, although watering plants is necessary to ensure their survival, giving them water without placing our heart into our actions provides an incomplete help thereto. As I sat by the atomic force microscope the other day, a devotional thought of what exactly in the field of medicine I should engage my creativity into and bear a lot of fruit for humanity thereby passed swiftly through my head. I looked up at the screen, and there they were: fibrous protein particles I had sought after for more than a year. They ornamented the softly blinking screen with beautifulness comparable to the most intricate of Michelangelo's masterstrokes, confirming my beliefs that the world is a canvas on which the most blissful of artistic pieces is being drawn and that life, at the end of the day, when all angels go to sleep, is the greatest of all fairytales.

S.F.5.5. Life lived to the fullest of our divine potentials, dispersed inside us like stars seeded across the night sky, is always about marrying the king of the mind and the queen of the heart in the strangest and most unexpected of ways. As our spirits glide through the city streets in search of a soul to awaken and illuminate with a twinkle of the eye and a graceful move of the hand or a softly spoken word, we could let the bright and sharp intellect be the vehicle for the heart, the heart which, like the statue of a siren, stands boldly at the helm of the ships that our spirits are, whereas when they sit solidified into a statuesque stillness conducive to the rise of blissful thought by the lab bench, we could let the quietness of the mind be fueled by the fire of passion and love ignited and kept aflame by the heart, and in both cases something extraordinary will come out. But to get back to the method of producing the first stable dispersions of monodisperse cholesterol particles, you ought to know this: believe it or not, it would never have been developed had it not been through the incompleteness of my knowledge of chemistry. It was my lack of knowing the most effective synthetic pathways one would have been expected to follow that made me transcend those often complex, energy- and resource-consuming tries and focus on simple procedures. These practical gaps in knowledge can be further traced to the poverty of my formative scientific days, which coincided with the civil war of the 1990s in Yugoslavia, the international sanctions, the embargo on the import and export of goods and the overall collapse of the state economy, when even the basic nutritional items, let alone chemicals for the lab, were unaffordable. Now that I think about it, it may have been a sign and not a pure coincidence that my first peer-reviewed paper, published in 2002¹⁹¹², was a short review about magnesium diboride, whose

¹⁹¹⁰ See the World Economic Forum's The Global Competitiveness Report 2012 – 2013, edited by Klaus Schwab, World Economic Forum, Geneva (2013), pp. 312.

¹⁹¹¹ *Ibid.*, pp. 313.

¹⁹¹² See my paper titled *Na putu novih magnezijum diboridnih superprovodnih materijala* or On the Path of New Magnesium Diboride Superconducting Materials in English and published in *Tehnika – Novi Materijali* 11 (1) 13 – 17 (2002).

superconducting properties were discovered a year earlier¹⁹¹³ and which remains to this day the chemically simplest superconductor, thus silently sketching the path of simplicity that I was to follow in science. And anytime a strikingly simple protocol is being devised on the backdrop of one such formative destitution, a brick is added to the fortification of the idea that poverty can be a blessing, given that it can make inventive ideas flourish as much as they fall into a deep sleep in the conditions of overabundance of resources. When one such brilliantly simple process is discovered or invented, my sitting depressed, with face buried in hands, near pieces of equipment that break and come to life and all over again as well as my transporting a single tube for a calcination furnace for over 30 h on a bus from Slovenia to Serbia across the prairies of Balaton to make my research compatriots happy and my long hours and days of improvising laboratory setups with *štap and kanap*, as the Serbian saying goes, utilizing one and only pipette in my syntheses for months and washing it dozens of times each day - when later in life, in wealthy American institutions, I would see them being treated as a disposable good, thrown away after each use – suddenly gain purpose. In fact, the procedure I came up with was so simple that it could be carried out anywhere: in a regular kitchen, on a meadow or while juggling beakers in air, provided that we are equipped with the right acrobatic skills. Some cholesterol, 1-propanol, water and only five minutes of patience is all that is needed. And yet, the method is unsurpassable in terms of its practicality and eco-friendliness, echoing the simplicity of one of the first methods for exfoliation of graphite and the formation of single-atom thick (0.66 Å) planes of graphene, utilizing some scotch tape and the tip of a pencil and nothing else¹⁹¹⁴. The method is vaguely reminiscent of Yellow by Coldplay¹⁹¹⁵, the song of brilliant simplicity, the key to the birth of which was surely unclear to its creators, who combined mountainously moving aspirations with sweet and innocent ignorance in their heads and hearts and produced an ingenious concoction from which the song was born, naturally and effortlessly, just like I did when I invented this simple procedure. Within the sphere of music, a story we could bring to mind now is that of Bruce Springsteen asking Elvis Costello how he achieved the sound on his debut record, My Aim is True, which the Boss was particularly fond of. As the second part of the story goes, Costello said, “No money”¹⁹¹⁶, bluntly hinting at magnificent effects that lacks of resources can create, but also at the putting of creativity to sleep under conditions where resources are too many, praising the blessings of the poverty and disparaging the spoiled rotten souls of the riches thereby. In the realm of classical music, we could evoke the example of Hector Berlioz, the French romanticist who used his meager technical skills as a composer to his advantage, given that his poor technicality is one of the reasons why his structurally chaotic and rhythmically irregular compositions, primarily the choral and the symphonic, today sound fresher than those of many of his technically virtuous contemporaries. On a similar note, jazz historians unequivocally agree that “(Miles) Davis discovered that he couldn’t play like (Dizzy) Gillespie, and proceeded to develop a style of stark, hesitant, even blushing lyricism that provided a contrast to (Charlie) Parker’s flood of virtuosic inventions”¹⁹¹⁷, and thus

¹⁹¹⁷ See Stanley Crouch’s Considering Genius, Basic Civitas Books, New York, NY (2006), pp. 241.

I claim that the inability to achieve the technical virtuosity of contemporary masters in the field is an essential step toward becoming a source of expressions of a genius, expressions that evolve the given field away from superficiality and staleness and toward diviner depths than before. Ever since then, not only have I claimed that the products of the mind of a genius arise from the marriage of the lack of knowledge, not abundance thereof, and awesome aspirations, but my approach to the synthesis of new materials has also followed the route of extraordinary simplicity, as opposed to unnecessary complexities introduced by the mainstream chemists. For, just like philosophers often tend to put quite simple insights into glossily farfetched linguistic garments, so as to make them sound more pompous and proficient, so do chemists frequently rely on an unnecessary stack of chemicals in the procedures they devise. In fact, from 2002, when my doctoral advisor, Miha Drofenik, objected vehemently when I called the procedure for making nanostructured ferrites in reverse micelles simple in a practice for my first conference talk¹⁹¹⁸ because, as he said, the funders for our project would be in the audience and they would not fund science that was deemed simple, to 2021, when a UCL professor, T. K. Thanh, interrupted me when I called the synthesis of iron oxide nanoparticles “simple” compared to other chemistries¹⁹¹⁹, presumably because of the same reason, I was being made aware of how scientists with an eye on the monetary prize are scared of calling any aspects of their sciences simple and of how commonly they present the simple as complicated as a psychological trick and a tactic in the fishing for research funds. To publicly denote anything pertaining to one’s science as simple, thus, more often than not leads to the abolition of one’s freedom to engage in doing this science, regardless of the fact that such attribution of the epithet of simplicity to science acts as a powerful magnet attracting common people with lesser skills to the field, which does an enormous favor to it. And yet, little scientists prefer building phony gates of pretense around themselves with these unnecessary complications, for how else would their egos thrive if what they do for living was deemed simple? In any case, my cholesterol days served as a tipping point in my denouncement of complications for the sake of self-promotion and the embracement of simplicity as a route toward wisdom and benevolence for all in materials science frames. Since those days, I gradually became fond of playing the game of simplifying, be it presentations at technical conferences whereat presenters would rush like hurricanes to make sure that they are the ones who would spit out more data than anyone else in a fifteen minute time slot, synthesis methods in a culture wherein the greater the diversity of the expensive and fancy components placed in the solution or captured by the precipitate, the more noted the method would become, or the interviews in a world where the more flattering words one has to say about oneself and the more exquisite one’s attire, the greater the chances for landing the job of one’s dreams. For, mainstream scientific presentations at conferences are delivered to befuddle, like those that the members of the imaginary International Astronomical Congress in Saint-Exupery’s story about the Little Prince were accustomed to, so that people understand only bits and pieces of the content, but end up with a high opinion for the speaker, thinking that “he must be really smart and skilled if we cannot follow him”, whereas my newest approach has been to craft presentations that are accessible to everyone and allow people to savor a story arc, as if they were watching a movie, ending up with a more rewarding experience, though often at the cost

of a not so high opinion for the speaker regarding his scientific mastery. In spite of this inevitable ruination of my reputation, my decision has been to relentlessly pursue this pop art approach that elevates people and diminishes the value of oneself, in contrast to the traditional, customary scientific presentations that do it the other way around, wasting people's time and diminishing their confidence, but benefitting oneself. By giving simple, simple talks at conferences, full of long pauses and containing minimal numbers of words and images, let alone focusing on questions rather than on answers, I have acted in the spirit of the French New Wave filmmakers who insisted that the role of the artist is to create art that questions the art itself alongside providing an inspirational message to the viewer. It is through this accentuation of simplicity in my recent talks that I have questioned not only the path of science in a given field, but also the art of presenting scientific information in a world overpopulated by people habitually trying to cram as many pieces of data in their presentations as possible so as to prove their worth, albeit neglecting the disservice that they do to the inspiration-seeking souls listening to their self-assertive selves. For example, the keynote lecture presenting my research on the potential of calcium phosphate nanoparticles to be osteogenic, antimicrobial and viscous and replace the expensive growth factors, antibiotics and polymers, respectively, in types of bone grafts favored by the scientific community of the day, given in a coastal town near Lisbon in January 2016 I began with the following words: "Explicitly, this will be a talk about a single material – calcium phosphate – and the inexhaustible potentials that it possesses. Implicitly, this will be a talk about simplicity. From what we could have seen by now at this conference, the future is in further complexification of nanoparticles. But this talk serves to raise an important question: does it sometimes pay off to move in the opposite direction, that is, to simplify rather than complexify nanoparticles"? This is also why I have tried to highlight the equality of the methodological essence of nanoscience and of the ideal that says "small is beautiful" on every possible occasion. Given that the practical aim of most of my research has been to develop nanostructured therapeutic platforms for treating diseases tied to austere environments, such as those common in Third World countries, synthetic simplicity enwrapped in Tagore's saying that "those who understand simply, understand truly"¹⁹²⁰ and inspired by the artistic path of Yasujiro Ozu, whose increase in the filmmaking budget was paralleled by his making movies ever more low-budget in nature and ever more beautiful to that end¹⁹²¹, I set forth as a highest ideal that must be satisfied before the product with the right therapeutic properties is delivered onto that translational belt that connects the bench with the bedside. To promote affordability on the basis of preparatory simplicity by transcending the need for expensive chemical components and create fascinating products using the cheapest of methods and compounds, ideally those that have been discarded as uninteresting and exhausted in potential long time ago by the chemists and materials scientists has thus become an essential principle that I posed before myself to guide me in my research. When the Christ, per the biblical record, fed "five thousand men" (John 6:10) with "five barley loaves and two small fishes" (John 6:9), in my head it stands for the miracle I have intended to achieve in the scientific arena, especially today's, where money and money only is the measure of quality and success, which is to show that wonderful discoveries can be made from little to no funding at all. Thankfully, my own making first research steps in a country whose resources were less than meager did me a favor on a big scale of things, having taught me how to create a most phenomenal science in the scantiest of conditions for creation. Such stunningly simple approaches and ideas as my method for making monodisperse cholesterol particles or the bone grafts that were antibacterial and osteogenic in nature even without

being loaded with any antibiotics or expensive growth factors, however, rarely come across a welcoming spirit among the editors and peer reviewers associated with prestigious journals. Allured by the Hollywood spirit where megalomaniacal spectacles are favored over indie simplicity, as sweet and tender as it can get when clumsy drawings on slides substitute the computerized graphics, and where sci-fi futurism is seen as the amplification of everything that is machinelike in man rather than as an intensification of everything that is truly human in us, these gate-guardians would shove such outpours of organic simplicity of mine in the blink of an eye and restate that there is no place in the prestigious pantheons of science for them. Hence, as I submitted one of my works to the editor of one such journal, it happened to be rejected since he did “not feel that the work is of strong enough novelty”, and when I challenged his decision with a number of points along which I could show that the work was fully original, from its hypothesis to a myriad of conclusions, the answer was unexpectedly debilitating, hiding a tragic philosophical and historical illiteracy of our times within itself: “It is probably true that you are the first author to state this hypothesis so clearly, but it is fairly obvious”¹⁹²². With this message that shuns simplicity by the sides of the road and embraces the merits of unnecessary intricacies the given editor bluntly clashed face to face with the idea expounded by Erwin Schrödinger, “The task is not so much to see what no one has yet seen; but to think what nobody has yet thought, about that which everybody sees”¹⁹²³. He also implicitly reiterated the realm of science as the one domineered by pitifully surface-valuing personas about whom the Antoine de Saint-Exupery noted the following in his story about the Little Prince: “On making his discovery, the astronomer... was in a funny costume, and so nobody would believe what he said. Grownups are like that”¹⁹²⁴. Of course, someone like James Prescott Joule, when he learned that doors to publishing his valuable scientific findings in avenues as prominent as those of the Royal Society of Chemistry may be permanently closed because he was a brewer with not a single day of traditional education in natural sciences¹⁹²⁵, or I, myself, upon realizing that my transition from a higher-ranked academic institution to a lower-ranked one and then a complete excommunication from academia coincided with the entryway for publication in major journals getting progressively narrower and my receiving less and less invitations for guest lectures and sponsored conference participations, all because scientists are respected in their social circles almost solely based on the institutions that they are affiliated with, can attest to the trueness of Saint-Exupery’s vignette, but it is less obvious how modifying the language standards of scientific communication toward a greater simplicity of expression poses equally sturdy barriers before the dissemination of one’s work. However, it is true: if we were to begin to express our scientific methods and derivations in an utterly simplistic language, chastely childlike in its essence, we would be swiftly discarded by our colleagues and peers as unscientific, inapt and unacceptably extravagant. In the first episode of the TV series, *The Saint*, Simon Templar’s partner, Adrienne recognized how “insurance companies found out years ago that investigators could do a lot more if they did not look like investigators”¹⁹²⁶, but were we to apply the same principle in the conservative milieu of today’s science and distance scientists from their social stereotypes, we would not go far, the many advantages of this approach notwithstanding. Here, it is worth recognizing that an important impetus in the direction of the growing complexity

of scientific language comes from its objectivistic premises. The latter, namely, tend to induce a greater pervasion of passive constructs aimed to accentuate the illusory idea of separation of the subject from the object of his research, despite the fact that this effect has been recognized by the 19th Century Serbian linguist, Đuro Daničić, as the one deadening the language and thus ought to be heartlessly banished from it¹⁹²⁷. An identical collection of scientific results can, in fact, always be organized using either an unnecessarily fluent language or a simple and unpretentious one, and while the former would normally encounter a response filled with nothing but delight, the latter would be mercilessly thrown into a nearest garbage can, indicating once more that something is profoundly wrong with the state of affairs at universities today and that the clouds of change, ominous for the privileged authorities and reassuring for the undervalued progressives oftentimes feeling as refugees of a kind, are beginning to loom over the contemporary academic world. How and when the ship of childish heartwarming minimalism will come in, as in Bob Dylan's legendary song¹⁹²⁸, take over the realm of science by surprise and push aside the mainstream scientists that the Little Prince made fun of long time ago, having noticed his tendency to intentionally use intricate words "to get the ship confused"¹⁹²⁹, all so as to boost the impression of smartness among others, no one knows, but one thing is for sure: the time of this grand phase transition is gradually approaching. As I stand here and reminisce over a verse from Dante's Divine Comedy, "You wished to possess virtue in poverty rather than great riches with vice"; these words were so pleasing to me that I moved forward, to make contact with the spirit from whom they seemed to emerge"¹⁹³⁰ (Purgatorio XX, 26 - 29), marking the moment in which the poet becomes acquainted with the merits of poverty and thus makes a crucial step from the murky depths of Purgatory to the crystal clear lights of Paradise, I know that that day will come, on which a similar transition from the purgatorial complexities to the paradisiacal simplicities in the sphere of scientific communication will be made. It is nowadays known to every critic of the modern music that minimalism and straightforwardness of punk sound singlehandedly killed the intricacy and suffocating solos of progressive rock and occasionally made even the best of classical composers of pretentiously structured and cerebral pieces blush, as much as simple fountains of Rome hidden along cobblestoned sideways alleys, such as the mask fountain in the park of the Orange Trees, or behind dense bushes of the local forest, as in the case of the fountain of Moses in the Pincian Gardens or the one in the gardens of Villa Sciarra¹⁹³¹, have often made many of the pompous watery monuments of the Eternal City blush with their modest, unassuming and yet inexhaustible aesthetic appeal. And if we were to draw on the flickering, neon-lit screen of our mind some of the classic equations that propelled scientific thought and technological development of the planet in whole new stellar directions, we would swiftly realize that they tend to be extraordinarily simple, from Newton's equations that set the bases of classical physics to Einstein's mass-energy equivalence and the equation that expresses the photoelectric effect to Heisenberg's uncertainty principle to Planck's definition of the quantum nature of light to de Broglie's equation that describes particle-wave duality to Boltzmann's statistical definition of entropy to a myriad of mathematical formulas involving Euler's number, e , and π . In a likewise minimalistic manner, on

the fiery podia of science I have ever since been on the mission to show how a single touch of simplicity that renounced any reliance on fabulous technique on the account of embracing a great desire to save the world is just about enough to overshadow the most immaculate experimental sophistication deprived of these inner blasts of compassionate spirit. I have been assured that technical innovation is driven by those in hold of the sophisticated and pricey technologies and that their maturation on the market will be the way to make them accessible to the destitute and the underprivileged, thus bringing profit to the wealthy developers, as it is, for example, bound to happen in the realm of fine particle synthesis as lithographic methods for fabrication of monodisperse fine particles with designable shapes are substituting the simple wet methods, like the aforementioned protocol for the synthesis of uniform cholesterol particles, as these lines are drawn, and yet the only morally viable stand I could take is such that it focuses on devising simple, minimalistic methods practicable by the poorest people on the globe and affordable to all. And I have assured myself with an equal level of certainty that the only way these exhibitions of simplicity can succeed in putting their more complex analogues to shame is through an act of magic, which can neither be planned nor trained for nor taught and transmitted to another as a skill. For, everywhere and at all times I have held in the back of my mind the dichotomy between Vincent van Gogh, the artist who could create magic on the canvas by “dashing it off with a few brushstrokes”¹⁹³², and Eugene Siberdt, the painter who effectively expelled van Gogh from the Academy of Fine Arts in Antwerp in 1886 and whose technique may have been a hundred times more immaculate than van Gogh’s, but it lacked one thing: magic. And if we reckon that van Gogh held that painting ought to be representative of perception and not be a product of imagination¹⁹³³, we could conclude that the tuning of our sensory devices to see the world in the way of gods and goddesses, corduroying the compassion of angels and nourishing this fire within day by day, hour by hour, minute by minute is the path leading to the production of works that will move generation after generation of their consumers, even when the technique is embarrassingly meager and when they are being created with the most economical of means, financially and/or stylistically. This is the point when I recall the most beautiful thing a wise owl said to Piglet after he had sadly noted how “it is hard to be brave when you’re only a very small animal” in one of the fairytales about Winnie-the-Pooh: “It is exactly because you are a very small animal that you will be useful in the adventure before us”¹⁹³⁴. And what better example to bring up to illustrate the benefits of being small than the survival of exclusively small species, including our mammalian predecessors, following the last major cataclysmic collision of the Earth with an asteroid, 65 million years ago, during which all the large and then dominant species, including most notably dinosaurs, went extinct. Just like the small soap bubbles can rest intact for quite some time on the blades of grass that they fall on while the big ones burst momentarily, being the effect I learned about by spending days blowing bubbles for Theo and Evangelina, so do small things in most other aspects of life have more pronounced survival skills than the big ones. The vision of Piglet escaping through a crack in the ceiling to get help for his friends locked inside a forest house, but too big to squeeze through the tiny crevice, thus proving how smallness can equal lifesaving dexterity brings to mind not only the hot southern Californian day when I, covered with sweat, worked hard, with an assortment of tools, to pull a little birdie toy stuck inside a hole next at the edge of the Stone Creek

¹⁹³² See Vincent van Gogh’s Letter No. 535 to Theo van Gogh, In: Vincent van Gogh – The Letters, edited by Leo Jansen, Hans Luijten and Nienke Bakker, Van Gogh Museum & Huygens, NL (2009).

¹⁹³³ Van Gogh’s close friend, Paul Gauguin held the opposite view and the argument between the two painters famously resulted in van Gogh’s cutting his own ear off.

¹⁹³⁴ See Benjamin Hoff’s *The Tao of Pooh and the Te of Piglet*, Egmont, London, UK (1992).

pool, though only to have Theo pull it out effortlessly with his little fingers, as if through an act of magic. The vision of the littlest animal in a pack performing the greatest of all feats also evokes the nearly a kilometer tall granite monolith in the Yosemite National Park, also known as El Capitan or Tutokanula, the latter of which means “Inchworm Rock” in the Miwok Indian language and is a reference to the myth of its formation, itself a story in which a momma bear went to forage for fruits in a forest while her two cubs fell asleep on a rock, which grew taller and taller, all until it turned into an imposing rock formation of today’s size. Alas, neither a fox nor a mouse nor a mountain lion were able to climb the rock and rescue the cubs, but a lowly inchworm could and he brought the little animals back to their mom. Along remoter corridors of my mind, these ruminations also bring to mind an essential historic fact, namely the key advantage of the Serbian army that helped it win the first battle for the Allies against the Central Powers in World War I¹⁹³⁵ having been none other but its comparative smallness, for it allowed it to flexibly rearrange the troops in response to rather sluggish movement of the more massive invading Austro-Hungarian army¹⁹³⁶. In fact, by being guided by the norm that “small is beautiful” and that humbleness, smallness and softness are those that would lead me towards the right ways, I have acted in accordance with the values metaphorically presented by Mickey Mouse, that animated American hero whom the beginnings of the triumphant stride of the US culture on this planet can be traced to. For, it is smallness with which this mousey hero has conquered the world, whereby it is abhorrence of smallness and celebration of one’s own sublimity and aerial nature, cravings to lift one up on the account of stomping over the values of minuteness in life, such as epitomized in the following words proclaimed by the fascist regime in mid 1930s, that conceal the root of one’s fall from grace in this life: “Mickey Mouse is the most miserable ideal ever revealed... Healthy emotions tell every independent young man and every honorable youth that the dirty and filth-covered vermin, the greatest bacteria carrier in the animal kingdom, cannot be the ideal type of animal... Down with Mickey Mouse! Wear the Swastika Cross”¹⁹³⁷. After all, only if we literally find diamonds in the dust, that is, sources of the most valuable insights we could think of in the littlest details of the Universe, normally neglected and cast to the sides of the road along which the mainstreams of human consciousness proceed in their blindly and fearfully following each other, we have the chance to reach peaks of ultimate happiness in this life. And by discarding the robust and manipulative molecular machining and lithographic methods that posed themselves as the counterforce with respect to soft chemistry approach, which embodied these ideals of smallness and softness deep within itself and which I have ever since been a proponent of, I embraced the latter and accomplished great results. Just as David picked a stone from the ground, tossed it in the air and managed to hit Goliath straight into his forehead, thus beating him in the battle (Samuel I 17), I too, intuitively, with shiny aspirations enlightening my heart, threw ingredients into a single beaker and miraculously accomplished what many robust and expensive, Goliath-like synthetic methods had not been able to. No matter how immaculate and flawless inventions on the frontier of human creativeness may seem, we often become stunned by how frequently they share the fate of Titanic, while little and modest ships prove themselves as able to travel much farther and with greater success. What this example tells us is that choosing perfections is rarely a best way to

¹⁹³⁵ The battle in question is known as the Battle of Cer, having taken place around the mountain of Cer in western Serbia in August 1914, exactly 100 years from the day these words are written. As the result of its being analogous to the biblical clash between David and Goliath, this battle nowadays presents a standard case study in almost every serious school of warfare in the world.

¹⁹³⁶ See the leaflet entitled *Cerska Bitka: 100 godina od početka Prvog svetskog rata 1914 – 2014*, The Ministry of Work, Employment, Soldier and Social Questions, Belgrade, Serbia (August 18, 2014).

follow. It is by listening to our heart and hiring those in whom we recognize a fire of love and passion, despite their imperfections, that we make the best choices in life. When Duke Mu of Ch'in hired Po Lo to find the best horse in the country, Po Lo hired Chiu-fang Kao. And when Chiu-fang Kao brought the horse to the duke's palace, the duke was stunned as he looked at a small and puny animal and immediately called for Po Lo, whining how "that friend of yours whom you commissioned to look for a horse has made a mess of it; what on earth can he know about horses?" But Po Lo, he only laughed, noticing afterwards: "Has he really got as far as that? Ah, then he is worth a thousand of me put together. There is no comparison between us. What Kao keeps in view is the spiritual mechanism. In making sure of the essential, he forgets the homely details; intent on the inward qualities, he loses sight of the external"¹⁹³⁸. Consequently, we should not be afraid of making mistakes in life, as long as they are made with a bright, noble and clear vision in front of our hearts. A single misstep, lightly and gracefully made, can thus be a much greater source of our progress than a lengthiest perfectly conducted stride we could think of. As Gordon Pask noticed in the framework of his cybernetic view of intelligence, "Mistake is not the same as error"¹⁹³⁹. For, only through mistakes do we reach higher levels of knowledge and lead the wary world to observe what the suspicious Duke Mu noticed when the puny animal he scornfully laughed at reached the mountaintops of its creativeness, "It turned out indeed to be a superlative horse"¹⁹⁴⁰, or what doubtful misbelievers and abovementioned contemptuous cynics said when they finally glimpsed Prefab Sprout's magnificent lodge among stars, "We confess, there were times when we thought it was just an address, but now that we've seen it, we know it's Andromeda Heights"¹⁹⁴¹.

S.F.5.6. Now, beside the role of intentions, passions, emotions and other powerful cognitive streams that flow through the foundations of human reasoning, metaphors that could be found everywhere around us present another connection between the social life in which scientists are immersed and their professional creativity. The greatest scientists of this world were never ashamed to admit that they frequently looked for metaphorical inspiration in the natural world to help them solve numerous scientific problems and puzzles. Therefore, we should always be receptive to what Nature has to tell us using metaphors of whatever goes on inside our head. For, that is how Nature gives us signs if we are on a good way or not. To sum up, I carefully observe details of the outer world, but am also equally meditatively immersed in the essence of my being, watching for the blinding flash of light that would signify me that I am ON THE RIGHT WAY. See, as I typed the previous sentence, I accidentally pressed the Caps Lock key on the keyboard, as if my intuition guided me, telling me that, after all, I truly am on the good way. Hence, we should rely on the powers of our intuition, intentions and love burning in our hearts neither more nor less than we rely on the powers of logic and knowledge we accumulated over time. This is how we walk the way of exhibiting a truly impressive creativity in this world. In other words, we should be equally rational and irrational if we want to become a king of rationality in this world. And if this sounds revolutionary, it is. It is a call for anarchy in the realm of science, currently dominated by the mediocre reliance on rigid, preset algorithms on how research ought to be undertaken, that is, in purely rational ways. For, just like the famous Black-Scholes equation was seemingly successfully applied for decades among economists to predict the most profitable trade

options before suddenly turning into a nightmarish, so-called “black hole” equation when it became clear that blind servitude of naturally intuitive and holistic human minds to it has led to global economic meltdown¹⁹⁴², so does unquestioningly following steps of authorities in science or anything else in life, from their pre-established methodologies to behavioral patterns to paradigmatic beliefs and worldviews, essentially resemble the biblical procession of men behind a blind leader, all of whom are predestined to end up in a ditch. What I call for then in order to save science and humanity from this imminent peril is simply bringing scientists and artists of the modern day face to face and telling them to imitate each other, all until a balanced mindset is reached in both of them. As of today, however, we stand forth as witnesses of a strange gap between scientific and artistic minds. Whereas the former are constrained by rigid norms of logic and ratio, unable to let go and follow the voice of their heart, the latter are carelessly, without any solid base of analytic thinking, flying around driven by uncontrollable and undomesticated flights of fancy. But mirroring each other may result in scientists opening their hearts, filling it up with wild imaginations which would then be included in guiding their day-to-day professional activities and decisions in the lab. As for the artists, this would instill analytical order and discipline into the nihilistic chaos and fruitlessness of their mindsets. For, remember, art is meant to serve the purpose of glorifying both human spirit and the world around us, of awakening love and wonder in our eyes and pointing to immaculate traces of beauty that reality abounds with. In return, such feeding of our creative being through artistic pieces and deifying the world around us by its means goes back to produce ever more wonderful artistic expressions in this endless feedback cycle in which human spirit enriches the world that enriches human spirit, carving human creatures on the way so as to become ever more spiritually elated and the world ever more beautiful and fulfilling. And yet, by negating this classical view of art and bringing it down to the level of mere nihilistic “anything goes”, one pales the greatness of human spirit and the divinity of the world alike. As Igor Stravinsky, who, like myself, thought that the electronic music is immensely potent, but lastingly frozen in the embryonic stage of development, noted, “It is the transcendent (or ‘abstract’ or ‘self-contained’) nature of music that the new so called concretism - Pop Art, eighteen-hour slices-of-reality films, *musique concrete* - opposes. But instead of bringing art and reality closer together, the new movement merely thins out the distinction”. Instead of envisioning ever greater ways of expression and being through arts and blending them with the reality, the postmodern approaches do not always manage to live up to the ideal of clearly pointing at the entire world as a divine form of art, but merely suffocate the intrinsic greatness of human spirit and Nature alike. True art also lives up to the ideals of the Way of Love, that is, of being signs of the times, aiming to reflect the hidden essence of the world as it is, to stand forth one day as a cultural evidence of the actual times and be a time-machine that instantaneously drops us off at their thresholds, but also to be a unique and original message that propels the human race towards new evolutionary horizons via offering precious ideals and incentives. In other words, there is a whole lot of intellectual background that should ideally underlie one’s awareness of what arts are truly about. Without them, arts tend to dissipate into superficial and meaningless forms present in the world today in astonishing amounts. Likewise, there is whole lot of artistic columns and bricks deeply ingrained within the foundations of scientific reasoning and method. For, it is only a sea of deep emotions that ships of intelligence can sashay on, as I claim. To feed the scientific core of our creativity is to be open to the streams of wonder and love that true arts shine with. To conclude, both arts and sciences prosper when they are brought closer together.

¹⁹⁴² See Ian Stewart’s The Mathematical Equation that Caused the Banks to Crash, *The Observer* (February 11, 2012), available at <http://www.guardian.co.uk/science/2012/feb/12/black-scholes-equation-credit-crunch?fb=ative>.

S.F.5.7. Still, what scientists are implicitly taught today by being openly encouraged to wholly separate their professional lives from the private ones is to keep their hearts at one place and minds at another. But for as long as this separation is instigated, our personalities will be incomplete and our creativity will suffer. And whenever our creativity suffers, it may be either because we have spent too much time immersed in the collective spirit of our surrounding, that is, via blindly following the norms, advices and commands set forth by the authorities while ignoring to listen with an equal carefulness to the voice of our heart, or because we have overly confined ourselves to ourselves only, disregarding the social sphere which we are a member of and the equal realness of the emotional worlds of the surrounding creatures as that of ours. Being here and being there is thus essential for being truly creative in whatever it is that we do right here, right now. Traveling across the distant galaxies in our fancy with one part of our consciousness makes us prone to deliver far more creative signs in the present moment than if we were to be completely absorbed in what is here and now around us. As I put a lipstick on in front of a camera on a recent shooting of a movie directed by Jane in the haunted attic of a Bolivian restaurant named Peña Pacha Mama in the North Beach, minutes before I would be directed to dance on a squeaky wooden floor surrounded by Andean totems, necklaces and lutes, all drenched in crimson lights, and glimpse directly at a camera, breaking “the fourth wall” thereby, quite in the style of Krzysztof Kieslowski’s Veronique when she similarly transgressed the most pivotal standards of good acting in the cork-popping cherishment of the spirit of cosmic loneliness, a moment before she took a dreaming look at an upside down world reflected through a marble held in her hands while journeying on the train to Krakow, or right after she noticed a mysterious light reflected in the corner of her apartment, I had a sudden flash of insight that told me how helplessly great our performances in this world become whenever we think of how “satellites and cameras watch from the sky”, as proclaimed by Andy Horace¹⁹⁴³. Maybe the whole concept of God has thus been so frequently invoked by humans because it balances our beings by partly withdrawing our attention away from things that are here and now, somewhat similar to the effect produced by monks counting beads and repeating mantras. Imagining a starry creature, a divine muse of our being, looking at us from above, can have a delightful effect on the gracefulness of our acts in this world. When it comes to scientific or any other creativity alike, I know that glancing at details surrounding our experiments and reflecting away from our theorizing is essential to bring inspirational clues to our endeavors. Hence, my way of doing science is to make life out of it, to infuse it in every detail of my daily experiences. Even as a student I would come back home from a party in the wee hours of the morning and jump straight onto the textbook, the equations from which I had spun through my head all night long, in togetherness with wondering stars and other lifelike passions that the night out brings. I let them inspire each other, unlike other students who mostly kept these two domains, science and life, thoroughly separated. “Get a life”, they would tell me, but for me, science and life have always been parts of a single whole. There were days when I, as a student, would come back home from partying at the break of dawn and get on with deriving equations from my atomic physics textbook and clarifying its concepts with gazes wistfully directed toward the blue skies and a pen resting on my chin. There were also days when I, in the middle of a party, would get immersed in a book picked from a bookshelf and have everything around me disappear before the illuminative ideas and visions beamed down into the vessel of my translucent mind. These words, these days, I write on park benches, Muni seats and porches of the Victorian houses of the Sunset, day and night, in and out, mingling free time with the worktime to the point of their

¹⁹⁴³ Listen to Massive Attack’s Hymn of the Big Wheel on Blue Lines, Virgin (1991).

yielding a thoroughly homogeneous mixture. This is not even to mention all the pickup soccer games I played with books in my hands, throwing alternate gazes at their pages and symbols and then the ball, a petite Moon, or romantic conversations intercepted to write down brief reminders on thoughts that swooshed through my dreamy head in their course. In turn, parties and aimless hangouts have been in my universe always prioritized to lecture time and other dry scholarly activities. From the earliest days of my enrollment in schools and universities to this very day, to party well has always been more important than to study well. If you wonder why, know that the reasons are too many to be exposed here. One answer I could borrow from the Stone Roses bassist, Mani, when he replied to the lead guitarist's, John Squire's complaint that he kept on clubbing all night and coming to rehearsals tired and defocused by saying that "clubbing is for research"¹⁹⁴⁴. Indeed, to keep head buried inside the book at all times may be to know the whole world without stepping into it on some level, but it is also to kill some of the essential sources of one's creativity, especially when we remember that the light of our humaneness and the fire of love burning in its core are the roots of scientific inventiveness just as much as other people's hearts conceal the fastest route to God, which many, as we know, are tempted to search everywhere but in the heart of another man. Substituting reading or lab time with clubbing or bar hopping can be always justified by the need to understand the zeitgeist, the cultural spirit of the current era that science strives to penetrate with its grandiose attitude. It is also a way to understand the cultural values that subtly and imperceptibly guide scientific voyages towards a discovery at its serenest depths. For, as much as culture is an undercurrent on which the ships of science glide, it is also a sea into which science disgorges its contents in this cyclical cosmos wherein every cause is an effect to its cause. As far as teaching, another key component of the academic profession, is concerned, clubbing presents an invaluable way of acquainting oneself with the lifestyle, the lingo, the interests and the worldviews of today's recipients and tomorrow's creators of knowledge, which is of critical importance for the success of our reaching out to them in the classroom and passing the inspirational points across. But perhaps most importantly, mastering the art of partying and connecting hearts with fellow humans in its course has had the purpose of reigniting empathy and instilling in me the love for humanity in the most passionate of its forms, which I have seen as a fuel for the development of a creative scientific mind and which can be easily put to sleep with too much time spent in introverted solitude, away from community. For, ultimately, without great passions and wholeheartedness nurtured inside us, all the mindfulness of ours will be in vain. Intelligence is fed by love just about as much as our ability to love is sustained by the power of intelligence. If we do not use our heart and passions in doing science, the merits of mind alone would never reach solutions to problems it poses in front of us. Hence, unless the so-called private and professional lives start to interfere and inspire each other through analogies and emotional associations, the doors that lead to the most exciting discoveries and revelations would stay shut. For example, I have noticed that when circumstances in my life seem harmonized, I do not have a hard time to make my writings consistent, meaningful, true to my ideas and poetic, which is the source of great satisfaction in me. But as I write this in the moments of disappointing falling from the cliffs of trust in those appearing as "wolves in sheep's clothing" (Matthew 7:15), my self-confidence has dropped and I am finding myself staring at this paragraph, knowing that a missing link exists in it. And the missing link is not incidental, as only a week ago I first broke and then lost the temple of my glasses during a wild night out. As I sought the missing part, not only did my path take me to a store that lies close to the pavement of the *in medias res* beginning of this book, but many other strange coincidences also occurred. I found myself first dozing in a

¹⁹⁴⁴ See Simon Spence's *The Stone Roses: War and Peace*, St. Martin's Griffin, New York, NY (2012), pp. 146.

mysterious atelier and then browsing through a pile of broken glass in a car with smashed windows, left alone to the mercy of looters and cops in a forbidden part of town, searching in vain for this missing part through many hazy SF nights. Not only do I consider a time point at which I happen to lose things of material value as a wake-up call to reassess my materialistic attachments, but also in particular, every time I lose my glasses, I think of it as a symbolic crossroad of a kind, that is, as a sign that new points of view ought to be taken. Now, to move ahead in time and drop something precious on the way straight from the fountainhead of one's heart may be a precursor for the discovery of new lands and incarnation of the deepest dreams brewing within the microcosm of one's thoughts, which is what makes me wonder on some days if this and other books of mine might be soon, after many years of writing and sacrificing my professional standing and future thereto, let alone falling into a ditch and losing the temple of my glasses while being awed by stars swirling above my head, as it happened to Thales of Miletus two and a half millennia ago too, delivered to the social daylight in proper clothes. The first time I lost my eyeglasses, after searching for them all over the streets of Belgrade to no avail, I ended up cocooned in the navy blue room of my solitude, listening to Cocteau Twins' Frou-Frou Foxes in Midsummer Fires, the song of otherworldly beauty, and, immersed in an unforgettable ecstatic ocean of feelings evoked in my spirit by its aural magic, heard Elizabeth's "mystery to find you" verse, which is when the name for the first collection of my musical recordings, Mystery to Find, came to my dreams to guide me through its conception and creation. And the last time I lost them, in Chicago's Lincoln Park, near the North Pond gazebo, it occurred to me how much of a blessing losing them and losing physical items in general must be, serving every time to teach us of how miniscule and petty material objects really are in comparison with the infinite vastness of the sea of spirit encompassing us from all sides. All of these eyeglass-losing occasions have been, of course, only some of the instances that confirmed my faith in seeing things lost as quintessential signposts whose purpose is to lead me towards much greater things in life to be gained. Speaking of the lost things, I bring to mind now the night on which I found the wallet of a man unknown to me, named Louis, under the Dwight D. Eisenhower Expressway overpass, near Chicago's Greyhound station. Having searched for him for days in attempt to return him the wallet, when I finally succeeded and handed it over to him, he wished to reward me with a dinner at Yoshi's, but my wish was different. Since I had always believed in the magic of the missing links and in their being the starting points of something life-changing and beautiful, I wished for a favor to be turned away from me, into the world which we all ought to reach out to in an effort to give our heart and soul thereto. "Let this good deed be the beginning of a chain reaction of graciousness that will gradually gain intensity and eventually overwhelm the world with its colossally powerful flow, which no dams of selfishness and barricades of greediness could stand against", I remember I thought to myself and instructed the fellow man accordingly. This lost wallet event occurred a couple of days after I moved to the city of Chicago from SF and, coincidentally, the fate would have it that in one of the last days of my stay in the Windy City, before relocating back to California, I would also help an unknown person find a precious lost object. This time it was a diamond ring that an old lady dropped in the dark on West Surf Street, which I strolled on often at night, with Theo on my shoulders, and as soon as the two of us approached the scene, I spotted the ring glistening from the floor, picked it and handed it over to the lady, who would go on to explain to me how it was her husband's wedding gift, which meant a world to her. Now, need I mention that losing a thing either by accident or on purpose is often a prerequisite for earning something far more fantastic in return in every other domain of life? For example, as a long-time expert in the game of soccer, I could tell you that losing a defender and going from four to three players in the backline can be used to

promote vigilance, given the perplexity thus instilled in the players, who won't know anymore what role on the field they are supposed to be playing, having multiple ones before each one of them, as opposed to strictly defined positioning that they would have otherwise assumed. Is the central defender supposed to be on the left or on the right, or maybe be a sweeper behind the defensive midfielders ahead of him who'd draw deep under the opposing team's gushing forward? Are the backs supposed to act as central defenders or as offensive backs, and are they meant to be running wide or deep, given so much space that they are about to cover? And so on. In such a manner, the team dynamism is being incentivized, alongside alertness, as well as creativity in the bigger picture, though, as usual, at the risk of the formational falling apart, demonstrating nonetheless how subtracting and losing a piece can be a sacrifice through which a far greater lifestyle and the way of being at the level of the whole is gained. Finally, this brings me over to the fact that every time I lost an exciting idea somewhere in the dark alleyways of my mind and ran backwards in a desperate attempt to retrieve it, I was impelled to think of the associative nature of thinking wherein everything is connected so that through chains of analogies new thoughts are being born, which, as you see, led me to ideas about ideas, arriving at which made me forget those petty little ideas dropped into the sea of oblivion along my epistemic ways in the first place. It was as if this letting go of a heavy thought lightened up my burdensome brain a bit and enabled its uplift and elevation to higher, meta-logical levels of thought. Therefore, I have no doubts that losing things in life is always a path to climbing higher on the ladder of spirit and gaining something of an even greater preciousness and importance. After all, in this life wherein "whosoever will lose his life for my sake shall find it" (Matthew 16:25), wherein those who give so as to have not are the only ones who truly have, and wherein 2:0 is the most dangerous of scores, as the Serbian soccer coach a.k.a. Bard Živa used to say¹⁹⁴⁵, putting our mindfulness to sleep and filling us with a sinful sense of pride, truly victorious souls are more often those who, like Bob Dylan's soldier, "win the war by losing every battle"¹⁹⁴⁶ rather than those who are always on the triumphant streak, the reason for which I, guided by the mantra "give, give, give", unreservedly dissipate all this mental haze of visions and thoughts piling inside my head and attain the liberation of the spirit thereby. Nonetheless, how do I relate the marriage between mind and heart with individualism and collectivism wedded in this world wherein "we all go through it together but we all go at it alone"¹⁹⁴⁷, you may have begun to wonder by now. That is, what does the entanglement of logic and emotion have to do with the juxtaposition of the individual and the society, as in a little-known lullaby verse, "Future belongs to me and I belong to you"¹⁹⁴⁸, so that the

¹⁹⁴⁵ One game that can be used as an epitome of this fundamental principle in soccer may come from the loss of Ajax at home to Tottenham on May 8, 2019, in the second UEFA Champions League semifinal game. Prior to this game, the young squad of Ajax led by the Serbian No.10, Dušan Tadić managed to beat Real Madrid, the defending champion of the competition, which it won three times in a row, in the round of 16. Ajax lost 1:2 at home, but then managed to win 4:1 away, in Madrid, and qualify for the quarterfinals, where they played against Juventus, the finalist of the competition from the year before. Like in the match against Real Madrid, Ajax drew unfavorable 1:1 at home, but then won 2:1 in Turin. In the semifinals, they played Tottenham, the team that never won the most prestigious European soccer competition. Ajax played convincingly and won 1:0 away. At home, they played even better and were leading 2:0 at the halftime. However, this 2:0 boosted arrogance amongst the youngsters, who started seeing themselves in the final before the game was over. Lulled in their glorious daydreams, they conceded a hat trick by Lucas Moura, including a goal in the sixth minute of the stoppage time, and lost 2:3, saying goodbye to the finals, in tears and disappointment, providing one of the greatest coming-of-age moments in modern soccer.

enlightenment of I is inescapably conditioned by the enlightenment of Thou and *vice versa*? However, I will leave this question unanswered directly and this passage just as it is, with the missing link embedded in its core. I will place, though, right in front of you, as a guiding light, what the most famous of all Slovenian scientists, Jožef Stefan, said once: “What science needs today are people with some knowledge in their minds and some love in their hearts”¹⁹⁴⁹. Still, how eternal and seemingly insolvable this challenge of marrying heart to mind and setting up a union wherefrom pure magic could be expressed is perhaps best summed by the last words of Charlie Chaplin in *Limelight*, “The heart and the mind – what an enigma”, uttered right before he said “I believe I’m dying” and died seconds later, with a view of the stage whereon his muse and disciple danced the dance of her life, pouring the last wafts of happiness down the rims of the vessel of a body whose spirit was departing. However, despite the seeming impossibility of attaining this union between mind and heart on the bridge linking rebellious individuality with empathic communion, precisely at the end of this section, without me telling you anything, you shall find the key.

S.F.5.8. All my life has been thus devoted to finding the balance between rationality and beauty, the one described in Hermann Hesse’s *Glass Bead Game*. Ever since I opened that book for the first time as a 17-year old boy, I felt as sanctified to follow its trail. I mysteriously sensed it had been telling me something immensely important for my life. Even then I knew that the character of Joseph Knecht was so similar to me in its blend of extreme inclination to purity and inner tidiness and yet a deeply concealed compass that made him go after the ideals of eternal beauty throughout his entire life. For years I struggled to find foundations upon which I could continue building the towers of my knowledge while holding on to a balance between the strict threads of logic and shining light of divine beauty. How to engage my feelings and fancy in unbound flights and yet to carefully and concisely continue to weave the threads of logic, without ever giving up to the chaotic impulses of the former or to dull finiteness of the latter, but rather combining them into an inexhaustibly rich creative pot in my mind has been the mission that quietly brewed inside of me ever since. Here and there, sparks of it appeared on the surface of my creative being, but they were of momentary duration only, resembling occasional flickers more than a long-lasting flame. And then, as a 25-year old young man, while strolling with my Mom down the foreign book aisle of *Mladinska knjiga* bookstore in downtown Ljubljana, I stumbled across Gregory Bateson’s *Mind and Nature*. As my softly palpitating eyes, reflecting Cosmos as a whole in them, encountered the book, the waves of the Beach Boys’ *Pet Sounds* surprisingly entered my ears from remote radio speakers, producing a hardly explainable concoction of visions and feelings and handing me a sign that emphasized the extraordinary importance of this encounter. Indeed, from that moment on, a renaissance in my mind began and this book became my favorite summer reading, even when it turned totally disheveled and stained from all the peaches that got smushed in my bag where I carried it night and day. First, this renaissance was merely intuitively sensed and then, over the years of studying Bateson’s philosophy, it began to crystallize through precise structuring of ideas in the semantic spaces of my mind. Thus, Bateson’s entering the classroom and placing a crab and a seashell on the desk in the opening chapter of *Mind and Nature* first had a mysterious appeal to me and only later, when I recognized the analogy between (a) his calling for the recognition of analogy between the structure of various sea creatures as a gateway to the systemic, the most sacred of all knowledge, and (b) Hesse’s vision of *Glass Bead Game* as the

¹⁹⁴⁹ See Lavo Čermelj’s Josip Stefan: *Življenje in delo velikega fizika*, Slovenski knjižni zavod, Ljubljana, Slovenia (1950).

ultimate form of human knowledge, a synthesis of all human sciences and arts, requiring “years of hard study of music, mathematics, and cultural history” to be played proficiently and proceeding “by players making deep connections between seemingly unrelated topics”, it provided grounds for illuminative rational thought. Eventually, through this connection established on the wings of pure intuition, a genuine balance between rationality and aesthetics was found. Its home was in the framework of systemic reasoning, upon which I would later build the majority of my philosophic compendia of thought. And so, today, the first and the last exercise in any of my classes is always finding analogies between the subjects of the course and real life, stemming from my belief that in such an ability to reflect the relationships recognized in the subject of one’s scientific inquiry onto the subject’s life on social scales lies concealed the crown of human knowledge. It was, thus, on a summer day, with my Mom and myself being surrounded from all sides by books, “man’s best friends”, as she christened them more than once, or that “infinite peace wherein you shelter yourself to open your eyes”¹⁹⁵⁰, as a book fairy defined them, in a magically archetypical scenery, that I blissfully touched the epistemological foundations upon which the philosophical towers of my worldviews would begin to be built, towers that are deeply rooted in servitude to people of the world and yet stream straight to heavenly vistas of knowledge, far beyond the farthest clouds of human thought and into the eye of divine Cosmos from which tears of sadness and twinkles of joy equally emanate.

S.F.5.9. Years later, a day before my 33th birthday, on the dusk of which the Sun and the Moon were in a beautiful opposition, one bathing on one side of the horizon and the other one on another, symbolizing the great balance of the Way of Love and inviting me to spread my arms like the Christ on Corcovado overlooking the endless sea of the beauty of being, and on the night of which the full Moon and Venus were travelling right next to each other across the sky, resembling a star on a parachute in my Mom’s eyes, reminding me of a descent of the divine glow from the Heavens of my sublime spirit down to Earth, I glimpsed a shooting star between them as I peered behind my shoulder to look at Maya’s eyes. On that same night I sat with an energetic white-bearded Japanese materials scientist who held Happy in his name, drew my own name on a napkin and pronounced the meaning of the drawn series of pictograms: Buddha-nine pestle-children-old-beauty-intelligence, pinpointing the balance between beauty and intelligence as well as of childishness and cogent maturity that I have always felt to be deeply ingrained in the core of my being. Cherishing 9 could also be interpreted as hardship, anguish and the Christ’s suffering, my newly made friend added, alluding to the clash of darkness and light, which I have also always been aware of as swirling inside of me and have considered as a crucial trait of every true artistic personality. When I was a child, the world inhabited by humanity, along with all of its sacraments and sins, was overwhelmingly impressive and there was no corner in my microcosm of thought where I could turn to and not be dazzled by the glow of pure wonder and unutterable astonishment, but as I have grown so has this world shrunk, occasionally appearing to be held on the palm of my hand in its tediously predictable spinning across many of its facets, from human thought to behavior to collective aspirations to the swings of social climates and trends, instigating simultaneous undying love for it and hearty rebellion against it, the two central emotions that will have ruptured my soul apart for many years to come. “Alone against the rest of the world”, said the words imprinted on a poster of Tycho Brahe in the Red Room of our family house in Mala

¹⁹⁵⁰ “*Knjiga je beskrajni mir u koji se skloniš da bi otvorio oči*”. See Slobodan Maričić’s *Ko ostavlja knjige po ulicama? Pa zvanična srpska knjiška vila*, B92 News (January 9, 2018), retrieved from https://www.b92.net/kultura/vesti.php?nav_category=272&yyyy=2018&mm=01&dd=09&nav_id=1344668.

Moštanica, resonating with that Biblical vision of “a wild man; his hand will be against every man, and every man’s hand against him” (Genesis 16:12) and insinuating my destiny to engage my heart and soul in rebellious fights to bring truthfulness, beauty and love to the world poisoned by fakeness, vulgarity and selfishness that were yet to come. This Danish martyr in the domain of medieval science lived in the times of theological dogmas, one of which was a belief that nothing that surpasses the orbit of the Moon is ever subject to change, resembling a divine 360° painting that enfolds the Earth, the center of the Universe, from all angles. Yet, Tycho, whose name translated to Serbian would mean “quiet or silent”, found a little, point source of light on that celestial dome and managed to show that it does move with respect to the rest of the stellar sky¹⁹⁵¹, thereby shattering the rigid doctrines that masses have blindly adopted and on which the church authorities based their limitless power. Just like he used this incredibly tiny detail of the world to tear down the paradigm that reigned over the entire Western world, ignite the flickering flame of the Renaissance movement and revitalize the pillars of Love and Wonder, the ultimate drives of the evolution of the Universe, in people’s hearts, so has my mission in life been the one of incessantly pointing out that “small is beautiful” and that immaculately fine details of the world, be it flaps of butterfly wings or the tiniest thoughts arising in our heads, are sufficient to reverse the spin of the whole Earth at times, all the way through confronting mainstream canons and clichés, knowing that rebelliously questioning and crushing standards of anything in life is the only way to advance our knowledge and being forward. With such embracement of experimental novelties and cordial dedication to detail, believing that every note played with the right intensity, at the right time, arising from the heart of devotion and immersion into grand One, could save the world I approached musical creation in my Red Room, beside the colored drawing of Tycho Brahe taped on the side of a russet-colored dresser. In those days, it was as if one part of my brain wove enlightening harmonies day and night, delicately, atop the pyramid of a consecrate intellect, while the other part of it plunged meditatively into a state of holy oneness, living up to the predicament adopted by Jackson Pollock and other expressionists in the form saying that the journey toward the state of mind with which the artistic creation is approached is more essential than the work of art *per se*, albeit in a million times more lyrical manner. Furthermore, as I recorded the collection of pieces for three guitars, Starry Train, with divine devotion illuminating my heart, the photos of Sri Chinmoy with his mandolin, symbolizing flowery peacefulness, and of light and explosive Bruce Lee, standing for the mindset of a warrior, were hanging on the wall right next to my kite and blue karate belt, epitomizing the same harmony between spontaneous flexibleness and stony determinateness. Through riding along the railroad where one rail is the heroic and stony Yang ethics and the other one is the dreamily light and wavy Yin aesthetics, I have opened the gate for the outflow of the beautiful lights of the constellation of Virgo residing at the depths of my heart.

S.F.5.10. On a translucent June afternoon I found myself sunbathing under an emerald hedge, next to a sculpture of playful pans in a little park facing SF Grace Cathedral. Exactly ten years and zero hours before that moment I was trying to sleep through a long, long night and waiting to wake up and finally set off to start my research career in a new country, leaving Belgrade, my hometown for good. Moreover, at precisely that moment a rare astrological phenomenon was happening above my head: the transit of Venus across the Sun in earthlings’ eyes, an effect occurring only once every century on average, bound to happen for the next time in neither more nor less than year 2117. The image of a tiny circular shadow traversing the shiny ball of light in the back before it

¹⁹⁵¹ See Frank Wilczek’s and Betsy Devine’s *Longing for the Harmonies: Themes and Variations from Modern Physics*, W. W. Norton & Company, New York, NY (1989), pp. 59.

got lost in the darkness surrounding it made me recall my own heading out from the sunshiny oasis of my childhood and youth and then suddenly finding myself in lonely cosmic spaces, enclosed by spiritual darkness, cold and vacuous, on the long and winding way to figure out how to become a similar sun of spirit as that I had left behind. One thing was certain though: entering the gate of science, as I did on that June day at the dawn of the new millennium, can be successful in the profoundest sense of the word only inasmuch as we never cease to keep this sun of endless beauty, love and devotion to another in the back of our analytical minds. Hence, when Brittany, a young research student of mine, asked me once if I thought she would become a great researcher one day, I looked at her and proclaimed: “The first step in becoming a wonderful researcher is to learn to passionately love Nature and humanity”. Then, I told her about Jovan Dučić’s dichotomy between the cosmic joy and the humane happiness, the former corresponding to one’s ability to communicate with the celestial voice of Nature hidden in every detail of one’s experience and the latter pertaining to one’s ability to achieve an emotional and cognitive fulfillment only when immersed in a lively social environment. Whereas those whose minds are eclipsed with the moonlight shine of cosmic joy could spend hours listening to the waves of the sea, staring at the clouds or patiently exploring stripes on miniature flower petals, those who are inclined to incessantly search for the humane happiness would always seek for human creatures in the corners of their eyes, for it is them that they need to reach a true satisfaction in life. On the other hand, the former creatures might readily become bored when absorbed within an ordinary social milieu pervaded with clichéd conversations. To be a successful scientist, one has to have a cosmically joyful personality, which would predispose one to be able to passionately love Nature and humanity from the distance, to spin one’s creative wheel of thoughts and ideals in solitude, while feeling an immaculate intimacy with the entire Nature. But then Brittany responded with another question: “What makes you think that love of any kind is important for being a successful scientist?” To answer to this, I had to go back and remind her of the essence of the co-creational thesis. “It tells us how everything perceivable arises from the dialogue between human mind and Nature. Every product of our experience is Nature giving subtle answers to questions posed at the depths of our mind. From there on, you could easily guess that should one love Nature, the doors to understanding millions of her mysteries would be open for one”, I said. I saw a bubble of thought in front of me, with outlines of Great Britain in it, which prompted me to add: “To be a great scientific mind, you need to approach Nature as if being a humble virgin kneeling with a prayerful grace dwelling in your heart”. Thus we have arrived at wonderful cliffs looking at the open sea of knowing that the love of Nature underlies scientific inquiry. The co-creational thesis furthermore implies that scientific descriptions are not reflections of an objective nature of the reality. Instead, being semi-creations of our own cognitive apparatuses and semi-creations of Nature, they can be, strictly speaking, considered only as pragmatic metaphors of our experience. They arise where the creative imagination of ours and whatever our biophysical structure predisposes us to (certainly corresponding to our current stadium in the evolution of life) meet the objective world as-it-is. Both of these creative poles are, however, imperceptible *per se*, similar to the inaudibility of the aforementioned sound of one hand clapping. Only in pair can they produce something perceptible, but then the very question of whether the sensual information comes from one or the other pole becomes meaningless. In view of that, scientific descriptions can be defined as pragmatic sets of metaphors applied for the mutual coordination of experiences at the social level. From such a definition, one can clearly see that intentions to apply these metaphors in benevolent ways and develop them for everyone’s benefit underlie the scientific inquiry and practice. In other words, love for the fellow humans and life is at the root of scientific endeavors. These two, love of Nature

and love of humanity are the centerpieces of science. Only around hearts beating with such love can waves of intelligence be able to lead to magnificent scientific discoveries.

S.F.5.11. “Here is my secret. It is very simple: It is only with the heart that one can see rightly; what is essential is invisible to the eye”¹⁹⁵², the Little Prince joyfully spread the essence of his beautiful thoughts to the desert winds of the world. And truly, the habit scientists and people in general have lost over time is to observe the things of the world with the eye of their heart. It is both ratio and emotions that ought to be referred to in bringing brilliant decisions in this life, irrespective of whether they fall in the domain of sciences, arts or subtle and ordinary, daily acts. If we imagine a railway track spanning through the landscapes of our mind, one bar thereof would correspond to the mental powers of ours, whereas the other one would stand for our ability to sense the invisible essence of the world, composed of aspirations, intentions and emotions of humanity, upon which our beings inconspicuously surf. Hence, whenever a decision is to be made, I consult various centers of “consciousness” of my body: the so-called Third Eye, where the prophetic visionary powers are dormant; the shaky Adam’s apple in my throat where the talent for music, poetry, arts and the divine devotion sleeps; my solar plexus where sunny calmness and smiling, jubilant satisfaction reside, and finally but inescapably, my heart, where the center of the spinning wheel of Love, the core of our being, dwells. Sometimes I feel as if my whole being and my entire attention have descended to my heart. Thence I open a window from that tiny house of my heart that sometimes sends warm waves of bluish loving melancholy to the world, sometimes bathes itself in stars of a purely cosmic feel, sometimes in its colorful and carefree nature resembles Disney cartoons with Donald Duck and his nephews resting apple pies on the windowsill of a wooden cabin in the midst of an evergreen forest, and sometimes shines to the world with a blinding white light of an enlightening oneness. Indescribable is the extent to which the modern man ignores and skips the invisible, but immaculately beautiful radiance of the things around by substituting this descent of the spaceships of his attention down to the heart of his and instead spinning the nervous thoughts driven by the desire to attain fame, recognition and be celebrated in eyes of other people. And yet, one thing is needed, as the Christ would have reminded us: looking at the world with innocent love, blessing it with the sunshine of our attention, just as the Evangelical Mary had used to do (John 10:38-42).

S.F.5.12. When I go to a grocery store or pick apples from the trees, I neither look for the most lustrous and glossy ones nor blindly pick them. No, I carefully choose, and in doing that I look for the ones that are smiling to me. Sometimes these are the least attractive ones at first glance. But I believe they are the best choice, and I am happy when I pluck them. Then I recall how important it is for us to learn the art of balancing rational and irrational, intellectual and intuitive, smart and spontaneous, profound and meditative, logical and imaginative with every choice we make in our lives. Only then we may find that the most aesthetic choice arising from our hearts is essentially the same one that our rational mind would have picked, and the other way around. For, “beauty is truth, truth beauty – that is all ye know on earth, and all ye need to know”, as John Keats poetized in his Ode on a Grecian Urn. The French filmmaker, Jean-Luc Godard would have surely agreed with this viewpoint, as he, himself, claimed that “there are directors who seek the truth, which, if they find it, will necessarily be beautiful; others seek beauty, which, if they find it, will also be true”¹⁹⁵³. Hence, the approach followed by the genuine pragmatists of this world and summed up

¹⁹⁵² See Antoine de Saint-Exupery's *The Little Prince*, Mladost, Zagreb, Croatia (1943).

¹⁹⁵³ See Godard on Godard, edited by Jean Narboni and Tom Milne, Da Capo Press, New York, NY (1968), pp. 181.

by the words of the Southern Californian architect, Charles Sumner Greene, “I see till I find what is truly useful and then I try to make it beautiful”¹⁹⁵⁴ and its opposite pursued by true artists, the one marked by keeping an eye open to the inflow of beauty into the cups of our minds and only then trying to see what it can be useful for, the methodological category into which I gladly number myself too, despite the fact that placing aesthetical insights higher on the ladder of cognitive significance compared to purely intellectual ones is but a big blasphemy in the realm of science which I professionally inhabit, can be said to be akin to digging the tunnel through the mountain from two opposite sides and eventually meeting in the middle. And that beautifulness and usefulness stand in direct proportion to each other can also be glimpsed from the complementary friendship established between the ruthless train operator, the epitome of science, that ran his trains like maddening toys up and down the railway tracks on which the graceful lady, the symbol of arts, slumbered and dreamt of divine beauties in Gregory Bateson’s Allegory: “The surveyor was forced to agree that indeed the beauty of his maps and correspondingly the beauty of the railroad tracks were not within his province. She, on the other hand, was delighted and hugged to herself the secret knowledge that he would never invade what she most valued - the elegance and symmetry of the total system. Not its details but its foundation”¹⁹⁵⁵. In the spirit of Gregory Bateson who brought close the lady who slumbered by the abandoned railroad tracks, a symbol of beauty, and the exploratory train operator who ran his trains up and down exactly along those tracks, a symbol of pragmatism, and made the former recognize beauty in the operator’s maps and the latter accept that the province of aesthetics will remain untouchable to his strictly analytical methods of probing reality, sooner or later we too will realize that sustainable practicality always has something of the most romantic beauty hidden in it, just as much as anything beautiful, like Mary of Bethany’s gazing lovingly at her sister while she worked diligently to serve the Christ and other guests (Luke 10:38-42), always conceals something of lifesaving importance in it. Or, as the Little Prince noticed while watching a lonely dweller of a distant planet alternately place and displace a bell around a flower he looked after, “Since it is beautiful, it is truly useful”, concluding a definitive usefulness of the man’s dedicated work directly from the sense of beauty emanating from it. Paul Dirac grazed the surface of the same equality between reason and aesthetics when he proposed that scientists in their derivation of formulas that describe physical reality ought to satisfy the aesthetic thirsts within them rather than blindly follow the prefixed rules of conduct. And yet, we could learn a lot from the failed attempts of Renaissance masters to distill the artistic sense, as complex, undecipherable and unquantifiable as it can be, into a simple standard called the Golden Ratio. Another example that shows us how heart and soul could be pulled out of artistic expressions when they become stringently subjugated to preconceived algorithms comes from serial music of the early 20th Century whereby prearranged numerical sequences first determined the temporal ordering of the twelve pitches of the chromatic scale, as in the method developed by Arnold Schoenberg, and then the musical rhythm and dynamics, as in some of the works of late serialists, including Anton Webern, Karlheinz Stockhausen and Pierre Boulez¹⁹⁵⁶. Theodor Adorno was notably puzzled by the sudden prominence of serialism, seeing in it a rather unusually restrictive style in musical expression that, paradoxically, arose in parallel with the discovery of the limitless harmonic freedoms of atonality, somewhat similar to the limitations of the 12-tone scale to which most musicians have unquestionably stuck to this very day. When this rather ill approach to

¹⁹⁵⁴ See Kevin Starr’s *Inventing the Dream: California through the Progressive Era*, Oxford University Press, New York, NY (1986), pp. 13.

¹⁹⁵⁵ See Gregory Bateson’s *Allegory*, *CoEvolution Quarterly* 44 - 46 (Spring 1978).

¹⁹⁵⁶ See K. Robert Schwarz’s *Minimalists*, Phaidon Press, London, UK (1996), pp. 54.

musical composition transmuted into the so-called musical minimalism, advocated by the likes of La Monte Young, Steve Reich and John Cage, a baffling crack in the substratum of human musicality was produced, of which Igor Stravinsky, widely considered to be an antipode to serialism with his insistence on “pitch and interval relationships as the primary dimensions”, that is, the aesthetics of harmonies, said the following: “What I cannot understand is the mind which chooses to leave the completion of its work to the megrims of performers; that and the manic-depressive fluctuations of a fashion that swings from total control to no control, from the serialization of all elements to chance”¹⁹⁵⁷. What these ruined attempts to confine enlightening expressions to binds of foreordained formulas indicate is nothing but a permanent place for the intuitive eye for the moment at the most sacred seat of the artistic spirit in us, not substitutable with logical principles and teachable doctrines under any conditions. In concert with conscious erasure of inclinations to inertly lean on to methodical algorithms and pre-established doctrines and awakening of the genuine sensitivity to react to signs sprouting all around us right here, right now, derivable from this viewpoint, the Italian movie director, Federico Fellini remarked that “all the formal philosophy you could possibly apply to my work is that there is no formal philosophy”¹⁹⁵⁸, while Lee Strasberg summed up the most popular system for teaching the art of acting up to date, that of Constantin Stanislavski, with the following words: “The important thing in the Stanislavski method is that it is the opposite of a system. A system implies a theory with precise rules of what to do exactly at each moment. The Stanislavski method is no system. It does not deal with the results to be obtained and therefore sets no rules for what should be done”¹⁹⁵⁹. Indeed, on one occasion, Stanislavski was seen handing the following precious advice to the hands of a perplexed student: “Create your own method. Don’t depend slavishly on mine. Make up something that will work for you. But keep breaking traditions, I beg you”¹⁹⁶⁰. The same method that goes against any method in general applies to every stellar creative approach in life. And yet, defiance of even the ultimate principle that tells us that there is no principle to follow at all and free pursuance of any principle that the Universe has heard of is a step further in our embracing boundless creative freedoms. When we learn how to put our feelings and thoughts across with this piercingly instinctive state of mind where no principles are left to follow, opening space for free following of any principle we could think of, our beings would start to magically ring with distant cosmic harmonies as they creatively express themselves, sowing celestial seeds across the mental soils of the world, which their recipients will hardly notice and acknowledge as valuable, but which will over time sprout and grow into fabulous trees of knowledge, such as that depicted on Salvador Dali’s masterpiece painting from 1947, *The Three Sphinxes of Bikini*, always reflecting both beautifying and destructive potentials in their double-edged nature.

S.F.5.13. An old saying tells us that “all good things come in threes”. To such an extent did ancients trust this saying that, according to Qur’an, Allah has been likely to send its messengers in threes rather than twos, lest they be discarded by people as evilly ominous (Yā Sīn(36):13-29). Therefore, sometimes I maintain that there are three ingredients of creativity in life. The first is a bright intellect, that is, an ability to draw relevant relationships concerning the analyzed systems. It is

¹⁹⁶⁰ *Ibid.*

normally built through experience and hard work. Years of hardship lie behind each skillfulness endowed with this ability. The second is a heart of goodness. When we cultivate simple goodness, living in accordance with the ancient ethical rules, then silently we prepare our being for making the right decisions. The ones who cultivate goodness in their hearts rarely make wrong decisions. And it is also something that gets crafted for years and years. But the third element is the drive for the balanced emotional and rational clarity of the first two ingredients. It belongs to great wishes and burning desires without which all our creative deeds would seem lukewarm and lame. In the end, it is these great wishes and aspirations that build the first two aspects mentioned, and may be thus seen as an ultimate manifestation of human creativity. In them lies the secret of how to reach brilliancy in the latter. They provide a bridge between heart and mind, in the middle of which, right where our Vishuddha chakra is positioned, around the Adam's apple, a fire of artistic passion is ignited and wherefrom the waters of inspiration start pouring and become embodied in the written word of ours. St. Paul the Apostle claimed that no matter how much we are blessed with our faith and hope, if there is no love in us, all our strivings and deeds are worthless (Corinthians II 13). But I claim that no matter to what extent we have built our knowledge and spontaneous goodness and benevolence, if there is no passion in us that moves us to enlighten the world with our creativity, all our deeds will be meaningless and poor. This inner passion is the one that can in a single moment transform a longtime sinner into a saint. It can occasionally illuminate the long forgotten patterns of goodness and miraculously endow us with the right knowledge.

S.F.5.14. Everyone should be aware that the development of our intellectual and emotional powers does not mean that we intrinsically become a good person therewith. No, our powers become increased, but it is still up to our aspirations to choose whether we shall exhibit them for better or worse, to uplift or degrade the spirits around us, to enlighten or darken the humankind and the world. As our powers increase and creative potentials expand, the abilities to bring the light of goodness to the world and to scatter the sprouts of animosity over it follow each other in step. Whatever you write, then, keep in mind that words can deliver a healing light of constructive harmony as much as they can be a sword that brings harm and destruction to all things around us. Words are older than the oldest weapons and still stand as some of the most powerful ones. They could be as prickly and piercing as the sharpest bayonets. If you remember Jacques-Louis David's painting portraying the death of Marat, a renowned Parisian political writer of the late 18th Century, you may also be able to recall that two of its miniature, yet colossally important details, the bloody dagger dropped on the floor by Marat's nemesis, Charlotte Corday¹⁹⁶¹ and the quill pen in the dead writer's right hand, touching the same ground with its tip only, are drawn right next to each other, though with the former lying flat and the latter resting upright in the hands of the martyr, as if the painter wished to suggest their interchangeability as well as the possibility of using pen as a weapon far more powerful than the knife. Indeed, could it be a mere coincidence that the word "word" is contained in the word "sword" or it is a sign that words have had the role of sophisticated swords throughout the history of humanity and even more so in these postmodern times wherein most wars are waged on more sublime interpersonal levels than it used to be the case in the past. In the end, "In beginning, there was a word, and the word was with God, and the word was God", are the words with which Gospel according to John begins and takes us into its stellar storytelling sphere.

¹⁹⁶¹ See Tom Gretton's Marat, L'ami du peuple, David: Love and Discipline in the Summer of '93, In: David's The Death of Marat, edited by William Vaughan and Helen Weston, Cambridge University Press, Cambridge, UK (2000), pp. 38.

S.F.5.15. Some people hold that intelligence is all about intelligence, and it is I who regularly disagrees. Intelligence is as much about the element of intuition. It is as much about knowing as it is about not-knowing. It is sucking the nectar from both the well of analytical richness in connecting and differing and the well of ignoring and not-knowing. It is about variegated mental landscapes wherefrom fireworks of visions and ideas emanate as much as it is about meditative blankness wherein the guiding glow of the great One resides. If we mix the Western concept of testable intelligence and the Eastern mastery of meditation and intuitive instinct, we would come to the right blend. So, alchemists of present and future, here is the task for you! Find the recipes for balancing the capabilities of our cognitive systems, already reflected in the division of our brain to its analytical and intuitive hemispheres. Find the way to place the decisions of the heart at the core of our mindfulness, and *vice versa*: to guide the ships of our emotions and the drives to act and perceive the world in beautiful ways upon the streams of intelligence.

S.F.5.16. An old radio Belgrade deejay had a habit of finishing each one of his weather reports with a profound message, as if signifying that in order to get a true weather forecast we should look deep at the brightness or cloudiness of our own spirit. For, that is where the compass to our true lives lies. One of his forecasts ended with a saying that should one know how to love, he would not need to do anything, except to love. Despite my belief in the balance between Karma-Yogic pragmatism and Bhakti-Yogic nurture of the purity of mind and heart, I find this saying almost immaculate. It immediately makes me recall the Evangelical story about the Christ's visit of the house in which two sisters, Martha and Mary, lived (Luke 10:38-42). Although Martha served Jesus diligently, Mary simply kneeled and looked at Jesus with much love. After a while, not standing that anymore, Martha approached Jesus with the following words: "Dost thou not care that my sister hath left me to serve alone? Bid her therefore that she help me" (Luke 10:40). Jesus, however, replied: "Martha, Martha, thou art careful and troubled about many things: but one thing is needful: and Mary hath chosen that good part, which shall not be taken away from her" (Luke 10:41-42). Hence, if you love all life, might I say you are allowed to do anything? To dance, foolishly act, or even steal? Yes, of course. "We sing, we dance, we steal things", Jason Mraz says in his homage to the laidback and yet wisdom-filled muse of the modern times, while Radiohead readily respond with "Hail to the thief" message hidden in their music pervaded with a captivating blend of childish dearness and rebellious righteousness. To be a sneaky stealer of the ball, of course, must be paired with being an impeccable passer of it too, somewhat like John Stockton of Utah Jazz, the holder of the NBA record for most career assists and steals and one of the two American basketball heroes of my youth, the other one being the perennially smiling Isiah Thomas of Detroit Pistons. In other words, when thievery is committed for the sake of saving the world, nothing but smiles would be drawn from the gods and goddesses watching over us from some twisted, transcendental angles. Hence, when Natalie Merchant steals the pieces of pastry from a breakfast tray in a hotel by the sea and then "eats them on the shore"¹⁹⁶² before transcribing the beauty of life glimpsed while high on this wheat into arrays of touching notes and lyrics, eventually inspiring the world through a moving song, or when Ellen from Chaplin's *Modern Times* steals a loaf of bread while sporting the stance that shifts stars from their orbits with its style and energy, then these acts of thievery turn into the acts of utmost charity in the enlightened eyes gotten used to contextualize actions in the broadest frames conceivable. To judge less and be awed

¹⁹⁶² Listen to 10,000 Maniacs' *Verdi Cries on In My Tribe*, Elektra (1987).

more is what naturally emerges as the trait of cosmic consciousness, the total opposite of the judgmental, finger-pointing and bigoted parochial mind.

S.F.5.17. “Nothing beats teaching without words” (Tao-Te-Xing 43), Lao-Tzu said in his Tao-Te-Xing, the book I have always said I would choose to bring with me onto a desolate island. “He hardly ever gave me any conscious teaching, but there is no measure for what I learned in the deeper sense from a contact with a man who, in word and in music, overflowed with a sheer abundance of vitality”¹⁹⁶³; this is how Bruno Walter described the teaching method of Gustav Mahler, impelling us to realize that starry, Christ-like consciousness faced with a choice to either pick carefully crafted words and an icy cold and careless spirit or heart leaping with joy and excitement, pervaded with moving waves of cosmic love, though on the account of absolutely annulled eloquence and zero ability to verbalize inner feelings and thoughts, would always opt for the latter. And if we stop and think for a while how we could teach others without words, we would quite possibly arrive at enlightening insights. If we rely on mere words in our expressions, we risk to possibly become one day like the Biblical Pharisees, for whom Jesus said that “whatsoever they bid you observe, that observe and do; but do not ye after their works: for they say, and do not” (Matthew 23:3). And if we go back to the last passage of Tao-Te-Xing, we may read the following verses: “True words need not be chosen words; chosen words need not be true words. A good man does not argue; the one who argues is not a good man” (Tao-Te-Xing 81). These words clearly point out that, in the end, what we are saying in words matters much less than what we want to point at from the depths of our heart. Our love for others and benevolent intentions are the ones that truly matter in our efforts to beautify the world. When our heart is filled with bright wishes, and when we enter communication with others with the desire to direct them onto the right path and overwhelm with divine lights, whatever we do or say will open the ways of Nature towards the fulfillments of our desires. (After all, in everything they see, wise eyes recognize a dialogue between the silent language of the deepest wishes and aspirations of human hearts and the divine teaching force of Nature.) Then we may talk about rockhoppers, dustsheets and nephophobia, put Marx and marzipan in the same sentence¹⁹⁶⁴, offer statements such as “the sun softly melts the nothing wheel”¹⁹⁶⁵ or “cogs sarcy cogs swrking round”¹⁹⁶⁶ or even “vrythng chp chp chp. sqlng fr tntn range rovers barbouris preaching from lecterns”¹⁹⁶⁷, as some of the golden lines from Radiohead’s memory hole have it, and yet all that we do or say will open miraculous ways of truth and beauty in front of others. When we understand and start applying this ultimate art of teaching, we simultaneously become as wise as very Lao-Tzu and yet as charming and amusing as a divinely blessed child. No wonder Lao-Tzu’s name means exactly that - an old boy or an ancient child.

S.F.5.18. I know that the balance implicit in a profound way of life is the one between cultivation of intense reflections and a blunt emptiness of mind. Thus, whenever I get tired of judging too much about the nature of the world and others, which as a researcher and a philosopher I do for living, I turn myself to meditative wholeheartedness. Besides, if we were to stop judging others, the world of ours and the way we look at it and act would spontaneously turn into something

immensely beautiful. Or, as an introspective traveler through time noticed on one occasion, “No one is ever on their deathbed wishing they’d spent more time being uptight and judging people”¹⁹⁶⁸. Face to face with the vision of a skeleton confined to a wheelchair, with the wonderful story of life closing on one, I get to feel its diametrical opposite, the power of life brewing inside me and wanting to explode. In those introspective moments I remind myself that in life one ought to be alive, so so alive, livelier than the liveliest emanation of life conceivable, and not dead, as most humans walking through life like lifeless lumps of a kind are. To say what one has in mind, to create tempests and earthquakes wherever one’s voice airs and foots step instead of being a passive conformist that pleases everyone, especially the authorities, is the urge awakened in me in those moments. To be a fire, a rebel, a Napoleon in rags¹⁹⁶⁹, a king of the Earth “sitting on an ass’s colt” (John 12:15), like the Christ, rather than a lukewarm vomit that is spitted out of the divine mouth (Revelation 3:16), is what I vow to myself then. What is perhaps most interesting is that if one dives deep into this powerful cosmic drive aroused in one, one would recognize in its core its total opposite in terms of an ultimate peace of mind rooted in the faith in everything and forgiveness to everyone. Needless to add, the remorseful wish that one forgave others more in life is the feeling that tends to arise in minds that find themselves in the midst of perilous crises, face to face with existential abysses. By quitting judging others, we would likewise quit judging ourselves; hence, too much of reflections that often block our free expressions and make us appear all rigid and clumsy would be transformed into an enlightened state of mind. Then we may start to live for the ideal proposed by the Christ when he said, “I came not to judge the world, but to save the world” (John 12:47). This is when the beauty of our wishes, ideals and thoughts starts to spread its glorious wings and we begin to live up to another, even more beautiful deathbed remark, shed by a soul reflecting on her long, ego-driven, judgmental journey called life: “If I had my life to live over, I would pick more daisies”¹⁹⁷⁰.

S.F.5.19. As I sat in a friend’s apartment and he was about to light a cigarette, he asked me if I was going to accuse him of damaging his own and other people’s health. I said, “No, I normally do not judge people about seemingly harmful actions they take”. For, “judge not, that ye be not judged” (Matthew 7:1), said the Christ, the same enlightened creature who stopped condemnatory peasants from stoning a prostitute (John 8), declaring anarchistic tolerance that shows no desire to govern over anyone or anything as the way to truly conquer the spirits of the world, as he quietly and fancifully drew figures in the sand (John 8:8), distancing himself from the judgmental rabble that raged around him. In fact, one of the reasons why I felt delighted for being born in the Orthodox Christian tradition was that there have been no preachers in it; only priests. Whereas these Orthodox priests were taught to humbly sing and with their very being and thought shed cosmic joy that one’s spirit becomes filled with when one follows the way of the Christ, edifying the world subtly and quietly, by example rather than by word, priests in the Catholic tradition not only do arrogantly present themselves in light of heavenly creatures able to forgive other people’s sins, but are also known of fully embracing the following St. Paul the Apostle’s catastrophic call: “Do ye not know that the saints shall judge the world? And if the world shall be judged by you, are ye unworthy to judge the smallest matters? Know ye not that we shall judge angels? How much more things that pertain to this life” (Corinthians I 6:2-3)? This arrogant of the stance allowed the Catholic church to become the right hand of the state apparatus in the middle ages and engage in

¹⁹⁶⁸ See Alex Robinson’s *Too Cool to Be Forgotten*, Top Shelf, Marietta, GA (2008), pp. 67.

the battle for secular power, thus ignoring that the Christ, on whose message the ecclesiastical machinery was founded in the first place, had been an anarchist who lived up wholly to the old Serbian premise in rhyme, *Sila Boga ne moli, al' silu Bog ne voli*, meaning, "The power does not look after God, but God does not love power either". In the most extreme situations, this stance justified crimes against humanity, prompting priests to trail behind the genocidal conquistadors, soldiers burning nonbelievers at the stakes or Ustaši slaying innocent people, forgiving their atrocities with the prayer and cleansing their horrible sins as soon as they committed them. In contrast, handing over any power of authority from clergymen to invisible spheres holding human realities in their grasps, which is common in the Orthodox tradition, have created a whole different vibe in and around the Orthodox Christian sites of worship. Such sites, according to my experience, resemble introspective spaces to enter and become spiritually reconfigured and braced in, as opposed to Catholic churches, which often reverberate quietly with norms and standards that ought to be followed to ensure one's place among angels, let alone leaving a frequent impression of trying to "sell" the advice for the soul, something which presumably still stands forth as a remnant of the tarnished neocolonial mentality of people who carried this tradition over centuries and over the globe. Moreover, when one is not tricked into thinking that the end of one's lifesaving efforts lies in verbally preaching to others, transmittance of "the word of God" is, logically, not seen as a priority for the spiritual sustenance of the world. "For Christ sent me not to baptize, but to preach the gospel: not with wisdom of words, lest the cross of Christ should be made of none effect" (Corinthians I 1:17), St. Paul the Apostle correspondingly noticed, prioritizing the invisible, the impalpable and the ineffable portions of our beings over their visible, palpable and effable counterparts when it comes to the conveyance of divine knowledge. With one such approach adopted by the traditional Orthodox Christian outlooks being much closer to the way of the Christ, who openly asserted that his mission was "to fulfill" (Matthew 5:17) the law instead of merely rewriting it by being focused on the word, the mere means to an end, embodying the expressive nature of divine being and giving examples by one's very being has been seen as the sublime ideal that Orthodox Christian priests ought to aspire to. Most importantly, with no impetus on preaching what is good for another, the implicit rising of preachers above those to whom they preach is shun; with it, the institutionalization of religion, the trap into which Catholicism, for example, fell, is avoided and the latter is practiced in a more authentic, anarchistic form whereby servants of God take the role of servants, not kings, of man, genuinely following the way of the Christ rather than inverting it thereby. Here, a tiny thread connecting orthodox Christianity with evangelical Protestantism can be drawn, erasing the division between the religious and the secular on the wings of the prose by the 17th century New England poetess, Ann Bradstreet, "There is no object that we see, no action that we do, no good that we enjoy, no evil that we feel or fear, but we may make some spiritual advantage of it all"¹⁹⁷¹, but also professing the redemption of the soul not through the acts, regardless of how charitable they are, but through the pureness of the spirit in which one abides, in and out of the acting mode. All these thoughts on the benefits of nonjudgmental attitudes in life streamed through my head like a supersonic train as I watched the cigarette being lit in my friend's hands and the first smoke rising into the air from it, producing formless figurines ominously flying above my head. After all, even though I despise finding myself in a stuffy space, I know that beneficent impulses in this world could hardly ever be distinguished from the harmful ones. In order to find an answer to this enigma, one would need to stand on the top of a panorama over the entire space and time and be able to see the given actions in the context of entire humanity,

¹⁹⁷¹ See Alan Gowans' *The Restless Art: A History of Painters and Painting, 1760 – 1960*, J. B. Lippincott Company, Philadelphia, PA (1966), pp. 264.

planet and the Universe in its evolution since the dawn of time and up to the very end of it. This is why I heartily turn down any impulses to judge others and preach accordingly. I know that any judgment I could come up with would be incomplete and superficially derived. In that sense, although I know that judgments, as imperfect as they always are, need to be exerted if we are to contribute to the progress of our civilization, I am like the Buddhist monk who does not change others, but merely tends after beautifying the heart of one's own, polishing and patiently cultivating its sunken flower garden so that its light could be selflessly brought to the surface our being and of the world. The worldly creatures will thus be strewn with precious guiding stars, but they won't be forced to pick them up from the ground and apply them. A donkey can be taken to the water, but it cannot be forced to drink it. So the Buddhist monks stick to the norm which says that the right ways can be pointed at, but the beings of the world ought to walk on them driven by the spin of the wheels of their own willpower. Now, as my friend was about to strike a match and light a cigarette, the box of matches strangely bounced out of his hands and flew all the way to the corner of the room. "Which does not mean that my mere presence will not deliver signs", I responded, and my friend laughed as he put down the cigarette, understanding the message. Hence, we do not need to explicate farfetched meanings and preach in words. When we are tuned in harmony with the cosmic beat of love and wonder, our very beings become preaching signs. With our being in the world, we spontaneously, without even trying, shed invaluable signs for others to follow everywhere we go, somewhat like bees pollinating flowers while happily flying from one flower to another. We can talk about anything we want, claim even the opposite opinions from those that the music of our heart reverberates with, and yet it is these invisible foundations of our being that will leave traces in this world, like ripples on the sea surface, forever and ever bouncing off the distant shores of the Universe and letting the surrounding beings happily surf on them, without ever realizing their origins.

S.F.5.20. For, in the end, one can always recognize beautifulness and powerfulness of people's actions rooted in silent mantras that swirl at the untouchable depths of their minds and hearts. The deepest intentions of our being present the foundations and drives of our actions in the world. And we all know that if "the foundations and roots be holy, the entire house and the tree will be holy too", as proclaimed by the Christ (Matthew 7:24-27) and St. Paul the Apostle (Romans 11:16). Hence, when I look at people, I do it like Kao, the Taoist horse-keeper who judges horses not by looking at their external traits but by looking through them into their holistic, invisible potentials¹⁹⁷². Thus I sometimes recognize entrancing waterfalls and charming breezes of poetic aspirations moving them from within. Not a single action of ours could be carried out or conceived without the magic driving wheels of inner aspirations that are the roots of our living in the world today. Another powerful feature of the human mind is that, like snake that takes off its skin, it can perform an amnesiac erasure of who we are and where we go, and all that through fervent Christian forgiveness and blessings of the world. In such a way, with every new day we can become completely new, angelically pure and literally born again. It is in our hands to choose if we want to become old and repetitive or rejuvenated and flying in spirit with every new breath of ours.

S.F.5.21. Frequently when I get to listen to old and experienced musicians or catch a few thoughts about life by thinkers who attained worldly acclaim, I turn away a bit disappointed. Because by reading "between the lines" I notice that the essential energy of an artistic work or creative expression in general, be it a musical performance or an ordinary exertion of opinions or gestures

¹⁹⁷² See Lieh-tzu's Taoist Teachings, retrieved from <http://www.sacred-texts.com/tao/tt/index.htm> (ca. 400 BC).

in communication with others, is lacking in those cases. On the other hand, many young artists and bands often sound immaculately inspiring despite the pieces of their art not having the level of refined perfection that older and more experienced artists normally possess. And that mysterious energy radiates right from the depths of the artists' hearts. It arises from a great desire to enlighten the minds and hearts of others with whatever we present them. The root idea of punk movement has for me always been exactly that: if one cultivates a mountain-moving wish to use the song as a sophisticated tool to beautify the world by beautifying the eyes that observe it, the task will be achieved even if the technique and knowledge are lacking. Although the Beatles were musical virtuosos compared to most punk rock musicians, their rise to global stardom commenced with the first chord on the opening song of the central record of their early phase, *A Hard Day's Night*, a chord involving only a right-hand stroke and nothing but that, serving as a perfect validation of Robert Henri's maxim, "Go slowly – you want to be an artist before you've learned to draw"¹⁹⁷³. Technical mastery will be built through hours of work, but if the colossal desire that moves the mountains of one's soul toward the sublime aim, which, ultimately, always is the enlightenment of the world, is missing, there is no level of technique or performing that can make up for it. Or, as the professor of fine arts at Central Washington University, William V. Dunning noted, "I have seen many young artists with exceptional skill and technique who failed because they lacked concept or idea. But I have never yet seen a young artist who had exciting concepts and ideas fail because she or he lacked the necessary skill and technique"¹⁹⁷⁴. Now, as we advance from the level of a novice, where a lack of playing technique can be made up for by an immense passion to produce novel and enlightening expressions, toward the level of an experienced artist, the lack of passion often tends to be substituted by a sheer excellence in technique, which many superficial critics may believe is enough. Yet, should our playing start to resemble recitals set according to given templates and recipes, the quality of our art will suffer, primarily in the face of Nature, who will be the only one to truly but secretly know the quality of our works. People will never be able to be a good indicator thereof, as immediate popularization of great artistic pieces is rather an exception than a rule in the society in which the majority of people looks after usualness, normality and mediocrity rather than after originality, uniqueness and progressiveness. This gradual loss of pureness of the spirit as the artist gets more technically mature and socially recognized explains the well-known phenomenon in rock music, namely the best record often being the bands' debuts. Some may say that any creation emerging from stardom, achieved some time after the given debuts are being released, can only feed the hearts of egomaniacs among the listeners and can never be a proper guide for the soul of the ordinary man, being an effect that perhaps explains the today's epidemic rise of blown-up egos among ordinary folks. Still, however, the putting to sleep of the magnificent desire to send a blast of some mysterious, healing energy from one's heart to the world once a routine in artistic creation settles in is to be blamed as the major factor contributing to this unfortunate and somewhat paradoxical loss of creative potency accompanying the artist's growth. Being aware of this instructs us to cultivate the starry sparkles of wonder and love within us, whereby we could spur the winds of passion that propel us to produce marvelous pieces of art, while also to incessantly humanize our playing technique and pervade it with improvisational "mistakes" rather than robotizing it and turning into something that paves the way for perfectly reproducible performances. In that sense, the words of Jean Lescure offered in his study of a painting by Charles Lapicque could be recalled: "Knowing must be accompanied by an equal

¹⁹⁷³ See William V. Dunning's and Ben Mahmoud's *Advice to Young Artists in a Postmodern Era*, Syracuse University Press, Syracuse, NY (1998), pp. 63.

¹⁹⁷⁴ *Ibid.*

capacity to forget knowing. Non-knowing is not a form of ignorance but a difficult transcendence of knowledge. This is the price that must be paid for an oeuvre to be, at all times, a sort of pure beginning, which makes its creation an exercise in freedom”¹⁹⁷⁵.

S.F.5.22. One of the ways to keep one’s passion for bringing light to the world with one’s artistic creativity fresh at all times is to every now and then renew one’s forms of expression and topical cores of one’s works. Some of the greatest artists that this planet has nurtured have done exactly that. They conceived each one of their artistic pieces with a new eye to the world. On the other hand, watching artists trying hard to look and act in the same way as they did in the past inevitably leaves traces of pity and sadness in my eyes. This explains why, as soon as a paper or a book of mine is finished, as soon as I place THE END on it, I erase it from my memory, as if it has never existed, and turn my creative attention to some new blank canvases and pieces of paper that are to be filled with lines shining with wisdom and beauty. Also, each one of my previous books was written with the intention to have it thoroughly differently structured than any of the previous ones. Thus, my first book written in Serbian, *On the Way to a Reductionist-Holistic Balance for the Modern Science and Society*, was meant to be a quick, modernly and spontaneously told story, focused on the essence, almost in a journalistic fashion, and yet with a poetic beauty and wisdom interwoven through every detail of it. The second book, *Principles of a Holistic Science of the Future*, marked my progression into a more elaborate style, into writing pervaded with pompous intricateness, as massive as the Alpine peaks I gazed at while conceiving it in a Hegelian manner and in the spirit of colossal philosophical works that aspire to sum one’s whole lifetime of thinking in a single tome. Finally, the third book, *Ethics of the Modern Living*, was conceived as a portrayal of the essential ideas and observations already presented in the second book, but in a less scientific and rigorous and more poetic and passionate fashion. Linguistically speaking, it was a giant leap, in terms of the book’s long sentences that are meant to drive and drive the reader through the rollercoaster of wondrous impressions, and all that with the entwined prudency and poetic ecstasy in what was meant to be a firework of love, wonder and wisdom. As these three books were mostly written during my stay in Ljubljana, the capital of the country on the sunny side of the Alps, with Triglav (literally meaning “a triple head”) being the highest Slovenian peak on them, I used to see this trilogy of mine as a reflection of this triple-headed peak, the symbol of the country, with the middle one, corresponding to the second, most structurally perfected book, being the highest of them all. A little appendix named *Evening Meditations*, which was in the form of its expression identical to the third book, came after, already after I moved to the US. Then, the time to start writing in English came forth. My first book in English, *Philosophy of the Way: Systemic Perspectives on Cognition, Creativity, and Ethics of the Modern Era*, was written with each of the chapters supposed to scrupulously replicate the structure of a scientific and philosophical work, with abstracts, introductions and conclusions carefully outlined within each one of them. The terminology was also such: highly intricate and complex, all for the sake of satisfying the ideals of profound exactness. As such, the book almost reads as if having been written by a computer rather than a human being. Yet, with its intrinsic message pertaining to love and beauty it has blended the note of humanness with this inhumanly computerized precision, thus appearing particularly appealing for the philosophy of the digital age. Although, as a rule, I never look back at my old works, but instead close their pages once the writing is done and then bow in front of them, like a sailor solemnly looking at the open sea, letting them freely float with the streams and

¹⁹⁷⁵ See Gaston Bachelard’s *The Poetics of Space: The Classic Look at How We Experience Intimate Places*, Beacon Press, Boston, MA (1958), introduction xxxiii.

winds of the world, every time I open this book for the sake of curiosity I feel as if I have glimpsed an impressed dream of a sentient computer akin to HAL 9000 or Edgar from the 1984 movie *Electric Dreams*, helplessly confined to suffocating streams of expressional perfection (although interspersed with instances of grammatical and terminological inconsistencies, which was, I marveled, just as a humanoid computer of the modern day would express itself) and yet dreaming of the beauty of imperfect, fragile humanness, the state of being which the transcendent angels from the legendary *Wings of Desire* so intensely envied when they came to realize that “when the angel falls in love, he is the perfect human”¹⁹⁷⁶, as pointed out by Farid ad-Din Attar. Eventually, however, these chains of perfection become torn apart in the course of the book and the spirit shackled by them for such a long time flies off into the skies of simple, unpretentious being, angelically light as a feather. Henceforth, the second book, *Sketches of Stars and Pebbles of Wisdom: An Essay on the Human Heart and Divine Ethics*, was meant to weave the same story, to put forth the same meanings as the first book¹⁹⁷⁷, but using casually and lightly impressed thoughts. And this, what you read now, is my third book, *SF Pensées: A Peer into a Cosmos of Starry Thoughts*, written so as to satisfy the ideals of amusingness and funniness as much as of depth and profoundness, to be an incarnation of Fellini’s 8½ in the scientific domain, an intimate diary and a story relevant for the whole humanity, to tell stories sympathetically little and breathlessly great, and to be a glorification of a Glass Bead Game in the language of a punk rebel and a saint. When asked what Alexei Karamazov, the monk and the most spiritual of all the Karamazov brothers, was meant to become in a never written continuation of the work, Fyodor Dostoyevsky merely replied: “A rebel”. Revolutionary saintliness: that is what the voice of these words is meant to awaken in you. The sound of a great, grinding and milling willpower and a silent, tranquil and happily twinkling beauty, of wildly dancing and quietly dreaming, of thunderously loving and calmly wondering and *vice versa* is what echoes with the words of this book everywhere around us.

S.F.5.23. By reading works of many renowned artists I learned to see in desperate thoughts on evanescence of many of them a lack of scientific understanding of the world we live in. If we

¹⁹⁷⁶ See Annemarie Schimmel’s *Mystical Dimensions of Islam*, University of North Carolina Press, Chapel Hill, NC (1975), pp. 140.

¹⁹⁷⁷ Of course, as the result of my approaching writing without a predetermined plan or a structure, letting the written word coevolve together with my life instead, I could be accused of writing the same book every time. And yet, this book will always be different. In support of my belief that this approach of mine need not hurt the veracity, the originality and the inspirational value of my written works, I can always refer to the words spoken by Federico Fellini: “At bottom, I am always making the same film, to the extent that what arouses my creativity, what interests me definitively, what unleashes my inspiration, is that, each time, I am telling the story of characters in quest of themselves, in search of a more authentic source of life, of conduct, of behavior, that will more closely relate to the true roots of their individuality”. See Pierre Kast’s Interview with Federico Fellini, Giulietta & Federico, *Cahiers du Cinema* #5 (1966), pp. 29. In part, this may be because of my habit of working on a large number of projects simultaneously, including all of my books, none of which were put a definite end to. This habit was cited by the music critics as the reason why the same threads ended up being woven through multiple pieces composed by Ludwig van Beethoven. The composer is thus quoted saying, “I do not work on uninterruptedly at any one thing. I always work on several together; now I take up one, and now another”. And as pointed out by Paul Mies, “undoubtedly the result was a certain common emotional basis for the works thus simultaneously developed... the similarity in the state of mind that produced the several melodies and movements gave them so much in common and so close an internal relationship, that it was very easy to effect their association and interchange... and I should be inclined to see in this method of enforcing unification a specific characteristic of Beethoven as a composer”. See Paul Mies’ *Beethoven’s Sketches: An Analysis of His Style Based on a Study of his Sketch Books*, Translated by Doris L. Mackinnon, Dover, New York, NY (1929), pp. 129.

divide our bodies to two halves, one would reflect the Sun of clear and bright understanding, whereas the other would reflect the Moon in its eternal wandering wonder, an inconstancy in the shape of its longing and intuition. Therefore, with fostering only the moonlit side of our creativity, corresponding to poetic ecstasy, the achievements and eventual satisfaction of ours will remain incomplete. But if we manage to properly, with a constant mutual entwinement, balance this artistic verve with a dose of scientific orderliness, we would be on the right way. For, scientific depictions of the Universe hide an unbeatable childish joy and amusement comparable to a masterfully interwoven adventurous or detective story in which humans try their best to answer the eternal enigmas that the divine Creator, Nature herself, has posed in front of them. They present stable bases onto which we can anchor the kites of our spirit and make them gracefully wave across the sky. Without anything concrete for the artistic passion to instill itself into, it may stay aimlessly swirling inside of us, producing only the winds of sorrow to eat us up.

S.F.5.24. On the other hand, if we exceedingly rely on the qualities of discipline and rigor, rigidly bringing creative decisions solely depending on the desires of the authorities above our heads, and neglect the need to let loose our thoughts and feelings and enter the daydreaming states in which we leisurely fly in our fancy across the inner landscapes of ours, the creativity of ours will remain blocked and unfulfilled. Rigorous schooling is thus often more harmful than useful for fostering one's creativity. The gradual loss, not gain, of that wondrous sparkle in the eye that I have perceived by moving from communicating with children at K-12 science fairs to teaching freshmen courses to instructing seniors and graduate students has taught me, the teacher, that schools do something terribly damaging for the creative elements of the human psyche. Remembering the Nazi officer's disparagement of the French strivings for freedom when, in his opinion, discipline is what humanity needs in the final scene of Louis Malle's *Au revoir les enfants*, the schools' emphasis on assessment, discipline and conformity are to be blamed for this devastating effect of theirs on everything beautiful in the child's brain. One of the solutions to this problem has been the perception of schools as tickets that allow one to engage in research for the solution to realer life problems later in life. Another solution, resorted to by countless creative individuals who sensed that theirs were paths too creative to be compatible with traditional schooling, has been to, simply, drop out. Had Beethoven not discarded Haydn's tutelage (which had been one of his childhood dreams) as a teenager and went his own way¹⁹⁷⁸, who knows if he would have become a brilliant composer as he eventually turned out to be. Had Goethe not listened to the inner voice of his being which yanked him to the sea and left the imprisoning apprenticeship in a shoemaking business, the one in which his entire family had belonged and within the order of which his father had desired to place him, reached Antwerp, set on a ship and became a sailor, he would never have left the great gems of literature and science that he was later to create with us¹⁹⁷⁹. Had Jacques Tatischeff similarly remained loyal to his father's wishes that he continue running the family business of picture-framing and hesitated to indignantly ask himself, "Do I have to look out on the shop on the other side of the street for the rest of my days"¹⁹⁸⁰, the world would have never known of the greatest French mime artist. Likewise, had the Serbian cosmologist Milutin Milanković - accredited with discovering the variations in eccentricity, axial tilt and precession of the Earth's orbit around the Sun responsible among many other climatic effects for the periodic coverage of

most of the European and North American continents with a blanket of ice for tens of thousands of years at once as well as for the cycle of alternate greening and desertification of Sahara - obeyed his father's call to attend an agricultural school in the city of Osijek and then return to the rural family estate in Dalj¹⁹⁸¹, not far from the darkened streets of Belgrade and the meadows of Mala Moštanica, where I, like Milutin a hundred years ago, watched stars nested above my head with awe, the world would have been spared of the early rise of the field of planetary climatology and of one of the greatest connections between the celestial and the earthly in the realm of empirical science. Jovan Sterija Popović is another notable figure who made history by disobeying his father's requests; namely, instead of going to Vienna to study law and become an esteemed persona, as was his father's wish, he opted to listen to his dying mother and go to Serbia from his hometown of Vršac after it fell under the Austro-Hungarian rule in 1817. There, although living the life of a poor and depreciated artist, he initiated the founding of the first theater in Serbia as well as numerous other renowned cultural institutions¹⁹⁸², including the Serbian Academy of Sciences, the National Museum and the National Library. The same character traits marked by an inherent disobedience as to what the figures of authority had to say could be ascribed to Albert Einstein, Thomas Alva Edison, Bobby Fischer, Jack London, Mark Twain, Abe Lincoln, George Gershwin and Charlie Chaplin, who were all high-school or elementary-school dropouts. Franz Schubert had completed only five classes of the grammar school, and that with very poor success, before he set off to pave the way for the transition from classicism to romanticism in music and become one of the most productive composers ever¹⁹⁸³. Napoleon Bonaparte was one of the worst students in the military academy at Brienne-le-Château and never learned the proper French grammar and spelling properly, but this did not prevent him from becoming one of the world's most celebrated army commanders. When 33-year old Vincent Van Gogh enrolled in the Academy of Fine Arts in Antwerp in 1886, by the time he had already painted many of his masterpieces, none of which would go on to sell during his lifetime because of being deemed "too dark" for the bright impressionistic days of his era, and was made to draw Venus de Milo in the class taught by the Belgian painter, Eugene Siberdt, his response was to draw the limbless female torso of a peasant, which enraged the instructor, who corrected the canvas with crayons so violently that he tore holes in it, prompting Vincent to leave academia for good, after only three months of attending the school. Michael Faraday, a dissenter at heart, quit his formal education at the middle school level before engaging in the study of natural laws and textbooks on his own, refusing to have his creativity choked by the institutionalized slavery to the state that the standardized schooling system is, teaching children how to be conventionalized sardines in a can and obedient cogs on a wheel more than how to think beyond boundaries and seek treasures in these mystical epistemological and ontological domains. The inventiveness and the polymath skills of Benjamin Franklin also might be thanks to his dropping out of the elementary school in Boston after only two years spent in it, before there was sufficient time for the school conservatism to mold his mind into a stiffened template for an artificial, genuinely uncurious and uninventive thought. As a student in Graz, Nikola Tesla, who was later to become the unequivocally crowned wizard of science, was ridiculed as a monastic weirdo, which prompted him to start gambling, sometimes around the clock, for entire days. Consequently, he ran into difficulties at school, having become unprepared when the

exam time came, and was eventually discharged, never graduating from college¹⁹⁸⁴. Mihajlo Pupin, the second most famous Serbian scientist, right after Tesla, who, just like the introverted genius from Lika, the region of the Balkan peninsula that my maternal grandfather originated from, by the way, came to America with only a few cents in his pocket, before inventing some of the components of electrical circuits used in all electronic devices around us, mentoring five Nobel laureates and earning eighteen honorary doctorates, was forced to emigrate from Serbia, settle temporarily in Prague and then sail across the Atlantic because he stomped over the Austrian flag and became accused of dangerous political leanings¹⁹⁸⁵. Many other notable Serbian people were marked as indolent dissenters in school, including Emir Kusturica, who was described by his teachers as disinterested and lazy, the Nobel laureate, Ivo Andrić, who had to repeat the seventh grade in middle school because he failed in math, let alone having to take summer classes all through his high school because of constantly having F in math and graduating from college only at the point at which he already held an eminent diplomatic position, Momo Kapor, another Serbian writer who, as the story goes, sat in the same middle school classroom pew in Sarajevo in which Ivo Andrić sat some 45 or so years earlier and who, like Ivo, failed the seventh grade¹⁹⁸⁶, and so on. Even Citizen Kane, the prototype for an authentic American businessman, using the strange combination of magnanimity and megalomania to climb up the ladder of success, happened to be “expelled from many colleges and universities”, in his own words in the Orson Welles’ classic. Steve Jobs, the founder of Apple Inc. and another famous entrepreneur, whom Steven Spielberg has called the greatest inventor since Thomas Alva Edison¹⁹⁸⁷, though stormily criticized by programmers all the world over for “selling out open-source freedom for a handful of security” and transforming from a sci-fi seer into an unscrupulously business-minded baron, considered his decision to drop out of college and never return to it “one of the best he ever made”¹⁹⁸⁸, advising students decades later not to be “trapped by dogma - which is living with the results of other people’s thinking; not to let the noise of others’ opinions drown out your own inner voice and, most important, have the courage to follow your heart and intuition: they somehow already know what you truly want to become”¹⁹⁸⁹. Dyslexic David Geffen, yet another successful entrepreneur, dropped out of University of Texas in Austin first and then Brooklyn College and Santa Monica College before faking a UCLA degree to get a mailroom job, though only to have the UCLA School of Medicine be renamed after him some forty years later. Rabindranath Tagore was sent to London by his father to get a university degree and, though the poet enjoyed attending classes, he found no interest or profound purpose in entering any of the exams and, thus, had to be promptly expelled from the school. After completing only one year at the prestigious Julliard School of Music, Miles Davis left the conservatory to pursue his so-called nightclub education¹⁹⁹⁰, choosing

to break the classroom walls that separated application from dry theory, that is, real-life music from merely theorizing about it through the eyes of classical approach to musical composition, something that improvisatory jazz barely ever conformed to. Albert Einstein, who allegedly did not speak until the age of four, was diagnosed with dyslexia, attention deficit disorder and autism by the psychiatrists of the very schooling system that he had no desire to conform to, and which he later criticized for its losing touch with the spirit of creative thought while insisting on strict rote learning. Another person diagnosed with pathological refractoriness by psychologists was the many-time recipient of the award for the best soccer player in the history of the game, Pelé, mere months before the World Cup in Sweden in 1958, which was to launch him to stardom as a result of his fantastic style of play and a pivotal role he played to help Brazil win this tournament for the first time. Specifically, the medical assessment report marked his personality with “obvious infantility”, adding that the player did “not possess the sense of responsibility necessary for a team game”¹⁹⁹¹ and suggesting his removal from the roster, just as in the case of his now most famous teammate, the anarchic right-winger Garrincha, who allegedly scored so low on these tests that he would not have been given the permission to even ride a bus on the streets of São Paulo¹⁹⁹². In the realm of painting, the examples are so many, including self-taught Henri Rousseau, Vincent Van Gogh, Frida Kahlo and Basquiat, that Mark Rothko said once that “no good painters I know have studied painting”¹⁹⁹³. Michael Faraday showed an array of symptoms of dyslexia and could not properly spell or punctuate sentences, alongside being unable to handle the simplest math¹⁹⁹⁴; the Indian philosopher, Jiddu Krishnamurti was described as a “particularly dim-witted boy who often had a vacant expression that gave him an almost moronic look”¹⁹⁹⁵, demonstrating for a hundredth time the veracity of the verse “a bright type could never draw, could not describe night swimming”¹⁹⁹⁶, singing in favor of the privilege of portraying the ethereal beauties that life is composed being solely those who do not appear as bright as it would be expected from a top-class artist or philosopher; Thomas Alva Edison was kicked out of school at the age of 12 because of suffering from dyslexia, while Alexander Graham Bell, Winston Churchill, Richard Strauss, Ludwig van Beethoven, Wolfgang Amadeus Mozart, Walt Disney, Pablo Picasso, Leonardo da Vinci, Gillian Lynne and many other celebrated scientists and artists had the same or similar forms

¹⁹⁹¹ See Jonathan Wilson’s *Inverting the Pyramid*, Orion Books, London, UK (2008).

¹⁹⁹² The legend has it that, having given the task to draw the first thing that comes to his mind, Garrincha drew a circle with lines extending from its circumference, looking almost like the Sun. Intrigued by this motif, the national team psychologist, João Carvalhães, asked Garrincha what it was meant to represent. Although he hoped that the footballer would indeed say it was the Sun, he said it was the head of Quarentinha, his teammate from Botafogo. As the result, the psychologist promptly ruled Garrincha out of the team for the third game in a row at the 1958 World Cup, deeming him unsuitable for an upcoming high-risk match against the Soviet Union. The coach, Vicente Feola, however, trusted his instinct and for the first time introduced Garrincha in the starting lineup. Thanks to him, it took only minutes for Brazil to hit two posts and score a goal and effortlessly qualify for the second round of the tournament. of learning disabilities¹⁹⁹⁷. In fact, Paul Snyder, a San Franciscan beatnik and environmental activist pointed out in one of his studies that practically all Nobel Laureates and members of the British Royal Academy of Arts had difficulties in school¹⁹⁹⁸. If the current method of schooling does not change in the direction of promoting the balance between rigidity and imagination, which Gregory Bateson pleaded for in front of the UC Board of Regents in the late 1970s¹⁹⁹⁹, some of the most talented and creative human creatures will follow the road taken by Bob Dylan who dropped out of college after less than a year because “he was too busy educating himself”. These utterly inventive beings will have awakened the semantic vibe concordant with the verse inscribed in a sonnet by one of the most popular Serbian poets among children, Duško Radović – “Just today one was about to learn a thing or two, but, alas, he can’t, for to school he must go”²⁰⁰⁰ - and decided to take the road that leads away from the traditional schooling whereby kids are turned into monotonously molded micro-cosmoses for fabrication of pragmatic thought rather than stellar explorers who go after unique ways of expressing themselves - always seen as blasphemous in the eyes of conformity-demanding authorities - for the sake of saving the dying divine spirit on this planet of ours. Besides, what is a school or a university but a place to earn a degree from, if not hold a stable academic position, which are both but confirmations that one could sit still in a classroom or an office and repeat what the teacher or the textbook say. Mere testaments they are to one’s passing the test of conformity before authorities who hold the seat of power and being ready to engage in the machinery of the social structure as one of its billions of uptight, pardon upright screws. It is for this reason, for this restlessness of spirit that I could have never rested in one place nor obeyed the calls and demands of authority, eventually becoming an academic expatriate, a woodchip drifting through life like an eternal refugee, a pollen in the wind hopping, like the Little Prince, from one flower to the next²⁰⁰¹. The solace I would find in Albert Einstein’s motto that “the true sign of intelligence is not knowledge, but imagination”, a saying that, however, in today’s climate, merely reiterates this outlook seeing modern schools as dungeons wherein the ghouls of intellect imprison the infinitely innovative spirit of imagination, even though the two ceaselessly dance with each other on semantic podiums lit by the flames of empathy in the most creative mental spheres that inhabit this world. Verily, only if an equal dose of fanciful childishness and juvenile adventurousness is encouraged to be aroused in the educated ones in addition to the

²⁰⁰⁰ The personally translated and adjusted quote was found in the article *Razdeljak za skupljanje*, *Politikin Zabavnik* (August 31, 2012), pp. 28.

²⁰⁰¹ It is for the same reason, for this love of adventure, of constant travelling and changing perspectives, of being on the road yesterday, today and tomorrow that I have also made dispersed particles out of all forms of matter available to me the focus of my scientific studies instead of more complex, but also more static structures, such as lithographic surfaces, microfluidic chips, compact disc technologies, 3D printed scaffolds and others. “I am not interested in complex engineering concepts that make things work faster, better, *et cetera*. I am interested in making things that are one and only – in other words, fine particles. Similarly, I do not believe in hierarchical structures and therefore I stay away from intricate devices in my research, such as those fabricated by photolithographic, microfluidic or 3D printing means. Instead, it is a particle, a lonely traveler, regardless of how passé it has become in recent years, that I wish to follow”, I remember I said to a stupefied attendee of the Global Forum on Advanced Materials and Technologies in Toronto in July 2019.

strict knowledge that they are being forced to grasp, the teaching approach of ours would deserve the epithet of complete. The ideal schooling is thus, as I claim, the one where teachers and pupils mirror each other, so that teachers become more fanciful, honest and spontaneously expressive children with every passing moment of their interaction, whereas children become instilled with self-responsibility for bringing happiness and bliss to the world around them. For, in order to attain the peaks of creativity, we need to hold on to William Wordsworth's norm that says that "the child is father of the man"²⁰⁰² and set the fire of spontaneous imaginativeness ablaze on one side, while still respectfully reading the signs that our tradition has left inscribed for us on the dusty and solemnly white Doric pillars of ancient edifices of wisdom that we roam through in our mind. If I could pick a single Biblical saying which I shan't readily agree with, it would be the Christ's message that "the disciple is not above his master, nor the servant above his lord; it is enough for the disciple that he be as his master, and the servant as his lord" (Matthew 10:24–25). For, if the teacher does not believe that his students will one day become greater than he is, and does not do everything to provide learning conditions for such a self-transcending progress of those who have asked him for guidance, his overall approach will remain incomplete. After all, parents and teachers preventing their children and pupils, respectively, to surpass them in creative potentials goes hand-in-hand with blocking their independence and trying to turn them into mirrors of their teachers' selves, which, needless to add, has devastating consequences for their development as independent individuals. The only proper way of educating the world is to set oneself like a sea, below the loved ones, and happily rejoice with every river of being ascending above oneself, waving at their independence and the freshly awakened sense of self-responsibility, letting them fly across the skies of the world of science and arts, like white doves, while glisteningly watching the world from their eyes with an empathic tear of celestial happiness in one's own.

S.F.5.25. And every time we temporarily stray from the right path, there is one place we could turn to and glimpse signs which we ought to follow in order to return to these prosperous tracks of perceiving the world, thinking and acting: the little ones whom we had spent precious time heartily educating. Thereupon, we actualize not a full circle in which teachers and their disciples form linear, hierarchical and unidirectional relationships, but rather a full circle wherein they invaluablely influence and learn from each other. As we grow old, we begin to increasingly fall back onto well affirmed habits in our acting and thinking, slowly ceasing to explore the world by curiously looking at it from novel angles and acting in refreshing new lights, while being over and over anew astonished by its beauty. The latter is an art that no one can teach us as well as little children. For, with the most vital relationships in this life being mutual, it comes as no surprise to notice that not only do grownups act as invaluable teachers of the juvenile ones, but no greater signs on the path of life do the adults have than the childlike spirits that surround them. From this perspective, I have always seen the little ones as giant reminders of how we should return to the right path of wonder and love ingrained in each of the then flexible and juvenile gestures and moves of ours. In my head, the way they leisurely and joyously pull off their body gestures and moves, without any trace of being poisoned by clichéd behavioral norms of the culture they are immersed in, has been seen as a beautiful reminder of inspirational behavioral sincerity that Nature places on our paths at the point when we become an uninspiring grownup, locked into rigid and stiff behavioral habits. Yet, by copying the sparkling and heartfelt children's moves, we could slowly restore the starriness of the most elementary acts of ours and invigorate our tiresome bodies and thoughts with dazzling

²⁰⁰² This saying is from William Wordsworth's poem *Rainbow*, also known as *My Heart Leaps Up* (1802), available at http://en.wikipedia.org/wiki/My_Heart_Leaps_Up.

excitement and energy. In that sense, we should be reminded that “except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven” (Matthew 18:3), as the Christ argued. For, indeed, from the moment when a child is born, being a miraculous biological concoction of You and I that serves as a pointer in the direction of the simultaneity of sane oneness with oneself and empathic oneness with another inherent in the concept of the Way of Love, to the days when it begins to draw touchingly honest and unaffected moves that show the parental spirits spoiled by the societal pretense and self-centered phoniness how to regain divine naturalness in their ways of being, the abovementioned William Wordsworth’s verse, “the child is father of the man”, over and over again proves itself as infallibly valid. Therefore, unlike John Lennon, who “could hardly wait to see” his five-year old son, Sean, “come out of age”²⁰⁰³, I nest my little ones near me and hinder their growth into adulterated adults, wishing them to remain children at heart and guides for my senseless soul lost in the dark forest of adulthood for as long as possible. From here on, one of my nightmares, not dreams, is that my children have grown, oh so quickly, and that I have not collected all the precious pearls of wisdom and guiding stars that they strew into space with each gesture of theirs. Indeed, look into a child’s eyes and you will recognize a glistening eyeball dance that could remind you of the long-forgotten secret on how to enchant the world by simply gazing at it, with no words spoken at all. The genuine sense of wonder and the passions steaming out of the volcano of love that enlighten and enflame our juvenile hearts slowly start to vanish as people grow old, and so do the sparkly jiggle of wonder and the melting sun of love in their eyes, which turn out to become substituted with phlegmatic, indifferent and drowsy gawks. Since eyes are the windows of the soul, as Socrates noticed, they can also be used as mirrors in which we could read the clearest signs of how old one’s spirit is; needless to add, no amount of plastic surgery or Botox therapies can mask this spiritual agedness readable in the lack of glittery dance of one’s eyes. Yet, our spiritual aging can easily go in the opposite direction compared to our physical aging, as life events may infuse ever more wonder and love into our eyes and hearts, which would essentially make our spirits ever younger as the time passes by. And it is by following the way of the child that the grownups have once again a chance to reinstall some genuine liveliness within their eyes and thus transcend the mere beady drowsiness or panicky and perplexed shiftiness which their eyes so often exhibit. For, this subtle dance of our eyes, which we are all sensitive to and able to spontaneously read despite its extraordinary fineness and delicacy, is what magically triggers smiles around us and stirs the sea of pleasant emotions in human hearts, if it only possesses a similarly smiley radiance and a warmhearted shimmer of a summery child within itself. But there are other great insights I have come up to while playing with children. One of them is that, after all, even though all children sooner or later grow up, they always retain the essence of their childlikeness within them. St. John the Apostle, who had given himself the task of spreading the word to humanity about the light of the soul divine may have reminded us with the following words that this inner light that children possess could be the essence of our religious contact with the divine too: “That was the true Light, which lighteth every man that cometh into the world” (John 1:9). Retaining an intimate contact with the child in us, as pure and chaste as it can be, unspoiled by greedy and selfish thoughts, can thus be seen as equal to walking along the religious path. Like Masolino’s St. Christopher painted on the wall of St. Catherine’s chapel in the church of St. Clement in Rome, waiting for the sign from a globe-holding child that gingerly rests on his shoulder, so may it be that all the captivatingly creative creatures that have held the arrested attention of worldly eyes on the palms of their hands owe their success to leaning their ears on the heartbeats of the celestial child in them and acting in accord therewith. To see grownups as children

²⁰⁰³ Listen to John Lennon’s Beautiful Boy (Darling Boy) on Double Fantasy, Geffen (1981).

is then also akin to cultivating peacefulness and benevolence within our hearts as well as washing others with inherently pure and blissful thoughts, invisibly guiding them along the spiritual path. “All grown-ups were once children but only few of them remember it”, the Little Prince said once and I wonder at times how funnily innocent and untainted of a place the world would become in our eyes if we were to truly learn how to see each and every one as a child that they had been. This warmhearted stance is, of course, an exact antipode of the carnally competitive and coldblooded attitude that most people assume when facing each other, undoubtedly seeing one another as grownups rather than sweet, wondering and unprotected children only covered on the surface by the grit and jaggedness of rough mundane lives. Adulthood as a period of human lifetime lying halfway between childhood and senescence, close enough to both to reach them and be inspired and awed thereby, is thus the time of great balance and peaking in wisdom, for, if the arms of our spirit indeed be stretched towards both and both be touched by the depths of our mind and our mind deeply touched by them, a combination of infinite joy and infinite sadness is bound to arise in us and in it lies the key to unlocking the channels in our being through which a celestial energy, able to purify and heal all around it, streams. For, whereas empathizing with the fellow humans by seeing them as children in essence instills a joy out of this world in us, like the Sun of a kind, feeling profound compassion for them by seeing them as once, inevitably, ailing souls, just as the elderly who are waving farewells from these earthly realms of being, fills us with some cosmic sadness and pierces our darkened, nightly heart with a gazillion of stars. Needless to say, a truly divine creature on Earth, just as the Christ, for one, had been, would see every human being in his or her historical wholeness, that is, as a soul being born and dying, traversing the whole pitiful road from dust to dust in the blink of an eye, which would be just enough to endow the bearer of these magnificent views with infinite compassion and love and sustain the blaze of saintliness within himself, serving as a proof that perceiving and being receptive to wretchedness everywhere around one a stairway to Heaven like no other. This is why William Saroyan praised the breed of souls that see immanent mortality in every living creature, knowing that a day will come when they will “die and be forgotten”, believing that this insight makes them “gentle and kindly where another man is severe and unkind”²⁰⁰⁴, a noble point of view that I boldly pair with its opposite, that is, with calling for the perception of every sentient creature as a child, as in agreement with the age-old Serbian adage saying that “there are no children like grownups”²⁰⁰⁵. And as I have always had it, enlightened sages that shed stardust of infinite empathy and joy all around them ought to indeed see themselves and other earthlings in exactly the same way as the eyes of Cosmos overlooking the entire creation see us: that is, as creatures that are born as cosmic children and that die as such. The majority of Serbian last names, then, including mine, contain an “ić” as their suffix, which means “the little one”, and I have always seen this as a human reminder of essential childlikeness of each and every one of us. When I was little, in 1984, on the banks of the seashore of Split, my Mom told me a story about divers who unexpectedly found Atlantis but could not photograph it because they made all the photos that their cameras could hold on the way to it. This is something that has occurred to me every time I would walk around the world in preposterous hopes of capturing the intrinsic beauties of reality and confining them to a communication medium, be it music, words, drawings or photos; namely, I would eventually realize that the heart of that inexpressible beauty findable in pieces of Nature cannot be impressed onto anything and conveyed to others by any means. For example, although I made several hundred images of Dominican

²⁰⁰⁴ See William Saroyan’s *The Declaration of War*, In: *The Man with the Heart in the Highlands & Other Early Stories*, New Directions Publishing, New York, NY (1944).

²⁰⁰⁵ Or *nema veće dece od odraslih* in the original form.

Republic during my first visit of it, the most beautiful one was not captured and its image firmly impressed in my mind prompted me to add a blank picture to the corresponding album with the following words written on it: “This is the most beautiful image in the collection. It was never captured. It was only seen. It is of a mother cutting the hair of her son on the red, windowless balcony on the second floor of a corner apartment in La Romana, the sugar city”. Now, the reason why I am telling this story is because this image suddenly enkindled a feeling in me that every single person in the world, no matter how roughened and jaded he has been made by the worldly circumstances, could be seen as stemming from a boy who was once one such kid full of trust, care and respect as this little black boy who had his hair cut by his mom, slowly and carefully, one slash at a time, on a red and humid Caribbean terrace. And should we look at the world through one such window to reality, the blessing sunrays of sympathy and affection would spontaneously land on each and every one, yielding senses of friendliness and amity everywhere we’d go. As a song on “how to save a life”²⁰⁰⁶ was played on the radio and I wistfully looked at northeastern San Jose foothills greening under El Niño rains, a flash of light and thunder suddenly illuminated my mental microcosm, bringing forth on its wave the realization that if adults are truly seen as children and cordially done good and gentle things to, cared to have one’s head leaned on their heart, if sad, and be taken by the hand, if lost, and have the right way shown to, then the mothers and fathers of these grownup people, once their children, even if loved for a second or two, if not deeply, for the entire lives of these careworn parents, would smile in sympathy and relief from some distant shores - ‘tis the greatest thing that parenting is to instruct one, I believe, i.e., not to begin to love one’s own child only more than oneself, but this whole endless world, too. In such a way, children show one the ultimate way toward the conclusion of one’s spiritual growth, which is, as a matter of fact, returning to the consciousness of a child, before which everything is a part of one and one is a part of everything. As I paid a visit to Swee’Pea’s family and dazzlingly gazed at his little child, I also had an enlightening feeling that human creatures are not individuals, intrinsically separated from each other, but merely parts of that great planetary and cosmic oneness that streams towards ever more progressive states during its evolution as a whole. For, that is how the child sees the world: all in the spirit of an eternal purity of the great oneness, without discriminating between oneself and the world. Or, as Walt Whitman would have pointed out, “There was a child went forth every day, and the first object he look’d upon, that object he became”²⁰⁰⁷. Only later, when demands for more sophisticated coordination through the physical environment arise, a distinction between oneself and the world becomes established. Then, by its repeated usage, it becomes mistakenly enrooted in one’s consciousness not as a pragmatic assumption of one’s psyche but as a fundamental feature of reality. And as the life path of the child proceeds from spiritual unity to ever finer individualization, only later to reverse itself, the parent’s path moves on in the opposite direction, as if compensating it all and bringing back to a cosmic balance. Therefore, as the child is born, a path opens up in the life of the parent, leading him towards slow extinguishment of his ego and starting a life full of devotion to another. A recent study has shown that children learn from their older siblings countless practical skills, but teach their older brothers and sisters a far more precious art: empathy²⁰⁰⁸. The same applies to any parent/children relationship; namely, while children acquire lots of palpable skills through their parents, the parents become enriched

by greater spiritual treasures via nurturing the connection with their children, who, as such, become their gateways to sainthood and that mystical paradise of the soul lost long ago. As I sat on a pew in a Lisbon church occupying the birthplace of Saint Anthony of Padua, that protector of things lost and confounded, and gazed at the reredos behind the altar, showing the saint holding a girl child with a careworn expression on his face, just like my Mom's, the sun-like radiance over his head and two marvelously sculpted angels overseeing him from above, through a myriad of candles, I remember I knew more than ever before that holding one such child in one's hands and loving it despite its crankiness and volatile temper constitutes one of Nature's essential gateways to the wisdom of the saints. Of course, to begin to live for the benefit of one's child, a biological extension of one's "own flesh and blood"²⁰⁰⁹, as it were, is only the beginning of journeying on the road towards the complete extinguishment of one's ego and the perception of each and every soul as a child to be treated with infinitely selfless love and respect. The end of this road is, thus, ideally, not the one where one is ready to give life for those whom he loves but cultivates permanent hatred for the rest of the world, but the one where one reaches a complete spiritual unison with the entire world, realizing that we are all merely parts of that great One. In that sense, children are also natural reminders of the spiritual path of our beings in life, which, as we all may know, takes us from being a little river dependent on many little streams and weather patterns to becoming a vast ocean, a symbol of the great oneness of being, into which all the rivers flow and find their solace and home. Hermes Trismegistus inscribed the simple secret of One, as the key to the mystic doors of spirituality, on a stone that was later to become known as Tabula Smaragdina, five millennia ago, and many claim this to be the dawn of human philosophy and theology alike. Lao-Tzu, however, talked about how the path of the sacred learning is a crooked road on which we alternately take a glance into that great and blissful unity of all things and then return to seeing them as mutually isolated, because it is only then that we can apply our analytical faculties of mind. The latter make us capable of discerning and diversifying the informational content of our planet and the Universe, whereas the former gives a blessed, holistic meaning to everything we engage our analytical creativity into. Or just as John Fowles once noticed, "Science disembodies, art embodies". No wonder then that the roots of the Oriental word for science – *skei* – and the Latin word for religion – *religare* – respectively denote the acts of differentiating and connecting. These two, science and religion, are thus inextricably complementary to each other, as much as a bright mind and a loving heart are. For, as I claim, science and religion flowing into each other, somewhat like the black and the white on the celebrated Tai-Chi-Tu diagram, drawing each other like the two Escher's hands and providing essences to each other are vital for the prosperity of both. Religion that does not learn from sciences withers away in its blindness and dogmatism, whereas science that does not feed on faith, hope and love celebrated in the religious teachings of the world becomes a coldblooded, inert and lifeless endeavor that leads to no promised land at all.

S.F.5.26. If you ask me for the secrets of my and possibly everyone else's creativity, I will tell you that it lies in the balance between the faculties of mind and heart. I have seen many people who cultivate great and benevolent aspirations and desires within themselves but due to their lack of reason, simply shoot in the wrong direction, quite often for the Moon. For, rationality is the key to discerning doable from undoable, possible from impossible and effective from ineffective, and

²⁰⁰⁹ Listen to 10000 Maniacs' What's the Matter Here on In My Tribe, Elektra (1987). The ridiculousness of parents' claiming that focusing on the needs of their children liberates them from their egotistic cravings when these children are extensions of their own bodies was pointed out by Frances Ha in the eponymous movie directed by Noah Baumbach (2013).

thus picking the actions and aims that may prove as successful and meaningful in life. I see it as a great periscope that constantly searches for the right targets for our intellectual and creative capacities to focus onto. Once it finds them, even though we may know a routine that may lead us to an appropriate action, and even though we possess a superior concentration that prevents our focus from dissipating, this may not be enough. Thus I claim, to the surprise of many overly rational people, particularly in the scientific circles, that if we do not invest our entire heart at this point our actions may not mean much in the end. As if we have our intellect focused on the things we want to achieve, we need to use the language of our heart to knock on the door through which we enter the fields of divinely bright effects of our deeds. We need to give away ourselves selflessly in order to leave the room for the purity and grace of this affable language of the heart to be heard on the other side, the side of Nature which quietly but patiently stands in front of us in an endless course of the co-creational communication between the depths of our mind and Her, and have these magical doors opened both for ourselves and the whole wide world. Every creative action of ours has to be carried out with an impression that we want our heart to jump out and share the beauty of the divine spirit we keep inside of ourselves with others.

S.F.5.27. After all, in one's attempts to link the faculties of mind and heart, one inevitably comes to conclusion that they are inextricably linked. It makes no sense to disconnect or even imagine one existing without the other, for they are like two poles of a single sphere of human being. Loving others is based on knowing and understanding them, being able to compassionately look at the world from their eyes. To understand that we come from the same roots of chaste childishness and travel onto the same abysses of life that some of us will turn into wondrous cliffs of love, bathed in the sunset horizons of eternal sadness is the basis of loving another. Understanding others is thus the substratum of love. On the other hand, although many recommend not mingling emotions and loving aspirations with the scientific work, love is the one that opens the doors to insights of a bright intellect. Love is the guiding star that illuminates the right paths on our traveling along the forests and mystic lands of pure ratio. Love is the everpresent compass in our hands in our adventurous quests for knowledge. It spreads the sails of the ship of our being and thus enables it to use the force of the wind and travel along. Without love, wound and squatted, we would be inertly led by the ocean streams, confusingly not knowing where we are heading. But with its wings spread, we turn from an unmovable cocoon that merely hides in the soiled ground to a beautiful butterfly that gently and gracefully streamlines the air. In Kenji Miyazawa's most popular children's fantasy novel to this date, *Night on the Galactic Railroad*²⁰¹⁰, for those who remember, little Giovanni embarks in a lucid dream on the ride of his lifetime, aboard an intergalactic train taking him to the farthest end of the Universe, to Heaven and back, after he decided not to venture along the river of fun-seeking people to the city center to watch a festival of stars, but rather to wait before a barn, all alone, on a lonely meadow in the dark, for many hours, for the milk to arrive so that he could bring it to his mother, who lay ill in her bed at home. On a similar note, asked by one of his disciples when and how he had acquired such a tremendous knowledge of the nature of things, al-Bistami told a story, which I paraphrase here: "When I was a child, my mother was very ill and she called me in the middle of the night to tell me to leave the door to her room open. I would do so, but was hesitant to leave, fearing that the airflow might shut

²⁰¹⁰ See Kenji Miyazawa's *Night on the Galactic Railroad*, One Peace Books, Long Island City, NY (1927), or watch *Night on the Galactic Railroad* anime directed by Gisaburo Sugii (1985).

it anytime. So I stayed there throughout the night, making sure that the door remained open. The knowledge I had sought so much entered through that door”²⁰¹¹.

Dancing, dancing, dancing

S.F.6.1. When I envisage the future on Earth, I see human consciousness and behavior rolling towards ever more enlightened stages in their evolution. I cannot tell, however, if this evolution proceeds continuously or through phase transitions that may be soft and unnoticeable or thunderous and magnificent. However, considering the unequal rate of progress of humanity throughout its history, I could easily conceive an array of phase transitions that would make us jump from one stair to another along the stairway of our consciousness in the endless line of our inner and outer development, in our cognizing and acting, in our beautifying ourselves and the world. The way to maximize our effectiveness in the latter is to provide firm connections between the two worlds, the inner and the outer, as the Way of Love has suggested. To love ourselves as much as the world, as the Christ pointed out, and thus see everything as One. Sometimes my evening meditations consist in envisioning one such enlightened consciousness, which I believe all of us keep as a beautiful muse concealed deep within our minds, as an ideal of who we could be if we lived faithfully to our true nature. Thus, I draw the visions of that Jungian *anima*, an empyreal female persona resting in the pith of every man’s psyche²⁰¹², appearing as if made of black marble, solid and stately, while at the same time being aerial, formless and wholly unworldly. ‘Tis the muse of mine, black-eyed and scarily thin, with sensitivity-signaling bones and blood vessels erupting from her skin, sitting on the Moon with a bare landscape around her (yes, my superego is a she!²⁰¹³). And when eyes of another approach her in that desolate landscape, they appear all starry to her, and she looks at them with a pure amazement in which the perfect balance between soft relaxedness and wide-awake, dancing liveliness is noticeable. Thus I remind myself of how eyes of another can be healing to our self, and such a short meditation helps me invoke that radiant balance between relaxedness and attentiveness in my own eyes, which are, as we know, the windows to the soul. And one of the greatest phase transitions we can imagine will be the one when people will “flip out” in terms of giving away their habitual way of acting and start living the muses that they unconsciously hide inside of them. However, if you ask me how I could place the beauty and wonderfulness of these great muses that live inside of us as guiding superstars into mere words, I would have no answer. The only way of expressing it, as it seems, would be through dancing. And so I dance. To send out the immaculate traces of beauty that sirens of loving thoughts leave behind as they silently and gracefully swim across the vastness of the ocean that my mind is.

²⁰¹¹ See Eva de Vitray-Meyerovitch's *Anthology of Sufi Texts*, Naprijed, Zagreb, Croatia (1978).

²⁰¹² See Jolande Jacobi's *The Psychology of Carl Gustav Jung*, Dereta, Belgrade, Serbia (1959), pp. 166.

²⁰¹³ “I am it’s a she”, I engraved in big, big letters next to the image of a pirouetting Degas’ ballerina once. This James Joycean phrase that popped up during my lucid daydreaming was meant to complement the twirling pose of the dancer and the trancelike dizziness it brings forth. For, its textual composition was my way of spinning the reader in a confounding circle, the only way out of which was to leave the language behind and continue streaming forward without its burden, gliding on the waves of Tao. Language as a curtain that ought to be raised before a beautiful play of life can begin is thus being mercilessly uprooted from the back of our minds. The mission of language extinguishment and the elevation of an authentic nature and beauty of life could thus be said to have been impeccably accomplished.

S.F.6.2. One of my favorite bedtime meditations pictures me becoming a dancing superman whose expressions spread love and grace that inspire people to shed tears of joy, those that we release as we face a divine and eternal beauty, as if through microcosmic spaceships descended on Earth. As I stare at the ceiling and imagine swarms of stars swimming and traveling in circles far above me, I see myself getting rid of my boring daytime identity, jumping into my tight pants and comfy shoes, and turning into a dancing puma, a stretchy starry superhero, emerging from an underground passage into an empty and romantic city street in which only the sound of water streaming along the pipes, an occasional meowing sound of cats stretching on house rooftops and the gentle, almost silent footsteps of mine are heard. Thus I know that the day will come when I will start dancing my way through the day. The dawn will see me jumping from the bed and dancing, dancing, dancing, all until an orange dusk sets in, and then the night falls. In the night time, when the crescent Moon appears, I will turn into a catman, jumping from one roof to another across the warehouse-filled neighborhoods of the modern times, asleep in the mix of romantic decadency and the sci-fi feel of airdrawing neon lights. But most important of all, I will collect enough braveness to release the shine of blessedness and divine joy that I have kept inside of me, and let it wash over the fellow humans. It is thus that I will become the incarnation of “the world so live”²⁰¹⁴, poetically drawn in the remarkable Television song, ready to stand face-to-face with Venus de Milo, the greatest beauty on Earth conceivable, and even superiorly walk away from the blissful sense of goddess’ presence at any time. The same unconstrained release of joy pervaded my childhood days, the days spent in the parental cocoon-like oasis of protected dreaminess and love, prompting me to brilliantly combine living and dancing throughout every minute of the day. Looking back, thus, I know, offers the key to the most progressive way of acting imaginable, the one that opens the way for the future ways of communication. On the way there, I ought to keep in mind, of course, that quantity matters much less than quality and that the craziest body twists, dazzling flashes of thousands of moves in a second carried out with only superficial links drawn between our body and the wells of divine inspiration within us will merely blush in view of a single shrug of one’s shoulder, a twinkly wiggle of a pyramid eye or any similarly subtle act for which impulses have been made to originate straight from the celestial depths of our soul, with our heart and mind surfing on the waves of cosmic love that erupt from its center. To arrive at these brilliant destinations wherein we would cease to be a vain preacher who, hypocritically, never lives up to the ideals he imposes on others and become the one who transfuses the beauty implicit in every corner of the world into dancing moves that shed enlightening stardust in their wake, rather than self-satisfyingly sitting and grandiloquently explicating worldly beauties in flamboyant and farfetched wordings, innumerable obstacles posed by fears, uneasiness and discomfort are to be crossed first. A galactic determinateness and closeness to the dancing muse that lives inside of us is required to overcome all the obstacles of fear piled up during our lifetimes. This masterful power of mind has to exist so as to push us to release the shine of love dwelling within us. To love, thus, we need to be strong. But to break all the vents posed on the way to releasing the shine of our spirit apart and “let bleed” in spiritual terms, we need to cultivate the sea of gentle and tearful love inside of us. In other words, to be strong, we need to be weak, gentle and flexible. To waveringly dance is thus ultimately to turn ourselves into the active suns of love that bring happiness and salvation to the life that surrounds us. Dance is, therefore, the channel through which we deliver the treasures of love and inspiration concealed within us to the world.

²⁰¹⁴ Listen to Television’s Venus on Marquee Moon, Elektra (1977).

S.F.6.3. Once I heard about an amusing dance giraffes in herd perform in their moments of play. They would wiggle and wave their long necks in pure silence, producing a lively dance during which they never touch each other. This ability to gracefully and spontaneously coordinate their movements altogether with exhibiting enchanting intimacy can be truly fascinating. And we should never underestimate the usefulness of looking back so as to explore the traits of our evolutionary predecessors; for, incredibly lot could be learned from them. One of the things we could learn is the art of moving gently and gracefully, mostly forgotten in this age of insincere bodily and linguistic expressions, the age that will certainly be looked at as pitiful by some distant generations on the Earth, similar to the way we now look at the old and obsolete patterns of communication and reasoning. When the first version of Walt Disney's Tron was released in 1982, the reaction of most people was along the line of "Whoa, it was made on computers"; when the sequel of the movie was premiered in 2010, the common reaction was said to be "Well, it was made on computers". Hence, what seems exciting to one generation will sooner or later become outdated in the eyes of its descendants, with the presumed exception of only a handful of timeless truths around which the traditional ethical and aesthetic teachings of humanity have revolved. Likewise, the way typical humans express and impress themselves will inevitably change in the future, so much that many of us would not be able to recognize the excitement of the current communicational threads in them. Needless to add, however, the danger of every evolution arises from the tendency to neglect the origins and foundations upon which the actual progress rests. In order not to avoid these traps of ultramodern attitudes, we should always keep one eye on the new and visionary and the other on old, dusty, and passed long ago. Only as such can we resurrect in us the wise eyes of Lao-Tzu, the one whose name means "an old boy", and begin to shine forth with the balance of ancient, eternal and profound, and juvenile, youthful and chaste.

S.F.6.4. To have healthy, vigorous necks, like giraffes, the tallest animals of the world, standing closest to the stars, we need to look up as much as we look down. That is, we need to humbly find the overwhelming reasons of satisfaction in small, negligible details of the world, like a boy that motionlessly sits on a seashore and with tranquil amazement watches the ridges and lines on pebbles beneath his feet, and yet to trace the patterns of the starry sky in our wonder, like a ballerina as she spins its silhouette while turning its heart to a flower that strews the world with sprouts of enchanting and divine beauty. Lest we share the evolutionary fate of the Irish elk²⁰¹⁵, the beast that fell prey to its own strivings to grow horns ever closer to the sky, ending up epidemically tangled in the tree branches, unable to escape the predators, and lest we become like a snail who confined itself to the limits of the world of his own shell, never lifted its head up and out of it and eventually died of starvation, we should always balance our streaming upwardly and folding downwardly. For, the creative shine of human beings arises from the colossal crossroad of the heart wherein the top-down travelling power of the reflective mind intersects with the bottom-up spreading biological naturalness of ours. It is thus that we infuse our animalistic nature with consciousness and, in turn, pervade our sentiency with the natural liveliness of the animal in us, bringing Heaven closer to Earth and Earth closer to Heavens. Similarly, we could be sure that only when our attention becomes crucified between pulls in skyward and earthward directions, that is, when Wonder, directing our gazes upwards, towards balconies, romantic rooftops and stars, and Love, sinking our views downwardly, so as to caress the petite things of the world that crave to be lovingly touched, become one will our necks attain the flexibility of giraffes' and the rivers of

²⁰¹⁵ See Stephen Jay Gould's *Ever Since Darwin: Reflections in Natural History*, W. W. Norton, New York, NY (1977).

mountain-moving musicality will begin to flow from our Vishuddha chakra into the sublime, aerial spaces of the world, launching the spaceship of our spirit towards some new suns and glittery dance balls of enlightenment.

S.F.6.5. Are we, thus, to blame the modern trend of light pollution for people increasingly showing symptoms of strained and stiff necks, or the realer cause could lie in the global trend of deprivation of stargazing wonder amongst humans of the modern day, prevalently holding narrow-minded and straightforward focus, intellectual and perceptual alike, as they walk through life, as opposed to questioning it all and giving themselves to all things around them in explosions of Wonder and Love, while spinning 'round and around in undying pirouettes, quite the way the moonlit muse of my dreams does? As I watched the world behind a shrub of roses on the top window of a house in Lange Bestenmarkt in The Hague where I looked after Fiesta and Delight, brother and sister cats, rode a bike to the North Sea shore, played I'm Waiting for My Man on an electric piano for days, drank wine from all the world over and dreamingly gazed at arrays of crystal balls flashing with karmic orange lights amidst which the silhouette of my spirit tirelessly danced, I was stunned by noticing none of the people passing by in the street noticing me, so to say. As if anything above the straight line of vision was invisible to them. This is how I concluded that the habit of most people in daily settings is to focus on details in the bottom parts of their visual fields. And yet, "though all other animals are prone, and fix their gaze upon the earth, He gave man an uplifted face and bade him stand erect and turn his eyes to heaven"²⁰¹⁶, as pointed out by Ovid somewhere around the time the Christ walked the Earth. The higher we set our views, thence, the farther we will be from the animal in us and the closer we will be to the angel in us; the less of the dusty, wholly reacted and tired matter and the more of the one light, intensively fusing and blasting with enlightening energy we will also be. Moreover, when I walk down the street and tell myself that I, from head to toe, from every atom in me to the whole they build, is the emanation of pure cosmic love, I am being naturally prompted to look up and around and embrace everything in my view and beyond with my dewy gaze, as if being love equals being one with everything there is. This is how melancholy over the state of the world deprived of love and filled with self-centered narrowness and down of views instead took over my flowery being and got instilled in me for good as I watched the world from the window of my dreamy locus in the heart of Den Haag. In contrast, as can be deduced from the causally cyclical nature of our reality, not only does awakening love inside of us impel us to look up, but raising our views towards heavens can be the first step in enkindling the blaze of love within our hearts. Knowing all of this, every once in a while I declare a day of enjoying only the visual details that lie above the line where the setting sun sinks into the ocean, even though I know I may thus end up falling into an irrigation ditch, somewhat like what happened to Thales of Miletus who walked immersed in the beauty of stars above²⁰¹⁷, or smashing into other people's mailboxes in the street, as it used to happen to my dreamy Mom in her teen days. For, in a world where Nazi explorers obsessively dug through the earth in search of heavenly spheres of reality, which they deemed must have lain underground, and then ran out to lay waste to the surface on which they abided, and where wars are waged for resources that lie below our feet when we could be harvesting them from the Sun and other stars, looking up, up, up may be a simplest utterly beautiful action that we could perform at any time to create a sparkle expandable

²⁰¹⁶ See Willard Gaylin's *Adam and Eve and Pinocchio: On Being and Becoming Human*, Viking Penguin, New York, NY (1990), pp. 33.

²⁰¹⁷ For more details on this story see Paul Rossetti Bjarnason's *Stargazers: Stories of the First Philosophers*, O-Books - John Hunt Publishing, Alresford, UK (2007), pp. 15.

into a dazzling ball of bliss with a little bit of luck and imagination, I sometimes think on those days. And so, as if carried on the wings of intuitive fancy that endowed Thales of Miletus and my Mom, on some windless starry nights you may find me wandering through the SF skyline, gazing upwards at the twinkly tops of skyscrapers, as far as my neck could stretch and my eyes could see. For, I have found sublime thoughts and uplifting feelings to naturally arise from these wistful views towards heavens, so to say, whereas sensations of depression, emotional deprivation and a lack of shininess of our spirits tend to form in us whenever we spend too much time shoegazing with a stooped neck and an inward, underground spirit of a kind. This is so, of course, because our sentient beings embody a feedback between psychological and physiological states where it matters not from which side of it we spin the wheel of our wellbeing; cheerful body postures can thus induce joyous mindsets, while bright and elated outlooks can equally invoke bursts of euphoric and overjoyed behavior. In that sense, aside from consciously steering the ships of my attention in the direction of sunlit mental seascapes, I also incessantly try to personify the dreamy cowboy, “a funny kind of guy that is always staring at the sky”, epitomized in the legendary live performance of Velvet Underground²⁰¹⁸, and always have my glances send their sparkly flashes of wide-awake wonder high above the ground and over the horizon line behind which the red sun sets. And every time despondency engrosses my heart and plain sulkiness imposes heavy weight on my eyelids, forcing me to bow down and look only at what lies scattered on the ground, some things, like heralds from heavens of a kind, I know, will come up to invite me to look up, to break the spell and amend my posture, like the time when the Serbian military forces began to pile up tanks and ammunition on the rooftop of the high school right across the street from the house in which I lived, impelling me to look up in fear of NATO bombs for days and thereby recognize skylarks, clouds and stars like I had never seen before, being just like those in which the Little Tramp and his muse found solace as they watched their homes being burnt to the ground, having realized that even the most menacing world powers have no power over them and cannot take them down, or the time when Theo as a two-year old toddler, a petite god brought to Earth to show me the way, would take me by the hand to count the ceiling fans in Chicago buildings night after night, so we’d bump into signposts and sidewalk trees because of looking up and up only. Another advantage of redirecting our gazes upwards comes from the positive effect it has on the revitalization of our necks. Namely, sticking out our throat exerts a beneficial effect on our awareness and health by spurring the activity of our thyroid gland, which regulates the cleansing of our bodies from the inside, and is also the energy center, a.k.a. Vishuddhi, whereat the poetic inspiration and musicality reside. Also, we know how body postures and states of mind are tightly related. For example, if you want to enkindle a triumphant spirit bursting with powerful willfulness, stand straight and elastic, like a child invigorated after sledding down a slope, looking back to the snowy peak and waving at it with joy, and *vice versa*. In other words, not only do we rejuvenate our spirit and awaken a childishness sparkling with delight in our thoughts and feelings by correcting our posture, but we can also spontaneously impose a playful liveliness onto our bodies by adopting energetic and decisive thoughts. On the other hand, humping one’s back naturally invites thoughts of depression and disappointment to creep into one’s mind, whereas should one start off with the latter thoughts, one’s posture would tend to neatly reflect them too. Thus, whereas keeping our neck bowed and making a hook or a question mark out of ourselves may be beneficial for temporary shelling ourselves so as safely churn some valuable ideas and forge them into brilliant, lustrous gems, in long term it may disrupt the harmoniousness of our

²⁰¹⁸ Listen to Lisa Says on the live recording of a concert held by Velvet Underground in Dallas in 1969, in which a middle ground between the underground New York City coolness and warmhearted country leisure was found.

thoughts and emotions. Monkeys made steps to becoming humans during the evolution not by gazing at the ground, but by raising their necks and making themselves stand upright, as if being driven by a devotional desire to run to and face the divine intelligence behind the veil of experience with their hearts first. Continuation of the evolutionary ride along the fields of consciousness and the secret to pulling off a hearty dancing charm of our expressions, never seen before, may likewise lie in protruding our chests even more, as if giving our heart to the world, and curving our neck, letting our eyes be filled with the drooping stars of the night sky above. “Last night I dreamed I dared to raise my head”, Paddy McAloon sang²⁰¹⁹, and if we aim at quitting to be on the run to become a raged loser by adopting scooped postures and triumphantly, with a blend of an elated ecstasy and a calm solemnity, walk towards the mountain peaks where the “still small voice” of the divine Nature dwells, we will sooner or later find ourselves raising our necks. This elevation of our body and spirit will be, of course, driven not by our loftiness and pretended feelings of superiority, but by the moving desire to be true to ourselves and yet give our heart to the world in its entirety. To sustain the ride of the starry train of spiritual evolution within ourselves is thus to have our spirit resemble a ballerina in her passionate spinning, offering her heart and throat as a sacrifice to the heavens through her devotional dancing. It is to approach life with the manic passion of Bosanac, an escapee from the army and the ongoing Bosnian war on the streets of Belgrade, with the joy of life running down his veins, persuading Gojko, a fellow soldier in training and another escapee outside the army camp, in front of Akademija, on the corner of Rajićeva and Knez Mihajlova to enter the club, rip the joint and dance the night away by telling him, “This is our night, I see us, inside, you and I”, and shaking hips like the Rolling Stones’ babe²⁰²⁰ on cloud nine. Be that as it may, from this passage we see how the effects of our deeds on some distant occurrences can sometimes be such that they stretch towards the stars and then, like a boomerang, get back to us, leaving the traces on our bodies and thoughts. The bedrock of true wisdom, in the end, lies in the ability to sense, if not plainly discern, the subtle effects that our most minor actions and thoughts can have on life, cosmos and humanity as they evolve from the seedlings to the succulent fruit.

S.F.6.6. In fact, if we want to awake an enchanting performer of anything within ourselves, from daily acts to hopping trains to blowing kisses to the world to talking to flowers and spinning creative thoughts in our head, we need to unstopably dance with all we have. When Sasha asked me what the secret of a truly enchanting personality, the one that shines with grace and spontaneously, without even trying, attracts people’s attention to it would be, I replied: “The key must be in enjoying every moment. Being here and now, sending the dancing rays of attentive lovingness, and yet being deeply plunged and absorbed within the starry essence of oneself, swimming inside the pool of stars that one’s spirit conceals deep within”. After all, that is the key message of the Way of Love: balancing being inside and being outside. And the only way to maintain this balance is to constantly move back and forth, that is, to dance between the shining poles, one of which is the pillar of our soul and the others of which are the pillars of other creatures’ spirits. “One needs to dance with everything one is. Do not ever leave your face squared and fishy. Engage all the muscles in it and in the rest of your body in a finest dance. It is the subtle signs given by means of subtly dancing winks of our pupils, eyelids, eyebrows, lips, nostrils, cheeks, neck, shoulders, chest, elbows, palms, hips, heart and soul that bring forth the waves of enthrallment and announce the starriness of our spirit. So, the message is clear: dance, child,

²⁰¹⁹ Listen to Prefab Sprout’s Venus of the Soup Kitchen on From Langley Park to Memphis, Kitchenware (1988).

²⁰²⁰ Listen to the Rolling Stones’ Shake Your Hips on Exile on Main St., Rolling Stones (1972).

dance”, I passionately opined. “Yet, remember not to be overly absorbed within yourself, sending autistic signals that have no power to interact and communicate the beauty of your being to the world. But also, do not respond to other people’s cues in clichéd and predictable ways either. Instead, be in a state that is both feed-back and feed-forward. You need to be as ‘feed-back’ alert and reactive as the Zen master who was allegedly able not to let a fly resting on his shoulder fly away by exhibiting fine moves in the direction opposite to that of the fly’s thrust whenever it would push his skin tending to fly away. But we also need to be dreamy and meditative in order to find the ‘feed-forward’ incentives that bring the treasures of our lively spirit to the world and make us become that ‘self-rolling wheel, a first movement, a holy Yea’ that Friedrich Nietzsche raised to the stars. A charming, magical blend of shy, sheepish sweetness, having respect of others at its foundations, and of a determinate drive to overwhelm the beings of the world with the sunshine of our soul, living in harmony with the voice of our heart at its foundation, is thus produced. React, thus, with uniqueness and originality coming straight from the creative core of your heart, be not sewn into submission and say ‘the things you truly feel and not the words of one who kneels’²⁰²¹, and yet shed signs of reliability and trustworthiness, of the readiness to stay grounded at the foundations of love, to be a bird that will never leave her friend who happens not to have enough strength to fly south for the winter. And know that showing oneself off without keeping anything secret and carefully shrouded by a mantle of stars is as tremendously disastrous as staying fearfully shelled within oneself all of the time. One should balance being distant and mysterious, hiding a whole cosmos within oneself and radiantly sending forth the rays of love and joy, free of any inhibitions, right here, right now, in harmony with the magic of the moment”. With these words, I’ve done nothing but tossed around the precious pearls of wisdom upon which the secret of the Way of Love has been inscribed.

S.F.6.7. Leaping around the California Academy of Sciences and Arts on a dancing museum night, upon a diversely colored podium where butterflies flew and a forest floor was depicted, holding a map of Galapagos in front of us, Dulcie recognized a giraffe in the shape of its biggest island, Isabela, whereas I saw a seahorse. But noticing that, for a brief moment of a second, I was prompted to think of all the qualities of being silent and still as a stone amidst the roaring and crazily dancing crowd. I thought in an instant about the abstract world of atoms and molecules and a principle such as the Franck-Condon one, stating that the electronic transition to a higher energy state is most probable when the atom and its nucleus move least in relation to their environment. It was there to remind me that dancing is majestic, but dancing to a tune, like lip syncing to its lyrics, acts as a hindrance to an effective absorption of the tune’s spiritual energy and stands in the way of one’s using it to ascend to higher levels of consciousness. Rather, to achieve such excited states of mind, a perfect stillness of the latter, let alone of the body, is required²⁰²². Eventually, loving divinely can be imagined to be reserved for those who move least, for each movement can be said to stifle a little bit of the blaze of love burning inside a holy heart. This may be why Romeo, at the party at the Capulets, did not dance. “Give me the torch: I am not for this ambling; Being but heavy, I will bear the light”²⁰²³, so said he, perhaps to insinuate that the opening of the doors

of our spirit to the inflow of love is reserved for those who resist to sway with the waves of public commotion and would rather take a seat or a stand and dream, in perfect stillness. For, dreaming, it should never be forgotten, is dancing too, the dancing of the soul, whose proportions are far greater than those of our frail and fleeting figures. Seahorses, penguins, alligators and frogs that surrounded me in that instant on a magical museum night were enchanting with their immaculate immovableness, speaking tomes in favor of this benefit of stillness amidst the roariest of tumults. It was there and then that I realized that it is not only the art of flexibly and spontaneously moving that we could learn from animals. The art of perfectly relaxing and being as still as a placid sea is another art we could learn from the animate creatures that are our evolutionary predecessors. Intensively pondering, I found myself for those few seconds or so resembling one of those still penguins, churning thoughts inside of my head, while a blasting fiesta of cheerfulness and fun was going on around me. For that is me: sometimes you may find me squatted in the corner of a room, deeply swimming inside the sea of my own thoughts and memories, forging precious pearls of ideas, feelings and shiny aspirations, which I will later, through majestic dancing, acting and talking hand to others. Thus I claim that it is by intermittently being old and deeply ponderous, by carefully watching the flight of seagulls across the skies of the world and by patiently weaving the looms of thoughts in our mind that we can preserve our true youthfulness, the one that is not about the mere glossy physical appearance, but the one that makes our being a blast of childish beauty, a careless flight of true spirit, forever and ever shining to the world with an angelic vitality. It is either by withdrawing our entire self every once in a while into the meditative silence of the starry essence of our being or, like a dolphin, keeping one half of our brain in a dreamy, self-immersed state and another half wide awake that we can sustain our inner drives and creative potentials to endlessly and tirelessly deliver flowers of wonder and beauty with our happily leaping and playing at the surface of the ocean of being, being a starry train of cosmic joy that whistles with joy as it runs through the landscapes of the world. Enjoying this light discovery bouncing off the wallpapers of my mind, I continued to leap around the museum, like a butterfly, driven by the silent ties and anchors my heart was weaving and throwing all around me, mysteriously connecting me to things and signs of the world, ready to gaze in a starry fashion into tiny, but infinitely intricate details strewn all over the gorgeous museum scene that night.

S.F.6.8. And in acting in splendid and gracious ways, in living in harmony with the cosmic music of our hearts, make sure you do not forget to modestly and sanely listen to the heartbeats of other creatures. If you happen to do so, in interactions with others you may become like an intoxicated rock singer who carelessly rocks or softly floats in her own world, whereby the audience recognizes her diminished creative yield under that particular state of mind. When I mentioned the Latin roots of the word “amateur”, I skipped to mention a more problematic etymological parallel, stating how the word “dilettante” comes from Latin *dilectare*, meaning “to delight”, reminding me how all artists are in danger of being trapped into performing arts in which only they enjoy, the way it was pointed out by David Bowie²⁰²⁴, especially when we know that modern rock

²⁰²⁴ Listen to the amateurish singing of Linda Perry on What’s Up by 4 Non Blondes for an excellent example of indulging into oversinging due to falling into traps of enjoying the performance so much that tensions in the sound are not creatively sustained but uninspiringly dissipated, and then compare this with Marvin Gaye’s Ecology where the singer preserves the mesmerizing tension throughout the song, resisting to sing so as to maximize his own enjoyment only and rendering a timeless performance thereby. Other examples where an array of exceptional pieces in the oeuvre of artists becomes intercepted by mediocre works whose making brought the artists, first and foremost, enjoyment – when they could have been engaged in the laborious and draining process of creating truly valuable and lasting works – include R.E.M.’s Monster, Radiohead’s Hail to the Thief and Pin Ups by very David Bowie.

concerts provide perfect ways for the artist to avoid an intimate contact with the audience, even though he may be performing in front of thousands of glaring eyes. Or, as put into words by Jarvis Cocker of Pulp, as his response to the question why in the world he would ever want to become a pop star if he was so shy and shelled in the first place, “Because it’s a way of being sociable but at a safe distance”, adding a personally familiar example of how maddened his family, friends and dates are when he talks about most personal impressions in his songs, while “when I’m at home, I clam up and won’t discuss anything intimate or personal”²⁰²⁵. Yet, “it must be unhealthy if you only express yourself in that area and you don’t express yourself in your real life”, as Jarvis further observed, convincing us that if we fail to find an intimate connection with each and every pair of human eyes that lands its rays of attention and spaceships of emotions onto us, warming other people’s hearts in mysterious ways by looking at the world from their angles and delivering our acts to make their worldviews utterly beautiful first and foremost, whatever we perform will not live up to its full enlightening potentials. Hence, for a performance to be truly gorgeous, one has to give up on a full, selfish enjoyment and substitute parts of it with a dose of selfless acting. If the plummeting of creativity and humane qualities of drug addicts speaks in favor of something, it is that excessive pleasures found while roaming along the splendid territories of one’s own mind, without sacrificing these internal satisfactions with empathic reaching out to ornament the surrounding spirits with diamonds and pearls that one’s inner world glows with, predispose one to nothing but a grand spiritual downfall. This agrees with the following string of thought of the Russian filmmaker, Andrei Tarkovsky: “I am starting to believe that my art is possible only insofar as it does not express myself only and if it accumulates within itself what I can capture by communicating with people. Art becomes sinful as soon as I start to use it for a self-interest. And it is most important that I cease to be interesting to myself. Perhaps from this starts my love for myself”²⁰²⁶. These thoughts, themselves, aired under the dome of the church of Saint James on Piccadilly in the summer of 1985, bounce off the mirror of a prior thought by Samuel Johnson: “Happiness cannot be achieved through self-observation; it is experienced only when it reflects off another person”²⁰²⁷. Or, “just as a diamond can only be polished by another diamond, it is only through genuine, all-out engagement with others that people can polish their character, and help each other to reach greater heights”, as Daisaku Ikeda pointed out, reiterating the point that compassionate living for others is in the long run vital for refining and sustaining the inner beauties of our being, lest we remain spiritually raw and psychopathically isolated from the cosmic symphony composed of countless human heartbeats within the solipsistic bubble of our own self. Being in an intimate touch with our inner world is essential for the sake of remaining to literally be ourselves and avoid falling into reigns of passivity and submission to other people’s ideals and expectations. On the other hand, we should be sure that this inner bliss which we may occasionally find ourselves dwelling in will soon be dissipated if we only neglect the call to “get it before you let it get to you”²⁰²⁸ and fail to timely reach out to others and try our best to wash them with these sunrays of the sun of our spirit, selflessly and stylishly. While resting on the balance of the Way of Love, a part of our being indeed listens to our innate self, whereas the other part will always run

to satisfy the spiritual thirsts of others. As if one eye of our mind is looking inwards and throwing precious rays of light so as to burn the essence of our spirit and produce the fire of love and creativity, and another eye is blessing the world outside with sending beautifying rays of our attention thereto. Thus our mind and heart become like those of the Christ, crucified between insides and outsides, between living in concert with the paths our hearts drawn from the inside and a great desire to feed thirsty beings of the world, to show them the way while being observant with respect to their wishes and worldviews. For, “when you make the inner like the outer and the outer like the inner... then you will enter the kingdom”, as Jesus prophesied (Thomas 22). Or, as the prayer Socrates sent into the air as he was about to engage himself in an attempt to verbalize the greatness of the cosmic power of Love goes, “Beloved Pan, and whatever other gods be present, grant me to be handsome in inward soul, and that the outside and the inside be one”²⁰²⁹. A clear consequence of this incessant struggle to balance things, like a clown juggling balls while riding a monocycle, is that we never can become perfectly satisfied with our achievements. And that mild dissatisfaction is not the one of blindly marching ambitions that will eat us from the inside. It is the one that underlies every true profound sense of satisfaction in this life, driving us to strive to be ever more productive and efficient in our attempts to beautify the world. And while balancing balances and imbalances, satisfaction and dissatisfaction, one day, without even recognizing that we were close, we would miraculously find out that we have reached our aim. In fact, we may suddenly realize that we have always been there. Which is why the coolest and the subtlest insight derivable from watching *My Dinner with Andre* is how Wallace Shawn arrived at the dinner as a shattered soul, questioning on the way to the restaurant his place in the city he had called his own, but then, towards the end of it, following Andre’s profoundly spiritual storytelling, whereby Andre never assumed the role of a guru nor wished to prove himself right and atheistic, spiritless Wallace wrong, he was brought to conclusion that he would never want to change his life, announcing its being just the way it ought to be and feeling during the ride back home as if past, present and future blended into one and all is once again at the right place. With absolutely no desire to change Wallace’s prosaic worldviews and not even a smallest bit of anger due to Wallace’s dismissing his spiritual perspective as nonsensical, Andre Gregory brought a lost soul back home, at least for a short period of time. Indeed, brethren, how to blink and make another feel at home has thus stood as the greatest art to be learned and mission to be accomplished before my starry self. And as in this landmark celebration of a sense of satisfaction achieved as the result of shoving every goal and ambition out the door and establishing a full presence of the mind in the present moment, which, by the way, arose from a clear sense of dissatisfaction on behalf of their authors, Wallace and Andre, with the state of the art in which theater and movies had found themselves on that day, proving that one lies in the heart of another and *vice versa*, if the choice falls on leaving the place after this enlightening blink as a savior or a fool in another’s eyes, allow me the latter and I’d know that all lights of the heavens will illuminate my path, the path that disappears into the Sunset once again.

S.F.6.9. For years I had sought the right balance between firmness and flexibility in my facial and bodily expressions. Suddenly, I realized that the key lay in a smile. A genuine smile is what shines forth with a perfect interplay between stony determinateness and watery softness. When its impulse reaches the rest of the body, a microcosmic smile, the one that enlightens our entire physical aura, gets pulled off, naturally, and in those moments we may know that the secret to its

²⁰²⁹ See Plato’s *Phaedrus* translated by Benjamin Jowett; retrieved from classics.mit.edu/Plato/phaedrus.html (370 BC).

evocation lies in dancing, in gently flowing movements that accompany every static posture or monotonous action. And since our body is a sensory-motor whole wherein physical and psychological impulses are inextricably entwined within a cybernetic feedback loop of a kind, we should keep in mind that just as happiness naturally tends to evoke sunshiny smiles and make them wash over our heart and entire body, microcosmic smiles drawn on our faces and gestures can equally open the gates for the inflow of a cheerful bliss straight into the rooms of our heart. Hence, “we listen to music with our muscles”, Friedrich Nietzsche observed once in the light of an insight that aside from being perceptual, reflective and emotional, complete cognition is motoric too²⁰³⁰. An unrepeatable dance of our bodies and thoughts should thus follow the stream of perceptual and inherently musical impressions that dawn on us with each new moment of our existence. Hence, finding yourself dancing, whenever you begin to feel that your movements are on the verge of becoming boringly repetitive and that their spontaneous flow is on the horizon, I advise you to uproot these habitual seeds that have started to sprout within yourself, break the law of regularity that thence takes over your movements and to which you have begun to passively conform, surprise your very body and mind by pulling off a completely unexpected move and when it, itself, starts to lead to some other routine and predictable way of dancingly expressing yourself, disrupt it again with a novel and unanticipated move, and so over and over again. This advice brings us over to the essential principle behind the dancing school of Merce Cunningham, according to which every habitual and repetitive impulse should be arrested and counteracted with a self-contradicting novelty. Faithful application of this principle that goes against all principles is meant to result in an infinitely imaginative, all but tediously repetitive eurhythmic flow of moves, a complete opposite from the type of dancing that dominates the modern dance floors for the masses. Just like blabbering empty words places an obtuse veil upon the shine of our spirit, hiding it from the view instead of revealing it, clichéd, repetitive moves on the dance floor belong to the same category of socially imposed behavioral traits that neither foster nor facilitate, but hinder the emergence of the shine of divine creativity from the core of our being to the surface. Both in verbal communications and gestural, dancing ones, therefore, breaking the partly conformist, partly habitual flow of these ordinary patterns of expression stands forth as the only means of illuminating the creative core of our being with the meditative focus of our awareness, anchoring our attention therein and starting to continuously dig inspiring moves straight from it. In this spirit, one of Merce’s choreographic pieces, Variations V²⁰³¹, fully reverses the relationship between the music and the dancers, from the common one where the dancers inertly wave and swing to the rhythm of the music and are thus essentially enslaved by it to the one where the stage was wired with photoelectric sensors which produced sounds as the dancers, immersed in their own inner worlds, swept past them, clearly alluding to the message that the music to which divine dancers ought to be dancing is within the dancer rather than outside of it. This may explain why amidst thousands of people swaying to the hypnotic rhythm of a Malian band²⁰³², lamely and repetitiously, serving as living proofs of how conformism drowns human spirit in the swamps of monotony, I pinpointed a tall pine whose tops were gently waving in the summer air, untouched by the norms and expectations of the surrounding clique, immersed in the river of Tao blissfully flowing through it and never repeating itself from one sway to another, claiming that it was the best dancer in the whole Stern Grove forest on that

²⁰³² This insight was arrived at during the concert of *AfroCubism* in Stern Grove forest in San Francisco on July, 10, 2011.

day. In a matter of seconds, this gorgeous evergreen tree, dancing like the sunrays on the surface of the sea, infinitely subtly and yet with an endless liveliness, brought to mind the words of Hermann Hesse, “Trees have always been the most penetrating preachers”²⁰³³, and his story I had admired as a teenager, in which a boy is granted a wish to turn into a tree and yet after a while he begins to crave to conjoin with a girl that fell in love with it, demonstrating that one indeed ought to follow one’s inner bliss, independently of social expectations and directions, and yet to be able to act in empathic accord with the hearts swirling like stars around one. For, of course, dancing in harmony with the Way of Love with its balance between meditatively pulling off deliberate moves from the inner core of our being and empathically letting our body rejoice with the waves of music on which our body floats and letting it be spontaneously reflected in our moves and gestures, adopts a middle ground between these two extreme perspectives. In any case, one of the purposes of raising awareness to the inner beat to which we, as dancers on the stage of life, should be dancing with every breath of ours is to “develop flexibility in the mind as well as in the body”²⁰³⁴ and save us from falling into the abysses of dreadfully clichéd repetitive dancing or any other form of expressing ourselves. If you have ever watched a 4-year old girl dance in front of you, you could have witnessed her constantly seeking for new moves, ceaselessly introducing something surprising into her repertoire of body shaking and gliding through space, clearly indicating that tediously repetitive and most of the time unpleasantly awkward swaying to music of grownups may be merely a degenerate self-conscious form of the most natural way of dancing that is spotlessly spontaneous, self-discovering and emotionally enthralling. Repetitive dancing, as such, is suggestive of nothing other but mental illnesses involving fixed thoughts that over and over again appear on the screen of one’s mind, or of debilitating, robotic and essentially bugged behavior. On the other hand, the dancing style based on incessant rejuvenation of our dancing impulses, of never repeating a single move or sequence of moves twice, is an epitome of the evolution of anything in life, which always crucially depends on our ability to timely break the laws of monotonous regularity and habitualness and produce inspiring novelties thereby. Of course, even repetitive moves, such as consecutive identical pirouettes, could be freely made at special moments in accord with this perspective, as breaking all the rules implies breaking every once in a while even the rule that says that all rules are to be broken and that we should never repeat ourselves under any circumstances. Still, such unexpected repetitions woven into a self-transformational flow of movements where reoccurrences of their sequence are strictly prohibited normally shine forth with an extensive powerfulness and moving capacity as they secretly embody one’s bravery to go against the stream by following the stream, so to say, the symbolism of which is as beautiful as that finding ultimate freedom in sacrifice of the very freedom and voluntarily entering the bonds of affectionateness and self-sacrificial love. This is, however, only a more elevated perspective on the issue at hand that does not disapprove, but rather solidifies the statement saying that something innovative needs to be ceaselessly instilled within every repetitive action of ours if we are to embody genuine naturalness in our performances, similar to what jazz musicians manage to do by introducing improvisations into each one of the melodies they play. And smiles, sincere and heartfelt, lighting up the lampions of sympathy in celestial crowns that hang over our heads, are just another form of dancing, involving the facial muscles, the finest ones in our body and the ones that subtly carry tremendous amount of information in our daily

communications. In fact, as pointed out by Karla in Douglas Coupland's *Microserfs*, a portrait of the marriage of faint spirituality and transparent superficiality that typifies SF Bay Area, the course of which has run from prosaic boredom to a light-beam-projecting-high-in-the-sky prayer at sundown, with hearts dangling by a Californian swimming pool, "Bodies are like diskettes with tags. You click on them and you can see the size and type of file immediately. On people, this labeling occurs on the face"²⁰³⁵. Sufis would have nodded their sunny heads in agreement with this insight, knowing that "their signs are in their faces"²⁰³⁶ (Al-Fath 48:29). Sunnis, in turn, according to Rumi²⁰³⁷, have interpreted the words from the book of Qur'an that ascribed God-given "speech unto all things" (Fussilat 41:21) in the light of the necessity to read the signs drawn by every segment of human bodies and not merely rest on the meanings of words dropped in communication, nowadays known to account for a minor part of the overall semantic content of the latter, the largest part of which derives from body language and the music of the voice. On the judgment day, they claimed²⁰³⁸, human hands and glances will speak to the angels and goddesses as palpably as the tongue will, and in order to awaken this sublime, seraphic perception in us, we ought to learn the art of reading physical moves as dedicatedly as we read the written word, the skill that the right hemisphere of our brains, ceaselessly interpreting body actions and thus complementing the left, mainly verbal hemisphere of ours, is already equipped with. On one side, this insight that attributes anamnestic traits to all cells in our bodies, each one of which is meant to be seen as a star in itself, according to Dr. Dana²⁰³⁹ who had a blessing chance of exploring and excavating the stellar space of my Mom's brain wherein galaxies spun in ecstasy and stars twinkled with sympathy, can be a good starting point for the revolutionary revitalizations of the bodies of all of us who have come to think that their purpose is only to home and carry our brains from one place to another. On the other side, Karla's insight stands forth as a reminder of how enormously much our finest facial muscles that, quietly and subtly, either joyfully dance in synchrony or stand still in sadness reflect the fine shimmers of the world hidden within.

S.F.6.10. In finest detail I studied body expressions and signs that could be used to read intentions and feelings behind them. However, what I realized after I had analyzed all that had been there to be analyzed was that every static posture has some negative connotation to it. Whatever the pose we strike, it can always be read as flawed and phony. Let alone that the constant flow of contexts that loom over these static expressions sooner or later makes them unseemly and out of place. Thence, the secret of genuine expressions lies in an incessant flow thereof, which is, in fact, dancing. Only through dancing do we get to exhibit the infinite, divine joyfulness that our true self shines with. Hence, I have no doubts that the future of communication lies in dancing. Places to work, to live and commute in the future will be the new dance floors. We will dance our way throughout the day, from the morning to the starry night. As I think of this, it makes me want to jump wildly, like Moby on the cover of *Play*, which is, by the way, what I often do when the magic blanket of stars suddenly unfolds over my eyes, all so as to give an impetus to the cosmic wheel of divine being and transform the scene, be it day or night, from that of awkward gawks and stiff posies to a collective prayer in movement and a praise to this magical Cosmos through dancing,

dancing, dancing. Note how a step higher on the ladder of emanation of the systemic knowledge will this phase transition in the domain of human behavior correspond to, as the contemporary obsession with the preservation of the balance in terms of upright and uptight postures would then vanish and every balanced state of body and mind would be succeeded by a deliberate fall out of balance and a return back the balanced state, only to be entailed by yet another fall to rise and a rise to fall, and so forth, as we will dancingly move across the starlit dance floors that the pavements of the future, markedly more authentic SF cities will be. The extent to which the simple act of walking as we do, strangely taken for granted as God-given and unchangeable, stiffly and uprightly, makes us inherently miserable is hardly noticeable by any of us since we rarely ever step out of it to observe it from a new angle; rather, for most of us, it will stay locked in the blind spot of our awareness for as long as we are alive. One of the elementary exercise that Eugenio Barba, the famous acting instructor, insisted on was thus in the freeness of freefalling from the state of stiff balance that our bodies occupy in their typical standing positions. What he presumably wished to convey was that the only way to rise in splendor and celestial beauty with our acts is to rise to fall to rise to fall and so on and on, highlighting thereby the ultimate systemic balance: the balance between balance and imbalance. Or, as Eugenio Barba, himself, noted, “This deformation of daily body technique of walking (moving through space and keeping the body immobile) is essentially based on an alteration of balance; its purpose is to create a condition of permanently unstable balance”²⁰⁴⁰. On the other hand, of course, “you can’t talk about movement unless you have equilibrium; you must know about the horizontal to undertake being vertical”²⁰⁴¹, as another renowned acting teacher, Jacques Lecoq, pointed out, drawing our attention to symmetry, order and equilibrium from which each constructive move originates and into which it eventually returns. This balance between the states of balance and unbalance is, after all, intrinsic to the very act of walking too; for, only insofar as we lose the static balance by moving a foot forward can we advance towards our walking destinations. Likewise, whatever the line along which we try to progress in life, we ought to know that obsessively preserving the state of equilibrium right after it was reached would be analogous to our giving in to permanent stagnation. Similarly, if we wish to continue moving towards ever more glorious stages in the evolution of the aesthetics of expression of our beings, we should fall when we stand and stand when we fall, jiggle and wiggle incessantly: in other words, dance as we cover any distance - mental or physical - from point A to point B. Moreover, the type of dancing that I envisage, which the enlightened creatures of the future will engage in from the early morning to the bedtime, waking up to it and falling to sleep with it as fluidly as Fred Astaire in *Top Hat*, will not be anywhere similar to the typical dancing seen on discotheque podiums today. A jazzy radio song sings about “the movers and the shakers”²⁰⁴², and should we disregard the regular connotation of this phrase, it could bring to mind a reflection of the dichotomy I conceived between those who mechanically and stiffly merely shake on the dance floor, producing eventually a similar, shaky and stressful effect on the world around, and those who move the very same world, deeply and profoundly, by magically finding the right, starry moves, as subtle and brilliant as they could be, and spontaneously invoking them at the right points in space and time. Whereas the dances of the former are composed of repetitive moves brought to the daylight of the reality by the power of one’s will rather than naturally and spontaneously, and even more stiffened by their self-conscious and socially ill wondering whether

they would satisfy expectations of others in their vicinity, the latter incessantly seek new moves, which then flow like a river, from one to the other, without ever repeating themselves, improvising and letting their inner world explode with some starry expressions that dazzle and bless the world around them, making it revolve and evolve like the blue planet that then glows in our eyes looking inward in graceful dreaminess and outward in charming sympathy, the planet that provides the dance floor that we are all meant to be tirelessly dancing upon, in each and every second of our lives.

S.F.6.11. In one of their songs, the Swedish post-punk band, Love is All thus invites us to “step right off the beat”²⁰⁴³, bringing to mind the legendary message from a Prefab Sprout song: “Life’s not complete till your hearts miss the beat”²⁰⁴⁴. For, the hypermodern dance, as I envisage it, will be based not on robotized shaking of our bodies to the beat provided from the outside, letting our limbs mechanically jerk in repeatable pulses, thus limiting the endless freedom of dancing movements and most often making our dancing a task rather than a pleasure. Instead, a dancer dancing with the harmony of the Way of Love enlightening his heart never forgets to involve his own feelings and the internal music as much as he sympathizes and unites his body and mind with the music that arrives to his ears. In such a way, music is let inspire us to dance, but once our hearts become filled with joyous stars of wonder and love, ready to burst in million pieces and shed stardust of enlightening expressions, it will be as if our spirit soars into space, engaging in never repeatable sequences of moves, which flow like a river and enchant the world around us. Hence, once again we arrived at a sign that points at the endless creative horizons that the guiding star of the Way of Love has taken us to: wonderful and enjoyable dancing as life. Should we stray from this balance, on the objectivistic side we would hit the waters of inert and passive slavery to the beat provided to us from the outside. We would thence become entrapped in the cages of convention, and the divine potencies that we were born with would gradually go to sleep. For, our lives would then be owned by mere habit, forced by fear and frustration to march mechanically along the well marked and paved roads, without ever creatively losing ourselves and the beat to which the whole social clockwork moves to explore the sideway sceneries. Like the stranded protagonists of Michelangelo Antonioni’s *L’avventura*, we would be predestined to arrive at feelings of pity²⁰⁴⁵ for each other as an ultimate emotional solace for our crumbling spirits, when they could have been elevated in cosmic joy and sprinkled as starry seeds of divine life all over the Earth. Like Ayn Rand, the mediocre thinker who claimed to have created the philosophical system in existence for millennia, the author of sayings such as “one should never live for the sake of another man”²⁰⁴⁶, “if any civilization is to survive, it is the morality of altruism that men have to reject”, and “contradictions do not exist”, and an exemplar of how devastatingly vulgar ethical systems naturally spring from philosophical niches that diverge from the middle ground between self-directed subjectivity and empathic objectivity, we would then find ourselves trying hard to balance this helplessly inert objectivistic floating with the mainstream of the creatively dead spirit of ours by pushing in the opposite direction: towards malign selfishness and sulky desolation.

²⁰⁴⁶ This is her summation of the essence of objectivist ethics. See Ayn Rand’s *The Virtue of Selfishness*, Signet, New York, NY (1964), and *Atlas Shrugged*, Dutton, New York, NY (1957).

Naturally, however, should we overly shift to the opposite extreme in our running away from the deadening forces of submissiveness and convention, we would find ourselves on equally devastating shores of solipsistic detachment from the nearby souls. On these solipsistic banks, we would face our blindness and ignorance of the wonderful signs that travel on the wings of the music of the world, music that resembles rivers that send the ships of our attention straight to our own heart, bringing many treasures of spiritual happiness to it.

S.F.6.12. This obligatory and, therefore, often awkward shaking of our limbs on the dance floor explains why I have always felt slightly queer about the whole concept of dancing in the discotheque. The idea that it ought to be the only place that we should limit our dancing efforts and moves to has never gotten into my head. To me, dancing is life, and in any enlightened culture, it should not be separated from day-to-day lives. A similar thing can be observed with people's exercising. Most of them confine themselves to gyms when hours of exercise come and then spend the rest of their daytime in lifeless postures. But for me, exercising should not be kept separated from daily activities, which explains why I adopt Yoga postures anywhere I can, roll my eyes in circles in company of other people, do pull ups on a tram, hopscotch in the middle of a business meeting, run my way from door to door during the working hours, leaping like a little happy animal and with eyes-wide-open, Bambi eyes looking at the world while soaking its impressions in their pools of soft melancholy and starry joy. Hence, dance in the open air, I say, dance as you jumpstart your day, dance your way to the work, dance in and on the trolley, provided you feel inspired to. Dance in an open supermarket during the day, spinning in circles together with a shopping cart, as in the video for Travis' Closer²⁰⁴⁷, or by night, with no one around, like the Little Tramp on rollerblades in Modern Times. Since planning where, when and how to dance goes against the grain of the idea of dancing as life, it explains why I have rarely felt perfectly comfortable dancing in a discotheque. The same feeling was undoubtedly shared by Isadora Duncan, a dancer born at the bottom of the Nob Hill²⁰⁴⁸, on top of which I sit and write these words, who felt that by confining ballet to theatres, dances, which were to be expressions of "the most moral, healthful and beautiful in art" were made too formal, unnatural and theatrical, deprived of expressional spontaneity that always calls for a dose of improvisation. Thus she offered the following harsh critique on the account of the choreographic establishment of her times: "The school of ballet today, vainly striving against the natural laws of gravitation of the natural will of the individual, and working in discord in its form and movement with the form and movement of nature, produces a sterile movement which gives no birth to future movements, but dies at it is made. The expression of the modern school of ballet, wherein each action is an end, and no movement, pose or rhythm is successive or can be made to evolve succeeding action, is an expression of degeneration, of living death"²⁰⁴⁹. She apparently understood that aiming for formal perfection means producing inherently infertile outcomes and that to yield an inspirational effect on the world our moves, or any other acts or deeds, should be mingled with elements of formless chaos. For, such inherent imperfections act as open arms which many human hearts will fall into, find solace in our art and be strongly inspired to continue creating along the same line of inspiring movement. Thence, what

this phenomenal dancer strived to attain was the ideal of life as a free expression of one's spirit through dancing. In the same spirit, if I feel inspired to dance, I will dance irrespective of the location or circumstances. However, if I feel more introspective at the moment, you could put me in the wildest dancing scene and I will appear as inanimate and tranquil as a quiet Buddha. For, even when we are as still and silent as a placid sea, we still dance, subtly and often imperceptibly; for, dancing and music are deeply engrained in life *per se*, or, as pointed out by St. Isidore of Seville, often called "the last scholar of the ancient world", "nothing exists without music; for the universe itself is said to have been framed by a kind of harmony of sounds, and the heaven itself revolves under the tomes of that harmony"²⁰⁵⁰. Since music is everywhere in us and around us, for as long as our hearts beat there will be something we could lean our supersensory, extraterrestrial ears to, grasp these incoming waves with our heart, turn them into dancing impulses and open our whole being into a "flower, showering love on the whole world"²⁰⁵¹, as was the impression Isadora Duncan used to leave on the spectators. However, just as institutionalization of any science or art inevitably gives rise to conformist spirits and thereby to diminishment of genuine creativity, so it happened with confining the art of dancing to theaters and, as for casual dancers, to discotheques. In view of this, it comes as no surprise that the modern dance scene pulls off trends and manners that I find terribly outdated, gauche and embryonic when placed side by side with the dancing visions I cherish. This brings to mind my waiting in the line to enter Mighty and dance the night away with Dulcinea, when I found myself uncomfortably sandwiched between two groups of people. When I asked those behind me how much the cover charge was, one of them looked down on me and loftily said, "Two hundred dollars", and never said anything else for the next 45 minutes we spent waiting in the line. Like their distant Germanic relatives who'd be whistling the Dresden amen and other aerial melodies to the ears of those over whom their leather boots would be stepping on seconds later, so is the world nowadays filled with the snooty spirits who'd die to declare their sublimity by bouncing into the airs off those who are busy struggling to pull their wings out of the worldly mud, it went through my head. As I kept my butterfly wings wound down, softly and with a loving melancholy looking at the lights surrounding me, thinking how the only way to make our eyes glossy with stars of wonder twinkling amidst the deep and tenderly palpitating pools of pure love is to incessantly see this starriness in the surrounding world, a person in front of me turned around and said: "Smile", but not in the way Charlie Chaplin said it in the *Modern Times*, with eyes overflowing with empathy and compassion, but rather with a mild antipathy and aversion. Iggy went downtown, "where the faces shine"²⁰⁵², because he wanted to escape the walls of architectonic insides and could happily scream, "No wall, no wall, no wall"²⁰⁵³, but how disappointed he would be to realize that under this open air dome of SF, right where Highway 101 enters the city veins of Van Ness and beyond, the way the needle shoots its content up into the bloodstream, the line of people was wall after wall, each a spirit with a whole fortress around it, boxed into a guard that no slogger would break. "Soul-corroding cynicism behind me and superficial phoniness in front of me. Where am I heading tonight", I thought, and reminded myself of the verses of a KT Tunstall's song: "This ball keeps rolling on, it's heading for the street, keep expecting you to send for me, the invitation never comes. Each time I turn around there's

²⁰⁵³ *Ibid.*

nothing there at all, so tell me why I feel like I'm up against a wall"²⁰⁵⁴. Imagining this ball, once embraced by the innocent child in us engaged in a carefree and sunshiny play, but now rolling towards the street, the space of danger and fear, filled with grownups, all of whom are made of millions of "who cares", surrounding our homey oasis for the soul, I was impelled to reckon how endless feelings and thoughts could be packed into a single verse by a little bit of imaginativeness and divinely intuitive inspiration. In this case, the longing for leisured childhood in the moments when the sense of it has begun to dissipate away in the adult world of carelessness, isolation and incessant strivings to be ever faster, stronger and better than another, all of which the road crowded with sinisterly looking cars threatening to run us over if we only run for the ball, the metaphorical subject of our sportive dreams, can represent, has been only a single one amongst multiple layers of feelings that the artist drew on the canvas of our consciousness. To be able to tell incredibly much through the commonest language conceivable, using ordinary words and not even a trace of farfetched pretentiousness, stood thence in front of me like an otherworldly graceful muse of thought, a living proof that poet can speak in "cloven tongues... as the Spirit gave him utterance" (Acts 2:3-4) and yet touch human hearts more profoundly than a myriad of scientist and psychologist with their overly sophisticated lingos. And then, in the middle of my flying on these clouds of thoughts, the door to this temple of devotion to permissive gods opened and I was let in. If someone could look deep into my eyes, he would see in them, like in the eyes of Jim Morrison, "the shadow of the guard receding"²⁰⁵⁵, signaling the opening of the heart and the beginning of a flow through space and time that no logic or reason can hold in their webs. Yet, in spite of the flights of fancy that the social butterfly in my engaged that night, the party was disappointing. Time to Pretend was all that there was in the air, as heralded by the feigned, airs-putting queuers from the entrance to the club. And to what extent pretense can hinder productive communication where petals of our hearts are to be opened and nourished with the nectar of love is neatly summed in the old saying of Navajo Indians: "You cannot wake the one who pretends to be sleeping". As it was one of the nights when I felt less in an expressive mood and more in an impressionist, *Clair de Lune* one, on the way back home I could imagine myself walking over the crescent moon, sleeping on its edge and being washed from the inside by its silvery light. In the end, it was alright. For, when I do not dance the night out from the outside, I do it from the inside. In those hours of darkness, it was my feelings, thoughts and glances that danced as if swimming through the mystical waters of wonder and love.

S.F.6.13. After all, dancing is about love and freedom, combined and inextricably entwined. It is letting the concealed potentials of ours to emerge to the surface of our being, ornamenting it with enchanting sparkles of starry beauty. By freely channeling these impulses that originate from the core of our spirit outwardly, merely looking at the resulting expressions and experiencing life through them makes us become strikingly aware of how beautiful expressions of life can be and how immense the potentials of our soul that then sends waves that wash up our body onto coasts of some genuinely novel expressions of our being are. Reflecting on our movements is inescapable if we are to move in the direction of becoming an ever more beautiful dancer, but eventually letting the core of our heart express itself in a spontaneous manner is the sun around which all the intellectual planets of thought are rotating during dancing. Dancing is thus releasing the inaudible

²⁰⁵⁴ Listen to KT Tunstall's False Alarm on Eye to the Telescope, Virgin (2004).

²⁰⁵⁵ "Tell them you came & saw & look'd into my eyes & saw the shadow of the guard receding. Thoughts in time & out of season. The Hitchhiker stood by the side of the road & levelled his thumb in the calm calculus of reason" is the last stanza of Jim Morrison's Paris Journal (1971), retrieved from <http://doors.eu.org/poezje/paris.html>.

and impalpable music of our heart to send its vibe from the center of our being to every part of our bodies, making them all move in harmony. And our ability to fully allow this inner vibe to penetrate every atom of our bodies, and be seen as radiating all around us is tied to our ability to topple down the dams of fear and uptightness resting in us. Many are ways that may lead one in the direction of crushing these internal dams. Some of them result in awakening a sense of dissatisfaction, but some of them result in a blissful sense of happiness. For example, I have heard many people advising those who overly reflect on their moves in a self-depreciating manner to “dance as if no one else is watching”, to “not listen to anybody else except your inner Lennon”²⁰⁵⁶, and, so to say, make sure that “we are to obey God rather than men” (Acts 5:29) on the dance floor. Hence also the smile of an angel leaning onto the musty wall of a Berlin rock concert hall and watching the performance behind the shoulder of a Japanese girl who sways to the inebriant sound waves and runs the following thought through her head: “The people aren’t watching; maybe Heaven is watching”²⁰⁵⁷. However, although this disconnectedness from the silent voices of the human hearts surrounding one may result in more sincere expressions of oneself, it surely does not present a perfect choice. Displayed chronically, it can be a prelude to the rise of sociopathic personality types that include executives exploiting employees with zero concern for their wellbeing, cruel throat-cutters devoid of any altruistic thoughts, narcissistic, “*ja pa ja*”²⁰⁵⁸ schmucks to whom a fellow human being is but a mirror to the view of their own self-worth, let alone mass murderers and other criminals. In fact, with this individualistic philosophy being more prevalent and some may even say constitutional in America, it explains why such psychopathologies are far more common in it than in the socialist countries where people pay more attention to “what others will say”. Therefore, the determination to dance as if no one else is watching, to walk down the street as if it is empty and to hold a lecture in an abandoned amphitheater resembles a relatively effective medicine against the malaises of conformity, but, like every medicine, it produces numerous undesired side effects. Put in the simplest terms, it is the way of reaching the fields of freedom on the account of diminishing the potential to love. But to isolate one’s mind from the world in order to attain freedom of expressions means not to be able to sustain the creativity behind the veils of that freedom for too long. For, an incessant openness of our minds and hearts to the world around us is required for sustaining our creativity as much as our closeness into the landscapes of feelings and memories of our inner world. Overly confining ourselves to inner contemplations and meditations without letting the nurtured sunshine of our soul send its blessing rays to the beings of the world can be equally damaging for the creativity of ours as constant openness with neglecting the importance of being creatively turned inwards, focusing and rearranging the inner blaze of love and inspiration. Hence, to dance perfectly we need to blend the attitude of perfect withdrawnness, that is, of dwelling deep within our hearts, as if no one else watches us, with a dose of openness and intimacy, of spreading our hands to the creatures around us and sending our glances as warmhearted sanctuaries for other people to catch and connect in mutual waves of floating inside the swimming pools of each other’s eyes. Dancing all alone, without being able to communicate with others through it is imperfect. But equally imperfect is submerging our attention into eyes of another so bluntly that we start blindly following her moves, being obsessed with satisfying her own expectations and desires, without letting the creative incentives arise from our heart and through the dancing moves produce spurs that in unique and

²⁰⁵⁸ A descriptive Serbian phrase meaning “I and then I”.

original ways beautify both her and other hearts beating on the dance floor and hidden, faraway, only distantly felt, beats of love that span the breadths of Cosmos populated with joyfully glistening stars.

S.F.6.14. The attitude of starry-natured modesty is the starting point for a perfect dance. But what is exactly this starry-natured modesty, you may ask. Well, it is precisely what the Way of Love teaches us to become. It is meditatively dwelling within the essence of our mind and heart, wherefrom through suggestive thoughts and cosmic mantras we build the shine of our spirit, turning our being into an endless field of stars. But such starriness is not the one that suffocates and casts shadows by its mountainous greatness over the surrounding beings. Instead, it lives so as to feed the beings of the world with the endless sources of beauty gleaming within us. And to succeed in that, a wise creature knows that thoroughly giving up on one's egotistic pride in any of its elements that like flashy arrows pierce our beings and silently destruct our celestial creativeness is required. This is what breaks apart all the dams that stand on the way of the shining waters of our creativity to reach the surface of our being from the starry essence of our heart. Hence, before I start dancing or engaging myself in any other performance, such as lecturing or playing at a concert, I know that two things are required. One is meditatively dwelling deep within the essence of my heart and enkindling the wondrous starriness within myself, and the other is letting go of all the guards I imposed on myself, altogether with any egotistic connections to my acts. So I sometimes get reminded of Bob Dylan's verses: "Princess on the steeple and all the pretty people, they are drinking, thinking that they got it made, exchanging all precious gifts, but you'd better take your diamond ring, you'd better pawn it babe. You used to be so amused with Napoleon in rags and the language that you used. Go to him now, he calls you, you can't refuse. When you've got nothing, you've got nothing to lose. You're invisible now, you got no secrets to conceal"²⁰⁵⁹. These are the verses upon the understanding of which we could slide in freedom of our expressions perfectly well. Throwing away our diamond rings and unlocking all the secrets within ourselves, knowing that the attachment to any wealth, material or spiritual, makes us unprepared to reveal our divinity to the world, is one step. But readily being a "Napoleon in rags" and speaking in a dreadful, broken language, carrying the starriness of our spirit hidden behind modest expressions that humiliate ourselves rather than ascend the power of our ego in eyes of others, is even a greater one. I have seen many people during discussions and various other forms of communication to send flashes of egotistic signs with the meaning of "do not go against of what I am saying; do not fight against my opinion". Such people are merely inviting other people to conform to their opinions. But it is weakness and fear of someone breaking the fake barricades of one's ego, and not a true, flexible and angelic strength of the flights of honesty over the gently flowing sea of love that is inherent in such a stance. This attitude is, furthermore, in the light of the dialectic evolution of the world, not the one that fosters prosperity of the world. For, if all of us were only nodding our heads and confirming each other's ideas and viewpoints, and no one was able and brave enough to stand up against them, no evolution would be possible. But to foster these evolutionary dialectical confrontations, it is not enough to be ready to jump up in a revolutionary style and bluntly tackle other people's ideas. It is equally required to be open and susceptible to other people's critiques, and to nurture an attitude that spontaneously invites others to offer the latter. Truly great personalities never yearn for people showing the signs of support for the things they do in life. They would more readily accept people disparage them rather than have them praise their works in an insincere and fake manner. And yet, truly great performers never let go of this

²⁰⁵⁹ Listen to Bob Dylan's Like a Rolling Stone on Highway 61 Revisited, Columbia (1965)

meditative submersion of their mind into the starry fields that their soul is composed of, even in the moments when they are not performing on the stage. As they walk, sit, answer simple questions, they pull out every tiny sound, word, move and act of theirs from this starry essence of their being. From such a state of mind, one's awareness that any subtle movement and sound one produces, albeit being a tiny, a tiniest one, can trigger an avalanche of beautiful insights in people's minds. A colossal focus onto the starry silence within is thus what typifies the mind of a great performer.

S.F.6.15. Recently, tapping in the dark, I came across a strange note on the edge of a timeworn staircase. It said "step by step, you will reach for the stars". When I told a mysterious girl at a party how my Grandma, just before the end of her life, sanely asked me when I would head over to the Moon, she softly looked at me and with a serious countenance, without even a piece of irony in her words and gestures, said, "Well, we are all going to become stars one day. Aren't we"? The other day I dreamt of having an impalpable crown placed on my head. "Why are you so smart", seconds later someone asked. "No, I am not smart. I am simply letting the history happen", I replied. In other words, I feel as if everything I do is done for a greater purpose than any personified ideal I could envisage in my mind. Thus, I let go. I plunge into the music of my being, become One with Nature, let my inner eye be washed with the blinding light of the spirit, and act. Thence, anything I do turns out to be at the right place. Verily, we should listen to the music of our minds and bodies more carefully and simply learn to follow it. If you come to believe that this music would make us blind to the wonders of the world and creatures around us, you are wrong. The Way of Love teaches us that the true meditative immersion of our mind deep inside of ourselves leads to opening up as much as to closing in. For, the pathways to encounter the essence of our own being inevitably lead through the hearts of others, and *vice versa*: if we desire to meet the essence of others, to reach oneness in empathy and compassion with them, we need to travel deep to the core of our own heart, to follow its beat and the guiding rhythm. In that sense, we are returned to the beginnings. Should we start from our own heart, we would be guided towards others, whereas moving in their direction would send us back to wonderful emotions and remembrances swirling within the geysers of our own heart and mind. Or, the other way around: should we start from running out to embrace others while being driven by loving emotions, it would eventually bring us closer to our own heart, making us see our self in a clearer light, and thus catapult us to become an ever greater star of spirit on the night sky of the world. Be that as it may, we should always listen to our heart, as the Shiva's-eye-opening Roxette song²⁰⁶⁰ whispered to me at the heartrending climax of the pre-teenage party at Hannah's, laying down the path for the future of reticence before my disheartened feet with a crystal-ball clarity and through a purplish hazy waterfall of tears cried over the breakup of a relationship that occurred in the landscape of my dreams only. Two decades later and I am standing on the ground floor of Genentech Hall at the UCSF Mission Bay Campus, before a research poster presented by a local grad student in the role of its official reviewer. We are casually chatting and as she was telling me not only that each cell in the body has a circadian rhythm installed in it (i.e., patterns of genetic activity shifting in cycles), but also that every day the circadian rhythm in the brain is reset by light-dark cycles, I felt as if I saw a light in her eye. A sensation of light in the eye sends the signal to the brain in the morning and thereby finely readjusts the clock of the daily music during which heartbeat rate, body temperature, sleepiness and secretion of hormones are regulated in a rhythmical fashion²⁰⁶¹. Yoo-

²⁰⁶⁰ Listen to Roxette's Listen to Your Heart on Look Sharp!, EMI, UK (1988).

hoo, I said in name of the fact that we are all made of music that pervades all levels of our being. Later I would learn from one of my colleagues at the UIC that the light of a right frequency shone into the eye of an epileptic could induce a seizure right away²⁰⁶², stamping proofs all over the *tabula rasa* of my summer afternoon head that the body and its environment are but a single, inseparable whole. From the vibrating superstrings to atoms to cells, everything is in a state of an unremitting dance. And just as the light entering the eye can reset the ticking of the inner biological clock of ours, wake us up or put us to sleep, the choice of music that we let reverberate along the walls of our mind and body has an immense effect on who we are, who we become and how healthy, beautiful and glistening our presence in the world will be. Therapy through music is, along with the therapies through love, dancing and cultivation of brilliant, inspiring thoughts and emotions, thus a thing of the future.

S.F.6.16. Someone has said that the secret of love lies in the touch. It is through hands that we feel the warmhearted glow of ours being emitted to the world. But we may all know that the difference between a static grip, a lame press, and a gentle, caressing touch is immense. It is the latter that is filled with grace of a feathered fairy, unlike the needy, rough, fearful or violent nature of the former. In order to maximize the amount of impressions absorbed by our touching and enlarge the glow of the rays of love sent out through our hands, we need to dancingly touch, to gently and meditatively, inwardly focused, play with our touches, to fondle and pamper in a light but also energetic manner. After all, what rose primates above any other life form on the planet was neither the physical strength and endurance of dinosaurs, nor the dexterity of cats, nor the lightness of birds, nor the ultrafine adaptive capacities of microorganisms, but the ability to touch and grasp objects with an extraordinary precision. Increasing sensitization of our touch can thus be extrapolated as corresponding to our continued evolution as the most advanced species on Earth. We are now left to only dream of the direction this diversification of impulses spreadable via our touching will take us to. As musical virtuosos demonstrate, we could turn our sense of touch into a source of touching other people's hearts by artistic means, while as the Christ and many other religious healers have shown us, the remedial effect of touch is beyond doubt. A prime exercise that the acting instructor, Viola Spolin, advised her students to perform as a part of her theater games with the aim to restore the feel of their bodies as wholes and rediscover the sense of being present right here, right now, in the eye of the moment²⁰⁶³, wherefrom moves akin to hurricanes that awe the watchers with their power to move are free to originate, was the so-called Space Walk²⁰⁶⁴, whereby one would gently graze the objects of one's surrounding as if encountering them for the very first time, exploratory, with a primordial sense of wonder, being all the while aware that "the tree seen as a tree is no longer the tree", as she, herself, loved to put it and I

²⁰⁶² Jeffrey A. Loeb, Professor and Head of the Department of Neurology and Rehabilitation, University of Illinois at Chicago, Personal Correspondence (January 31, 2014).

²⁰⁶³ This is what one of Viola Spolin's poems, Crystal Ball, has to say about finding this meditative moment of Now, from which magically creative moves spontaneously emerge: "To the witch she did go to find out what the future holds and to the seeker the following was told: Present time you must find and within it dwell, for in there is the key that opens the door to the great mystery and the future you will see. But hark! If in present time you cannot dwell, you'll have no future to foretell. Trapped in the past you'll always be. So she went forth to dwell in present time. But alas! Present time like the divine is most difficult to find". From Viola Spolin's Theater Games for the Lone Actor, Northwestern University Press, Evanston, IL (2001).

²⁰⁶⁴ See Viola Spolin's Theater Games for the Lone Actor, Northwestern University Press, Evanston, IL (2001).

paraphrase²⁰⁶⁵. For, touch is inescapably connected to intimacy, while intimacy is the grounds of empathy, and empathy is the beginning and the end of all the expressional beauty, in word or movement, in this world. Henceforth, whenever I feel slightly alienated from the world, I start bouncing off the walls of an elevator I am riding in, hugging trees and smooching my face up against their rugged bark, nuzzling and smooching the shop windows, rolling myself on the ground, and with light sensuality touching many, many things in my surrounding. In sign of sympathy with the surrounding world, each detail of which enlightened eyes see as palpitating with a divine radiance, I regularly brush my body against it as I walk. Every second or so, I lightly graze objects by which I pass with my hips, shoulders, arms or legs, if not lightly stroking them for prolonged periods of time. Like the waves of the sea of Solaris, these pulsations of Nature greet us from each detail of reality, making indeed ten steps towards us for each step we make to Her, softly enfolding and twining around us, without ever blatantly touching us and revealing Her presence, making sure that divinity always remains mysterious and hidden, like hearts of all the most beautiful things in life. Despite that, when our heart is golden, everything we touch will be turned into gold, similarly to what a character from Greek mythology, Midas, could do. A single light stroke of someone's hair with the glaring sun of love and the twinkly stars of wonder illuminating our heart and mind is thus enough to transmit incredibly powerful healing waves that penetrate each cell of another's being, harmonizing all the tiny disruptions that they come across. A reflection of this healing art of patting others as if they are pets of a kind I found in the title of one of the records of my lifetime, *Pet Sounds*. Having mastered it, I have repeatedly claimed that I should have opened a small business where people would come just to be fondled. Whenever I do this to Fido, I feel as if it turns out to be a meditative experience for me, while it has a calming and relaxing effect on him²⁰⁶⁶. I approach it with the same mindset as the one with which I approach my guitar: a silence in my mind, as if a giant ball of light has been lit behind my forehead and between my eyes, turning everything around me into a great One. From that sense of unity, almost as if guided by the words of *Tabula Smaragdina* - "As all things have been arose from one by ye meditation of one: so all things have their birth from this one thing by adaptation"²⁰⁶⁷ - my actions are brought to reality. I never intend to have a full control over them. I am only acting as a tool, a channel, through which the divine messages are conveyed. Hence, it sometimes feels as if rivers of the music divine come in waves from the Heavens above and enter my heart. Having been modulated there by travelling in-between the ethical and aesthetical pillars of the foundations of my worldviews, they reemerge carrying a unique blend of the subjective and the heavenly. For, as

²⁰⁶⁵ "The tree was a tree before you could see a tree" was the original Viola Spolin's saying. From: *Viola Spolin's Improvisation for the Theater: A Handbook of Teaching and Directing Techniques*, Northwestern University Press, Evanston, IL (1963).

²⁰⁶⁶ Over time, I realized that the entire *Way of Love*, the philosophy I have explicated on hundreds of pages of this and other books of mine lay dormant in this simple act of patting Fido, as illuminating and blessing as it can be. Namely, withdrawn deep inside of myself in meditative unison with the glowing ball of grand One, letting my moves spontaneously drop like teardrops of a blissful, heavenly rain onto his carrot hair, and yet having my entire being devotedly oriented towards delivering spurs of enlightenment in terms of fine strokes, little and unnoticeable, but endlessly powerful, opening ways of salvation and happiness in front of him and the entire world and all of its sad creatures alike, I incarnated exactly the mind which is simultaneously focused inward in meditation and outwards in empathy and that, as such, stands on the thin line of balance that I have named the *Way of Love*. After all, what provides the basis for lifelong teachings of ours most of the time springs from the fountains of infinitely small and beautiful insights, and the same is with the *Way of Love* that sprouted from this little event, the memories of which may embrace my entire lifetime with the wings of its magical beauty.

²⁰⁶⁷ See *Hermes Trismegistus' Tabula Smaragdina* (ca. 3000 BC), translated by Isaac Newton, retrieved from http://en.wikipedia.org/wiki/Emerald_Tablet.

the co-creational thesis tells us, all things around us, all that we are aware of in the domain of our experience is the product of entwinement, of the dialogue between the way Nature *per se* is and the way we, in the current stage of the evolution of our spirits, are. But I also know that my mind, using the tools of logic and rational thinking, has to present one pole of creative being, whereby the other pole is a pure, well focused and attuned intuition that lets Nature and God speak through us. This is what is verily immanent in every part of a masterful dancer's body: control, order and integrity balanced with freedom, flexibility and an energetic spiritedness of a bird that flies inside, moving the mountains of muscles and bones, as if wanting to break down the walls imposed by flesh and blood and jump out of one's skin. While dancing, all and even the tiniest parts of our body, from fingers to shoulders to hips and knees, need to demonstrate the blend of a milky flow and a powerful integrity. Only through such a balance could the healing energy of dancing be made to stream all over our body, producing waves of blissful excitement that wash the surrounding beings of the world with the feeling of healing sea waters and seashells and pearls glistening under the moonlight.

S.F.6.17. On a bench across the street from the Yugoslav Drama Theatre, while it was still lying in ruins from the fire it had caught in the late 1990s, Marija and I sat, facing each other, when she said: "Clap your hands together with me". She started off with a really slow but gradually increasing tempo, which I tried to follow. At first I could not clap my hands simultaneously with her, but as she began to clap a bit faster, I finally recognized the beat and began to clap in synchrony with her handclaps, turning my frustration into relief. In that instant, like a bolt of lightning, the tanka verses from the book of Ten Thousand Leaves, the oldest collection of Japanese poetry²⁰⁶⁸, passed through my head like a fast train, "A faint clap of thunder, clouded skies, perhaps rain comes, if so, will you stay here with me? A faint clap of thunder, even in rain comes not, I will stay here together with you"²⁰⁶⁹; for, this synchrony in clapping brought about a sense of connection, of trust, of microcommunion between the clappers. "This is what the beat in music is all about: invoking a sense of togetherness through the collective recognition of the beat", Marija intercepted the clapping with her explanation and woke me up from this momentary daydream. By the bye, this explains why various "group clap" exercises are routinely used in musical theatres all over the world to establish a sense of unity by increasing the level of mutual respect and trust. Another popular means to boost the feeling of interconnectedness among actors on stage is to engage them in the so-called "making a machine" exercise whereby one by one, sequentially, the actors begin to perform improvised repetitive movements, eventually yielding a harmonious "machine" composed of mechanical moves²⁰⁷⁰. Exactly due to the rhythmic nature intrinsic to this machine of human bodies in motion, the spirit of unison among each of its components is being given rise to. Beat is thus an essential component of life, which, as such, becomes an ultimate musical experience, the one that the music heard, composed and played by humans merely tries to mimic, resonate with and enrich. Next time a Western musical purist accuses pop music of shallowness because of its overly pronounced beat and clichéd repetition of verses and choruses, lean your ears onto his heart and tell him about this meaning of the beat for the connectivity and

integrity of the elements of life, if not comparing song stanzas with the traversals of the same routes over and over again²⁰⁷¹, though each time in a slightly different way and with a slightly different view of things, just as it happens in our day to day lives. From this line of reasoning, it also comes as no surprise that music with a strongly emphasized beat originated in Africa where the sense of tribal belonging was primarily meant to be conveyed through music. Pop tunes, all of which comprise a constant beat interwoven within them, are thus also endowed with periodicity, that is, they possess repetitions intrinsic to them, which naturally makes the listener feel safe, as they secretly convey a sense that everything that is here right now will repeat, and there is no need to worry about the evanescence of things at that particular moment. As the beat goes on and we let the clockwork of our mind harmonize with it, we are also left to think how since every music is underlain by one form of rhythm or another, be it a primitive beat or, more complexly, repetitive melodic structures, it could always be seen as implicitly spurring a sense of sympathy deep inside of us. Even the most intimidating music conceivable, stripped off of its daunting elements, could thus be appreciated and savored in light of its ability to foster a sense of communion and thus be essentially positive, regardless of all else. Furthermore, as the blind spot effect instructs us, wandering off the road we follow in life is an essential method for getting to know its essence and thus eventually increase our appreciation thereof, when compared to blindly and inertly walking on it without ever stepping off its trail so as to look at it from new angles. Correspondingly, when coupled with interplay between stressful dissonances that symbolize straying into unknown and relaxing consonances that stand for happy returns home, the sense of belonging conveyed by the rhythm is even more reinforced. The attempts to discard these rhythmical patterns along with the standard tonal reliance on consonances by the serial musicians of the 20th Century cannot be said to have been welcomingly received by the world, primarily because such music could not have been made a home for human hearts; or, as pointed out by Anton Webern, an atonal composer himself: “As we gradually gave up tonality, there came the idea: we don’t want to repeat, something new must come all the time! It’s obvious that this doesn’t work, as it destroys comprehensibility”²⁰⁷². Now, keep on clapping your hands or snapping your fingers in a rhythm as constant as you can get. No matter how proficient you may become in this, you will never reach the perfection of a computerized metronome. But whatever comes out of your snapping will be eventually more inspiring to listen to than the perfectly precise and repetitive, preprogrammed and overly processed, inhumanly played beats. And although there are musical programs that enable randomization of a computerized play (recall that this copying of sequences of keyframes with a dose of unrepeatability is also essential for making the moves of characters and objects in videogames more natural) so as to resemble a human, imperfect one, keep in mind that computers have no way of producing random sequences of numbers. A computer cannot produce a natural hum, a white noise that typifies the music of biological creatures in all of their aspects, without being plugged to a living system or Nature itself and using them as partial inputs. Hence, although I recall how enjoyable it was to spend a night with my friends in a summer camp on Jaz beach, in the midst of a St. Elijah thunderstorm and power outage, and - somewhat similar to Damon Albarn who had fun “in hotel cells listening to dial tones”²⁰⁷³, to my children dancing many years later to the repetitious scratch at the end of a record on the Victrola in a room on the second

floor of Dr. Fred's mansion²⁰⁷⁴ like there's no tomorrow, more sweetly and hilariously than to any conventional tune I could remember, or to myself browsing in a car through the bleak, insipidly commercialized music on the Orange County radio stations, the mirror of the collective prostitution of the American society, enslaved by the power of the \$, before, in a sign of protest, opting for sheer hum, for out-of-tune white noise to fill the cabin, in the face of Zak McKracken's alien mindbenders²⁰⁷⁵ and in memory of what my fellow anti-capitalist, Thom Yorke said OK Computer was about: the fridge buzz²⁰⁷⁶ - listen to the constant beeping AM signal on the radio sent for boats lost at sea (with someone forgetting to shut the tent window, which ended up in our sleeping plunged in rainwater and mine incessantly pulling out cans and pullovers from the surrounding bags and backpacks during the night so as to elevate my body from the waters underneath), the sound more monotonous than Kraftwerk's Geiger Counter, the opening tune from my favorite record of theirs, Radioactivity, but which Marjan, for whom the memory of the rain was the memory of a crumbling soggy edge of the wall-sized painting he had worked on for years, would soon, through his deejaying mastery of the moment, subject to manual frequency variations and transmute into a deliriously danceable beat to our unstoppably partying crew crammed in a canary yellow tent gradually caving in under the weight of this cloudburst, I would always pick an imperfect, humanly derived beat over a perfect, metronomic one for listening. In my head I would always be able to dream of a person enlightening the whole Universe with just about the right beat played with the tip of his finger, the beat permeated with inaudibly subtle divergences from its perfectly precise counterpart and tuned to the spirit of the moment, the possibility for which would be equal to none had he resorted to the use of a drum machine preprogrammed to continuously reproduce a metronomic beat in space and time. The timeless magic of the Beach Boys' Pet Sounds may be thus, for example, inherently tied to the band's usage of rhythmical punctuation via irregular breaks in tempo²⁰⁷⁷ all throughout the record. Mr. Tambourine Man's earning the title of Bob Dylan's "first great song"²⁰⁷⁸ by historians of the art of muses, a.k.a. music, was, likewise, largely owing to its "losing the rhythm" all throughout the song, as an unsatisfied fan of his noted after his concert in Newcastle in May 1966²⁰⁷⁹. Dylan found the inspiration for this arrhythmic signing in the free metrical verse of Arthur Rimbaud and in the prosodic blues of Robert Johnson, aiming to produce a sense of intimacy with the listener, as if "someone is talking to you and saying the words as they come to his mind"²⁰⁸⁰, but, even more importantly, to suggest, albeit secretively, as best arts do, that the shattering of laws, conventions and expectations is the key prerequisite for excavation of the many immeasurable treasures of creativity. Then, what lulling newborn Theo to sleep taught me is that no robotically precise electrical rocking chairs can replace the natural

swaying in human arms, confirming for one millionth time in my head the idea that our natural bodies must be tuned to resonate with equally natural and imperfect rhythms and be profoundly more touched by them. It is, however, true that there is an artistic feel in the music based on computerized drumbeats, as on most occasions it carries on its sound waves a sense of emotional isolation and attachment to machines and high-tech gadgets that the modern times are emblematic of. However, I also claim that the modern electronic sound is currently in its infant stages of development and that hundreds of years ahead in time people will look back to the way electronic music sounded today and laugh at its astonishing obsolescence. Masterpieces that will combine humane emotions with the electronic sound and thus instill life in the latter and perfectionist purity and discipline in the former are yet to arise in all their charm and beauty. Be that as it may, if you are still clapping your hands or snapping your fingers, recall that the purpose of this was to show you that imperfections lie at the heart of beauty of artistic and profoundly inspiring human expressions. Perfection can be reached only insofar as we embrace imperfections in our ideas and expressions. Yet, even then, what appeared as perfection may be such only for a brief moment in time. As soon as we step aside, carried away by the passage of time, the sense of perfection is lost, which is actually what drives the artist to evolve and always change, incessantly looking for novel ways of expressing themselves. Back to Bob Dylan, his epic song, Like a Rolling Stone, has been announced as the best song of all times on numerous occasions; yet, if you rewind the song to 2 min, 50 sec moment, you could hear an obvious off-key sound, a mistake unintentionally made by the pianist. As Dylan went to the bathroom on the day of the recording, the pianist started leisurely playing with some harmonies. When Dylan returned and the band began to play again, he heard the keyboard part in the distance, liked it and yelled: "Louder". This is how the background keyboard sequence that ingrained an incredible momentum to one of the best songs ever made actually originated: through the master's ability to recognize immensely important messages arising from pure accident, spontaneity and mistakenness. Needless to add, another one of Dylan's records, Blonde on Blonde, was recorded in its entirety as Take 1, which may hide the key to explaining its timelessness and the ability to captivate the listener every time anew with its drugstore-cowboy-like melancholy. Likewise, the stamp of eternal actuality and relevance of the sound captured on Television's debut album, Marquee Moon, could be sought to some extent in the band's recording most of the songs, including the title one, as a live rehearsal and in single take, with the producer's idea that the band record another take of the title song being shunned by Tom Verlaine with his idiosyncratic succinctness and a mumble saying, as the legend has it²⁰⁸¹, one simple "forget it". In the same spirit, Miles Davis, a devotee of impromptu approach in the studio throughout his entire career, of which J. J. Johnson remarked the following, "Most of the time he goes into a studio and one take is it!.. That's his philosophy on the recording bit"²⁰⁸², insisted during the recording of Kind of Blue that all accidentally produced extraneous sounds, from the test tones used to calibrate the tape machines to occasional whispers to the squeaky sound of wooden chairs moved against the floor were purposeful and should be left on tape²⁰⁸³. A similar low-budget philosophy and punk rock ethics where mistakes are not cut out, but accentuated for the sake of creating the atmosphere of naturalness and spontaneity that is capable of making more intimate connections with the listener than an excessively produced and polished sound can has

²⁰⁸³ *Ibid.*, pp. 134.

been proponed over the decades by Steve Albini, who would often, as during the recording of the Breeders' Pod, Nirvana's In Utero or Magnolia Electric Co.'s Josephine, insist that no more than one or two takes be recorded for each song, even when the artists are driven mad by the imposition of such peculiar principles²⁰⁸⁴. Many other songs and records that possess an undyingly fresh liveliness abound with imperfections and mistakes too. For example, Teo Macero, the producer of an array of Miles Davis' records, used a tape-slice technique based on an intentionally clumsy and offbeat entrance of the sound from a new channel at the halfway of a piece, so as to deliberately "juggle the listener just a little bit off balance, as though the drummer had suddenly switched rhythms"²⁰⁸⁵, the approach that had been heavily criticized by his contemporaries when first introduced, but is now considered to have been a perfect fit to In a Silent Way, an acclaimed masterpiece record that "shimmers without boiling over" and wherein "even when players are soloing, they sound like they're feeling their way around, blindfolded, in the dark; everything sounds like it's being played by men on tiptoe"²⁰⁸⁶. One of the biggest charms of Belle & Sebastian's Boy with the Arab Strap lies in the natural, homey ambience in which it was recorded and the casual way of performing permeated with handclaps and random cheerful whispers heard in the distance. In Darkwood Dub's *Veliki duh*, one of the landmark songs of the Serbian rock scene of the 1990s, the drummer loses the beat at one point (3 min and 33 sec into the song), making a banging mess in the song for a few moments, yet taking nothing away from the incommensurable sublimity of the song. Similarly, in one of the most mind-blowing live performances I have ever heard, that of All My Friends by LCD Soundsystem on one of Jools Holland's music shows, the drummer lost the beat twice throughout the song as it built its way into an explosion of aural energy, seemingly accidentally, but maybe even intentionally, I am tempted to think, given that one time it accompanied James Murphy's wondering if he had "made a fool on the road" and the other time it came together with the vocalist's referring to an own "ridiculous prop"²⁰⁸⁷. In a romantic Hollywood "lemonade", Begin Again, there is a scene where the band plays on the rooftop of a Manhattan building à la the Beatles in Let It Be or U2 in Rattle & Hum, except that there was no one but an angry neighbor as a screaming fan; the producer's teenage daughter steps up as a lead guitarist and begins a solo sequence that owes its breathtaking charms to its sounding as if it comes from the hands of a complete amateur and as if it will evanesce into a senseless cacophony at any moment, while at the same time blowing away the listeners with its juvenile energy, all so as to implicitly convey the authentic message of the indie culture: failings in frailty are necessary steps for the rises into the sublime skies of perfection. Nina Simone was an artist who was particularly careless about slips on the stage, frequently throwing the band off by suddenly changing the rhythm or shifting the key in the middle of the song²⁰⁸⁸, and during her legendary live performance of Sandy Denny's Who Knows Where the Time Goes at the New York City Philharmonic Hall, the mistakes came from all the instruments – the guitar, the piano, the vocals – yet they never diminished, but merely magnified the magic of this musical moment molded in time²⁰⁸⁹. I also wonder if Robert Altman deliberately made Barbara Jean, the country

singer and the centerpiece of his cinematic mosaic masterwork, Nashville, interrupt the songs with purposeless monologues, destroying their structure the way a child breaks a toy, gracefully, as if to subtly suggest what the attitude of a star in a starless social universe, confined to the can, enslaved by the rules and obedient to the expectation, must be. In fact, one of the reasons why my interest in attending concerts tapered off in the recent years is because listening to a live band would more often than not be identical to listening to their record and that, I know, is not how a star handles its performance. The way of a star is the one that immortally syncopates the steps towards one's soul and provides a source of constant surprises, for oneself and for the audiences alike, lest this view of the soul get lost and one becomes like Prefab Sprout, a beloved band that - as it is symptomatic in these days of bedroom recordings, DIY ethos and staring-at-one's-smart-phone type of estrangement - sounded fabulous on record, but was dead live. For this reason, that is, to prevent myself from similar falls from grace, I rejoice to hear moments in songs that celebrate the spontaneity of the moment and break the pattern of expectation and regularity. I love to hear Bobby Byrd making the following comment about James Brown and the Famous Flames' Live at the Apollo, recorded live in Harlem's Apollo theater on the night of October 24, 1962: "That was a huge album, and it was the worst album. Screams and stuff all over, some was falling, and they put that out just like that"²⁰⁹⁰. As a matter of fact, there are countless landmark records on which it is hard to find a moment without an anarchic disorder and they include Captain Beefheart's Trout Mask Replica, Velvet Underground's debut and White Light/White Heat, Šarlo Akrobata's Bistriji ili tuplji čovek biva kad..., Talk Talk's Spirit of Eden, the Faust Tapes, Raincoats' Odyshape, Syd Barrett's Madcap Laughs, the Stooges' Fun House, Robert Wyatt's Rock Bottom, Roxy Music's For Your Pleasure, and many others. Certainly, their creators must have known that jazz songs retain eternal freshness because they comprise a constant flow of surprises through the instruments' fighting down the habitualness and predictability at all levels and that, likewise, songs from any other musical genres can be embalmed and their sounds remained fresh forever by having them played in a similar manner, with tones bordering arrhythmia and atonality at every unit of the meter. Then, inspired by the spontaneity of punk rock, Neil Young decided to record Rust Never Sleeps, an album that was to become his homage to rock 'n' roll more than any other before or after, in a completely impromptu fashion, live from the beginning to an end²⁰⁹¹ except for two songs, one in which the twinkles of an acoustic guitar faithfully depict "aurora borealis, the icy sky at night"²⁰⁹², under which the story about Pocahontas is being told, and one about "living in a tepee"²⁰⁹³ and the beautiful views of the world being sustained so long as we could sit on the edge of a canyon, knowing that we might "sail away" at any moment, in the twinkling of an eye. Namely, although the tenor-singing Canadian rocker could have gone down the road of overproduction and perhaps made a record less flawed as the result of its ad libitum nature, he opted for a minimalistic route. His approach was, of course, far more faithful to the spirit of authentic rock 'n' roll philosophy and what emerged out of it was a record disparaged by most über-critics as not good enough, but whose message and spirit, including the unforgettable lyrics, has lived ever since deep inside all of them. Just like the rock 'n' roll movement itself, creating personas pushed in the dark ditches of the social reality by those occupying its sunlit spaces, this record had become a shadow cast on each and every one, music scholars and casual listeners alike,

while being all the while a son of the darkness, not of the worldly lights, conforming to the spirit of its call “into the black”²⁰⁹⁴. Another, a bit more trivia example from the popular Shakey’s career comes from the record Zuma and the song Cortez the Killer on it; namely, the sound had to be faded before the real end of the song because of the power outage in the studio, yet this abruptly cut solo and the missing verse have added such an enticing, mystical appeal to the song that they made it one of the fans’ favorites, though with a vague reference to “a ship breaking up on rocks and sandy beach being so close” being the closest that they have gotten to in an attempt to discover it like a Spanish conquistadors’ treasure sunken at the bottom of the sea of a kind. Then, at a particularly poignant moment in the live, one and only, Take 1 performance of Đorđe Balašević’s *Samo da rata ne bude*, a song in which fears of an upcoming civil war were depicted in a rarely lively manner, a solo boyish voice begins to chant the verses of the song before becoming accompanied by the whole chorus of singing boys and girls, and yet, at this crucial instance, the boy forgets the lyrics and starts to insecurely mumble inarticulate words, yielding an inexpressible charm to the overall song’s performance. If you listen carefully to the songs from the Beach Boys’ Pet Sounds, probably the first record that will be taught at musical conservatories when they become receptive to artistic achievements from the popular musical realm, you could hear a plethora of sound production anomalies, including the sudden spike in volume upon Mike Love’s vocal entry in the bridge of Wouldn’t It Be Nice and distant talking hearable between 1:52 and 1:56 on Here Today²⁰⁹⁵. A year later in the very same Sunset Sound Recorders studio in Hollywood in which Pet Sounds was recorded, Bryan MacLean as a member of the band Love softly strummed the acoustic guitar strings on a song called Alone Again Or, renowned for its contrast between depressing lyrics and an uplifting melody, and a few seconds short of its third minute his left-hand finger slid, producing a dead note; yet, the song became the opening track of perhaps the best psychedelic record of all times, Forever Changes. When John Coltrane joined McCoy Tyner in his repetitive chanting “a love supreme” at the end of the opening track of the landmark jazz record A Love Supreme, an unrehearsed move that surprised everyone in the jazz world, he began to mumble off-mic and only after the producer quickly adjusted the microphone level, the voice reached the audio tape. Still, “a love” in “a love supreme” was lost for good, never to be added to the album whose recording required less than an hour of recording tape²⁰⁹⁶. Unlike Trane on his A Love Supreme, Van Morrison did not allow any overdubbing to be performed on recordings of his concerts in Los Angeles and London before their release in 1974 in form of a double LP named It’s Too Late to Stop Now. Despite the producers’ warnings that no one ever before released a live album with no overdubs or at least minimal sound processing, the Belfast guru of soul music insisted on its issuance in the as-recorded, raw form and the fact that this record is currently considered as one of the best live albums of all times could indeed prove his viewpoint as well as the idea that a dose of rawness and imperfection is vital in endowing human creations with timeless authenticity, something that jazz musicians have kept close to their hearts ever since. Speaking of the raw sound of live recordings, no better example of its magical effects that render some performances truly timeless can be found than Keith Jarrett’s solo concert in Cologne, his most popular album up to date based on complete improvisation. Namely, it was recorded quite accidentally; Jarrett, who at the time suffered from back problems and was on painkillers most of

the time, arrived to the concert hall after not sleeping for a whole night before and driving straight from Lausanne. So tired that he could hardly discern people who looked to him all like a giant amoeba, literally falling asleep as he was going out on the stage, during the dinner time he told the recording people that there was no reason for them to stay and record the performance. Even worse, a few hours before the concert he had realized that a wrong Bösendorfer piano was brought onstage, “a seven-foot piano which hadn’t been adjusted for a very long time and sounded like a very poor imitation of a harpsichord or a piano with tacks in it”²⁰⁹⁷, as Keith put it, or “a superior bar-room piano, barely passable in the middle and lower registers, with the upper register often sounding tinny, forcing Jarrett to confine himself to the middle area of the piano a great deal of the time and to play a lot of repetitive rhythms, abandoning sonority in favor of rhythm – in other words, he plays the whole concert within the narrow limits of his instrument, and within this narrow confine, he achieves the usual state of grace – the inspired state... and it may be that his semi-comatose state contributed to this trancelike performance”²⁰⁹⁸, as a different critic observed. Talk Talk’s *Spirit of Eden* was recorded with constantly intruding disharmonic tones and improvisational errors, and yet an impression is that it is exactly those intentional mistakes that have predisposed the record to never grow old. A few years after Keith Richards hit a loose string in the sixth second of the intro to the final song on *Beggars Banquet*²⁰⁹⁹, which contrasted its devilish beginnings with the restoration of genuine goodness, refusing to look back and start anew, as if trying to tell us that we have to truly rock and roll with all the punches that our earthly erroneousness imposes on ourselves and freely make mistakes as we go along if we are to follow the line of that little light from here to the heavens above, the Rolling Stones entered the villa named *Nellcôte* near Nice and engaged in recording their magnum opus, *Exile on Main St.*, amidst the hearable hollering, clinking of the high heels and clanging of the bottles rolling down the stairs of this rustling and bustling mansion that had a party going on around the clock, handing us a solid proof that the stellar energies we wish to transmit to others are to be fully lived up if we wish to succeed in these endeavors of ours. Then, Radiohead’s *In Rainbows* could have been easily recorded with computerized beats, somewhat similar to the mainstream sound of the space rock contemporaries, but the artists decided instead to have the instrumental sections played in all the spontaneity of the moment, which makes the record sound better and better year after year, without ever exhausting the magnificent messages hidden in it. The implicit message of one of the band’s previous masterful records, *Kid A*, was actually a reply to the overly processed sounds of their contemporaries. The latter made many people who were dreaming of becoming musical artists falsely believe that without great investment in the record production no valuable and influential pieces of art could ever be made. And when everyone expected from the band a continuation of the trend of bearing space rock monuments of the previous two records, they made songs that occasionally appeared as if recorded on a 1980s cassette player, thus pulling off the essential message that the punk movement made a revolution of: “Hey, kid, everyone can do it; with a lot of beauty sprouting in you and a shiny willingness that moves mountains, even on a tape recorder you will make a masterpiece”. This beautiful record, with this message that, I felt, was being whispered to my ears, altogether with the sound of “kid, hey, wake up”, was indeed the one to spur my faith in being able to make a masterpiece with a electric guitar, an amplifier, a cable, a pick and a personal computer. Still, every time I listen to Thom Yorke performing *True Love Waits*, only his voice and an acoustic guitar, altogether with the infamous major seventh, so out of place

²⁰⁹⁷ See Ian Carr’s *Keith Jarrett: The Man and His Music*, Grafton Books, London, UK (1991), pp. 71.

that it almost assaults the ear, sounding as if it is a remnant of the first version of the tune composed by Thom in his teen days, an imperfection that he courageously lets linger in the air whenever he plays the song, as if secretly wishing to tell us that wheat and tares ought to “both grow together until the harvest... lest while ye gather up the tares, ye root up also the wheat with them” (Matthew 13:29-30), I become convinced anew that to profoundly and unforgettably touch the hearts of millions one has to engrain a whole lot of sweet and heartrending imperfections in one’s expressions, predestined to be perfect only inasmuch as they are perfectly imperfect. Listening to Radiohead’s unplugged performances, one could also feel a spacey euphoria and an aural bliss intermingled with childlike and seemingly random playing with notes, resembling a casual improvisation, all wrapped up in a sense of insecurity, as the notes are slowly discovered and played quietly in the background, giving rise to mostly raw sounds free from millions of sound effects that mainstream musicians in this genre have relied on so as to make their music sound as perfect as possible. Yet, it is in this streaming of theirs toward perfection that they have fallen from grace, while by embracing spontaneity of the moment and breathing imperfections systematically into our expressions, a perfect artistic impressiveness is reached. I, too, therefore, conceived my music with the ideal of improvisational spontaneity instilled in every tone played. I also stayed away from any attempts to cleanse the sound by getting rid of the natural hum and graininess that found their shelter therein. Just as David Griffith insisted that “wind in the trees” is to be seen in his shots and thus revolutionized the cinematography of the early cinema, so did I see the aural white noise as a gateway that, as in concert with the idea of co-creation, allowed Nature to have its say and infuse my recordings with the breath of infinity. This reliance on natural imperfections I turned into a paramount principle according to which my music, the apex of my creative accomplishments to date, was conceived. I was guided by the vision of beautiful harmonies played with humane imperfections, knowing that it would be the only way for the songs of mine to never grow old, to always reveal some new starry twinkles with the sound of the plucked strings. My belief has always been that if harmonies of the song are lame, no amount of processing can make a good piece out of it. But if harmonies and the heart of intentions of the artist were brilliant during playing, no amount of noise can degrade the brilliant impressions that the song will carry through the air on its wings. The same ideal moves me through the day, irrespective of what sort of expressions I have in mind: caressing my dearest ones, chitchatting with fellow earthlings, lecturing behind a lectern, performing out on the stage, hanging out with friends or dancing the darkness of the heart away. Whatever I do, I fully embrace my imperfections. I slide by walls, graze my shoulders against telegraph poles, leap around limply, like a monkey, act as an extraterrestrial who has just landed on Earth, make funny gestures, although never losing out of sight and slipping from my mind the precious pearl of knowledge which tells me that I can do anything, truly anything, just for as long as the streams of love and care for the world and all of its creatures are kept inside of me.

S.F.6.18. It takes one to samba, but it takes two to tango, some might say. I usually recall this phrase when I am about to explain the fact that human perception operates on boundaries exclusively. Cognitive creatures, as we are, are capable of detecting solely differences, and many details with regard to the way our sensory organs function speak in favor of this. For example, because a uniform visual image is imperceptible unless a contrasting comparison is included in our visual field, our eyeballs exhibit incessant subtle twinkling, which is known as micronystagmic movements. Then, by exploring how ultra-complex mechanical and electronic systems work, I realized that it normally takes a simultaneous failure of two links for the system to completely

break down and be brought to a halt. Complex machineries that are meant not to fail during their performance, including, most notably, airplanes, thus normally possess a loaded response to failure of each one of their parts individually, which explains why it takes two separate breakdowns to occur for their entire systems to collapse. In fact, the most recent theory on the Cretaceous–Paleogene extinction postulates that it had to take two parallel cataclysmic events, one pertaining to volcano eruptions and the other one to asteroid collision, to wipe the dinosaurs and the three quarters of the entire biota off the face of the Earth²¹⁰⁰. That awareness of the necessity of such dual defects to occur simultaneously in a complex system in order to induce its breakdown could be deeply engrained in our mental apparatuses is demonstrated by the markedly more paralyzing effect that double gunshots have on soldiers compared to single ones, which explains why policemen are always taught to shoot twice in a row at their target. Likewise, one whistleblowing incident regarding a person’s alleged illicit activities may mean nothing, but two of them, coming from independent sources, can be enough to lay the suspect off or even put him behind the bars, depending on the severity of his wrongdoings. Frequent involvers in business conflicts of one type or the other swear by the strategy of sending out two warnings intercepted by a settlement note, e.g., an acceptance of an apology, as the way to confuse the wrongdoer and often prevent him from recommitting the act for which he has been reprimanded for good, something that a single warning would be far less effective in²¹⁰¹. All of this may be caused by the fact that the ancient Middle Eastern saying that “things that occurred once may not occur again, but those that have happened twice will most certainly happen for the third time” is deeply integrated within our mental apparatuses. Now, the fact that double failings are needed to induce a collapse of a complex physical structure is relevant for chess games too on a far side of this semantic spectrum. Namely, it is an old strategic principle in chess, and many other sports alike, that as we attack and suppress the opponent around a single weak point, we should always look for the right moment to shift the focus of our attack partially to another weak point in his position, which normally appears as a consequence of imperfect defending²¹⁰². This is when the defensive structure of our opponent starts

²¹⁰⁰ See P. R. Renne, C. J. Sprain, M. A. Richards, S. Self, L. Vanderkluyzen, K. Pande – “State shift in Deccan volcanism at the Cretaceous-Paleogene boundary, possibly induced by impact”, *Science* 350 (6256) 76 – 78 (2015).

²¹⁰¹ Additionally, as per reward and punishment experiments on caged rats described by Henri Laborit in Alain Resnais’ *My American Uncle*, rats punished for not learning a particular behavioral pattern turned out normal, but rats punished randomly, regardless of their performing the given behavioral pattern or not, turned out behaviorally inhibited, full of angst and had weakened immunity. Launching a critical blow after the settlement may thus stun the opponent and weaken his intellectual defenses through effects intrinsic to this rat experiment. Interestingly, rats punished randomly but placed in shared cages, where they could release their frustration by aggressively hurting their mate turned out more normal than rats kept in single cages, partially explaining the destructive actions resulting within a reality of our own, where physical and emotional punishments inflicted on us by God come out of nowhere, unrelated to our behavior, as also elaborated in the Book of Job.

²¹⁰² One example of this shift comes from a 15 min per player game I played against certain animia on March 2, 2018. In this game, my opponent, playing with white pieces, started aggressively, responding with 2.f4 to my choice of Sicilian defense and launching an attack on the king’s side. With the unexpected passage of the black pawn to the fifth rank (17...d5!), I released some of this initial pressure and began to counteract on the queen’s side. When this counterattack succeeded in forcing the withdrawal of the white queen back to the queen’s side to defend it, I continued with 25...h6!, a quiet move that was followed by another quiet move, 26...g5 and that switched the action to the king’s side, eventually dismantling the opponent and ending in checkmate at move 41. Here I paste the entire game: 1.e4 c5, 2.f4 e6, 3.Nf3 Nf6, 4.e5 Nd5, 5.d4 cd4, 6.Nxd4 a6, 7.c4, Nb6, 8.Bd3 Bb4+, 9.Nd2 Qc7 10.0-0 Nc6 11.N2b3 Nxd4 12.Nxd4 Nxc4 13.a3 (if 13.Qb3, then 13...Nxe5) Ba5 14.Qg4 g6 (more aggressive 14...Bb6 is also possible) 15.Kh1 d6 16.b4 Bb6 17.Nf3 d5! 18.h4 Bd7 19.a4 0-0-0 20.b5 axb5 21.axb5 Kb8 (riskier 21...Bxb5 is also possible) 22.Rb1 Qc5 23.Nd2 Bxb5 24.Nb3 Qc6 25.Qd1 h6! 26.Nd2 g5 27.Qb3 Ba4 28.Qa2 gxh4 29.Nxc4 dc4 30.Bxc4 h3

to systemically topple down. Thereupon, moves made by a chess master are said to be such that they usually serve multiple roles on the board - for example, defensive and offensive at the same time - and, at their most effective, expose multiple weaknesses in the opponent's position and pose multiple threats to it. Pickpockets and magicians are similarly aware that the success of their deceptive arts depends on their ability to create dual foci of attention in front of the subject, before dragging him into one and thus opening the space for slyly, with no obstructions, operating in the other. Then, as skillful dribblers in soccer know, the easiest way to pass through the opponent's defense line is between two defenders, which again involves the enforcement of a double error, as both defenders are tricked to think that the other one will tackle the attacker and do nothing to prevent his advancement forward. The same, according to my experience, applies to babysitting children: most frequently they roam out of our sight to commit heedless acts when there are two nurturers, not one, and they think for a second or two that the other one watches over them, when in reality no one does, again implying a double error as the key to explaining a failure. In fact, whenever a pair of creative sources exhibits simultaneous influences on a system, a space opens for both their productive synergy and mutual rejections of responsibilities, placing them into each other's hands and thus harming the system's development. And if you think that the situation in dancing is different, you're wrong. A good dance, like any other form of cooperative acting, is based on an active communication between the dancers, during which both are subject to change. If we dance all by ourselves, shoegazing and ignoring the surrounding dancers, our dance will be millions of light years far from perfect. As I dance to Britpop music on a Leisure night at Annie's and this thought runs through my head, I, recalling that this polarization must apply to my mind too if it is to spin enchanting moves on the dance floor, begin to see myself sitting on a bench of the Grace Cathedral Park, right there where Noel, with Melissa Lim in the vicinity, composed *Half the World Away*²¹⁰³, prompting me to recall how unforgivable his refusing to hand the mic over to his brother, Liam to sing that song was, almost as unforgivable as his not letting Liam sing *Don't Look Back in Anger*²¹⁰⁴ and of Lou Reed's singing *Sunday Morning* instead of Nico²¹⁰⁵. Likewise, whenever we decline to hand over a creative role in anything we do in life to another, while simultaneously remaining in charge of the creative control and allowing these two co-creative poles to merge and fertilize one another, the creative output of ours will inevitably suffer. The next thing running through my head amidst this dancing in the dark is how the addition of a hydrophobic compound, antithetic to water and supposedly disliked by it, into an aqueous environment results in more rigid and ordered dancing of hydrogen bonds between water molecules in the near vicinity of these foreign entities. Such restrictions of the freedom of movement, however, lead not to a deadening rigidity, but are actually the first steps to the rise of life, as the presence of such interfacial water is intrinsically connected to molecularly biologic phenomena. Likewise, introduction of a seemingly dislikable distraction in our plain view results not in dissipation, but in focusing and crystallization of our creative attention, which may have otherwise scattered in the

31.Kh2 hg2 32.Qxg2 Qxc4 33.Rxb6 Bc6 34.Qh3 Rhg8 35.Rxc6 bxc6 (35...Qe2+ 36.Kh1 Rd1 would give a faster checkmate sequence) 36.Be3 Rd3 37.Rb1+ Kc8 38.Qf3 Rxe3 39.Qxe3 Qc2+ 40.Kh3 Qg2+ 41.Kh4 Qg4#.

²¹⁰³ Listen to Oasis' *Half the World Away* on *Whatever*, Creation (1994).

²¹⁰⁴ Listen to Oasis' *Don't Look Back in Anger* on *(What's the Story) Morning Glory?*, Creation (1995). The story goes that Noel insisted that he sang either *Wonderwall* or *Don't Look Back in Anger* on this record and that he let Liam choose which song he would like to sing. Liam, of course, chose *Wonderwall* and the rest is history, but my wonder is infinite as to how much more beautifully *Don't Look Back in Anger* would sound if sung by Liam. *Wonderwall* is a mediocre song compared to *Don't Look Back in Anger* and it would have made more sense had it been sung by Noel anyway.

²¹⁰⁵ Listen to the Velvet Underground's *Sunday Morning* on the *Velvet Underground & Nico*, Verve (1966).

winds of the world, transforming the essentially inanimate us into an emanation of spirited liveliness. Although another person dancing with us may seem as an obstruction on the path to realization of the stellar dancing dreams of ours, like all ostensible obstacles in life, it too hides the door open somewhere in it, leading to the fields of an ever greater freedom of our being. For, only through the rivers of other people's hearts could the boat of our being arrive at the ocean of ultimately fulfilling insights in life. It is with this credo in mind that I, a bold but graceful punk among Slaviša's best men at his wedding, found courage to abruptly stop the bride's choice of a special song to which she danced in all her glory, Sid Vicious' version of Frank Sinatra's My Way, and played Something Else by the Sex Pistols instead, having always been irritated by the selfish message of doing it "my way"²¹⁰⁶ and feeling that the spiritual fulfillment in life can only come to a soul whose acts and thoughts are conceived to bring happiness to another. Besides, the seemingly paradoxical truism emerging from the concept of the Way of Love is that only by empathizing with the surrounding souls to an utmost extent and striving with all our heart to reach the sacred state of oneness with them could our spirit become unique in its radiance and utterly authentic, true to one's divine self. Just like Mozart "who while trying all his life to write like other composers only succeeded in writing in the style of Mozart"²¹⁰⁷, so does a pure heart that ceaselessly weaves the vertical thread of connection with the divine find empathic unisons with others to strengthen, not weaken the intimacy of these ties with the transcendental sources of inspiration for the soul. Conversely, if we fear that these empathic binds that prompt us to reflect the bottoms of other people's souls in our movements would reduce the genuineness of the latter, we might end up in the ditches of spiritual destitution and desolateness. On the other hand, of course, if we blindly follow and copy the moves of the person we dance with, we will radiate with a similarly uninspiring charm as when ignorantly shedding moves that satisfy us and us only on the dance floors of life. Then again, if we set our body to cruise control that reacts in routine opposition to the moves of our partner, in the spirit of authentic dialectical dancers, we might end up resembling the fatal flyer of AF 447 flight from Rio to Paris that crashed in the Atlantic Ocean. Namely, the inexperienced pilot responded to dropping altitude by pulling back on the stick and lifting the nose of the plane up and thus keeping it in the state of constant aerodynamic stall, when the key on how to restore the stable line of flight was to simply release the controls and shift the nose down a bit, right where the plane was heading to. In other words, whether we blindly copy the moves pulled off by dancers around us and paste them onto our body or instinctively do all to be different and complement others' body moves, we won't be able to let the silhouette of our spirit fly above the discotheque floor in all its delightful charms. For, empathy that locks our heart in harmonious unity with all that is around us and meditative sanity through which we dig impulses for our actions from the deepest treasure mines of our soul are to be neatly balanced with each other if we are to attain the vistas occupied by greatest dancing spirits that silently passed through the cosmic station that this planet is. Hence, the secret is in harmonious, active, unpredictable and spontaneous communication during which we are immersed in the core of our mind and heart, wherefrom all our moves are born, while we never cease to adjust all our moves to those of our partner. In that sense, dancing may be seen as a vital and ubiquitous way of learning the art of the Way of Love, of being the same and being different at the same time. For, remember, electrons travelling through a superconductive material, with literally no resistance whatsoever, in as light and frictionless

²¹⁰⁶ It turns out that this opinion was shared by the very original performer of the song, Frank Sinatra, who "thought that song was self-serving and self-indulgent" based on the testimony of his daughter, Tina. See Sinatra 'loathed' My Way, BBC News (October 30, 2000), retrieved from <http://news.bbc.co.uk/2/hi/entertainment/994742.stm>.

²¹⁰⁷ See Robert Siohan's Stravinsky, Grossman Publishers, New York, NY (1959), pp. 98.

manner as possible, do so in pairs, and yet their spins assume opposite orientation, secretly telling us, the seekers after the holy grail of knowledge that the Way of Love may come to represent, that unity and difference need to be precisely balanced in every superiorly performing natural system. And never forget that it takes two to tango. Should you attempt to separate two to one, remember the logical fallacy of cutting syllogisms into single statements and expecting to arrive at novel findings thereby; the rather illicit chemical activity of considering the effects of single ions of the Hofmeister series without realizing that they come strictly in synergistic pairs lest the charge balance be broken²¹⁰⁸; the diminishment of the blaze of enlightenment that comes from dancing in the dark alone compared to holding hands and gazing at the starry eyes of another while drifting through space like a seabird over perennial seas; and the tears of sadness dropping from the eyes of the Universe in view of any situation where two fall back to one instead of going towards three and then, as Lao-Tzu would deem (Tao-Te-Xing 42), becoming a whole new Universe in itself²¹⁰⁹. “If you want to know yourself, go dance with others”, Heinz von Foerster thus claimed, to which I, a tireless treader of the Way of Love, still add that “if you want to dance with others, you better be first dancing with yourself”. These two principles may be imagined as two poles of the legendary Tai-Chi-Tu diagram or as the colored spiral and the gray spiral twisting around each other gracefully in Johannes Itten’s Meeting, flowing to and from one to another in the course of their endless dynamic balancing. Placing our hands inside, into the warm well of our heart where the divine wishes for salvation and blessing of others reside, and spreading them out to the world, where they give these tiny treasures away and become inspired by the lovely waves of the surrounding life, only to be returning back to the heart, to feed it with inspiration and beauty seen in the world, but only then to be spreading outwards again, to give life and love onto others, and so on and on and on.

S.F.6.19. Setting a good tempo is critical. Or, as pointed out by Igor Stravinsky in the 1950s, “Tempo is the principal item. A piece of mine can survive almost anything but wrong or uncertain tempo. And not only my music, of course. What does it matter if trills, the ornamentation, and the instruments themselves are all correct in the performance of a Bach concerto if the tempo is absurd?”²¹¹⁰ Earlier, in the midst of the rise of Classicism, during which composers finally broke away from the dull rhythmical standards of the baroque era, Wolfgang Amadeus Mozart made the

²¹⁰⁸ See H. I. Okur, J. Hladilkova, K. B. Rembert, Y. Cho, J. Heyda, J. Dzubiella, P. S. Cremer, P. Jungwirth – “Beyond the Hofmeister Series: Ion-Specific Effects on Proteins and Their Biological Functions”, *Journal of Physical Chemistry B*, 121, 1997 – 2014 (2017).

²¹⁰⁹ I would probably not be here today writing these words if it was not for my listening to Slaviša’s advice to go higher, not lower in the last Analytical Chemistry class of my sophomore year in college, in the spring of 1997. The goal of the exam was to qualitatively determine and then quantify the exact amount of an unknown chemical in a solution. I determined the identity of the compound correctly, but my estimate of the quantity was beyond the margin of error, but within its broader limits, and I was returned to the bench to rerun the experiment, for which, as it turned out, there was not enough time. My lab coat was set on fire that day during the first stage of qualitative analysis and a sense of mental exhaustion set in. And so I was forced to guess blindly or, more specifically, to choose whether I should increase or decrease the amount of the chemical in my earlier answer by 15 µg/ml. “Always go up, never down”, Slaviša said, and I listened to his advice. I went up and instead of failing the exam and having to repay the analytical lab ware user fee, which was at the time higher than both my parents’ monthly incomes together, and redo the entire coursework next year, quite possibly giving up on the idea of graduating with an academic degree, I passed the exam and indeed, as Slaviša presaged, continued going up. The first following record released by R.E.M., one year and four months later, was, symbolically, Up.

²¹¹⁰ See Robert Craft’s *Conversations with Igor Stravinsky*, Doubleday & Company, Garden City, NY (1959), pp. 135.

same point by noticing that “nothing seems so important as the right choice of tempo”²¹¹¹. For, the very mention of tempo during composition or conductance of musical works was unheard of in the times of baroque and renaissance, as each musical piece was supposed to flow at the rate of human heartbeats, approximately 60 BPM, by default. A similar diversification of the repertoire of rhythmical patterns and tempos, which, remember, is not only about the pace of a piece, but is also about mood that is to be infused into notes, as terms ranging from *grave* to *adagio* to *vivace* can illustrate, corresponded to a transition from big band, swing and bebop epochs in the history of jazz to songs and styles that secured the place of this genre in music academies all over the planet. The modern pop music has carried out the same transition over the past half a century, although mainly along its alternative, sideway paths, leaving its mainstream largely intact in this respect, still the slave of temporal inertness, though not so rigid as that which typified its roots, namely, boogie-woogie and rockabilly, all of which were equally deprived of lively crescendos, diminuendos and other subtle changes in dynamics as music from eras that predated post-bebop jazz and Romanticism. When it comes to setting the best possible tempo, however, sometimes I feel as if everything is better than the perfect, middle Way. Playing a song fast conveys certain energy in itself, whereas rolling it slowly and massively demonstrates another way of moving the listener. I have always seen the latter particularly enchanting in its inviting the reader to compassionately involve himself in “moving” the melody forth, as if helping the musicians roll that big stone of a mountain forward. In the end, the purpose of music has thus been fulfilled – to engage the listener in something greater and more important than their lives, at least for a moment, and thus invoke the same enlightening humane feeling doctor Faust had after he decided to help people in their ordinary duties, all after he had spent years and years of his life in roaming along the intellectual labyrinths of his mind, looking for the perfect answer of reason for the mysteries of life. When I was juvenile and played in a band I would be most irritated when my companions played faster than what seemed optimal to me. Outraged by what seemed to my infantile and artistically aristocratic self as utter ignorance for the sense of healing rhythm within a song, I spun the thoughts of the 11th Century Andalusian astronomer and musician, Ishaq Ibn Ibrahim in my steaming head: “He who makes a mistake is still our friend; he who adds to, or shortens, a melody is still our friend; but he who violates a rhythm can never be our friend”²¹¹². In vain was I explaining to them the playing style whereby notes are played as if they are being dragged by gravity of a kind, the intensity of which is inversely proportional to their frequency, while synchronously pairing this with an uplifting lightness and motion; my words were being blown in the wind. As the songs reached their climactic segments, alas, the energetic tension that tears the listener’s heart apart would be lost because crescendos prompted my fellow instrumentalists to accelerate the beat! The usage of metronomes to keep tempo in check was out of question in those days as I abhorred them then and I abhor them to this very day due to their unnaturalness; namely, all the immaculately performed musical pieces rely on subtle and often inaudible variations in pace. Playing songs slower than what their optimal beat may dictate was tolerable, I felt, but nothing could damage the song’s inherent qualities more than impatiently playing it quicker than it should be played. Lest the moving potential of the song dwindles by rushing its performance, as was indirectly demonstrated by Godfrey Reggio in his movie *Koyaanisqatsi*, where accelerated

²¹¹¹ See Elsa Findlay’s *Rhythm and Movement: Applications of Dalcroze Eurhythmics*, Summy-Birchard, Inc., Miami, FL (1974), pp. 5.

footages of human actions revealed their pointlessness and disharmony²¹¹³, they better be played significantly slower than a single bpm faster. And what a fascinating accomplishment it is to shift things in the opposite direction from the one in which we would like to see the listeners pushed and yet miraculously produce the desired effect! That is, by slowing down the song and seemingly numbing its potential thrill we then manage to profoundly move the listener and convey a sense of emotional connection and powerful devotion to her much more effectively than we would have achieved by hastily speeding up our performance. One of the most striking examples of this effect whereby descent into slow quietness is used to boost the mountainous power of the song is *Ich bin der Welt abhanden gekommen*, Mahler's orchestral song based on the poem by the German poet Friedrich Rückert. Namely, what makes this song extraordinarily powerful is the way in which it sinks into almost inaudible quietness at the same time as it delivers its "punch line" of the third stanza and injects the sting of the divine uplift for the soul into the listener, as if pushing him both ways, up and down, and producing torrents of soulful energy within one thereby. Furthermore, we could bring to mind the words with which the Edge, one of the guitar heroes of my childhood, described the sound of his instrument, always subject to feedback and reverb that delay its waves in space and time, in the song off the renowned Joshua Tree record: "The end of With or Without You could have been so much bigger, so much more of a climax, but there's this power to it which I think is even more potent because it's held back"²¹¹⁴. As genuine words always mysteriously reflect their meanings onto multiple other planes of one's being, the same statement could have probably described the essence of the Edge's personality too, always staying away from the limelight and confining oneself in the shadow, managing to use exactly this sense of tense withdrawnness as a source from which a moving musical energy is focused onto the listeners' hearts so as to set them on flames like Marcellus' ships by Archimedes' hexagonal mirrors²¹¹⁵. One of the essential traits of my style has been similar reliance on the arpeggio effect produced by breaking down the chords into note-by-note segments and yielding a smeared tonal flow that comes in gentle waves to drown the listener into a sublime spiritual slumber. Hence, my fingers would softly slide over the strings with the hand and the arm practically fixed in space and only the thumb and the index finger moving with a stiff little pick sandwiched between them, yielding an impression of my almost not touching the strings at all, while a soft series of rolled chords still surfaced from the speakers. In such a way, I adopted a thoroughly opposite approach compared to most other rock guitarists, which would give it all for a striking beat, banging their strings heavily so as to yield loudly ringing chords or riffs, quite unlike me, who has always been proud because of never ever breaking a string, some of which have stayed taut for years, thinning down over time and collecting layers of dirt and grease, changing their oscillation frequencies and detuning the sound of my guitar in charming ways. Hence, to slow down and produce a sense of being dragged down from the main road here and there, while at the same time following its course willfully and determinedly, like a steaming train, I saw as necessary to make the sound of my guitar, always a bit out of tune so as to maintain a twinkle of sadness among its joyous ringing, move the walls and angels that invisibly flew around, aside from human hearts beating in its vicinity. In view of all of this, maybe a perfect beat is not that perfect in reality. Finally, a miniscule sprout of the already articulated idea that perfect balances, as static and lame as they can be, are imperfect choices in life, whereas mild traveling from one imbalance to its opposite imbalance in one's moving along

²¹¹³ Koyaanisqatsi is, in fact, a Hopi Indian word for "life out of balance".

the thin thread of the Way of Love presents the best choice, dynamic and fruitful at the same time, could be discerned from these thoughts.

S.F.6.20. Could it be, therefore, that songs and other artistic pieces that sound enlightening to us actually push us towards the balance from an imbalanced state at which we currently are? When Morrissey sings in the song that stands for the closing moments in the career of his one and only band up to date, the Smiths, “I won’t share you with the drive and the dreams inside, this is my time”²¹¹⁶, could it be that this selfish message sounds so brilliant just because it fits an overly compassionate personality and thereby places it closer to the balance of the Way of Love by breathing a dose of sane individualism into it? And could it be that love songs that aim at awakening feelings of compassion and affection in us most intensively hit the ones who are heavily confined within themselves and are hardly able to break the wall that prevents them from empathically connecting with others? All these questions will remain in the sphere of our consciousness for as long as the enigma of finding the most optimal walk along the Way of Love is not solved. Is it a constant preservation of the balanced state or fluctuations around the latter? If fluctuations are closer to the truth, which I believe in, what magnitude of these fluctuations versus time would be the most optimal? These are all questions to which answers may never be found. For, if revealed, our walks along the Way of Love might then perhaps become meaningless. The same situation exists in chess. The ultimate question therein is if both White and Black drew the perfect moves, what would be the outcome of the game? Would the White win or would it be a draw? Had we known the answer to this, there would be, of course, no sense in playing chess anymore. Be that as it may, whether we stay forever constantly on this thin wire of the Way of Love or fluctuate around it, the Way of Love nevertheless presents the path that connects our inner and outer worlds in harmony. As Morrissey continued to sing in the song that placed a full stop on the existence of the Smiths, one of the most influential British bands of the 1980s, “I need a freedom and a guide”²¹¹⁷, a verse that neatly sums up some of the essences of the Way of Love.

S.F.6.21. In dancing, just as in the domains of artistic creativity and life in general, the first steps are the most difficult ones. How do we get out to the podium in front of so many bright eyes that seem as if penetrating with their clever looks straight into our being, sharply censoring us, and knowing immediately every bit of our humane fearfulness and insecurity? Doris thus has something to convey to us in the following words: “Sometimes I think me and Robin speak two different languages. She says, ‘Do you think people will ever voluntarily change and start living sustainably?’ In her voice is an accusation. Her voice says I am an idiot if I answer anything other than no. No, I don’t think people will change. but I think Yes”²¹¹⁸. These words cogently remind us of the breathless Molly Bloom’s soliloquy in the finale of James Joyce’s *Ulysses*, the book which opened endless new horizons in linguistic expression by breaking down the existing dogmas of grammatical rules and structure: “I was a Flower of the mountain yes when I put the rose in my hair like the Andalusian girls used or shall I wear a red yes and how he kissed me under the Moorish wall and I thought well as well him as another and then I asked him with my eyes to ask again yes and then he asked me would I yes to say yes my mountain flower and first I put my arms around him yes and drew him down to me so he could feel my breasts all perfume yes and his heart was

going like mad and yes I said yes I will Yes”²¹¹⁹. If we now turn to face the world of improvisational theatre, which teaches the art of acting tuned to the moment of the performance, of reinventing oneself from one instance to the next and of digging the prime impulses for the action directly from the eye of the hurricane that the present time with its mind-blowing plethora of impressions is, we would come to learn that its most elementary exercise consists in responding to every idea dropped on the stage with a Yes and then adding to it one’s own points of view. If we disobey this simple rule and relentlessly respond to another person’s acts with a stubborn No, chance is that we would be just like that poor teenager riding on the backseat of a car in R.E.M.’s video for the song Everybody Hurts as his father, driving it in the midst of a traffic jam, began to whistle a jolly tune, being frozen when heavenly expectations place us in the spotlight, all but able to react with behavioral brilliance to the surrounding stimuli. But as we would undoubtedly realize after only a few sessions of participating in this exercise of Yeses, it has an immense psychotherapeutic value, as it encourages exploration, curiosity, openness and playfulness²¹²⁰, all of which are the traits of a healthy psychological makeup. To respond to every experience with a Yes may thus be a simple outcome of our transition from an intrinsic sinfulness to an intrinsic saintliness in life, that is, from the wicked loci of adulthood, the states of being profoundly fallen from grace, to the aprons of childhood, the paradisiacal psychological provinces marking a return, once and for all, to the Garden of Eden. Yes and then another Yes is what Bernadette Soubirous whispered as she stood before an apparition of the Holy Mother, near a garbage dump at the entrance to a grotto at the outskirts of Lourdes, hinting at the transformation of our whole beings into a grandiose cosmic Yes as the final point on our spiritual journey to the stars and implicitly suggesting the correctness of the metaphorical representation of this journey by the biblical progression from a word echoing through the darkness in the beginnings to the blissful ends whereat all becomes Yes, whereat the acceptance of it all starts to reign and whereat “whosoever will” is “let take the water of life freely” (Revelation 22:17). Richard Linklater appearing as an animated pinball player at the very end of his thrilling cinematic masterpiece, *Waking Life*, correspondingly noticed that the journey of our lives, taking us from the domain to humanness to that of divineness, is all about moving from the Hegelian antithesis of No to the Hegelian synthesis of Yes given as an answer to a single question God asks us in continuity: Do you want to be One with God and all that is? And if we are to show the beauty of our inner self to the world through our dancing and being alike, we need to live this very same Yes that sends waves of positive acceptance across the ocean of our mind and heart with every breath, thought and move of ours. Such an attitude will help us naturally commingle a soft flexibility and a powerful willingness in the dancing body smiles of ours. For, to send out the rays of love is to be strong and willowy at the same time. Let me tell you one thing then. No one expects from you to start dancing enchantingly and completely free from the very first moment. The sunrise is not marked by a sudden burst of light, but by a gentle and gradual sending the night stars into distance and opening the way for the all-illuminating light of the bright Sun of ours. Intending to send this light from the very first moment of our performance would make our actions thoroughly unnatural and ever worse. In the finale of the *Great Dictator*, one of the most impressive movie scenes in the history of cinema, Charlie Chaplin disguised as Adolf Hitler sits on the stage in front of millions of people, wishing to stay there forever. However, Hitler’s name is announced and he is invited to deliver a

²¹¹⁹ See the very end of James Joyce’s *Ulysses*, Simon & Brown, Hollywood, FL (1922).

²¹²⁰ See Jana Phillips’ Use the Rules of Improv to Improve Your Work Sitch, *The Bold Italic* (September 24, 2014), retrieved from www.thebolditalic.com/articles/5886-use-the-rules-of-improv-to-improve-your-work-sitch. Watch also the movie *Liberal Arts* directed by Josh Radnor (2012).

speech. “You must speak”, says his comrade disguised as General Schultz. “I can’t”, Chaplin replies frozen with fear and stays in his seat. “You must, it’s our only hope”, Schultz repeats, to which Chaplin stunningly looks in the distance, and whispers “Hope”, challenging himself to find the strength and courage to stand up and speak. As he utters the first words, they are disconnected and strike with hesitation and insecurity, but slowly, word by word, turn into a rarely powerful and moving speech, which is nowadays widely regarded as the most fascinating movie monologue ever. In it, he reminds us how “we have developed speed but we have shut ourselves in: machinery that gives abundance has left us in want. Our knowledge has made us cynical, our cleverness hard and unkind. We think too much and feel too little: More than machinery we need humanity; more than cleverness we need kindness and gentleness. Without these qualities, life will be violent and all will be lost”, urging us to get rid of our robotic traits that make us act in preset and rigid manners, and install deeply humane features in our thinking and acting patterns, which would predispose us to be soft, wondrous, naturally uncertain, lovely insecure and sensitively swaying back and forth in touch with the impressions of the world, like a cypress tree in the wind. Hence, take it slow, know that angels fear to tread where fools rush in, and that time will come to soar your expressive momenta into orbits of delightful and captivating dancing. Remember the Trent vs. Tan chess game in which the black pushed his pawns forward like nuts, but the white was the one to queen a pawn first, making way through a fiery midgame with patience, perseverance and beauty, sacrificing both of its queens in the final move, yet winning it in style²¹²¹? If you do, then approach the grandiose dance floor that the world is in exactly the same way. Be like a surfer, as I say, paddling through the shallow waters seemingly aimlessly at first and then gradually finding the right wave for the surf and releasing yourself in all the spontaneity to all the unforeseen and unexpected ideas and actions that gliding on it will bring forth. Even this very analogy between the act of surfing and the art of giving inspiring performances has dawned on my suddenly, as I was surfing smoothly on one such wave during a semi-improvisational university lecture of mine. And although we all know that the first steps are the hardest, I have never come across the first line of a book that was boring or seemed fake to me. In fact, every beginning of a book has always seemed to me interesting, promising and inspiring. No first lines have ever left me dull or disappointed. Only then, the things get complicated, as it requires a great mastery to keep the meaningful thread spread all the way throughout the book with the same thrilling enthusiasm that provokes a tickling curiosity in the reader. So, do not be afraid of these first, opening steps and making moves that people may misinterpret as pickup lines captivatingly thrown all over the place. Although they are indeed the hardest and the most awkward, they can hardly ever be seen as wrong from the beautiful eye of the whole.

S.F.6.22. Just before one of the most memorable dances of my life was about to begin, I approached Tanya, my pick for the night, the girl I fancied, with a stone I carried all the way from the sandy beaches of the North Sea in my pocket, and showed it to her. It was the moment that now brings back fond memories of a little girl in a local Belgrade park who was asked what sympathy meant for her and she responded by picking up a yellowish leaf from the soiled ground and saying, “It is when you hand a leaf over to someone”. For, there is nothing more rewarding than giving and receiving things bare of any material value, with nothing to conceal the glow of care and love with which they are being gifted. After all, as someone has said, free things in life are the most precious and wondrous ones we could give or take. Be that as it may, holding this opaque North Sea stone

²¹²¹ See Lawrence Trent vs. Desmond Tan, BCF-chT 0203 (4NCL) (2002), West Bromwich, rd 10, retrieved from <https://www.chessgames.com/perl/chessgame?gid=1448708>.

on the palms of both of my hands, softly and caringly, knowing that such is the way to hold and give all things in life, with both hands, I asked Tanya if she could see stars reflected on its dark and glossy surface. She swiftly rejected the matter as a cuckoo instance of my fancy and, even later, never showed much understanding for it, while I had always kept it close to my heart. And now, knowing how stones form, I can only corroborate the idea that slow starts, not the explosive ones, are the right way to approach the dancing podiums in life, whereby the sunny spirit of the creative core of our being will be let shine. Ostwald-Lussac's rule tells us that whenever atoms of a compound we intend to crystallize can adopt multiple spatial arrangements in space in the solid form, the first phase to precipitate from a solution will not be the most thermodynamically stable one²¹²². Instead, the least stable and the most soluble phase will be the first to form. Either its transformation to a more stable phase or subsequent precipitation of the latter on top of it ensues. Moreover, we could recall that despite the casual belief that it is in the nature of phase transitions to be inescapably rapid, they always take place with some level of gradualness. Although they do tend to occur comparatively abruptly after specific conditions conducive to it are reached, they are also such that the phase transition itself is always gradual to some extent, making the system with every new second a little bit less of the old and a little bit more of the new. Thus, liquids crystallize at the freezing point in such a way that crystals gradually grow and the liquid gradually disappears with the passage of time; after the first year of life, humans become more and more toddlers and less and less babies with every new day; evolution of the man was such that a stage had to be crossed when one would not have been able to tell if what was emerging was still an ape or a new species called the man; and so must it be with the transition of a body solidified in space into a fluid form dancing through the room like a sprite made of stars. Most of the time, the two phases will remain in equilibrium with one another, both present in the final state, although in greatly differing amounts, and this insight could have its own repercussions in this context too, perhaps ensuring us that some level of solidity is always okay to possess even while the wildest moves are being spun on the dance floor. Another general principle to keep in mind here is that the more intricate the system, the more gradual and slower the phase transitions affecting it usually are. Given that the human body, though not as complex as a civilization or the biosphere, is far more complex than a grain of salt turning into brine, we ought to be sure that our transformation from a solid state to a fluid one in the behavioral realm cannot occur in the blink of an eye. As we start transforming our dull stillness into magnificent dancing and spinning the wheels of the carousel of our creativity, all until it starts rotating together with stars in their orbits, do not expect reaching a fantastic, starry splendor with the first moves. A little bit of a warm-up, comprising awkward, imperfect and hardly flowing movements, while we set the trains of our being into creative motion, has to precede the flawless flow of our spirit through the air. Likewise, good lecturers, dancers and other public performers who tend to foster interactivity and engage others in a similarly inspiring flow of creative expressions tend to reflect other person's quietness and take her by the hand, slowly and independently moving her towards states of freely and more energetically expressing oneself. They know that coming up in the midst of the moments of wild and explosive expressiveness, dancing all over the place with one's spirit in front of the quiet and still ones who, in fact, need someone to slowly and gradually move them would merely lead to showing off one's own skills and reinforcing the unneeded dominance over others. The process of crystallization can be divided to many steps, from the diffusion of atoms through the solution and their attachment onto the crystal surface to incorporation into the crystal lattice, and all of these sub-processes have

²¹²² See Stephen Mann's *Bioinorganic Materials Chemistry*, Oxford University Press, New York, NY (2001) for a more detailed explanation of this rule.

an energy barrier attributed to it, the highest one of which belongs to dehydration of ions prior to their binding to the surface. What this tells us is that in order to gain something, something else ought to be sacrificed. To engage in a marvelous dance and discover new dimensions of our being through it, we need to be ready to discard the habitual constraints that keep us caged in old and predictable behavioral modes, somewhat like a snake that takes its skin off every once in a while. Needless to add, this process is not painless, as indicated by the relatively large overall energy barrier attributed to it, which is merely another contributor to feelings of uneasiness and insecurity that follow each phase transition in life, from liquid-to-solid in a solution to still-to-dancing on a dance floor. Yet another principle we should keep in mind is that once the solution is supersaturated enough, the phase transition in terms of crystal formation proceeds spontaneously. Knowing this, we would first and foremost set ourselves for this phase transition from the inside and then let our moves go with the flow, trusting our instinct and the inner drive, letting the outer and the inner music be the guide. After all, dancing is all about a spontaneous flow of movements and resistance to forcing anything, from forming fixed judgments that constrain ourselves and the world to enforcing rigid, clichéd and unnatural dancing moves. This emphasis on the initial fluidity of our moves, all but structured at first, on our way to become a sparkler on the dance floor is in perfect accord with the Ostwald-Lussac rule that predicts that an amorphous phase wherein atoms are ordered in space so as to only resemble but not perfectly match the crystal lattice of a given compound presents the first phase to form. Hence, a disorder of our movements in space and timely displaced impulses sent to the air are what characterizes the first steps in anything creative we try to achieve. A more detailed and stricter explanation of the phenomena of crystallization stresses that a liquid phase wherein atoms are more ordered than in an ordinary solution forms prior to the amorphous phase. In his epic chemistry book, *On Growth and Form*, D'Arcy Thompson thus argued that "in accordance with a rule first recognized by Ostwald, when a substance begins to separate from a solution, so making its first appearance as a new phase, it always makes its first appearance first as a liquid"²¹²³, carrying both a profound chemical and alchemical meaning (for those who know how to recognize it, of course, no doubt by keeping their eye on the metaphoric connotations of the expressed ideas). What this extended principle suggests is that first steps ought to be carefully carried out, not so that we become immediately outstanding, but so that we lightly, unrecognizably make our steps through the surrounding forest, as if being a liquid in quiescent and gentle flow. So, now, when dancing moments approach, I know how to jump up in delightful excitement, especially because I accept the perfect imperfection of every beginning moment in life. Only when we approach life as "absolute beginners" do we have a chance to shine to it with spiritual perfection. Finally, as the law of mass action, another basic principle concerning the crystal growth phenomena, tells us, even though the crystal is fully precipitated from the solution and all the phase transitions in its interior have come to an end, the exchange of atoms or molecules across the solid/solution interface never ceases²¹²⁴. In other words, even when the dance is over, dance never stops. It goes on and on because all around us is an undying dance of colors, sound waves, atoms bouncing off each other and electrons orbiting and spinning like moonlit ballerinas on the edges of the spellbound forests of life. Even the stillest details of reality are pervaded with the cosmic dance of beauty and joy that keeps the wheel of existence turning. Therefore, the

²¹²³From D'Arcy Wentworth Thompson's *On Growth and Form* (1942). Quoted in: Laurie B. Gower – "Biomimetic Model Systems for Investigating the Amorphous Precursor Pathway and its Role in Biomineralization", *Chemical Reviews* 108 (11) 4551 – 4627 (2008).

²¹²⁴ See I. Tinoco, K. Sauer Jr., K. C. Wang – "Physical Chemistry: Principles and Applications in Biological Sciences", Third Edition, Prentice Hall, Englewood Cliffs, NJ (1995), pp. 325.

moment an enchanting dance stops, we ought to be tainted for good with the awareness that the silhouette of our being is but a dancer in the eyes of Heavens above. To make the latter burst with joy and release the divine teardrop to wash the face of the world with, we ought to make every gesture and movement of ours pervaded with the consciousness and grace of a divine dancer dormant in each and every one of us.

S.F.6.23. The most important thing to know is, of course, once you start dancing, do not stop. Do not let your over-pronounced, knee-jerky reflectivity drive you down. It is normal to ask yourself if this is phony and awkward. After all, as Lao-Tzu pointed out, “A man ill in his spirit does not recognize his illness; the sage recognizes his own illness, which is why he is saved from illness” (Tao-Te-Xing 71). But this question is, like almost every other, a crossroad, from which one path leads to disappointing giving up and losing the battle on the dance floor, whereas the other one leads to light out of the tunnel, of saying “Yes, it is, but I will be the one who will improve it by gracefully accepting it”. Many times I have heard instrumentalists in a musical band starting to play something that seemed overly simplistic and awkward, but by being persistent and sternly sticking to it, they made it graceful enough in the end. Bringing ourselves to a standstill after the first moments of dancing would be equally disappointing as seeing a musician halting his performance or tuning it down after only a few moments of playing. This is, of course, not to say that we should play and exhibit any nonsensical sections and moves, absolutely carelessly. No, it is by recognizing and accepting our initially awkward moves with grace that we have the chance to transform them into something delicate, unique and intricately beautiful. Now, these brief questioning thoughts have always fascinated me. The moments of confusion are represented in chaos theory as bifurcations, the points from which the evolutionary paths of the system ramify in multiple directions²¹²⁵. Simply saying, whenever we find ourselves immersed in the mindset washed over by perplexity and confusion, we may know that we actually stand on a crossroad with the choice on which way to go and how to guide our further evolution imposed on us. When Taoist philosophers drew the ideogram that represented risky perplexities, they had it intermingled with the one standing for an opportunity²¹²⁶. These fleeting moments when a flashing thought passes through our head, asking us whether we should stop or continue, present nothing but miniature crossroads. However, the chaos theory also tells us that in the world we inhabit, every choice we make may be potentially amplified up to the point of influencing the fate of the entire world; hence, the famous metaphor of a butterfly flapping its wings and producing a storm on the other side of the planet. Each tiny thought arising in our minds can be thus with every reason seen as a snowflake that may start rolling down the hill of atoms, molecules, organisms and people interacting in their incessant swinging back-and-forth, and produce an avalanche that will significantly change the face of the world. Once we become aware that each subtle movement we make in our dancing and communicating with others can change people’s lives, not by drowning them in the avalanche of a blinding glamour and an egotistic power we may radiate with, but by blessing them with pleasuring waves of grace and love upon which they can spontaneously start to surf, ski or swing, all in the rhythm of their heart and Nature beating as One, we may know we are on the right way.

S.F.6.24. The art of dancing along the slender line of the Way of Love teaches us that every creative act or thought is based on firmly and determinedly listening to the delicate tremor of the foundations of our heart and still freely and flexibly going with the flow of change with the views

²¹²⁵ See James Gleick’s *Chaos*, Heinemann, London, UK (1987).

²¹²⁶ See Fritjof Capra’s *The Turning Point*, Bantam Books, New York, NY (1982).

other people and Nature herself pose before us. In other words, we should be carefully listening both to the inside of us and to the outside of us if we are to become a magnificent dancer or exhibit our creativity in any other existential domain. We should throw the anchor of our ship down the seafloor of our heart, firmly attach ourselves onto good, solid foundations, such as those that the Christ praised at the end of his Sermon on the Mount (Matthew 7:24-25), and from there on let our worldviews trustfully and childishly wiggle with the watery streams and winds of the world. For, only if firmly attached to its base and yet able to feel the force of the wind and be susceptible to it can a kite fly across turquoise skies enfolding us like the wings of an oracle crane or the surface of a scrying stone made of smeared Sun and other stars.

S.F.6.25. But there is more to be done. Although modern Internet communications present a giant leap forward compared to unilateral ways of transmitting information, such as radio or TV, we are still way behind the ideal of a world in which everyone would have a room to proclaim a thought or two for many, if not all, to hear, and yet have an access to anything one wishes. The human cravings for control and tendencies to exhibit tyrannical narcissism could be blamed more than anything else for the regression that the mainstream forms of communication have made from the times of the Athenian agora and the Roman forum to the days of radio and television propaganda. Even in the most free-minded realms of human culture, including that of academia, the top-notch points of view are still handed out to others in the forms of amphitheatric lectures, wholly ignoring the far more productive concept of round tables whereby less of the inculcation of opinions from one head to many and more of the mutual reshaping of ideas is usually prone to happen. Although inventive employees of Esalen Institute in Big Sur challenged the obsolescence of traditional amphitheatric lectures in the 1960s by introducing flashing lights given to the audience, which could during the lecture designate one of the three possibilities – (I) “Yes, go on”; (II) “I am losing you”; and (III) “Hey, I’d like to say something”²¹²⁷ - the unidirectional ways of transmitting information still present the dominant form of verbally communicating ideas during important professional gatherings. On the other hand, dancing communications in which all parties are subject to change along their course are always the sources of surprisingly fruitful insights, probably owing to the fact that every evolution in this world is essentially a co-evolution, comprising systems evolving in their togetherness during a subtle interplay between competitiveness and cooperativeness. That is essentially what a true dance is: a ceaseless dynamical search for the harmony between a selfish and spirited expression of I and selfless and trustful following of that dancing other beside us. Beautiful dancing is always about finding a way how to be a Sun and a Moon at the same time. It is being simultaneously a source of light, a leader, a Nietzschean “self-rolling wheel, a first movement, a holy Yea”, bringing forth original moves that come straight from the core of one’s soul, and a mirror, a faithful satellite, a careful listener and a passive follower of the moves of the one we are dancing with. Alchemists of the past had celebrated Mercury-like creatures that had a Sun and a Moon, that is, active, boyish and passive, girlish natures precisely balanced within themselves, and I, an alchemist of the present concordantly pinpoint this balance as the one engendered from the divinely dizzy panorama of the Way of Love in all its unutterable glory.

S.F.6.26. In view of this celebration of bidirectional, dialogical communications, I am free to recall what Fernando Flores, the philosopher, the computer scientist and the information technologist, the former senator, finance minister and presidential candidate in Chile, recently told me: “When

²¹²⁷ See Peter S. Beagle’s and Michael Bry’s *The California Feeling*, Doubleday, Garden City, NY (1971), pp.200.

I am done with being a politician, I will establish a game design company. For, gaming helps us dig the hidden traits of our personalities and thereby become better people". These visionary aspirations are nowadays linkable with the recent accomplishments made by a Serbian computer scientist, Zoran Popović, and his coworkers: driven by the desire to make every creative engagement a game of a kind, they succeeded in attracting thousands of online gamers to play a game designed to solve the 3D structure of a retroviral protease involved in replication of HIV virus among monkeys²¹²⁸. Other studies have shown that playing computer games extends longevity, increases vitality, balances emotionality and improves dexterity among adults²¹²⁹. Yet, what the world needs today badly is, without doubt, more artistic creativity invested in videogame design, not only because of the extraordinary educational potentials of this interactive medium that is so often irrationally discarded as inherently and irremediably childish, but because videogames of the modern day *per se* exert a very powerful, though mainly inconspicuous didactic influence on those who play them. However, today they mostly do all but foster wittiness in making cordial connections between the subject and the rest of the world, which, considering the actual root of the word "religion" - *religare*, meaning "to connect" - could be seen as the ultimate aim of our spiritual growth on this planet: to be able to instantly connect ourselves with every single thing and creature in our perceptual field and build a sense of fabulous oneness whereby each one of us would still maintain one's individuality, with arms spread towards each other and hands held gingerly, like Doric pillars standing apart from one another while supporting a wonderful view of the world on their shoulders. Rather, by mostly being based on the aim of eliminating the many opponents, they have greatly contributed to the modern culture of alienation and pervasion of wholly desensitized mindsets with only flickers of empathy in them, preoccupied with calculating only how to surpass and outflank another rather than connect and build a holier whole, in a way, out of these encounters of the heart. Once this "one against many" approach intrinsic to most videogames of the present and past, from Space Invaders to Moon Cresta to Pac-Man to Donkey Kong to Burger Time to Commando to Doom and its innumerable offspring, is substituted with the one of "one for many", videogames will undergo a phase transition of an immense importance and become a step closer to the ideal of their becoming a multidirectional interactive platform more superior than any other in our collective streaming to trans-humanize this planet. When videogame creators' highlight of the benefit of avoidance and annihilation of the enemy becomes replaced with rewarding one's turning to face another and establish the links of cordiality and friendship, the mindset of videogame players and, then, of the average inhabitant of our planet will change for better, contributing to the development of more constructive arms of spirit by which we reach out to others, the arms that define who we ultimately are. For, just like the Sun is known for the rays it sends out to souls encircling it, so are we, spirits capable of growing into similarly shiny stars, perceived based on the spiritual sunrays that we emit into the space around us. Henceforth, as implied by David Kaplan and Eric Zimmerman in their short film, Play, only when we step out of the perception of reality through the eyes of a videogame player, always striving to manipulate another for the personal benefit, would we accomplish the mission corresponding to the level of reality that we are currently on and step onto the next one in our climbing from one bar to the next on the karmic ladder extending from the hellish and purgatorial lowlands to the

starry heavens. Now, to go back to the interactive nature of gaming, as opposed to the classical, amphitheatric congregations where one would talk and many would listen, I thought for a while how not only movies, lectures and all other educational forums of the future would be interactive, letting everyone participate therein, but even arts, the most powerful metaphors of human lives, may just as well be endowed with a playfully interactive character. Dancing can be, likewise, performed in a truly fulfilling and creative way only insofar as it resembles gaming, as playful and exploratory as we could imagine it to be. With one such playful nature fully awakened within us, we would walk backwards, towards recollecting the pearly insights that sparkle with graceful childishness. And we know that when we walk backwards in beautiful and insightful ways, we open the ways for walking forward, towards beautiful new horizons, as well. After all, Marshall McLuhan was right when he observed that “we look at the present through a rearview mirror; we march backwards into the future”²¹³⁰, implicating that looking back and understanding the past is a prerequisite for creating meaningful future, the reason for which we must make the purpose of our life to restore the child in us, for only in such a way would we be able to walk towards horizons that shine with happiness and ethereal beauties. A playful interaction with the world is what is innate to all children of it, children that are, as we know, the fathers of the man in this circular reality where beginnings and ends, origins and destinations merge into one another. They would come to you with a little bear or a ball in their hands, and in their eyes you could recognize a tender plead to play. But this observation tells us another important thing. It is that following the Way of Love is naturally rooted in little children. It is their living within mentally, emotionally and behaviorally imbalanced societies that makes them lose this wonderful balance that is all about interaction and mutual change with others in favor of becoming either blind and selfish leaders or passive and lame followers. In both of these extremes, unilateral interactions with beings of the world start to dominate one’s personality. Despite that, dances, dialogues, bidirectional, mutually shaping interactions and the Way of Love are what personifies the most brilliant features of life and humanity.

S.F.6.27. Someday I will give up on writing and figuring out the way out of the tunnel of our thoughts, on incessantly organizing the abstract microcosm that swirls with millions of starry thoughts inside of me in search of the permanent answer to it all. After all, Nature resembles a diamond with an infinite number of crystal faces, each one of which can be imagined as a single and unique perspective to the world. People touching an elephant in the dark all come up with different impressions of what the mysterious object might be: a trunk of a tree, a rugged carpet, a hose, or a thick layer of papyrus. Yet, only if they confidently communicate their impressions to each other and accept each other’s findings as equally relevant can they correctly figure out the object that they were let lay their hands on. Likewise, only through a fertile tension between various perspectives of looking at life do we evolve and develop. In that sense, the purposefulness of even the most seemingly trivial, vulgar or disruptive worldviews for the progress of human consciousness and the planet could become evident in the long run. Until then, I will envision myself on a dawn of one such bright and glorious day when everything that has ever existed, all the visions and standpoints of humanity, will have become blended into a perfect harmony of colors, yielding an image of the divine as the outcome, as standing on the cliff of life, right above an endless sea underneath and the Sun setting over it. I will throw all the papery words in the wind and go dancing, dancing, dancing.

²¹³⁰ See Douglas Coupland’s *Marshall McLuhan: You Know Nothing of My Work!*, Atlas & Co., New York, NY (2010), pp. 87.

S.F.6.28. “You haven’t made a film as good as you are, Chaplin”, the screenwriter Frances Marion told Charlie once in an instance of what seemed to have been a Delphic judgment²¹³¹, reminding us that even the best artists that this planet has nurtured have only managed to retrieve bits and pieces of their infinitely beautiful visions and inner landscapes, and impress them into words, songs, paintings or other artistic forms. I have thus always claimed that the most beautiful songs lie deep inside the hearts of ordinary people. What artists know is merely how to extract this inner beauty of emotions and aspirations, translate it into words and music, and bring it to the world in an intelligible and touching form. Every one of us is gifted with the ability to travel far enough to see images and messages that would be of an unprecedented meaning for humanity. These prophetic signs glimpsed in moments of extraordinary clairvoyance, of course, often fall in the sphere of the subject’s interests and, since all of us are ultimately different, the advice of Albert Einstein applies here: “Everybody is a genius. But if you judge a fish by its ability to climb a tree, it will live its whole life believing that it is stupid”. However, the entire point of any such journey is not to die on a desolate land because of not having enough resources and strength to find the way back and bring the treasures found on the way to the people we left behind. Instead, a successful discovery of new lands in sciences and arts alike is marked with smartly going forth and back: reaching new lands and bringing their treasures back home. For this reason, Robert Louis Stevenson, the travel writer who quite certainly knew a thing or two about hidden treasures²¹³², opened his treatise on ethics of human being with the following thought: “The problem of education is twofold: first to know, and then to utter. Every one who lives any semblance of an inner life thinks more nobly and profoundly than he speaks; and the best of teachers can impart only broken images of the truth which they perceive... A few men of picked nature, full of faith, courage, and contempt for others, try earnestly to set forth as much as they can grasp of this inner law”²¹³³. Hence, to preserve the balance between (a) comprehending and absorbing new knowledge and (b) finding channels to disseminate it in an inspiring fashion all over the world stands forth as a prerequisite for creative being in this life. For, like strings that in their back-and-forth oscillations give rise to music, the same trend of distancing and restoring the initial state of intimacy, of digging in and reaching out, of cocooning and exploding like a sun, is responsible for sustaining creativity in each and every aspect of our being and experience.

S.F.6.29. The art of dancing is no different from the arts of loving and living. There seems to be no way we could learn the latter without learning the former as well. However, most people are, just as I used to be once, brilliant in dreaming of themselves dancing, but when it comes to showing off their talents and living their dreams on the dance floor, they freeze and have their dreams dissipate into what appears as a lost, confused and overly self-conscious performance. Most of the time, one does not let one’s glistening eyes freely reflect the music, the waves of which crash against our ears and upon which our hearts glide, but sends flashes of anxiousness and worry driven by concerns of how one’s performance will be judged by others. “Don’t judge me”, a girl yelled at me as I spun my moves around her on a packed dance floor in the Double Dutch, making me wonder how she could judge that I am judging her without her judging me. “I was looking back to see if you were looking back at me to see me looking back at you”, the verses of a Massive Attack

song rang in my head²¹³⁴, making me spin, spin and spin, like a deliriously happy carousel with arms open wide and heart carelessly shining forth. And yet, the majority of dancers around me hardly make a beautiful reflection of music out of themselves by properly losing themselves in it. Instead, they become overly reflective about how their movements will appear in the eyes of others. They, in a way, let their own judgmental attitudes reflect in their reflections from the vision of what other people envision. Perhaps this is the way their own godly nature punishes itself for becoming engrossed in a sin that judging another is, which may be what the Christ insinuated when he advised people to “judge not, lest ye be judged” (Matthew 7:1). Or, as pointed out by Eugenio Montale in the last poem in his last songbook, *Posthumous Diary*: “Is the creator au courant about the strident sport of mortals, or can there be discretion in weighing a just man and a criminal? Maybe a superannuated writer, too, can be judged, if he makes judgments, for his terrible felony”²¹³⁵. And if we should indeed have judgments not enforce more and more judgments, all until our mind becomes enwrapped by them and thoroughly paralyzed, but rather annihilate one another, all until everything sinks into the sea of love, of an utter bliss in our minds, or, to some, nothingness, the empty pages in the Italian poet’s work following this final musing of his on judgments, containing not a single word from thereon and hinting at the Love Supreme arrived at the end of the road, in view of which all words pale in significance. However, one has to give oneself thoroughly, as in this absolute love, in order for the dance to capture people’s attention with its charm and lovingness. This is, though, to say that we should dance not in the same way as if dancing in an empty room, devoid of other people’s attention, but by always adapting our dancing to the circumstances and energy fields around us. Hence, although we need to dedicate our time to sane cultivation of the essence of our being from which the sunrays of our creative spirit emanate outwardly, to illuminate the world, what marks the truest dancers of this and all other human arts is the ability to jump from the cliffs, from the tiny edges of the balance that the Way of Love is, and into the sea, relinquishing themselves for the sake of becoming the world and all that is in it.

S.F.6.30. This is to say that, whatever I may claim herein, you should know that Love eventually wins all the battles. Love is the key that unlocks the gates of Heaven and releases the angelic vibe of sheer starriness even in the most hellish reigns of this Universe. As I think of my Mom’s careworn eyes, flaring out with Wonder and overflowing with Love, with galaxies spinning in her head frenziedly, the greatest depths of the sea of my spirit tell me that even if someone were to give me all the galaxies of Cosmos with the fountains of the most luscious treasures, the parties from Paradise with alluring skin tones and silhouettes dancing ethereally and entwining around my soul like silky snakes to be mine, all mine in return for my spirit’s kneeling before the saintly shine of Love emanating from her eyes, it would have said No, once and for all. Arriving at this insight, which rejects the sensual and the material in favor of the spiritual, stands for one of the greatest things that we have incarnated ourselves on the planet Earth to learn. And once learned, this sacred dharma will endow us with knowing that nothing, truly nothing stands in the way of the waves of Love in this world. There can be no dancing that moves stars in the sky out of their orbits without the dancers’ spirit springing from the foundations of Love, silent, soothing and still, acting as the Taoist center of the spinning wheel of creativity, motionless and gracefully quieted in its essence. We are thus free to say that Love, which is “staying”, as Erich Fromm would have

²¹³⁴ Listen to Massive Attack’s *Safe from Harm* on *Blue Lines*, Virgin (1991).

²¹³⁵ See Eugenio Montale’s *Ex Abrupto* in *Diario Postumo* (*Posthumous Diary*), Translated by Jonathan Galassi, Turtle Point Press, New York, NY (1981), pp. 169.

had it, unlike Wonder, which is all about being driven by exploratory thirsts and moving where no one has ever been, is the first and the final step of all the beautiful dances in life. “Through Love we become winners when attacking and invulnerable when defending” (Tao-Te-Xing 67) is Lao-Tzu’s principle I often recall when I am about to go forward, to break the barrier of my self-sufficient confinement in the bubble of my own dreamy thoughts and approach others with bursts of stunningly creative energy, blessing them with childish sincerity and empathy on the way. Through Love we feed the heart of an eternal seeker and ignite the glow of celestial wonder that lights up the landscapes of our inside world. Through Love we become whole and one with both our self and the world around us. Through Love we lose all the battles, by giving away all the gifts we hide within us, as in the game of tennis where a permanent loser gets all the “loves”, and yet win the war. Through Love we become poor in spirit and thereby, miraculously, in the blink of an eye, reach the kingdom of God (Matthew 5:3).

Soccer, samba and I

S.F.7.1. Albert Camus once said that he had learned most about human psyche and life by playing soccer for an Algerian team in his youth. And who knows how the scientific career of Niels Bohr and the development of quantum theory itself would have proceeded had Niels not complemented his studies with being a passionate soccer player, goalkeeping for the greatest Danish club of those times. If you ask me, I will tell you, therefore, that chess and soccer are indeed marvelous metaphors of human life. Although soccer is less mathematically complex than chess, it conceals a greater abundance of such metaphors because, unlike chess, it is a collective sport and in it figure relations between players: physical, psychological and spiritual, all tangled in a complex web whose reading by a keen eye can be a window to insights that tell us infinitely about the nature of humans, these strange sentient creatures floating through the sea of stars that Cosmos is. Signs of the times applicable to numerous social domains other than the sports can be read metaphorically on the soccer field and one of them, naturally, are scientific. Thus, as I watch any given professional soccer game today, I easily draw the analogy between (a) the way soccer changed from the ages of Bobek and Čajkovski or Careca and Casagrande, when there were times for the players to think with the ball in their feet and make elegant actions, to the modern age, when players are immediately pressed with the ball in their possession, having no time to breathe, let alone think, being forced to perform predetermined tactical plans up to the nines, like robots, and (b) the way science evolved from the days of Romanticism, when scientists were free to space out, count stars on ceilings and conceive of crazy concepts without fear that they would be reprimanded and booted out of academia to its modern days, when it has become industrialized to the point of inhumaneness, having scientists constantly on the hunt for funding and pressured to have their research follow prearranged, lackluster trends instead of questioning it all, including the trends that dominate the given times, explaining, *en passant*, why this sentence is found in a corner of the literary cosmos rather than on one of the accessible shelves of the popular press. Furthermore, strengths and weaknesses of entire countries, cultures and civilizations are mirrored with crystal clarity on the soccer field. And the same reflection of qualities applies on the individual scale too. That is, show me how you play any of the two, soccer or chess, and it will take me far less time to conclude about some of the most pronounced personality traits of yours than if we were to engage in a casual chitchat or an intense philosophical discussion. This explains why the famous chess players also had famous chess personalities, that is, styles, from the romantic outpours of emotion and energy by Paul Morphy to the methodological bohemianism nurtured by Wilhelm Steinitz,

both literally and metaphorically, to the tactical elegance and abrasively offensive simplicity of Emanuel Lasker and, later, Bobby Fischer, to the hypermodern ingenuity and strategic wizardry of Alexander Alekhine to the endgame-loving combinatorial clarity of Jose Raul Capablanca, to the pensive dreaminess and prioritization of the aesthetic over the practical of David Bronstein, to the monumental completeness²¹³⁶ and grandiosity of superbly methodical and principled Mikhail Botvinnik, to the positional patience and slow cornering of the opponent, like an anaconda, of Tigran Petrosian, to the sacrificial, dying-in-beauty spirit of the poet and the gambler by the chessboard called Mikhail Tal, to Boris Spassky's being a precursor for the sharp, aggressive style based on puzzling positional sacrifices to secure and/or preserve the initiative, which would later be mastered by Garry Kasparov, to the defensive timidity of Anatoly Karpov, to Kasparov's atomically energetic complexity and the proclivity to deviate from the textbook variants at the cost of producing moderate positional weaknesses in one's position, albeit open for more tactical possibilities, to the solid and principled, 'draw-with-me-or-lose' style of Vladimir Kramnik, to the erratic mood swings on the chessboard by Vassily Ivanchuk, to the tigery calm of Vishy Anand in the midst of self-initiated tactical storms, and so forth. Bobby Fischer's playstyle, for example, sharp, succinct, direct, favoring practicality over poetry, is as American as the American literature, serving as a paradigmatic example of how sociocultural traits of a player tend to become reflected in his moves on the chessboard. It is a statement of fact, however, that modern times have made this quest for one's own authentic chess language at the top level incredibly difficult because it is demanded from the most competitive chess players to excel in every single aspect of the game and apply different styles in response to the situation on the board and the style of the opponent, explaining why from the times of Magnus Carlsen onwards the uniqueness of the style among the world's best chess players has vanished and the universality of the style has become a rule without an exception. From the mid-2010s onwards, the top players in the world can be all seen forcing the transitions to dynamic positions brimming with countless tactical possibilities, but can also play a solid positional chess depending on the situation on the board. Now, chess is by far the most intricate game ever invented by humans, bordering science and art in its combinatorial complexity and aesthetical appeal, respectively. Through its solid, yet relatively simplistic framework, dividing the aesthetic into very defined elements, including (a) effectiveness, (b) disguise, (c) sacrifice, (d) indefensibility, (e) preparatory subtleness, (f) paradox, (g) bold and inventive goings against the textbook advices and prescripts, (h) cooperative unity of distinct pieces, and (i) originality²¹³⁷, it can form the basis for studying the theory of aesthetics in any other domain of life. As seen from many popular narratives, including, most famously, Ingmar Bergman's *The Seventh Seal*, chess can also be a powerful metaphor of life, meaning that parallels are often drawn between chess strategy and the approach to countless competitive and/or challenging situations in

²¹³⁶ Because of his completeness in every element of the chess game, Botvinnik has also showed me how bleakness and impersonality result from multifaceted perfection and conversely, how imperfection in one or a few elements of one's interface with the world is a must if one's wish is to possess a definite style that exalts and inspires. His analog in the field of soccer could be the former captain of the Serbian national team, Dejan Stanković, relatively styleless and unimpressive exactly because of being good in every aspect of the soccer game: offense, defense, shooting, passing, positioning, corner kicking, free kicking, heading, physical strength, etc. For, as the Polish-Argentinian chess grandmaster, Miguel Najdorf noted in the context of describing Bobby Fischer's game, "Perfection has no style". Still, in support of the benefits of one such versatility that averages across all the traits of a soccer player, one could argue that a hypothetic team composed of 11 Dejan Stankovićs would most probably prove itself better than a team composed of 11 Leo Messis, 11 Paolo Maldinis or 11 Frank Ribberys.

²¹³⁷ See the Wikipedia article on Chess Aesthetics, retrieved from http://en.wikipedia.org/wiki/Chess_aesthetics (2015).

life, the reason for which I, in search of divine guidance, frequently resort to a game of chess against computer or a human opponent²¹³⁸. Soccer, on the other hand, is a sport that may be closest to chess in terms of strategic richness and infinite distance from the solution or from a reduction to a finite set of moves and principles. Whereas the intricacy of most other ball games, including basketball, handball and water polo, is limited to their tactical elements, none of them comes anywhere near soccer in the abundance of their strategic possibilities. One could choose to play defensively throughout the course of the entire game or a part of it, to attack continuously or periodically, to confine the pressing areas to only segments of the pitch, to pack the team into a bunker in front of one's own goal, to force long passes at the cost of frequently losing the ball or to adopt the so-called tiki-taka style so as to maintain possession for extended periods of time, to pick different formations, to run the ball through the center or across the wings, to be constructive and play one's own game or to base it on destroying the opponent's plans, and so forth. Therefore, the breathing-like movement of teams across the soccer field throughout a game is the closest thing to a symphony in the world of sports. Yet, in spite of all the meticulous crafting of a holistic harmony, it is a single moment of imagination and inventiveness of a single player that often decides the outcome of a game and this balance between collectivity and individuality, between One and one, so to say, lands us straight onto the lenient lap of the Way of Love. The passions for both soccer and chess can also be said to literally flow through my blood. Namely, while my Dalmatian grandpa played in his youth for one of the oldest European soccer clubs, Hajduk Split, founded in 1911, years before he wanted to be lynched in his hometown for not taking off his hat in front of a Catholic Church procession, after which he moved to Belgrade and converted to Orthodox Christianity, and remained an avid amateur chess player all through his old age, his wife's and my grandma's brothers were top players in the most successful soccer club in the Kingdom of Yugoslavia in the period between the two world wars: OFK Belgrade, that is, BSK, as it was known back then. On the other, Montenegrin side of my family tree, not only do many of my cousins earn for living as soccer trainers and instructors, but one of my very close relatives, my grandma's sister's son, to be specific, Milan R. Vukcevich, who emigrated to America in the

²¹³⁸ One example comes from a 15 min per player game I played as white against certain psx19 on lichess.org platform on February 2, 2018, the day I learned that I will be booted out from my academic post at a private university, only because I stood up in defense of academic freedoms and displayed the same personality traits that I ascribed to scientific, scholarly creativity I disseminated in the classroom – wild, raw, authentic, imaginative, emotional, passionate, childlike direct, 100 % truthful and 1000 % free. Anytime we ask for guidance, we get it and this time I got through a chess game. It was Caro-Kann defense, which I opened with my regular first move of the queen's pawn, 1.d4, leaning "left of the middle", more to my Mom and various other queens in my life than to my Dad and everything masculine in life. As the game transitioned from the opening to the middlegame, the c file became opened and the black launched an attack on the weak black knight resting on c3 square. The hoppy knight, symbolizing unbound joy in me, got attacked, just as in real life, but I maintained it in place, unhurt and untouched, all until the end of the game. The way I counteracted this attack of the black was by pushing the two central pawns, e and f, all the way to the top of the board. These two pawns symbolized something small and weak, which I would make the strongest weapon in my arsenal. These, I deemed, must be my daughter and son, the two preciouses pawns in my possession. When they march forward, in their godly purity, nothing can stand in the way and the darkest of armies secede. Such was the case in this game too, as this counterattack withdrew all the offensive black pieces from the queen side to help the arrogant king, which castled not, and then forced him to surrender under an imminent checkmate threat. And so, following this guidance, I erased all other thoughts from my head and focused only on these two diamonds jumping on my lap. I looked deep into their starry eyes and empathized with the world seen through them. It was, I knew, my way to the victory. Here I paste the entire game: 1.d4 c6 2.e4 d5 3.Nc3 h6 4.e5 Bf5 5.f4 e6 6.Nf3 a6 7.Bd3 Bxd3 8.Qxd3 Ne7 9.0-0 Nf5 10.Kh1 Nd7 11.Bd2 Nb6 12.b3 c5 13.g4 Nh4 14.Be1 Nxf3 15.Rxf3 Rc8 16.Rd1 c4 17.Qe3 cxb3 18.axb3 Qc7 19.f5 exf5 20.gxf5 Be7? 21.f6 gxf6 22.exf6 Rd8 23.Bg3 Qd7 24.Re1 Qe6 25.Qxe6 fxe6 26.Rxe6 Kd7 1-0 Black resigned, White is victorious.

early 1960s, was a prominent chess player, an inductee into the US Chess Hall of Fame, the first American FIDE International Composition Grandmaster, the 1969 winner of the US Open Championship and a two-time nominee for the Nobel Prize in chemistry. Blood kinship aside, in my eyes, the magic of chess has always lain in the faithful way in which it reflects the game of life. Hence, whenever I play a game of chess, I see it as a giant mirror of what my personal qualities are at those moments, that is, how good and skillful I am in confronting the puzzles of the world in any of its aspects. Whenever I wander off the balance between patience and composure on one side and energetic dynamism on the other, it becomes reflected in the way I approach playing a chess game. For example, I may become too flurry and chaotic in the opening and thus produce many weaknesses in my position, or I may become inconsistent or hesitant in attacking the opponent, thus losing a critical initiative. As for the game of soccer, an experienced player or a coach with a keen psychological eye also readily recognizes personal qualities - difficult to glimpse otherwise – mirrored in the way one approaches the game. Thus, I have seen people turn into ravenous wolves on the soccer field, ready to neglect the demands of not only safety, but fair-play too by being selfishly focused on scoring and winning only, demonstrating their narrow-minded competitiveness and cutthroat thirst to prove themselves better than another thereby. Others I have seen uncontrollably vented their frustrations by deliberately aiming to insult and injure another. Yet others enforce one-on-one duels and often aimless dribbling, disrespecting both their opponents and their teammates thereby, let alone ignoring the fact that soccer transitioned from a predominantly dribbling game to a passing one a century ago, and so forth. I, however, on the best of occasions, let myself be magically guided by the music of my heart that is thence entirely one big smile from which tears of some mysterious sadness slowly drop, one by one, turning my dancingly graceful movements on the field, always craving to live up to the dreams of embodiment of some divine ethics and aesthetics, into a prayer in action of a kind. Now, the similarity between soccer and life greatly springs from the fact that soccer is a game one can enter with great expectations and still never score a goal. If you do, of course, you ought to know that the feeling is almost greater than life. It is every soccer player's dream to score an important goal and with a wind in his hair, arms widespread and heart filled with joy stream towards the fans for whom one plays and to whom one dedicates all of one's strivings and efforts. Many games and tournaments, both in chess and soccer, have served as giant signs on the path of my life. In fact, I believe that some striking moments from soccer games, be it Ljubomir Radanović scoring a header in the 91st minute for Yugoslavia against Bulgaria in Split in 1983 and taking his squad to EURO 1984, Peđa Mijatović hitting the post from the penalty spot in the 1998 World Cup match against Holland in Toulouse, the post that, as local soccer aficionados have it, "still shakes"²¹³⁹, decades later, or

²¹³⁹ The night after that epic miss, the street right around the block from my home in Belgrade, which had been renamed from Čeda Mijatović St. to Peđa Mijatović St. a year or so earlier, got its name reverted to its original. Also, not too long after that doleful night in Toulouse, my older brother, Deki, wrote a magazine article about Mijat's post and this street name change shenanigans, prophetically noting that "the public will remember the post forever" (See Dejan Petković's Bogovi su pali na teme, *XZ Zabava* 19 (August 1998), pp. 99). He did not know at the time that a year later he would be arrested right at the corner of Čeda Mijatović St. and our street, Milana Rakića, for refusing to be drafted and sent to war against NATO in 1999. And I, I have always claimed that I could write a whole book about this post. A millimeter up or down and a whole universe of human emotions, with unforeseeable consequences for billions of human lives, could go one way or the other. Mijat's post, in that sense, can be seen as an ode to the greatness of the smallest of things – a butterfly effect at its finest. The pain it brought to a whole nation for one or more generations also partly emanated from what Mijat's shot was meant to symbolize. The World Cup in 1998, namely, was the first international competition at which the soccer team of Yugoslavia, the nation humiliated and pilloried in the years prior to it, was allowed to compete. In 1992, for example, Yugoslavia, which was at the peak of the powers of possibly its greatest football generation, was brought in to Sweden to compete for the title of the European champion as the first

Pierre Boya missing the decisive penalty kick for Partizan on a warm and humid August night in Belgrade, sending Petržalka to the 2005/06 UEFA Champions League and leaving a sting of *žal* in the hearts of my two brothers who watched the game live on the stadium, can become so firmly impressed in people's minds that they could be easily imagined as changing the development paths of the whole nations. When the civil war broke in 1991, Yugoslavia was on top of the world in many sports. The Yugoslavian national team won the world championship in basketball in Buenos Aires a year earlier, thus continuing the almost three decades long spree of earning a medal at each world championship, specifically since the one held in Rio de Janeiro in 1963, and although it happened to be disqualified from the tournament held in Toronto four years later, in 1994, because of the international sanctions, as Serbia and Montenegro, though still named Yugoslavia, it defended the title at the next two world championships, in Athens in 1998 and in Indianapolis in 2002, retaining the world title effectively until 2006, that is, for 16 consecutive years if we do not take into account the championship in Toronto in 1994, when Yugoslavia was shamefully prohibited not only from having the tournament organized on its own soil, in the city of Belgrade, as was initially the plan of the International Basketball Federation, but also from defending it, allowing the US basketball team, which ironically dared name itself a Dream Team only from 1992 to 1996²¹⁴⁰, being the time span during which Yugoslavia was banned from the world sports stage, to snatch that title. Basketball experts today pull a plethora of reasons as to why the Yugoslav team from the early 1990s was a true winner of its clash with the American Dream Team titan in 1992 Olympics, even though this encounter never happened because of the ban imposed on the

team to have qualified for the tourney, but was then suddenly disqualified and sent home because of the international sanctions that kicked in in the interim. In an unprecedented move before or after, the European football association brought in the second team from the qualifying group topped by Yugoslavia to compete at the championship and, as it happens in fairytales only, this national team, namely Denmark won the competition despite being a complete outsider. In 1998, though, this generation of Yugoslavian footballers was already at its sunset, singing a swan song, saddened for having been banned from competing at the international stage when it had been at its peak, in the 1992 – 1998 period. Mijat's penalty shot was unorthodox and rarely seen in soccer. Symbolically, he kicked the ball with the full foot, into the center of the goal and as high as it can get, the three parameters that were supposed to condense all the rage that a nation unjustly condemned and excluded from the rest of the world felt against that world and its injustices. He could have slyly sent the ball with the side of the foot and into the lower side of the goal, as he did to Zubizarreta in the qualifying game against Spain in Belgrade a year earlier, but that would not be an adequate expression of the emotion of a nation at that moment, at that big of a stage. He could have also hit the ball with full force into one of the two bottom corners, as his teammate in that game and the player on which the penalty was called, Vladimir Jugović had done at the final penalty shot in the final of the Champions League two years earlier, in 1996, in a game against Ajax, against the very same goalkeeper, Edwin van der Sar, that stood face to face with Mijatović that night, thus bringing his club at the time, Juventus, the title of the European champion. But that, again, would not be it. The ball, rather, had to be kicked with the full foot, up high ("nebu pod oblake", as the common saying in Yugoslavia had it), and straight into the center; with one such subliminal message, the goal, if scored, would end up being impressed as an inspiration to his compatriots for ages, but, if missed, it would be the most painful miss in history. But the dice was cast and the risk had to be endured, Mijat might have felt, unless his mind in that instant was taken over by a grander hand of destiny. Alas, the ball went higher than Mijat wanted it by only a centimeter or so and bounced back just before the goal line. As it often happens in life, when ambitions are a bit over the top, the world governed by hypocrisies and mediocracies won't forgive it and will promptly penalize it, and so did it happen to the game played on that humid night in Toulouse on June 29, 1998, symbolizing the fate a nation and millions of its members in the world ruled by the love of power and not the power of love.

²¹⁴⁰ See the Wikipedia entry on Dream Team, available at http://en.wikipedia.org/wiki/Dream_Team. Only three US men's national basketball teams held the epithet of the Dream Team: the one that competed at the Olympics in Barcelona in 1992, the one that competed at the world championship in Toronto in 1994, and the one that competed at the Olympics in Atlanta in 1996. In 1990 and 1998, right before and right after the US team won the title of the best basketball country in the world in the absence of Yugoslavia, the championship was won by none other but Yugoslavia.

Yugoslav team, including the fact that, since then, basketball played by the most successful teams in the NBA league has become increasingly distant from the traits that typified the American Dream Team and increasingly similar to the style begotten by the Yugoslav team; or, as pointed out by Tom Hawking of Rolling Stone Magazine, “Forget Jordan’s Bulls, the Spurs, any team LeBron is on or the Warriors: Yugoslavia made our modern game what it is today”²¹⁴¹. In 1992, the famous three-point buzzer beater by Aleksandar Đorđević won Partizan Belgrade the title of the best European basketball team in spite of the fact that the team was not allowed to play but a single game on its home court, continuing the reign of Yugoslav clubs that had lasted for three straight seasons until then. Yugoslav dominance over the basketball courts of the world is also illustrated by the fact that this very same competition for the best European basketball teams was during this period of time, i.e., from 1989 to 1997, won strictly by the Serbian coaches. In 1991 in Perth, Yugoslavia defended the gold medal at the world championship in water polo won four years earlier in Madrid. Croatian clubs were also reigning in many sports: Jadran, a water polo team from Split, was the European champion in 1991 and 1992, whereas Mladost, a team from Zagreb, held the same title in 1989 and 1990; Zagreb was the European Champion in handball in 1991 and 1992; and POP84 from Split was the European club champion in basketball in 1991, 1990 and 1989. Although chess is an individual sport, there are a number of chess team events at international levels, for clubs and national teams alike, and Yugoslavia awaited its breakup as the silver medalist at both the European Team Chess Championship held in Haifa in 1989 and the World Chess Team Championship held in Lucerne that same year. Finally, just as the war was breaking out, in 1991, Red Star Belgrade won the most elite soccer club competition in the world, becoming first the best club in Europe and then the best club in the world. And just moments prior to the final game played at St. Nicholas stadium in Bari, Italy, against the mighty Olympic Marseille, the coach, Ljupko Petrović allegedly asked the team players if they wanted to play in a wonderful and inspiring manner, to leave their hearts out on the field, to enchant the spectators but eventually lose the game, or to play unattractively and insipidly but win the trophy at the final whistle, hinting at the elusive and permanently tensed relationship between quixotic idealism and result-giving pragmatism, “between beauty and cynicism, between what Brazilians call *futebol d’arte* and *futebol de resultados*”²¹⁴², that has kept the experts on this game preoccupied ever since its earliest days. The soccer historian, Jonathan Wilson has correspondingly invoked a dichotomy between the two Argentine soccer stars from the 1930s, nicknamed el Negro and la Chancha²¹⁴³, the former of whom prioritized having fun on the pitch over scoring goals in any of the ways and

²¹⁴¹ Tom Hawking also went on to notice that “the single best season of the last 20 years (for Greg Popovich) came last year, with the 73-win Warriors, who look strikingly like the great Yugoslav team that never was... Watch a tape of the Yugoslavian team from, say, the 1990 FIBA World Championship, which they won in a canter, and it’s uncanny: you could be watching an old, grainy videotape of a Warriors game. Golden State is certainly reliant on the individual brilliance of its stars, but even more so, it’s reliant on the way they play together as a smooth, fluid unit. The Yugoslavs do the same; on offense, they move the ball with startling swiftness, executing complex offensive plays with speed and elegance. On defense, they rotate smoothly and efficiently. Their ability to stifle their opponents isn’t reliant on being stronger and faster than the other team; it comes from discipline and mutual trust... to me, the great tragedy of the 1992 Olympics isn’t so much that it never saw the faceoff of the two greatest national teams of their generation, but that it never saw the greatest exponents of the American approach to basketball set against the greatest exponents of the European basketball philosophy. But then, perhaps that showdown never needed to happen, because it’s played out over the subsequent 25 years – and it’s starting to look like the Europeans have come out on top”. See Tom Hawking’s Why the Most Important Olympic Basketball Team Wasn’t the Dream Team, *The Rolling Stone* (August 3, 2016), retrieved from <http://www.rollingstone.com/sports/yugoslavia-impact-on-modern-basketball-w432112>.

²¹⁴³ *Ibid.*

the latter of whom worried only about how many, not how beautifully, goals are scored, with many, naturally, considering the reconciliation of the two to be the greatest problem of the South American soccer school. Be that as it may, as the history goes, the Red Star players collectively opted for the latter, result-oriented approach, obeyed the coach's advice to "give the ball back to the opponent when you get it"²¹⁴⁴, defended well for 120 minutes, and eventually won the game on penalty kicks, in a European Champions Cup final whose display of lackluster on the pitch could be matched only by the infamous one on the Heysel Stadium in 1985. A day will, however, come when we would realize that this plane of reality is such that consciously opting on it for failure is the only way to enter eternity and change the world for better, whereas craving to win would equal reaping fatter returns, but leaving no lasting mark and losing the game of life in the bigger frame, but this is the topic that I will merely mention at this point and walk away from it, though leaving it here like a seed from which monumental insights could be deduced, akin to a tree that could grow with one on them all the way up to the heavenliest clouds. Now, all these immense successes in the sport arena might have contributed to boosting the moral and spurring the feelings of powerfulness and superiority in people, possibly and sadly, if true, adding fuel to the fire of the fighting spirit on the battlefield. The great sport successes for a relatively small country of Yugoslavia occurred in parallel with the war events, as if an explosion of energy took place in all domains of the society. Sometimes I love to think that the early nineties gave rise to a huge concentration of energy in that part of the world, the most primitive one of which was directed to sports and fighting, and the most creative of which, scientific, artistic and philosophical, would take more time to flourish. Soccer is also one of the rare sports in which an underdog can always look for its chance to win a game or even an entire competition. In turn and in analogy with life too, it is also a sport wherein a more skilled and beautifully playing team may easily lose against a less skilled, vile or even a completely amateurish one, which is an insight that prompts us to comply with the words of the Serbian poet, Duško Radović, "we consider it unimportant who won; it is more important who is better, and that, my friend, is a matter of taste"²¹⁴⁵, echoing in accord with the genuinely wise worldviews adopted by the sages, always looking for something beyond human praises and accolades when it comes to appreciating human characters and their accomplishments, thus frequently finding themselves skimming through things, creatures and acts discarded as rubbish in search of real diamonds. Soccer, as such, being a mirror of the fabric of social reality, clearly demonstrates the illusoriness of the concept of justice in our lives. Of course, the sooner we grasp this fact, the sooner we will set our feet on the grounds of holy thought that judges not, but loves a lot, so to speak. After all, the world that we live in is such that harm done to it by the inherently unjust souls is just about the same as damage done by souls seeking justice but failing to realize that, given the infinite scope of the contextual skies that we would need to probe before coming up with perfectly just assessments of any qualities in life, the elusive weight balance on which justice is measured is as unattainable as the pot of gold at the end of a rainbow. Thus, ever since Denmark entered the European Championship in 1992 instead of Yugoslavia, which was eliminated due to political reasons, and miraculously won the tournament after recruiting the players straight from beach vacations, without any preparations, shockingly becoming the champion of Europe, strange things have occurred. Greece winning the European Championship in 2004 presents another example that immediately comes to mind. Although most soccer fans considered this peculiar moment in the soccer history as a devastating one for the

²¹⁴⁴ See the Wikipedia article on the 1991 European Cup Final, retrieved from https://en.wikipedia.org/wiki/1991_European_Cup_Final.

²¹⁴⁵ Or, "Mi mislimo da nije važno ko je pobedio. Važnije je ko je bolji. A to je stvar ukusa", as it goes in Serbian.

prospect of the game, given the fact that the trophy went to the hands of a destructive and all but imaginative soccer squad, which knew only how to park a bus in front of the goal, interrupt the fluidity of the opponent's game and hope to be lucky enough to score from a semi opportunity, to me this was a moment bearing an unassailable optimism, indicating that everything is indeed possible and that even the greatest underdogs have a chance to win the contest of life. Then came EURO 2008 when almost all the teams that did best in the group stage of the tourney got eliminated by the lower seeded teams in the first following round of the knockout stage. The same scenario occurred at the 2010 World Cup in South Africa where Spain lost the first game, but then recovered and won the six subsequent ones, becoming the champion of the world for the first time in its history. Similarly, Serbia became the youth world champion in soccer in 2015 after losing its opening match against Uruguay and winning the subsequent six games, beating first Mali and Mexico in the group stage, then Hungary in the round of 16, United States in the quarterfinal, Mali again in the semifinal and Brazil in the final. Hence, as it often occurs in life, the small doors and narrow gates lead to the greatest achievements and successes. Or, as the Serbian saying goes, *od pokojnika do pukovnika*, meaning "from the defunct to the dignitary" and being applicable to countless historical events, from the triumph of the Serbian army in World War I to the Olympic games in Rio de Janeiro, when all of the four Serbian ball game teams participating played miserably in the first round, winning less than 50 % of the first twenty matches, and then all won a medal in the end; as a result, Serbia, which won no medal before Day 11 of the two-week long competition, finished the Olympics as the only country in the world to have won a medal by each of its team sports, with more than 50 % of the total number of Serbian competitors returning home with a medal: 54 out of 103. Folk wisdom, thus, knows very well that as we begin insecurely and fall on our ways, we have the chance to learn thereupon and become a magnificent player one day. But if we start with phenomenal wins, our performance may turn out to become disastrous at later stages. For, through mistakes and displays of weaknesses we evolve and become flawless one sunny day. I have even gone as far as to state that the demise of the Serbian soccer began the moment when the freedom to make mistakes on the pitch, freely and dreamingly, was abandoned and substituted with a fear of errors, as stiffening and obstructive for the flow of creative impulses as it could be. Namely, as the key role in the national team was handed over to defenders and defensive midfielders, ranging from Dejan Stanković to Nemanja Vidić to Bane Ivanović to Nemanja Matić, leaving the era of Dragan Stojković Piksi, Dejan Savićević, Peđa Mijatović and other creative midfielders and attackers behind, the freedom to make errors was abolished and, with it, the room to display pure magic on which the success of this soccer school depended ever since its founding in 1919 became lost too. A risky playstyle based of boldness and imagination ceded its place to short passes, a.k.a. alibi ones, motivated solely by the fear not to lose the ball, yet being futile and directionless most of the time, resulting in a series of defeats and failures. Hence, from the littlest details to the biggest pictures, the conclusion has remained the same: do not be afraid of losing battles and making errors, for they are necessary steps to achieving greater wins in life. Bobby Fischer irrationally sacrificed a bishop in the first game of the 1972 final of the World Chess Championship against Boris Spassky, did not even show up for the second game, and yet in the end managed to be crowned as the champion of the world. Had Vlade Divac not missed both free shots five seconds before the end of the game against Argentina in the final of the 2002 World Championship, the referees would have called at least one of three fouls committed on Hugo Sconochini in his subsequent attempt to lay the ball in the basket. With Divac's misses, the game went into overtime, which Yugoslavia played immaculately and became the world champion for the third time in a row, thus continuing its 12 years long dominance on the basketball

throne of the planet. In a way, this fine miss-then-kiss affair was an echo of a bigger story about the Yugoslavian national team at world championships in basketball, the reason being the fact that even though the Serbian player, Nebojša Popović scored the first point at the first world championship in basketball, in a game of Yugoslavia against Peru in Argentina in 1950, the team finished the tournament at the last, tenth place, having lost all five games it played. Thirteen years later, however, in 1963 in Brazil, it would earn its first medal and then not leave the world championship tournament without a medal for 53 straight years, that is, all until 2006, the run that no other country ever succeeded in. Also, most of the great generations in team sports faced striking blows on their victorious visions and dreams at early stages of their careers, which, as the later history could show us, made them stronger and thus prepared them for the truly great achievements that were to come later in life. For, only when we fall from grace on our ways, we could be sure that the heavenly skies welcoming our ascent towards greater levels of being open above us in all their splendor and charm. When during the piggy race I watched at a country fair in Marin County the piglet that became disoriented shortly after the race had begun, finding itself wholly lost on the track thereafter, holding the last position in the middle of the race, crossed the finish line first, it was only one out a myriad of miniature fairytales, noticeable only by the most sensitive eyes of this world, wherein the last become first and the lost, somewhat like the words in this rather long and convoluted sentence, are found to be far more valuable than those that have steadily walked the righteous path at all times. For, as the biblical parable of the prodigal son (Luke 15:11-32) reminds us, the all-seeing eye of the Greek goddess Aphrodite, who had watched the world through the eyes of Odysseus and opened the ways of salvation in front of him, is made millions of times more gleeful in view of the things lost and found than those that never set their feet on the road and always stayed in its sight. The magical effect on dispelling the clouds of crankiness from within babies' minds through a simple game of peek-a-boo, which I, myself, can attest to, having realized how Theo's face becomes lit up like the Sun every time he watches me perform the salutation to the Sun before him, with my face being alternately revealed and hidden to him with each move of this yogic exercise, can also tell us that our entire beings, from the moment we were born to this very day in the courses of our lives, are intrinsically tuned to this ceaseless alternations between being turned to and from the most precious objects of our attention. Already by nine months of age or so, when the fear of strangers has taken over the spirit of the little ones, a readily visible pull in opposite directions settles firmly at the bottom of the infant's mind, driving him to escape from the world by cocooning oneself in the shroud of shyness and at the same time to come to it and other creatures as closely as possible, in a genuinely interactive manner. An excruciating clash of antagonistic forces is thus generated within one's consciousness and their reconciliation along the middle ground line of the Way of Love will come to define the child's sacred mission in life to accomplish. Sooner or later, one would realize that the most inspirational rockets of thought, emotion and physical expression are being launched from these middle grounds whereon one obeys the call to meditatively plunge as deep within oneself as possible and at the same time reaches out and opens one's heart to another with unaffected geniality and sympathy. After all, as it naturally springs forth from the symbolism of the Way and the ideal of simultaneous remoteness and connectedness that it highlights, the continuous spinning and swirling of the ball of life from one goal to another, bringing enormous joy and sadness, the two most fundamental emotions on whose pillars the whole Universe is erected, to both the spectacles and the participants of the game of life, is possible only insofar as the ball simultaneously spins to and fro with respect to both the points of its origin and the destination. In other words, to move back and forth, to be as remote as the most distant cosmic star at one moment and then as close to

one as a child embracing his mother, resembling the sea waves that ceaselessly rock back and forth, alternately touching the shore and retreating away, is the recipe to wondrous living in each and every of its aspect.

S.F.7.2. “The way of the East is the individual way, and the way of the West is the common way. Which one is real, which one is better? A man is an individual, but is also a part of the whole. Which way should he, therefore, follow?”²¹⁴⁶ These were the words of wonder of Selvarajan Yesudian, a Hatha yogi who left India during his adolescence and settled for good in Western Europe, quite probably continuing to reflect on the cultural differences between the place of its origins in the Indian city of Chennai, formerly known as Madras, and his newly established habitats. Now, one could readily agree on the approximate correctness of the Indian guru’s drawing a line between East and West and endowing the former with the attribute of a more expanded social consciousness, while attaching the epithet of self-centeredness to the latter, somewhat similar to what I did in one of the preceding sections. However, it does not take much intellectual wittiness to realize how individuality and communality cede their places to each other as the dominant traits within a society as one looks at it from different angles. The modern Western societies are individualistic in many respects, as they are largely based on self-oriented competitiveness and much less on the spirit of trust and reliance onto others. However, they also promote occasions for free socializing and progressively communicating in social settings. Oriental societies have, however, traditionally maintained a lone, individualist approach to enlightenment, unlike the communal rejoice, a.k.a. partying, which has been the route to happiness on the other side of the globe. On the other hand, the sense of communality in terms of high levels of trust that links the members of a society among themselves seems to have been more pervasive in the East. Now, having been born and grown up in Belgrade, I learned to see that place on the map of the world that I consider my home as the line dividing the Oriental East dominated by the individual man and the Western World dominated by the man of communion. And when I watch a great soccer team, I am reminded of the same quality: the balance between individuality and unison. As one leans by the wired playground fence and observes children playing soccer, one can immediately realize how overly confident and individualistic players tend to mistakenly find their way through the opponent team’s defense without passing the ball, whereas timid and insecure kids, ready to give their own judgment to hands of more powerful ones, only look to whom to pass the ball as soon as they are in possession thereof. Of course, although the latter players are truer to the basic principle of soccer game that teaches us to run as little as possible when in possession of the ball and as much as possible when not in its possession, if we desire to become a complete player, there is no doubt that we need to transcend both of these extremes and find a golden middle between them. A brilliant coach fosters the players to be great individuals, but he also urges them never to forget to think from the perspective of the team as a whole. In case of a winning squad, this balance may be slightly disrupted in case of particular players, but gets rebalanced once again at the level of the entire team. Now, earlier in the text I mentioned that although people in daily critiques often assume fixed qualities of individual teams and players, these are actually subject to ceaseless change. Not only do sporting assemblies as a whole naturally “breathe” and evolve as the play goes on, but the traits of individual players are likewise subject to incessant change during the course of the game, the season or the player’s career as a whole. Innumerable are examples of soccer players who came to new teams in a tremendously underdeveloped state, only to become phenomenally skillful and instinctual over time, as well as those who wasted their talents because

²¹⁴⁶ See Selvarajan Yesudian and Elisabeth Haich’s *Raja Yoga*, Unwin Hyman, Boston, MA (1980).

of failing to find a thriving niche for themselves; all of these insights are, of course, systemic and applicable on countless occasions as such. As for the world of sports, one can then often observe how “chemistry” between two or more players, sustained on the threads of immense sacrificial respect, can invisibly spread itself throughout the team and hold other, relatively untalented players under its spell, resulting in phenomenally coordinated and successful play of the entire team. When this “chemistry” is weak, spirit is low and the team tends to be short of success. Although a set of rules on how to compose a winning team is predestined to remain incomplete, some basic principles, which the most experienced strategists hardly wait to disobey, can still be outlined. The first and foremost one is knowing that success sucks nutrients from the roots wherein invisible qualities, not immediately connectable with the ordinary concept of the game, lie, including love and a whole lot of other emotions and frames of mind which hide the key to carving triumphant spirits. One of them is also the choice of the player(s) that will be spurred to spread this triumphant “chemistry” around himself, or the captain, if you will. I have seen many winning generations in sports fail flat when masterful centerpieces of the team have been substituted with so-called “screws” in the machinery of the team, that is, hardworking, obedient figures with limited scope of creativity. The true captain has to be someone who will have a distinct vertical line drawn upwards from the soil of his spirit, connecting him with “the great beyond” at all times, as if cosmos as a whole opens behind the screen of his heart and mind. These ideal central figures of the team are also intrinsic rule-breakers, finding moves surprising to all in an instant, guided by a phenomenal intuition springing from their rootedness in this greatly expanded consciousness. Rarely does it happen that a successful team does not possess an extraordinary individual, frequently playing a captain or a central midfielder and comprising a creative core of the team. Such players of usually sophisticated technique are quite sensitive once they become slightly injured²¹⁴⁷, particularly because they enjoy playing the game by being deeply withdrawn in themselves and not keeping their mind much on preserving the integrity of the team as a whole. Foxy coaches challenged by a team revolving around a creative center in which one such sophisticated and ultrasensitive soccer star resides thus often resort to having him either deliberately injured or seriously tackled in order to have his focus distorted and the first example that comes to mind is that of Rafa Márquez’s bumping his head into the back of Luka Modrić’s head during the decisive group stage match between Mexico and Croatia at the 2014 World Cup in Brazil, thus disrupting the playmaker “of slight, almost fragile build”²¹⁴⁸ whom Jonathan Wilson hailed “the first of the new-style playmakers”²¹⁴⁹ for the duration of the game and ensuring the win of his squad. Years of research in the drug delivery field has taught me that during the design of drug carriers for controlled release of the therapeutics there is a constant tradeoff between their physical robustness on one side and degradation and release properties on the other. Prompt release and structural sturdiness are thus two quite incompatible sets of properties as much as slow release and structural softness, so to say, are. The same systemic principle that aligns with the omnipresent balance between rigid order and flexible disorder applies to the soccer field where, as we see, neither more nor less than the optimal number of dissipative dreamers, as soft and sensitive as they could be, ought to be a part of the winning team, lest the wholeness of its spirit and workings becomes threatened to fall apart. Consequently, the optimal presence of obedient fighters is equally vital for the sake of ensuring the victorious diversity of the team and they often come in shape of defensive players who can play with the same level of precision even under serious injury,

²¹⁴⁷ See Simon Kuper’s *Football against the Enemy*, Orion, London, UK (2003).

²¹⁴⁸ See Jonathan Wilson’s *Inverting the Pyramid*, Orion Books, London, UK (2008).

²¹⁴⁹ *Ibid.*

particularly because they play by keeping their heart with the whole team. Hardworking soccer schools composed of highly obedient individuals are normally inclined to be more defensive, whereas soccer schools based on creative individuals are more attacking. Italian school is a typical example of the former, and English school might have been one as well had there been no traditional insistence on long passes and kick-and-rush crudity, while Brazilian and African schools may serve as good examples of the latter. Consequently, fostering team spirit on the account of suppressing bursts of individual creativity normally results in tough and cohesive defensive teams, but with little creativity in the midfield and in scoring goals, whereas neglecting the team spirit and obedience to tactical rules on the account of promoting individualistic lucidity typically leaves a plenty of space for the opponents to combine and attack, but short tactical maneuvers inspired by the moment can oftentimes pay off. The offensive, so-called constructive, Milanese play is thus often adopted by coaches if the team happens to possess creative individuals with great technique and a plenty of imaginativeness, whereas if the team lacks the latter, the coaches are often forced to opt for the defensive, so-called destructive, Interesque play based on spoiling the opponent's attack rather than creating one's own. Hence, when blamed for winning the EURO 2004 with the Greece national team with a boring and unattractive, destructive approach to the game, Otto Rehhagel said that "no one should forget that a coach adapts the tactics to the characteristics of the available players". On the other hand, when imaginative players are many in the squad, one has the freedom to loosen up on insisting on the submissiveness of players to the rules of tactics and even go for the guiding thought given by Baba Atif in the legendary Zabranjeno Pušenje's song: "Who plays for the people neglects the tactics"²¹⁵⁰. The epitome of one such athlete who neglected the tactics was the Yugoslavian boxer, Marijan Beneš, of whom his coach Bruno Hrastinski said the following: "Neither I nor the country have had such an obedient, diligent and technically skilled boxer during my lifetime. He was pure perfection. But only at the practice. As he entered the ring, he forgot everything and boxed the way he wanted to. He would not hear or listen to any piece of my advice"²¹⁵¹. Of course, when a team consists of too many loosened up players who tend to neglect the tactical demands and incessantly look after surprising the opponent with their creativeness, the dangers exist that the team may disintegrate owing to a lack of strong tactical threads that keep it organized within a coherent whole, which would lead to incarnation of the next verse of the famous Zabranjeno Pušenje's song: "...but will end his career in the low-ranked Vratnik"²¹⁵². The Yugoslavian soccer school, for example, has traditionally been based on prodigally inventive individuals with a gentle touch and graceful nonchalance that still makes them unique and readily recognizable in European soccer circles and beyond. Compared to the planned Soviet school, the industrial German school, Italian *catenaccio* or the physical style of the English, "the unique style of the beautiful game was developed"²¹⁵³ in the early days of Yugoslavia, being "based on technical abilities, short passing and most

Beneš's popularity led to a common greeting among kids, "Beneš, Yugoslavia", as a substitute for saying "Huh, see how cool of a thing I did" and usually being accompanied by a stylish wink and a handshake. My Mom, I remember, used a similar phrase, which involved not Beneš, but the Serbian wrestler, Petar Cucić. Hence, "Cucić, Yugoslavia", was her version of this phrase.

²¹⁵³ See Tommy Piskor's USSR – Yugoslavia, the Story of Two Different Football Conceptions, Russian Football News (December 20, 2015), retrieved from <http://russianfootballnews.com/ussr-yugoslavia-the-story-of-two-different-football-conceptions/>.

importantly – improvisation”²¹⁵⁴. This focus on the daring elegance was the trait of not only players with the ball in their feet, but goalies too, from Vladimir Beara, one of the last keepers to eschew walls when facing free kicks, who trained as a ballet dancer before being recognized as a potential goalkeeper and who converted his ballet skills to the soccer field well, earning the title of the world’s best goalkeeper by even Lev Yashin himself²¹⁵⁵, to Milutin Šoškić, the awardee for the best and most stylish goalie at the 1962 World Cup in Chile to many other less known keepers, such as Petar Borota, who exhibited his abstract paintings in London galleries in the early 1980s, while still playing for Chelsea, to Živan Ljukovčan and his bold single-handed catches, so different from today’s keeping that prohibits anything but cowardly deflections. The greatness of this school was probably most obvious at the time their last hurrahs were being performed, that is, at the time when Yugoslavia began to disintegrate under the nationalist tensions, as if bearing testimony to that mystical “star over the Balkans”²¹⁵⁶, which shone brighter as the beat of the military drum got louder and the warriors approached nearer and with which this remarkable Bosnian band, Zabranjeno Pušenje ended their musical oeuvre and went down in history in a glorious way. The sense for the beauty of the game nurtured among the Yugoslavs explains why Pelé, who is considered by many to be the greatest soccer player of the 20th Century, was wished to play his farewell game in July of 1971 against none other but Yugoslavia. His wish was granted and the game played in the South American soccer shrine, the Maracanã stadium in Rio de Janeiro, ended 2:2, with the display of the Yugoslavian team, for whom Dragan Džajić and Jurica Jerković scored two phenomenally beautiful goals on that summer day, eclipsing that of the Brazilians by a moonlight mile. Some football critics would even claim that, early on, the nickname of the Yugoslavian national soccer team, “Brazilians of Europe”, was flattering more to Brazil than to Yugoslavia. Brazil, of course, owes a lot to Yugoslavia when it comes to its evolution on the soccer scale to the status it enjoys in the world today. At the first World Cup, in Montevideo in 1930, the Yugoslavian team composed of exclusively Serbian players, which was much later to earn the epithet of European Brazilians due to its emphasis on individual creativity and which had traveled overseas on a mail carrier for more than two weeks and practiced daily on its deck before it arrived at its destination, eliminated Cariocas from the competition already in the first round, with a 2-1 victory of which a soccer commentator noted that “Brazil were individually cleverer, but collectively inferior”²¹⁵⁷. Their next encounter, four years later in Belgrade, resulted in an even

²¹⁵⁶ Listen to the song *Zvijezda nad Balkanom* on Zabranjeno Pušenje’s *Male priče o velikoj ljubavi*, Diskoton (1989).

²¹⁵⁷ See Jonathan Wilson’s *Inverting the Pyramid*, Orion Books, London, UK (2008). Note also that the semifinal game against the host, Uruguay, played before 93,000 spectators, was lost under strange circumstances, as the legend has it. Namely, Uruguay conceded first, already in the fourth minute, but equalized in the eighteenth. Only two minutes later, a bizarre thing happened. A ball was sent behind the goal line outside the goalposts by a considerable measure, but a Uruguayan policeman who stood there kicked it back into the pitch. The Yugoslav goalkeeper expected the referee to call for an out and did not even react when a Uruguayan player, Peregrino Anselmo netted the ball. The Yugoslav players protested, but to no avail. Next, a few minutes later Yugoslavia equalized, but the referee called for an offside, even though the witnesses claim that the goal was completely regular. This allegedly demoralized the Yugoslav squad to such an extent that by the end of the game they conceded four more goals, but still ended the tournament as the best European team, sharing the third place in the world with the team USA. The mark the prodigies from the Balkan Peninsula left on the game was lasting and some time later a Montevideo street was even named after

more convincing outplay and an 8-4 win for the Yugoslavs²¹⁵⁸, who were said to have “exploited a lot of space between the lines, showing up the faults of the old-fashioned system”²¹⁵⁹, thus initiating rethinking and revitalization of Brazilian soccer on a massive scale, the success of which led to its subsequent climbing to the top of the world and the birth of a soccer style that has become traditionally “happy, smiling, impertinent and disrespectful of authority”²¹⁶⁰. But it may have been that Pelé merely shared his views with those explicated by the Chilean writer, Isabel Allende, in her memoirs: “In addition to the English, Germans, Arabs, Jews, Spaniards, and Italians, immigrants from Central Europe made their way to our shores: scientists, inventors, academics, some true geniuses, all of whom we refer to, without distinction as ‘Yugoslavians’”²¹⁶¹. Just as the woody stiffness marching to the sound of the imperialistic drum of loftiness of the game’s originators has been the stereotypical trait of the Brits on the soccer field²¹⁶²; defensive elegance spiced up with a whole lot of peevisness of the Italians; clockwork precision and a talent to tactically orchestrate of the Germans; the icy stalwartness of the Scandinavians; the glacially fluid run-and-pass style of the Dutch; the deceiving trickery of the South Americans, alongside the proclivity of Argentines to loftily aspire to resemble Europeans in their attitude and style, notwithstanding the authentic displays of disgrace and deceitfulness of their conquistador forefathers along the way; agile, yet heedless flukiness of the Africans; kamikaze zipping to the ball of the Japanese; mingy fierceness of the Middle Easterners; the wooden-legged and elbowing, slap-in-the-face roughness of the typical American bruisers, who pass the ball with robustness and disgrace, with not even a grain of subtleness or geniality in this most beautiful move of the game, and for the majority of whom the backward pass is an act of cowardice and the “pressure, pressure” philosophy is where their intellectual evolution of understanding of the game seems to have been brought to a halt, as if they have never made a progress from the 1870s and the earliest days of soccer when every pass was dubbed an act of gracelessness and superfluity, when 1-2-7 formations were common and when the reactionary strategists joked that the only good use of a pair of center-backs was to “keep the goalkeeper in chat”²¹⁶³, before they had their butts kicked by the teams that focused on well-organized midfield as a key to a victorious play and now must scratch their heedless, forward-only-rushing heads over the recent statistics that show how teams in the Major League Soccer that make more completed passes have a greater chance of losing the game than

the Yugoslav goalkeeper, Milovan Jakšić. Also, it is worth noting that because the Croatian players boycotted the national team at the time, it ended up being composed of only Serbian players, 16 of whom played in Belgrade, one of whom played in Novi Sad and three more of whom were Serbian internationals playing for French clubs. Most players came for BSK (including the team’s two biggest stars, Moša and Tirke), one of the two biggest soccer clubs in Belgrade at the time and exactly the one for which two of my grandma’s brothers played little later in the 1930s. See <http://forum.burek.com/vesti-zanimljivosti-t503060.30.wap2.html>

²¹⁵⁸ To this date, this game holds a record in terms of the number of goals conceded by the Brazilian national team.

²¹⁶² In fact, I have always stated that the reason why England has not played a final of the major competition since they hosted and won the World Cup in 1966 is that the talent of the English players is little, as their stiffness and rigidity is similar to that found in the rest of Northern Europe. However, unlike Sweden, Norway, Iceland or Denmark, which have adopted the strong, defensive style as the key to success, the English, thinking highly of themselves as the game’s pioneers, have played with the attitude that the game’s originators should play with, meaning with a lot of flair, elegance and style, yet because of the disparity between this gentle attitude and the true skill, they have failed over and over again. But whenever one fails in life because of one such disparity, a graceful fall it will be.

²¹⁶³ See Jonathan Wilson’s *Inverting the Pyramid*, Orion Books, London, UK (2008).

those who do not²¹⁶⁴, unlike in every European top-tier league; indolence, nonchalance, wit and emotionality exhibited all at once have been the trademark traits of the light and leisurely arty virtuosos with the ball that have originated from the Balkan Peninsula. *Drugi igraju, naši se igraju*, says a local proverb describing the most talented and inventive Yugoslav sports figures; albeit untranslatable to English, it means that while regular players play (sports), our players play (a game, the way children do, for fun, pleasure, exploration and invention of something new and unseen by oneself or the world). In any sports played with the ball on the European soil, one is bound to find one or a few of such whimsical genii and, very often, it may turn out that they were born in Yugoslavia, be it Ivano Balić in handball, Miloš Teodosić a.k.a. Teo in basketball, Luka Modrić in soccer, Novak Đoković in tennis, Filip Filipović in water polo or Nikola Grbić in volleyball. When Teo points at his head as if saying that one must be crazy²¹⁶⁵ and either make stupid errors or score an irrational three pointer nine meters from the basket that knocks the defending world champion out in an instant²¹⁶⁶ and make a mind-boggling pass that makes thousands exclaim, Wow, breathlessly, in a second, or when Dejo Savićević plays on the left in the first half but then again on the left in the second half, just because the left side of the field was in the shadow on a hot summer day, having earned the nickname “genius” because of his volatility and virtuosity on the soccer field, remaining to this very day, as the legend has it, the only person having the liberty to enter Berlusconi’s office without knocking and play on any part of the field that he wanted to be on lest his quality of play should diminish, they illustrate the rich and genuinely lyrical material that Yugoslav stars are made of, seeking beauty in all things in the same way as ragged robins seek raindrops, though turning into gritty walking omens if this beauty-seeking soul becomes shoved, spitted on or treated with neglect. As far as soccer is concerned, this concentration of virtuosos with the soccer ball culminated at around the onset of the eruption of violence that resulted in the civil war and the breakup of Yugoslavia in the early 1990s. An irresistible combination of guts, style and heroic dreaminess condensed into sublime moves on the soccer field typified some of the classiest examples that emerged out of the Yugoslav school that sang its swansongs as the country was falling apart during the civil war of the 1990s. On the other hand, the sense of sacrificial friendship that has been traditionally instilled into the majority of Yugoslav people provided precious links that kept the players integrated within a single, consistent and tough whole, yielding an excellent counterbalance for the creative individuality that tends to disperse the players each in his own universe. One casual illustration of how deeply instilled this sacrificial spirit is in the hearts of my compatriots may come from the celebration of the Serbian New Year²¹⁶⁷ of 1998 out on Belgrade streets, at nearly 0 °F, when a friend of mine, Slaviša got so deliriously joyous somewhere in front of the Plato bookstore that he started taking off one after another piece of clothing until he was naked over his waist and when another friend of ours, Čulaf saw that, he followed this with his own stripping clothes off, saying that if his friend was to suffer

²¹⁶⁷ Serbians are a curiosity in a sense that they celebrate two New Years: the regular one, which falls on January 1 of the Gregorian calendar, and the “Serbian” one, which falls on January 1 of the Julian calendar, corresponding to January 14 of the Gregorian calendar.

from hypothermia and freeze, he should do it too, evoking in my head that Gilgamesh's "If Enkidu can die, so can I" verse²¹⁶⁸ as I tried to convince them in vain that they should put their clothes back on, which they both refused to do until the other one does it first, meaning that they ended up naked in the snow for what it seemed to have been an eternity. Moreover, these ties of sacrificial comradeship traditionally spread between the players' hearts, having certainly found support in the glorious past of some of the Yugoslav nations, typified neither by the imperialistic thirst to conquer and enslave others nor by the widespread tolerance of any form of social injustice, tyranny or fascism on their own soils²¹⁶⁹, often provided an excellent unification force to keep not only intensely individualistic personalities together, but also a spectrum of different mindsets originating from the most ethnically diverse European country of its times, having been constituted of six major ethnic groups, three religions and languages, spanning from the sun-drenched and jovial Macedonian to the dark and moody Montenegrin to the proudly gallant Serbian to the waggish and *merak*-infused Bosnian and Herzegovinian to the rough and mountaineering Dinaric to the leisured and good-natured Pannonian to the poetically light and graceful Adriatic to the cold and distant, almost Arian Alpine among many other mental landscapes of the geography of the mind, into a single and harmonious whole, epitomizing the principle of unity in diversity to a much more authentic extent than that of which the US and many other colonial countries have made themselves proud. However, although the Yugoslav national team in soccer became the world champion for players under 21 years of age in Chile in 1987, the same year in which, coincidentally, their basketball and handball coevals won the world titles too, when this extraordinary generation was finally given the chance to compete at the senior international level, in the early 1990s, the war began and the national soccer association split up to form four new federations, the Slovene, the Croatian, the Bosnian and Herzegovinian, and the Macedonian, with the Serbian and the Montenegrin taking the role of the official successor of the Yugoslavian one. Soccer critics almost unanimously state²¹⁷⁰ that had it not been eliminated because of the international sanctions, the Yugoslav national team would have had a highest chance of winning both the 1992 European Cup and the 1994 Mundial, the latter of which is considered today as the one with the poorest display of soccer skills in the recent history of international soccer tournaments, with relatively average squads such as the Sweden and the Brazil making it to the semifinals²¹⁷¹. As for the 1992 European Cup, curiously enough, it was won by Denmark, which

²¹⁶⁸ See the Epic of Gilgamesh translated and illustrated by Kevin H. Dixon, Seven Stories Press, New York, NY (2018), pp. ix.

²¹⁶⁹ As Rebecca West correctly observed in one of the classic books about Yugoslavia, *Black Lamb and Grey Falcon* (Random House, New York, NY, 1941), always the more insightful, the more foreign the eye documenting them, tyrannicide is a cultural force and a personality trait particularly praised and rooted in the southwest Balkans. This dislike of any form of authoritative, imperialistic tyranny and power over people, however, has inclined the people from this part of the world to be rather masochistically complacent in relationships with others, including particularly the foreign agents, which has acted as a powerful psychological magnet attracting all sorts of conquerors, resulting in a countless and unceasing series of wars that has struck this region throughout the history. The same psychological effect I have observed to have taken place throughout the history of my anarchistic, power-abhorring being on this planet.

²¹⁷⁰ See the article by Carlo Garganese published at goal.com in early 2010: <http://www.goal.com/en-us/news/114/mexico/2010/01/12/1740900/top-10-teams-that-didnt-win-the-world-cup>.

²¹⁷¹ Notwithstanding the objectification and commodification of human beings by the folk habit of composing teams from them and discussing their play, I have always toyed in my head with the idea that finding the right combination of Yugoslav players who would have played at this tourney had the civil war not broken would be akin to decoding a password for unlocking some secret doors somewhere in the heart of the Universe. From today's perspective, here would be my take on this potentially winning team for the 1994 World Cup, with all the numbers associated with the standard positions on the pitch (See, for example, *Soccer Positions Explained: Names, Numbers and What They Do*

came second in the qualifying group 4, behind Yugoslavia, and which entered the competition only after Yugoslavia was disqualified on political grounds eleven days before the scheduled start of the tournament²¹⁷². To make the humiliation even worse, the Yugoslav national team already arrived in Sweden, where the competition was held, and its practices had begun when the news of its disqualification came. Meanwhile, as the apocryphal story goes, many of the Danish players already set out on long-awaited summer vacations and were literally picked from the beaches to play at the tournament, with the best player of the squad and its captain, Michael Laudrup refusing to join the team, partly because of the disagreement with the national coach, partly because he rated his team's chances of doing something memorable too low and partly, as some accounts state, because he thought that the place at the tournament belonged to the Yugoslavs and he would have found it immoral to take it. The captain armband he would have worn thus ended with the central defender, Lars Olsen, who was unsigned at the time and on the move from Trabzonspor in Turkey to Royal Sérésien, a bankrupt Belgian side playing at the 8,000-capacity stadium in the suburbs of Liège. Nonetheless, understanding the unfairness of this mingling of politics and sports and sympathizing with the Yugoslavs, the Danes had the Yugoslav flag wave at all times from their team bus, everywhere they went, which the superstitious amongst them believe helped them to perform a miracle and emerge as a winner against all the odds, having being considered the least favorite team to win the competition before its onset. To make the miracle complete, but also heartrending, the scorer of the decisive and the final goal of the tournament, Kim Vilfort had to leave the camp twice to visit his 7-year old daughter on her deathbed, whom he cites to this very day, for the energy she instilled in him and for urging him to go out and play, as a truest hero of this miraculous conquest. As for the 1994 World Cup, it was won by Brazil, and even their national team can be quoted for an excellent balance between the integrative obedience and creative freedoms, although not at the level of all the team members. Namely, it was based on a tough and cohesive defense with an attacking line to which almost a complete freedom was given, lest the

at <https://www.bundesliga.com/en/bundesliga/news/soccer-positions-explained-names-numbers-what-they-do-2579-786> (2020)): 1. Kralj, 2. Mirković, 3. Jarni, 4. Bilić, 5. Mihajlović, 6. Jugović, 7. Prosinečki, 8. Stojković, 9. Mijatović, 10. Savićević, 11. Boban. Some of these players, such as Kralj or Mirković, might have been deemed too young and inexperienced in 1994, but from today's point of view, they would present very good choices. Note the absence of the classical striker in this team; rather, the emphasis would be placed on agility and swift positional changes and overlaps, with Mijatović acting as a false 9, making way for the runs into the box and the goal-scoring opportunities for the likes of Savićević, Stojković and Boban. Correspondingly, virtually no player would be cemented in one position; rather, Mijatović would play as 8, 9 and 11, Stojković as 8 and 10, Jugović as 6 and 8, Savićević as 7, 9, 10 and 11, and so on. This rather elegant and dexterous squad could be reshuffled with players from the bench to make it more defensively solid or such that it fulfills other strategic or tactical demands. A holding, more defensive and taller midfielder, such as Katanec or Jakanović, could thus be used instead of Jugović; a more standard sweeper, such as Saint Ilija, pardon Najdoski could be used in place of one of the full-backs; more standard strikers, such as the likes of Šuker, Bokšić or the good ol' goal-poaching cobra, Darko Pančev, could also be considered depending on the occasion. Therefore, the players on the bench could be Omerović as the keeper, Đukić, Štimac and Najdoski as central defenders, Katanec, Jakanović, Brnović and Soldo as defensive midfielders, Drulović, Asanović, Zahović and Rambo Petković as attacking midfielders, and Šuker, Bokšić, Pančev and Kodro as strikers. In a parallel universe, this hypothetical squad has lifted the Jules Rimet trophy in Pasadena on July 17, 1994, less than an hour drive from the Orange County city of Irvine in which sit and I write this elaborate footnote.

²¹⁷² The goalkeeper of the Danish squad, Peter Schmeichel, said the following after their victorious run: "We couldn't reach Yugoslavia in the qualifications, but then they were expelled and we found ourselves at the EURO. We played in the name of Yugoslavia and of all its citizens; we even rode a bus with the Yugoslav coat of arms. Practically, we were Yugoslavia, and it is impossible to explain it". See Saša Dragojlo's A Yugoslav 'Dream Team' Would Win EURO 2016, *Balkan Insight* (June 24, 2016), retrieved from <http://www.balkaninsight.com/en/blog/a-yugoslav-dream-team-would-win-the-euro-2016-06-24-2016>.

failures of the national team from a decade earlier, having been guided by freedom and freedom only, repeat. Then, there is the example of Pep Guardiola's Barcelona from the early 2010s, which many consider the best team in the history of the game, wherein a clear line was drawn between the players given the task of maintaining the rigid structure of the team and the more dynamic and versatile ones who would traverse the field with far greater freeness, which was in some instances, as in the cases of Lionel Messi or Andrés Iniesta, allowed to be complete, as in the spirit of the extraordinary free-role midfielders of the past, the *trequartisti*, *registi* and *fantasisti* of the likes of Garrincha, Maradona, Ronaldinho, Luis Suárez Miramontes in Helenio Herrera's Inter, Dragan Stojković Piksi, Gianni Rivera, Cristiano Ronaldo or Wayne Rooney in Alex Ferguson's Man United, Francesco Totti, Roberto Baggio, and so on. The Dutch total soccer school may be seen as a classical attempt to forge a team with a perfectly balanced individuality and awareness of the team at the level of each one of the players. However, no one can really say that this approach has been particularly fruitful in terms of the number of major tournaments the Dutch national teams have won in the past, despite the fact that they lost two consecutive World Cup finals, 1974 and 1978, to host nations when the *totaalvoetbal* philosophy, centering around the versatile centre-forward that Johan Cruyff was, was at its peak, following more than three decades of perfection extending from the days of Jack Reynolds to the days of Rinus Michels as managers of Ajax. One reason for this lack of success that I could think of might be a slight imbalance in terms of overly obeying the rules of tactics and movement on the field and neglecting thereby the vital importance of rule-breaking ruptures of individual creative instincts. In fact, the most successful era for the Dutch soccer was the late 1980s when their team was composed of a sturdy defense and a set of highly creative, one-touch individuals in the midfield and the attack, all of whom were interwoven within a highly disciplined whole as a team. Notably, Fabio Capello, the coach of the famous AC Milan squad of the early 90s, notorious for perfecting the then traditionally Italian style of play called *catenaccio* and insisting on each player's total submission to the given tactical roles, learned his lesson too in this respect when, after a series of struggles with the attitude of Dejo the Genius, a Montenegrin soccer prodigy and an epitome of the stereotypical Yugoslavian concoction that is one third leisured laziness, one third sublime spite, an emotion so inherently Yugoslavian and representative of its people that one could distinctly hear its echo in the very first verse of the Yugoslav anthem, "Hey Slavs, it still lives", and one third wizardry that bears constant surprises, he started assigning everyone specific duties prior to a game, while telling Dejo to "just go out and play", giving him complete creative freedom on the field to counterbalance the rigid compliance with the former tactical directives. Dule Vujošević, one of the popular coaches from the world-renowned Serbian basketball school, whose greatest virtue he described as "the right to be different", thus talked of the following guiding principle in his practice²¹⁷³: "What I try is to separate players from the roots of egotism and place them in a system where collective spirit dominates, to show them that they could be liked by the spectators as such, and not only through exhibiting cheap and individually gratifying moves; yet, in that approach, the most important thing is to have a limit because one should never ruin the player's dignity nor limit his individual

²¹⁷³ His stereotyped approach may resemble the impression Lou Reed had on Bon Quine of the Voidoids: "When I came offstage, Lou Reed grabbed me and said: 'You're a great guitar player'... I'm sitting at the table with him, and for a second somebody passed and I looked away, and he said, 'God damn it, you look me in the eye when I'm talking to you or so help me god I'll smash you in the face'. I started laughing. He said, 'Don't laugh for a second. I'm deadly serious. You look away from me again, I'll smash you in the face'. This is while he's telling me how great I am. I did keep my eyes on him from then on". See *Please Kill Me: The Uncensored Oral History of Punk* by Legs McNeil and Gillian McCain, Grove Press, New York, NY (2006), pp. 287.

creativity”²¹⁷⁴. Needless to add, building one such combination of powerful individualism and collective spirit instilled in each one of the squad members presents the first step in crafting a truly triumphant team. This praise of the balance between individualism and collectivism clearly brings to mind an example from the history of modern music brought forth by the very Beatles. Namely, only after the two main songwriters and creative sources within the Fab Four began to search for their own individualities and move away from the united appearance that the earlier works of the band (that is, up to the famous Rubber Soul turning point) emanated with, their music reached truly original and invaluable meanings defining the future directions in popular music as a whole. As if epitomized in the story about Greek and Anatolian painters mirroring each other and dialectically fostering the development of each other’s skills, John Lennon began to move toward a bitter, cynical, ironic, depressed and essentially punkish personality, whereas Paul McCartney, in order to balance such a shift, adopted sunshiny, bright, joyful and optimistic perspectives on music and life alike, needless to add, leaving George Harrison to stand in the shadow while acting as a vital bridge between the two. In view of all things being said, the message is then clear: there are no strict rules when it comes to composing a triumphant team. A perfect balance may not be that perfect at all. One has to keep an eye on preserving the balance between individuality and integrity, and yet in addition to that there needs to be something disrupting the perfect balance. Versatility flexibly fluctuating around the state of a perfect balance in many aspects is a vital feature of a triumphant team.

S.F.7.3. Whenever I played soccer in the early days, I used to withdraw myself to the backline. People regularly asked me why, and I responded by saying that that was the position of a real catcher in the rye – the one who in an unplayable way stands at the cliffs of life and keeps eye on the children in their play, making sure that they do not fall down. Most people have found it most satisfying to kick the ball with the full force and score the goal, but I have, in contrast, always found the greatest amusement in smart moves that are oriented towards integrating the coordination of the team and subtly, imperceptibly and quietly, leading to victory. Making an unexpected pass that consolidates the defense and yet provides an open way for a rational attack, in soccer and chess alike, has been my ideal ever since. I would also equally enjoy moving across the field in an immaculate manner, without necessarily getting in contact with ball, knowing that with players simply covering the right spots at the right time, space for great combinations, dribbling and maneuvers may become open to the teammates. Although such mastery of moving smartly is rarely visible to amateurs, the sensitive professionals would always recognize and acknowledge its merits. The legend says that the greatness of the Canadian hockey player, Wayne Gretzky was not due to the fact that he made remarkable moves game after game, but because he played so as to make himself invisible on the field, while magically prompting others to play crazily good, way better than they would without him on the ice, and my style of play has always been concordant with this approach of being a catcher on the rye on the soccer field, so to say, by opening space for the demonstration of excellence of my teammates, not myself. Like the rather slow and sluggish Scottish left winger, Jimmy Leadbetter, whose movement without the ball and in the deep area of the field rather than wide, as one would expect from a winger and as ingeniously envisioned by Alf Ramsey²¹⁷⁵, was instrumental in pushing the central defenders from the

²¹⁷⁴ See the interview with Dušan Vujošević at http://www.b92.net/sport/intervjui/intervjui.php?yyyy=2010&mm=04&nav_category=91&nav_id=427786 (April 29, 2010).

²¹⁷⁵ See Jonathan Wilson’s *Inverting the Pyramid*, Orion Books, London, UK (2008).

opposing side closer to the midfield and opening the space behind them for the prolific strikers to bring the ball forward and score as well as in enabling Ipswich Town to become the English champion in their first season in the first division, I also try my best to compensate for my lack of dexterity in controlling the ball by running in the right directions and opening the forward path for more aggressive teammates, while decorating my dashing back and forth with delicate touches that send out passes that rejuvenate the team and make it spread out on the field like a giant octopus. Such an inherently defensive and quietly holistic approach has neatly reflected my approach to life as well, in each aspect of which I have used to exhibit an inclination to tidiness, peacefulness and perfection. Defenders are required not to make a single mistake throughout the game, whereas if an attacker makes one good move among dozens of mistakes, he may still claim success and collect rewards in the end. For this reason, the Italian soccer coach, Alberto Zaccheroni said once that “if we deprive players of the freedom to make mistakes, we should better close the shop and go fishing instead of playing soccer”. Still, my fear of mistakes and an innate tendency for perfection combined with a decent level of technique and a love of fine touch have predisposed me to be more of a skillful defensive midfielder than a fierce attacker on the soccer field. Inclined to the left, politically and bodily, given my giving in primarily to the impulses of the right hemisphere, and, though right-footed, being able to use both feet with an almost equal precision, I would typically play a hypermodern combination of 3 and 11 on the soccer pitch, acting as a box-to-box *mezzala* – or *polutka* in Serbian²¹⁷⁶ - that connects defense with offense, helping both from the shadow without being a consistent part of any. Fast and dexterous, but avoiding twists and turns with the ball and harsh physical contact alike, I based my play instead on quick, witty and ultraprecise, one-touch passes with a perfect spin, that is, on smart elegance rather than on energetic roughness. Though my movements on the field would resemble those of Andrés Iniesta, coincidentally the scorer of the only goal in the final game of the 2010 World Cup in South Africa, as, like him, I would spend most of the time in the space between the lines, aiming to connect them, as in the spirit of the greatest Middle Way seekers and wizards, turning parallel lines and parallelepipeds into triangles visible from space, though still rushing forward here and there, the goals I scored were more of an exception than a rule, having been netted with such an efficacy that about eight out of ten shots on goal ended up in it, mainly because I knew that the more I engage in the role of an attacker, the greater would be the extent to which my wish to preserve the impeccable unerringness of my performance will dissipate. On the other hand, I was simultaneously aware that without dispersing mistakes like stars across the sky of our most bedazzling performances, we would be doomed to sit mute on the bleachers of life, like Beckett’s Vladimir and Estragon, and wait for good for gods of perfection, not of angelic frailness, that haunt our darkest dreams, but that never arrive²¹⁷⁷. Although I lived up to this belief in the realm of science with all my heart, having never been willing to make a concession under the pressure from my peers and academic advisors and sacrifice my holding a critical pen that boldly and prolifically outlines new directions of thought in a visionary manner to the pity fear of mistakes. For, I have known that as many blunders as drawings of groundbreaking ideas and waterfalls of inspiration will have been made on this road and that nothing but a sure decent to dryness would entail my

²¹⁷⁶ The word *polutka* has an additional connotation in Serbian, unlike that of any other midfielder type in English. This is thanks to its being a combination of the word for a half, namely *pola*, and a doll, namely *lutka*. An authentic *polutka*, therefore, has the elegance and softness of a Luka Modrić, playing a defensive role without the aggressiveness of a holding midfielder such as Patrick Viera or Gennaro Gattuso and an offensive role without the penetrativeness of a No.8 such as Eden Hazard or Angel Di Maria.

²¹⁷⁷ Listen to Midlake’s *You Never Arrived* on *The Trials of Van Occupanther*, Bella Union (2006).

becoming guided by the craving to avoid mistakes at all costs. The fact that mistakes are integral parts of any evolution in life has thus always rested in the back of my mind, occasionally popping out to question my quietness and instigate me to open the petals of my heart, despite all the swords that would readily prick the openhearted core of our being thence. “Lasker is the greatest player of all time – he made miracles on the chessboard. They compare me to Lasker, which is an exaggerated honor. He made mistakes in every game and I make them only in every other one”, Mikhail Tal, the most famous and inspiring attacker in the history of chess, thus said. And yet, despite all of this, I have always felt as if something beautiful lies in one’s humble and modest devotion to defending the goals in life. Let others score goals and become endowed with the glamorous stars of fame, but my greatest enjoyment has been passing the ball to endow another with laurel wreaths and, more than anything, saving the goal. “For I came not to judge the world, but to save the world” (John 12:47), I would repeat my favorite Jesus’ words and let them reverberate in my heart, producing waves of passion and creative drive, crashing between the coasts of Yang bravery and determination and Yin flexibility and grace.

S.F.7.4. Ever since the earliest days of my childhood I have considered myself a “fiery fan” of the Football Club Partizan Belgrade. It is a soccer club with a proud history as well as a club which is “loved”, not merely “rooted for”, as its cordial fans, a.k.a. gravediggers, chanting in its praise throughout good and bad times, in triumph and loss, with an equal zeal, usually state, implicitly teasing their city rivals, Red Star Belgrade thereby, whose fans are noted for booing their players when things do not go well and cheering in their support when things do go well. Soccer aficionados know that Partizan Belgrade did not only lose its only final of the UEFA Champions Cup, to Real Madrid at the Heysel Stadium in Brussels on May 11, 1966²¹⁷⁸, after leading 1-0 until the 70th minute with a goal scored by Velibor Vasović, but that it also played the first ever UEFA Champions Cup game, 3-3 against Sporting Lisbon at the Estádio Nacional in the Portuguese capital on September 4, 1955. Such was the reputation of Partizan Belgrade abroad that even though the team ranked fifth the previous year in the national league, it was still invited by UEFA to participate in this inaugural tournament. Though the return match in Belgrade was convincingly won by Partizan, 5-2, this talented squad was stopped in the quarterfinals by the soon-to-be first UEFA Champions Cup champion, Real Madrid, in two games for whose bias in refereeing in favor of the Spanish side even the former Real Madrid president Santiago Bernabeu later apologized in his memoirs²¹⁷⁹, especially to the scorer of two disallowed, albeit regular goals and a hat-trick scorer in the Partizan win over Real Madrid in the return match in Belgrade, 3-0²¹⁸⁰, Miloš Milutinović, a.k.a. *Plava Čigra* or Blond Buzzer, whose eleven years younger brother, Bora, would decades later earn the epithet of the world’s greatest soccer coach for the underdog, having enabled Mexico in 1986 to reach its first and only quarterfinals of a World Cup, Costa Rica in 1990 and USA in 1994 to reach the second round of a World Cup for the first time in history, and China in 2002 to qualify for its first World Cup. The first thing that being a Partizan fan has been a constant reminder of is the mission that I have vowed to accomplish in the kingdom of science through which I roam, not as a member of a higher order or a noble aristocrat of a kind, but exactly as a

²¹⁷⁸ All until 1986, when Steaua Bucharest beat FC Barcelona on penalty kicks to win the UEFA Champions Cup final, Partizan Belgrade was the only Eastern European club to reach this far in the competition. Red Star Belgrade, the winner of the UEFA Champions Cup in 1991, is the third Eastern European soccer club that shares this privilege.

²¹⁷⁹ See Miloš Milutinović: PES Stats Database, retrieved from <http://pesstatsdatabase.com/forum/viewtopic.php?t=8988> (2009).

²¹⁸⁰ The first match was won by the Madrid side with 4-0. Miloš Milutinović previous scored four goals for Partizan Belgrade in the 5-2 win against Sporting Lisbon.

partisan – a pioneer, yet a rebel too, a gritty ambusher of everything that is rotten in the reigning academic order, albeit the order before which most of my colleagues and acquaintances bow their heads submissively instead of questioning and challenging it, as an authentic scientific and philosophical mindset ought to do. To that end, I have shared mission with that of the members of the French *nouvelle vague* movement, who strived to carpet bomb the realm of cinema by exposing everything that is stale, clichéd and phony in it through their art, although I have operated in a different realm: the scientific one. And just as the World War II partisans were accused of being dirty terrorists by the imperialistic occupiers of Yugoslavia because of hiding in forests and attacking the more numerous and better equipped army of the enemy by surprise, so have I earned the epithet of a crafty insubordinate who ought to be gotten away with in the cruelest ways possible owing to my adopting a similar strategy in rebelling against the reigning academic order that suppresses anything lyrical and poetic in scientific expression and that proposes an intrinsically capitalistic model based on continued exploitation of the young scientists' workforce for the benefit of the tenured and the privileged. With definite parallels capable of being drawn between the view of Nazi conquerors on Yugoslav partisans and the view of the academic administrators on my own effort to expose all these instances of unfairness and all this lack of aesthetics to this and the future generation in the hope that the critical mass of people pushing for the fundamental change in the academic state of affairs will be garnered one day, a tee-shirt placing the Partizan Belgrade emblem on my chest is perfectly fitting from the ideological standpoint, even when it is too bulky or too tight for my figure. Another thing that the traditional, striped black & white uniforms of my favorite soccer club remind me of these days is that each one of us is never fully black or fully white, utterly perfect or immaculately evil; rather, you and I and everyone else we know are always complex blends of black and white. "Everybody is a nice person, everybody is going through a rough time. Most people are not bad people, they just do shitty things", says a character from Jenée LaMarque's *The Feels*, prompting us to always consider that the circumstances are more often than not blamable for the devilish acts committed by people; or, as Peter Handke pointed out in his controversial effort to justify the deeds of a devastator of the Serbian nation at the end of the 20th Century, Slobodan Milošević, "Anyone in his position in the last ten years would have acted the same way he did"²¹⁸¹. It is this insight calling for the abandonment of black & white dichotomizations, especially in the context of assessing people's traits and qualities, that stands as a glorious gateway to accepting once and for all that "mercy rejoiceth against judgment" (James 2:13) and beginning to look with heart-melting empathy each and every worldly soul, while holding the warm waves of an inexhaustible ocean of compassion and understanding in our hearts. Here I may also bring to mind the concordant title of the first exhibition by the Blue Rider artist collective, founded in 1911 by Kandinsky, Marc, Macke and Münter: *Black White*²¹⁸². If anything, it was, in my opinion to suggest that whenever we categorize something or someone as purely white, it automatically becomes black, simply because any proposal of a polarity like this, as unrealistic as it can be, blackens it all – the object, the observer and the whole reality – with one monstrous lie. Wittily, most compositions on display at this exhibition were, in fact, in color, circumventing the sharp contrasts of extreme dichotomies. All of this has added up to my general dislike of simplistic generalizations, regardless of how paradoxical this "general dislike of generalizations" can be to a logician in the room. This resistance to

²¹⁸¹ See Bernd Reinhardt's *The Austrian writer Peter Handke, European public opinion, and the war in Yugoslavia*, World Socialist Web Site (August 11, 1999), retrieved from <https://www.wsws.org/en/articles/1999/08/hand-a11.html>.

easygoing categorizations was formed in me partly owing to my developing a personality as an adolescent in the midst of Yugoslav wars, which have then and now been impossible to explain in black & white terms. Rather, as in Peter Handke's *Journey in a Canoe*, where the two filmmakers on a joint mission to film a story about these wars abandon the project with the conclusion that "the events on the ground are too confusing and alien to make a simply drawn story that would move the public, using the tried and tested formula, where everything unfolds nicely according to the plan"²¹⁸³, they would plunge any mind descended deep enough down their causal fishnet into an infinite sea of perplexity, uncertainty and reservation before any cut with the knife called judgment is being made. This all explains why, before a big game, I would put a black & white jersey with number 21 and the name of Lilian Thuram, one of my most respected soccer players, drawn on it and head over to the field. Like this player, dubbed Citizen Thuram by those who have seen in him "a troublemaker with a far-left political agenda"²¹⁸⁴, who had demonstrated immaculate precision and discipline of a defender and then on rare occasions produced charming and masterful moves, I would be doing the same: playing in an altruistic way, judging no one, always humbly passing the ball whenever I could, and yet waiting for the right moment to produce a magical move, a brilliant pass or sometimes even score, like Thuram did, only twice in his lifetime for France and that on a single full Moon summer night which I spent on a long bus ride from my hometown to the seaside. Seeing greatest attackers scoring goals has also showed me that having a golden wish within one's heart is as much important as calmness, focus and technique in making one a great goal-getter. Instead of quickly calculating and shooting in the best possible direction and style, they always combine this form of swift precision and agility with a golden wish that makes them stream towards the goal with an unstoppable thirst to score. Consequently, their shots sometimes do not aim at the most available spot on the goal, and yet they miraculously appear unmistakable in execution. Because a great wish partly guides them, they may end up shooting almost straight to the keeper, with the ball bizarrely bouncing off to the goal. And yet, nothing could disgrace the impeccability of their art. It was one such goal, directed straight towards the middle of the goal, mere centimeters next to the keeper's left foot, with the ball rolling almost completely on the ground with a slight clockwise spin, yet bouncing once before it crossed the goal line in order to confuse the keeper, that I scored a second or two before the lights went off at the last out of about a hundred Monday night games I played on the turf of SF Raymond Kimball playground, showing me that, indeed, if our heart is in the right place, the reality will succumb to our wildest dreams and transform all its blandness into pure magic. This great wish to net a goal traversing the mind of an immaculate striker, however, should not be confused for sheer surface ambition or mulish willpower. Rather, it is a wish that got sublimated and turned itself into a vapor of stardust now residing in the footballer's heart. Only in such a way can one take one's physical movements on the ride over the waves of intuition, an art that is impossible to exhibit when one strives too hard in one's mind to achieve a goal, whatever it may be. Or, as explained eloquently by the Slovenian skiing superstar from the 1980s, Rok Petrovič, who revolutionized the slalom skiing style by being the world's first skier to ski directly toward the pole rather than around it, "Beware of the grand personal wishes because they affect the intuition by objectivizing the psychic spaces that resist objectification and should you give in to such a wish and ambition, you will lose every inner sense, for which reason you must remain in a nullified state of mind for the power of

²¹⁸⁴ See Andrew Hussey's *If You Can Keep a Head Cool*, *Guardian - Observer Sport Monthly* (March 3, 2007), available at <http://www.guardian.co.uk/sport/2007/mar/04/football.newsstory>.

intuition to be active”²¹⁸⁵. And because I have known this mystical, *shikantaza* mindset that leads to superb goal-scoring capabilities, I have always thought that I could be a solid attacker and scorer of golden goals in life. As a matter of fact, I had used to be one such unstoppable dribbler and regular scorer of hat-tricks in the golden days of my childhood. However, that was before I hit the teenage years when my confidence suddenly plummeted, resulting in my confining myself to the backline, girlishly shy and insecure, and quite unexpectedly becoming a goalkeeper one day. This loss of self-assurance coincided with a few traumatic experiences, such as the time when I singlehandedly beat my two cousins on a small soccer field, having scored a stylish goal from beyond the center, and as a reward they left me in the woods all by myself to find the way home, or the occasion when I likewise drove two brothers from Mala Moštanica crazy with my footwork, prompting one of them to enter their house, pull out a shotgun and point it at me, telling me to kneel or he would pull the trigger, or even one of the most memorable soccer-playing experiences of my lifetime when I played on the edge of a cliff overlooking the Adriatic Sea in the suburbs of Split and immediately afterwards got lost in the dark rooms of what seemed to me like a giant star-crossed castle. And so, over years, I settled among the defenders of this world, acting like a melting snowman in front of others in real-life and on the soccer field alike, becoming thoroughly frozen upon the call to act in an imaginative, sane and willful manner, with no sunshine of joy and self-confidence glowing inside of me so as to guide me toward the goals I dreamt of scoring in my head. Anywhere I stood in those days, I resembled Ivan Tokin’s boyish goalkeeper²¹⁸⁶, holding a soccer ball on his hip, with the spiky hair waved in one direction and the striped, sailor shirt in another, standing as the last line of defense and looking far beyond the horizon, dreaming of running forward and becoming once again that magnificent dribbler, fierce attacker and prolific goal-getter that I had been in the golden days of my childhood, even before I get to Heaven, the place where, as in childhood, with the full circle having been made, I will wear on my shirt a number for infinity erected on its end, 8, and play on the position it denotes with the wholeness of my heart. Yet, in order to restore my attacking skills, I was clearly required to raise the level of self-esteem. An attacker has to maintain self-confidence and brightness of intuition despite numerous baffled attempts of his to trick the defenders, make a brilliant pass, or score a goal. He has to be like a child who never loses patience and faith in himself amongst numerous falls in its learning how to walk, like a child that somewhere in the back of its mind keeps the streams of wonderful determination to succeed and arises to the face of the world in its grace and glory. If I could pick the most immaculate art my Father has taught me, it would be the way to live my life exactly by the way he has played chess, resembling Mikhail Tal, the greatest ideal of mine in the world of chess. Unlike my strictly positional play in which I would first reassure that the defense has been set firmly and only then proceed to battle for the space on the chessboard, slowly and patiently suppressing the opponent, trying to stifle its king like a slow-moving boa rather looking after swift tactical maneuvers, my Dad would sacrifice pieces, one after another, and attack in a flawless manner, showing me how the heart of love shining within makes one’s moves impeccable, even when one sacrifices all that one has. And yet, in real life he has stood as a monument of humbleness and stony stability, a true guardian of light, in my eyes. In the midst of his heroic heart, you would still mostly find him reading papers in the corner of the dining room and spending time in the solitude of his bright mind, penetrating with the lasers of his thoughts through crystals structures of materials, his ultimate friends for life. For, to be a true guardian of light, one needs

²¹⁸⁵ See Rok Petrovič, zlatni dečak jugoslovenskog skijanja: Mladi žive za novac i žurke, Yugopapir, retrieved from http://www.b92.net/zivot/vesti.php?yyyy=2022&mm=02&dd=08&nav_id=2102247 (1986).

²¹⁸⁶ See Ivan Tokin’s Najnormalniji čovek na svetu, Samizdat B92, Belgrade, Serbia (2014), pp 43.

to neatly balance carefully enclosing and fortressing oneself, and yet finding the right moments and impulses to taut the bow of one's mind and send the arrows of thought that hit the targets straight at their centers.

S.F.7.5. In the famous Akira Kurosawa's movie the Seven Samurai, one of the villagers whose homes the samurai defended, asked the leader: "Now we defend every point except the gate on the north side. Why is it open?" "It is open because that is where we will attack from. If we never attack, we can never defend ourselves". In other words, even the strongest defense has to keep an eye on the right moment and opportunity to open itself up and engage in an attack. Some modern soccer strategists, including most notably Héctor Cúper and José Mourinho, have realized that the ball possession is not necessarily an indicator of the true quality on the field or a determinant of the winning potential and that leaving it for the other side and then waiting for quick and well organized counterattacks can oftentimes present the right approach to winning the match against the opponent. One recent example may come from the final match of the inaugural Nations League between Portugal and Netherlands, where the latter squad had a 10 % higher ball possession and made 137 more passes in total, but also had five times less goal attempts and made only one shot on goal²¹⁸⁷, logically losing the game in the end, with 1-0. As a result, the traditionally English idea, as old as the game of soccer, that the concentration of players in the forefront of the field and the length of time the ball spends in the opponent's penalty area are directly proportional to the probability of scoring, has become outdated in favor of an approach that favors flexible defensiveness as a root of prolific attack and the triangle, if we were to refer to the shape of a typical team's formation on the field, has been inverted. In the final game of the 2018 World Cup, Didier Deschamps freely gave the ball possession to the Croatian players and the so-called *vatreni*, that is, "the fiery ones", by relentlessly attacking the French, literally burned in their own fire²¹⁸⁸, making space for the French to sneak in, effortlessly execute the opponent and eventually raise the most prestigious trophy in soccer. As I looked at the young moon moving across the celestial sphere together with a little star later that evening, when this magic ball called planet Earth rolled 11 hours ahead to the place that the wistful and melancholic I stood on, I thought about all the academic battles that I lost to people who simply sat back, sparked the fire in me and then waited for that single wrong statement to be made in hour long monologues so that they could pull them out of context, present to higher authorities and push me into the ditch. When it comes to soccer, this tactic of tempting the opponent to open up and then executing the weaknesses he has created in the process can be found not only in the broad strategic schemes governing the play, but also in the finest movements made by individual players on the pitch. For example, skillful dribblers know that it is the forward foot of the defender that a maneuver is to be made around during one-on-one encounters; likewise, the space carelessly opened behind a heedless attack is far more easily punishable than the back of the side solidly fortified in its defensive efforts. Consequently, allowing the opponent to take the lead, dictate the tempo and start implementing its own strategic plans is often the best way to force it to expose weaknesses in its approach, which the quiet side is then free to target by swiftly transforming from the defensive and subjugated side to an attacking and winning one. Hence, sometimes not making an immediate move and simply waiting instead, drawing one passive move after another, is the best strategy we could employ, especially when we

²¹⁸⁷ See the official statistics at UEFA Nations League 2019 Extended Highlights by FoOtcublc, retrieved from <https://www.youtube.com/watch?v=eqFHVn-K0SU> (2019).

²¹⁸⁸ See the comment by Stepa on Murinjo: Finale rešilo pogrešno tumačenje VAR, B92 News (July 16, 2018), retrieved from https://www.b92.net/sport/rusija2018/komentari.php?nav_id=1419517.

have an impatient opponent on the other side of the field, board or ring. The most skillful boxers and street fighters are often said not to be those that begin to furiously punch the opponent from the very start of the fight, but those that carefully observe him, waiting until he exposes his weak sides, often trying to tire him by patiently avoiding his attacks and then punishing him with one or a few well directed hits. Somewhere deep inside of their mental universes, they have embraced the systemic statement of fact that no attack could be launched without revealing a weakness, and the awareness that this weakness must exist presents the starting point of intuitively sensing where it lies. Such an approach where one purposely assumes a losing stance so as to invite the opponent to open up and reveal weak points that will then be exploited is often named rope-a-dope after the boxing strategy employed by Muhammad Ali, who would lie against the ring ropes and assume a protective posture, allowing the opponent to attack him but alertly waiting for the right moment to launch a devastating counterattack. Masterful strategists in life thus frequently do not hesitate to throw themselves straight into an abyss, to commit acts which appear suicidal in the eyes of their opponents, as if cutting the tree branch on which they are nested, but only to draw their enemies into a trap and emerge as winners in the end. Like Brecht's Baal, pretending to be dead so as to attract vultures upon himself and then blacking them out with a smack and eating for dinner²¹⁸⁹, these strategists owe their victorious stances to assuming the appearance of losers, be it in the form of bland souls that perfectly blend with the grayness of their milieus or of decrepit spirits brimming with weaknesses and all but being able to strike a serious blow against their adversaries. Military historians, for example, know that the key to Napoleon Bonaparte's victory at Austerlitz, his greatest of them all, was thanks to his first pulling out, seemingly illogically, the advanced forces positioned on the most sought location for a battle, at the top of the Pratzen Heights, and then deliberately weakening the right flank of his army hanging around the bottom of the hill, inviting the Russian-Austrian forces to attack it, thus falling into a classic rope-a-dope trap and losing the battle in less than nine hours²¹⁹⁰. Likewise, the Greek victory over Persians at Salamis around 480 BCE, which is said to have changed the course of history, was owing to the outnumbered and less experienced Greek fleet's attracting the hefty Persian triremes into the narrow straits between Salamis and the Athenian coast, where the Persian ships got disorganized and were unable to maneuver well, ramming into one another and ending up being defeated²¹⁹¹. Accordingly, alluring or forcing the opponent to capture a sacrificed piece for the sake of executing a victorious combination is admired as the highest accomplishment in chess and is a most decisive contributor to the epithets of artistic and poetical that this game bears. In addition, while the quiet, slow-paced and elegant gambit on the queen's side, one of the oldest openings in chess, dating back to the 15th Century, has been my favorite opening as White and is considered the most reasonable response to 1.d2-d4 d7-d5 (aside from the London system), my Dad would always go for the more aggressive, dynamic and much riskier gambit on the king's side. In both cases White sacrifices a pawn and allures Black to defend his extra pawn; if he does so, though, it would cost him a lost game since it presents a mistake that an experienced player would know how to routinely punish and easily emerge as victorious in the end. In fact, the most popular response of Black to a closed game enforced by White starting with 1.d2-d4 has been for decades 1...Nf6, which leads to one of the Indian defenses whereby the strategy of Black is to accept a cramped and passive position and

²¹⁸⁹ "Often Baal shams dead. So if the bird falls for this, Baal dines on vulture, sans a word", says Bertolt Brecht in the Chorale of the Great Baal. draw the white pawns out, let them fully occupy the center of the board and only then undermine the stability of their structure and gradually establish grounds for a powerful counterattack. Hypermodern openings popularized in the mid-20th Century, the most famous and revolutionary one of which has been Alekhine's defense in which Black allures White to immediately start chasing after an undefended knight and build a broad pawn front in the center thereby, are even more extreme in terms of letting the opponent overextend in the center and thus be forced to sustain the initiative, the first signs of vulnerability in which the defending side will be watching out for and swiftly punishing. Building on the theory of Hypermodernism in chess, David Bronstein, remembered as a player who cared more about the artistic appeal of the game than about its outcome, an approach that cost him the title of the world champion²¹⁹², conceived of a strategic approach based on "the dynamic handling of positions with formal but unexploitable weaknesses"²¹⁹³, presumably being aware that (a) insistence on perfection leads to passivity and that (b) deliberate deficiencies can be invaluable assets if they only succeed in distracting the opponent from its plans and alluring it into their dark chasms wherein merciless punishment, like an array of bladed pendulums, awaits it. Amidst hundreds of thousands of examples embellishing the chess literature, one that comes off the top of my head is Anatoly Karpov's game against Gata Kamsky played at the Alekhine memorial tournament in Moscow in 1992, in which Karpov as white launched a fiery attack on the kingside, allowing Kamsky a counterplay on the queenside, but when everybody expected the continuation of Karpov's promising attack on the black king, he switched the gear and crushed black on the very queenside to which he attracted him²¹⁹⁴. Another example may be Karpov's 19.Rd3 during his Yugoslav attack on Viktor Korchnoi's Dragon variation of the Sicilian defense in the second game of the Candidates Final in 1974²¹⁹⁵. When everybody expected sharper 19.Nd4 or Nf4, if not 19.g5, Karpov made this mysteriously quiet and practically static move, alluring Korchnoi to respond after 36 minutes of thinking with a seemingly fantastic 19...R4c5, a move that was supposed to be protecting Black against the 20.g5 threat while also taking the positional control of the fifth rank, not knowing that he merely fell into an immaculate trap that Karpov had set for him. Karpov proceeded with none other but 20.g5, the move that 19...R4c5 was supposed to prevent, causing a quaver of disbelief all across the chess universe. He was indeed right and after 20...Rxc5 and 21.Rd5 Rxd5 22.Nxd5, the white knight blocked the fifth rank and also attacked the black knight at f6, the key defensive piece, after whose exchange the black's position quickly crumbled and he resigned already on move 27. A more basic example from chess may come from a comparison of two hypothetical white pawn structures in the center: c4-d4-e3 and c5-d4-e3. Although the former structure is less stable, it allows White to control the center, which he relinquishes by converting to a more stable latter structure, enabling Black to occupy squares along the a8-h1 diagonal and from there infiltrate White's position. Notwithstanding that with c4-c5 White may allure Black into an offense that could, depending on the position, turn out to be a trap, this comparison refers back to the principle reckoned by the chief samurai in Kurosawa's classic: to stabilize one's structure is to lose grip of the position and create spots that the opponent is invited to take over, whereas only an inherently unstable structure can maintain control of the position. Needless to add, one way or the other, a masterful strategist

recognizes that a weakness is always present in the opponent's position, even when it seems immaculate and superior. Similarly as in chess, the rope-a-dope trick is intrinsic not only to broad strategic schemes or tactical plans, but also to the finest moves displayed on the soccer field. For example, a most basic trick that skillful dribblers rely on is controlling the ball in such a manner that an opposing player is allured to reach out to get it, which is, however, followed by swiftly getting to the ball first and changing its direction so that the opposing player is tricked and left behind. This trick based on subtly attracting the opposing player to attack one and thereby reveal weaknesses that can be then elegantly punished allows soccer players to exhibit magnificent skills without pulling off fancy footwork, such as, most notably, the multiple cut moves made in a row or the infamous step over dribble, a.k.a. the bicycle. One simple trick that dribblers employ is to move forward with the ball in a zigzag fashion and then throw the defender off balance with changes in the direction at precise times: to the left when the defender steps down with the right foot and to the right when the defender makes a step with his left foot. Skillful defenders in soccer likewise know that marking an attacker perfectly well is not such a perfect defensive approach after all. Instead, pretending to be imperfect and slowed down, letting the attacker make a step ahead and feel as if he has an open path to the goal, but only then to jump on him and block the shot or take the ball away is what these experienced defenders would consider as a perfect approach. Getting too close to the opposing team's player in hold of the ball is also an elementary tactical mistake due to which space is opened behind the defending player's back, where the attacker could pass the ball with greater ease. A similar mistake typically committed by hotheaded novices is to run with the ball straight to the defender instead of staying in place or moving only a few steps forward or, even better, diagonally. For, by running straight to the defender the space where the ball is to be passed becomes tightened, benefitting the defensive line rather than the attackers. In contrast, by alluring the defender to approach the one who is in the possession of the ball the space behind the defender's back becomes broadened, to the disadvantage of the defending team. Hence, both foolishly forcing "one on one" play by running with the ball straight to the opponent and exerting pressure as a defender to such an exaggerated extent that one runs straight to the opposing player, believing that one could take the ball away from him without a foul, could be thus seen as equally disrespectful to both one's teammates and the opponents as trying to pull off one of fool's mates in a game of chess, that is, consciously weaken one's position because of trying to trick the rival into a simple and, from the aesthetic standpoint, quite a vulgar trap. Needless to add, these weaknesses opened in one's position are often targeted by the opponent to a devastating degree and the first example that comes off the top of my head is the game between AC Milan and Roma played at the San Siro in late 2013, when the guests, leading 2-1 at mid-second half, suddenly and quite puzzlingly began to press the host team, the punishment for which came immediately, through a sequence of short passes through spaces opened behind forward-rushing Totti and the teammates. Pep Guardiola, a former Barcelona coach, although often credited as one of the fathers of tiki-taka, once opened his heart and explained the secret of his strategy in soccer: "Barça didn't do tiki-taka! It's completely made up! Don't believe a word of it! In all team sports, the secret is to overload one side of the pitch so that the opponent must tilt its own defense to cope. You overload on one side and draw them in so that they leave the other side weak"²¹⁹⁶. In other words, to first allure the opponent to come close to one and then to launch an attack through zones made vacant and weakened by such forward-moving regrouping is the key to playing a winning game in Pep's opinion. Therefore, a team with speedy wingers would typically overload

²¹⁹⁶ See Marti Perarnau's *Pep Confidential: Inside Guardiola's First Season in Bayern Munich*, Arena Sport, Edinburgh, UK (2014).

the deeper areas of the field to attract the opponent thereto before quickly transitioning the ball to the flanks to penetrate the opposing defense, whereas a team playing in a more short-pass tiki-taka manner would usually spread a compact defense by sending the ball to one flank and then the other, after which it would preserve the high width and at the same time overload one of the central zones, say by one of the two edges of the penalty box, normally utilizing full backs and false nines for that, and then rapidly switch the ball to the different side of the pitch, the one that got partially vacant by dragging the opposing team's defenders to the overloaded zone. Villarreal of the early 2020s can be said to have brought this strategy to the extreme by alluring the opposing team's players to the penalty box, where the Villarreal players, the goalkeeper included, would then make coldblooded passes and send the ball behind the open lines, towards an often very effective counterattack. Another one of the tricks pulled from both Pep's hat and the hat of many of the managers of his era, including Jose Mourinho, traces back to Marcelo Lippi's Juventus that played three finals of the Champions League in a row, from 1995/96 to 1997/98, involving the attraction of the opponent with the ball to the flank and then closing both the forward pass and the back pass options and leaving it stranded near the sideline, where the passing options are, nevertheless, far lesser than deeper in the field. One of the classic examples of this strategy was seen in the Champions League final of 1996/97, which Juventus lost to Borussia Dortmund in spite of being tactically a more superior team. There, Juventus played in the diamond formation in the midfield, with Zinedine Zidane in the front, his compatriot, Didier Deschamps in the back, Angelo Di Livio on the right and Vladimir Jugović on the left. With Di Livio being a more "energetic and attentive defensive player"²¹⁹⁷ than Jugović, Borussia's attack was, logically, directed to the latter, Yugoslav player's side. This, however, would be met with the pressure from the left-back, Mark Iuliano, with Jugović guarding the half-space and preventing the forward passes, Zidane recovering backwards to block the horizontal pass and Christian Vieri dropping down from the attacking zone to prevent the back pass. The most innovative soccer squads have often gone down in history as unfortunate losers and such was the case with this Juventus side, whose poorly planned attack can be blamed for the loss²¹⁹⁸, specifically the forced quick, vertical progression of the ball, as opposed to the gradually built attack, as well as the reliance on individual skill of the two strikers, Vieri and Alen Bokšić, but also Alessandro Del Piero after he was brought into the game in the second half. This hasty and rather disorganized attack particularly fit the man-oriented Borussia side, preventing the Italian team from taking advantage of the opponent's loss of structure upon regaining possession in the defensive zone, which it could have exploited had its attack been as orderly as the defense and the midfield were. In any case, the common wisdom that organizational order and rigidity ought to get progressively reduced as one moves vertically along the field, from the defense to the attack, the latter of which should operate fluidly and unpredictably, did not pay off in this game and the less sophisticatedly organized team took the trophy home in the end. Another possible factor that might have contributed to this unfortunate outcome for the Italian side in this game was the decision not to counter-press the German squad, perhaps fearing that they, themselves, could then end up falling into a rope-a-dope trap like the one they were setting up for their opponent. For, from the tactical standpoint, pressing the opponent does not only weaken the defensive element of the pressing team's formation, but also leads to

²¹⁹⁷ See James Curzon's How Borussia Dortmund Beat a Brilliant Juventus Side in the 1997 Champions League Final (2017), retrieved from <https://spielverlagerung.com/2017/10/05/how-hitzfelds-dortmund-beat-a-brilliant-juventus-side-in-the-1997-champions-league-final/>.

²¹⁹⁸ *Ibid.*

surrender of one's strategic plans, allowing the opponent to control the game²¹⁹⁹. As such, it is analogous to forfeiting one's inner focus from which impulses for brilliant action arise and masochistically subduing one's will to that of another, being one of the two extreme directions in which fall off the thin line of interpersonal balance that the Way of Love is. Of course, as soccer has overwhelmingly become a running game and pressing evolved into a mainstream defensive strategy, pressing, especially when moderate and positional, leaves room for setting various rope-a-dope tricks, one of which are so-called passing lane traps, that is, vertical channels that allure the opponent to send a pass along them, but only to rapidly block the receiver and regain the possession. What all this advice essentially brings to light is that wise and prolific attacking attitudes in life are invariably built on an immaculate sense for defensiveness resting in the back of the attackers' minds. Some soccer experts, in fact, consider the entire science of soccer tactics to be an attempt to answer the question of what the best possible way to balance defensive solidity and attacking fluidity would be²²⁰⁰, which could bring us over to the conclusion that just like the leaves of a tree can wave in the wind and seize the attention of the many beautiful, dreamy eyes of the world only insofar as their bases are stably rooted in the ground, so is a magnificently deft and creative soccer team always built on the sturdiness and stability of the columns and beams that constitute its defense. "Defense, defense", thus ring around the words one hears at the American basketball games, and yet, despite all being said, I know that they form only one part of the story in a sense that too much defensiveness, unbalanced with the spirit of aggressive expansiveness, will merely shrink the butterfly being of ours into an inanimate and creatively atrophied cocoon²²⁰¹. Therefore, for many years I worked on developing a more direct, less fearful and more attacking, self-confident personality, and nowadays I believe I hold in my hands the right balance between the two. All the while I doubted my ability to craft my art of dancing with the soccer ball into something more aggressive, wondering if I have that Southern perkiness and robust impudence that wholly disrespects a human being standing before one in my blood at all, given the fact that the most successful Serbian soccer players have lately been exclusively defenders or defensive midfielders as well as the traditional futility of soccer schools from the eastern European, the region of the world whose cultural bests and worsts are grounded in grandiose compassionateness, posing an impassable mental block before an attempt to trick an opponent with the ball. Still, I worked hard, physically and mentally, to reach a stage where the defensive stability and an unobstructed offensive expansiveness would be seamlessly combined in me and today I do see myself as both a reliable defender, the one whose heart beats with the guiding line of "love is staying", and a bold striker, the one who rarely hesitates to rush forward with the ball. Defensiveness has provided me with a dose of reflective cautiousness, while the attacking side in me has flown my moves on the magic carpet of irresistible radiance and charm. The former focuses

²¹⁹⁹ See Ralf Peter's Soccer Tactics: Types of Pressing, available at www.soccerpilot.com/tactic/tactic-selection.html (2012).

²²⁰⁰ See Jonathan Wilson's Inverting the Pyramid, Orion Books, London, UK (2008). In fact, sometimes I play in my head with the idea of inverting this standard paradigm of soccer tactics and creating a team with fluid defense and mathematically precise attack rather than *vice versa*. Soccer began with virtually no emphasis on defense, before the "pyramid" was inverted and stable defense became accepted as the cornerstone of tactical superiority, and one such hypermodern, rope-a-dope-employing transition I envisage, whereby the "pyramid" is to be re-inverted, would correspond to a sweet and romantic return to the earliest beginnings of the soccer game.

²²⁰¹ How confusing this inversion of the soccer lineup pyramid to emphasize defensiveness and deemphasize forwardness has been to the old generation of soccer players is best illustrated by the comment made by the former Serbian soccer superstar, Milan Galić shortly before his passing in 2014: "What is this with modern soccer? They all play it backwards".

the rays of creativity within me, whereas the latter dissipates them away. And as the Way of Love teaches us, one without the other could not exist at all. They nurture each other in the endless spin of the carousel of love and wonder within our hearts. As we ride on this carousel in our ruminations, every once in a while we catch a crystal clear view of the beautiful starry ideal that our spirit has embraced.

S.F.7.6. This ideal is all about letting ourselves express freely, without any irrational constraints imposed on our behavior. Despite that, most of us are nowadays pervaded by enormously many tiny constraints that we are not even aware of. We all know that we should let our guard down and wipe off that social mask that encloses our tender insides into a protective but oppressive clothing if we wish to engage ourselves in communication that will glitter with inspiration and beauty, but how many of us truly succeed in that? It is a whole different question whether a success in this endeavor would be akin to the fulfillment of one of those dreams that we inevitably regret for the moment we realize that they have come true. For, would not we then go limp, with jaws dropped and eyes deadened, so that no energy that moves and illuminates could ever be expressed from our core? Would not we then, having forgotten that every shining star experiences a stressful pull of gravity toward its center, whose role is to keep its atomic components integrated and tight, just dissipate into an empty space, never to be recomposed again? The reason, of course, is that perfect relaxation is equally undesirable as an utter rigidity. It is the balance between an active tightness and loose flexibility that makes the strings of our spirit reverberate with music. Try to stretch too hard and we will break, but try to loosen up too much and we will become infertile and fruitless and no divine music could be produced by us anymore. Nevertheless, I still claim that most of us, nowadays, are like the cosmonauts depicted in Moby's video clip for the song "We are All Made of Stars" or in the one made for "Opus 40" song by Mercury Rev, dwelling inside a shell-like aura that keeps us protected from the harmful influences of the environment, but simultaneously limiting our creative acts in the world. Over time, I learned to recognize the look of a defender in human eyes. It shows a certain toughness and rigidity that prevents one's heart from bleeding with love and care to the people of the world. Most people comprising the current generation of humanity can be, in fact, classified as defenders. The guards surrounding not only our hearts, making our chests rigidly withdrawn and shoulders stiffly elevated, but many other fine, fine details of our bodies and minds pervade us. Have you ever tried relaxing all of the fine muscles around your eyes before sleep? It is normal to observe that when you relax one group of muscles and shift your attention to another, the first group spontaneously contracts again, and *vice versa*. It takes numerous conscious attempts to relax them to truly succeed in that. The same is with these fine and invisible guards that we impose on our bodies so as not to fall far from the ideals of conformity in social communication. They have been firmly established in us through years and decades of shaping our personality into socially acceptable forms. In doing that, however, many spontaneously adopted guards have been established within us, and it may be truly hard even to observe them, let alone ameliorate them and turn our entire beings into a gentle dance in which the connections between our movements, thoughts, cells and atoms are like strings, optimally tight and flexible to reverberate with enchanting music. So, encountering the introspective view of what we appear like in the social milieu with a cosmic vision of our true self, with all its miraculously vigorous dance of love and wonder expressed in every minute detail of our expressions, may be the way to transform our well-guarded self into a beautiful angelic creature with an eternally open heart that is home for everyone. Nevertheless, pertinently letting the guards off our eyes, emotions, chakras, joints and muscles, resulting in awakening a long forgotten balance between a tight

liveliness and a loose relaxedness, is the key. Recall that the roots of the Hebrew word for Satan denote “a dam, an obstacle”. Unless we get rid of these obstacles that force our rivers to flow along rigidly indented riverbeds, we will never transform our expressions into something immaculately inspiring and awesome. One of the vital preconditions for our transcending these dams that block the flow of inspiring energy from the core of our being to the surface of our expressions is, of course, accepting mistakes that we will unavoidably commit along the way. For, trying too hard to achieve anything in life, including avoiding mistakes in whose essence the drives for our ascent on the ladder of spirit lie concealed, is a perfect stumbling block to our striving to reach destinations of celestially expressed inner music of our being. When a juvenile monk asked a Zen master how long it would take for him to reach enlightenment, the master answered, “About ten years”. When the disciple asked how much it would take him then if he tried even harder, the master replied, “About twenty years then”. Confused a bit, when the student asked how far the moment of enlightenment would be then if he were to work day and night to the limits of his capacities and try hard with all his heart and soul, the master’s answer was even more seemingly disparaging: “In that case, I would say, about thirty years”. On a different note, a worldly visitor to a Zen temple asked a master dwelling in it how much time in a day he should allocate to meditation, to which the master replied: “Twenty minutes unless you are busy, in which case I would advise an hour”. The two masters’ messages were clear: without freely going with the flow of energy emanating from the divine core implanted in the heart of each and every animate creature, we can hardly expect to reach the most sublime peaks in the ascent of our minds to cosmic heights. Without letting our bodies carelessly surf on this awakened flow of divine energies emitted from our very soul, we will only spin in circles and may never even glimpse the dawns of enlightened being awaiting each creature that follows the signposts that mysteriously pop up everywhere within and around it. Without becoming not a river that rationally runs to the ocean, but an ocean itself, as natural as it can be, into which all the rivers flow, letting the waves of enlightenment wash over us spontaneously, we may likewise never become a divine dancer that sheds sheer stardust of otherworldly beauties with every move made. Yet, when I imagine the future ways of acting, I see people freely singing, dancing, performing headstands at public meetings and jumping with joy, and all that on a daily basis. These days we think we have revolutionized communication, but that is, as I claim, only the start of a much bigger revolution, the one that is about to strike the chords within the deepest realm of human spirit and prompt us to undergo a phase transition into more exhilarating mannerism, from which there would be no return to lame, lifeless and prosaic postures and movements that will have marked the current age. The technological infrastructure for easily establishable connections between people and an ultrafast transfer of information is set, but the spiritual and artistic elements awakened by the enormous richness these communicational bases possess still lag behind. But soon, we may start to see people, one by one, “breaking through to the other side”²²⁰², as if crossing the magic mirror in Alice’s room that takes her to new adventures in Wonderland, making a big phase transition from the state of mind dominated by dams imposed by social fears to the one ruled by the power of love that moves the sun and other stars, as in the finale of Dante’s *Divine Comedy*.

S.F.7.7. Whenever I play soccer I get reminded of this balance between mind and heart, which is essential for absolutely anything we do successfully in this life, from the simplest to the most intricate deeds. I have seen many players appearing perfectly physically fit for the game at the beginning of the game, but completely useless for the team at the end of the day. Hence, when I

²²⁰² Listen to the Doors’ Break on Through (to the Other Side) on the Doors, Elektra (1967).

am out there on the field, I imagine myself as an inverted triangle, the bottom edge of which signifies our physical predispositions and the upper two edges denoting our mind and heart, respectively. With ourselves firmly rooted in good physical conditions, we may still never be able to spread the “wings” of a beautiful play outwards. To do so, a heart filled with love and devotion, and mind focused on finding the smartest and the most balanced moves, have to be on command. It is also essential to ensure that these two balancing aspects of one’s creative performance, in general, do not overwhelm each other. For example, if our emotions overcast our ability to act cleverly in an instant, we would find ourselves running around ceaselessly without positioning correctly and passing the ball promptly, and all that while making a plenty of fouls on the way. But failing to cultivate a heart of devotion, an inner bravery and a great wish to play immaculately will wipe off the magic and the enchanting character of our play. In the end, life is all about balance, in each and every one of its aspects. Moreover, it is all about the balance between the states of balance and the states of imbalance. Only living according to this rule can impel us to progressively stream forward in our walks of life. Should we tend to permanently stay in a safely balanced state, we would never make a step forward, which necessarily temporary brings us out of balance, similarly to how a canoe paddler has to tilt his boat and deviate from a straight path if he wants to make a stroke that propels him forward. Thus, every now and then one of our brain hemispheres, one of our eyes, one of our nostrils and one of our arms will become dominant with respect to the others. The point of many Yoga exercises, including alternately breathing through different nostrils, is to bring back the balance within our bodies. Ultimately, the balance between our inner powers of intuition and warmhearted inspirations on one side, and analytical thinking on the other corresponds to the balance between the activities of two brain hemispheres. Nonetheless, becoming preoccupied with how our brain works would be similar to decorating letters of the text we write with an aim to improve its artistic quality. We should always look through the visible features of the world straight to its heart. Therefore, to live the balance between heart and mind in each tiny aspect of our lives is not to be obsessed with this particular balance, but live spontaneously moved by the inner powers of love and intelligence. As proclaimed by Lao-Tzu in the first verse of his collection of thoughts on applying Tao in the real life, “Man of a sublime character is not aware of his character, which is why he has a character; man of a treacherous character is looking after not losing his character, which is why he is without character” (Tao-Te-Xing 38). Chuang-Tzu struck the same point upon claiming that “the one who has become virtuous does not think of virtuousness as of something worth pursuing”, as well as Blaise Pascal when he noticed that “true eloquence has no time for eloquence, true morality has no time for morality”²²⁰³. Like the Sun that shines and bestows life to the circling planets and yet stays in the blind spot of its own light, not recognizing its greatness and maybe even having an impression that it has ever since been immersed in a dull darkness, the same is with the spiritual shine of our spirit. As we are always moving together with it (because it is us, so to say), we are hardly able to notice its precious beautifulness.

S.F.7.8. Many fine metaphors that could be with a little bit of imagination translated to wise imperatives and ideals lie dormant in principles of every science, art or game in this life. The same is with soccer, and I am amazed every time I recognize a new principle that reveals itself as a lovely metaphoric guideline on how to act in various different situations and aspects of life. One of these metaphors in soccer relates to a mistake that amateur players make. Namely, they forget

²²⁰³ See Blaise Pascal’s *Pensée* No. 514, Translated by A. J. Krailsheimer, Penguin, Harmondsworth, UK (1669), pp. 212.

that space is what should be kept eye on rather than merely individual players. One side of this “space rule” says that players need to constantly run to find an open space, which, as you may guess, becomes instantly closed once they stop moving. Ceaseless moving is, however, required for a successful play not only in the game of soccer, but in every other domain of life. As soon as we stop searching for a space where “the ball” could be handled to us, the doors to our receiving precious messages from Nature and its creatures become gated. The other side of the “space rule” tells us that once we have the ball in our possession, we should not look for another player to deliver the ball directly to, but watch for an empty space where the ball should be delivered. Whereas in the defending zone, where safety is of prime importance, passing the ball straight to a teammate is acceptable, the closer we are to the forward midfield zone and the attacking zone, where the most creative moves in the game are made, the more it is required that a good pass be sent into an empty space. Now, the same is with every idea we deliver to the world. If we send it right there where their recipients are, they would be prompted to stand in place and the forward moving impulse of the team will be consequently hindered. But if our messages aim at a space in the vicinity of the passing player, and thus seemingly deviate from a perfect way of expressing it, urging the player to make an effort to grasp them, the result would be the most favorable. Simultaneously and on a bit fancier side, this precept guides us to deliver ideas in a manner more representable as strewing stardust across the open skies than passing on perfectly comprehensible signs hand to hand, all so as to puzzle first, then bedazzle and only then illuminate, taking the receiver along the way from the solid earth to the sublime firmaments in the celestial sphere of her reasoning. Sasha, the captain of a Marin County soccer team, told me during practice at the South Sunset playground of a method he uses to make his teammates more aware of aiming at an empty space rather than players themselves upon passing and receiving the ball. Namely, he slows them down by allowing them to walk only during practice. As their movements become significantly slowed down, the players have more time to scan the field and its open spots, thus making better decision in terms of sending the ball to an open space rather than directly to other players as well as ceaselessly seeking to find an empty space on the field for themselves to run into and temporarily occupy. The message is, of course, that slowing down is often a great method to recognize the way forward which we have become blind to in our moving in a fast forward fashion. The same principle naturally applies to watching soccer games as a spectator; namely, what may seem as a most logical move for the player to make in real time becomes often seen as a mediocre choice in slow motion. When actions are slowed down, one tends to perceive an immensity of choices a player has upon receiving the ball; being aware of those facilitates the analysis of the game at hand and explains why I frequently play soccer games on TV in slow motion and have them last for five or six hours instead of an hour and a half. Be that as it may, this mystical raising of the awareness of the essentiality of empty spaces, of the things unknown and unseen as opposed to those plainly manifested, makes us indirectly aware that balls, i.e., signs we give to people ought not to be given directly to them. Instead, they should be thrown into an open space so that their potentials are stretched and expanded in the effort to grasp them. This is, by the way, why the addition to my aforementioned morning mantra, “pass the ball, pass the ball”, is my favorite evening shower mantra: “Pass the ball *into an open space*”. In concert with the Way of Love, the perfect gifts are not those that perfectly fit a given being at a given moment. For, things and messages that lead to one’s full satisfaction with and a complete understanding of merely confirm one’s preexisting knowledge and do not necessarily lead to one’s evolution. But gifts that partly fit the being and are partly mysterious too and not understood by the gifted being are the finest.

They are comparable to ladders upon which a being can climb to ever more beautiful starlit panoramas over the spinning ball of the dazzling Earth.

S.F.7.9. Earlier I wrote about the deterministic chaos and the butterfly effect in the domain of chemical experimentation by potentiating how minor differences in our experimental setups can occasionally yield tremendous differences in terms of the unusual and unexpected experimental outcomes. As for the art of soccer, the same sensitivity of the fates of millions of human beings and the entire nations depending on minor differences in the trajectory of the ball in a game²²⁰⁴, in the way in which it was kicked or spun, being the events that take place in the order of milliseconds, can be realized with a little bit of imagination. Namely, innumerable soccer games have been decided by one of the players missing the target by a centimeter or so, not completing a pass by an inch or so, being just slightly late to avoid offside position, etc. Global recognition or humiliation that will stay for decades and maybe even centuries impressed in people's minds may result depending on these slight differences, each one of which could be seen as directing the writings of histories of whole nations along a novel trajectory. Whether being in a slightly different state of mind could have led the evolution of an entire country along a different path, a player stands at the field and wonders every once in a while. Even a butterfly landing on one's shoulder or spotting it from afar could have changed the player's mindset by that little bit which would be enough to turn a slightly missed opportunity into a golden goal. On top of this, a general feeling is that any professional team can nowadays beat any other professional team, irrespective of how great the difference in their quality may seem. Although at the league level, these differences in quality become more or less averaged, whenever a tournament comprises a few games only, including a knockout phase, such as at the World Cup or at the European Championship, this impression of vulnerability of even the strongest squads on the paper remains solid. If I were to compile a list of soccer games that I watched in which a team that showed greater skills and a more inspiring play, let alone a higher number of scoring opportunities, lost the game in the end, it would be an endless one. What this means is that if one is to judge the quality of soccer teams wisely, one should scratch out Jose Mourinho's motto that says that "philosophy based on beauty that doesn't have results is protection for losers"²²⁰⁵ and leave the final scores, the end results and the winner names aside, focusing on the real play, one moment at a time, instead. After all, the brilliant Hungarian and Dutch generations of the 1950s and 1970s, respectively, failed to win any major tournaments despite inventing the tactical framework of total soccer and revolutionizing this game for good. Like these two famous soccer squads, two famous chess players and world champion contenders who were one draw away from the world champion title, but blundered terribly in winning positions and never became the champions, David Bronstein and Carl Schlechter, brought something beautiful to the chess game on and off the chessboard, respectively. While Bronstein inspired generations of up-and-coming players with his dissentient dreaminess and relentless quest

²²⁰⁴ For example, following the loss of Argentina against Uruguay in the final of the 1930 World Cup, the disappointment in Argentina was so intense that it eventually resulted in overthrowing the country's president Hipólito Yrigoyen in a military coup, whereas a real war broke between Honduras and El Salvador over a series of three World Cup qualifying matches between the two countries in 1969, all according to <http://www.topendsports.com/events/worldcupsoccer/winners.htm>. The precedential triumph of Red Star Belgrade in the May 1991 game that decided the best European club likewise, in my opinion, ignited an incredible triumphant energy among soccer fans and an enthusiasm that, if it breaks, the war would be won. Needless to add, many of these soccer fans voluntarily ended up on the frontline during the upcoming war. Even if not this drastic, all other major or minor soccer events can be thought of changing the course of the history of humanity, subtly and imperceptibly.

²²⁰⁵ Watch the January 21, 2019 episode of Locker Room, Bein Sports (2019).

for poetry in the game, without even a slightest concern for the score, Schlechter inaugurated gentleman play where courteous draws, candid mentoring of opponents and refusals to claim victories if opponents came late for the games were the norms. Alas, unlike the Hungarian “light cavalry” - the name under which this famous squad from the 1950s was known in my home country at the time - or the Dutch “carousel”, which both influenced today’s dominant style of soccer play, the beautiful stylistic things Bronstein and Schlechter brought to the chess world have been exterminated in the meantime and must be built from scratch by some new heralds of new romanticism in it. One thing that could be inferred from these examples is that there are definite demerits of prioritizing competitiveness over innovation in any discipline, be it art, science or sports, because very easily such misplaced priorities may lead to superficial assessments of the history of the field and blemish the clear view of its evolution, let alone inspire wrong kinds of people, namely the selfish competitors versus selfless innovators, to enter and fight for the prize and the prestige in it. Back to soccer and wins in losses, Victor Maslov’s Dynamo Kiev is nowadays remembered as the first team that implemented 4-4-2 formation and the concepts of zonal pressing and interchangeability of players’ roles, with its versatility on the pitch being resultantly described as having “something like two squads – one if fighting, engaging in a frank power struggle... while the other plays in the ‘southern’ technical, combination style, at an arrhythmic tempo”²²⁰⁶, but, despite that, it failed to leave a significant mark on the European scene. The only World Cup Brazil hosted, in 1950, its national team played immaculately, yet it failed to win it in spite of Flávio Costa’s implementation of the famous “diagonal”, that is, a tactical formation that broke the reflection symmetry on the pitch and for the first time showed to the world that positioning of the players on the left side of the field need not be the same as that on the right. Although it was exactly this idea that was exploited by the Uruguayan side in the final match of this World Cup²²⁰⁷, with Danilo as a defensive midfielder on the left being pushed forward far more than Bauer on the right, leaving too much space behind him for the left back, Bigode to cope with, it has continued to live to this day in the heads and hearts of generations of proficient soccer strategist. Some may add that another generation of Brazilian soccer players, arguably the best and the most creative of them all, heralded by Doctor Socrates and playing the unsurpassably bold 2-2-2-2-2, never reached the semifinals of the World Cup, whereas the one that was rated just above average broke this spell and won it in 1994, the year in which the favorite would have been none other but Yugoslavia had it not been for the civil war and the United Nations ban imposed on all of its sports teams. Despite the general failure of Socrates *et al.*, hopes remain in the hearts of soccer enthusiasts all over the world that the times of bold, beautiful and inspiring play they promoted in the early 1980s are yet to come. Needless to add, in spite of their giving in to the destructively defensive Italian side that stood in their way and won the World Cup trophy in 1982, they were the true winners in the eyes seeking beauty and the recognition from gods, not humans and their corrupt courts. In contrast, 1994, the year when Brazil won the World Cup after a long spell, could be considered as one of the biggest losses, not triumphs, for Brazilian soccer, despite the fact that at the first following World Cup, in 1998, the Brazilian squad would reach the final and then win it again in 2002. The reason for this lies in the paradigm shift that this winning of the Jules Rimet trophy in 1994 brought about among Brazilian coaches. Namely, whereas Telê Santana’s Brazil of 1982 and 1986 was an offensive-minded team of flair and flow and style, traditionally Brazilian, some may say, Parreira’s Brazil of 1994 was the side of sturdy defense and discipline, modeling itself for the first time in history after the European style of play. Henceforth,

²²⁰⁷ *Ibid.*

the winning of the World Cup in 1994, in spite of the relatively poor play, marked a turning point in Brazilian soccer philosophy, after which Brazil would never be the same, having still to reach a semifinal of the World Cup since 2002, which is to remind us that very often in life losses are triumphs and triumphs losses. Next, Paris Saint Germain crushed Barcelona, the most tactically advanced soccer squad of the past decade, 4-0 in February 2017 at the Parc des Princes, but were eliminated from the competition by losing 6-1 in the second leg; still, they demonstrated how the Catalonian style based on short passes and Petrosianesque, anacondian suffocation of the opponent could be dismantled with semi-long passes and optimal distancing of teammates, not their coming close together as in tiki-taka, opening the way for the next school of soccer thought, in my humble opinion. On the other hand, the triumph of England as the host nation at the World Cup in 1966 yielded a wrong impression that Alf Ramsey's wingless, diamond-shaped 4-4-2 midfield was the only legitimate approach of the English to the game, setting them back against more superior opponents and delaying its flourishing for many decades to come. A brilliant discovery this is, inviting us to switch our attention from the final scores and destinations onto the enchanting moves on the soccer field, right here, right now, on the road itself and qualities shining like constellations of stars in the tiny little moments of the game. And, indeed, if the art of soccer manages to teach us that style is forever and ever more important than silverware and that finding destination in the journey itself is needed, a giant step towards enlightenment will have been made. Another great insight lurks behind the question that will incessantly swirl inside of a wondering human mind on this planet. The question is whether there is a key that helps one turn these seemingly random and uncontrollable differences into something that will secure success for one's play and any other endeavors in life, which all inevitably hide innumerable butterfly effects within their cores. Could it be a prayer, a right state of mind, months of physical and psychological preparation, the powers of instinct and intuition, or something else? Or, could it be that these things are subject to some greater cosmic laws over which we, humans, can have no influence? Do they tend to work their way so as to balance out human wishes and desires and produce the most desirable outcomes that will in the long run maximally benefit humanity and the planet which it inhabits? Or, in the worst case, could it be that these tiny events as the ones that deliberately guide the evolution of the world in accordance with the aforementioned butterfly effect are all subject to inherent randomness and accidentalness? As faith, hope and incessant quest for guidance and keys in life is crucial for sustaining its evolution, one thing is certain: these questions will never yield definitive answers. Touching the most fundamental ontological problems that have bothered philosophers since the dawn of the human race, they will have stayed where they always swirled: inside of the minds overwhelmed with waterfalls of starry wonder, and it may be that it is these wondrous minds are the only ones that will be led to glimpsing of the answer and scoring great goals on the field of life. For, should there be a definite answer given to the most profound questions that humans can pose, such as "will our strivings yield success or all that we do is done in vain", the wheel of human creativity, inherently depending on this thirst to reveal and find out, would stop spinning. Be that as it may, an insight that I mentioned before posing this endless stream of questions is that in view of the butterfly effect in the domain of soccer games, the divine hands of Nature that according to its will direct the evolution of the world in togetherness with the will of human creatures ought to be sleeping in the little things and details that, though, have a decisive influence over the final outcomes of human strivings. The quantum sea that underlies the whole existence, as the physical domain of quantum smallness and fineness in which movements obey the Heisenberg's uncertainty principle and follow seemingly random, or, one should better say, causeless evolution, tells us the same thing: the divine guidance comes from the smallest things imaginable. On the other hand,

Laplace's demon as the hypothetic brain-powered creature able to calculate and predict every future event in space and time based on knowing the positions of all the atoms in the world and the laws that govern their movement and interaction dwells in the domain of macroscopic things for which the classical laws of mechanics apply. Yet, this demon irrevocably drowns in this quantum sea, which takes away even the slightest chance to fulfill its dreams of perfect knowing, which, in fact, comprises a perfect ignorance, after all. Once again, this time through the eyes of a devoted and imaginative soccer fan, we realize that Small is Beautiful and that incessant starry wonder sends the trains of thought along enlightening directions inside of one's mind.

S.F.7.10. Many people find it stunning that the only things I enjoy watching on telly, which I rarely ever switch on, by the way, are soccer games and Fashion TV shows. The most vacant things I could choose to watch those are, my friends occasionally tell me. And believe it or not, I have a readymade explanation all set to be pulled out, always in a new dress. Not that I wish to defend myself, though. For, as I mentioned before, long time ago I had given myself a vow never to defend myself on any of the occasions involving fierce attacks on chastity of intentions underlying my acts. Knowing that "Jesus wants his witness to be nothing"²²⁰⁸, as the first one out of 1000 Pascal's *pensées* says it, you will never hear me repeating Chuck D's desperate cry, "Can I get a witness?"²²⁰⁹ when my heart becomes pierced by venomous arrows of unfair accusations and condemnations. For, I have witnessed too many exceptional artists criticized by the mediocre masses and letting the fantastic image of their creative work be spoiled by their desire to defend themselves, as it happened, for example, to Charlie Chaplin following the extremely unwelcoming press conferences at which he participated in the wake of World War II²²¹⁰. Not to confront, but to reiterate the accusative arguments with a lovable laughter emanating from a sunshiny mood which no clouds of angst could ever be set over is thus the approach that I learned to see as unassailable in situations like these. Henceforth, here I will drop the justification of the aforementioned habit of mine just for the sake of enriching the discourse and your knowledge brushed up by it. I will do so also in order to throw some lights on routinely neglected and rejected details of the world and make you realize that there is a whole lot of meaning and beauty in them. And that is, as you may have realized by now, a most favorite action of mine. Now, just as every sage does, when I observe visual or any other sensual details, my perception does not end at the apparent boundaries, but penetrates through them until it reaches the level of their holistic meanings. Simply saying, a wise perception is like reading: our attention does not end at individual lines, letters and words, but travels through to the higher levels of knowing at which abstract meanings arise from interpreting whole bunches of primary perceptions. So when I watch soccer games and models walking across a catwalk podium or doing makeup in the backstage room, my attention is with the invisible essence that like clouds of imperceptible qualities embraces the characters on the screen. And these qualities are thoroughly different and quite complementary to each other in these two types of colorcasts. Whereas soccer is all about cordial devotion, shiny wishes, strength and determination, supermodels in their acts are all about relaxedness, featheriness and grace. Whereas soccer provides a lesson on how to ignite warmhearted ethics in our heart and a fire of emotions on our

face, fashion TV, a window to the world of calm and graceful countenances and mystical smiles that abhor the idiotically affected grins that have swept over the rest of the western world, threatening to drown it in its smarmy waters, is how to be a meditative, cold goddess in one's mind and movements. Whereas many people put the latter in the same category as party shows and hip-hop music videos, the difference is, in fact, tremendous, I claim, as shows about supermodels on the catwalk and by the mirror, in the backstage, often have a million times higher aesthetic appeal, as sublime, sophisticated and, finally, ingraining some starry emanations of beauty in silence as it can get. Then, whereas soccer games are about Yang, about stony strength and determinateness, the fashion TV shows are about Yin, about swirling dreams of stars and galaxies in our mind. Whereas the former are about focusing and converging (our mental and emotional powers to the core of our being), the latter are about spreading, letting go and releasing. Whereas the former are about acting in Love, driven by the sense of sacrificial and selfless friendship, the latter are about dreaming in Wonder. Too much of soccer games in our life and we would end up resembling a *Canis familiaris*, a good and faithful being, but inherently clumsy and clueless about the things going on around him. But too much of fashion, and we would turn out to resemble a cat, neat and graceful in our acts, but inherently smear and malevolent, always ready to jump onto her owner's kitchen table in search of the food as soon the owner is out of the room. Therefore, I know that the secret is in the balance, between sports and fashion, between ethics and aesthetics, between science and arts, between mind and heart.

S.F.7.11. Watching some of the greatest and most inventive soccer players in action, one could recognize a blend of gentle and soft playfulness and passionate sturdiness ingrained in their very moves and appearances on the field. The art of soccer has thus implicitly taught me that anything one engages one's creativity in has to be infused with the doses of childish playfulness as well as of avid somberness. On one hand, the very fact that soccer is played against human opponents where our triumph implies someone else's loss takes us directly to Lao-Tzu's words, which serve as guidance to a masterful play: "There is no more guaranteed debacle than underestimating the opponent.... When two equal armies meet, the man of sorrow is the one who wins... There is no beauty in the triumph... The triumph should be celebrated as a funeral" (Tao-Te-Xing LXIX... XXXI). Rudyard Kipling hinted at this grief lying at the heart of every conquest when he advised that to "be a Man" and worthy of inheriting the Earth, one ought to "meet with Triumph and Disaster, and treat those two imposters just the same"²²¹¹. Or, as Francis Scott Fitzgerald phrased it, "Show me a hero and I'll write you a tragedy"²²¹², equally paying our attention to the fact that in every victory, many tears lie, so to speak. On the other hand, the greatest success of Brazilian national teams at the World Cups, often appearing as enjoying the game, setting the rhythm of the game to the dance of samba, all to the cheerful national anthem of theirs, can neatly demonstrate that childish playfulness is vital for the mastery of many, if not all, skills in life, prompting me to proclaim that being playful is always a must for playing well. To be a samba dancer on the soccer field, an epitome of elegance and grace, rather than a bloodthirsty gladiator, rough and ferocious, as the modern trends defined by money-centeredness, ego and rivalry would like to have it, is the

direction in which I see the wheels of mental energy spinning within the mind of a genius in this art. Somewhere in the back of his mind, this diamonded figurine on the soccer field lives up to the guiding thoughts offered by soccer enthusiasts in the 1930s, when the result-driven approach to the game was for the first time seen as imminently threatening its inherent beauty: “The great fallacy is that the game is first and last about winning; it is about glory, it is about doing things in style and with a flourish... If we would have better football, we must find some way of minimizing the importance of winning and the value of points”²²¹³. To revert to this original, very much aesthetic approach to the game, in 1977 Pelé dedicated his autobiography to “all those who make the game beautiful”, and attached the Brazilian phrase, *Joga Bonito*, meaning “to play beautifully”, to the art of soccer. This is why I claim that in order to be an extraordinarily impressive soccer player, irrespective of whether one is in this sport for recreational or professional reasons, one has to play as if holding a tear of passion and love inside of one’s eyes, while at the same time transforming one’s entire self into a giant smile, a shiny sun of a kind, so as to mysteriously illuminate the world with every movement and pass that one makes. Seeing things from the angle of the modern American soccer school which helplessly tries to reach peaks of higher appreciation in the world of this sport, the following insight might be helpful. Namely, both American players on the recreational fields and those that are part of professional soccer teams never cease to amaze me with their robustness and insensitivity to this graceful and artistic ideal of *Joga Bonito*. I cannot help but noticing every now and again how the lack of sophistication in playing, of a fine touch and of a sense for the beauty of the game that typifies American players probably explains why serious scouts have given up long time ago on seeking extraordinary talents and prospective players on the American soil. It is quite possible that strivings to reach success that would correspond to investments in this game would be futile unless this invisible knowledge of the beauty of the game is transmitted too through the soccer schooling system. This endowment of the game of soccer with a genuinely playful and aesthetic character softens up the hostilities caused by the result-oriented approaches, which we so often witness in the world these days. At the 2010 World Cup in South Africa, the Honduras national team became the first one to have three brothers in a national soccer squad, and when asked for the secret of their success, one of them told the story about their father telling them how “soccer is a game and they should always play it playfully, with a whole lot of enjoyment”. Their quarrels over who was better than the other from then on turned into their mutually supportive and harmonious ascent into the soccer waters of international recognition. Indeed, one of the first preconditions for awakening feelings of thrill and enjoyment in others with whatever we do is that we, first and foremost, are thoroughly filled with thrill and delight. Stefan Milenković, the former prodigal violinist, now professor of classical music at the Juilliard School in New York, has thus advised one of his stage-frightened students before her performance saying, “I would go to your concert not because I am your professor, but because I’d like to have some fun. If you will be all stiff and panicky and transmit that to others, I won’t go. One such experience is of no interest to me. I would rather watch a movie with special effects and enjoy. I want to see you amusing us, the audience”²²¹⁴. On the other hand, sheer playfulness not balanced by serious-mindedness can send one in the direction of becoming flaky and unmotivated to leave one’s heart on the field, which is vital in ensuring success of any of our endeavors in life. Just as al-Bistami told us earlier how all the wisdom that he has even grasped entered through the

door that he kept open so as to keep his Mother safe²²¹⁵, an example of how living every moment of our lives for the sake of edifying others is the key to victory may be provided by a Uruguayan soccer superstar, Diego Forlan. At the 2010 World Cup he exploded into a sun-like god on the soccer field, as if reflecting his national team flag, and led his team as outsiders to the semifinals. When asked about his secret, he mentioned the car accident that left his sister paralyzed when he was only twelve years old²²¹⁶. The first thing he said to her afterwards was that he would become a soccer superstar because of her. “When I run on the field, I run for my sister”, he says, whistling us the secret of success of any ventures of ours in this life: entirely, with our whole heart, living it for the world and for all the frail flowers lying broken, wilted and wrinkled in it.

S.F.7.12. The art of soccer taught me another big thing. It is the necessity of a cognitive entity to always be engaged in a feedback interaction with the world around it to make the best possible outcome of its actions. A child learning how to walk, to read or to play is incessantly conceiving its actions with respect to the responses that the world has given to its prior acts. An endless feedback loop with mind on one side and Nature on another is thus established in every harmonious act. Soccer offers examples of an interaction like this at many different levels. For example, a good dribbler never implements in reality tricks conceived in advance without paying attention to a player from the opposite team facing him. Instead, he looks at the opposite player and quickly adjusts moves to the moves of the opposite player. Every skill in life is conditioned by one’s ability to improvise moves in a real-time feedback with the signals from one’s surrounding and that, undoubtedly, includes soccer too. Just like soggy pitches wetted by rain call for a game based on long passes, whereas tropical pitches favor short passes, lest players peter out sprinting from one end of the pitch to another, and icy ones prompt shooting of the sliding balls from the distance, which are faster than usual and difficult to catch by the keepers on a slippery surface, skillful dribblers allow the subtlest footwork of their opponents to direct their own movement, in a natural manner, faster than their brain works, so to speak, moving as such less like torpedoes and more like guided missiles. The greatest dribblers thus rarely show an assortment of attractive, circus-like moves, but simply watch the direction and the swing in the center of gravity of the opposite player, and accordingly control the ball. They secretly sense that every movement has intrinsic weak spots, whereas, needless to add, no movement on the soccer field would count as the biggest weakness of them all, the reason for which the defenders in a direct encounter with dribblers always hop in alternate directions, somewhat like boxers awaiting the punch, even when they are practically standing in place. Even then, however, the leg rooted in place, albeit for a segment of a second, is the one around which a maneuver could be made by a truly magnificent dribbler. To do so, he need not rely on an assortment of tricky moves, such as the aforementioned bicycle, but simply change the direction of the ball and of himself leading it at the right time instead. Only so much is needed to exploit the inescapable weakness of the stationary leg, which is most pronouncedly exposed when the defender is allured to make a move towards the opposing player in control of the ball. In that sense, I have always considered these marvelous dribblers to be living up to the advice that the Christ had given to his followers, “be ye wise as serpents, and harmless as doves” (Matthew 10:16), as well as to the motto on which Alexander Alekhine, who topped my list of favorite chess players when I was a youth, had based his play, namely “a master must

²²¹⁵ See Eva de Vitray-Meyerovitch's *Anthology of Sufi Texts*, Naprijed, Zagreb, Croatia (1978).

²²¹⁶ See the article *What Connects Maradona to Forlan* at http://www.b92.net/sport/sp2010/vesti.php?yyyy=2010&mm=07&dd=06&nav_id=443789&fs=1 (2010).

envisage himself as a cross between an ascetic monk and a beast of prey”²²¹⁷, evoking somewhere in the distance the epithet of “angelic vulture”²²¹⁸ given to the Spanish and Real Madrid striker from the 1980s, Emilio Butragueño. Namely, not only is every skill in life, including soccer, built on the aforementioned combination of childish playfulness and grave soberness, but what I primarily have in mind here is that players like these may leave an impression of dove-like lightness and mellowness, that is, of being an easy prey; however, once the opponent makes a move aimed at tricking them, their serpent-like vigilance kicks in and, like the Tai Chi master who wins the fight by simply targeting the weaknesses revealed by the opponent during his attack, they too respond in the same manner. The best defenders thus, for example, intentionally leave a momentary impression of trailing behind the opposing player that they are supposed to be marking, tricking him into thinking that the space towards the net is open; once their confidence soars, all in a matter of milliseconds, the masterful defender leaps up and blocks the shot or a pass, saving the goal. As for the smartest attackers, neither do they find themselves running at the fastest pace and occupying the most optimal position on the field at all times; rather, they too lag behind on purpose, somewhat similar to the way the tremolo sequence I played in the piece for two guitars named *The Way*, slackened its pace, consistently falling behind the rhythm, producing an entrancing effect on the listener, pushing him back while the bouncy beat propelled him forward and yielding an enlightening cross within his heart thereby. Yet, by instinctively exhibiting these miniscule instances of ostensible weakness, they allure their opponents to attack them confidently; mental rigidity and a lack of alertness that the latter attitude entails, however, opens space for an upsetting counterattack to be launched. Two millennia ago Seneca stressed out that “all cruelty springs from weakness” and awareness that every attacking move conceals weak points somewhere in it presents the first step towards triumph in such a mind that patiently punishes the attackers from an ambush of a kind. Needless to add, many battles in life I have won by applying the same strategy. Also, when it comes to shooting a penalty kick, I often apply what I regard as the best possible way of taking it. It is picking a far side first, which could be either left or right, though ideally the side to which the body opens first as it approaches the ball: right for the right-footed shooter and left for the left-footed one. Then, as one approaches the ball, one is to calmly observe where the center of gravity of the goalkeeper shifts, all until the stationary leg is positioned and the shooting leg starts to swing towards the ball. A lot of focus and cold-bloodedness is required herein, but the prize is obvious. If at the last moment before hitting the ball, you do not see the keeper jumping to the side you planned to kick the ball to, hit with a moderate hardness in that direction and, provided you were precise enough and nailed it close to the post, the goalkeeper would not be able to reach the ball. But if he shifts his center of gravity, appearing as if he is getting ready to jump to the picked side, place the ball gently and elegantly to the opposite side, and not necessarily to the very angle of the goal. Note that what is implicit in this approach to taking a penalty kick is neither the attitude of perfect certainty nor the one of confusing indecisiveness. All great strategists would readily agree that launching an attack on the opponent when it is either perfectly confused or perfectly confident is the key to success. Both of these extreme stances, quite often readily visible on the takers’ faces as they approach the penalty spot, have a high chance to lead to disaster in terms of a missed penalty kick. Yet, as we see, a mindset pervaded with the right mix of stony determination and flexible waviness, firmly walking towards the goal and yet alertly

²²¹⁷ Watch Alexander Alekhine: Top 14 Amazing Chess Sacrifices of all Time! by kingscrusher, retrieved from <https://youtu.be/4IqtEj01iU> (2021).

²²¹⁸ See Euan McTear’s Emilio Butragueño: The Vulture, *These Football Times* (August 1, 2019), retrieved from <https://thesefootballtimes.co/2019/08/01/emilio-butragueno-real-madrids-vulture/>.

being ready to change the path that leads to it at any time, provides a cornerstone from which balls kicked in the air or any other creative acts emanating from our being will successfully reach their targets in life. Every experienced soccer player knows that holding a single plan in one's mind, such as an intention to kick the ball in a certain direction, is not a route to success, as it tends to be relatively promptly read by the opposing players. Instead, by swiftly changing plans with the flow of the ball and players' movements, from one segment of a second to another, is how the player on the other side becomes tricked. Yet, to accomplish this, a fascinating alertness and receptiveness to environmental cues is apparently required rather than blind pursuance of a single track of thought. As we refocus our attention from the intricate mental railroads inside of the heads of individual players and onto their organized movement within a team, another example comes to mind, and that, naturally, from the domain of tactics. Namely, to play against an opponent successfully, it is always recommended to flexibly adjust the coordination of the players to the tactics of the opposing team, lest they turn into "eleven shadows, way out of place"²²¹⁹. Blindly following the preconceived strategy can pay off on a few occasions, but does not present the best possible choice. As proclaimed by Helenio Herrera, one of the most famous soccer coaches in the history of the game, "You have the tactics, you score a goal, and all the tactics dissipates"²²²⁰, which, mind you, is one of the core messages of Leo Tolstoy's *War and Peace*. According to it, war is an unpredictable endeavor influenced by innumerable factors that come into play to swerve the protagonists off the projected paths and into unknown directions, just the way they deranged Napoleon's plans after he entered the Russian territories in this novel and in real life alike. Hence, although the world may seem to be pervaded with those who either enjoy expressing themselves while discarding the need to listen and absorb the messages that the surrounding world sends around, or merely sit and stare at the world while neglecting the urge to make a move, act and bless the world with the beauty of one's spirit, the secret of fulfilled living lies in the middle, that is, in simultaneously: talking and listening; giving and taking; stretching our arms outwardly so as to act wonderfully and pulling them inwards, prayerfully, so as to focus our powers; exploding with the desire to bless the world with the treasures of one's soul and imploding through the meditative withdrawnness of ours that collects the precious insights from the world around and brings them into the inner world of ours, so as to be forged into treasures that the very same world will subsequently be endowed with. No doubt that the same applies to the art of lecturing as well. I have heard people recommending that one imagines a meditative spot in one's mind that would retract one's attention from the audience and make one focus perfectly on the content of the lecture. However, this would merely turn an opportunity for an interactive dialogue, the only fruitful form of communication, into an unnatural and unilateral monologue. Although it goes without saying that peer pressure that erases the ability to sanely pull creative acts straight from the creative core of our being is an abyss which we all must resist falling to, every fruitful communication in life, irrespective of its form, has to be directional, to proceed with continual openness of the sides in communication to adjust one's expressions to expectations and cognitive capacities of the others. This is why I have always been bored by the very concept of amphitheatric lectures and performances, TV shows and monologues where the acting side is blind and insensitive to the feelings and messages sent forth by the recipient side. For, whatever the product of our creativity that we intend to bear for the world, it always eventually becomes co-shaped by both us, their physical originator, and those standing on the other, receptive shore of the stream of information

²²¹⁹ Listen to R. E. M.'s Perfect Circle on *Murmur*, I. R. S. (1983). The song allegedly describes Peter Buck's being moved to tears at the sight of a soccer game played by kids at twilight from his motel cabin some time in 1981.

²²²⁰ See Simon Kuper's *Football against the Enemy*, Orion, London, UK (2003).

that it will become. Henceforth, being immersed in one's own inner world and delivering from there on creative impulses without any correspondence with the surrounding world predisposes one to exhibit possibly magnetic and captivating, but essentially out-of-place performances, unable to connect to souls around one and magically illuminate the right ways that lie ahead of them. When he was accused by the critics for his snobbish berating of the audience, the relentlessly lyrical jazz pianist, Keith Jarrett pointed out that partial withdrawnness from his listeners into his inner world is a necessary precondition for his success in dignifying it as much as having his heart and soul connected to it incessantly. Via the following statement, he outlined the reverse direction of this feedback loop whereby creative mind draws its environment which draws the mind, that is, the situation wherein the dreamer dreams the dream that dreams the dreamer, so to say: "Why is it inappropriate to remind people that their perceptions play a role, and their presence in the hall plays a role in this process? It seems to me to be problematic only if you don't understand what improvisation is"²²²¹. Thereby, the master of improvisation who was often thought of as a practitioner of magic²²²² rather than an ordinary jazz musician due to his ability to lead the audience to a new state of collective consciousness touched the idea that all our performances can be perfect only insofar as they incessantly adopt new forms in an incessant feedback from the environment in which our creativity is let flourish, rather than robotically repeat themselves with no sensitivity of the impulses falling onto one's being from the outside. This point of view sheds light on my firm beliefs in the merits of keeping the doors of our awareness constantly open, despite the partial confinement of our consciousness into the inner, meditative realms thereof in attempts to dive deep into the ocean of our spirit and derive from there on divine impulses from which enlightening acts will stem. I have thus always secretly waited for the moment when the band in concert will enter the audience, mingle with the listeners and let them interact therewith and with each other freely and spontaneously, not obsessed with the need to be still and listen thereto, as well as for the magical moment when the audience will be invited to fill the stage, whatever the latter may be. This is why the moment when the fans enter the soccer field in *The Great Escape* and carry the winning players on their arms to the freedom, the moment when the spectators and actors will face each other and lively respond to every each other's blink of the eye, when the dancer and the dance will merge into one, when the barrier between the observer and the observed will become shattered and when our judgments will become subdued to the Christ's norm "I have not come to judge the world but to save the world" (John 12:47) has such a special meaning in my life. This is, of course, because the world evolves by co-evolving systems and their environments, mind and other minds, mind and Nature.

S.F.7.13. However, for such a co-evolution to proceed flawlessly, a balance between co-evolving systems mirroring each other on one hand and providing the first move, an impulse that pushes both sides out of an old balance and yet brings them closer to a new, advanced one on the other hand, needs to be put into practice. Therefore, one of the critical mistakes that soccer coaches frequently make is deciding to perfectly mirror the tactic adopted by the opponent. On the other hand, experienced soccer strategists quite often opt for setting the tactic that in certain segments lies in opposition with the one adopted by the opponent. Top class soccer teams tend to possess versatile players in their squad, which naturally increases the choice of strategies available to the coaches. Sir Alex Ferguson can thus be often seen setting a play dominated by chaotic crisscross runs of midfielders and attackers all over the field with a purpose to confuse an overly stable and

²²²¹ See Ian Carr's *Keith Jarrett: The Man and His Music*, Grafton Books, London, UK (1991), pp. 109.

²²²² *Ibid.*, pp. 133

orderly configured team of the opponent. On the other hand, when playing against an unpredictable team composed of many creative individuals who might be found anywhere on the field, you might witness him enforcing a more rigid arrangement of the players, such as by reinstating a stable playmaker in the center. Countering attacks through the middle with an intense wing play or *vice versa* present other common tactical oppositions. For example, the natural way to break through the classical 3-5-2 formation is by counteracting its broadly distributed midfield with a funnel-shaped formation, dense in the center and then spreading in the forward zone, so as to oppose the condensed and centrally oriented defense of the opponent. The latter may, in turn, see this as an opportunity to gain control of the game by forcing penetration along the wings, illustrating the fact that every strategy has its inevitable weaknesses. Such exploitation of each other's unfortified structural sections springs forth from the millennia of warfare, from the Trojan War onwards, that have taught us one major thing: the futility of frontal attacks and the fruitfulness of assaults that proceed along the undefended alleyways and sidelines²²²³. Hannibal's army, after all, as history teaches us, having unstoppably proceeded all the way from Carthage to the heart of the Roman Empire, across the Strait of Gibraltar and the Alps, was finally hampered on the outskirts of Rome not in an open, frontal battle with the Roman army, but via numerous attritional pokes using small legions and sideway angles of attack, following Fabius Maximum's trademark strategy of warfare. Similarly, coaches of the European basketball teams have known that playing man-to-man against NBA teams, to whom it is the only natural approach to play, would equal a tactical disaster by allowing their physically superior players to effortlessly make baskets and that, conversely, playing a zonal defense and thus minimizing one-on-one encounters is the only road to success. Of course, whenever a team opposes its rival in certain aspects of the game, its success will vitally depend on the ability to mirror the opponent in some other, smartly chosen aspects, which is the principle that naturally emanates from the Way of Love and the balance between difference and sameness that it promotes. When Garry Kasparov had to win against Anatoly Karpov in the last game of their 1987 world championship match in Seville, lest he lose the world champion title, he abandoned his authentic, dynamical style and adopted the defensive style of his adversary, drawing passive, catious moves and waiting for the opponent's minor error to be meticulously taken advantage of. This came in spite of his following observation after losing the previous game and bringing the retention of the world champion title into question: "Caissa, the goddess of chess, had punished me for my conservative play, for betraying my nature"²²²⁴. It also came in spite of his adopting earlier the same strategy against the same opponent, the most famous instance of which came in the final, 24th game of their world championship final match two years earlier, when Kasparov as black, needing to draw to win the title, played quiet 23...Re7, seemingly placing the rook into a prison of a kind, though, in reality, using it to defend the f7, g7 and h7 squares, preparing for the doubling of the rooks along the e file and thus preventing the f4-f5 attack of white and also preparing the rook for the decisive counterattack along the b file that would eventually result in Kasparov's win. In fact, Kasparov owes his survival in his first match as the world champion contender, against Karpov in 1984/85, to the renouncement of his authentic, aggressive style in favor of a passive play that was wholly foreign to him at the time. Namely, with the score in a match played up to six wins being 4-0 in Karpov's favor after only nine games played, Kasparov's goal changed from that of winning the match to prolonging it for a bit longer and losing at least somewhat honorably, and so he began to play in a very closed and catious, Karpovian style.

²²²³ See Yehudi Menuhin's *Theme and Variations*, Stein and Day, New York, NY (1972), pp. 123.

²²²⁴ Watch agadmator's Garry Kasparov's Most Memorable Moments Pt.1, retrieved from https://www.youtube.com/watch?v=cK4IAWZRs_0 (2018).

With this strategy, he managed to draw the following seventeen games, before losing another one, thus bringing himself one game away from losing the match. However, things then dramatically changed in Kasparov's favor, as he scored the first win in game No.32, which was followed by two more wins and fourteen more draws in the sixteen games that followed, at which point the match was abandoned and replayed six months later. This match Kasparov won and it marked the beginning of his long reign as the world chess champion and an instructor in decision-making using none other but this example of mirroring the opponent's style to score a win against it. Another example from the world of chess can be that of the Croatian master, Vladimir Kovačević's winning a game as black against soon-to-be world champion, Bobby Fischer in Rovinj in 1970. In this game, Kovačević, first of all, opted to play the very same French defense variation that had been played in the previous round of the tournament by Wolfgang Uhlmann, whom Fischer crushed without any problems. More importantly, however, Kovačević played this game as if he was Fischer, himself, that is, boldly, aggressively, sacrificing a couple of pawns and prompting Fischer's resignation already in the middlegame. A Serbian grandmaster, Borislav Ivkov, who played at the same tournament, commented after the game that had anyone watched the game without knowing who was black and who was white, they would be absolutely certain based on the playstyle that the winning black pieces were Fischer's and the losing white pieces were Kovačević's, but how wrong they would be. This comment was so impressive and illuminative with regard to the style-mirroring strategy Kovačević employed in this game that he ended with it his personal description of the game 45 years later²²²⁵. In more physical sports, examples of such approaches based on mirroring the opponent's style are similarly inexhaustible. For example, NBA teams, in attempts to break the zonal defense of their European opponents, have usually resorted to the use of the strongest weapon of the European basketball players: avoidance of the close contact, minimization of the dribbling and reliance on good shooting skills from the distance. Combination of this approach with the tight man-to-man defense usually ensured easy wins against the European teams, suggesting that picking the aspects of the game in which mirroring is to be applied and levels on which tactical oppositions are to be used is of vital importance, lest we see the integrity of our armies on the battlefields of life crumbling away. For example, in the 2009 Champions League final, the Man United coach, Alex Ferguson decided to counterpunch Barcelona by mirroring their own strategy: rapid passes, a whole lot of running and total soccer dexterity. However, because of neglecting the need to enforce a stable and sturdier midfield play that would not mirror, but counteract the strategy of Catalonians, which displayed an unprecedentedly excellent dynamic coordination of the midfielders coupled with quick, useful and unpretentious passing of the ball, his team eventually lost the game. Two years later, in the 2011 Champions League final, Alex Ferguson had yet another chance to challenge the strategy of Barcelona based on fluid passing and ball control in the midfield²²²⁶; this time, however, he left Paul Scholes, the central midfielder around whom the play of his team revolved two years ago, on the bench and insisted on a strict wing play. During the broadcast of the game, the camera caught

²²²⁵ Watch Vladimir Kovačević's *Iz ličnog ugla – kako sam pobedio Fišera*, aired on Croatian television in 2015 and available at YouTube: <https://www.youtube.com/watch?v=HyExPILebTw>.

²²²⁶ To what extent this FC Barcelona team has been strategically focused on establishing dominance in the central midfield comes from the fact that their left winger is right-footed, while the right winger is left-footed. A similar tactical element has been adopted by the Dutch national team of the same era, the descendants of the originators of the total soccer school, with left-footed Arjen Robben often playing the right winger and right-footed Wesley Sneijder occasionally playing the left winger and both of them waiting for a chance to shoot straight on goal from just outside of the box. In Robben's club at the time, Bayern Munich, the left winger role was given to another deft and dexterous player, the right-footed Frenchman, Franck Ribéry.

him once yelling at his players, “Spread out!”, during the moments when it may have dawned on him that without setting a semi-stable anchor in the center so as to partly mirror the opponent in addition to opening the space for counterpunching it, the structure of the team will collapse, which is exactly what happened as Barcelona brought the trophy home to Catalonia once again. Another team subjected to a similarly devastating insistence on the play along the flanks, as if wishing to have players come home with chalk on their boots despite their low fitness level and excellent technical skills, which had naturally called for their disposition deep rather than wide, and all that against the blunt, 3-4-3 frontally attacking Holland side is that of Yugoslavia in the second round of EURO 2000, the game which it lost with a six goals to one. Now, providing a total opposition is as deficient of an approach as perfect paralleling of the opponent and another example of how simple mirroring, without conceiving the plan to counteract the opponent on the field is a losing strategy may be the loss of Serbia and Montenegro to Argentina during 2006 World Cup, when the public pressure to start playing more offensively forced the Serbian team to give up on their most pronounced trait at the moment, that is, a strong defense that in the qualifiers set the all-time record for the least number of conceded goals: 1²²²⁷. Multiple factors are usually involved in defining any given real-life outcomes and the catastrophic loss of Serbia and Montenegro on this June day was no exception at all. Other reasons for it included the facts that the game was played on 3 pm on one of the hottest days of the year, being the conditions that favored the South Americans, that all shots on goal of the Argentines in the first half ended in it, and, finally, that the solid obedience of the strategic plans gave way to the heedlessly offensive efforts that were swiftly being punished. Just like in the world of science where head and heart are equally involved in driving a superb research towards exciting destinations, success in the realm of soccer also depends on how well the concoction between brains and passions has been made. For, when the winds of passion in our sails push us so intensely that they begin to eclipse the discipline, the self-control and the resolute submission to the strategic demands, it typically has just about as many detrimental effects on the quality of the team’s performance as complete deprivation thereof has. An example that comes off the top of my head is that of the Champions League Final in 2013, when the coach of Borussia Dortmund, Jürgen Klopp, paid a dear price for his relative inexperience by forcing his players to relentlessly rush forward and push the already tired defensive line whole 40 meters away from the goal in the last 30 minutes of the game, an approach that was suicidal against the Bayern team that based its attacking efforts on the speed of two of the fastest midfielders with the ball in the world at the time: Arjen Robben and Franck Ribéry. A similarly aggressive pressing of the opponent could have been seen at White Hart Lane on the first day of 2015, where Chelsea faced Tottenham Hotspur and a bit arrogantly wished to double the somewhat undeservingly reached lead against the host. Had José Mourinho’s squad had a more renowned and respected opponent on the pitch that day, perhaps it would have withdrawn a bit and waited for a chance for the

²²²⁷ Thousands of folk stories were told about partisans and Germans in World War II and a personal favorite tells about the importance of finding the right moment not to merely mirror the opponent, but to counterpunch it with a diametrically opposite strategy. In it, a group of partisans was hanging out in the woods when they heard Germans approaching. Not having enough time to escape, they all jumped into a nearby empty well and quietly stood at its bottom. Germans gathered around the well and began to discuss where the partisans could have escaped. “Maybe they are in the woods”, one of them said, to which the partisans replied with bass sounds so as to give an impression of echo coming from an empty well: “Maybe they are in the woods”. “Maybe they are in the huts”, then a German soldier said, to which the partisans replied all in one expanded voice, “Maybe they are in the huts”. “Maybe they are in the hamlet”, one of the Germans said, to which the partisans replied, “Maybe they are in the hamlet”. “How about dropping a bomb into the well just for the case”, said a German then, and the partisans, all together, murmured, “Maybe they are in the woods”.

counterattack; however, it underestimated the popular Lilywhites and the cost happened to be unexpectedly high. Namely, by assuming the given approach, the solidity of Chelsea's play based on numerous low-risk passes and the slow strangling of the opponent was undermined and gradually it ceded its place to mimicking the loose style of play of the host team, abundant with mistakes and based on as little high-risk passes on the way to the goal as possible. Having found itself on the tactical foreign grounds, the rock-hard and scarily accurate machinery of Chelsea's playstyle unscrewed and fell apart, as the team conceded five goals by the end of the game, more than they had conceded in a single game in the previous two decades. Hence, whether we box blindly, to the rhythm of our own drum only, disregarding the opponent's maneuvers and thoughts, or become a complete copycat of his moves in the ring, the outcome is bound to be the same - catastrophic. Whether we have soccer, chess, boxing, debating or any other competitive activity in mind, it is always a balance between parrying our opponents in aspects in which they are the strongest and exerting our own, unique strengths that hides the key to success. If we become overly inclined to one or the other side, the chances for losing the battle will be increased. After all, that is what the Way of Love teaches us: to compassionately mirror the feelings and worldviews of others and the entire world on one, Moony side of our being and yet to deliver the inspiring acts for the world from the creative sources that swirl deep within our mind and heart on the other, Sunny side of our being. Thus, by neglecting the need to counter the opponent with adopting his own approach partially and blindly implementing the predetermined plans of ours, without being receptive to the feedback response from the opponent, we often run towards an abyss, just as we do whenever we pay attention only to deflect our opponent's actions without listening to the essence of our heart and acting accordingly in unique ways that our self dictates to us. Owing to its systemic nature, this principle is valid both for individual players and their actions on the field as well as for the team as a whole and the strategies that are in hands of the coach. For, such is the nature of all systemic norms; they can be applied in case of all natural systems, irrespective of their scale, from atoms to cells to individual creatures and their communities to planets and stars.

S.F.7.14. The abovementioned necessity for an utterly skillful soccer player to naturally conceive of moves in response to a direct feedback he receives from the overall environment composed of the subtlest movements of the opposing players, of the teammates and of the ball implies one incredibly important trait to be built and carefully cultivated within an aspiring master of this and any other game in life: wide-eyed wakefulness. By teaching players patience, vigilance, dwelling in the present moment, these demands for making moves in direct correspondence with what goes on around one has a truly magical effect on the game, improving its quality in every single aspect of it. Being here and now instead of roaming aimlessly through the jungle of one's thoughts and drowsily roving through the tempests of one's emotions is thus the way to go, if you ask soccer pros and Zen Buddhists alike. Therefore, Basho's timelessly relevant verse, "Journey is home"²²²⁸ immaculately well applies to the art of soccer, as it serve as a reminder that not the mentality that struggles to score a goal and does everything to proceed closer to a goal leads to success on the soccer pitch. Rather, the frame of mind that is completely immersed in the eye of the moment, still and silent, even though its surrounds may be as loud and storming as a hurricane is most useful for the team and holds the key to true success. Herein lies a crucial paradox dormant in the heart of the art of soccer: to those who are not blinded by the cravings to score a goal and nothing but that is the honor of scoring them or being a chieftain of a triumphant squad usually left. That is, to a journeyer for the sake of the journey alone rather than to goal-directed travelers do the greatest

²²²⁸ See Tom Killion's and Gary Snyder's *Tamalpais Walking*, Heyday Books, Berkeley, CA (2009), pp. 47.

kudos from the gods of the game belong. To be guided by all but reaching the goal is the way to reach them in this intrinsically paradoxical reality of ours wherein “the last shall be first and the first last” (Matthew 20:16), wherein “whosoever shall seek to save his life shall lose it; and whosoever shall lose his life shall preserve it” (Luke 17:33), and wherein getting ever closer to the Earth and the saddened hearts smashed and smeared all over it and making a beautiful pass rather than bluntly going for a goal is the way to ascend to the heavenliest peaks of existence and score the most glorious golden goals in this beautiful life of ours.

S.F.7.15. 1:1 – ‘tis the score flashing on the stadium scoreboard at the end of a game that represents the karmic stage of life on the planet Earth today. Why, you may ask, and the reasons are many; in fact, too many to be but briefly touched here. First of all, 1:1 warns us of the nonsensicality of sports competitions and any other competitive cravings to prove oneself better than another, when only equality will be tolerated by Nature, the goddess that delicately keeps the inherently imperfect human navigations of the evolution of life in check. Then, 1:1 describes a game where remorse and regrets remain to haunt both sides. For, both sides have scored, but they have conceded, too. They both could have won, but they did not. Needless to add, life on this blue, deeply melancholic and purgatorial planet that lazily rolls its way around a shining star is such that every soul that is a part of it bears a sin of one kind or another. “Why do you call me good? None is good, save one, that is, God” (Luke 18:19), the Christ is remembered to have said, declaring the sinful nature of even himself, the purest and the most blissful creature that lived on Earth, according to many. 1:1 is also a sign that, yes, most of us have somewhat tried to leave a lasting impression on human souls that we have shared the existence with and some of us have even tried to create something of monumental importance for humankind, but we have not tried hard enough and, at the end of the day, when the curtains drop for good over the stage of life over which we have walked, it will be realized that far more of the inner glow instilled in us by the Creator had remained unexpressed and frozen within the walls of our egotistic fears than revealed and poured into the dazzling eyes of the world. That is, we have scored, but meagerly and far less compared to our true potentials. Maybe in thousands of years from now the life of an average human creature will become a *goleada* of enlightening expressions, as by then we will have reached a stage in the evolution of our spirits whereon that 3:3 Liverpool and AC Milan played in the finals of the Champions League in Istanbul in 2005, which I watched in a London’s Soho pub amidst a diverse and delirious crowd, fully showered by an oatmeal stout by the end of the night, would occupy the place of the meager 1:1 in order to reflect the far greater fireworks of mutually beautifying expressions made by the members of the humankind on this future day, but as of today, 1:1 is the score that most veritably mirrors who we are, how we live and how closely we have approached the most sublime, skyscraping summits of spirituality. Even the fellow SF Bay area resident, Justine Frischmann’s and her *Elastica*’s 2:1²²²⁹ can be said to be but a distant dream for humanity of the modern day. All of this is to remind ourselves of how much sense it made when dr. Nele Karajlić and Zabranjeno Pušenje chose to highlight 1:1 as the score with which the game between Osijek and Sarajevo ended on the day the unforgettable Bosnian soccer magician, Asim Ferhatović retired and, through a distant and subtle metaphor, the leader of my home country, Yugoslavia, for almost half a century, Marshal Tito, left this planet for good²²³⁰. All of this is also to prepare us in advance

²²²⁹ Listen to *Elastica*’s 2:1 on *Elastica*, Deceptive (1995).

²²³⁰ “Bješe rezultat jedan-jedan kad sudija odsvira kraj, spustiše se zastave stadiona Koševo, stade jedna nedelja da se nastavi maj, maj”/“One-one was the score when the ref blew the whistle to signal the end, the Koševo stadium flags lowered, a Sunday stopped so as to continue a May, a May”, with this mayday-evoking May being repeated twice, as

to face this and this score only as a writing on the wall at the turning points of our lives. As I waved farewells to my grandma upon her sailing away from this plane of reality and onto another one and the droplets of summer drizzle kissed my cheeks with unexplainable softness and hush, OFK Belgrade, the team she was an avid fan of throughout her life and in which two of her brothers played in the prewar days of their youth, and FK Partizan, the club that all the rest of the boys in the family fancied, played 1:1. The first big name from the world of soccer that played in Belgrade after the long draught caused by the decision of the United Nations to prohibit all Yugoslav clubs as well as the individual sportsmen and sportswomen, including the national team, from competing at the international stage, was Spain and the long awaited game, as you may guess, ended 1:1, with both goals being scored from the penalty spot. Yesterday on my TV screen, in a game I watched live, Asmir Begović scored the fastest goal ever by a goalkeeper, mere twelve seconds into the match between his Stokes City and Southampton, landing his name straight into the Guinness Book of Records, but the game ended 1:1 after the Bosnian goalkeeper conceded a goal in a similar fashion as he scored it: that is, after the ball bounced off the ground, leaped over the keeper's head and found its way into the net. It was watching it that actually prompted me to expose my beliefs in the magical nature of 1:1 in this passage. Finally, the game I quote as the most inspiring and the best I have ever watched, as a 9-year old boy with my Father on a black & white TV set, which this time and never again we placed outside, under a luscious vine with purple, trumpet-shaped flowers on the night of the northern solstice, between Brazil and France during the World Cup in Mexico in 1986, ended 1:1 after the regular and the extra time, before the penalty kicks sent France to the semifinals and the last generation of Brazilian footballers that was "irreverent, joyful, creative, free-flowing"²²³¹, if I am allowed to quote Dr. Socrates, the creative centerpiece of this side, to history. Only nine years old on that first summer night of the year, I did not know then that I was being a witness to the beginning of the dying of soccer as an art and the birth of soccer as a machinelike practice, free of wit, flair and fancy, no longer a search for the Holy Grail in each flick of the boot and sway of the hip. This dying process would reach its completion a couple of years later, with the violent breakup of the Yugoslav team of the 1990s, the last one that could aspire to the throne of the world by playing in the authentically Brazilian style, making soccer a game *bona fide* and an art in its own realm, all enwrapped in the mist of passion and fantasy. Therefore, when the referee in any other domain of life blows the whistle that signals the end, it could easily be that the score flashing before our minds will be none but 1:1 and that both we and those whom we will respectfully shake hands with will look back in penitence to everything that lies behind, on the altar of our collective memories.

S.F.7.16. And, if I will be pitiful one day about not becoming what I had wanted to, that will be because of not fulfilling my dreams of becoming either a soccer player or a rock 'n' roll star. Both of these stellar professions carry their own respective risks, which, as we know now, comprise integral elements of all paths worth taking in life. While the delusive whirlpools of druggy dreaminess incessantly tempt rock 'n' rollers to drown in them, the life-threatening aspects of the game of soccer could be banally illustrated by the tragic fates of Bob Marley, the former prime

if the singer wished to make us aware of whom the song might have really been about – about Marshal Tito who passed away in the May of 1980, the same month in which the Bosnian soccer superstar, Asim Ferhatović allegedly played his last game. Listen to Zabranjeno Pušenje's Nedelja kada je otišao Hase on Dok čekaš sabah sa šejtanom, Jugoton, Sarajevo, Bosnia & Herzegovina (1985).

²²³¹ See Tom Adams' Brilliant Brazil's Brush with Greatness, ESPN FC (March 24, 2011), retrieved from http://espnfc.com/columns/story/_/id/897472/rewind-to-1982:-brilliant-brazil%27s-brush-with-greatness?cc=5901.

minister of Serbia, Zoran Đinđić, and of the opera singer, Andrea Bocelli, let alone by the historical fact that many of the recent wars, including the one in Yugoslavia in the 1990s, were fueled on the soccer pitches and that soccer hooligans often end up on their frontiers. Despite this, I, who have known that truly marvelous destinations in life could be reached only if we are prepared to cover dangerous distances on the way thereto, have been sometimes even more regretful about not becoming a soccer superstar, a golden artist in the milieu dominated by the disciplined, the preprogrammed, the robotized, the fraudulent, the vulgar and the rude. In fact, my mental and emotional attitude in life has largely reflected a disciplined and passionate desire to give one's heart for something greater than oneself, exhibited by a player with a hand on his heart and a determined looking in the distance, during the moments of the hymn of his country played. Every time I play soccer, it turns out to be an almost prayerful, spiritually ecstatic experience for me, as I run around and make passes carried on the wings of my sincere beliefs in the celestial beauty of the game. A single pass can change the fate of everyone on the field and, from there on, the entire Universe with the subtle ethical and aesthetical messages that it ingrains. This why I play soccer with a dolphin's smile of a samba sun on my face and in my heart, although always mingled with starry twinkles of gracious sadness. Entering a soccer field is thus like entering a church for me. As I run into the field, I lightly touch the grass with my fingers, cross, and envision a flash of the blessing emptiness of the heavenly sky in me. A focused and meditative attitude of a determinate lovingness and a pure devotion to the beauty of the game washes over me at those moments. Every move of mine I thus let originate from a heart craving for beauty, letting myself become an emanation of the ideal of *Joga Bonito* on the soccer field of life. And from there on sometimes I wonder if these inspiring attitudes could be displayed had the competitive character of the game not existed. Could it be possible to give rise to new, evolving patterns of human knowledge and life if there were no dialectical bases for doing so? In that sense, we should be aware that soccer fields offer some of the most illustrative glimpses into the primitive nature of the animal in man in this world wherein people have partly tamed these carnally competitive urges for good and partly are still keeping them alive behind the veils of hypocritical politeness. And yet, these fields of life are not to be repugnantly avoided, thinking that showing the glisters of divine gracefulness to the surrounding players and spectators would be equal to casting pearls before swine (Matthew 7:6). Instead, we should step on them, bravely and yet lightly, with the glow of saintliness illuminating our forehead and our heart, while incessantly delivering sparkles of celestial beauty all around us and instating ourselves as a stellar exemplar to the carnal clique surrounding us. For, not social circles whose members have been widely familiarized with sacred ways of living, but those wherein people still swim in the muddy waters of sinful practices, feelings and thoughts is where the saint in us ought to head to.

S.F.7.17. Hence, as we see, the state of mind that is ideally carved on the soccer field is the one wherein leisured, playful gracefulness of an elusive cat on a hot, thin roof is balanced with the shine of willful ethics of a faithful dog, the best man's friend. Albeit enwrapped in the waves of elegantly flowing energy, with its laser-like rays of determinedness this focused state of mind penetrates straight to the core of the observed and contemplated details of reality, whatever they may be. But to attain and preserve it, one needs to have a problematic, battling situation in front of one and a readiness to confront it with a problem-solving idea. And such a resolute mindset, which appears as if concentrating the sunrays of one's attention and directing them so as to sustain the fire in which new ideas get digested, makes the solutions be miraculously born within one's mind. The moments when a new idea is suddenly brought to life inside of me and I rush to the

computer to write it down are enwrapped in similar determinateness as the one exhibited by a soccer player passionately holding his hand on his heart and playing, breathing and being for the loved ones, equally illuminating the way inside, towards the essence of one's heart, wherefrom the sources of creativity flow, and outwards, guiding us to the beautiful new horizons of being. And this is where a beautiful and final analogy between soccer and arts lie, in the heart of ethics of players involved in both.

S.F.7.18. Such a firmly focused element of one's mindfulness is the essence of Yang in us, which is then balanced with a dose of gentle, Yin floating over the streams of the world in our ceaseless wonder. Should we live absolutely carelessly, without any passion to ameliorate the world with our actions, the Yang element of our personality would be missing and all the potentially inspiring rays of creativity within us would dissipate away. But without inhaling the element of vivacious spontaneity and improvisational flexibility within our heart and our actions, our being in the world would resemble a stone in its rigidity, and our heart, like a broken record, would be "playing a Ride of the Valkyries with no semblance of grace or ease"²²³², as Andrew Bird would have put it. We would be lucid and wise in judging the world, but when it comes to acting, we might never be able to break the point of being mere owls or "creepy oglers", as some may say, merely watching the dance of life from aside, fearfully frozen and deprived of the childish spontaneity and sunny drives that would make us engage in joy and happiness in it. Thus, should we mix the straight-looking attitude of pure ethics that a soccer player keeps in his heart prior to a big game with a sense of wonder over the miraculous gift of existence and of divine majesty lying in every natural detail, we will get a perfect blend from which the waterfalls of creativity will endlessly flow. This is all in sympathy with the way Immanuel Kant concluded one of his lifeworks: "Two things still fill me with awe: the ethical law within us and the starry sky above us"²²³³. With this norm in mind, ethical and aesthetical guiding stars, revolving around each other, are born in us. A beautifully played game of life can thus start.

S.F.7.19. Get set, ready, go, go, go, then, but remember that moments when we take a rest from this great race, race, remember, in which we do not run to leave others behind, but to be gracious to others, should anyone falls to bow down and raise them, losing our winning streak but holding hands together as we cross the finish line, concluding that "I have fought a good fight, I have finished my course, I have kept the faith" (Timothy II 4:7), as St. Paul the Apostle said, and look up, from the mountains of our spirit, towards the great stars ahead of us, and filling our heart with this great determinateness and a starry wish to succeed in bringing light to the fields of the Earth, blessing everyone on it, are equally important in this endless shift between introspective desolateness and creative giving, carefully nurturing our strength inside and radiating a beautiful luster around us, defending and attacking, focusing love and wonder within us and yet making it explode and fall with a starry dust on the creatures of the world, in this never-ending rollercoaster ride that life and the Cosmos are.

A few more ethical and aesthetical guiding stars

S.F.8.1. If I would close my eyes and plunge into the starry silence of my being, I would often feel as if waves of an ocean, instilled in me through my Mom's family side where Dalmatian sailors

²²³² Listen to Andrew Bird's *Sovay* on Andrew Bird & the Mysterious Production of Eggs, Righteous Babe (2005).

²²³³ See Immanuel Kant's *Critique of Pure Reason*, BIGZ, Belgrade, Serbia (1781).

and poets are found, who had longed for reaching the muses of the beauty sublime and could gaze at the sea for days, flow along the stony coasts put in place by my Dad's side of the family, where the love of crystals has abounded and whose origins lie in the rocky landscapes of Montenegro and the strong, willful and heroic warriors who had resided there. "O smallest among peoples! Rough rock-throne of freedom! ... Never since thine own black ridges drew the cloud and brake the storm has breathed a race of mightier mountaineers", wrote Alfred Lord Tennyson to the people of Montenegro, wishing to portray their glory. And it is said that every Montenegrin household should have two books on the bookshelf: Petar Petrović Njegoš's *The Mountain Wrath* and Marko Miljanov's stories of humanness and heroism, i.e., *čojstvo* and *junaštvo*, respectively. Now, not many people know that the architectonic connect between the two poets spans from Montenegro to America and back and that its influence is so immense that countless world wonderers walk on it every day. Namely, Olgivanna, the daughter of Marko Miljanov's daughter Milica, a fierce warrior and a Balkan war hero, emigrated to the US as a seven-year old and went on to become a dancer, a philosopher and the third and the last wife of Frank Lloyd Wright, whom she would not only accompany during the most productive part of his career, but also take over to the visit of the chapel designed and built by Nyegosh atop Montenegro's tallest mountain, Lovćen, and designated by the poet as his burial place. Even though the chapel was ruined in 1972 to cede place to Ivan Meštrović's pharaonic mausoleum, it had vastly impressed the American architect, who would consider it an epitome of organic architecture and use its idea of contrasting sharp mountain peaks with a round dome in several of his later works, while Olgivanna became the head of Wright's Tallesin foundation and school of architecture and ran them both for 50 years. Now, according to the system of ethics that Marko Miljanov proposed more than a century ago and which Montenegrin people have traditionally adopted, humaneness and heroism, that is, *čojstvo* and *junaštvo*, are the basic pair of human attributes that everyone should strive to attain. Heroism is defined as defending others from others, whereas humaneness is defined as defending others from oneself. Of course, as ever when it comes to a pair of quintessential principles posed side by side, there is a connection between them, allowing for them to flow in and out of the core of one another, as in the Tai-Chi-Tu symbol, which in this case comes in the form of a line coined by the famous Croatian boxer, Mate Parlov: "I must win against myself if I wish to win against another"²²³⁴. This system of ethics, therefore, accepts the Christian concept of original sin, assuming the innate existence of evil forces inside every human being, which emerge every once in a while from deep inside to tempt one to exert control over other human beings and, going against Kant's ethical imperative, use them as means rather than goals in themselves. This assumption, in turn, requires a constant exercise of morality throughout life so as to keep oneself on the right path, freed from the clutches of this hurtful willpower dormant in each one of us. Furthermore, even though I have never heard this being pointed out, through the juxtaposition of these two norms is, I deem, the ladder enabling one to climb to the most sublime moral grounds being set. These are the grounds wherefrom Gandhian, nothing but peacemaking social activism and approach to conflict resolution comes to life. For example, if the hero comes across the person A mistreating the person B, in order to protect the person B, as Miljanov's first norm would want him to do, he cannot simply step up and be aggressive to the person A lest he exhibit a lack of humanness as per Miljanov's second norm. Therefore, he must think of a subtler strategy on how to save the person B from the person A and in the process of devising this strategy, he would get trained in wisdom *par*

²²³⁴ See Najpoznatiji intervju Mate Parlova: Ne mogu biti nacionalist, ja sam svjetski prvak, Index (November 16, 2020), retrieved from <https://www.index.hr/sport/clanak/najpoznatiji-intervju-mate-parlova-ne-mogu-biti-nacionalist-ja-sam-svjetski-prvak/2230924.aspx>.

excellence. In the attempt to find a compromise between Miljanov's two basic ethical norms, the hero would develop a truly heroic, peaceful approach for conflict resolution, which many proponents of these two norms alone, independently of one another, have traditionally missed. One example where the supposedly heroic side has failed to conceive of the most optimal conflict resolution strategy in its peacemaking endeavors because of neglecting to submit to Miljanov's criterion of humanness can be said to be that of the American foreign policy. As Milton Friedman correctly pointed out²²³⁵, the role of the US federal government is to protect the American people from a foreign enemy and also to protect these people from one another, the task in which, as Friedman further added, this government had largely failed, the reason, in my opinion, being that for as long as Miljanov's humanness is not being implemented as an essential ingredient of the American political interventions abroad, the international, long-term and all-around success of this approach will be missing. In any case, the ethical teaching inscribed in the heart of the Montenegrin tradition is the one of pointing out how miserable it is to strive to establish the supremacy of one's own being relative to others. This teaching, in turn, reiterates how great it is to be able to see the grains of wretchedness in others and love them with all their imperfections. In one such frame of mind, others are not being rejected based on petty flaws discerned in them; rather, acts are being incessantly conceived so as to ameliorate their states of unhappiness and carry them to higher grounds. In view of this, it comes as no wonder that I love to say that only fools attack others whilst defending themselves. The true hero knows that his strength feeds itself on protecting the weak and helping the needy, as much as the virtuous knowledge that touches the clouds of wisdom gets built on one's care for the world. The true grace, likewise, lies in the gentle attitude that lowers oneself like a sea in front of others, and lives so as to enlighten others. For this reason, having found myself in a social setting, all my mind does is send the following mantra to bounce off the seabed of my psyche, "I would lay down my life for you, and you and you and you", knowing that grace, in the purest of its forms, spontaneously and effortlessly emanates from such foundations of thought. Being stringent to oneself regarding the compliance to these two ethical norms, thereby defending others under all circumstances, has ever since stood as the simplest recipe to attain the most enchanting and inspirational ways of being in this universe wherein "ethics and aesthetics are one and the same"²²³⁶. Or, as stressed out by Lao-Tzu, "Heaven and Earth last long. If Heaven and Earth last long, it is because they do not live for themselves. This is why they last forever. Hence, by placing himself at the last place, the sacred man finds himself at the first place. His body he considers accidental, yet his body stays protected. Does he not realize himself exactly because he does not live for himself" (Tao-Te-Xing 7)? Hence, should we start seeing our life and our body as a gift, taking the role of a spirit that selflessly guides the body so as to enlighten other people's lives, with absolutely zero interest in self-interest, so to speak, the majesty of graceful living and the crown of playful prudence would dawn on us.

S.F.8.2. In our effort to reach the tops of the mountain of wisdom and meet the muses and mermaids adorning the graceful summits of spirit within our beings, we should never forget that quiet thankfulness, playing its balmy melodies within our heart, ought to present the mornings and dusks of our quests for divine knowledge and action. Being thankful should be the beginning and the end of our spiritual cravings in this world. Once "our way of bending to the world's will and giving thanks" - being the phrase engraved on a curly wall of the Gallivan plaza in Salt Lake City, just outside the KUTV studios - starts to dominate over a sense of permanent dissatisfaction, "the

source of all evils” (Tao-Te-Xing 46) in the philosophical framework of Lao-Tzu, we become born again, into a child that walks three feet over the earth, as light as the feather, with eyes bright like suns, mind floating along with clouds, and mental burdens dragging us to the ground having been wiped away with the swipe of a single Thank You whispered with the language of the heart. Soft and flexible bases of knowledge and acting in the world that cordial thankfulness provides us with would make us shine with genuine grace unto it. Whereas irksomeness is similar to a barbed wire piercing and hurting spirits all around us, producing pain and squalls, albeit not hearable by the crude senses, a thought that “all is beautiful” spiraling down the deepest orbits of our psyches, dropping gingerly onto the seabed of our soul and then sprouting from the soft bed of gratitude into a gorgeous monument to God, is akin to giving a hug to the world and washing it over with the waves of a sea, warm and soothing. Soft thankfulness, as if being a magic mop, cleans all the slimy spots and dusty grime of dull and sulky ignorance in our spirit and outlook, which are then free to mirror the divine beauty of Nature and Cosmos with perfect clarity.

S.F.8.3. Finding ourselves at the crossroads in life, big or little, daily or the ones of lifelong importance, sometimes we listen to our material desires and the needs to satisfy them and sometimes we are deeply connected to the essence of our heart. Whenever a big decision is about to be made, it is as if our innate nature draws us towards our inner self, closer to the inner voice of our being, the listening of which will make us bring the right decision. But sometimes we become negligent in our aspirations and thoughts, apparently preoccupied with solving something that misleadingly seems to us to be of a greater importance. But for the whole time, during and after the decision time, we would feel that our heart quietly sings a sad song, if we were keen to listen to its subtle melodies. We could almost see our real self sitting next to some wonderful landscapes or parachuted into some delightful occurrences, and our second self walking along a wrongly chosen path. While being immersed in daily circumstances, we would be distant and wistful, feeling as if our second shadow, a dreamy silhouette of a kind is travelling across the landscapes of the world all by itself, going places which we only wished to be at during the given moments. But remember that it is never too late to get back to the true path and join our self that rejuvenated itself for the time being. It will take us some time to heal and become one with it completely, but we can make it. Just as a jazz improvisation can always find a way to transform a prosaic and uninspiring one into waves of blazing happiness and thus give a whole new meaning to the preceding emptiness, the same can be done with our lives. For, life is akin to a jazz tune wherein each successive moment can breathe illuminative meanings into all the preceding ones, regardless of how desperate and damned they may seem *per se*. Likewise, as we can conclude from Sonny Rollins’ allowing Max Roach to cut his second solo in Blue 7²²³⁷ after mere seven seconds with an over two minutes long drums solo, but then turning the song to one of the most memorable jazz performances ever, ceasing to play so as to give another person a room for expression need not detriment our play either, for when we get back to it, what comes out of our instruments with the right set of mind should sound more magnificent than ever and turn out to be better than had we remained in the spotlight all the way through. Thus, whether we step down from the stage for one reason or another or we muddle up our own performance, there is always a path to reengage in it in a way that uses everything preceding it as a stepping stone for an expression that touches the sky, as by the tender hands of a child who has just come out of Heaven to inspire us with a gesture of two and then gone back. Henceforth, thinking of tonal threads woven through the air and transforming the sound of dullness and doom to the one of pure enchantment and wizardry, I bring

²²³⁷ Listen to Sonny Rollins’ Blue 7 on Saxophone Colossus, Prestige (1956).

to mind F. W. Murnau's movie *Sunrise* and the legendary wisp of hay that first prompted the protagonist to conceive the murder of his beloved one and then provided the object with which he saved her from drowning in the midst of a tempest. Concordantly, we ought to know that even the most ominous tokens could be transformed into gateways to heavens in the blink of an eye, if we only believe so, as much as a single magical movement of the brush of our divine dreaminess can turn a sinner into a saint, a road to ruins into a path to paradise. Still, my favorite example of how eruptions of cordiality that shed starry sparkles all around us can give fabulous meanings to all the preceding moments of sulky struggle is Blur's *Think Tank* that from its beginning to the end makes up for a sweet little record despite being composed of some of the most debilitating songs one could think of. And yet, looking back at the content of the record in the light of the final, heartbreaking cry, "You could be with me"²²³⁸, each tiny thread of it seems as if palpating with a breathtaking appeal.

S.F.8.4. And in order to succeed in this endless improvisation that life is, we need to incessantly move, every now and again changing perspectives from which we gaze at the world. In the movie *Dead Poets Society*, Professor Keating teaches his pupils to never get tired of looking at the world from a new angle. In the old, conservative and autocratic school, he showed his students the importance of freely, as a bird, standing atop a classroom bench, in spite of the impending reprimands of the strait-laced authority, just for the sake of peering into a new world. For, such a great weight changing perspectives at things around us every now and then holds that risking our personal standing and very life for it is usually worth it. Babies know this trick and, if made to dwell in a single spot for too long, they will do it all to change the perspective, and, if repositioned, a silent Thank You vibe will be emitted toward their caring guardian. And just like babies get cranky by looking at the world from one angle for too long, so would our spirits scream if they could, thunderously, any time we spend too much time observing reality from a single experiential locus. For, our capacity to comprehend and empathize with physical systems increases in direct proportion with the number of angles from which we observe them. And as the glow in the eyes of children shifted from one spot to another can indicate, a new world becomes open whenever we look at things and situations well-known to us from a new angle and/or in a new light. Each single perspective of observing and thinking is abundant with blind spots in terms of assumptions and details that we do not see that we do not see. Every time I had a chance to look at familiar situations from an opposite side – performing on the stage instead of being a part of the audience, placing microphones on other people's suits instead of being a presenter, teaching others instead of being taught, guiding students instead being a mere academic follower – it resulted in an enlightening experience. As I watched the 1983 movie *El Norte*, a motion picture told through the eyes of two Guatemalan immigrants to California, prompting the native inhabitants of the latter to realize the small-minded artificiality of their own affluent cultural stances and ignorance with which they fail to even notice the heart of the immigrant beating in their stellar proximity, it occurred to me that the purpose of narrative art forms, from theatrical plays to novels to movies, is to make their consumers see the world through some other eyes for a moment and become a bit broader, more enriched human beings thereby. The purpose of the art of living, as conceived by some divine intelligences, is, likewise, to face their protagonists with alternative worldviews, the coasts of which they will reach if they only build enough of the bridges of empathy in this life; for, with each such coast conquered in peace and understanding, the wider and wiser the heroine's personality becomes. Eventually, as the river of her being lets hundreds or thousands of streams,

²²³⁸ Listen to Blur's *Battery in Your Leg* on *Think Tank*, Parlophone (2003).

creeks and waterfalls to disgorge the contents of their hearts into it, it unnoticeably becomes an ocean which all the other rivers can freely flow into and find their final solace in. For, to find sympathy for all, even the more blasphemed modes of being and points of view, and embrace them unconditionally with the infinite sea of love glistening in us is to reach ultimate wisdom in life, the most sublime peaks of enlightened consciousness attainable. Needless to add, with each such change in perspectives, the doors for revolutionary paradigm shifts, for turning the world of our preconceptions, the world as we see it, upside down, become open, as in accordance with the claims made by Thomas Kuhn: “During revolutions scientists see new and different things when looking with familiar instruments in places they have looked before. It is rather as if the professional community had been suddenly transported to another planet where familiar objects are seen in a different light”²²³⁹. Thus, being a revolutionary at heart, wherever I find myself, I adore changing my and other people’s points of view. In conversations I therefore swiftly change the sides, one moment arguing for and another moment arguing against certain views. I am aware that simply confirming other people’s opinions contributes to narrowing down their perspectives, all until a seriously limited and inflexible, tunnel view forward is reached. On the other hand, dialectically confronting them opens up new perspectives, eventually not weakening, but strengthening their principal stances. Every paper of mine is, thus, an exercise in nonconformity, crafted with a freeness to provide an intriguing point of view, with no concern over whether the content of one will contradict the content of another. Since my ego evaporated long ago and blended with the sea of knowledge that encompasses all things, I worry not if such contradictions will be the reason for the critics to attack the integrity of my intellect with their venomous arrows, as they did on the occasion when an introductory thought in one of my papers attributed no particular application to the particle designed and developed in the given study, but then one of the final thoughts in it mentioned that the particle was designed for a particular application in mind²²⁴⁰, an instance which I countered with a reiteration of the aforementioned quote by Niels Bohr: “The opposite of a small truth is usually an untruth, but the opposite of a great truth is usually another great truth”. When it comes to visually perceiving the world, I sit on a chair for a while, then I roll myself on the carpet, I dance a bit and sometimes even decide to stand upside down, just for the sake of enriching and beautifying my view of the world. By doing so, I implicitly invite others to find merits in experiencing similar continuous changes in perspectives. I also know that the mood swings that most artists experience play the same role: to teach us how it feels to look at the world with different eyes, in different mood colors. The larger the variety of such experiences, the shinier the invisible crown of wisdom will be placed on our heads one day. Soaring in an ecstatic mood and then plunging deep in depression gives us a chance to have a look at the same things from a different angle, and thus avoid many blind spots that single, unchanging perspectives carry with them. Just as during a rollercoaster ride when the same details look thoroughly different depending on whether we are placed above or below them, and whether we slide beside them in a descending or an ascending manner, looking at the world with eyes sad, lazy, blissful or placid will make the things observed appear thoroughly different. For, beauty indeed partially lies in the eye of beholder, as the co-creational thesis with its balance between subjectivism/idealism/constructivism and objectivism/realism stresses out. Human emotions and

²²³⁹ See Thomas Kuhn’s *Structure of Scientific Revolutions*, University of Chicago Press, Chicago, IL (1969).

²²⁴⁰ See AuntieMarkovnikov’s *Perhaps ACS Should Pay More Attention to Its Publication Content and Less to Sci_Hub*, Reddit (November 18, 2017), retrieved from https://www.reddit.com/r/chemistry/comments/7dsazp/perhaps_acs_should_pay_more_attention_to_its/#bottom-comments.

states of mind cover a wide spectrum and it is not by being locked in only a few of those that typify our being, but by adopting a whole range thereof that we learn immensely about the world. As a result, do not be afraid to accept your emotions and states of mind, irrespective of how distressful dwelling in them may feel like, because frequent mood swings and shifts between widely distant emotional and mind states are what makes us avoid the blind spots that unnoticeably expand all across our worldviews if we stay in only a few of those for too long. It is not by rejecting and suppressing them but by living through them that we invite wisdom to quietly knock on the door of our mind.

S.F.8.5. The fact that we cannot see the eyes that see the world is not something that should render us helpless and the subject of other people's ridicule. Namely, what stands behind the irremediable social state of affairs where "man laugheth scornfully at man; and yet his fellow ape is mirror of himself", as pointed out by Abbot Stephen in Nyegosh's epic in verse, the Mountain Wreath, is not only the tragic inability of humans to recognize in themselves the same traits they denounce in others, but also their ability to recognize in others precisely the very same traits that they engrain somewhere deep inside of themselves. This, of course, makes every condemnation hypocritical in its essence, a crystal clear awareness of which surely radiated from the Christ's eyes as he stood tall on the Mount of Olives, facing the angry crowd ready to cast stones on an adulteress, and was just about to utter that strident phrase that breaks down all the principals of logic and makes every eagerness to condemnatory judge another collapse before one's feet, "Before Abraham was, I am" (John 8:58). As the scriptures tell us, after saying this, he walked straight through the livid mob and emerged on the other side, unhurt, with only sand to be wiped off his sandals and the robe. And speaking of Nature's always wearing the colors of one's spirit, as Emerson phrased it, Boyan Marinov's sculpture showing a man made of rusty chains struggling to liberate himself from the chains that tie him to the ground, but are, in fact, an extension of his chained corporeal self, standing not far from the corner of Clark and Wrightwood in the city of Chicago, only a few of blocks away from my Lincoln Park nest in the clouds, exemplifies it nicely: namely, what comes to constitute our mental makeup becomes inescapably reflected in the way the world as a whole, in each and every one of its aspects, appears to us, for the reality we inhabit is such, Escherian, so to speak, wherein the hand of the mind sculpts the holy hand of Nature, which, in turn, carves the outlines of the human mind along which the rivers of the divine streams of thought will come to flow, and so on and on. Thus we see that, as the beginning of this passage has insinuated, no escape is possible from the realm of bias and into the realm of the absolute, of truths attainable independently of the inherently fallacious premises of our frail and imperfect self. Though, if we flip the coin of this insight to its more positive side, we might realize that it leads us to acknowledge that even when we grow up and are not perfectly satisfied with the way we appear in the mirror of our mental sphere, we could still be whatever we want to be. We could imagine ourselves in the most enchanting and divine light that we could ever think of. And to ourselves, we will be that light. We could thus go back to the juvenile, infinitely pure and forgiving creature we had been long ago, standing on a seashore and scanning the sea with the rays of light emerging from the two suns of our chaste eyes, ready to spin the stars off of their orbits with every move emerging from the fountain of our soul; we could go even further back in time, all until we merge with the prenatal silhouette of the starry spirit that we have come to hold inside us in this life and illumine the corporeal shell posed around it; or we could go far, far forward in time and meet there the SF vision of our self, bordering sheer extra-terrestrialness in its progressiveness. Hence a whole lot of connotative meaning in the witty intro to an interview that came out of the mouth of Tony Curtis at the 1985

Cannes Film Festival, as he sat right next to the interviewer, Roger Ebert: “Let me tell you a story. It’s sort of a parable. One day in 1948 I went to Hollywood. My name was Bernie Schwartz. I signed a contract at Universal, and I bought a house in the hills. It had a swimming pool. Unheated, but it had water in it. One night I came home late, I jumped in the pool, I swam a few laps, I got out, I dried myself off, I put on my clothes, and I walked directly into this room and sat down and started to talk to you”²²⁴¹. Hence also the title of Boyan’s sculpture not being, say, Forever Bound, in spite of its depressive image, but rather far more optimistic and elating Boundless. Thus, no matter what misfortunes befall on us, our face could shine with the purity and grace of St. Michael the Archangel, our own modern version of the Holy Virgin or any other saint or muse we may think of. In that way, we can always be a divine child blessed with a glowing wonder and chastity. Even more exciting, the same inner divinity will be somehow emitted outwardly and spread out to the world. Over time, thus, when people’s impressions of our deeds crystallize into solid but volatile memories, purely angelic reflections of our being might turn out to be engrained in them. Our fragile physical features in movement will thus be magically transformed into astral images of pure holiness floating through the air of these endearing memories.

S.F.8.6. Mirrors are, therefore, imperfect light-interfering objects in this world as much as black bodies are. Whereas the former reflect all the light that falls on their surface, the latter entirely absorb it. From the perspective of the Way of Love, mirrors can be compared to creatures that in their interaction with others thoroughly reflect other people’s opinions, attitudes and expressions, thereby neglecting the need to extricate creative expressions from the core of their hearts. On the other hand, black bodies can be taken as metaphors of creatures that greedily absorb all the surrounding impressions, just for the sake of warming themselves up. In order to be complete in our interaction with others, we need to partly reflect the light of impulses that fall on us after being emitted by others, which is essential for others to have the reflection of who they really are. But we also need to absorb some of this light in order to promote communication that brings about mutual understanding and edification of each other’s worldviews. And finally, we need to be partly transparent to many of the stimuli, which, if absorbed in their entirety, would cause a numbing confusion in our mind. In other words, we need to be like water. No wonder Narcissus looked at the surface of a lake when he enchantingly looked at the reflection of himself. And the lake itself turned out to be Nature who looked back. Such a triadic nature of our interactions with others and with the entire Nature seems to be the only way to simultaneously observe the essential beauty of ourselves and of the divine Nature as sparkling within every detail of the world of our experience.

S.F.8.7. “Fear made the world go ‘round’”, Murray Lightburn and his band from Montreal, the Dears, sang on an invigorating night in Independent, on Divisadero Street, peppering my dreamy head with the words that I affably agree with, seeing the sheepish world of ours wherein the cult of followers has eclipsed the shine of striving for uniqueness as a place where fears of the unknown, of the dark, of suffering, of the transformation, of looking stupid, of being seen as creepy, of appearing impolite, of being rejected, and of who knows else drive our actions into the gutters of mind-numbing boringness and unimaginativeness, putting the powers of human wonder, of curiosity that endowed the pioneers, of cravings to love and be loved, of the bursting joy that seeks to blow our spirit apart and sprinkle the world with the sparkly stardust that we are all made of, of compassion that draws godly steps ahead of us, steps that bring us closer to another, to a

²²⁴¹ See the last passage of Roger Ebert’s Two Weeks in the Midday Sun: A Cannes Notebook, Andrews and McMeel, Kansas City, MO (1987), pp. 185.

long night sleep. Therefore, the conclusions of a recent text-mining study conducted at the University of Bristol and aimed at looking at the frequency of appearance of specific mood-evoking words in millions of books available through Google Books and thereby estimating the predominant social moods of the present and past should not surprise us; namely, fear has suppressed all the other major emotions that the researchers outlined as the major ones - joy, surprise, anger, sadness, fear and disgust - in the last 40 - 50 years and established itself as the dominant one, at least in the English-speaking parts of the world²²⁴². As usual, fears multiple together with our attachments, which have grown exponentially in the recent past, following our global advance on the material scale in step. This makes sense if we remember that most of these attachments bring to the soul anchored to them a pleasure of a kind, be it spiritual or sensual or solely mental, while fears are just the flipside of the coin of pleasure, as Jiddu Krishnamurti deemed, the reason for which the ascetic liberation from the idea of pleasure naturally entails the liberation from fears too. As for myself, for a long time in my life a timid creature I was, always choosing safe harbors instead of open and dangerous seas. But then, one day, I underwent a change of the heart, rearranged the orbits of stars in my head and set in front of myself a guiding one which has ever since impelled me to go after situations and places that I have been mostly afraid of. When we have the option to act in a way that is predictable and less prone to displaying our mistakes and showing our weaknesses or to act in a way which makes us face things that make us intimidated, we should always opt for the second choice. Eventually, the faster our heart beats in face of a conceived situation in life, the greater the gains from it may be. "The truth resides in the abyss", stands written in a Schiller's poem, and we should always keep in mind that the more perplexities and risks the paths in life carry, the more treasures they conceal as well. As Dante and Virgil walked along the dark paths of Hell, they realized that the way out lies at its very center²²⁴³. Hence, when a Zen master was approached with the question of how to escape from the heat, he replied: "Go straight to the middle of the fire"²²⁴⁴. Even if we look unto God and crave to awaken the divine glow of Godly presence in the world and in human hearts, we should know that "he made darkness his secret place; his pavilion round about him were dark waters and thick clouds of the skies" (Psalm 18:11). Hence, the greater the achievements in life, the more challenging and adventurous are the paths that lead thereto.

S.F.8.8. When I was younger, I used to be terrified at the very thought or feel of approaching another human being. The reason was clear: owing to my highly reflective nature, the self-consciousness of my personality reached tremendous heights, and coupled with a high respect of the opinion of others, I was under constant pressure to leave the best possible impression in their eyes. My inner sense of specialness, instigated in my family circles since the earliest childhood, was only adding fuel to this fire of insecure reflectivity burning inside of me. My heart would thus shrink with fear and my mind freeze, unable to find creative impulses, words and gestures as soon as I would get close to facing another being. Over and over again I would find myself in the shoes of Salomon Atijas, a character from Ivo Andrić's *Bosnian Chronicle*, regretful for life for never being able to dig the most inspiring and proper words at the right time; instead, they would dawn

on him only after those he had communicated with were left out of sight. Or, as the Serbian writer himself described it, “It was exactly this powerful craving, which suddenly befell upon him, to assert and convey something universal and ample about his being in life and about the sufferings of all Travnik’s Alijases ever since, that deterred him from finding the right means and the needed words that would succinctly and faithfully express what now stifled him and rushed blood to his head. So he spoke stutteringly, not what filled him up and what he so intensely wished to express, but only severed words that came to his lips”²²⁴⁵. Hence, only after delivering what sounded like a speech of his lifetime in front of the French consul in the final passages of the book did the reader realize that the fabulous monologue merely ran fast forward through his head and that “this or something similar he would have said. Yet, none of it was completely clear and defined in his mind, let alone ripened to be expressed, though it lay in him, alive and heavy, but unsaid and inexpressible. And who in life succeeds in expressing one’s best emotions and best wishes? No one; practically no one”²²⁴⁶. Yet, every problematic obstacle on which we stumble in life always presents a sign that can help us soar towards more sublime heights of being, and so has been with this inability of mine to find equally beautiful words to utter in the midst of a communication act as when I was all alone, in my naturally reflective mood. In the 1994 documentary, *Hoop Dreams*, there is a scene wherein an aspiring basketball star softly looks at a baby who happened to be mumbling some inarticulate words and notices how “whatever she says, she means it”, triggering a myriad of bells in our head to ring all at once and remind us that a lack of desire or ability to faithfully express our feelings, beliefs and visions of stellar being in this world, typically followed by unrelenting weavings of a maze of regretful thoughts, a psychological affliction known under the name of hypocrisy, to which all the members of humanity are subdued to one extent or the other, resembles a bug that resides at the root of the tree of happiness of human creatures, preventing its stemming and growth towards heavenly heights. Since eliminating this parasite of hypocrisies is a prerequisite for reinstating our beings in the state of grace that we fell from long time ago, bridging the disparity between dreams and reality has been something I devotedly worked on for a long time. In *Vivre sa Vie*, Godard’s heroine, Nana, wonders out loud in front of the French philosopher, Brice Parain, how “it’s funny, suddenly I don’t know what to say. It happens to me a lot. I know what I want to say. I think first about whether they’re the right words. But when the moment comes to speak, I can’t say it”, reflecting the same sentiment, to which the philosopher responds with a story from the *Three Musketeers*, *Twenty Years After*, in which Porthos, who allegedly never had a thought in his life, found himself in a situation wherein he had to set up a bomb and blow apart a cellar. As he lit the fuse and began to run away, a prime thought occurred to him, a moment of wonder over how humans actually walk, placing one foot in front of another. At that moment, he froze and got blown apart. What the philosopher wished to point out is that not only does the problem, as ever, implicitly hide the solution in its very heart, but also that every problem is the solution in itself; this is so because erroneousness provides an inescapable route towards higher levels of being. Letting the right words spontaneously dawn on us, as in accordance with the Christ’s style of delivering speeches, all based on letting the divine eye for the moment guide one (Luke 12:11-12), has thus stood forth as the key, which I also used to unlock the magic door that led to magnificent orating skills. Furthermore, failing every once in a while is, as we see, a vital trait of every successful run in life, which suggests on top of everything that imperfect, stuttering speeches intercepted with staggering silence are the only ones that can live

²²⁴⁵ Personal translation from Ivo Andrić’s *Travnička hronika*, Prosveta, Belgrade, Serbia (1945), Chapter XXVIII, pp. 352.

²²⁴⁶ *Ibid.*, pp. 354.

up to the ideals of perfection. This is how I have changed: by locating the problem and learning to love it and live it. Not anymore am I like the character from the *Bosnian Chronicle*, and I am intrinsically glad about it, for now I look forward with joy at the moments of facing others, opening up my heart, like a flower or a magic cone that play enchanting silent melodies of peace and untainted lovingness, spontaneously, surprising me and others alike with the startling naturalness and divine relevance of their radiance.

S.F.8.9. And yet, I remember a story about a dancer who would, after hours of the wildest performance during which she exhibited the most unusual postures and gestures, fluidly floating through space, say farewell to the audience not with a grin on her face, bowing down in front of it with respect, but by approaching the spectators with a squared, expressionless face. Ever since I heard about this, I have been impressed, without knowing the real reason, except that I distantly evoked Louise Brooks as Lulu and the acting-by-doing-nothing style²²⁴⁷ that she popularized in the silent movies of 1920s that brought her fame. But here is the key. First of all, it is true that while we respect others so much that we forget about the sane listening to our own heart and following the starry signs it whispers to us at every moment of our lives, we are out of balance of the Way of Love. Thence we normally fall into the state of a mild panic whenever we are about to act in front of others. This occurs due to exceeding reflections on our behavior driven by the desire to leave as good impression as possible. However, this fear of failing to fit leads to a vicious circle wherein our reflectivity promptly notifies us that this fear leaves unfavorable traces on our appearance, which implies that we should be fearful of this fear as well. But this fearfulness of the very fear means that we are already self-conscious, which equals disgraceful acting. And so, this fear of fear multiplies, all until it leads to an explosion of fear, after which we either come out thoroughly disarrayed and perplexed or healed, bright and summery. Also, this tendency to conform and fit into the existing environment, without ever acting in unique and original ways and in natural harmony with the beat of the music of our heart, may actually lead us to never be able to fit wherever we want to fit. Even if we succeed, the creative influence of ours on the surrounding would be equal to none, as we would turn ourselves into a mere faithful follower. In contrast, a combination of the latter and being an impressive deliverer of the divine messages of the birds that fly across the landscapes of our soul is what I have tirelessly spoken in favor of. In order to release these heavenly birds to the world around us, we should neither ignore them by passively following the enchanting streams of the surrounding world nor dwell within ourselves so deeply and so obsessively that we forget about respecting the world around. For, as in the Lieh-Tzu's story mentioned above, any attempt to catch the seagulls that play in the vicinity of the seashore (of our mind) would result in their flying away in the distance. It is only by having one hemisphere of our consciousness resting with the dancing images and sensual patterns of the surrounding world and another hemisphere focused on the inner landscapes of our heart and mind that we have a chance to deliver the most beautiful treasures that our spirit abounds with to the daylight of being. Our attention has to draw a string between the inner world of our spirit and the world of external impressions, upon which it will dance. By having our attention moved back and forth while standing in-between the two poles that define all the experiential appearances of ours – mind and Nature – we have a chance to engage our spirit in the sincere and genuine communication with the world, with other human creatures and, finally, with God. Be that as it may, there is still one thing beautiful about the still facial gesture: it signifies not only self-consciousness, but also one's

²²⁴⁷ See Roger Ebert's review of *Diary of a Lost Girl*, available at <http://rogerebert.suntimes.com/apps/pbcs.dll/article?AID=/20120322/REVIEWS08/120329989/1023> (2012).

respect of another. After all, without reflectivity and self-consciousness, no science or philosophy could have ever been brought to life. This reflectivity, which was instilled in us in the earliest days of our childhood through the moments of playing with mothers²²⁴⁸, presents the roots of deliberateness, cleverness and sanity in life. Getting rid of it would be disastrous, which is why I propose accepting the shyness arising from it, and mixing it up with braveness to be different, to determinedly explode into a creative supernova that will illuminate the skies of humanity and give rise to wonderful suns of inspired thinking, feeling, acting and dreaming.

S.F.8.10. On a Radiohead concert in Golden Gate Park I found myself standing behind a few tall people, trying to wiggle my neck so as to take a glimpse of the stage. Thence, all of a sudden, as the band started playing the Pyramid Song, the view in front of me cleared up and I got reminded of the final passages of Zen and the Art of Motorcycle Maintenance where Chris finally manages to peer behind his father's shoulders at the road ahead²²⁴⁹. Both of them take their helmets off as they reach the Californian, San Franciscan breeze and the ocean coastline. Chris was later, in 1979, stabbed and died at the corner of Height and Octavia, coincidentally just a few blocks away from the SF Zen Center he had attended and where one of my greatest heroes in the world of science and art, Gregory Bateson, died a year later. And it was over the steps of this Center that four-year old Theo and I hopped endlessly on an April day, "looking for Paul", as the petite boy was saying, referring to a old friend of mine, Paul Haller, the abbott of this Center and one of the guests of my lecture series at UCSF. But, "there's nothing to fear, nothing to hide", the rhymes of the song were being sent to the cosmic vastness above our heads. My eyes filled with stars felt as if glimpsing a mantra that should always be anchored to the seafloors of my mind. A barrage of beaming beats followed, grinding the peace of a midsummer night with its sonorous lapidary's lathe into an entranced mill wall of stars. And then silence settled in, pierced by but a strident outcry running through my head like a rabbit before headlights, "I am not afraid", for ages to come, exactly the same phrase as that exclaimed by Ivan Bondarev, another angry silky-haired boy with a slightly drooped eyelid under the weight of permanent dreaminess, in one of the most memorable movie scenes ever²²⁵⁰, before a black cross slammed down and tipped over into an ominous X, the symbol of the Christ, a holy soul holding the Sun its center, just like this cross still trembling after the fall on the dusty ground of my memory, handing us the key as to how to become a soul perfect and sublime by uttering that timeless "fear them not therefore: for there is nothing covered, that shall not be revealed; and hid, that shall not be known" (Matthew 10:26). Verily, let it be so from now on, with love being one way, fear the other, and me, as ever, standing boldly in the center of this crossroad, listening not, but extending my arms with infinite love to both.

S.F.8.11. Countless sages in their illuminative discourses anteceded barb-wired Ms. Kitty Farmer from the animated story about Donnie Darko and his imaginary rabbit friend, Frank, in claiming that reduced down to their core, all human emotions issue from either the cognitive roots of love or fear. Love is the light (*ru* in Sanskrit) that illuminates the darkness and blindness of fear (*gu* in Sanskrit). And yet to become gurus, we need to know both sides. We need to have become familiar with the gloominess of fear and then to have blissfully met the true beautifulness of the light of love. No wonder then that Nature guides us along the path of our lives through the dark hills of

²²⁴⁸ See H. Maturana and G. Verden-Zöllner's Biology of Love in *Focus Heilpädagogik*, Ernst Reinhardt, München/Basel (1996).

fearfulness, just so that we could one day be the sunny force of pure spirit that lightly and effortlessly dissipates the dark clouds of ignorance and fear while standing gorgeously on the cliffs of life. Be that as it may, I have realized that my mind and heart in their togetherness function in one of two basic modes. When obsessed with perseverance and glorification of my ego, thinking more “what others will say” than “what I can give thereto”, insecurity and self-consciousness creep in, making my mind become all frozen and my heart ceasing to flow with love out to the world, as if someone placed dams on it. No wonder that the original roots of the word “satanic” actually denote a dam, that is, something blocking the natural flow of spirit within us. Hence, whenever I recognize what is going on, I switch to the side of the free flow of love, as if immersing my mind into the glossy glow of my heart, which then starts flowing in beautiful streams and waterfalls outside of me, washing over the beings of the world and inconspicuously bringing about starry impulses that lead others to enlightening impressions, tiny little treasures on the way towards their spiritual fulfillment. “Let it be”²²⁵¹, said the Beatles in the moments of their inclination to the philosophy of Buddhist nihilism, whereby the Stones responded with “Let it bleed”²²⁵², one of the norms of my life. Similarly, after the Beatles put clear skies on the cover of Sgt. Pepper’s Lonely Hearts Club Band, Frank Zappa’s Mothers of Invention parodied the cover and topped it with a stormy sky, a thunder and a lightning²²⁵³. For, how else to interpret my habit of cutting my fingers inadvertently on the most unusual of objects, ranging from book pages to hand soap to grapes, but as a sign from the heavens above that what is needed to reach the aerial vistas of holy being is to bleed and rain with my heart all over the place, to let it all, good and bad, blissful and dismal, out, to “tell you how I feel”²²⁵⁴ by channeling the emotions swirling within the deepest cellars of my psyche to the tops of my lungs, freely and unrestrainedly. Truly, just as the Christ lived and lived and then at one point started to bleed, giving his love freely to the world, healing and beautifying it limitlessly, a magic moment of our lives, corresponding to the stage that the Biblical crucifixion stands for, that is, the cancellation of our ego and spiritual rebirth marked with beginning to live for the world as One, is about to happen in each and every one of our lives if we follow the road of the divine. Our love will from then start to unstoppably flow from our heart, shedding signs of immaculate graciousness everywhere we go. “And the Spirit and the bride say, Come. And let him that heareth say, Come. And let him that is athirst come. And whosoever will, let him take the water of life freely” (Revelation 22:17). Or, as one of the princesses of the Bristol music scene of the early 1990s, Beth Gibbons summed this bridal phase transition from relentlessly making the interface of our being with the environment a playground for the games of ego to turning it, once and for all, into a garden of Eden, wherein giving for the sake of enlightenment of another becomes the only thing left on our minds, in the language of modernity and in a song to which I, I will have to say, lost my virginity to a mousey mastermind, “I’m so tired of playing, playing with this bow and arrow, gonna give my heart away...”²²⁵⁵ This is indeed how we feel, as if the utmost ups and downs have been wedded in the flower of our heart, when we begin to bleed with the rivers of emotions that entwine heavenly joy and the eternal cosmic sadness, as depicted in the tears of the Holy Mother on monastery frescoes.

S.F.8.12. One day, after I got back home from work, I found a freshly dead mouse lying on the carpet underneath the kitchen table of my Outer Sunset apartment on Ulloa and 28th. The sight, at that moment, did not bring back the memory of another mouse, whose death caused by a human hand an artist would use to depict the beauty of the heart driving those nobly murderous hands, because I would become familiar with those scenes years later²²⁵⁶. So, as I stood there, gazing at this petite carcass, I kept on wondering what it could have symbolized. Mouse has always been a greatly symbolic animal, somewhat like bear, rabbit, seagull, sea star, giraffe or dolphin. It has mainly been emblematic of the combination of vigor, vigilance and fearfulness. A mouse tends to enter its hole upon hearing any sound in its surrounding, and normally does not move until everything appears quiet again. And then one day, I finally realized what this whole event might have meant. It could have been the sign for me to stop acting like a little mouse, scary and withdrawn from showing the inner beauty concealed within “mice elf”²²⁵⁷ to the world. What is the use of the daydreams of beautiful dancing expressions of love, grace and other divine feelings if they never find their way to the outside world? To be the inner muses of our artistic creativity, you might say, and I could not disagree. But there is always a dream that this beauty developing inside of us for whole lives long will someday burst into a supernova of heavenly expressions that will bless the eyes of the world with waves of pure lovingness and restore to health many ill spirits of this world. Instead of hiding in our houses on a starry night, afraid of the dark and monsters, we would readily run outside, with the wind in our hair, making step by step into the forests of the unknown, knowing that the ones who are protected by Tao are protected with nothing but the shield of love. So, if we love, there would be nothing to fear. Or, as Rainer Maria Rilke mentioned, “Perhaps everything that frightens us is, in its deepest essence, something helpless that wants our love”²²⁵⁸. Instead of running away from our fears, which is what the natural tendency of most people is, with this torch of love in our hands we would try to get ever closer to it, knowing that by illuminating its cataclysmic caves and crevices we would arrive at the key that unbolts the dams of cocooned constrictions within ourselves and lets the soulful energies concealed in us emerge to the daylight of being with humungous whooshes, splashes and roars. Or, as the American jazz musician, Ben Sidran pointed out, “Go toward your fear” for “there’s nothing in life – or probably even death – that’s as bad as your fear of it”²²⁵⁹. In other words, only when we (a) rid ourselves of the tendency to suppress our fears and thus get drowned in the muddy waters of phlegmatic

²²⁵⁶ Nuri Bilge Ceylan’s *Uzak* (aka *Distant*) is a movie in which a dying mouse’s is a key role in the portrayal of a relationship between Mahmut, the symbol of an artist distant from life, who constantly commits errors on the moral plane so as to be aware of them and capture them in his art, and Yusuf, the symbol of a worker, a commoner, exactly a type of the soul in which Goethe’s doctor Faust finds the spiritual fulfillment and a ladder for his ascent to Heaven. However, as their relationship evolves, Mahmut becomes increasingly irritated by Yusuf and hostile to him, seeing him as an epitome of laziness and stupidity. Throughout the movie, we learn that not only Yusuf unwillingly accommodates Yusuf during the times of his vain job hunt, but he also tries to hunt a mouse with a mousetrap, though on one occasion he, himself, symbolically, falls into it. Eventually, the mouse is being caught and is heard squeaking helplessly. Mahmut orders Yusuf to throw it into a garbage can outside of the house. Yusuf takes it out wrapped in a blue plastic bag and, as Mahmut watches from the balcony, bangs it across the wall to minimize his suffering. At that instant, the viewer believes that Mahmut realizes the goodness of Yusuf’s heart. Yet, the following morning Yusuf is gone, having realized that he is unwelcome to stay as Mahmut’s guest anymore. *Via negativa* at its best: life given for life to be gained.

²²⁵⁷ This pun is attributed to the title of the song with which Sly and the Family Stone ended their record, *There’s a Riot Goin’ On* (Epic, 1971): *Thank You (Falettinme Be Mice Elf Agin)*.

indifference, and (b) accept²²⁶⁰ our timid mousiness and learn to collect in our hands all the fears emanating from it as tiny sparks of thrilling anxiousness dropped in the wake of our thought and acts would we get a chance to elevate our performances and the very being in this life to utterly stellar scales.

S.F.8.13. There are many body language signs which we could use to read awkwardness in other people's gestures. A lower arm positioned parallel to the floor with fingers held together or upper arms held stiffly in A shape with one's head at the tip, repeatedly fixing one's collar, pointing with one's fingers at one's elbows or the back of the head are all subtle signs that, as someone said, point at one's inner drive to simply say "awk" and leave the party. Awkwardness, however, a direct indicator of one's divergence from the balance of the Way of Love onto the empathic, societal side, spreads across the Western world like a plague as these words are being written. This global epidemics of awkwardness is a direct corollary of the spirit of submissiveness arisen from ignoring the divine drives for action brewing deep inside of us on the account of ever tighter social bondage. The modern man has become ever more awkward as this imbalance has been taking a deeper and deeper hold of his being. Critically, today he does not even recognize it as a symptom of a psychological disorder and sees it as a trait that defines one's normality instead, albeit failing to recognize the enormousness of the extent to which his expressions become crippled thanks to it. On a brighter note, one of the beautiful things that awkward traits we notice in others may point at is not only one's focusing on oneself more than on how to strew others with a starry dust of happiness, but also one's desire to exhibit as impressive performance in other people's eyes as possible. In the latter sense, such a behavior, although it could not be praised due to self-constraining and self-freezing of one's own expressional creativity that it carries, bears a beautiful implicit message. It is the one of caring about how one's actions will influence the world in eyes of others. As long as one cares about it, one can be considered as respectful of others. However, as the balance of the Way of Love tells us, such over-respect is extreme and has to be rebalanced with a dose of self-respect, which would bring us on the right track again. On it, we would dwell inside of ourselves as much as we would be concerned with bringing about creative actions that benefit others. In other words, we would respect our self equally as the self of others. Hence, we can conclude that there is, after all, a dose of beautifulness in this insecurity that we naturally tend to exhibit. After all, to give up that loving childish fearfulness obvious in the way a child's eyes open widely in face of an always surprising glance around the corner of its experience would be equal to tossing an essential ingredient of our everyday grace. We should thus never wave goodbye to the wonderful guiding star that gracefully whispers to us that "where fools rush in, angels fear to tread". After all, a mild and healthy dose of fear incents the sparkles of excitement in our eyes and intellectual worldviews alike. When our heartbeat increases as we knock on the door behind which a party is rushing, we should know that we are alright thence, still on the track of pure beautifulness. Had we felt nothing at that moment, it would have been a worrying thing. "As Josh awkwardly walked to the bathroom he tripped over a book and two different TV cables, then stepped on a bag of chips and someone's hand. In the bathroom he tripped over the edge of a tile,

²²⁶⁰ "Not just acceptance. That's a little passive. But really taking them on, almost to the point of having an appetite for it. Going towards it", Olympia Dukakis would add, for "actors go towards what is painful, ugly, vulnerable, they go towards what is angry, what is frightening. Most people try to avoid those things in their lives". In: Mick Berry's and Michael R. Edelstein's *Stage Fright: 40 Stars Tell You How They Beat America's #1 Fear*, See Sharp Press, Tucson, AZ (2009), pp. 102.

fell headfirst into the toilet, and drowned”²²⁶¹, an anonymous person explained what awkwardness means, but, hey, in it lies the source of one glamorous beautifulness, I claim. What Charlie Chaplin’s, Buster Keaton’s and Woody Allen’s movie characters managed to succeed in was to amplify their own insecurities and awkwardness up to the level at which it surpassed pure ridiculousness and silliness and became charming, graceful and astonishingly hilarious. Thus, when we find ourselves behaving in a manner veritably reflected in Miles’ straightening up in a rocking chair, stroking his goatee and falteringly declaring his recent interest in Rieslings after Maya stroked his hand in Alexander Payne’s *Sideways*, we should know that the first steps, although colored by tremulous fearfulness, were made just about right, but only before the panic took over and spun us in a positive feedback loop, catastrophically out of control, drowning us in a riptide of fear, which would have become our best friend had we accepted it no later than half-way through this journey into dark vortices of our consciousness. Likewise, when dealing with our tendency to exhibit awkward behavior, which naturally emanates from our emotional subtleness and sensitivity, it seems that a dual choice stands in front of us. One way takes us to neglect and suppression of the fears that stand at the roots of our insecurities. If we follow this way, we may realize one day that we have overcome all our fears, though we have lost the essence of grace that our spirit shone with during our younger days. In that sense, we may realize that we have fallen into the very same traps of bleak and uninspiring behavior that we had tried hard to avoid, somewhat like the crew of the whaling ship *Essex* capsized by a sperm whale in the South Pacific, which filled the rescue boats and decided to sail away from the Marquesas Islands, unreasonably fearing that they would be eaten by cannibals there, and opted to sail towards the coast of South America, eventually having to resort to the very cannibalism that they feared of in order to survive²²⁶². Therefore, fears in life are to be embraced, accepted and loved rather than shoved into the trenches of our consciousness if we are to use them as gateways to the deep and illuminative insights about the nature of our beings and the reality in which they are planted. Still, what the new Americanized values have instilled in the society is nothing but a widespread regard of timidity, introverted attitudes and shyness with sheer loathe. However, what I have tried to point at with this passage is an inherent beauty in awkwardness. Thus, what I will claim now may be shocking, but it has been one of the most important guiding principles in my life. It is that only through awkwardness we may be able to overcome awkwardness in our behavior. Only through accepting our timidity instead of suppressing it is that we would be able to reach for the stars in our acts. The only important thing to keep in mind is being awake, receptive and never falling into states of depression and self-disdain, which will immediately be felt as rays of glassy coldness radiated towards others. After all, the extent of love that our mind and heart glow with inside of us is about the same as the extent of love shone outwardly. So, accepting our insecurities and human fragileness is one pole of the creative behavior, whereas the other one still lies in the sphere of willfulness and courage. After all, if we lack the latter, we may end up sitting quietly in the corner of the room forever and ever, while all the mediocre loudmouths will fill the center with nothing much to show except their extroverted attitudes, and there would be no one to offer to all the words of wisdom, which, we know, say that “when everyone in the room is yelling, those who sit silently are to be listened to”²²⁶³. But with some drive to bring our inner shine to the world and be that Biblical candle that does not sit alone in a room but goes out and sets itself on the top of the

mountain from which it illuminates the whole city (Matthew 5:14), we may reach our aim, which is a perfect balance between a graceful shyness and an unstoppable glow of our lively, dancing spirit for the sake of beautifying the world.

S.F.8.14. After hopelessly trying to hold a tiny glass-ceramic substrate in the lab with her shaky hands, my summer research student left everything aside and sadly looked at me, saying how she would never become a skilled chemist. “So were countless composers extremely poor performers and critics still fondly argue whether Ravel was worse at conducting or playing²²⁶⁴”, I remember I said, “just as you could argue with your lab mates whether I am a worse lab manager or experimenter, but what matters at the end of the day is how moving, if not monumental, the work left behind us when we sail away from this planet is”. It is no secret to me or anyone around me that I am a poor manager, the reason being that the innate renegade, headstrong rule-breaker and resolute paradigm-shifter that I am can only produce disaster when managing those who are predominantly meek and submissive conformists, but the fact that my lab bench work sucks comes as a surprise to students accustomed to my fondness for experimentation. Still, the point I tried to get across was that none of this really matters at the end of the day because the mental and emotional energies and tidal tensions we harbor inside determine whether and when something monumental will be hatched from our minds. And to reach these glorious vistas, we must start slowly and patiently. Therefore, I praised her shaky hands and passionate reaction, knowing that those were the signs of a plenty of respect and care underlying her experimentation attempts. I reminded her next of Alexander Pope’s norm about fearful angels and resolute devils, explaining to her how appearing calm and coldblooded while making first steps in anything in life is often a sign of sheer carelessness and long-term futility of our future endeavors along the given path. As we sat squatted underneath the lab bench, I told her how passion, love and care stand at the roots of all great achievements in this life. “Set the vision before your eyes, make each step with a lot of love, and lo, you will get there some day”, I said. In view of that, we should not be hesitant to make those first shaky steps as timidly and insecurely as we possibly could. For, it is only them that will make us stand up in all our greatness, knock on the doors of life and with the divine powers slumbering in our heart “break on through to the other side”. While “shaking through” at the doorsteps of great and wonderful parties in this life, as in an R.E.M.’s song²²⁶⁵, we truly break the barriers of lukewarm and uninspiring acting, and become a light for the world, an enchanting example, a guiding lantern of spirit according to which all will set the compasses of their inner, spiritual roads towards becoming great and immaculate beings in this life.

S.F.8.15. One should also keep in mind that it is not only the first steps in learning anything that are permeated by insecurities that freeze our sane ability to extract the creative impulses for our thinking and acting in this world straight from the core of our heart. These moments happen every now and again, whenever we hit plateaus in the lifelong learning streams. And it is so with every skill and art in this life, from learning how to speak new languages and play musical instruments to juggling soccer balls to balancing test-tubes in the lab. For, every learning path is a sequence of alternating ascending slopes and flat plateaus, with occasional downward descents too. In fact, from the nonlinear increase in the mean square displacement of macromolecules diffusing through the solution over time, where their path alternates between the periods of immovability, during which they are “caged” within their surroundings, and the periods of rapid coverage of huge

²²⁶⁴ See the Wikipedia page on Maurice Ravel available at https://en.wikipedia.org/wiki/Maurice_Ravel (2020).

²²⁶⁵ Listen to R.E.M.’s *Murmur*, I.R.S. Records (1983).

distances, to phase transitions on macroscales occurring not continuously, but after long preparatory processes where things seem to be at infinite standstills, to rises to stardom or sinking down slippery slopes in individual lives occurring suddenly, faster than the bolts of lightning, to the Darwinian evolution occurring in series of successive plateaus and ascents along steep upward curves, everything in Nature seems to follow a stepwise, spirally path. No wonder then that our planetary home is sunken deep in an edge of a spiral galaxy, as if its shape composed of dozens of billions of stars signifies that the spiral path is the path of ascension of our spirit. Resting on it, it seems to us as if, whatever we strive to attain, we always make two steps forward and one step backwards. And yet, whenever we feel desperate about our seemingly falling down again after vainly trying to grasp higher levels of knowledge, we should recall the words of Paul Tillich: "Nature draws straight with curved lines". Hence, as I learn a new knowledge, there are moments when I feel as if I have utterly excelled it and have become fully proficient in it, and then there are moments when my brain seem stuck, the cup of my knowing seems empty, and I have nothing to say, appearing stunningly blunt to myself. Then, I know I am on a plane. Wherever I look, it is all flat and uninspiring. But then, such moments resemble the Taoist crossroads wherein perplexities meet opportunities, showing us how moments of crisis are the ones through which we break through to new levels of knowledge and being. Hence, whenever I find myself confused and helplessly uncreative, I know that the doors leading to higher levels of my being are somewhere near. And so I carefully listen, waiting for the moment in which I will sense the light shining again, finding its way through a dark forest, so that I can follow it and emerge on the other side. All transitions in Nature, from the phase transformations in the world of atoms and molecules to being born and sailing away from this world are preceded by great confusions and difficulties. So, whenever we become immersed in waters of hardships and suffering, we may know that an ever greater light will be seen at the end of the tunnel. And while we stay submerged in the darkness, we should know that whatever we envision is what we travel to. The end of our lifetimes is the greatest confusion that our spirit has to cross on the way to a new light. For, this whole life may be seen as a wonderful station on an eternal galactic journey of our soul, with us endlessly ascending on our way towards ever more beautiful and inspiring worlds, exploding with the love of our heart on each one of them and shedding the shattered stars of the precious pieces of it all over the world, where they will keep on being divine seeds that give rise to wonderful trees of being and thought in the millions of eons to come.

S.F.8.16. One of the first things we ought to do on the way to resolving the nods of insecurities within us, which may sometime seem as if they could not be untangled at all, is to break the sexual barriers that make us act in unpleasantly tensed and awkward ways. One of the greatest discoveries I came across in Hong Kong was the relationship between sexes, so much less tensed compared to what I got used to encounter in European cultures. After a while, I realized that the very language reflects the attitude of the natives in this respect. Similar to what the Korean tradition dictates, the women accost their fellow men as their big or little brothers, whereby the men address women as sisters. It is no secret that men who grew up in a family with a sister or two tend to develop a more natural relationship with women later in life, quite unlike me who grew up with two brothers (although I had a sister, Miljana or Margarita, I cannot remember, but only for a month or so, which is another wholly different story) and all my life struggled to overpass the barrier between seeing women as sexual creatures and seeing them as sisters, as fellow human beings meant to lead us to love them primarily through engaging in warmhearted, friendly relationships. In other words, not sexual seduction pervaded by the thirst to possess and subjugate another to one's

powers, but a more sublime, kindhearted passion to lift others up in spirit, asexually, hides the key to unlocking the deepest treasure chests concealed within our soul and letting the unforeseen spirits of celestial creativity emerge to the light of the day. Or, as a Cherokee proverb nicely summed these thoughts up, “A woman’s highest calling is to lead a man to his soul, so as to unite him with Source, and her lowest calling is to seduce, separating man from his soul and leave him aimlessly wandering”. For, as the Way of Love teaches us, a harmonious relationship always resembles a pair of pillars, strongly supported each in its own ground, while never ceasing to hold arms spread to each other and remain tightly embraced, so as to be able to bear immense stresses imposed on them. To drag the partner too close to one and make him/her lose one’s own individuality and sane contact with one’s own soul is thus to produce a heavily imbalanced edifice prone to crumble down under the slightest of pressures. Hence, the balance between preserved individuality and constantly rekindled empathy is the one through which harmonious relationships between sexes are maintained. Now, the second part of the abovementioned Native American proverb says the following: “A man’s highest calling is to protect woman, so she is free to walk the earth unharmed, and his lowest calling is to ambush and force his way into the life of a woman”. And I have known that for as long as a man regards women as sexual objects, lustfully and chauvinistically, and not as sisters, clemently and with a chaste charm, the perfection of his attitude towards life and the gracefulness of anything he engages his creativity into, from daily acts to the most complex deeds, will be incomplete. After all, according to the Biblical story of Genesis, the Lord created women so as to be friends and “helping hands” (Genesis 2:18) to men, and not mere objects of sexual cravings and sinful sources of lust and luxuriousness. Although there are many types of love – brotherly, motherly and friendly loves, love to stare at the ceiling or collect pinecones and climb the trees with, love to gaze at each other surrounded by starry silence with, love to be placid and satisfied with or love to shinningly yell and bop with - all of these are eventually based on establishing a divine amity and bridges of equality between ourselves and the creatures we love, as in harmony with what was proclaimed by Kahlil Gibran: “Love one another but make not a bond of love: let it rather be a moving sea between the shores of your souls. Fill each other's cup but drink not from one cup. Give one another of your bread but eat not from the same loaf. Sing and dance together and be joyous, but let each one of you be alone, even as the strings of a lute are alone though they quiver with the same music. Give your hearts, but not into each other's keeping. For only the hand of Life can contain your hearts”²²⁶⁶. Hence, in the book of Genesis it is said that God made Eva to be a friend to Adam, to fill his solitary moments of wonder with the illuminating companionship, and not to have her as a prey or an object of possession. Furthermore, to denote that prosperous spousal relationships are always comparable to bundles of threads of brotherhood and sisterhood, the King Solomon called his bride a sister (Song of Solomon 4:9), which prompted C. S. Lewis to wonder out loudly “whether a woman could be a complete wife unless, for a moment, in one particular mood, a man felt almost inclined to call her Brother”²²⁶⁷. Just as the Way of Love points out, it is equality, that is, neither possessiveness nor emotional slavery, that leads us towards the peaks of a fulfilled personality. Leveled eye-to-eye glances instead of submissively scary and bulgy stares or sadistic flashing looks, are what leads us to ultimate happiness, attainable via resting in peace within our inner world and yet incessantly interacting with the surrounding creatures. And yet, our fall from grace, described in the book of Genesis as the awakened ability to judge and be shamefully self-aware, corresponds to raising the wall of discomfort between men and women, that sometimes turns into the roots of almost all hostilities

²²⁶⁶ See Kahlil Gibran’s *The Prophet*, Paideia, Belgrade, Serbia (1923), pp.102.

²²⁶⁷ See C. S. Lewis’ *A Grief Observed*, The Seabury Press, New York, NY (1961), pp. 40.

in the world: “I will put enmity between you and the woman, and between your seed and her seed” (Genesis 3:15), thus God said. Nevertheless, it seems that in relationships with other people we have the choice of either looking at other men and women as our potential enemies and prey, respectively, or accepting them as our brothers and sisters. Should we happen to follow the latter route, the two original sins flowing through the blood of men and women, which are the yearning for power and the yearning to win the human hearts and put them under one’s spell, respectively, get to be softened up and slowly eradicated, opening way for something holier to grow in their place. At the same time, families that we have been born in, if they happen to be bountiful oases of love and peace, might end up being seen as mirrors of relationships that we will later engage in while facing not familiar creatures, but sheer strangers. Hostility towards the unknown and incessantly dormant competitive and thereby aggressive tendencies, from which all wars on this planet have arisen, thus become subdued by our peacefully treating people around us as our brothers, sisters, parents and grandparents, and thereby letting the world joyously flourish in each and every one of its corners.

S.F.8.17. The subtle message conveyed on the dreamy waves of Pet Sounds has also made me realize a beauty of petting those dear to us as pets of a kind. Many might agree that seeing the beloved ones as funny animalistic cartoon characters rather than lustful and ensnaring *femmes fatale* of a kind is the route to happiness. Therefore, the family oasis of love in which I have grown up has had a place for a loving bear, a watchful dog, a mousy mouse, a couple of snails, an injured bird, and an ugly duckling which has turned into a gorgeous swan. On top of this, good luck loony you in searching for human names given after animals, just like the one I was made to bear in life: Vuk, that is, Wolf in my native language. Sitting on the rooftop of one of our bedrooms, called the White Bear, and gazing at the stars, I would fill my mind with the beautiful waves of Pet Sounds and images of me caressing and playing with the dear ones, as if they are domesticated and celestially intelligent animals. Even today, thinking of how I live in the city of Saint Francis, the great protector of animals, reminds me of the beauty of adorning the dearest earthlings with congenial and cartoonish animal characters. As my Little Bear and I sat on a Santa Cruz summerhouse veranda overlooking the ocean, a mere hundred feet behind our backs was a monument to Bear Spirit, showing a man hugged by a bear, both made of stone, and attempting at “capturing that twilight world where transference of energy takes place, the result of surrender of human ego and an opening of one’s self to allow the spirit energy to enter, be it bear, eagle, deer, or coyote”²²⁶⁸. As I gazed at it during a breezy dusk, I was strangely prompted to think of Janet, a little heroine endowed by an utmost belief in goodness of each and every one²²⁶⁹. The last frame of the cartooned adventure of hers depicts her bravely opening the doors behind which cynical, egotistic and inherently mean spirits of the world reside, while giraffes, lions, zebras and hippos peek behind her shoulder with dewy-eyes, protectively and tenderly watching each step of hers²²⁷⁰. Although she lost all the fiscal wealth she possessed by dreamily and innocently placing the crown of goodness onto even the most wicked creatures of the world, her world had become wonderfully colored as she gained spirits of the most potent African animals to follow her everywhere she’d go and guard her on her ways. The authentic Yoga postures carry animals names, an inheritance they

²²⁷⁰ *Ibid.*, pp. 170.

earned by originating from attempts to copy the movements and poses of animals in human vicinity; however, a step ahead from this physical imitation of animals, which can help us maintain fabulous flexibility of our mind and body, can be said to belong to infusing our spirits with the protective energy of animal spirits which we sympathize. As usual, humbling ourselves down in empathy rather than loftily looking in the distance above the ways of life that lie below our own is the way to catapult us into great starry heights of being and thought. Yet, one of my newest discoveries beats seeing people as animals, brothers, sisters or mere parents by a moonlight mile. It is seeing everyone as a child, in all the purity and innocent dreaminess of their beginnings. Clouds of caution, reservation, fear, and distrust gather over people's eyes and faces as they grow older and troublesome with carrying the burdens of living and caring. These emotions take over the wings of childishness, tie them down and throw into dusty cellars in the back of their minds. But still, the eyes of the wise ones know how to penetrate through these clouds and reach the shine of their soul, where the glowing treasures of this untouched childlikeness everlastingly rest. And once we see others as children, we, ourselves, change. Our voice becomes gentler and softer, pampering others with its immaculate grace. As if becoming a fairy who throws stardust with her magic wand onto the little ones, our words of grace get to fall onto others as if covering them with a starry carpet upon which they could fly to distant worlds of fancy and relentless imagination. Spontaneously we would treat everyone with the same affection as when bowing down in front of a little child to play with it. And yet, as Martin Buber pointed out, the child in the heart of the grownup that we play with will not be merely an It; it will be Thou. This combination of a great respect for the person we face and perception of a sprout of childishness in it is what makes this approach a true miracle play.

S.F.8.18. To repeat the aforementioned, the more we are up against the wall of sexual barriers and thereby see the neighboring men as our enemies and women as our prey, the closer we are to the animal nature in us. But the more we are inclined to see brothers, sisters and heavenly pure and innocent children in the surrounding creatures, the more we approach the godly nature in us. However, as human beings at this point of time, we are still somewhere in-between. We are biological creatures, governed by our instincts and organic needs, and yet we have our heads plunged into the clouds of sublime feelings and thoughts that bring us close to the Heavens. With our heart tapping energy from both below and above, that is, from both the biological and thoughtful roots of our being, respectively, we need to appreciate both sides, that is, to instill spontaneous instinctive liveliness in our thinking and behaving, and yet to ingrain some of reflective wisdom in our movements. In view of that, we need to keep in mind the ancient Greek principle that "a healthy spirit resides in a healthy body". But recall that the *vice versa* argument, saying that a healthy body enwraps a healthy spirit is hundreds of times more profound. Now, people often tell me how they never find enough time to exercise. Not even a half an hour per day. And then I introduce them to an amusing metaphor of such a lifestyle. Well, to me, I say, that is like driving your car on a highway of life where you always need fifteen minutes to be led aside to get to a gasoline station and the same time to get back to the road you are heading on. Taking that time off to get some gasoline is equivalent to taking some time off to exercise. Without the latter, our bodies may break down, and then we may regret that we did not exercise more and keep our bodies fit. But just as usual, there is a catch. If your car, continues I, has a solar generator it can keep on going by merely absorbing the energy of the Sun, and then it won't need to run to get gasoline every once in a while. This ability to absorb the energy of sunrays metaphorically depicts our abilities to absorb the shining, joyful and benevolent thoughts that inspire and enlighten our

whole bodies, giving them a supreme health, incomparable to any life of exercises and healthy diet, but permeated with envious and filthy thoughts. The periods of sunny weather and gloomy cloudiness are going to switch, but if we furthermore have a good backup battery system using which we would be able to store the energy of inspiring thoughts, emotions and aspirations, and in hard times retrieve them within us, it would be enough to give us once more the power to live and love overflowed with a majestic and sound health.

S.F.8.19. The same can be said for the art of dining. And, over and over again, I remind you that the elementary tasks we perform in life, including breathing, sleeping, walking, and eating are so complex that they could always be learned anew. There is always a room for improvement, as perfection can never be reached. When asked about the secret of his longevity, Li Xing-Yun said how he “keeps quiet heart, walks like a pigeon, sits like a turtle, and sleeps like a dog”²²⁷¹, prompting us to think that in the harmoniousness of these elementary acts, which are nowadays undoubtedly usurped by our stressful lives and burdening, self-consumed thoughts, the secret of reaching the ages of ancient sage-like characters, whose lifespan the Bible and the Oriental scriptures estimate at quite often more than hundreds of years, may lie. Now, even if this art of perfectly harmonious performance of the most basic daily living tasks becomes attained in an enlightening moment, the time slips through and the fog of forgetting it strikes us, causing us to spontaneously fall from grace once again. After all, that is the story of our evolution: incessant ride between the states of balance and imbalance. So, when it comes to eating, we seem to always forget to cultivate the right attitude of mind while performing this task that is elementary for our survival. For, it is not only important to eat properly balanced food, slowly, while chewing it until it becomes all pulpy. The thoughts we invoke as cartoon balloons in front of our heads are absorbed within every cell of ours with every bite of food we take. “There is nothing from without a man, that entering into him can defile him: but the things which come out of him, those are they that defile the man. If any man have ears to hear, let him hear” (Mark 7:15-16); this is how Jesus taught. Truly, should our heart radiate with goodness and the desire to eat “for the world”, we would be able to transform even poison into cure, poison which, we know, is the dose, dependent on the context of its usage, as Paracelsus noted centuries ago. This perspective brings into question the trite adage that “what you eat, you are”, of which George Harrison sang in the midst of his launching a voluptuous attack on “crème tangerine and Montélimar, a ginger sling with a pineapple heart”²²⁷² and other tasty viands topped with the savoy truffle. It also puts us in the shoes of Chihiro Ogino, the innocent, eternally childlike soul ready to strike the adventure of her lifetime in the blink of an eye and make heavens smile all along the way, and not in those worn by her parents, who, remember, got transformed into swine as they could not resist the foody feast posed as a demonic trap before them, the piggish devouring of which marked the beginning of the adventure for little Chihiro in her attempt to save them from the cruel witch that enticed them²²⁷³. In view of that, even though I maintain that the basic nutrients of our diet, including carbohydrates, amino acids, vitamins, minerals and fibers need to be balanced before we can say that we have eaten healthily, I am also aware that the true nutritious value of food is, just like the true quality of artistic pieces and anything else in life, absolutely impossible to define. First of all, there is holism, that is, value in great, so to say. Namely, combinations of nutritious chemicals in food possess synergetic effects, so that, for example, many vitamins need specific minerals and oils in their

²²⁷¹ See Benjamin Hoff's *The Tao of Pooh and the Te of Piglet*, Egmont, London, UK (1992).

²²⁷² Listen to the Beatles' *Savoy Truffle* on *The Beatles* (aka *The White Album*), Apple (1968).

²²⁷³ Watch *Spirited Away* directed by Hayao Miyazaki, Studio Ghibli (2001).

“vicinity” to be properly absorbed by the body. In Nature thus one rarely finds concentrated chemicals; instead, they are almost always incorporated within complex mixtures, which through mostly yet undiscovered synergetic mechanisms maximize their nutritious efficiency. Isolating single ingredients from food and consuming them individually does not replicate the beneficial effects of a natural diet that involves simultaneous intake of an endless number of macro and micro nutrients, essential and seemingly useless alike. A recent study has, for example, pointed out that the regular intake of antioxidant nutrients as supplements rather than consuming them through the natural diet can have only adverse effects on human longevity and health²²⁷⁴. In view of this, the habit of describing food in terms of mere calories becomes seen as incredibly irrational, which is why I often spin in my head visions of kids from many centuries or millennia ahead in time in a human history museum, gathered around a dusty prototype of a treadmill or an elliptical running machine, which you could find in any gym nowadays, and laughing over the little screen showing how many calories were spent. This little screen would then turn out to be a neat sign of the times, signifying a primitive and overly simplistic way of seeing planetary ingredients, in this case food, that dominated one outdated human era of the past. And then, there is subjectivism, that is, value in small, so to say. Do you know what happens when farmers plant the same cultures on the same soil year after year, without replenishing its content by artificial means? After a while, that same culture ceases to grow. This is because every plant absorbs a specific spectrum of minerals from the soil, depleting it in a disproportionate manner. This is why planting pairs or multiples of different species which complementary deplete the soil of minerals is required to preserve the balanced mineral composition of the soil. The same is with humans. Unique metabolism of each one of us implies that different people need different ratios of basic and subtle nutrients alike. Feeding others with a diet which may be balanced for one of us may thus not work for all others as well. Finally, the evolution of our beings proceeds via facing problems and obstacles posed on the way of our development. If we were transferred to a perfectly sterile environment, our immune systems would slowly start to weaken and degrade. If we were to count all the cells that comprise our bodies, we would be amazed to find out that only about 10 % of them carry our uniquely human genetic material²²⁷⁵, with the intrusive genes outnumbering the host ones by more than 350 times²²⁷⁶; the greatest majority of cells that make up the biological entity that our organism is belong to various microbes that live in symbiosis with our human phenotype and without whom our lives would have never been made possible. When I conducted a research study focused on assessing the ability of antibiotics to eradicate pathogens internalized within mammalian cells, I was surprised to realize that these invasions by foreign bodies often make the cells sturdier and less prone to programmed cell death²²⁷⁷. In fact, with each new day, more evidence is collected in support of the hygiene hypothesis which states that intruding microorganisms spur the normal development of our immune systems and even have the power to rebalance those that tend to go awry and result in autoimmune disorders and allergies. Some people even believe that babies

²²⁷⁴ See G. Bjelakovic, D. Nikolova, L. L. Gluud, R. G. Simonetti, C. Gluud – “Antioxidant Supplements for Prevention of Mortality in Healthy Participants and Patients with Various Diseases”, Cochrane Database of Systematic Reviews 4 (2) Art. No.: CD007176. DOI: 10.1002/14651858.CD007176 (2008).

putting all things in their mouths do so instinctively, following the needs of their immune systems²²⁷⁸. How else could one explain this instinct, knowing that other senses already provide a lot of information for the baby, much more than taste bud cells can? Our immune systems continually boost themselves through facing invading intruders recognized as non-self. In view of that, just like the evolution of life has proceeded via resolving problematic situations, even the seemingly unhealthiest compounds may turn out to be healthy for us in the long run. Taking upon ourselves problems in terms of imperfect diet may thus present the healthiest choice we could make. In contrast, if we were to consume the most nutritious food we could find at every moment, our bodies might become too soft and sensitive to damaging effects of the environment. Just as steel strengthens through cycles of heating and cooling, known as quenching, during which the concentration of imperfections and defects known as dislocations within the material increases, serving the role of preventing dislocation slip and crack formation, which would have otherwise led to fracture, the same may be with every aspect of our beings; only an incessant alternation between states dominated by difficulties and hardships and states of peacefulness, tranquility and harmony may present the true and lasting way forward.

S.F.8.20. Through hardcore dedication to solving problems in life human intellect and emotional depths and powers of ours are developed. So, before I am about to stand in front of my students and expound things of great importance, I ask myself what it is that truly is the key to profound education, the one that opens up bright ways to enlightenment, fruitful being and spiritual salvation of the little ones. Standing there as a teacher, one bears a great responsibility. For, each one of those curious and glistening eyes staring at one presents a road forward, a road that will branch with many other roads, inevitably influencing the path of development of entire humanity and the planet itself. Hence, a great sense of responsibility dawns on me thence, resembling a cloud of strength, yielding a feel of intensiveness for everything I say and every movement I exert while on the lecture hall podium. For, every particular word, every sound I make has a chance to present a powerful impulse that may change the fate of the world, the way I believe. And yet, on top of this mental stream that pulls me inward, so as to reach harmony with the voice of my heart, I also know that talking about science only is not the solution. Focusing pupils' attention solely in one direction has a drowsing effect on them, enlarging the scope of their blind spot with the passage of time. So, I recall the prophetic words of Gregory Bateson: "The pattern which connects. Is it that teachers know that they carry the kiss of death which will turn to tastelessness whatever they touch or teach anything of real-life importance? Or is it that they carry the kiss of death because they dare not teach anything of real-life importance?"²²⁷⁹ Thence, I shift their attention, as if making a game of tennis out of myself. And they have to switch their attention left and right all of the time, inconspicuously keeping themselves awake. I achieve this by modulating the scientific stream of my talks with comments that touch ordinary things in our vicinity or trace the threads of common wisdom. Hence, you will hear me interrupting the scientific content of my lectures with improvised comments, stories or comically dancing movements that often call for a physical touch with people in the audience. For, after all, involving everyone in everything we do, starting up with one-man shows and ending up with round tables and circles where people hold each other's hands spurred by the visions of connectedness of everything through love and understanding is the aim. And to reach that aim, I use the most powerful weapon in the Universe: Love. I have heard many people telling me how one has to keep distance with one's students in order to preserve one's

²²⁷⁸ See Jane E. Brody's *Babies Know: A Little Dirt is Good for You*, New York Times, D7 (Jan 27, 2009).

²²⁷⁹ See Gregory Bateson's *Mind and Nature*, Hampton Press, Cresskill, NJ (1979).

authoritativeness. But I throw comments like these straight into the water. For me, love is the key. It is the way to unlock the secrets of self-responsibility of the taught ones. It is the ultimate way to make them truly understand why it is important for them to behave in accordance with the principles of intellectual and ethical conduct and respect science calls for. It is the way to invigorate them with passion that will stir the sailing boats of their intellectual journeys and beach them onto some undiscovered and exotic islands of knowledge. Needless to add, this very same method founded in love and love only and no method whatsoever, I apply as a parent too. Asked what my parenting method consists in, I have often said that when one's method is rooted in love, then there must be freedom all around it lest the love suffocate, and when there is this much freedom everywhere, then there can be no method, or else the method, if applied methodologically, would disperse in the air instantly. Therefore, in contrast to the mainstream school of parenting, behaviorist in essence and based on imposing gates and rules of an "if... then" kind, which confine the initially infinite child's world into ever narrower limits over time, all until a sense of confinement inside rigid habitual behavioral patterns becomes unbearable and mental pathologies begin to multiply, love fosters freedoms, opening up and uniting one's spirit with ever greater scopes of reality, vowing never to employ the same approach twice in search of a way forward, judging little, if any, and finding the best advice spontaneously, by simply empathizing with the child and watching the world through his eyes. In addition to this, *en route* to glorious freedoms of behavior and thought, the breaking of the predictable flows of logical thought is a strategy reserved not only for my classroom. Rather, talking impossible things, from the flowers marching to the Moon to raining pickles and oranges to rubber ducks slumbering on starlit rooftops folded by banana leaves, awakened only by the chatter of baseball hats, creating adventures quite like those that befallen Alice in Wonderland, is what I have done as a parent too in search of the gateways to freedom and, thence, creative expression and thought, yielding laughter and joy along the way, knowing that each moment that the child spends in bliss is a brick added to the Garden of Eden that will remain impressed deep inside his psyche, revealing itself as a magical source of inner delight and the way out of the tunnel of dare situations in life on a many later day, just as it was foretold in the final lines of Lewis Carroll's coming-of-age allegory²²⁸⁰. If all goes well, with pitiful sympathy they will look one day at the callous, stonehearted souls screaming from the inside and trying to cut the threads of love that tie these gentle child-men to the world, and will mind not what they are doing, saddened by the lack of that magical force, love, that they had been exposed to earlier in life, only whispering that good ol' "forgive them, for they know not what they do" (Luke 23:34) deep underneath their breath. This laughter after laughter and smile after smile aroused in the heart of a child will also provide for an inexhaustible source of inner joy with which the child, when grown, would bring life and holy spirit to countless deadened spheres of reality that need them badly, just the way I have aspired to do in the realm of science, trying to fertilize everything that is arid and lifeless in it with these and many other outbursts of inspiration and poetry. Therefore, to lower myself to the level of a child and begin to speak its language of amusement and wonder has stood for the pinnacle of education and parenting in my world. This explains why, with love in my heart and in the air, I intentionally do everything to lose authority, and yet by doing so, I manage to gain an ultimate authority. As Lao-Tzu summed it up millennia ago, "Intelligent control appears as non-control or freedom. And for that reason it is genuinely intelligent control. Unintelligent control appears as external domination. And for that reason it is really unintelligent control. Intelligent control exerts influence without appearing to do so.

²²⁸⁰ See Lewis Carroll's *Alice's Adventures in Wonderland*, Macmillan, London, UK (1865).

Unintelligent control tries to influence by making a show of force”²²⁸¹. For, as pointed out by Lord Acton, “Power tends to corrupt, and absolute power corrupts absolutely... The danger is not that a particular class is unfit to govern. Every class is unfit to govern”. God, for one, as all theologians would agree, oversees reality with this anarchic maxim in mind, handing over its powers, partially, to people and giving them the freedom to co-create the reality together with Him. Likewise, like dolphins holding hands in an undertow, I let myself be guided by the guided who go on to guide the guide in return, as co-creatively as it can get. In this process, as in a leisured game of tennis, I let myself lose everything, strewing the world with the shine of my spirit, losing all the games while accepting my imperfections, and thus becoming the voice of Love, of the divine zero, of the Evangelical poorness in spirit in front of which gates that lead to the kingdom of Heaven are crushed, silently guiding the little ones along ways of prosperity and happiness.

S.F.8.21. I remember sneaking as a kid, on a sunny June day, to a local blonde’s cottage house by the shore to watch the Wimbledon tennis tournament final between Boris Becker and Stefan Edberg. At the end of one point, Becker hit a fine slice close to the net. Running to reach it, but failing to do so, Edberg received such an acceleration that he could not stop himself anymore, ending up falling on the Becker’s side of the court. As Edberg kept on lying still, Becker started running towards him. Everyone thought that Becker was going to offer him a hand in a friendly manner and help him stand up, but instead of doing so, Becker ran by Edberg, jumped across the net, and fell down on the solid court just as Edberg did, to an apparent amazement of the spectators. Every now and then, I get reminded of this hilarious, but beautiful gesture whenever I am about to make an inspiring choice with my acts in life. Therefore, whenever I face an apparent weakness exhibited by someone else, instead of preaching and explicitly pointing out the way in which one should ameliorate the troubles one has gotten oneself into, I candidly play the game of mirroring. In such a way, I implicitly show that sympathy and compassion, rather than reason deprived of this soulful mirroring, are the key to becoming a true healer of the world. In that sense, whenever I can, I adopt the Becker’s empathic net-jumping strategy. On one occasion, I danced with a girl and upon her making a spin, she, being tipsy, tripped over, and me, being all in clouds, did not grasp her and save from falling. As everyone looked at her stretched over the dance floor, I had no choice but to drop down as quickly as I can and lay right next to her, head to head, for some time. As I lay down, I felt as if I entered a pure Cosmic silence of being, a distant starry universe, despite all the attention of the dozens of people on the dancing floor staring at us. But this is the true art of teaching. Placing ourselves on top of others is nowhere as helpful as leveling stances with fellow beings. This lofty approach often only elevates ourselves by showing off our knowledge or talents, and merely humiliates the creatures we ostensibly wish to help. Which is where comes the story of a man who lived in the mud and took it as a great offense when another man, an idealist by chance, gave him his hand to lift him up to higher, more sublime grounds²²⁸², showing us how naïve and blunt lifesaving approaches can have quite the opposite outcome from the intended should they only originate from haughty heights and resist jumping unhesitatingly and humbly into another’s shoes and trying none but to lay back and go with the flow in them. This is also how light becomes shone on the meaning of a cartoon that circulated across social networking platforms these days, showing a depressed stickman squatted in the corner of the room, hardly able to mumble but a few words to each question he is being asked, and another stickman coming forth,

²²⁸¹ See Kevin Kelly’s *Out of Control: The New Biology of Machines, Social Systems and the Economic World*, Perseus Books, Reading, MA (1994) for the Lao-Tzu’s quote.

²²⁸² Watch *Nostalghia* directed by Andrei Tarkovsky (1983).

having overheard the conversation, and patiently starting to build an improvised tent in the other corner of the room. As he was finished, he pointed at the dark hole created in its center as a place his depressed comrade should tuck himself in. After his friend entered into this dark hole, he entered through it as well and got equally wrapped up in the veils of depressing darkness, continuing to lie side by side with his friend. There it was, the key: not affectedly enforcing the process of change, but painting the environment all until it starts to resemble a mirror of the inner states of the suffering souls. And when we apply this magical tool of compassion in action, simply reflecting the feelings and moves of spirits we wish to heal can be infinitely instructive to them. It is as if we have held a mirror before them, in which they could clearly see the way they are, prompting them to jump out of their skin and thus avoid all the blind spots of their points of view and open the ways to improve themselves, to truly stand up in spirit and, all of a sudden, appear toweringly tall in their own fancy. Moreover, as you may have guessed by now, these guiding lines contain an implicit disparagement of all those phony healers with glossy smiles, polished manners and voracious hearts. For, being overly kind and polite is oftentimes the first sign that a person wants to obtain something in return or position oneself higher on the ladder of power and influence. But to act in beautiful and innovative ways, one needs to disregard the drives to act purely politely, and become a quirky, punkish creature that will readily bash oneself and do everything to raise the value of another creature in one's own and other people's eyes equally.

S.F.8.22. Charlie Chaplin's *The Great Dictator* is one of those movies that to a large extent owes its greatness to its timeliness. Namely, released in October 1940, way before the major atrocities were committed by the German Nazi regime, it could be said to have gone prophetically ahead of its times, airing a message that could have prevented unspeakable human suffering had it only been heard by those whom it had been directed to. This movie classic also holds a special place in the fight of the Serbian antifascists against the German Nazis who held the country occupied from April 1941 to October 1944. Namely, it was played by a group of witty local boys to German officers in the cinema Central in the town of Valjevo on the eve of May 15, 1942 instead of a German propaganda drama, *Wunschkonzert*, which the spectators had expected to see. The projection ended after only ten minutes with a salvo of boos, curses and even gunshots fired straight into the movie screen and was followed by a thorough search for the local suspects and their eventual arrest and prosecution²²⁸³. The reason why I am telling you all of this is because in this movie there is a scene in which the two fascist leaders sit next to each other and alternately raise the elevation of the chairs they sit on so as to appear taller than the other one. Now, that taller and heftier people naturally appear authoritative to others is something that everyone is subconsciously familiar with, although only a few are attentive of this as well as of a plethora of other contextual effects, including those derived from our physical appearance and body language, that define the light in which we interpret other people's actions on a daily basis. Most critically from the ethical standpoint, this insight reminds us of how easily ordinary people tend to exploit vulnerability, quite naturally and spontaneously, if only they are given a chance and a right set of circumstances to do so. Unfortunately, the metaphor depicted in Chaplin's wartime masterpiece is of the attitude that the majority of people nowadays adopt in relationships with other beings: raising one's value in the eyes of another. This is in spite of a greater message lying dormant within the broader frame of the very same movie and conveyed by the final twist of its plot, in which the Jewish barber and Führer swap places thanks to their looking like spitting images of one another:

²²⁸³ See Budo Novović's *Ko je, zapravo, Nemcima podmetnuo "Velikog diktatora"*, *Politika* (August 12, 2014), pp. 13.

deep down we are all equal, the brutes and the gentlemen, the villains and the heroes, the devils and the angels, for Nature can make the wickedest and the heavenliest of paths converge anytime She wishes to do so. And as the Christ claimed, “whosoever shall exalt himself shall be abased; and he that shall humble himself shall be exalted” (Matthew 23:12); for, “if I honour myself, my honour is nothing” (John 8:54). So, by working our best to self-righteously soar the value of ourselves in other people’s eyes instead of plunging like a child into the mysterious, pearly beauty that the swimming pools of human eyes and other details of the Universe hide, we may end up depleting our sources of creative expression, blankly, with a squared face staring at the world, wondering where all the inspiring strength and energy within us went. By raising the importance and relevancy of ourselves solely, we become like a mountain river, which, we know, never possesses the breadth and the strength of a river flowing at the sea level. All the creative energy in ourselves would thus tend to flow away with nothing much above us to replenish it except for the sparse teardrops from compassionate souls in our vicinity that pass us by sublimely, like clouds on translucent skies. Moreover, every time the idea of our being better than others comes to us, we should remember that it is a sign of the ills of competitiveness colonizing the inner spheres of our psyche as well as of our subtly and inconspicuously sowing the seeds of destruction, not sustainment, across the soils of reality, the act which we will be sooner or later held responsible for, be it by the stormy gods at the pearly gates or, more probably, at the miniscule courts assembled by the little worms dwelling in the darkest depths of our own consciousness. But by throwing lights on the imperfect and frail elements of our personality, by humbly bowing our views in front of the beauties of the world, we become like a sea, lying below everyone else, yet letting all the rivers around us freely flow thereto. You might, therefore, often hear me speaking nonsense and pure trash, using unfinished sentences and broken grammar, and by the way I look and behave, you might never say that I am a serious academic professional. This is because I find it beautiful to disgrace myself. That is where a key paradox lies. For, only then can true grace get to shine straight from our heart. For as long as we are lofty and pretentious, trying as much as possible to prove ourselves, we spontaneously block the streams of love from our heart, the love that incessantly knocks on the door of our being asking to get out and wash the face of the world with its blessing light. As Lao-Tzu said, “By placing oneself at the last place, the sage finds himself at the first place; he considers his body as a nullity, and yet it becomes preserved; does not he fulfill himself just because he does not live for himself” (Tao-Te-Xing 7)? This is the attitude of a real hero, the one in whose heart one can hear the music of sea waves crashing against lush coasts during the lively encounter of an ethical strength and a poetic beauty.

S.F.8.23. It is the basis of ethics I may call humanely divine to never elevate and praise oneself in eyes of another. The ethics instilled in common people’s hearts is, on the other hand, such that it inconspicuously navigates the ship of their beings towards proving their own relevancy and greatness in other people’s eyes, while most of the time failing to realize how these ships of their outlook and esteem thereby become beached and crashed in some shallow waters. The true ethics, however, follows the opposite route: lifting others up in our own eyes. Sanely looking at the world from our own eyes instead of being preoccupied with leaving good impression in eyes of other people is in concert with the path of Love I have proposed. Whereas the humanely divine ethics makes us discreetly dwell within our own essence of being and yet radiate with sparkles of beauty and grace all around us, the ordinary human ethics predisposes us for exhibiting self-conscious traits that block our free and inspiring expressions and make us frozen with fear and negligence. When my fellow PhD students recommended me to be the student regent and placed my name on

the voting list, I never voted for myself. One day, the closest candidate came up to me and said that the result was tied. “I voted for myself, but you did not vote for yourself”, she said, adding that “you should vote for yourself and win the elections – it’s as simple as that”. “No way, I never vote for myself”, I immediately thought. Of course, in this deeply immoral world wherein notifying people with a plea to vote for one’s own entry at a competition is seen as completely normal - as opposed to the only ethical way of asking them, if possible, to check out all the entries and vote for the one which they liked most, regardless of whether it is one’s own or not - this decision of mine has caused a substantial amount of jaw dropping in disbelief. In the end, however, as it usually happens, a reward came along a rather unexpected route: the two of us were chosen to share the presidential post and it turned out to be better than I would have ever thought. While I, as a foreign student, was readily aware of problems experienced by foreigners, she was more familiar with the perspectives of domestic students and we complemented each other’s points of view very well. Half a decade later, I would be nominated by three different postdoc fellows and elected as the president of the biggest and oldest postdoctoral association in the US, while similarly refusing to vote for myself as a sign of grace and courtesy to other nominees. Fast forward eight more years and I, as an assistant professor in my second junior faculty post in the US, would be nominated by my colleagues for a senator and the representative of the department and the school, in which case I would also not vote for myself, yet I would win the elections. Hence, year after year, decade after decade, I do not give up on the principle of never raising one’s value in other people’s eyes and I find it gravely unethical to see people submit appeals for rewarding themselves. I would instead much rather follow the path of diminishing my own value in eyes of other people. So I rather knock my knowledge down and act as an illiterate chipmunk than present myself in a solemn and self-defensive light. Many of those people get the awards in the end, but I have never sought after such ways of recognition. Mine is the way of Lao-Tzu, who said: “One who tries to shine dims one’s own light”. It is not by revealing oneself, but by keeping one part of one’s essence concealed within oneself and another part sent away with the winds of the world that the sage, following the Way of Love, transforms oneself into a boundless source of love and beauty.

S.F.8.24. Why would you want to get credit for anything you do, I incessantly ask people around me, including myself whenever I become overwhelmed with the desire to greedily chase after things in life, grab them and proclaim “mine, mine, mine”. I have felt the blessings that fall on me from the Heavens above like gracious flowers or snowflakes as I release my claims for things in this life and let Nature distribute the goodness in whatever way she prefers. I know that, in essence, we are all part of that great One. Our entire planet, Gaia, is like one creature, and all the sickening emotions and malign intentions that strike us could be thought of as reflected in a global state of illness which she will eventually fight against by its own, natural means. People in scientific circles are often in dispute over who is supposed to get more credit for their achievements, claiming limited authorships and patent rights while forgetting about the fact that every tiny discovery is always made on the back of entire humanity. Whatever the beautiful things we see in the world, they are always, more or less, existent owing to our standing on the shoulders of giants, that is, on the pedestal of the preexisting foundations of creativity of our civilization. With their diligence, innumerable scientists have opened up the ways for the actual discoverers to follow and in most cases serendipitously arrive at some treasures along the way²²⁸⁴. For this reason, that is, because economic wealth is the product of work of innumerable human generations, the anarchist communists claimed that any single person’s economic contributions are immeasurable and used

²²⁸⁴ See Royston M. Roberts’ *Serendipity: Accidental Discoveries in Science*, Wiley, New York, NY (1989).

this argument to topple down the unavoidable injustices upon which the capitalist societies were built. It is thus that we would arrive at the logic of Pierre-Joseph Proudhon's answering to the question "What is property" with a simple and elegant "Property is theft"²²⁸⁵. Jean-Luc Godard made a similar point when he suggested a simple solution for the economic crisis in the EU in the early 2010s: "The Greeks gave us logic. We owe them for that. It was Aristotle who came up with the big 'therefore'... If every time we use the word therefore, we have to pay 10 euros to Greece, the crisis will be over in one day, and the Greeks will not have to sell the Parthenon to the Germans"²²⁸⁶, so he said, lucidly demonstrating the absurdity of the concept of private intellectual property, a.k.a. patents. And this is even without invoking the radical argument proposed by the French philosopher, Henri Laborit in Alain Resnais' *My American Uncle*: "We must understand that, at birth, the brain is still immature. Therefore, during the first two or three years of existence, a human being's experience of his surroundings will be indelible. It will play a very important role in the evolution of all his future behavior. Above all, we must come to recognize that what affects our nervous system, starting at birth, perhaps even in the womb - the stimuli acting upon our nervous system - comes essentially from others. We are nothing but others. When we die, these others, interiorized by our nervous system, these others who have formed us, formed our brain and filled it are going to die". "You... are everybody's", is, thus, my frequent reply to my son's claiming toys for himself at parks and playgrounds, implying that, to one wholly blended with the world, everything that is one's is everyone else's too and dropping a gentle reminder to a casual overhearer of my message that we all form a single web of life where who we are is defined mostly by what we have given to another. Therefore, in view of the ludicrousness of claims for the individual ownership of ideas, I am free to ask the following question: what makes you, the scientist, think that marvelous people who had built the preexisting knowledge, the tools and the architectural infrastructure, which are now the bases for your work, do not deserve any credit? What about the weary workers who laid bricks of the building in which your research takes place and cemented them with their sweat and blood, or those who dug the clay that these bricks were made of from the ground with their bare hands? What about the parents and other guardians of creative people, who, like my Mom through the harshest times conceivable, nourished their body and spirit and made all the discoveries that they would later arrive at possible? What about a person that is now wholly erased from your memory but who once told you an inspiring story and opened a tiny track of thought in front of you, which you, subconsciously, stepped on and continued to expand, all until it enlarged itself up to phenomenal limits and became a magical avenue of stars? Of course, should we start searching for anyone who contributed in any way to any work done by anyone of us, we would eventually have to include the whole humanity and every single creature that has ever belonged to it. And, as you may guess, not only humanity, but the entire evolutionary backbone that preceded us and the entire biosphere that supports the existence of humanity would have to be squeezed on this honorary pedestal as well. A whole new perspective would be opened if we were to recollect the neuroscientist, David Eagleman's comparison of the conscious part of the human mind with a newspaper reader about the gazillion of events that occur in the world, that is, the brain, on the daily basis, who happens to, quite irrationally, take credit for the thoughts that have been churned out as the end products of this myriad of subconscious neuronal interactions²²⁸⁷. That the whole notion of I, worshipped by every bubble of ego in this world, is far less involved

²²⁸⁵ See Pierre-Joseph Proudhon's *What is Property?*, Create Space, Scotts Valley, CA (1840).

²²⁸⁶ See Fiachra Gibbons' Jean-Luc Godard: 'Film is Over. What to do?', *The Guardian* (July 12, 2011), retrieved from <http://www.theguardian.com/film/2011/jul/12/jean-luc-godard-film-socialisme>.

in findings praised for their originality than we normally tend to think becomes crystal clear from one such analysis of the causal web in which the elusive I has been caught. A powerful ethical message derivable at this point is the one telling us that not only does the sustainability of us as individual creatures depend on the wellbeing of everything that surrounds us, including the unthinkably small things that routinely pass by the rays of our attention unnoticed, but our own existence also has its main purpose in creative engagements to edify not I, but another. In this context, we may as well highlight the words of Ludwig Feuerbach: “The single man in isolation possesses in himself the essence of man neither as a moral nor as a thinking being. The essence of man is contained only in the community, in the unity of man with man - a unity, however, that rests on the reality of the distinction between ‘I’ and ‘You’. Solitude means being finite and limited, community means being free and infinite. For himself alone, man is just man (in the ordinary sense); but man with man - the unity of ‘I’ and ‘You’ – that is God”²²⁸⁸. However, we still live in a society in which people crave to be read, listened, famous and loved, but are less prepared to carefully read, listen and focus their strengths and shed the graceful stardust of their love onto others, which would make them feel blessed and made suddenly famous by the twinkling stars above. For, “notwithstanding in this rejoice not, that the spirits are subject unto you; but rather rejoice, because your names are written in heaven” (Luke 10:20), as the Christ pointed out, reminding us that not in worldly recognition, but in those silent and unnoticeable praises that cherish us from the Heavens above, lies the true reward for our deeds. And me, I have always had St. Nicolas, the great saint, in his throwing gifts for the little children through the windows of their homes and then running as fast as he could²²⁸⁹, as my ideal in life. In fact, this habit of his was later used for making up the whole legend about St. Claus (short for St. Nicolas), a good white-bearded man who lives in the North Pole and throws presents from the sky to the chosen ones on the Christmas Eve. Hence, I am all for the same: disgracing myself any time I can, and thereby lifting up others.

S.F.8.25. So, respect your tradition as much as you can. Respect it with all thy heart. Do not stray away from it, or you will end up like a kite released from the thread that kept it tied to its bases on the ground, flown away, reaching the stratosphere and ending up in the violet range of cosmic loneliness. Should we do that, we would be like David Bowie’s Major Tom who lost the contact with the ground control and was left to dwell alone in his spaceship in the outer space²²⁹⁰. In our search for unrestrained freedom of expressions, we are always tempted to give up on the parental love and respect of the neighbor and the entire social tradition in light and labor of which we have been brought up. But then, if we are unfortunate enough and succeed in doing so, we would merely enter an autistic bubble from which we would never be able to radiate with enchanting love to the world. Although we may then attain the freedom we craved for, sadly enough, we would most probably struggle to go back, to substitute some of this unconstrained freedom with connections of love and respect that would tie down our inertly and meaninglessly floating balloon of being. No wonder that a decade after his epic song about Major Tom was released, David Bowie wrote its sequel, named *Ashes to Ashes*²²⁹¹, in which he metaphorically claimed that invoking happiness in human circles has to be in the end balanced with the cosmic joy, should we use the

²²⁹¹ Listen to David Bowie’s *Ashes to Ashes*, RCA (1980).

aforementioned dichotomy proposed by Jovan Dučić²²⁹². Whereas the former is found in sharing the common fate and feelings in empathy with fellow humans, the latter exists in the moments of wonder, when we look up into the night sky filled with stars and galaxies. In the end, these two poles could not exist one without the other. Immersing our eyes into the wonders of the starry sky and the glistening lights of the discotheque will be vain and vacant without incessantly inhaling love for the people around us with every move we make. As we jump into all the vintage clothes of ours and prepare to go out, we should understand the elementary concept of it – bringing into life something that once belonged to someone else, never revealed to us, carried as part of his/her personality. As we put our vintage sunglasses on, we should truly feel as if we are looking at the world from the perspective of another, of someone who existed or still exists with human feelings and passions that are just like ours. Whenever we eat a banana, we should also think of an old farmer who may have picked it from the tree, with sunspots, dry wrinkles and droplets of sweat on his face, but a sunny smile too, and our eating experience would be enlightened thereby. I know that you may feel spiritually humiliated and depressed when you notice that, despite the creative sun shining within yourself, looking into eyes of another leads you to display a natural dose of trustful reflectance of their emotions and intentions and thus “lose yourself” a bit, but this is something intrinsically human. Should we look after erasing this natural empathic drive within us, we would, as I say, end up emptying ourselves from one of the essences of happiness. To be one with others, to suffer and change with all the feelings of our fellow beings is one pole of the Way of Love, whereas the other truly comes from our own heart, from meditatively plunging into the secret voices inside and living in concert with them. It is the balance between compassionately limiting ourselves and yet being free as a bird that is the essence of creative being in this life. It is the flight towards the stars of the white seagulls of Wonder within us and the statuette of Love with open palms spread as if saying “I am here and forever will be, staying with you, through harsh and brilliant times alike”, that we ought to tend to express in everything we do.

S.F.8.26. I remember an enchanting story an assistant professor from my college told us one day at a class. He took a blank piece of paper and drew two dots on its ends. Then he said, “Look, if these two dots were two creatures living in a two-dimensional world, they would think that they are thoroughly separated from each other”. “And for us, looking at them from a three-dimensional world, they seem so as well”. Then he flipped the paper so that the two dots touched each other. “Look now”, he said. “In their two-dimensional world nothing has changed, but we, from a three-dimensional perspective, see that they are now connected to each other”. The enlightening message was clear: what may seem as separation from one point of view may turn out to present an indivisible unity from a higher-dimensional perspective. One example that may come to mind now, from the distance of a couple of decades, as I think of a dancer who is said to have danced in every dimension when most people dance in three, is that of the Ising model from solid state physics. Namely, according to this primitive model of phase transitions in materials, as proposed in 1920 by Wilhelm Lenz, who gave it as a problem to his student, Ernst Ising to wrestle with, where each site in the crystal lattice is represented with a spin up or a spin down, no phase transitions, where all spins would be oriented in the same direction, are possible in a one-dimensional system. Although Ising originally extended this insight to any multi-dimensional systems, this turned out to have been an error, given that we know now that the transition is possible and relatively easily solvable for a two-dimensional system and is also possible for any higher dimensions, despite the model’s being not integrable and insolvable for a physical system with the number of dimensions

²²⁹² See Jovan Dučić’s *Cosmic Joy* (early 20th Century).

higher or equal to three²²⁹³. Likewise, looking down from our spatially three-dimensional world onto planar, two-dimensional pieces of matter can lead to the discernment of extraordinary properties much more frequently than we may casually expect to be the case. For example, whether we have in mind single atom thick layers of graphene, silicene and germanene, of hexagonal boron nitride, of molybdenum disulfide or other metal chalcogenides, common to them all is the exhibition of an array of peculiar properties nonexistent in their bulk, three-dimensional forms²²⁹⁴. In other words, losing a dimension may mean gaining new dimensions in this world of ours where more is often less and less is more and where the more we give, the more we have, while the more we wish to collect and retain, the more disvalued we are in the currency of the vault of the heavens, I deem with thoughts still resting on this magical existence of everlasting connectedness between everything in the eyes that see it all from a higher-dimensional ground. I am now also reminded of a guiding line that Buzz, a virtual Cherokee friend of mine once whispered to me: “The most direct connection between two entities is a straight line”. This guideline has ever since been raised in front of my consciousness as something helping me to overcome my satellite-like tendencies to overly respect others in communication and thus suffocate the creative shine that arises from the silence of my own being. However, as we are living in a three-dimensional space, we should know that straight line on a two-dimensional map never presents the closest connection between two points. In order to draw the shortest and the most direct possible path we need to follow a slightly curved line on the map. The message is clear again: the most direct connection between us and the aims we want to attain in life leads through places and situations that make us wonder if we have gone astray. And as we roam through the forest of life, somewhat similar to the way days and nights cede each other places as the earth rotates around its axis, the moonlit sense of being lost and the sunshiny feeling of being found alternate on the surface of the blue globe of our mind, instilling in us awareness that one without the other could not exist. Every once in a while, thus, we become illuminated by a sense of mysterious connectedness with higher spheres of being, feeling as if we have become a dot which has been brought into contact with millions of other dots scattered all over the papery planes of the Universe. By glimpsing a natural detail that unexplainably captivates our attention, we may feel as if parachuted through a strange opening in the spiritual substrate of reality into a faraway domain and instantly linked to a strange source of nearly extraterrestrial, supernatural insights. In those moments, we may feel as if these details of the world hide a secret door which opens channels for an enlightening cosmic energy to flow into our open mind and heart. Quite often, such illuminating insights are triggered by analogies, whereby we recognize a symbol or a pattern in our surrounding that invokes a touching remembrance in us. For example, as I looked up, at the peak of the Egyptian Museum in San Jose, the symbol I glimpsed on it brought back a wave of dreamy memories I had attached once to the virtual adventures of Zak McCracken, one out of a plethora of carriers of precious signs in my life, which, I have known, I would sooner or later use to navigate the story of my life in the right direction. Recognizing such signs in the context of cosmic Wonder and Love laying out roads to enlightenment within my being, I would feel as if my heart burst into millions of pieces, yielding a channel in its center, the one through which an immense spiritual energy can enter my being and feed it with its light. Needless to add, to make our being receptive for such insights, peace and love are to be cultivated in our heart; for, heavenly insights are powerful tools and heavens, themselves,

²²⁹³ Petar Tadić, Yale University, Personal conversation at the Zenta Vučinić winery, Rogami, Montenegro, October 17, 2023.

²²⁹⁴ See Mingsheng Xu, Tao Liang, Minmin Shi, Hingzheng Chen – “Graphene-Like Two-Dimensional Materials”, *Chemical Reviews* 113, 3766 – 3798 (2013).

would not want those who are unprepared to responsibly utilize them to ever get hold of them. This is why the purity of our heart is a prerequisite for our becoming a channel through which the healing heavenly energies could be redistributed from the higher planes of being through the earthly empires of existence.

S.F.8.27. Have you ever tried playing and working for the sake of saving the world? Eating for the sake of becoming powerful and yielding majestic guiding lights to the world? Scoring the points in a basketball game for all sides to cherish and thrive? If we were to succeed in setting our mindset to this higher plane of seeing the world, from which we would realize that we are all one with Nature, the limits of our self would be expanded, all until it encompasses everything we consider as the world. Then, although our beings may grow old, the world that we are will continue to develop into an ever more beautiful and sanctified whole. This is when our worldviews become infused with the sunbeams of pure and ultimate happiness. And as noted by the Serbian poet, Duško Radović, “Before reaching out for happiness, check out if you are not already happy, for happiness is tiny and inconspicuous, and many may not recognize it even though they have it”. For, as this coiner of some of the heartiest aphorisms of my youth, but also a political dissenter, who, like me, got fired from his most notable professional post because of being a loud criticist of the powers that reigned over him, would continue, “There is always better than Here and That is always nicer than This. We are unhappy with what we have and what we are. Our happiness is enjoyed by others, who may not even be know it”²²⁹⁵. Then, I remember strolling along the streets of the Mission District in San Francisco, after a pretty desperate and inefficient week at work, and glancing over a verse ingrained on a sidewalk brick, saying: “The truth is laughing his face, but he does not realize that, remaining a disbeliever, as he ever was”. In one of the final passages of Gospel according to Thomas, the disciples ask the Christ when the kingdom will come, and Jesus replies: “It will not come by watching for it. It will not be said, 'Look, here!' or 'Look, there!' Rather, the Father's kingdom is spread out upon the earth, and people don't see it” (Thomas 113).

S.F.8.28. If you are a muse, inspiring other people with simple things, with a few guiding stars thrown out with the miraculous way you smile, move, dress or speak words of truth and love, why should you be productive in life? There will be other people, those inspired by thee, that will do all the work. Although I have been writing plentifully in my life, I have been also surrounded by fellow beings that were often heavily criticized for being little productive, crestfallen and lazy. But just as the Christ readily defended Mary of Bethany when her sister accused her of not helping her and merely sitting there and enjoying the Christ’s presence (Luke 10:38-42), I too always stand up in the defense of my fellow beings, as seemingly unproductive as they are, for all I have ever written could never be possible had those creatures not existed. It was them that sparked the mysterious engine of creativity that moved the wheels of that starry train of divine thoughtfulness inside of me. Hence, whatever I manage to bear out of me in terms of artistic pieces will be theirs as much as mine. Sometimes knowing that our progenies and the beings we invested much love into are the ones who will touch the stars instead of us can be the source of even greater satisfaction than if we were to fulfill the same task by ourselves. For, as I say, if there is anything more enchanting than being immersed in the starry sky on a summer night is being immersed in someone else’s eyes as they contemplate the mysteries of being while floating across the deep and starry sky.

²²⁹⁵ See "Ućutkan" je zbog jedne rečenice, a hiljade drugih citiramo i danas, B92 News (June 3, 2019), retrieved from https://www.b92.net/zivot/vesti.php?yyyy=2019&mm=06&dd=03&nav_id=1550084.

S.F.8.29. Everyone is an antenna! The sum of all thoughts, emotions and aspirations that swirl within us at any given moment are being radiated from our mind, reaching vast cosmic distances and penetrating on the way creatures that comprise life on Earth. In that sense, each one of us is a Radiohead in the real sense of the word. With every moment of our lives, with every idea and mental vibration that arises in our minds, we are invisibly and imperceptibly tuning the radios of our minds to the frequencies that may, for example, correspond to: angry and raging heavy metal sounds; lustful, wicked and druggy hip-hop beats; debilitating and mentally fixating repetitive drumbeats; the colorful and wavy music of beautiful and inspirational thoughts; visionary music that shines forth with love that purifies the blue skies of our minds; or the silent hush of the streaming of Earth through the cosmic space twinkling with subtle leaps of joy of stars that are everywhere around us. In the final passage of the famous James Lovelock's book in which he identified the whole planet as a giant being, Gaia, the author envisions future days in which children will be sitting next to the sea and amusingly absorb the mind waves of the nearby dolphins in their enchanting play. "An age will come with clairvoyant conditions similar to those prevailing in ancient Atlantis"²²⁹⁶, Rudolf Steiner offered us a similar message in one of his contemplations. Hence, maybe days to come will give rise to hypersensitive creatures that will be able to consciously tune to the invisible waves of human emotions and thoughts that constantly crush along the seashores of our mind. To an enlightened creature from one such age all of us nowadays might seem as blind, ignorant and obsolete as we could be. Of course, even today hidden amongst us are supersensitive creatures able to discern the feelings of souls that they are bonded with on the spiritual plane even when thousands of miles of physical separation stand between them. When my Mom was placed in the tube of a monstrous machine and then handed over a diagnosis that gave her only a month or so to live, I, sleeping soundly on the other side of the globe, entered a dream in which I was surrounded by an apocalyptic flood of firmamental tears that threatened to sweep the whole earth away, while the Sun eclipsed over my head and all submerged into the darkness of a doomsday. On a bit brighter, though not necessarily optimistic note, at the start of every World Cup I could sense the feeling of excitement and hope traversing the globe, but as the event progresses and countries are eliminated one by one, saddening millions, this initial positivity cedes its place to a sense of bitterness, disappointment and regret, all of which the antennas of my being tuned to detect the finest waves of psychic energy respond to. In those days, all I could dream of is a whole planet enwrapped by the waves of positivity emitted from the radio-heads of our beings, the thoughts of whom have the power that surpasses in its intensity that of even the most influential acts imaginable at times. Of course, some might say now that humanity will never become fully devoid of malign desires and vicious intentions, while recollecting visions from George Orwell's 1984, wherein a thought police is chasing all those who have committed the so-called "thought crimes" by spinning wrong and illegal thoughts inside of their heads, as a proof. Be that as it may, we will leave the potentials for one such war in the reign of human minds for future generations to discuss. For now, having swum for too long amidst waves of greed, jealousy and hatred, we may only ask ourselves: what kinds of waves does the antenna which is one's heart and mind combined emit? Is it the sound of pleasant and light harmony or those are flashes of anger and destruction coming out of the dark tempest that severs our mind? It does not require extraordinary sensitivity to sense whether a gently floating lightness or rupturing disharmony are being emitted from the radio of our mind. And once we establish what it is we can embark on a

²²⁹⁶ See Rudolf Steiner's *Reading the Pictures of the Apocalypse*, translated by James H. Hindes, Anthroposophic Press, New York, NY (1993), pp. 82.

great voyage of mastering the art of maintaining these spiritual radio waves always at the right wavelength lying at the boundary between tranquility of a placid sea and joyful waviness thereof, between rock and roll, so to say. What the sacred man knows is how to set his mind to the right frequency that will, unknowingly and inconspicuously, excite the mind machines of the surrounding creatures to turn their wheels in the direction of the right thoughts and intentions. Hence, a true sage need not say anything, as long as he sets his Radiohead to the “good vibrations”. “Wise man does not know many things; who knows many things is not wise... many words exhaust; therefore, lean to the core” (Tao-Te-Xing 81...5), as Lao-Tzu mentioned. And great Sirach would certainly add that “the heart of fools is in their mouth, but the mouth of the wise is in their heart” (Sirach 21:26).

S.F.8.30. Whine & dine! That is the habit of many people during their lunchtimes: unending gossiping and criticizing others. However, an act of eating paired with the thoughts of anger and disruptiveness turns what could have been a blessing and healing portion into a poisonous and intoxicating meal. Nowadays, in the era of an unprecedented abundance and comfort of living, they seem to have forgotten about the importance of being grateful for every bite of food they are given a chance to take. Instead, insatiability and greed have crept into the mind of the modern man, which is why I often (via the theological meaning of the co-creational thesis, e.g.) call for a partial return to the ancient way of communicating with the underlying divine force of Nature with, more or less, every breath we take and every act we perform. After all, logic and science can never be able to prove with an absolute certainty that anything we do is perfectly safe and beneficial for the world. There will always be a sprout of uncertainty, inviting us to keep our mind focused onto a prayerful wish that the things we do turn out to bring good to life on the planet and pursue the evolutionary path of informational and spiritual progress. The importance of this uncertainty for the purpose of truly improving the world and our inner qualities is, as I said, largely neglected today. And once we recognize its importance, the beauty of an attitude of balancing knowledge and uncertainty, logic and belief, science and faith in everything we do dawns upon us. Hence, when I become spontaneously invited during conversations with others to offer my critique of fellow beings, I immediately invoke this uncertainty in my mind, most strikingly described in the Biblical book of Job. I know that criticizing others serves the purpose of elevating the virtues of ourselves in eyes of another, and achieving the latter can be most easily done by diminishing the virtues of others. And I know that only by forgiving others, our own sins, which most of the time we are not even aware of as they lie in the blind spots of our consciousness, invisible to us, will be forgiven, by our self and by Nature together (Matthew 6:14-15), thus purifying the eyes of our soul. But these “clever” critics look to me like clouds formed by ascending droplets of water, inevitably falling down to earth at one time or another. Unlike them, those that diminish themselves by pointing out their own demerits and mistakes and elevate others by realizing the patterns of beauty inside of them become like seas, solemn and enduringly graceful, accepting all the rivers that flow into them, just as taught by Lao-Tzu: “Who knows how glory shines, yet loves disgrace, nor e'er for it is pale, behold his presence in a spacious vale, to which men come from all beneath the sky. The unchanging excellence completes its tale; the simple infant man in him we hail”²²⁹⁷ (Tao-Te-Xing 28). I have also learned that people are most fervent in criticizing bad habits that either they, themselves, exhibit or have somehow managed to overcome during their lifetimes. In other words, it seems that the most striking vulgar traits recognized in others are reflections of the

²²⁹⁷ See Tao-Te-Xing 28 in translation by James Legge, available at <http://www.sacred-texts.com/tao/taote.htm> (1891).

ones we have kept concealed within ourselves, which means that every such critique has to be hypocritical to a certain extent. “Man laugheth scornfully at man; and yet his fellow ape is mirror of himself”, are the already mentioned words of perennial relevance proclaimed by Abbot Stephen in the epic work of Montenegrin literature²²⁹⁸. In addition, we never know the historic background of the ignorant and destructive behavior of people, which would in many cases explain their irrational actions. Also, by being confined into single cognitive perspectives, our worldviews are crammed with blind spots. Just as we are never able to see our eyes that see the world, many ignorant and beautiful features of acts and judgments of ours alike are directly invisible to us. So, although I am aware that pointing out bad habits can be educative, I try my best to look at the bright side of other people’s personalities. Because, after all, each one of us carries a permanent and inextinguishable sun of the soul shining within, and it is the clouds of dark and ignorant thoughts and disharmonious, angrily flashing and fearfully freezing emotions that hide it and make invisible to others. But with the spaceship of our graceful reason able to penetrate through these often thick clouds and winds that tend to drive us away from our course aimed at encountering others with a kindhearted sincerity, we can make the way through and touch the warm and wonderful sun of the spirit of even the gloomiest and the most hopeless eyes of another.

S.F.8.31. Whatever we do in life, let us not ever forget to place a glow of love for others implicit in all our words, acts and thoughts. Ludwig Feuerbach, who interpreted religion through the eyes of lawbreaking love, rather than through the niche of what seemed to him as merely dogmatic and judgmental concept of faith, thus observed the following: “Love is not only objectively but also subjectively the criterion of being, the criterion of truth and reality. Where there is no love there is also no truth. And only he who loves something is also something - to be nothing and to love nothing is one and the same thing. The more one is, the more one loves, and *vice versa*”²²⁹⁹. Hence, only when we strew the soil of our mind with the seeds of intentions that aim towards bringing happiness and enlightenment to others can our steps and the paths we take in life be watched over by angels. When I was juvenile, I had millions of starry wishes, many of which came true, but only because each one of them was placed on a pedestal of my devotion to others. I gave myself a vow that the fulfillment of these dreams would be for the sake of enlightening me who will then enlighten the world with all the gifts of life I would receive along the way. All the traces of beauty I have seen in my life were just the signs of so much having to be given to others. Still, the unconditional love is the greatest thing I have been taught. Love that has reservations as to when it is going to switch itself on and off, conditioning its shine depending on external circumstances, is not an ultimate, cosmic Love, as I have claimed, but a forged copy of the latter, drawn from the memory and workings of our brains. With respect to this celebration of unconditional love, Selvarajan Yesudian refers to the image of God who is glad for a single sinner converted to faith more than for a hundred of obedient “sheep”, claiming that “(the real religious follower) will kneel in the dust in front of the one who said ‘Lord, forgive them for they do not know what they are doing’ (Luke 23:24), but will turn its back to those who want to present God as the one who revenges and damns, and not as a compassionate God of love”²³⁰⁰. Henceforth, God that demands to be loved, as many people who literally interpret the ancient scriptures believe it to be the true

²³⁰⁰ See Selvarajan Yesudian and Elisabeth Haich’s *Raja Yoga*, Unwin Hyman, Boston, MA (1980).

message of many religious teachings, including the one emanating from the Old Testament, cannot be the real God, as I have always claimed. Although Mozart understood that trust and love open gateways to absorption of the divinest signs and was, thus, known for its habit of asking people to first confirm that they love him before he would begin to play to them²³⁰¹, the only way to exhibit true godliness in the world is to let the waves of unconditional love emerge from the depths of our soul and wash freely over all, from the thankful and meek to the hateful and insolent, with each act of ours. For, only after we let the light of our spirit land onto every earthling, illuminating the paths to happiness without asking to be loved in return will we become the ultimate ideal of divine being – a Sun on the face of the Earth.

S.F.8.32. Have you ever noticed how waves of pleasance crash on us when we quote some people, while we feel as if itchy needles penetrate through us as we quote others? Some people are simply great to quote, whereas some are not so. Having wondered why that is so, I came to the conclusion that the secret might lie in their implicit intentions, and not in the words or phrases that they used. If one used a phrase with an intention to beautify the world, our repeating or paraphrasing it will somehow leave us surrounded with enchanting feelings, whereas if one was intending to beautify oneself and vulgarize the world, our reference to the given phrase will leave uncomfortable impressions in both ourselves and others. This explains why truly genuine, magnetic and powerful spiritual personalities spontaneously invite people to imitate their voice, gestures and movements. After spending some time with them, we may feel as if we are quickly adopting elements of their behavior. With it, we inconspicuously build the towers of worldviews that would highly resemble those of the creatures whom we were impressed by and whom we thus spontaneously imitate. This explains how a simple being changes the world. Words are not necessary. They are secondary. Beautiful intentions are what truly matters. The ocean of the deepest feelings and aspirations upon which the ships of our thoughts and acts drift hides the secret of our success in truly improving the face of the world.

S.F.8.33. Still, many people in my native country have reminded me that clear explicit messages are necessary in saving retarded minds from sinking ever deeper into swamps of stupidity. When I look back at people I used to encounter on daily bases during the times of my upbringing and early youth, I cannot help but agree. In fact, even my overly poetic expressions in this and other books of mine probably have their roots in my growing up in the deeply primitive society with people poisoned by hatred and crudity, in which smile was seen as a sin and in which a few nice words of kindness and love were as rare and precious as diamonds in the dust. Hence, what may seem as pathetic, stale and a pure platitude from the perspective of a well educated, spiritual and developed social surrounding may be efficient in improving uncivilized and savaged societies dominated by an intellectual and emotional opaqueness and animalistic habits. In other words, as previously inferred, there are no rules as to what constitutes the most favorable way of exhibiting creativity: disgracing and diminishing the importance and beauty of our deeds on their surface, but keeping the hidden foundations thereof washed in bright intentions and emotions, or tending to beautify all, the surface and the roots alike. But one thing is for sure: whether we look after conveying meaningful explicit messages in communication or not, the essence always lies in the invisible rays of love, grace and carefulness that these visible gifts are carried onto others on. It is them that need to be carefully nourished, irrespective of whether the explicit meanings of our

²³⁰¹ Watch For Ever Mozart directed by Jean-Luc Godard (1996).

words and acts are as soft and gentle as the summer breeze or as raw, arduous and ungracious as snowy mountain tops.

S.F.8.34. Hannah, holding one of the rare names that spell the same forwards and backwards, is like a cactus. Once she asked me if it hurts others to have her being so exceptionally discourteous and offensive. I looked up and the only thing I could think of was to tell her that she was a Universe in herself, and that no one actually knew how good or bad she truly was. An artist may provide us with a painting that looks like a random and meaningless pattern, but we may never be aware of the extent to which it enlightens our being, let alone the world as a whole. After all, artistic effects are multidimensional, and what the artistic movements of the 20th Century fought to show was that it is not only emotional comfort and inspirational drive that count as artistic qualities. Many other unforeseen influences artistic pieces may exert to the world and be equally included as artistic qualities. What I have always believed in is that no matter how seemingly meaningless and random the movements of an artist or a layman are in their work, if they are performed with a blessing wish to save the world shining from within their hearts, or with the sense of being One with Nature, these movements will result in something that will undoubtedly beautify the world, and that either via visible and recognizable delicate features of the work or, most probably, via unapparent and secret pathways. In that sense, it is not necessarily bad being a cactus, building a barbed-wired wall between ourselves and the world, for as long as we tend after flourishing of the inner flowers of beauty within our hearts. For, I know what the secret of cacti is. I used to have one, and do not laugh because it was my good friend. It was all thorny, quite rancorous in its appearance, but then only once a year yellow flowers, as beautiful as they could be, would emerge from its spiky stem. They would last for a few weeks, after which the cactus would again adopt a frowned and bristly look. But these flowers secretly let me know that there was a natural craving for it to yield something beautiful and give it to the world. This inner desire to endow the world with something wonderful was flowing with its inner streams of life. Despite its prickly appearance, my cactus friend was holding, nurturing and protecting something immensely beautiful inside it. It reminded me at times of the outlaw immortalized in the opening of Prefab Sprout's debut record, Swoon, wearing a forever frown because of being weighed down with the "burden of love"²³⁰² and seeing Judas in every other face, if not of Jerome Lawrence's and Robert Lee's vision of Henry David Thoreau as "a man who loved so deeply and completely that he seemed, sometimes, not to have loved at all"²³⁰³. As a result, having inspired me to wonder whether thorny fences of arrogance are always needed to protect a tender heart glowing with an otherworldly love, I spent hours of contemplation beside it and its little flowers as I worked in Ljubljana on my Philosophy of the Way, from the 11th floor apartment overlooking it and the snowy peaks of the Julian Alps in the background. After all, once we learn to see the essence of beauty in even the most unpleasant and hostile creatures on earth and details of the world, it usually turns out to induce a paradigmatic shift in our understanding of the world. Superficial judging then ceases to exist, retreats and cedes its place to the unconditional shine of love, for all and everyone, without ever expecting anything in return, just as the Sun does, on the throne of our celestial head. This is why I have never let Schiller's verses, saying that "the truth lies hidden in the abyss"²³⁰⁴, slip off the back of my mind. So, the real seekers of truth set themselves to the gloomiest areas of the human experience,

²³⁰² Listen to Prefab Sprout's Don't Sing on Swoon, Kitchenware, Newcastle upon Tyne, UK (1983).

²³⁰³ See the Preface to Jerome Lawrence and Robert E. Lee's The Night Thoreau Spent in Jail, Hill and Wang, New York, NY (1971), pp. vi.

²³⁰⁴ See Werner Heisenberg's Physics and Metaphysics, Nolit, Belgrade, Serbia (1956).

knowing that the shining beauty can be easily found in the midst of a cheerful daylight, but finding it in dusty and unapproachable natural and experiential landscapes is the real challenge. And needless to point out, once we recognize the inherent beauty in even these, hostile details of the world, we'd be able to see it as concealed truly everywhere. An ultimate quest for the truth and beauty thus necessarily takes us to the abyss-like features of human experience. And that is, of course, only where the bravest ones are willing to set their feet. So, after all, being a cactus and hanging out with cacti people is not a bad idea at all. I know that looking at the eyes of cacti people leads to great and enlightening insights. However, long time ago I convinced myself that God is immanently present in everything. So, once again, being a cactus is not a bad thing. There is not a single creature that does not carry a celestial lantern in itself. In the end, being impolite and repulsive on the surface but, in fact, carrying doves of peace within oneself is million times more ethically and aesthetically correct than being a sheep on the surface while carrying a greedy wolf on the inside. The former type can be likened to the elusive ideal of capoeira dancers as "a deity in constant motion, friend of fracas, of confusion, but, in his heart of hearts, an excellent person; in a way he is the No where only Yes exists"²³⁰⁵, repulsive and rusty on the surface, but chaste and bright like a billion suns on the inside. The latter creatures, on the other hand, resemble thieves that teach people how to be honest, and although no one will ever be able to prove that their attempts are futile, I strongly believe that they are. But I equally believe that by cultivating the heart of beauty and love within us, no matter how obscene we behave will never extinguish these inner lights that illuminate the way forward for many surrounding creatures. And of course, no one will ever come up with a proof that my beliefs are right or wrong. After all, faith flourishes only for as long as the proofs of the objects of our faith are nonexistent. So, to repeat once again, it is not a bad thing to be a cactus. Hannah is a cactus. And I am a cactus too.

S.F.8.35. Some paths in life are to be revisited many times. Some of them are to be seen only once. Some of them will be journeyed on twice while recalling the old Middle Eastern proverb that "the event that has occurred twice will happen for the third time". And some of them are to be observed from the distance and never traveled upon. For, just as the Chinese story about the chalk circle tells us, sometimes by withdrawing oneself and not acting great fortunes are gained. Hence the greater bliss enjoyed by the blind girl in Millais' famous painting than by its sighted sister, who hides herself behind the blind girl's shawl in view of the scenery scarily wonderful to glimpse, as if to insinuate that to retire from seeing is often to see more than ever before and to be blind is sometimes more pleasing to the senses and to the soul than to see what is around us. "What makes the desert beautiful is that somewhere it hides a well"²³⁰⁶, the Little Prince said and while some of these wells that we sense with the eye of our heart are to be happily traveled to and readily discovered, some of them are to remain ennobling objects of our dreams. In the old Japanese tale about the crane wife, recently popularized by the Decemberists²³⁰⁷, a band from Portland, Oregon, a man finds a wounded crane on his doorstep, brings it inside, helps it heal itself and releases it. Soon after, a beautiful lady appears in his life, and the two of them fall in love and get married. However, pressed by the poverty, the man realizes how helpless he is in supporting their family. The lady then whispers to him about the mastery of knitting beautiful embroidery that she is

equipped with. “But in order for me to be successful in that art, it needs to remain secret”, she said. “No one could ever see me weaving the loom, not even you”. So she would confine herself in a room and weave all by herself. One day, however, the man, not being able to resist the pressure of his curiosity, craving to find out what the secret of her art is, peeked inside the room. What he saw was a crane plucking feathers from itself and weaving them into the looms. At the sight of the man glancing at her secret, the crane, that is, his wife, flew away and never returned. The message of the story has always reminded me that objectivistic looking at the world, driven by the thought that we could have a perfect insight into other people’s mindsets, intentions and feelings, is nothing but imperfect and ill, and will make many a bird of paradise that reside in other people’s souls to fly away from us, leaving us alone and sad with the curse of Pandora’s Box flaming inside of our heart. Although exerting a judgmental attitude to some degree is necessary to sustain our ability to flawlessly navigate through the world, as well as empathically gaze at the world from the eyes of another, we should make sure that it does not eclipse the other half of a fulfilled perspective at anything in life, which resembles the dark side of the moon, pervaded with a sense of self-withdrawnness, uncertainty, doubt and intuitiveness. Besides, when Jan Oort wrapped up his calculation of the mass of the Milky Way in 1932 with the conclusion that “there must be more matter than stars”²³⁰⁸, hinting at the existence of dark matter, whose content he estimated at about 50 % of the overall galactic mass, it was as if the whole Universe winked at us and whispered to our ears in its cryptic language that only up to one half of the rooms of a truly galactic mind can be shiny and revealed, whereas the rest of it must remain dark and withdrawn, untouchably mysterious, which is exactly what the Way of Love as the ultimate recipe for inspirational being calls for. Back from the cosmic to the mundane, which hides the cosmic secrets of an equal depth as the whole Cosmos does, when José Ortega y Gasset engaged in a rather banal observation of an orange and concluded that “by an inexorable visual law, the half of the orange which we have before our eyes will hide the other half which lies behind it”²³⁰⁹, he likewise hinted at the idea that illumination of anything in the spheres of our knowledge or action is owed to something else being pushed to epistemic darkness or ontological nullity, respectively, in this profoundly dialectical life wherein being is founded in nonbeing and *vice versa*. For, “if there are bright, shining aspects, there will definitely be a counterbalancing dark side... Light that doesn’t generate shadows is not true light”²³¹⁰, as pointed out by the Japanese novelist, Haruki Murakami. Thus, if there are paths to be taken in life, we should be sure that they owe their existence to paths concealed from view, never to be stepped on, destined to remain the subjects of our abstractions only. If there are dreams to be lived, their coming true is possible only because there are dreams that are only to be dreamt and never realized. These musings, along with the story about the crane wife, tell us that some secrets are truly like doors that are never to be knocked on or even tried to be opened and glimpsed behind, whereby some starry wells within the essences of the beings around us ought to be never jumped into. Yet, some other doors in this life are to be readily knocked on, opened or even broken, with our carefully treading or rushing inside, bringing indescribable joy and happiness to the insides of their four walls, making them ring with our soulful laughter, explode with the loving energy and send the waves thereof to the distant stars that dizzily buzz above our heads. What

this short sequence of thoughts implicitly tells us is that there are no rules on how life should be lived. As put forth by Heinz von Foerster, “The final doctrine is that there is no doctrine”. This is so because uncertainty, entropy and ignorance are clouds surrounding our knowledge and feeding it with precious droplets of watering rain. Should we reach a final and seemingly perfect doctrine with respect to anything in life, it would prevent our further evolution as there would be nothing to drive our explorations of the world from there on, and in that sense one such doctrine would not be perfect at all. The ultimate ethical and aesthetical imperative is, therefore, that there is no such imperative. There is no simple and straightforward guideline on how life should be lived. But for as long as we live by keeping glistening aspirations, feelings and thoughts within us, all mixed up with the zap of genuine wonder that feeds on questions and uncertainties, everything we do will turn out to enlighten both ourselves and the world around us.

S.F.8.36. At the end of Jack Kerouac’s *On the Road*, the main character, Sal Paradise, sits by a New Jersey river and thinks about how God may resemble Winnie-the-Pooh bear and even more thinks about his friend, Dean Moriarty. This stands as nothing but a sparkle of a reflection of the balance between Wonder and Love from the sea of the mind and heart of our hero at the final point of the book in which, as it often happens, one travels all over the land just to come back to the starting point of one’s journey and glance at one’s own soul in new light, revisiting and replenishing it with some starry energy. And he finds the key. It is that being devoted to another being, a friend, with care and love glowing within one’s heart, is the way forward. Some people make children in order to have someone to care about. Others surround themselves with pets, plants or seashore pebbles, and yet others decide that their heart is big enough to fit the whole wide world in it. Then it stops acting as a tiny bottle in which merely a minute message of helplessness can stand, and becomes a home the size of an ocean, in which many, many waters, dolphins and white ships may fit. All the while, the beauty of the blue sky, symbolizing the Heavens above, finds a clear reflection in it. Splash, splash.

On beauty found in simple things and acts

S.F.9.1. As I was lying with my belly on the grass, a yellow flower in my hair and head placed on the pedestal of my swimmer’s arms and shoulders on a meadow in Golden Gate Park on a sunny Sunday afternoon, when one can spot almost supernatural people chilling out, wandering by, happily singing and dancing, a brief but extra-terrestrially beautiful glance drifted by the windows of my attention, as a whiff of the summer breeze. It was a clear, sparkling, ecstatically joyful and yet compassionately bleeding glance that magically made me realize that sometimes a single look can be enough to turn one’s worldviews upside down and maybe transform one’s sinful path into the one of a missionary devotion. A chaste, graceful and miraculously pure glance sent to us can be enough to impress us so much as to change the pathways of our thinking, behavior and the whole life. It is wonderful to imagine signs and expressions, lasting for a brief segment of a second, so small and evanescent and yet so powerful. Not a single word. Just look. And then I ponder how lovely it would be to learn the art of simply looking at people so as to make them and the world appear beautiful in our and their eyes alike. With eyes that twinkle with wonder and yet pulsate from within their depths, sending warm waves of love everywhere around us. This is the way to become a heavenly child again. So, step inside, onto the yellow brick road leading to the magic land where tranquil stillness and mountain-moving powerfulness are combined in the way we see the world, where Wonder and Love reign, where the simple and the everlasting are bound together.

S.F.9.2. “Be here now”, John Lennon said when he was asked about the ultimate message of the rock ’n’ roll philosophy²³¹¹, striking the same chord as an anonymous movie director who saw life as a movie whose most boring parts corresponded to flashbacks of the past. Have you ever noticed how more inspiring, awakening and interesting are conversations that instead of recycling stories from the past focus on immediately available impressions? “Spitting in a wishing well, blown to hell, crash, I’m the last splash”²³¹², a punkish pixie said once, perhaps to urge us to forget about the past and the future, which is merely the past abstracted and reshaped, and immerse ourselves instead in the beauty of the finest and the least noticeable details of the world around us, all until this world ceases to become “around” us, but rather becomes us and we the puny splash of spit on a puddle and the whole cosmos in it. So, I urge you to smash this book against the nearest wall and stare at the nearest thing that captures your wonder and makes it spread its wings, all until your spirit is ready to cheerily take off into an unbound flight of fancy away from the lackluster patterns of reality. Do not let the beauty sitting in front of your nose escape as ignorantly and arrogantly unnoticed. My favorite thing to do when I am overwhelmed with the past-recycling stories is to break the predictable stream of conversation by pointing at the amusingness of something readily available to everyone’s attention at the given moment. The following passages are, correspondingly, not about proposing great and all-encompassing ideas. Instead, they humbly lay down tiny and immediately available impressions for our cognition to joyfully thrive upon. They are about the things resting right in front of our eyes. And yet, as we shall see, each one of these little things is enveloped by angelic wings of sophisticated and grand generalizations that are visible only to the eye of a profound systemic philosopher. Using them as a means to soar into the translucent skies of sublime thinking, we are able to glimpse the Earth as a whole and come face-to-face with the spirit of divine oneness that holds this majestic blue ball on the palm of its invisible starry hand and lets it spin from light to darkness to light and over and over again, evolving into an ever more wonderful eye to the Universe with every step forward of the train of time.

S.F.9.3. In addition to pointing at the immaculate and eternal beauty of small, directly visible and easily neglected details of the world around us, I try my best never to repeat myself. Never tell the same story twice. Even my signature never repeats itself, not only so as to confuse the potential forgers, as I love to claim, but mainly to remind me that nothing healthy in Nature reduplicates itself. Hence, somewhere around the second letter of my last name, the movement of the pen turns into a random scribble all over the place, serving as an incessant test for myself of whether the spontaneous streams of impulses in me, having a vital role in directing our actions towards watermills of sheer awesomeness, have become all molded and predictable over the course of our habitual lives. For, uniformity and easy expectedness of behavior are the followers of not life, but death. Healthy cells within an organism are always slightly different from each other and yet give rise to a miraculous unity of the organism as a whole, while cells that resemble clones of each other are, as a rule, malignant and cancerous. The disastrousness of fostering uniformity of worldviews by attempting to make others think the same way we do as well as of suppressing the natural versatility of emotions and behavioral modes for the sake of confining them into narrow and predictable channels thus becomes readily obvious. At the same time, the necessity to resist

²³¹¹ See David Browne’s Be Here Now, Entertainment Weekly (September 5, 1997), retrieved from <https://ew.com/article/1997/09/05/be-here-now/>. This phrase appears to have been said by Lennon during his interview with David Sheff of Playboy in September 1980: <http://www.beatlesinterviews.org/dbjypb.int3.html>.

²³¹² Listen to the Breeders’ Cannonball on Last Splash, 4AD (1993).

being repetitive on any given occasion is being shed light on. Hence, my advice is that if you really think an important message would be conveyed by telling a same story twice, infuse it with some novelty every time. Repeating the same things over and over again, like a broken record, in a world that is by default incessantly changing and constantly adopting different forms is an irrational thing to do. Each one of us is special and requires a distinctive approach, a unique answer to questions posed as pillars of one's epistemological foundations. Also, to breathe life into roads that lead to answers that we try to draw in front of others, our expressions need to never repeat themselves with the passage of time. They always need to be expounded while we hold the doors for the inflow of eternal newness incessantly open. They should be built on the blend of a well outlined plan with which a clear vision is laid out in front of other people's feet with naturalness and spontaneous improvisation, always letting the breeze of the moment co-craft these expressions with us. Besides, as I have come to conclude over the years, something horrid happens to the human brain that very moment when it decides to retell a story or remake a point, regardless of whether it happens in a professional or a casual milieu. It is as if the brain from that point onwards becomes doomed to mentally ill repetitions and turns into an inherently closed machinery, unreceptive to the infinitely numerous ideas that knock on its doors with their tender angelic wing flaps. Having experienced this first-hand, the only legit way of being, I have decided, is that of always seeking new points to convey to others in communication and never ceasing to improvise the form of expression when an already established principle is to be presented and shared with another. Jazz, thus, knows the answer, as I love to claim. By never repeating oneself, by always blending improvised novelties with the constant melody beating within our hearts, a truly inspiring way of communication is set forth. Busy transforming a dreamy imagery arisen in his head into a painting, yet another master of multidisciplinary creativeness, Jean Cocteau, compared his approach with that of an improvising jazz musician *à la* Charlie Parker, and added the following remark to highlight the devastating effects of the yearnings to have our artistic visions perfectly reflected in our works, without letting Nature infuse some of Her subtle messages in them, as it would be in the spirit of the co-creational thesis: "The more I insist, the more I seem to hang on to a sinking ship"²³¹³. Moreover, such partly improvisatory expressional style may be the only way to truly transmit the inner melodies of ours in a cloud of understanding to others: by enwrapping them into clothes that are always novel and always adapted to circumstances that are "right here, right now". To manage so, as complementary to the crystal-clear rationality we exercise, we need to feed the power of intuition within us as well. And the latter, I tell you, thrives only upon the soil sprouted with seeds of loving others. Hence, love and rationality, as usual, form a closed circle in which each one of them feeds and supports the other.

S.F.9.4. Be that as it may, as far as the rules for fruitful and inspiring communication are concerned, the ultimate rule is, of course, that there are no rules. So, although we may be guided by the idea that the same stories and concepts ought not to be repeated over and over again, I sometimes enjoy multiply repeating finishing lines, witty remarks or invigorating moves for others, just as a little kid does. In doing so I also stick to what the 19th Century humorist, Artemus Ward, once said: "Why care for grammar as long as we are good"? Hence, sometimes I even speak in unintelligible... hmmm... *^&)%... terms, in unfinished or mysterious sentences, even randomly picking characters to draw or say, and yet I can do it because I keep firmly anchored to

²³¹³ See the documentary on the art of Jean Cocteau, directed by Noël Simolo, available at <http://www.youtube.com/watch?v=SK87TtoingQc&feature=related> (2007).

my heart the words with which St. Augustine summed up the message of the Christ: “If you love, you cannot but do well”²³¹⁴.

S.F.9.5. For a long time I had directed my thoughts and behavior to be unique compared with those of others. But only when I accepted the sameness with others, an opportunity to express myself truly uniquely showed up. However, being true to oneself and being true to others is what the acrobat of love dwelling within our heart has to balance. Neither complying with other people’s desires without listening to the guiding voices of our heart nor spending time meditatively immersed in the depths of our mind while being blind to the needs of the surrounding creatures are the keys. A dynamic balance wherein alternate pushing onto one and then the other side has to be constantly exhibited is the key. Hence, when I hear people telling me how one needs to be oneself in order to be a creative force of progress in life, I add that one also needs to absorb the rivers of influences of the world and people around one within one’s own river of being in order to truly preserve oneself and be an incessant progressive stream in life. In other words, one has to become others through love and empathy as much as to be oneself through meditation and introspectiveness in order to reach peaks of a spiritually sublime and truly fulfilling personality. As this balancing process is dynamic and akin to a bicycle ride during which incessant spinning of the wheels is the only way to keep us straight, balanced and moving forward, we should know that to be is to change, and to change is to be. In the end, as the Way of Love suggests, whenever we become too much like others, the circumstances will work in the direction of restoring our uniqueness a bit. But also, whenever we become extremely original so that our expressions could not find any understanding in the world, there will be an angelic guide opening the way for us to get closer to people and discover the charms of being humanly equal to them.

S.F.9.6. I have realized that if I spend more than five minutes choosing what I shall wear, my joyful stability throughout the day gets seriously shaken. It is almost as if all the communications that I engage myself into that day become painted with a sense of insecurity, stiffening self-awareness and a sickening obsession to impress others. Thus, I vowed to myself that I will start making my wardrobe chaotically mixed, and will each morning randomly pick the shirt I am going to wear for the rest of the day. Once, years ago, when I lived in the Alpine foothills, in the city of love a.k.a. Ljubljana, I wore strictly white undershirts for four straight years, not ironed either, but wrinkled to the point of appearing as they were “chewed by the cows”, as we say in Serbia, thanks to my habit of smooshing them, freshly washed, into a packed wooden drawer under my TV set in the dining room. And remember, this was in the years before Facebook was launched and with it the career of its founder, Mark Zuckerberg, who would later boast of wearing only his trademark gray tees, justifying this choice of his by the wish to minimize the trivial decisions he needed to make in a day, such as over the clothes he will wear, so as to focus on those, deeper ones, from which the community can benefit. Therefore, I remind myself of the way Jesus taught: “Why take ye thought for raiment? Consider the lilies of the field, how they grow; they toil not, neither do they spin: And yet I say unto you, that even Solomon in all his glory was not arrayed like one of these. Wherefore, if God so clothe the grass of the field, which to day is, and to morrow is cast into the oven, shall he not much more clothe you, O ye of little faith? Therefore take no thought, saying, What shall we eat? or, What shall we drink? or, Wherewithal shall we be clothed? (For after all these things do the Gentiles seek:) for your heavenly Father knoweth that ye have need of all these things. But seek ye first the kingdom of God, and his righteousness; and all these things shall be

²³¹⁴ See Osho’s Just like That, retrieved from <http://kamalneet.googlepages.com/osho>.

added unto you... The foxes have holes, and the birds of the air have nests; but the Son of man hath not where to lay his head” (Matthew 6:28-33...8:20). With such an approach, I would not only avoid paying attention to clothes *per se*, which would help me shift my attention from superficial features to deep and invisible traits of my and other people’s appearance, but would also avoid wrapping myself in symmetry and concordant colors. By doing so, one’s actions naturally tend to follow the guiding line along which symmetry, standards and norms are being broken, quite unlike the clichéd and boring behavior that tends to reflect a perfectly matched set of garments. But then, I remind myself of how the solutions to enigmas in our life could never be based on simple guiding principles, but actually always require skillful balancing of certain opposing principles. Timing and subtleness are thus essential for preserving our successfulness in bringing about brilliant decisions. Thus, as opposite to the pure randomness in selecting the way we get dressed on a daily basis, I place a profound care about this and other small things in life. For, I know that a message inscribed in fine print letters on a punk badge can spark a brilliant thought in a passerby’s head and start a chain reaction of inspiration that may spread like an avalanche throughout the world. Likewise, even tinier and undecipherable shapes of lines, drawings or loose threads on our clothes can also miraculously ignite people’s fire of inspirational thinking, changing the world thereby in unforeseen and unpredictably magnificent ways. In the end, in concert with the guiding star of the saying that “small is beautiful”, devoting our attention to small and negligible details in the conduct of our behavior makes us truly wise. As the butterfly effect of the chaos theory tells us, sometimes the most minor actions that we could think of tend to become intensified during the evolution of a system in which they were carried out, eventually having an outstanding effect on the outcomes. Substitution of a single out of 484 amino acids (Glu → Val) in the primary structure of hemoglobin leading to sickle cell anemia, some types of cancer being caused by a similar, single point mutation in the parts of genome coding for specific proteins²³¹⁵, or innumerable examples from the field of chemistry wherein one electron more or less makes an incredible difference in the outcomes of a chemical reaction can easily speak in favor of the enormous extent to which premises of the chaos theory pervade the world that we live in. A single man’s eating an undercooked bat somewhere in the Chinese wilderness and starting the spread of a new coronavirus, alongside triggering an unprecedented pandemic of panic and fear through the social networks, which would put humanity on a whole new cultural and evolutionary trajectory, is another example of how a minor act can have enormous palpable repercussions in the world we live in. Of course, to prevent the uncontrollable redirections of the evolutionary path along strange and wobbly courses that may threaten the sustainability of life that had taken billions of years to evolve into its current, conscious form, Nature employs a whole set of strategies to provide conditions for amortization of this immense sensitivity of complex natural systems to slightest perturbations of the conditions under which they exist. On the other hand, I have previously written about Nature’s ability to dampen seemingly huge and amplify seemingly negligible effects of human actions, thus contributing to the fable-like character of reality wherein everything is possible and wherein the littlest tears shed over frozen-hearted landscapes of the world can trigger avalanches that will bury the old and unearth the new and the beautiful²³¹⁶. As I wobbled my way with Evelyn through a barrel tasting event in Sonoma Valley and compared the earthly taste of wines from the Old World, full of the odor of leaves and oak, with the fruity taste

²³¹⁵ See Ignacio Tinoco, Jr., Kenneth Sauer, James C. Wang – “Physical Chemistry: Principles and Applications in Biological Sciences”, Third Edition, Prentice Hall, Englewood Cliffs, NJ (1995), pp. 692.

²³¹⁶ See my paper entitled Of Sustainability, Elephants and Prefab Sprouts, published in International Journal of Sustainable Society 1 (1) 85 – 102 (2008).

of California wines, I was impressed to recognize tremendous differences in the taste of wines made of the same grape varietal but planted only 20 meters apart, or of those produced from the same grapes but separated by a single season. For example, as I learned years later, during one of my following trips to the wine country, the same grapes planted 10 meters away from each other at the Nicholson winery at the very boundary between Sonoma and Napa valleys yielded two totally distinct wines in 2011: Sonoma Valley pinot noir with cherry, tea and cinnamon flavors and Sonoma Coast pinot noir with raspberry, mushroom and cedar notes. What impressed me most was how proud the winemakers were in emphasizing this impossibility to replicate the taste of wines from year to year, as if enjoying the unpredictable versatility of Nature and rejecting the tendencies to reach a perfect reproducibility of their winemaking process outcomes. Once, as I was chatting in a secluded backyard of a house on Shotwell and 24th with Stephane, a French friend of mine who worked as a pastry chef at La Boulange, he was all smiles, boasting how the croissants he made that day were impeccably good. “But, you repeat the same recipe every time, right? How come that they are not the same every time you bake them”, was my first question. “No, they are special and unique every single day”, was his response, after which he told me a story about him coming to the US for the first time as an apprentice and being asked by a chef if he would know how to make a simplest form of pastry. “Sure”, he said and began to work; alas, he failed every time he tried to prepare them based on the European recipe he had previously repeated hundreds of times. So, he concluded that, similarly to grapes planted on different soils, American flour and eggs are tougher and require slow mixing compared with softer flour and eggs in Europe, which sometimes makes me wonder if the reason for the aristocratic softness of Europeans and the tough determinateness of Americans may partially lie in the food people consume. Conversely, in this feedback-looped reality, where every cause of an effect is also an effect of the given effect acting as a cause and where ties in the circular chicken-and-egg causality are all but extricable, it should not surprise us if the hardness of the food and its ingredients in America is caused by the hard hearts of people producing them, which is an argument supportive by an array of dichotomies, from the softer and mellower European popular music compared to its harder analogue on the American continent to the rawer and more robust abstract expressionism in America compared to its lyrical, Tachiste analogue in Europe, and so on. Going back to the magnificent effects of minor addendums to our gastronomical protocols, this may also explain why the best chefs never rely on reproduction of their recipes by precisely measuring the amounts of ingredients added, but instead incessantly improvise and never repeat the same meal twice, so to say, somewhat similar to jazz artists who never play the same song twice. Be that as it may, like these winemakers and bakers, I also enjoy seeing the effects of minor deeds being amplified to enormous scales. Thereafter, choosing a minor detail on our wardrobe can sometimes be enough to change someone else’s life. Therefore, my new trend has been to intuitively visualize myself in a certain outfit and then choose that piece of clothing to wear for the day, the same way I’d pick my changing personality for it, knowing that these two, picking clothes and characters to wear, if we were to trust Megi and Milan and their Belgrade classic about lifted curtains and devils peeping from under the sleeves²³¹⁷, always come together. Or to open the closet and, guided by intuition, briefly browse through the clothes hanging on the racks all until I sense a light resting on one of them, deciding to wear that particular piece for the rest of the day. The same mindset I set when I enter a bookstore in search of an inspiring book. Sensing a similar ball of radiant light resting on one of the books is frequently a sign of its immense upcoming importance for my life. Hence, it is more often an intuitive attraction to a thing that mysteriously enkindles a sense of blissfulness in me than an elaborate

²³¹⁷ Listen to EKV’s *Ti si sav moj bol on S’ vetrom uz lice*, ZKP RTLJ (1986).

logical choice that becomes decisive in my picking the right book to hug and bring home. The very same approach I have extended to hiring research assistants for my lab: hence, instead of deliberating over a range of miniscule details, I rely on the intuitive feel of the first fifteen seconds of encountering the person. The chemistry, the willpower driving the spirit underneath the physical appearance I thus sense and, as experience has taught me, making decisions based on it never leads to an error or regret. When someone perceives such a largely intuitive approach to selecting people as superficial, I do not defend myself; rather, I may loudly recall Noel Gallagher's hiring Andy Bell as the bassist for Oasis after seeing him walk through the door, justifying his decision by saying, "I don't care if he knows how to play so long as he looks right"²³¹⁸. Accordingly, like plague I have avoided the standard academic meetings at which scientific projects and ideas are discussed at length, sluggishly, and have preferred to expand and discuss ideas in a manner similar to the making of a typical rock 'n' roll song or an impressionistic painting, sketchily, in a heartbeat, faster than the speed of light. Correspondingly, I have remembered carefully what Brian Wilson said in his memoirs about the making of what I and millions of others placed at the apex of the pop musical heritage, namely the Beach Boys' God Only Knows from Pet Sounds: "'God Only Knows' gets named as people's favorite Beach Boys song regularly. Some people pick it as their favorite song of all time by any artist in the rock era. Some people pick it as their favorite song of all time, period. So I could say that I really worked forever on it, that I spent a year imagining how the melody would work and another year on the lyrics. But the facts are that Tony and I sat down at a piano and wrote it in forty-five minutes"²³¹⁹. Therefore, all these years I have been a strong believer in an ultrafast art-making process, irrespective of the fact that this habit has driven countless of my acquaintances mad when they casually correlated this speed with lack of care, not knowing that the goal was quite the opposite: that is, to prevent things from sounding stale and losing some of their precious spirit of the moment if they were to be excessively overworked. This tendency of mine to connect the mind and heart with some mysterious higher grounds, trust the guts and create at the speed of a rocket does not clash with my habit of developing the ideas for these creations in the finest of detail, with great care and attention; rather, it means that one should be receptive to the short, ephemeral moments when enlightening ideas dawn on us and be ready to accept and expand them *in situ* and with the rapidity of a chipmunk's leap from the bottom of a tree to its top.

S.F.9.7. Randomness with which I usually pick clothes to wear is reflected in a similar approach I have had upon entering libraries. Namely, I would tell myself that instead of carefully picking books that fit my interests, I should start choosing them purely randomly. One of my favorite amusements has thus been walking blindfolded among bookshelves in libraries and randomly picking books, knowing that each one of them always carries hidden sources of marvelous inspirations. Because my interests are wide, stretching between the most distant fields of human inquiry about natural details and tending to connect them all into ever greater systemic wholes, this approach has never failed. In view of that, each book for me contains an enormous quantity of inspirational sources. The tinier and dustier, the better. Whenever I get hold of one, it reminds me of how beautiful it may be to let some marvelous works of seemingly forgotten people sow the seeds of creative thought along the bright fields of my mind.

S.F.9.8. Another fanciful thing I enjoy doing is then to randomly pick a sentence from a randomly picked book, somewhat like the ancient preachers would do by opening the Bible at a random place and beginning to read guiding words, or as I would do as a child, pointing at a rotating globe while keeping my eyes closed and then dreaming of parachuting myself there. In fact, ever since the Christ was seen opening the Bible at a random place and reading to his followers (Luke 4:17), as if emphasizing how immensely versatile insights are dormant in each and every profound saying we can utter, many were followers of such an approach in the theological realm. I too would thence open a book, glimpse a sentence, read it and close the book, continuing to use that single thread of thought as a star around which my ideas would orbit. In such a way, I take a random single thought, plant it in the soil of my mind and turn it into a sprout from which great new trees of knowledge would arise. And then I would realize that any given sentence could be easily placed as an immaculately amusing quotation at the beginning of a book or an enchanting graffiti that ornaments a city façade and makes the passersby puzzled, as if almost transcending them into a state of sweet and enlightening Zen confusion, and yet the one where a divine and light simplicity is suddenly seen as pervading it all.

S.F.9.9. As Kevin Kriescher, the son of a fairy, and I sat in Vesuvio bar in North Beach, the same place where beatnik poets gathered half a century ago or more to discuss their plans on how to revolutionize poetry and prose of their times, arguments along the same subject were fired into the air, creating a firework of mind-opening ideas and mystical gates through which we could enter into wonderlands of fabulous thought. While Kevin insisted on the aesthetics of short sentences deprived of unnecessary wording, I praised pointless poetic embellishments as utterly useless things epitomized by the Taoist teaching of Lao-Tzu, things through which the entire cosmos of meaning becomes visible due to their hollowness, alongside maintaining that words are music and looking after producing gorgeous flows of it necessitates the usage of more words than required to merely convey the meaning to others. While Kevin claimed that frequent full stops in a paragraph are a must because they give the reader a space to breathe, I held on to my belief that full stops are overrated; while they dip the flow of wording into the sea of silent levelness, commas, colons and semicolons yield more freedoms when it comes to interpreting the intonation of the sentence. Besides, if one's aim is to create a sense of breathlessness in the reader's mind, an intellectual punch in the head that makes one see stars, avoidance of full stops and reliance of exceptionally long, never-ending, rollercoaster-like sentences instead becomes a natural choice for the writer. After all, when the writer is bedazzled by the marvels of the world to the point of sheer breathlessness, when his "life becomes a rambling run-on sentence dropping a period not after absolute exhaustion"²³²⁰, any verbal expression thereof, lest it be accusable for an intrinsic hypocrisy, must rely on unstoppable, never-ending sentences, albeit convoluted and confusing most of the time, just as the reality portrayed by their means is. No doubt that I, having had Molly Bloom's soliloquy²³²¹ firmly anchored to my heart as a guiding star that was to show me the way to upturn the mind-numbing trends in scientific writing and revitalize them with an invigorating lyricism, hoping that, since writers write writings which in turn write back the writers, these verbalized streams of passion will eventually subtly substitute the robotic dullness in scientists' attitudes with markedly more spirited stances, employ this strategy of creating endlessly stretching sentences in my writing, not unlike the very one that you are just about to finish reading. In doing so, I have been expanding upon the final, 172-word long sentence of Jack Kerouac's *On the Road*,

²³²⁰ Watch *America Recycled* directed by Noah Hussein & Timothy Hussein, Indie Rights (2016).

²³²¹ See James Joyce's *Ulysses*, Shakespeare and Company, Paris, France (1922).

succeeding mostly short sentences that preceded it and that were derived from the writer's rootedness in Hemingway's succinctness, and have been taking the beat literary style to the next logical level, where it would be less beat up and confined to short breaths and more beatific and linguistically breathless than it has ever been, coming out of a mind bedazzled by the beauty of reality, naturally piling thoughts after thoughts, visions after visions, without ever daring to put a full stop to their endless streams. Also, remembering how Kerouac wrote *On the Road* all in one paragraph on a single roll of paper, as well as how David Albahari's novel *Leeches on Belgrade's secret societies* is a 300-page long single paragraph, how each chapter of László Krasznahorkai's novel *Satantango* is a dozens of pages long paragraph without any line breaks, and how Winnie-the-Pooh thumped his belly full of honey down on the ground after sliding down the words of an A. A. Milne's book on the funny little bear to the remark, "I wish this paragraph was a little longer"²³²², the unending passages and sentences of this and other books of mine, craving breaks to most readers, gain support in their striving to live up to the beat, to the opposition to the "claustrophobic and oppressive"²³²³ by all means and in all domains of expression, from essayistic to scientific to casual. From this sublime vantage point, which holds in view millions of affairs and associations that it wishes to fit into a single frame and describe at once, I also fully understand William Blake's vehement response to the "less extravagance and more simplicity" remark to his art by Sir Joshua Reynolds, the founding President of the Royal Academy, which Blake attended as a student, eventually "excusing himself on the grounds that too much attention to formal training, any self-conscious studying of 'style', would ruin his or any other painter's spontaneous vision, desiccate his imagination, inhibit all his creative faculties"²³²⁴, before devising his famous litany: "I will not reason and compare: my business is to Create"²³²⁵. Since that day, his attitude, like mine, became such that "he despised the official art of the academies, and declined to accept its standards"²³²⁶; both of us realized the claustrophobically conservative, cramped up and smothery boundaries of academic science and art and vowed to transgress them with all our might, as occasional physical insiders, but everlasting outsiders at heart, always anchored to the Outlands, if we were to refer to the dystopian reality of Godard's *Alphaville*. Logically, Kevin's opinion was, however, that adding too many words in a sentence in order to make the meanings conveyed richer, thicker and more exact on many occasions produces an opposite effect, as in accordance with Leonardo da Vinci's thought: "The more you describe, the more you will confuse". Instead of solidifying and clarifying, according to this Renaissance master who allegedly left each one of his works unfinished on purpose to certain extent²³²⁷, such an approach only manages to dilute the meanings that we intend to put across, confusing the reader along the way. Such a stance would have certainly been defended by Ernest Hemingway who famously criticized William Faulkner for his complex, dense prose by asking him whether he was aware that "big emotions do not come from big words", by H. G. Wells who similarly compared the opaque style of the late works of Henry James to "a hippopotamus laboriously attempting to pick up a pea that has got into a corner of its cage"²³²⁸, by the opponents of Marshall McLuhan's writing style, "hermetic, terse, and often

obtuse, drawing from sources such as Yugoslavian epic poetry and modern sculpture”²³²⁹, known also for “its confusing charts, its heaps of esoterica, all glued together by dense, metaphor-rich style of writing alienated all but the most determined reader”²³³⁰, by Kim Peres who advises writers and public speakers to completely abandon adjectives from their verbalizations²³³¹, leading armies of Westernized, Puritanical hearts in which any traces of poetic footsteps of the soul on the sandy seashores of their arid minds have been carefully washed away to concordantly conclude that “adjectives are one of the worst elements of speech and even make a listener or reader lose trust”²³³², as well as by June Casagrande who opened one of her recent books by stating the following: “This sentence rocks. It’s concise. It’s powerful. It knows what it wants to say, and it says it in clear, bold terms. But upon quickly or slowly reading a sentence such as this, in which the writer quite clearly is wanting to make a point regarding various issues pertaining to general written communication, it suddenly becomes more than clear that this is sentence whose aspirations of rocking have been handily eclipsed in favor of the act of sucking”²³³³. Now, my confession is this: although I cannot help enjoying crafting rollercoaster-like sentences that drive the reader upside down, spin her ‘round and ‘round, shed showers of multitudes of enchanting signs in front of her and produce a starry dizziness in her head, and although I sometimes contemplate on how the modern English with its prosaic practicality strayed from its German linguistic relative, still somewhat seeded with germs of poetic passions, by not only insisting on ultra-short and straight-to-the-point sentences²³³⁴, but not tolerating at all extraordinarily long and intricate ones, while at the same time limiting and narrowing its reader-enriching potential as a language, I do appreciate grace and powerfulness of simple sentences. At the same time, however, at least as far as my literary taste is concerned, they rarely work, for they make up writings that are either simplistic to the point of obtuseness or explosive to the point of making me tired, like a movie with too many cuts. Therefore, despite being a minimalist at heart, sometimes I wonder with the waves of Pet Sounds gently crashing over the coasts of my mind with countless instruments filling every segment of space with their aural lines whether verbal showers of ideas and impressions that leave the reader in dazzle and awe could be crafted at all without producing sentences such as this one, seemingly never coming to an end with its endlessly piling worded images one on top of the other, symbolizing the steaming train of wondrous thought that never finalizes its journey, never places a full stop on its run after stellar wisdom, but keeps on rolling and rolling towards ever greater heights of celestial *raison d’être* that is to provide heavenly foundations for the divinely inspiring acting of our inverted being in this world, bouncing off the very stars rather than from corrupted and lame social grounds upon delivering the enticing acts of ours. Another reason why I do not use such extraordinarily simple sentences anywhere else except in the beginnings and ends of well-structured threads of thought, such as books or articles, so as to

²³³⁴ An exception is a confirmation of the rule, the folk saying goes. For, had it been otherwise, the exception would not be an exception, but an antithetic fact. Notable exceptions in this case include writers such as William Faulkner and Jack Kerouac. Check out their books *Intruder in the Dust* and *On the Road*, respectively.

reflect the evolution of our knowledge, which is reminiscent of the Zen lumberjack for whom “mountains were mountains and rivers were rivers before he began to study Zen; they ceased to be so when he started exploring Zen; and they became mountains as mountains and rivers as rivers again once he emerged onto the other side and reached the light of simple understanding at the end of the learning path”, is because, as a writer, I do suck. Still, looking back at my writings I have realized that they stand somewhere in the middle, embracing the amusement and directedness to each and every one, taken from the modern Western and particularly American schools of philosophical writing, but also sipping the nectar of the old European philosophical tradition, dominated by long and heavy sentences, each and every one of which is reminiscent of a tree with juicy ripen fruits waiting to be plucked while hanging from its branches, fattened with multilayered meanings and directed to intellectual giants and not to the ordinary man and intellectual dwarfs as the peer-reviewers for the modern Western publishers in philosophy nowadays demand from the writers. Thereupon, by glancing at the philosophy books that slumber in the contemporary bookstores I regret over how the old days of books filled with deep and mysterious sentences, each one of which could be read over and over again and lived with while discovering incessantly novel meanings inscribed therein, are gone as the mainstream publishers of this sublime genre nowadays accept only works written with stupefying and overly simple style that tends to irritate the knowledgeable readers with its implicit treating thereof as impatient intellectual infants rather than solemn-minded and colossal thinkers. “All one sentence, whew!”, stands handwritten with a charcoal pencil as a side note next to a 89-word long sentence in an essay by a European-American violinist in a book I borrowed from SF public library²³³⁵ and reflects the train of thought that would be sped by an average editor’s field of attention upon his glimpsing a sentence that takes the reader on an exciting ride through the luscious lawns of his consciousness with its multiple ups and downs, being what this, another 89-word sentence leisurely aspires to achieve too. With this attitude, even Friedrich Hegel’s *Phenomenology of the Mind* would have been swiftly rejected based on the 130-word long sentence with which the German philosopher opened its preface. The prose of Herman Melville evolved through the increasing use of word repetitions, alliterations, allusions and mutually contrasting adjectives toward “one-sentence paragraphing”²³³⁶, where the quest for the narrative economy, quite like the one typifying these very lines, often resulted in instances, where, as in the opening chapter of *The Confidence-Man*, half of all the paragraphs in a chapter would consist of a single, albeit lengthy and elaborate, sentence, and this tendency of the American novelist may explain why most of his novels, *Moby-Dick* included, received poor reviews during his lifetime and had to wait for the centennial of his birth to be revived in popular interest. Or, how about Lewis Carroll’s *Alice’s Adventures in Wonderland*, a book whose last chapter contains four sentences only, with over 100 words each? Initially, this nowadays most popular of all children’s books received poor reviews and for decades its sales and translations to foreign languages were justified by the allegedly remarkable accompanying illustrations by John Tenniel. Likewise, *The Pilgrimage of Arsenij Njegovan*, a laureled novel by the renowned Serbian writer, Borislav Pekić, would end up in the trash before the intellectually superficial and shortsighted editorial eye of the modern day makes it past the first three 411-word long sentences of the book²³³⁷. The writing style of another one of the most prominent Serbian novelists of the 20th Century, Danilo Kiš, with his sentences often spanning entire paragraphs or even multiple

pages²³³⁸, would be also destined for disdain and censorship by today's literary critics and editors, respectively. The same fate, I am sure, would have stricken Hermann Hesse's *Narcissus and Goldmund*, a novel opening with a 165-word long sentence²³³⁹, as well as Charles Dickens' *A Tale of Two Cities*, opening with the classic, 119-word long "it was the best of times, it was the worst of times, it was the age of wisdom, it was the age of foolishness" sentence, let alone any of the late works by Henry James, wherein "single paragraphs began to run for page after page, in which an initial noun would be succeeded by pronouns surrounded by clouds of adjectives and prepositional clauses, far from their original referents, and verbs would be deferred and then preceded by a series of adverbs, the overall effect being a vivid evocation of a scene as perceived by a sensitive observer"²³⁴⁰. Gabriel García Márquez, then, would have to pray that the reviewers turn a blind eye to the final, 85-word long and rather mundanely sounding, brackets-containing sentence of *One Hundred Years of Solitude* if he wished to have it published today. The unabridged version of Victor Hugo's *Les Misérables* contains countless sentences, such as the following, 116-word long one, which, had they caught the eye of the reviewers today, would never be printed as such, without being butchered by the copy editors and broken into multiple shorter sentences: "While the men made bullets and the women lint, while a large saucepan of melted brass and lead, destined to the bullet-mould smoked over a glowing brazier, while the sentinels watched, weapon in hand, on the barricade, while Enjolras, whom it was impossible to divert, kept an eye on the sentinels, Combeferre, Courfeyrac, Jean Prouvaire, Feuilly, Bossuet, Joly, Bahorel, and some others, sought each other out and united as in the most peaceful of days of their conversations in their student life, and, in one corner of this wine-shop which had been converted into a casement, a couple of paces distant from the redoubt which they had built, with their carbines loaded and primed resting against the backs of their chairs, these fine young fellows, so close to a supreme hour, began to recite love verses". Ironically, despite their rootedness in the traditional appreciation of the notion of freedom and the fact that a writer such as John Neal, who led the American literary nationalism movement in the early 19th Century, relished extraordinarily long sentences, having used neither more nor less than 228 words for the first three sentences of one of his novels, *Rachel Dyer* from 1822²³⁴¹, today's American critics from virtually every literary genre nurture zero tolerance to sentences where words have been freed from the cages of syntax and allowed to fly toward infinity. This is not even to mention 3684-word long Molly Bloom's soliloquy from James Joyce's *Ulysses*, one of the most revolutionary passages ever to emerge from the human pen, and the difficulties it would face from the publishers both then and now. Nor is there the need to summon up the opening lines of Viviant Denon's *No Tomorrow*, which Milan Kundera christened the finest sentence ever written in French: "I was passionately in love with the Countess of —; I was twenty years old, and I was inexperienced; she betrayed me, I became angry, she left me; I was inexperienced, I missed her; I was twenty years old, she forgave me: and, as I was twenty years old, inexperienced, and still betrayed, but no longer abandoned, I thought myself the best

²³³⁸ See, for example, Kiš's *The Anatomy Lesson*, Nolit, Belgrade (1979), where many sentences are longer than a page, counting hundreds of words. One, starting on page 35 and ending on the next page contains around 400 words, 44 commas, 4 open and 4 closed brackets, two pairs of quotation marks, and a hyphen.

²³³⁹ See Hermann Hesse's *Narcissus and Goldmund*, Mlado pokolenje, Belgrade, Serbia (1930).

²³⁴⁰ See the Wikipedia article on Henry James, retrieved from https://en.wikipedia.org/wiki/Henry_James (2015).

²³⁴¹ To make things worse for the modern denouncers of long, flowery sentences, John Neal ended this third sentence of his with "the warm light or the cheerful rain of a new sky" phrase. See John Neal's *Rachel Dyer: A North American Story*, Issue 1, Sharley and Hyde, Portland, ME (1828), retrieved from https://books.google.com/books/about/Rachel_Dyer.html?id=CnlTqTShF9wC, pp. 21.

loved of all lovers, and, by that token, the happiest of men”²³⁴². Correspondingly, I have been aware that nothing stood in the way of my occasional aspirations to open my written works to broader readership by releasing them through official publication channels as much as extraordinarily long sentences that now unequivocally typify my style. On the other hand, giving up on them would be like giving up on the heart and soul of my personal philosophy - of the Way, as you may guess - that I try to put into every iota of my verbal expressions. For, by using such deliberately long, undying sentences that rise from the ashes like Phoenixes whenever you may think that they are done and over with, I have subtly and clandestinely declared my disbelief in any symbolism that full stops may bear, having had my heart in favor of things that go on and on, endlessly, never finishing the quest, but always being on the road, starting things anew whenever a looming ending seems to be in sight, finding purpose in journeying rather than in arriving at the destination, breaking down walls and fortifications and opening the doors rather than shutting and locking them down, questioning rather than finalizing the answers, embracing Wonder rather than dogma and Love instead of judgment. For as long as I write, thus, will I look with a slight dose of abomination at the popular writings on literary platforms such as Quora, the literary mecca for SF techies and armchair liberals, systematically stripped of emotion owing to cherishing cold logicality and puritanical practicality, finding any outbursts of quixotic lyricism downright foreign and creepy, serving as continuation of the cataclysmic lineage of Hemingway’s obtuse and simpletonic verbal simpleness²³⁴³, truly embracing simplicity as if no alternative to it exists, to the extent of being frightened to the bone to delve deep into complexities and leave a trace of mysteriousness behind, the mysteriousness that, as Lao-Tzu had had it (Tao-Te-Xing 1), is the gateway to all understanding and to enchantment with this grandiose reality that bestows us with the stardust of the magic of life from each and every one of its corners. All this is, of course, not meant to diminish the glister in the eyes that have faith in the uttermost beauties condensable within utterly simple phrases, an ideal that perhaps all writers secretly or subconsciously strive to attain. “It’s so beautiful”, the final words of Umberto Eco’s Foucault’s Pendulum still ring around the hills and forests of my visionary mind, everlastingly reminding me of the loveliness of simple words and catchy phrases, charmingly placed in some enchanting contexts. For, in the end, we can say that it is more the grace radiating from the core of our heart than things palpable and verbalizable that we forge and create, having more to do with how we say a thing rather than with what we say and more with the acting spirit and style than with its surface semantics, that truly beautifies the world.

S.F.9.10. Have you ever noticed how fruit sown and collected by machines can never have the same savor and the subtle richness of taste as the one looked after and picked by human hands? That is because we instill some of our spirit into whatever we do. We do not need to deal with big things in order to change the world. As the art of Karma Yoga described in the book of Bhagavad-Gita has taught us, the smallest creative act performed with a chaste heart and mind unstoppably

²³⁴² See Milan Kundera’s *Art of the Novel*, cited in Michael Nuridsany’s *100 Masterpieces of Painting*, Flammarion, Paris (2006), pp. 5.

²³⁴³ My surprise as a high school student to whom Dostoyevsky stood at the top of the literary world upon stumbling upon Hemingway’s writings and being horrified by their shallow simplicity is still readily evocable. The following excerpt from Peter Ackroyd’s book on the life of Ezra Pound actually nicely sums my own opinion about Hemingway’s literary style: “He (Ezra) stayed on amiable enough terms with other American expatriates, but he was not a serious drinker or smoker, and ‘the lost generation’ did not appeal to him. Only with Ernest Hemingway did he strike up a firm friendship; Hemingway taught him how to box, and he tried to teach Hemingway how to write”. See Peter Ackroyd’s *Ezra Pound and His World*, Charles Scribner’s Sons, New York, NY (1980), pp. 61.

contributes to making the world a shinier and happier place. Every miniscule thought or physical movement is akin to an initiated vibration whose wavelike impulse continues to propagate through the cosmic ether and affect all life and matter in the universe. As our very perception is, according to the core concept of co-creation, also a creative act during which we autonomously draw the world of our experience in couple with the environmental incentives, every moment of our lives could be seen as the one in which we exhibit our creativity and determine the fate on the world therewith. Even the seemingly aimless wandering of our eyes along bricked walls in front of us draws the entire world in enchanting colors and shades for as long we find blissful waterfalls of love and happiness awakened in our heart by means of one such unpretentious creative act. Thus, our spirit does not become instilled into things we shape on the palms of our hands only, but in everything else around us as well, including the objects that we have barely looked at. Consequently, even when we cease to exist, our spirit will remain deeply ingrained in the kernel of this world, while unendingly waving on its surface on top of the seafloor of the ocean of reality to which it will have fallen, along with mermaids, sunken treasures, pearly mollusks, colorful corals and the pillars of Atlantis overgrown by kelp and hugged by a myriad of sea dwellers' spirits.

S.F.9.11. "Better is a dinner of herbs where love is, than a stalled ox and hatred therewith", (Proverbs 15:17) was King Solomon's saying, reminding us of how we instill the essence of our deepest wishes, emotions and aspirations into everything we do. When we cook with love and peace in our heart, these emotions will permeate every bite of the meal we make, just as the plot of the popular novel and then a movie, *Like Water for Chocolate*, has showed us. And together with the material nutrients, these emotions of ours will enter those for whom we cooked and whom we have fed as well. To cook with one's soul, as the prime idea behind the soul food movement insisted on, should thus present the first and the foremost step in every gastronomic recipe. Although many people will readily claim that the distant effects of human emotions and thoughts are nonexistent, to me there is no dispute in their realness. If the room I enter is filled with vibrations of pleasant thoughts and emotions, I am able to sense that and spontaneously feel as if similarly harmonious vibrations are instigated within me as well. As humans in particular and biological creatures in general, we possess a natural tendency to reflect emotional states, moods and behaviors of the creatures we come to sensory contact with. Children are particularly sensitive in this respect. Not only are they naturally prone to imitate surrounding gestures by means of going with the flow of empathy that arises like a powerful stream from within their hearts, but they are also often able to read through the obvious communicational signs handed to them by others and lucidly glimpse the invisible clouds of intentions from which these actions have originated. Yet, living under social conditions whereby instinctual and intuitive powers are being gradually put to sleep, while logical and rational traits are overly emphasized and celebrated, predisposes us to lose these genuinely childlike traits of ours and become blind to what the little princes of these world would every now and then remind us to be essential: that which is invisible to the eye²³⁴⁴. Or, as four-year old Theo said when the two of us searched for a treasure outside and I pointed at a lonely and raggedy autumn leaf, lying halfway smushed on the ground, as a potential treasure, "Dada, this is not treasure. Treasure has to be inside something. You can't see it". The same point was made, implicitly, by three-old Evangelina when I covered 1 in 10 on the 10 ft. sign of the Stonecreek pool in Irvine and asked her what number she sees and she said, "One", after which I covered 0 in 10 and asked her the same question, to which she replied, "Zero", confirming that the

²³⁴⁴ See Antoine de Saint-Exupery's *The Little Prince*, Mladost, Zagreb, Croatia (1943).

divine perception of children is such that it indeed favors the hidden and invisible over the uncealed and plain. But then, the world demanding the demonstration of logical thought to justify the wild and unruly exhibitions of the instinct and of the eye that perceives an elephant in an anaconda and a sheep in a box²³⁴⁵ slowly but surely begins to interrupt the flow of Tao, the divine energy, within one and molds a stiff sarcophagus in place of what one was the home to a spirit as lively as a child's innate imagination. In other words, the celestial child in us, able "to see a world in a grain of sand and a heaven in a wild flower", is being put to sleep for life, while an essentially dead, tediously predictable, bureaucratically boring and narrow-mindedly indoctrinated grownup is reinstated at its place; or, as Mr. John from Rumer Godden's *River* noticed, "Children have no armor, and so we kill them. We massacre the innocents. And the world is for children – the real world. They climb trees and roll in the grass. They're close to the ants and as free as the birds. They're like animals. They're not ashamed. They know what is important. A mouse is born or a leaf drops in a pond. If the world could be made of children..." Yet, should we retain this vibe of childlike sensitivity and let it sustain our entire being in a spiritually electrified state, we would be able to sense feelings and moods of creatures that are thousands of miles away from us, but are immaculately close to us in our thoughts. After all, we should know that whether we are sensitive to these remote vibrations of hearts or not, hidden connections that hold us all united within a single bowl of being are inextricable and omnipresent. Then, even when separated by enormous distances, the bonds between creatures that keep each other in their thoughts remain, and by enveloping the loved ones in thoughts of light and love, we are able to miraculously open the ways for light and love to reach their hearts. When we are in love, we may sometimes feel as if we are enclosed in a protective bubble of love of the person that keeps us in her loving thoughts. We may feel then as if we are a Christmas tree surrounded by tiny, joyfully twinkling lamps and a big star on top of our heads, illuminating the ways lying before us. This is why many people are addicted to romantic relationships; because just like plants yearn for water that gives them life, humans crave for love. Thus, a true spirituality for me starts with setting the foundations of beautiful and crystal pure thoughts and emotions of devotion within us, and only from there on letting our acts spontaneously spring forth. Ultimately, how we do something matters more than what we do, which is why we can let ourselves be a punk and misbehave accordingly, and yet with beautiful intentions within us send rays of light with every moment of our lives.

S.F.9.12. The indigenous people of Trobriand Islands off the coast of New Guinea are known for their habit of exchanging goods while believing that the spirit of the gift-giver rests in the objects aside from their material value²³⁴⁶, reinstating this forgotten consciousness that raises the value of "how" on the glorifying pedestal of human deeds far above that of "what". Thinking of these beliefs of Papuan islanders that may seem superficial to inhabitants of the materialistic Western world, but are, in fact, quite profound, I recall my own watching telly, glazing amulets and experiencing spaces in which I become magically immersed with a state of mind that absorbs not only their visible and palpable details, but the mysterious spiritual essence which these perceptual details of my surrounding hide within. It is as if human emotions and spiritual aspirations are being projected straight from the TV screen, from objects in my vicinity, or from the hearts of creatures that hold us tightly in their thoughts and may be on the other side of the planet, onto the bottom of our soul. On another occasion, when I came to our family house in the rural suburb of Belgrade I

²³⁴⁵ *Ibid.*

²³⁴⁶ See Annette B. Weiner's *Inalienable Possessions: The Paradox of Keeping While Giving*, University of California Press, Berkeley, CA (1992).

have loved to call Mala Mo – a setting that complemented the urban neighborhood of Belgrade in which the other family house of ours resided, quite righteously to be blamed for the dialectically crucifying standpoints on which I would come to place the gist of my philosophical views – to do some gardening while my parents were away, I felt as if every blade of grass, every ensemble of leaves on the trees waving with an infinite gentleness and yet an infinite liveliness on a summer breeze, every compound of colors surrounding me, including the open arms enfolding the reddish setting Sun and the bloody orange full Moon in its rise, spoke to me with the emotions my parents infused them with by simply watching them daily. So powerful did my immersion in this visual setting had on me, allowing my soul to flicker like psychedelic disco lights when I closed my eyes that evening, that I had absolutely no doubt that objects and plants I befriended that day had transmitted some mysterious spiritual energy from my parents to myself. Speaking of this makes me recall my hearing of tribal people who used trees instead of phones to communicate with their distant fellows. Thus, if a man, for example, went to a marketplace in a neighboring town, his wife would come to a tree and utter what he additionally needed to buy. This reminds me of how, once, when my mom fell ill, I went to every tree, every seagull, cloud, blade of grass and squirrel and conifer cone and, with outpours of love gushing out from my heart and choking me in tears along the way, told them *čuvaj mi mamu*²³⁴⁷, firmly believing that the waves of cosmic energy were thus being transmitted and made to travel to her divine self through the chain of life and inanimate matter alike, so that when they crash into her, they would heal and bring bliss and lull into sleep of white rabbits and angels. On the other hand, she has always used to say that when she is no more, I would need only look deep into any detail of life around me, be it the hum of leaves, the shiver of treetops, the trepidations of the moonlight, the chirp of the birds that kiss the windows jalousie with their ragged beaks or the sound of the hush sea, to hear the precious guidance from her, for she, literally, would be in everything. Therefore, I have no doubts when I claim that every detail of the surrounding world incessantly, subtly and for most of us imperceptibly talks to us about the nature of the collective mind of humanity and beyond. These signs of the times (Matthew 16:2-3), which we must carefully train our mind to become sensitive to, are literally everywhere. Each flower or a cloud may thus be a phone, a record speaker or a flashing screen that reflects wishes, aspirations and emotions of the whole wide world and particularly of the people we care for and relentlessly keep in mind. Action at a distance is, heuristically speaking, in fact, more of a rule rather than the exception in the world of physics since most of the physical forces are envisaged as transmitted practically instantaneously and non-locally, involving fields rather than chains of local particle-particle interactions, although the modern theories that aim at unification of the major physical forces use exactly the latter approach²³⁴⁸. Knowing this, we should not be surprised upon encountering assertions that speak in favor of our inextricable connectedness at deeper levels of physical being compared to the macroscopic and perceptive outlines of our realities. Just like roots of forest trees form a single reticulated network, so may be with the spiritual roots of our beings: even when walls of isolation are placed between us, somewhat similar to those surrounding trees in a Seattle garden²³⁴⁹ designed by Robert Irwin, the sense of unity, intimacy and interconnectedness need not be lost. In fact, what I believe in is that deep underneath and beyond the visible and tangible world of ours lies a sea of light in which all things are merged

²³⁴⁷ That is, “Take care of my mom”, if I were to translate this phrase into English.

²³⁴⁸ See the works of David Bohm, Fritjof Capra, Dejan Raković and other quantum theory philosophers and theoreticians that extensively discoursed on ontological and theological implications of this theory for more details on this.

²³⁴⁹ This open air exhibition is entitled Nine Spaces, Nine Trees and could be found in Seattle, WA.

and into which our awareness can plunge by means of inwardly oriented and deeply meditative focus, sending beautiful guiding waves to many creatures of the world and absorbing a spiritually enriching energy that then spontaneously and subtly radiates from our being following any action of ours. This is why every once in a while I descend into this divine and quite possibly quantum sea (as some interpreters of the metaphysical realms of quantum theory state), which underlies our existence and upon which the solemn and elegant ships of our perception float, so as to balance out the flows of energy within my being as well as to send wonderful messenger doves of peace into the air, which may guide the creatures dear to us on their spiritual quests. These deep and meditative layers of our consciousness may be truly those within which we have the chance to turn on the radioheads of our minds to blissful frequencies, thus sending waves of invisible beauty everywhere around us and starting to bless and secretly heal the world with every breath of ours, irrespective of how the surrounding world will interpret the superficial meanings of our actions. This fascinating phase transition occurring from within the deepest spheres of our psyche is analogous to fulfilling the mystical Zen task of emptying the cup of the mind so that the waves of this omnipresent sea of divine spirit, from which all things arise, like foam, could freely flow into it. Essentially, such is the way for us to become a pristine infant once again, infinitely receptive and free from the walls of daily judgments and other mundane thoughts that preoccupy the typical adult and block the flow of Tao, of divine intuitiveness and sensitivity, like Theo, who responded to trees in his surrounding from the day he was born and who'd begin to weep and sob on my chests when the branches of the trees lining the SF streets during our daily walks, though hidden from his view, were being chopped. Indeed, even when emotional events are out of sight, the consciousness of a child in us, of which sages and seers all the world over have professed, can easily sense them, as if with extraterrestrial antennas of a kind. For, when there are no ships of thoughts traversing the sea of ubiquitous celestial spirit in which our mind has meditatively immersed itself, even a ripple on the other side of the globe, let alone the other end of the street, can start to shake the tree of our entire being from its roots to the treetops.

S.F.9.13. The last paper written by Charles Darwin²³⁵⁰, the scientist who nicknamed oneself Stultis the Fool²³⁵¹ in regard to his believing the seemingly stupidest ideas to be the most rewarding and prolific ones, only two weeks before he sailed away from this planet, like a Hiawatha, the legendary founder of the Iroquois confederacy of Native American tribes whose soil was my first home on the American continent, “in the glory of the sunset, in the purple mists of evening... floating, rising, sinking, till the birch canoe seemed lifted high into that sea of splendor”²³⁵², was about a tiny clam that clamps itself to fingers of ducks, birds and water beetles in ponds and relies on their flying to spread itself to new habitats. When I was in an Iroquois Indian museum in the midst of the evergreen Adirondack forest, I was shown a picturesque story about a little bird who clung onto the back of a big black bird and then released itself once the black bird became tired and turned around, and thus reached unforeseen destinations in its explorations of the world, fulfilling the universal prophecy set forth by Leonardo da Vinci in his saying “the first flight of a great bird will begin from the back of a swan”²³⁵³. I have already written about the strange

²³⁵⁰ See Charles Darwin's *On the Dispersal of Freshwater Bivalves*, *Nature* 25 (6 April), 529-530 (1882).

phenomena in the living world, wherein organisms inconspicuously transmit seeds of other species and thus help them spread to new territories²³⁵⁴. Dodo birds and elephants swallowing indigestible seeds and releasing them on a distant soil in a protective wrap formed while traveling through the animal's guts are some of these strange examples. Also, some of the flower plants that nowadays inhabit the Galápagos Islands, on which Charles Darwin spent a considerable amount of time collecting the crucial evidence for his theory of evolution of species by natural selection, are known to have arrived on the islands' soil after being pooped out by birds that flew to them from some distant lands²³⁵⁵. Hence, out of all the incredibly imaginative garments and gadgets at the 2010 San Francisco Renegade Fest, I was most amused by the earrings that looked like miniature seed pots with a semi open bottom, so that they could self-seed themselves as the person wearing them walks around. Now, most notably, during his walks across the Galápagos Islands, Darwin was most intrigued by the beaks of finches he saw. He compared them with those of the predecessors of these birds that had arrived from South America less than a million years ago and concluded that their evolution must have been responsible for their drastic modification over time. This is why finches' beaks can be said to play a primary role in the story of how Darwin's theory of evolution came to arise and of how this English voyager became an unassailable example of a systemic thinker that approaches the littlest details of the surrounding reality, with the keys of insightful imagination unlocks the diamond chambers holding the most precious secrets of the origins and the future of our being on this planet and gracefully steps into them. Oddly, the person who had sent the specimens of the aforementioned pooping birds to Darwin turned out to be the grandfather of Francis Crick who later managed to elucidate the genetic structure of the cell and thus opened the way for the confirmation of Darwinian viewpoints at the molecular biologic level, leading to "the triumphant vindication of almost everything Darwin deduced about evolution"²³⁵⁶. The hidden connections between things of the world are thus so dense and omnipresent that the world is truly "like an ocean, flowing and touching all in itself, so that you tap at one place and it echoes on the other side of the world", as Dostoyevsky's Father Zosima claimed²³⁵⁷. Who could have told that the main source of the mineral nutrients and fertilizers for the soil of the luscious Amazon forest, not very rich in the first place as I have already pointed out in one of the previous chapters, comes from the Bodélé depression in the Sahara desert²³⁵⁸, a place that is not only 200 times smaller than the Amazon forest, but is also located thousands of miles away, on the other side of the Atlantic Ocean? These desert sand particles that provide food and salvation to the trees and shrubs of the Amazon rainforest are, however, the very same ones that significantly contribute to the ongoing deterioration of the Caribbean coral reefs²³⁵⁹. Similarly, it took scientists years to realize that ten billion tons of dust released into the atmosphere during the eruption of Mount Pinatubo in the Philippines in 1991 was responsible for restoring the regular amount of rainfall to

California and causing the flooding of the Mississippi River two years later²³⁶⁰. It has been known that manually putting out fires on one side of the Yosemite National Park interferes with the natural transfer of nutrients to the other side of it, dozens of miles away, alongside preventing the wildfire heat from opening the cones of fire-resistant sequoias and releasing their seeds onto the ground as well as averting the clearance of canopy whereby the sunlight is allowed to flood the forest and spur the growth of oak trees whose acorns are the major source of food for the local bears²³⁶¹. Deprived of their natural food, these bears go on to attack the habitats of people, the same species that aspired to the role of forest protectors by extinguishing the wildfires in the first place, but, in the end, merely disturbed a complex web of life and produced more havoc than harmony thereby. Therefore, lest the natural cycle of creation and destruction on which the sustained thriving of the forest life depends be disrupted, it was agreed upon that the vital effects of the forest fires in Yosemite, Yellowstone and other national parks all across the US are to be acknowledged and not interfered with at any cost. Similar effects existing on the global scale and in subtler settings are still far from easily imaginable, of course, even though they have been confirmed on countless occasions. Henceforth, a plausible explanation for the sudden surge of success in the synthesis of solid turanose all over the globe as well as for the global change in the dominant polymorphs of multiple pharmaceutical compounds could now be ascribed to Charles P. Saylor, a chemist from the National Bureau of Standards who hypothesized that “it was as though the seeds of crystallization, as dust, had been carried upon the winds from end to end of the earth”²³⁶², the reason for which a joke goes that chemistry professors specialized in solid state synthesis, such as myself, could be deemed successful or not by the versatility of seeds for crystallization of different compounds that they would bring into the lab on their beard²³⁶³. Thereupon, we may never be aware of all the tiny seashells and pearls of beauty and love that we imperceptibly sow around us while our attention rests on readily noticeable things and achievements in this world. Nyegosh’s Abbot Stefan thus said, “Our lot on earth, and what our destin’d goal – two sphinx-like faces which we try to read: where seems Disorder, Wisdom all profound? What are the children, what fathers of man’s dreams? That we call ‘Real’, is it ‘Appearance’ mere? Are these all mysteries Man can never sound? That which to man ‘appear’ – is that ‘Real’, or are we simply trick’d by our own eyes”²³⁶⁴, in what I regard as the most beautiful of all of the poet’s verses and what standard interpreters of Nyegosh’s works have regarded as the most enigmatic one. In any case, they point out that restoring childlike chastity, sensitivity and dreaminess within our spirit stands forth as the key that allows us to penetrate with our knowledge of things from their mere superficial appearance to the essence that they shinningly hold within their invisible foundations.

S.F.9.14. One of these days, as I was discussing a scientific problem with colleagues in the lab on the sixth floor of a rusty UCSF building on the Parnassus campus, in the midst of someone’s exerting an opinion I stepped aside, without discontinuing to listen carefully, and slightly moved a flowerpot that stood on a nearby cabinet. This distantly brought to mind the way in which

Gautama Buddha would stand up amid an arousing verbal discussion, step away from the talkative clique, enchantingly approach a flower, smell it and continue to hypnotically gaze at it²³⁶⁵. Right away Marcia, a bit irritated, asked why I did that, to which I replied, “Small is beautiful”, and felt as if I produced question marks above the heads of all the participants in conversation. Seeding the world with wondrous stars that others can use as signs to guide them to some wonderful treasures in life, instead of drawing the whole way thereto, is the secret of a masterful education. And it was neither the first nor the last time that I temporarily walked away from an engaging conversation, as if walking on a dream, but only to return to it with a refreshed heart and mind. Needless to say, nodding one’s head mechanically and staring at the participants in conversation is the thing of the past, as I claim. The future will, naturally, bring forth ecstatic dancing all over the place in the midst of even the most intense and focused conversations. In the end, staring at one’s face with strained eyes, having a frozen, half-smile with the upper lip lowered down, is most frequently not the sign of true respect, but of awkward clinginess. Hence the catholic poet, Coventry Patmore’s wonder drawing on the musings of an anonymous 14th Century English monk’s drawing on the 5th Century thought of Dionysius the Areopagite and exposing it in a pamphlet of Christian mysticism, *The Cloud of Unknowing*, “Shall I, a gnat which dances in Thy ray, dare to be reverent”²³⁶⁶, and my answer to it: “Dare to be reverent, but dare to be yourself too and continue to dance on that beam of divine light emerging from the depth of your heart”. And I know that sooner or later, should you retain the liveliness of a child in you, whose heart and legs leap in excitement with every holy thought that arises in you or that you come across, the world will press you down and you will tell yourself, under this pressure, that time has come to begin to walk slowly and steadily, like a heavy robot, never again turning your head like an Apollo glimpsing the muse of his dreams and spinning in silhouettes; that time has come to start speaking slowly and smoothly, weighing every word, never again stuttering, shoegazing, rubbing your chin and stonewalling the students and the public; that time has come to look bored and bugged, the way all professors with experience, they tell us, should do, so as to be taken more seriously; that time, simply saying, has come to choose death over life. And when this moment strikes you, remember to tell yourself that they can take everything from you, but life in you they cannot. Choose life then, not in an ironic way that Rent Boy had it in the generation-defining *Trainspotting* monologue, but in a frank, honest way, which is to inspire you to continue to act with the spiritedness of an infant, surprising everyone in sight with how unconventional and offbeat your acts are. One thing to keep in mind on the way to this sacred destination is to stay away from the behavior that is eccentric for the sake eccentricity solely; for, by doing so, one would merely contribute to the ongoing epidemic of “silly, selfish and eccentric”²³⁶⁷ people who have recognized that such traits are the proper tool to reach the world’s highest ranks, including those of academia. Albeit successful in their opportunistic careerism, via this wearing of appealing clothes and concealing a voracious essence underneath, they contribute to the quiet rotting of the hearts of science and humanity. What is needed instead is the building of a state of mind wherefrom radical behavior would emanate naturally, with no forethought or reward to reap therewith in mind. However, neither rules to hand out nor rules to play by are allowed in this book. Rather, with love

²³⁶⁷ An unrelated line from the film *Prisoners* directed by Denis Villeneuve (2013).

shining forth from our heart and wonder twinkling in the stars of our eyes, whatever we do will be blissful for us and the world. Be that as it may, the reason why I moved the jardinière was to yield an artistic movement that would possibly awaken beauty and harmony in inconspicuous ways. Common to both the Japanese art of Ikebana and the Chinese art of Feng Shui is exactly that: ordering objects in space so as to produce invisible waves of harmony. As I held the palm of my hand impressed in the sand of the Repulse Bay Beach in Hong Kong, contouring hearts and names in the sand and watching them being washed by the sea waves, every once in a while dreamingly gazing in the oceanic distance, behind my back was an invisible dragon drinking water from the very ocean. Looking back, indeed, one could see a huge scyscraper with an unusual hole in the middle. During the construction of the building, a Feng Shui master allegedly said that the space now occupied by the hole could not be filled with bricks because the space through which the dragon curves its neck when drinking water from the bay would then be blocked, which would make the dragon angry. No one could, of course, see the dragon, and yet the Feng Shui master had to be trusted. For, there is no doubt that such an ability to feel the invisible and directly imperceptible flows of energy conductible by the fine artistic arrangement of objects in our surrounding endows the true masters of these arts. And, as we know, this artistic ordering needs to be based on balancing order and chaos, symmetry and asymmetry. Just as when I play guitar, I rearrange the positions of objects in space while at the same time I let my mind sink into my heart, meditatively carrying out movements that let an inner light illuminate myself. As if I am One with the whole world at those moments. And I know that one tiny movement can enlighten the whole world when performed with such a state of mind. So, I moved the jardinière by a tiny, tiny distance, almost invisible to a human eye, and yet I felt that a harmony was let stream through the world thereby. Speaking of moving plants, I bring to mind the answer David Lynch gave when he was asked how he had gotten into movies²³⁶⁸. Basically, he quoted a story about him, still an aspiring painter at the time, drawing a plant in a garden by night at the Pennsylvania Academy of Fine Arts, when the plant suddenly moved under the subtle force of the wind. This infinitesimal and seemingly insignificant event had such an effect on the future filmmaker that he first went on to present it to his peers as a moving painting, then purchased a camera to capture this elusive movement and the rest is history. The secret morale of the story is, of course, never to underestimate the powerfulness of the effect of the finest and the subtlest of acts on the future evolutionary path of the souls in their vicinity. And indeed, sensitivity to these miniscule acts and ascription of cosmic significance thereto is what makes a difference between a savage and a sage. Therefore, every now and then you may find me trying to push apart the walls of the entire Universe by moving a flower pot or any similar object by a mere mil or two. Such living as a spiritual butterfly, if we were to invoke the famous effect that illustrates the core of the chaos theory, is in synchrony with the following words of Béla Hamvas: “There is no one such meaningless move or thought, the effect of which would not be felt even in the most distant parts of the Universe. Every act has its own universal meaning for the world. A single pebble thrown into the sea defines an entirely new direction for life of the world, and with every breath something changes in life of the world, irrespective of how tiny it may be”²³⁶⁹. Or, as the astroboyish space prophet from Oklahoma City, Wayne Coyne sang in the Flaming Lips’ *A Spoonful Weighs a Ton*, “Giving more than they had, the process had begun, a million came from one, the limits now are none”²³⁷⁰, reminding us of the infinite healing potentials of imperceptibly fine touches, glances

and utterances. The awareness of these little dusty and deserted ones which can turn into dazzling and glorious millions, of seeds of divinity sown with loving care and magically transforming into lusciously fruitful trees puts us straight on the track to awakening indescribably potent enlightening energies within our beings. Then, as Heinz von Foerster claimed, “we become aware that every action – even tiny lifting of our arms – can create a universe that has not existed before”²³⁷¹. Finally, when Inayat Khan says that “Cosmos is like a dome; it reverberates with what we say in it and with an echo sends it back to us”²³⁷², and when Confucius says that “among the means to transform people, the voice and semblance belong to trivial effects... when the sage is calm and filled with respect, the whole world becomes driven to the state of happy tranquility”²³⁷³, they also share the essence of the beautiful thought that “small is beautiful” and that the shine of love and beauty within us is the one that truly changes the world.

S.F.9.15. Since we instill some spirit of ours in whatever we do or perceive, when we run out to help people around us, we should make sure that we give them incentives that will make their goodness and happiness sprout independently of us, from the very inside. Hence, do not give fish to hungry people. Teach them the art of fishing instead. Do not explicate the entire route to happiness and fulfillment of their spiritual desires, but leave something secret and unsaid, so as not to deprive them of the joy of finding. Show them the path, but do not take them by their hands all the way to the journey’s end. Hand them a map with mysterious pointers to a sunken treasure, and then ride off into the sunset, like the glorious cowboy after he has instilled the signposts that lead the way to the beacons of heavenly ethics in the hearts of local ranchers and bunglers, all of whom were lost at dark seas of spirit before his arrival into town, or like Mr. Hulot as *mon oncle*, the diametrical opposite of the notion of a rotten spoiled *oncle d’Amérique*²³⁷⁴, getting on a plane, losing himself in the confused crowd and leaving the prosaic dwellers of the unimaginative and uninspiring materialistic world of ours changed by just a little bit and a stone’s throw closer to the child in us, the infant that holds the key that unlocks the gates of limitless outpours of creativity locked in the cages of our stiff and stern selves. Not dragging one by the hand all the way to the destinations we have envisaged, but merely intriguing people’s hearts with a stardust of subtly but marvelously shed signs is thus the recipe to truly beautifying the world around us. In other words, announcing the existence of a hidden treasure and opening the perspectives from which the road that leads thereto is visible is enough. The same approach is applied by Nature in teaching human creatures how to find the treasures of happiness and the meaning of life, notwithstanding that these may be inextricably tied, as implied by seven-year old Theo’s answer to the question what the meaning of life is: “The meaning of life is to be happy”. For, without being happy in the first place, as many would argue, no other people can be made happy either, the latter of which has been assigned the divinest goal in life in the opening passages of this book. But can these fellow human souls be spoken their language to without understanding their emotional plights and empathizing therewith, for which compassion and swirls of sadness rushing through our blood are needed, soon became the question revolving like a thousand sombrero galaxies inside my hurdled head. But this is how Nature, then it occurred to me, like children, its holiest emanations of life, strews our paths

with details that spark our curiosity and instigate our explorations, setting ourselves on quests during which the more we find, the more we wonder and the more we realize the great things around us that are worth exploring, thus unstoppably spinning the wheel of the scientific and technological progress of the planet and the cultural, artistic and spiritual evolution of humanity, which generally always occur hand-in-hand. After all, the beauty of seeking and journeying is the beauty of life. Being on the road with a beautiful star of envisioned destination flashing in front of our mind is the consciousness of a human divine. For, just as the following ancient Oriental story tells us, the aim we keep anchored inside of the sea of our heart and the visions that we let flash on the screen of our mind are equally important as knowing how to find a perfect fulfillment in walking on the road right here, right now. As it is the case with the twenty core principles of Shōtōkan karate, as put forth by Shōtō himself, which all start with *hitotsu* (一、), meaning “one” or “first”, so as to indicate that they are all equally fundamental, both the nurturing of the vision and the making of the steps leading to its incarnation are equally significant in the lifetime of every holy traveler. And so, in this story, a traveling sage was seen by a guardian of a Himalayan pass as he walked across a bridge in the middle of the winter, as a strong freezing rain started to fall. And so the guardian asked the old sage, “How are you going to reach the second base in the mountains during this storm?” The sage joyfully responded: “My heart has already arrived there. It won’t be hard for the rest of me to follow”. This song was sent to me from my Mom on one of these days as a good morning story, to which I replied with a single 🌞, thus giving an homage to a fellow soul from the grim motorways of Sweden, who, like me now with this pop art icon, began a record of hers with the sound of Skype²³⁷⁵, that connector between the trembling hearts of my Mom and I for many days, months and years, all of which are now gone, tussled in the wind, harbored only by the long, 7 o’clock midsummer shadows of memory.

S.F.9.16. When I walk through the streets of my native city, Belgrade, I feel as if I walk across the landscapes of my soul. This may be everyone’s feeling about the places of their childhood, partly because natural landscapes most intensively shape the world of our thoughts, emotions and everything else that our mind is composed of when we are juvenile. We have previously seen how by means of moving aspirations and emotions and creative thought and action, one is able to change the world, both physically and perceptually (i.e., the way it appears to one). On the other hand, by means of setting the physical limitations, drawing environmental constraints and conditioning cultural values, Nature modifies human mind too. As a result, mind continuously draws Nature, while Nature draws human mind. Be that as it may, for a long time I have joked that when I return to Belgrade, I will open the school of bleating or baaing, which are the slang terms used in Serbian language to denote the action of hanging out, roaming around and doing nothing except looking at the world and maybe contemplating about it. For, back in the days, before I began to write frenetically, while moved by a mysterious drive to impress the ideas that have landed on the celestial space of my mind during my daily contemplations onto notes of remembrance, I had crowned myself the king of bleating, living up to the ideals proposed earlier by Lao-Tzu and Oscar Wilde. Whereas the former said once that “nothing in the Universe can beat a doctrine with no words and the usefulness of doing nothing at all” (Tao-Te-Xing 43), the latter was the one to point out how “to do nothing at all is the most difficult thing in the world, the most

²³⁷⁵ Listen to Molly Nilsson’s Real Life on History, Dark Skies Association (2013). The opening sound of Skype could be heard 24 seconds into the song, before the first lines of the song were sung.

difficult and the most intellectual”²³⁷⁶. Having felt in those days that I was at my most useful when I did, in fact, nothing, when I let the airs of the Universe stream through my mind uninterrupted by the mental barriers of various kinds, I would have readily agreed with the protagonist of Eric Rohmer’s *La Collectionneuse*, who saw intrinsic heroism in the act of doing nothing in a world obsessed with being productive, albeit confounded and lost, unable to reach meaningful and fulfilling existence because of this toxic habit. Socrates, one of the founders of the Western philosophy and one of the most influential ancient philosophers, was also one big bleater who used to aimlessly hang out long into the night, drinking wine and partying with his gay friends, oftentimes coming home after dawn, where his wife would wait for him to take him to an early morning bath. He allegedly disliked taking paths that are straight as arrows, thinking probably that everything natural comes in spirals and other crooked lines wherein two steps forward are followed by a step back and so on. He also used to suddenly come to standstill and remain immovable like a rock, immersed in transcendent thoughts, for hours. His walks through the city streets, so Plato’s records say²³⁷⁷, may have been, in fact, the least predictable thing in the world, perhaps resembling the walk of a one-year old, back and forth, ‘round and around a bush or a rabbit, with no directedness or purpose in mind, purely curiosity-driven instead. And Socrates may have indeed been more of a child at heart than anyone else amongst his peers, which simultaneously led to his being the holder of the greatest wisdom around, highlighting once more the way of the child as the grandest ideal for a striver for stars to attain in the realms of emotion, experience and behavior alike. Additionally, with his peculiar way of crossing the distance from point A to point B, Socrates may have been implicitly pointing at the way and not the destination, of searching and not finding and locking one’s bird-like spirit into self-imposed cages of preconceived thoughts and judgments, as the key to solving ponderous problems that have hung over our heads like white puffy clouds. He also pointed at these keys as handed to us by Nature with its everyday phenomena, the careful observing of which is to lead us to realize solutions to numerous puzzles that our mind is busy processing. Active social living and openness to Nature and other beings has thus stood at the beginnings of the road of the Western philosophy that many great minds will have subsequently walked on, building it brick by brick. Richard Feynman thus carefully observed how “Western civilization, it seems to me, stands by two great heritages. One is the scientific spirit of adventure – the adventure into the unknown, an unknown that must be recognized as unknown in order to be explored... To summarize it: humility of the intellect. The other great heritage is Christian ethics – the basis of action on love, the brotherhood of all men, the value of the individual, the humility of the spirit”²³⁷⁸. With these words, he had merely reconnected us with the message implicit and gracefully concealed in Socrates’ teaching, revolving like a satellite around the suns of these two precious heritages of humanity: Wonder and Love. Aside from Socrates, other great philosophers and theologians, particularly those who took their teachings to a whole new level by not only preaching it, but living it too, such as Confucius, Gautama Buddha, Jesus Christ, St. Francis of Assisi, Ramakrishna and innumerable other souls that have enlightened either the millions or but a few, starting off chain reactions of spiritual illumination that reached cosmic proportions, and all from the little terminals of their hearts, were essentially big bleaters too. With the exception of St.

Francis, who wrote only a handful of short prayers and letters²³⁷⁹, neither did these three sages who had set forth the grounds for the founding of some of the most influential religions on the globe write a single word during their lifetimes nor had any intention to carry the message of their teaching onto others in a written way. They taught wordlessly, believing that appropriate actions, unnoticeable or sensational, may be actually far louder than words.

S.F.9.17. And it is the ultimate art of living: knowing how to look at tiny details of the world around and discover in them astonishing meanings that amuse our mind and enrich our soul. The secret, of course, lies in creative finding of analogies between the observed relationships and those conceived in our mind. Thus, we can convert an event taking place on a flower petal or on a tree nest into what goes on in our heart or an interaction with the neighbors. The options for placing these analogies on top of each other are indeed endless, and this is where the creativity of our observing and reasoning comes forth. Not in passive following of mechanistic and predetermined scientific research programs, but in imaginative finding of productive and beautiful metaphors of the explored situations in science and life alike. This also explains why whatever it is that we engage our creativity in, a part of our being has to be deeply and carefully immersed into the explored details, while the other part has to be distant like a flying bird that carelessly glides across the sky of reason with an unconstrained imagination. As the Way of Love has taught us, whatever we do, in our professional fields or daily communications, a part of our being has to firmly stand as one with others, carefully exploring every tiny detail of the surrounding world, whereby the other part ought to be dwelling in the depths of our own heart and mind. A creative communication thus always leaves enough room for the participants in it to be half here and half there. That is, to be devoted to listening and absorbing what the others are saying and expressing, but also to be distant and withdrawn in their own hearts from which the enlightening sources of creativity send their rays that our marvelous will and attention redirect to others. For, as spoken word poet Sarah Kay pointed out, “Having the courage to tell your own story goes hand in hand with having the curiosity and humility to listen to others’ stories”²³⁸⁰, building up on a poem in which she noted the following: “Impossible is trying to connect in this world, trying to hold onto others while things are blowing up around you, knowing that while you’re speaking, they aren’t just waiting for their turn to talk – they hear you. They feel exactly what you feel at the same time that you feel it. It’s what I strive for every time I open my mouth – that impossible connection”²³⁸¹. And in this life wherein giving out in stellar proportions is preconditioned by absorbing interesting details of life around us and transforming them into illuminative insights that maintain the glow of the sun of our spirit, we ought to know that, indeed, we do stand crucified on a wonderful crossroad of creativity at all times, one side of which extends in the direction of graciously reaching out to bring light to others, while the other side takes us to ever more inspiring collection of simplest things conceivable scattered all over the fields of reality we inhabit, but, as a rule, transformable into enticing pearls of wisdom, true diamonds that are truly forever owing to their irreplaceable role in fueling the spaceship of our soul on its voyage to stars. Finally, this crossroad is quite unlike the worldly ones whereon decision to follow one of its branches implies letting the other one fall into oblivion; rather, as the Way of Love teaches us and the image of the Christ on cross insinuates,

embracing them both and travelling along their mutual course is vital in ensuring our successful journey along any of these roads separately.

S.F.9.18. It is, thus, through the gates of the Way of Love that we arrive again at the doorsteps of the aforementioned Leonardo da Vinci's saying, "The more you describe, the more you will confuse". The French conceptual artist, Marcel Duchamp certainly knew about this principle when he worked for 13 years, from 1911 to 1923 precisely, on one of his most famous pieces, *The Bride Stripped Bare by Her Bachelors, Even* a.k.a. *The Large Glass*, and decided that it would remain indefinitely in an unfinished state before selling it. Later, when the artwork composed of two superimposed glass plates, some wiring and dust, cracked during a loan to an exhibition, Duchamp found it to have become even more beautiful than before and never wished to restore it²³⁸². Indeed, whatever it is that we are trying to communicate, whatever the point that we are trying to get across, we should know that some things ought to be left unsaid and unpainted, so that the reader, the one for whom our works and ideas are meant to represent something important reconstructs the rest in an enlightening moment of understanding. Although this interpretative act will often turn out to be analogous to the shattering of the glass of the sublime piece of art of what we have tried to convey, despite it all, in the end, it might be more beautiful than were it left alone, untouched by another. Which is to say that for many reasons it is best for things to be left imperfect upon handing them to others. In a book that celebrates simplicity of profound living, the Little Prince had asked the pilot, the author of the book, to draw a sheep for him, but only when the pilot drew a box, saying that the sheep was actually enclosed inside, the Little Prince was satisfied. He was, on the other hand, very skillful in recognizing an elephant in a boa constrictor, knowing that one always has to seek for the deep and concealed qualities of things encountered in life because it is them that are the roots and true sources of it. As proclaimed by St. Paul the Apostle, "While we look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal" (Corinthians II 4:18). Hence, the real art of teaching does not lie in providing puzzling situations and immediately afterwards pointing to the solution. The truly inspiring method lies in supplying the taught ones with a problematic event and then instigating a powerful and mountain-moving desire to find an answer to it. As proclaimed by Antoine de Saint Exupéry, "If you want to build a ship, don't drum up people to collect wood and don't assign them tasks and work, but rather teach them to long for the endless immensity of the sea". The conductor of an orchestra does not play each instrument instead of the musicians even though he could be maybe playing better than many of the instrumentalists do. Instead, he knows that everyone will be satisfied at the end of the day after feeling that one had equally contributed to building a great artistic whole. Not to mention the merits of learning through being immersed in situations where we have to act and play, and not only to listen and conceptualize. Even if the things do not work out for the disciples, instead of doing the work on their behalf the true teacher would merely hand them a piece of a starry constellation that may serve as a guidance on their individual quests, albeit the quests always done for the sake of glorifying humanity as a whole.

S.F.9.19. However, metaphors we discover upon observing simple things in life are like double-edged swords. Whereas one person will in the twinkling stars see a metaphor of angelic winks to pure and innocent, heavenly childish people on Earth, another creature will see in them a metaphor of a headache buzzing with pain. Whereas one could see in clouds a metaphor of sublime ideas

²³⁸² See Michael Nuridsany's *100 Masterpieces of Painting*, Flammarion, Paris (2006), pp. 180.

solemnly sashaying across the sky of our mind, always changing as they are being recalled and reshaped during their travel over the railway of time, another creature will see in them a metaphor of inevitable evanescence and vicissitude. If you mention the word “Way”, my first association would be a spacious road, symbolizing a direction in life, progressiveness, adventure, a traveling ecstasy and a passionate immersion into the beauty of life as a journey right here, right now. But someone else may disappointingly say, “Oh, yes, all things stand in a way to each other”, thus reincarnating the feelings of Jean-Paul Sartre’s Antoine Roquentin as he sat on a bench in a park and looked at the world with sadness and despair. Not “on the Way”, towards meeting God with every beat of their tiny lives, as I have suggested by proposing the entire Philosophy of the Way, but “In the way: it was the only relationship I could establish between these trees, these gates, these stones... I was In the way for eternity”, says Sartre’s pointless character²³⁸³. With the sound of Sonic Youth’s Teen Age Riot and the line “now I come near you, but it’s not clear why you make the way”²³⁸⁴ echoing in our ears, another person, of course, may perceive the making of a way instead of standing in it with the wish to face another and interact with it lovingly as sinful and nauseating, reminding us that whatever we do or say can always be interpreted as infinitely evil, infinitely gracious or simply lukewarm by the eye of beholder. At the very mention of Kingdom of God, a fantastic realm of perfect bliss and happiness, a pitifully disenchanted soul like this would merely wave his hand disapprovingly and say that Eldorado must have been an invention of the vengeful Incas who had wished to direct the conquistadors to the fierce heart of the Amazon forest that would swallow and slay them and that the Kingdom of God must be just about an equally vindictive outline of the road to peril, not paradise. Then, having his attention paid to the beautiful colors decorating the objects that comprise one’s experiential reality, the irksome, sulky spirit would merely wave his hand and dismiss this call for the appreciation of the beauties of life by pointing out, albeit correctly, that a flower is blue not because it is the real color of it, the color that it embraces and loves, but rather because it absorbs all colors but blue, wondering how wicked a reality must be that makes us observe objects in colors that these objects dislike and shove away from them. If reality perform this inversion at this simple physical level, how much more of positivity is concealed and negativity exposed in our perceptions of physical entities at deeper, more complex and spiritual levels, he may continue to wonder. Likewise, rainbow will for me always stand for the enchanting feelings arising in our mind right after the moments of rainy sadness, when the Sun of joy and hope again peeks through the blind curtains of our thick and foggy thoughts. But for a character like Antoine Roquentin it will symbolize beauty that can never be reached nor touched, and thereby a curse of human existence. “Look, there is a rainbow”, a glad and thankful spirit will happily proclaim, whereas a despaired, grumpy creature may merely notice: “What the heck, anyway there is nothing at the end of the rainbow”²³⁸⁵. But, whenever I hear a comment like this, deep inside of myself I recall a blessing thought of how some of the most beautiful things in life are like Lieh-Tzu’s seagulls that ornament the seashores of our mind only for as long as we leave them playing at a distance, without ever aiming to jump at them and catch them with our bare hands. For example, trying to capture the most profound qualities and emotions that are like graceful seas and streams upon which the ships of our beings float into the nets of words and linguistic conceptualizations of ours will be inevitably futile, as these ineffable qualities will, similarly to Lieh-Tzu’s seagulls, easily avoid them by flying away, leaving our nets mostly

empty, with only some slimy algae and a few seashells here and there to decorate the coasts of our knowledge with and remind ourselves of the beautiful uncatchable seagulls every now and then. Now, reasoning using analogies has been steadily established as an essential element of creative thinking, complementary to following the logical rules of thought. Whereas logic is mostly guided by the power of intelligence, in the standard form of the usage of the word, this complete, both logical and metaphoric thinking style apparently requires a dose of artistic inspiration to spin its wheels. However, overly relying on metaphors in our reasoning, without balancing their free flights of imagination with steady rules of logic, can be dangerous. After all, unconstrained and uncontrollable metaphoric flights of fancy are known to typify both geni and mentally disordered persons. For example, one of these days I roamed around the city, texting and calling people when I suddenly noticed that the batteries on my phone had almost gotten discharged. Soon after, I engaged in a conversation with a seller in an anarchistic bookstore, and for a brief moment felt as if the batteries in my mind are discharging and I had to make the point across as quickly and efficiently as possible. So, what I noticed in one domain of my experience (phone) became quite spontaneously and irrationally transferred to another domain (mind). It is, of course, essential to be able to recognize analogies like these as irrational and quickly discard them as such, which, however, many mentally disordered persons are not able to. Hence, although both the heads of an inspirational thinker and of a mentally confused persona may be immersed in a space crowded with unstoppable trains of analogies, flashing with starry ideas on the screen of one's mind, while the former knows how to recognize the sparkly and precious diamonds in the dusty haze of thoughts, walk to them through a plasma of amorphous and sublime ideas, pick them up, clean, cut, polish and present to the world, quietly and peacefully, deeply immersed in his thoughts and undisturbed by the dusty clouds all around him, the latter is unable to notice this difference, remaining ever more confused by the buzzing analogies that hurryingly fly through the space of his mind. Hence, whenever I find a vulgar or pessimistic metaphor in an experiential relationship, I do not stop listing more and more of possible analogies, all until I settle my thought onto a beautiful and inspiring metaphor. To erase a million of possible stars of thought, and keep only a single Sun in us is thus what typifies truly creative thinking. As the number of analogies that any single relationship observed - or, strictly speaking, co-created - in any domain or detail of our experience can lead to is apparently infinite, it is thence up to the compass of loving aspirations, to the anchors and stable edifices of intelligence, and to the ability to follow the Sun of hope and the stars of wonder to direct the ships of our thinking away from the whirlpools of chaotic and meaningless thought, and straight to some new oases in the ocean of human thought.

S.F.9.20. The way people approach shop and restaurant windows has always served to me as a metaphor of how they come near many other things in life. As I sit in a restaurant, one of my favorite things to do is thus to stare at the street and watch the reaction of the people passing by. On most occasions, they do not slow down their pace, but, if interested, simply rotate their body and twist their neck so as to catch a glimpse and mentally "cop a feel" of how worth it is to enter the place. Windows are like great symbols of interfaces in many other areas of life. Houses rest on foundations, but without windows their interiors would be wholly unlivable, and so is it with living creatures too: their inner constellations of beliefs, emotions and thoughts are the source of their spiritual stability in life, but it is their points of contact with the environment that make their bodies fresh and pervaded with light. And whenever we are about to indulge ourselves into situations that bring about novel insights, we are essentially approaching an interface. Depending on the imaginativeness of our interaction with something lying on the other side of the interface, the

insights gathered will be more or less valuable. I recall now that it is very much the same in the world of materials too, wherein, application-wise, things start to either go awry or echo success straight from the interface, be it another component in an electronic device, the oxygenated surface of a substance prone to corrosion or a neighboring tissue in the case of biomaterials. And what applies in the domain of inanimate matter can be usually transferred smoothly along a metaphoric road straight to the social realm. In this case, it is the interface that defines the merits of our encounter with a significant other. Be that as it may, the way people approach shop windows is nowadays a bit disappointing, and that particularly as it reflects the way people encounter many other enormously valuable sources of information in life. The fact that they are rarely ready to stop from cruising along a well-planned path, and with an open amazement drop down their jaw, open the flower of their heart and appear as if looking at the enchanting Noah's rainbow, indicates mountains of suppressed feelings within them and the fearful ignorance winning the battle over brave facing of the creatures and objects of the world that often silently crave for a precious piece of human attention. As Melvin Konner followed a chimpanzee across the Tanzanian forest and saw it suddenly stop next to a waterfall and gaze at it in what seemed like speechless astonishment, he noted down the following: "Perhaps millions of years ago, in the infancy of the human spirit, something evoked a similar response from a very similar animal. Something that made it stop in its tracks overcome by a sense of wonder"²³⁸⁶. After all, according to Plato, the rise of the Western philosophy coincided with Socrates' habit of abruptly stopping during his leisured walks, freezing like a stone and standing immovable like a marble statue for hours, deeply immersed in his elevating thoughts. Friedrich Nietzsche found a source of sympathy that, according to the historians, ruptured his whole being into bits and pieces, putting a definite full stop on the gushing flow of philosophical grandeur pouring from it, not in a horse that ran lightly across valleys and grasslands, but in the one that stood still, immovably, like a statue, in front of his residence in Turin, despite the verbal and physical assaults it suffered from a carriage driver who whipped it heartlessly, while Nietzsche, all covered in tears, watching the solemnly standing horse having the living daylights beaten out of it, uttered that timeless phrase, "Mother, I am dumb", and went on to spend the next, final decade of his life in complete silence. Then, the legend says that as Fritz Schumacher sat in the house of his mentor, Leopold Kohr, in a small Welsh town and worked on expanding his political thesis that "small is beautiful" onto economic territories, the Austrian anarchist wistfully complemented it with another adage saying that "slow is beautiful" too²³⁸⁷. Thus, when the times become overly fussy and I feel that my brain cannot handle the copious inflow and outflow of information anymore, I redirect my gazes upwards, to the ceiling, to the starry skies, to the orangey lamppost, to the swinging treetops, to the soundlessly gliding clouds or to anything that lies above the horizon line and imagine that it is 1984, that it has all become washed in bright colors once again, that I am laidback and leisured, cool as the snow, spread out with my spirit like a straw hat in the sun, that there is no more hypermodern pressings of the digital age wherein the level of neurosis amongst high school kids today is said to be the same one as that amongst asylum patients half a century ago, that I could sprawl into a widest 4-4-2 imaginable, that no one rushes to close me in, and that doctor Socrates is just about to receive the ball, make a samba sway or two and a pirouette on his heel before passing it classily to Zico, and that breathing deep and dissolving all the inwardly accumulated spears and spikes of irritation is needed, opening the channels through which I will become a child again, gently going with the flow, sympathizing

with it all and worrying not even an iota about falling from the lotuses of grace, for the grace of gods will always be there to pinpoint the way and save my amaranthine soul from being led astray. “Hey man, slow down”, my mind thus begins to whisper to me the verses of the finale of the epic OK Computer and remind me of the timeless Tagore’s verses: “Greater than all the troubles of the crowd was a little boy’s trouble - he had not a farthing to buy a painted stick. His wistful eyes gazing at the shop made this whole meeting of men so pitiful”²³⁸⁸. The art of stopping from whatever we are busily engaged in, turning around, making a pirouette and gazing with pure, childlike amazement at the eyes of seemingly trivial little things, at least for a second or so, is the sign of ultimate wisdom in this life.

Guiding stars asleep in the specks of everyday life

S.F.10.1. All is metaphor! Wherever we look, we could find millions of metaphors relevant for the finest and the broadest aspects of our lives alike. Bees pollinate flowers and with every one of their diligent flights spread some of an invisible essence that makes the meadow flowers rise in all their beauty. Winds travel across the land, showing us how the difference (in pressure) creates natural music and other lovely effects, such as bending of treetops and the dance of shadows amidst the hum of wind-swept branches. The very trees can suck water from the ground only if they give away the water collected in the upper parts of the plant. They do this by forming precious droplets of water on the surface of the leaves and letting them fly into the air so as to form clouds that will water and refresh other thirsty plants. These and many other natural processes and events offer beautiful analogies and guidance in our quest for living wisely and beautifully. No wonder that the greatest scientists looked for metaphorical inspiration in the natural world in attempts to solve numerous scientific problems and puzzles. Aside from the standard examples of Archimedes discovering the buoyancy principle while plunging in a bathtub, Einstein arriving at the principle of relativity while moving in a tram away from the Bern clock tower²³⁸⁹, Newton being inspired by an apple falling from a tree to build up the law of gravity²³⁹⁰, bearing resemblance to the way Sergei Eisenstein two centuries later came to the idea to shoot the famous Odessa massacre scene from Battleship Potemkin, which was to revolutionize film editing and montage for good, on a giant stairway by dropping a cherry pit and seeing it bounce down the stairs²³⁹¹, Gwyn Macfarlane developing the molecular cascade theory of hemostasis after the mechanism of intensification of electrical signals in photomultipliers²³⁹², Carl Linnaeus’ deriving what would become the standard taxonomy of living organisms via an analogy between a nostalgia for declining monarchy in the Age of Liberty in Sweden of his times and biological “kingdoms” ranging from the mineral to the plant to the animal²³⁹³, the two medical doctors, William Petty and Francois Quesnay giving birth to classical economics by comparing the circular flow of blood in the body with the flow of assets between the producers and the consumers²³⁹⁴, Baz Luhrmann coming to the idea for the memorable

scene of Romeo's and Juliet's seeing each other for the first time through an aquarium full of colorful fish while washing hands in a men's room and glimpsing the hair of a girl in the ladies' room behind an ornamental fish tank that separated the two restrooms, Victor Maslov coming up with the 4-4-2 soccer formation, nowadays the most standard one, after visualizing the pitch moving at ever greater speeds and the team on it being an airplane in need of streamlining its shape in order to sustain a stable flight²³⁹⁵, Giuseppe Viani inventing *catenaccio*, the least popular, but also the least penetrable defensive formation in soccer, involving a combination of zonal defense with players arranged in a line and man-to-man marking performed by the so-called libero or a sweeper, after taking a stroll by the waterfront and seeing fishermen catch fish with double nets, so that fish passing through one are stopped by the other²³⁹⁶, Harold Rosen, inversely, designing something practical by finding inspiration in sports, specifically the stable trajectory of geostationary satellites after the way quarterbacks spin the passing ball²³⁹⁷, Misha Tal's arriving at the idea of a majestic sacrifice on the chessboard in his game against Vasiukov in Kiev in 1964 exactly at the moment when the hippopotamus, whom the chess artist visualized to be sitting in the marsh of the board and tried to drag out for forty whole minutes, sank and drowned²³⁹⁸, one of my two favorite examples is that of Nikola Tesla and his discovery of the principle behind the work of the alternate current motor. It was in Budapest, as Tesla had a walk through the city park with a friend who was meant to alleviate his strange mental occurrences, such as thunderous sound and vision, with a healthy exercise. Although this idea had been sprouting in Tesla's mind for a long time, he simply could not fit the pieces of the puzzle yet²³⁹⁹. At one moment, Tesla glimpsed the setting Sun which reminded him of the verses from Goethe's Faust, which he then started enchantingly reciting: "The glow retreats, done in the day of toil; it yonder hastes, new fields of life exploring; ah, that no wing can lift me from the soil, upon its track to follow, follow soaring!" With envisioning the Sun descending and himself ascending to reach it, "the idea came like a flash of lightning, and in an instant the truth was revealed", in Tesla's own words. "See my motor here; watch me reverse it", Tesla happily exclaimed, while drawing a diagram of the AC motor with a broken branch in the dust, somewhat similar to Archimedes drawing circles in the sand before the feet of wrathful Roman legionnaires. The second one of my favorite examples is that of Ludwig Wittgenstein arriving at the idea of the broken correspondence between reality and language as a vehicle for thought while being voluntarily enlisted as an Austro-Hungarian soldier to fight against my home country, Serbia, in World War I. Looking at the widely spread military maps day and night first made him certain that "the limits of my language are the limits of my world"²⁴⁰⁰ and that the process of thought, including even the most rigorous forms of logic and math, must be rooted in language. Next, when he found himself on the frontline as a forward observer, hiding behind a stone wall which would be seconds later blown into pieces by an allied grenade, and when he looked up in the ash gray sky over his head, he knew it: "The meaning of the world does not

rest in the world”²⁴⁰¹. Together with the shattered stone wall, his dreams of a perfectly consistent correspondence between logic and reality crushed into millions of pieces, never to be picked and reassembled again. The war was soon lost for his side, but from that night on Wittgenstein became a fierce advocate of the fundamentally deficient, senselessly tautological nature of logic *per se*, unknowingly opening the door to an inflow of Dadaism, abstract expressionism, informalism, tachisme, conceptual and pop art, deadening relativism and a plethora of other “anything goes” philosophies straight through the heart of logic, that most orderly of all the disciplines of human thought. “Logic is vacuous... it cannot speak reality... my book delimits language, thus also thought. But the real issue is beyond all that... it’s how to live... and that we cannot talk! All the facts of science aren’t enough to understand the world’s meaning. For this, you must step outside the world”, Wittgenstein is thought to have said to his mentor, Bertrand Russell in the Hague in 1919, who would respond by asking him, “Without language or thought, how can you understand anything?” “Who knows, maybe by whistling”, allegedly said Wittgenstein, pointing at the understanding of the meaning of life as the exclusive privilege of those who learn how to live it rather than of those who learn how to verbalize it. In any case, what happened in the instant of that explosion of the bomb in Wittgenstein’s head was a seed for his most famous book, *Tractatus Logico-Philosophicus*, which sprouted and stemmed into its final form in an Italian camp for the prisoners of war a couple of years later. He became aware of the deficiency of every language conceivable, except perhaps that of the heart, and went on to claim that “philosophy is a battle against the bewitchment of our intelligence by means of our language”²⁴⁰², the battle which I would join any day with all my intellectual forces. This culminated in the finale of his tractate, wherein he put ethics and aesthetics at a higher level than ever reachable by logical propositions and famously asserted that “what we cannot speak of we must pass over in silence”, suggesting that the insight into the meaning of life is accessible only to those who live it, not to those who muse about it, an idea with which Goethe’s Faust and poetic souls all the world over would undoubtedly agree with. How flattering it is to think that by proudly fighting in the Great War and defending every inch of their home soil, my compatriots also fought in a war waged in that glorious sphere of human intellect where armies of ideologies march, cavalries of ideas clash and airplanes drop bombs of beliefs, not dynamite, onto the mental terrain. Without knowing it, their victory on the concrete level had a counterpart on the abstract level too, affecting from a different, more subtle angle every living soul on Earth, present or future. For, by becoming the victor, they helped in crushing the devilish dreams of dictatorially deterministic order that the Austro-Hungarian and German armies epitomized and wished to enforce and also helped in creating cracks through which the unutterable beauty of life could enter the human mind, a daunting twofold task for which my whole Serbian heart lives to this very day and whose rainbow colors shade every angstrom of the aura of my radiant spirit.

S.F.10.2. The way the model of the atom has evolved over time offers another beautiful example of how everyday observations can become reflected in scientific visions and images which would still be supported by the rigorous rules of logic and math. The model of the atom that Ernest Rutherford proposed in 1911 and Niels Bohr subsequently elaborated into a more complex, quantum model was a revolution for the world of science in terms of showing how magnificently large may find its reflections in minutely small; as if macrocosm and microcosm merged into one.

²⁴⁰¹ See Apostolos Doxiadis’ and Christos H. Papadimitriou’s *Logicomix: An Epic Search for Truth*”, Bloomsbury, New York, NY (2009), pp. 250.

²⁴⁰² See Ludwig Wittgenstein’s *Philosophical Investigations*, Nolit, Belgrade, Serbia (1953).

In this case, it was the very Sun that was imagined as residing in a single atom. It was the time when a mess of concurrent models was used to explain the atomic behavior – the cubic model, the plum-pudding model, and the Saturn rings model. And yet, these inventive minds came to the idea of invoking the metaphor of the Sun and, as in concert with the oneness that it symbolizes, to unite all of the preceding models around a single one, which would turn out to be more valid than any one before. The Sun can be thus said to have shown the way for humanity to understand and become friendly with little atoms and use them for the benefit of all. The Bohr-Rutherford model depicted electrons as circling around the nucleus just as the planets circle around the Sun. The only difference was in the nature of forces that supported this continuous movement. Whereas in case of the solar system the balance between centrifugal force that tends to drive the revolving planets away from the Sun and gravity that tends to bring them closer to it is responsible for the planetary circling, in case of the atom gravity was hypothetically replaced by the electrostatic attraction. However, an enigma faced by the atomic physicists of those times was how come the electrons stay in stable orbits the atomic nuclei when the calculated balancing of the forces predicted their slow descending into the sun, that is, the center of the atom. To explain this, Erwin Schrödinger picked on the major improvement that Bohr introduced compared to Rutherford's model, i.e., quantization of the atomic energy levels, and represented them as different harmonic modes of vibration of a guitar string. His blunt idea was to depict atom as a source of music. After many theoretical attempts he succeeded in this and in 1926 the Schrödinger equation was born. Two years earlier, Louis de Broglie showed that the ancient Leucippus' and Democritus' idea of atom as a solid particle inevitably fails and replaced it by the wave-particle dualism. By representing the atom as a particle and a wave at the same time, our ability to imagine and comprehend things became stretched to the very limits. Over time, however, appeared the needs to reconcile the tenets of quantum theory, which excellently predicts the evolution of physical events on a fine, atomic scale, with those of the theory of relativity applicable in explaining events on astronomical spatial and temporal scales. The string theory that expands on the musical character of the nature of matter and brings it to a whole new level by describing reality in terms of multidimensional strings that continuously extend through the entire space and time has so far provided the most successful framework for achieving this grand unification. In one such representation of reality, what we discern as objects and beings are essentially localized symphonies composed of millions of fine vibrations played on these cosmic strings which make all things in the Universe connected with everything else. Speaking of the importance of musical impressions for the evolution of scientific picture of the world, we can also recollect the often forgotten historic example of two scientists who placed pivotal bricks for the birth of the modern version of the periodic table of elements in the middle of a nighttime dream of Dmitri Mendeleev on February 17, 1869: John Newlands and Julius Lothar Meyer. While the former proposed that the chemical elements lay arranged in octaves, as in analogy with octave-repeating musical scales, the latter rearranged Newlands' "diatonic" version of the periodic table while even more emphasizing the octave-based rhythm after noticing eight-step periodicity inherent to the function of atomic volume vs. the atomic number as well to that of the propensity of an element to forming compounds vs. atomic weight²⁴⁰³. Inspiration that came straight from the world of music could thus be seen as responsible for the evolution of the periodic table from a set of unrelated and randomly scattered islands of elements that shared similar properties to the eight-group system that is in usage today. What is important to notice from this brief revisit of the way the model of the atom evolved over time, from plum-

²⁴⁰³ See Peter W. Atkins' *The Periodic Kingdom: A Journey into the Land of the Chemical Elements*, Basic Books, New York, NY (1995), pp. 81 – 84.

pudding to the Saturn rings to the Sun to the music and beyond, as well as of the timeline of systematization of different atomic elements, is that scientific pictures continuously evolve in feedback with human imagination, the one that incessantly feeds on perceptive impressions and transforms them onto the level of scientific relationships. In such a way, it becomes quite clear that Nature and human mind in togetherness draw sketches of science, as in agreement with the tenets of the co-creational thesis. A clear implication of such a stance is that sensitivity in recognizing the brilliant signs that Nature strews around us, certainly being promoted through learning to appreciate the works of art, is a crucial feature of productive scientific thinking. Science and arts are thus fundamentally entwined. No wonder then that some of the most productive scientists in the history of humanity were inclined to arts. Albert Einstein, William Herschel, Louis de Broglie, Richard Feynman, Ernst Mach, Max Planck, Ilya Prigogine, Frank Oppenheimer, William Lipscomb, Gerald Edelman, Werner Heisenberg, Wilhelm Ostwald, J. H. Van't Hoff and many others actively played a musical instrument or two; Albert Michelson, Walter Thirring and, most notably, Alexander Borodin, the member of the famous Russian *Могучая кучка*, were composers; Marie Curie, Otto Hahn, Erwin Schrödinger, Walther Nernst, Roald Hoffmann and Jožef Stefan were all poets; Alexander Fleming, Edward Wilson, Louis Paster, Santiago Ramón y Cajal, Lawrence and William Bragg were painters; Robert Holley and Roger Sperry were sculptors²⁴⁰⁴. Vladimir Nabokov was simultaneously a writer and a taxonomist of butterflies with “a long list of publication and a substantial career in entomology”, and is oftentimes invoked as an example of how artfulness and scientific inclinations can inspire each other. Although many fans of his literary works may have whined over the fact that he did not spend more time writing novels, whereas many lepidopterists may have regretted that he was not even more dedicated to this profession of his, in which he was known for “writing, in technical papers, what is surely the most polished prose ever applied to butterfly studies”, in Nabokov’s own words, “Dark pictures, thrones, the stones that pilgrims kiss, poems that take a thousand years to die but ape the immortality of this red label on a little butterfly... I cannot separate the aesthetic pleasure of seeing a butterfly and the scientific pleasure of knowing what it is... There is no science without fancy, and no art without facts”²⁴⁰⁵. This disagreement between lepidopterists and bibliophiles over Nabokov resonates with the generations of atheistic mathematicians’ belief that Blaise Pascal squandered his colossal talents for math by dwelling in religious thought, contrasting clergymen’s frequently exposed idea that his devotion to math is, in fact, what limited his fascinating theological musings to often ambiguous and little articulate, aphoristic scribbles. While the former claim that Pascal could have given the world infinitesimal calculus, which he insinuated in his writings, before it was developed by Newton and Leibnitz decades after his death, had he not only spent so much time developing his theological ideas, the latter blame his inclination to math responsible for the mild misanthropy that penetrated his thought and prevented him to reach a lasting union with both man and God. The same regret I often sense directed from one angle to my own dedication to poetry, philosophy and music as something that, in the opinion of hardcore scientists around me, diminishes my immense scientific potentials, and from the other angle to my profession as a scientist as something that, according to my artistic friends, I was simply not meant to be. While the former may share the view of the inventor, Red Edison from the LucasArts MS-DOS point ‘n’ click adventure, *Day of the Tentacle*, when he accused “bad blood on the mother’s side of the family” for his sons’, Jed

²⁴⁰⁴ Rogers J. Hollingsworth – “High Cognitive Complexity and the Making of Major Scientific Discoveries”, In: A. Sales and M. Fournier (Eds), *Knowledge, Communication, and Creativity*, pp.129–155, Sage: London, UK (2007).

²⁴⁰⁵ See Stephen Jay Gould’s No Science Without Fancy, No Art Without Facts: The Lepidoptery of Vladimir Nabokov, In: *I Have Landed: The End of a Beginning in Natural History*, Harmony Books, New York, NY (2002).

and Ned, deciding to be artists rather than scientists, the latter may, like Thomas Dolby²⁴⁰⁶, blame the goddesses of science for blinding the artist in me and stealing my poetic soul away. The reality is, however, that things scientific and things artistic in my head are entwined in a feedback loop wherein they inspire, not suffocate, one another. To the critic who thinks that my indulgence in poetic expression befuddles the clarity of my philosophical points and makes my scientific presentations obscure and not trustworthy and to the critic who thinks that my loyalty to science and philosophy merely dilutes the aesthetics of my lyricism, the answer is the same: to have the scientist in me without the poet and the philosopher, or any other way around, is impossible. None of them would be able to exist if it were not for their coexistence with all the other ones, for they all feed on and inspire each other and should one retire, the creative output of all the others would decline. In any case, knowing that creative thinking vitally depends on our ability to metaphorically connect the microcosmic relationships that are netted within the space of our mind with the macrocosmic ones that our everyday worlds of experience abound with, I also know that the most miniscule details of the world may offer us beautiful guidelines of thought if we learn how to observe them with patience and great insight. A Californian video game developer suffering from the writer's block has concordantly had a flash of insight when he noticed that the greatness of the work of an artist is due to "drawing from his life experiences" and gone to live life rather than sit by the computer all day long²⁴⁰⁷. Perhaps his string of thoughts at that instant resembled mine whenever the fear that my writing skills would deteriorate should I cease to exercise them nonstop, day in, day out, gets dispelled in my head and the slogan saying "class is timeless" instills itself in its place. For, if supreme level of mastery has been reached, there is nothing to fear because even after years or decades of not touching the pen, the master can produce nothing but a masterpiece when he returns to his art, often with a single stroke, like Chuang-Tzu when he drew the most beautiful butterfly the world had seen up to that point after contemplating about it for seven years, without even coming close to the canvas in the interim. Be that as it may, the game developer's immersing himself into life for a change indeed bore fruit and resulted in his creating the first video game after two whole decades of uneventful attempts to do so, suggesting, likewise, that this tapping of the most valuable inspiration from the ordinary and the extraordinary events from the life of the author applies to and encompasses every single field where human creativity becomes exercised. The modern trend of insisting on scientists and thinkers to do their jobs nine-to-five and then push the science out of their heads for the rest of the day, that is, to thoroughly separate work from life, can be therefore seen as nothing but devastating for one's creativity. Yet, this trend goes hand-in-hand with the contemporary shift away from seeing science as a romantic and passionate quest to reveal the secrets of Nature and toward seeing it as a coldblooded, emotionally detached entrepreneurship. Still, I have never separated work from life in my creative endeavors, which is why you may see me waking up in the middle of a dream at night to scribble down a thought or two, frenetically typing words of my books on MUNI with my computer bumping on my lap, opening textbooks to glance at a few formulas after a night out spent tirelessly jumping in a discotheque, or wistfully gazing through the window, writing poetry and playing like a dolphin in the pool in the middle of a working day. For, long time ago I came to conclusion that being a successful scientist requires artistic sensibility and insightfulness to be developed in us, while being a fruitful artist likewise requires an analytical element of our thinking to be incessantly active and able to distinguish actual from obsolete, sincere from fake, inventive from imitational,

²⁴⁰⁶ Listen to Thomas Dolby's *She Blinded Me with Science* on *Blinded by Science*, Harvest (1983).

²⁴⁰⁷ See James Liu's answer to the question *Why Did You Choose To Be an Engineer?* *Quora* (July 18, 2014), retrieved from <http://www.quora.com/Why-did-you-choose-to-be-an-engineer>.

touching from mind-numbing, amusing from boring, *et cetera*, and all that while intellectually and emotionally grasping a whole lot of history of the given art in our heads. Still, the reason why I opened my personal webpage with a description of myself as “an artist and a scientist” rather than *vice versa* is that I believe that science is a little bit more of an art than art is science, and not because I place my artistic ventures before the scientific and philosophical ones, despite the fact that I do consider my musical recordings the peak of my creativity in the eyes of Nature. In view of my beliefs that our successfulness on the tracks of science vitally depends on our ability to perfuse scientific activities with ardor, heartiness and emotionality, all of which are the classical attributes of arts, whereas artistic brilliance can often arise from absolutely no rational method as its base, I could deduce the argument that doing great science is an art of a kind, while the inverse statement may not necessarily hold true all of the time, and that right after invoking the following array of definitions put forth by St. Francis of Assisi in early 13th Century: “He who works with his hands is a laborer; he who works with his hands and his head is a craftsman; he who works with his hands and his head and his heart is an artist”. Now, if we classify science as art, the point of view that would have been shared by Albert Einstein who noted once that “the greatest scientists are artists as well”²⁴⁰⁸ as well as by Yakov E. Geguzin, who claimed that “there is no line between science and art: a true natural scientist is an artist, and a true artist is a scholar of nature in a way”²⁴⁰⁹, then, trivially speaking, simple math can tell us that if one dedicates 90 % of his time to science and 10 % to arts, he would be, strictly speaking, a 100 % of an artist and 90 % a scientist; hence, art, the forgotten heart of every empirical science, ought to always come ahead of the latter. On the other hand, although science could be seen as the subset of the domain of arts and the latter could be imagined to form a stem of the tree of human knowledge split off into many branches, some of which are sciences, I won’t lie if I claim that I am a Renaissance scientist who has decided to remain in the scientific realm for good; it is just that I have spent equal amounts of time trimming the scientific branches of the tree of knowledge using practical, experimentally based methodologies and inspecting the healthiness of its roots and watering them using an irrigation system, the successful application of which is directly dependent on one’s ability to enter the spheres of philosophy, metaphysics and poetry and speak angelically in their languages. I could, of course, not imagine a fulfilling life without balancing my devotion to scientific and artistic creativity. I have always felt as if the former without the latter would deprive my spirit of the streams of poetic passion and the stardust of grace that endow it, turning its Shelleyan intellectual beauty into mechanistic, clocklike cleverness, while the latter without the former might transform my being into a creature equally spiritually destitute and deprived of wonder, that elementary force that spins the wheels of the evolution of our consciousness. Many other benefits would arise out of acknowledging this entwinement of artistic and scientific traits in an enlightening human thought. For example, “if the natural sciences can be successfully united with the social sciences and humanities, the liberal arts in higher education will be revitalized”, E. O. Wilson stated in his attempt to unite the merits of science and arts, among many other aspects of modern thinking and society²⁴¹⁰. And yet, as of today, liberal arts colleges - such as the one where I relocated my lab in 2016 from a top research university in an utterly rebellious act against the dominance of the prosaic

²⁴¹⁰ See Edward O. Wilson’s *Consilience: The Unity of Knowledge*, Knopf/Random House, New York, NY (1998).

over the poetic in contemporary science - are scraped off any good reputation because drawing links between sciences and arts is still regarded as the passion of lunatics and intellectual rejects. Liberal arts today, of course, have their own battles against limitations to wage, such as that of swaying passively and superficially with the changeable winds of dominant liberal ideologies and excessively relying on critical theory premises, according to which social structures, not individual psychological inclinations and determinants, are responsible for defining the social wellbeing, but this is a cud to be chewed on some other occasion. Nevertheless, there is a grain of hope nested in my heart that the landscapes of the human thought would be instantly illuminated by the light of the spirit should we understand the pervasive role of metaphor in them and the importance of cultivating artistic views of the world for maintaining high levels of scientific creativity and *vice versa*, that is, should we understand the importance of a scientific discipline and diligence for the thriving of the technological and advanced communicational bases through which human minds and artistic pieces are shaped into ever more beautiful expressions and forms. Certainly, by developing artistic senses and the ability to notice beauty in relationships other than the scientific, one simultaneously develops the skills to plan, perform and interpret scientific experiments in magnificently creative ways. One ought to carefully examine these common things in the world around us since each one of them may be hiding precious insights that will be, sooner or later, incorporated in our models of reality. The colorful patches of butterfly wings, the softly humming seashell songs, the clinks and clanks of seashore pebbles, the long traveling clouds, the pining pinyon cones and needles – all of these may find their places in the realm of science or the system of our values through some precious metaphors that they evoke. It is by looking at the world and its small and neglected details with a whole lot of love, grace and humility of the intellect that we will find around us similar suns as the one that made its way through the metaphor to the dominant model of the atom, place them in the center of the Universe of human imagination²⁴¹¹ and make them spin our thoughts in unforeseen directions, taking ourselves and the planet on a ride toward the birth of ever more assorted, astute and amusing outlooks.

S.F.10.3. If we looked at the world long enough through the telescope of analogies, everything would start to appear as connected to everything else. “The stories about snails and trees are also stories about you and me”²⁴¹², says the daughter in one of Gregory Bateson’s metalogues, in the enlightening moment of understanding how any relationship presented as part of any scheme of things, model or narrative could be metaphorically copied on any other relationship in Nature, if only we are fanciful enough to avoid merely linearly connecting insights and ideas along a single, logical plane, but are able to arrange them one on top of the other and link them by the invisible threads of analogical parallels. By correlating things through metaphors, by placing one car after another in the endless train of associations, we may find connections between any two things, objects, details or events in life. One of these mornings I found myself staring at the sky just like when I was a child. It was one of those days without the fog, when the sky is light blue with only white planes and seagulls disturbing its silent monotony. In San Francisco and California in general, puffy clouds are a rarity, so instead of dreamily floating with them I looked at the planes and recalled how it had been the most enchanting thing I could do in the moments of relaxation

²⁴¹¹ Remember, atoms and molecules are models of how the reality works, and not the stuff that the world is objectively made of. For, as the co-creational thesis states, every product of our perception and thinking arises at the intersection of the way in which we invent our own worlds of experience and the way in which the world really is.

²⁴¹² See Gregory Bateson’s *Mind and Nature: A Necessary Unity*, Chapter III: Metalogue: Why Do You Tell Stories?, Hampton Press, Cresskill, NJ (1979).

years ago. Growing up in Belgrade, I used to wonder how amazing the sky looked in those areas where the air traffic was even more congested. And I have always had the habit of letting myself become dizzy by merely looking at the sky and contemplating about its immenseness and impenetrable depth. As I had my eyes fixed on the planes that resembled white sailboats leaving wakes on the tranquil blueness of the sea, I got reminded of how “what is up has to be down”. Whatever it is that guides our thoughts has to be reflected in the harmony of the dance of atoms, molecules, cells and organs that compose our bodies. Beautiful spirit = perfect healthiness. And then, soared on the wings of my ideas, I started immersing my fanciful mind into imaginations of me as one such plane. I would boost myself and soar up and then get all loose, letting myself drop down. And then I realized how in order to keep the constancy in the horizontal line of its flight, the wings of the plane must be neither tilted too much upwards nor slumped too much downwards. The same is with human creatures. Should we become overly soared in spirit and self-confidence, raising our nose and extruding our chests, we may ascend so high as to stop noticing many beautiful details that the Earth and earthlings abound with. Like a lofty balloon, we would fly across the skies of humanity, but be unable to get in humane touch with the plethora of beautiful creatures, objects and phenomena that the world abounds with. But if we become overly depressed and nurture the black hole in our heart that sucks our creative sunrays of attention inwardly, making our neck and head bowed down and desperately walking around in a crouched and shoegazing manner, our spirit would tend to spill its liquid and disconnected content and become like a blotch that sticks itself to the ground in despair and misery. So, the balance is required, and now I remember how I have always loved to sneak behind the back of my darlings and place my hands over their eyes, making them guess who that is by barely touching my hands. Also, when I was a child, a favorite trick my Dad used to play on me was to point at my heart whenever I was sad or moody. “What is this”, he would ask. But as I looked down, to my chests, he would merely raise my nose upwards. I play a similar game nowadays by showing examples of how to give “warm shoulders” (dancing and wiggling ones, unlike “cold shoulders”, literally frozen and stitched) and making the fellow creatures freely wiggle their necks, all until they realize that the position of the neck where we look straight ahead, as if being focused on the line at the horizon where the sea meets the sky, is the most favorable one. And then, by having our eyesight focused onto this magnificent horizon, with the neck so straight and the head so flat that vases and water buckets could stand on it stably, we might realize the ease with which the balance between childlike openness and dreamlike closeness, allowing us to stare at the sea and the sky for hours in tranquil amazement, emanates from this bodily stance. Only from such a balanced eye can a teardrop of pure devotion merge itself with the sea whence it got plucked once. Only from such a balanced eye can the enlightening rays of One shine forth. If we become too closed and distant from the world, if we avoid focusing onto its charming details and consciously appear remote and sleepy, we rest far from the ideals of beautiful acting and sensing that our muses and angels incessantly whisper to us as they fly around, guarding us with the shield of love with every step we take. But also, if we are too open, literally swallowing others with our eyesight, we ruin the sense of privacy and thereupon demolish the beauty of our being. Hence, balances are required, whereby the one between openness and closeness seems to be omnipresent, governing the wellbeing of cells, human organisms and psyches, ecosystems and all other things lying in-between and beyond. Even if we were to magnify the movements of atoms in a crystalline body, we would notice that they constantly dance, alternately getting close to each other and then diverging in different directions. In doing that, distancing too far away is more energetically favorable than approaching too closely. And yet, the middle range where the atoms are neither too close nor too far from each other stands

forth as the most favorable one. But miraculously, even if we were able to cool down the crystal to the absolute zero, when there is absolutely no thermal movement, the quantum theory predicts that this incessant dance of atoms moving to and from each other would not stop. Atoms never find the most optimal positions and settle therein, without moving at all. Instead, they dance and fluctuate even when the most energetically favorable points in space and time are found. This is because dancing is inherent to life, and the only perfect move at the moment of finding a perfect balance would be to break it, to keep on moving, traveling, fluctuating, as if being a happy twinkling star that leaps across ever more joyful trails of light and love in the home of its galaxy. Finally, this happy leaping reminded me of the way joyful blood cells travel through our heart. As the heart valve opens and closes, the blood cells rush through and spin in vortices. During this spinning, the negative charge is formed on the cell surface. It has been known for a long time that microscopic entities that are meant to be kept separate are typically negatively charged in the biological realm. Of course, what is positive and what is negative had been determined solely by convention and perhaps it could have been the other way around had the pioneers in the theory of electricity and probing the subatomic world not thought that the thing revolved around, like the Sun, must be more positive than the thing roaming and revolving, like the Earth, but this could mark the beginning of a completely different story now. The point is that hydroxyl species are more dominant contributors to the electrical potential of biological surfaces than protons, the reason being their more massive nature, lesser mobility and lesser hydration compared to protons, which all makes them reside longer on a surface. This charged nature of blood cells is essential for preventing the cells from sticking together and clogging veins and arteries. But on the other hand, this charge has to be, like everything else in Nature, optimal; neither too much nor too little of it is ideal. Because, had there been too much repulsion between the cells, the blood, specifically platelets and fibrin molecules, would not be able to coagulate and close an open wound. Therefore, it should not surprise us that the zeta-potential of erythrocytes was measured to be -15 mV ²⁴¹³, which places these cells right at the boundary between the range of permanent instability ($\sim \pm 15 \text{ mV}$) and a very weak form of stability ($\sim \pm 15 - 30 \text{ mV}$), with the range of full stability being reached only at the potentials higher than $\sim \pm 30 \text{ mV}$. Nor should we be surprised to learn that collagens do not have a one and unique melting point in all the different species, but that it is found usually just over the usual ambient temperature of a given type of organism, e.g., $15 \text{ }^\circ\text{C}$ in cod inhabiting the cold North Sea, $29 \text{ }^\circ\text{C}$ in tuna inhabiting the warm Mediterranean waters and $36 \text{ }^\circ\text{C}$ in cows and pigs inhabiting the land. Some may say that this is to allow this most abundant family of biomolecules to serve as sensors reacting by denaturation to the slightest deviations from the normal ambience and signaling the potentially life-threatening change to the central nervous system, while others, like myself, may extend this insight into a broader, more systemic direction and draw a conclusion that everything in life, in order to evolve uninterruptedly, must remain on the edge of existence, surrounded by abysses on all sides. This is all to remind us that whatever we do in life, it has to be a walk along a thin line of a balance where we are just about to fall onto one or the other side, leaving the breathless spectators in awe. For, wherever benefits are numerous, risks multiply too, making by default every walk toward treasures a walk over the edge of an abyss. And then, it is the shine of faith and hope, flourishing only when willful determination and shaking insecurities clash together, that propels us forward and makes us become like a jet plane rushing across the blue sky. And with everything being a metaphor applicable to the profoundest aspects of our lives, allowing the drawing of the threads of analogies from it to everything else under the

²⁴¹³ See Kung-Ming Jan & Shu Chien – “Role of Surface Electric Charge in Red Blood Cell Interactions”, *Journal of General Physiology* 61, 638 – 654 (1973).

Sun, by looking up to the sky and airplanes traveling through, by aiming our glances as high as we could, the magic train of our thoughts guided us from the air of the heavenly dome to human eyes to dancing atoms to rushes of blood and back to the heart. As in the ancient Sufi story, replicated in Paulo Coelho's *Alchemist*, seeking the treasures of the world is inescapably linked with the quest for the treasures of spirit. By roaming through the mysterious places of the world we simultaneously adventure across the mysterious landscapes of the soul. When we find the divine voice and its sublime beauty everywhere, we are at the same time absorbed deeply within the essence of our very self. To find the beauty of God is thus to "know thyself", and *vice versa*. All the roads lead to the ringing voice of God as much as to the beautiful music of sun and the stars that play deep beyond the air streams and planes of our heart.

S.F.10.4. And then, one day, as I glimpsed the American flag with the multitude of stars drawn on it, waving at me from the top of the 1800 Taraval Street post office, I felt as if wonderful, starry thoughts are like cars of a train continuously rolling through my head. Through logical and analogical links, a vision after vision passes like a blessing spirit across the screen of my mind. What I may bring to the reader are only modest sketches of this wonderful train of inspiring thoughts journeying through my mind. After all, this mountainously prayerful bliss that swirls inside of me, a communication with the divine in which merely a language of the heart is used to connect, does find impressions in the words of my books, but it only partially reflects this blissful confession of my being to the holy One that encompasses it all. I have always wondered how much of this inner bliss the readers of my works would manage to glimpse. Could it be that these inner sparkles of imagination are merely distantly related to those produced in the readers reading these works, I oftentimes wonder. On the other hand, the fact that each one of us breathes something subjective and unique into everything one interprets and experiences lies at the core of the co-creational thesis and is what truly drives the wheel of the evolution of human communication. Be that as it may, although such confessional writing purifies my heart and pleases me whenever I feel I have succeeded in impressing the beauty I sensed in my thoughts and feelings onto something palpable, something which could be communicated to others and used to produce similarly exhilarating feelings and insights in them, the fact that whatever comes out of a writing process will be merely a hazy picture of the real feelings and ideals that have nested inside of me will eventually put an end to it. One day, thence, I know I will leave the pen aside, tune myself to the right frequency, as if connecting with the distant universes, and make the stellar spin of my mind the most amazing book I could plunge into. All the words I always wanted to lay down would be written on that day, the final of which will be, of course, words that shatter this stifling barrier of words posed like a fortress around the sun of our spirits and liberate the art of being, as beautiful in its wordlessness as it could be, enabling our ascent to the angelical spheres of being after roaming confoundedly for too long across Faustian labyrinths of the mind in vain search of a solution findable in the domain of the intellect only, a type of solution that exists not. The Orthodox Christmas Eve on which, symbolically, the glad tidings of the acceptance of my paper on the ethos of punk philosophy for publication came my way, ending with my "letting language, the implicit subject of this short discourse, shatter into a shimmering semblance of the starry sky, incomprehensible but dazzling and mysterious, a silhouetting chiaroscuro, an anahata sound, a squirrel and a pine needle, and then a star"²⁴¹⁴, I remember I proclaimed as one such day as of which all that was to be said with this pen that writes with the guidance of the divine hand was

²⁴¹⁴ See my paper entitled *Punk Philosophy as a Path to the Summit of Ethos*, to be published in *Cultura: International Journal of Philosophy of Culture and Axiology* (2016).

said and the world was conquered, a day that might have presented the turning point in the reverse path I projected for my life, wishing to have it spent working hard and keeping head immersed in books for its first half and then living and playing and dancing, carelessly and beautifully, in its second half, which, in a way, now that I think of it, fits my teenage dream of living life to twenty-one and then living it back afterwards. And yet, here I am, writing about this glorious day, implicitly proving that one such day may not be meant to come yet, though meaning not that moments of plunging into the nonverbal essence of being and allowing myself to be swayed back and forth by the waves of Tao, of that mysterious divine energy that pervades our beings, are missing. Right now, for instance, like Mario Peixoto's describing the indescribable enchantment of sitting squatted behind an agave on the edge of a granite cliff atop the sea shimmering in the sunlight by uncontrollably panning the camera²⁴¹⁵, first along figure eights, then along concentric circles, before tumbling and turning the camera and taking it on a couple of dizzying spins around the camera's horizontal axis and the cameraman's vertical axis, silently bedazzling the viewer to the point of his seeing stars at the brightest of middays and creating a most memorable cinematic moment in the history of Brazilian cinema, I will leave my sane and studious self behind and engage in a dervish-like, bliss-bearing spin once and for all, with everything I have and am, allowing the complex mosaics of thoughts assembled meticulously in my head for all my life to drop onto the imaginary marble floor under my feet, crash and collide and shatter and die, yielding millions of scrambled semantic pieces, liberating me from their oppressive confine and launching into enlightened mental spheres wherein "after our labors, stars will be neighbors"²⁴¹⁶.

S.F.10.5. It was on a night when a crescent moon in the shape of a cradle, with Venus positioned right below it, with an unusual symmetry, hung suspended in the sky that I held in my hands Emanuel Lasker's *Manual of Chess*²⁴¹⁷, in which he said: "In Life a tension within Society always leads to a revolutionary political act, a great tension in the sentiments conduces to a reevaluation of established values, and it cannot surprise us if in Chess a tension brings about a combination... For if a great advantage is the necessary and sufficient condition for the existence of a combination, this longed for but seldom attained goal, the laborious search for it can be methodically made and thereby facilitated. Therefore, in the beginning of the game ignore the search for combinations, abstain from violent moves, aim for small advantages, accumulate them, and only after having attained these ends search for the combination – and then with all the power of will and intellect, because the combination must exist, however deeply hidden". Indeed, as a game of chess could be seen as a metaphor of the human lifetime and of battles waged in its course, as depicted in the legendary Ingmar Bergman's *The Seventh Seal*, whenever we are uncertain about what moves to draw and what strategy to adopt we could turn to the strategic principles in chess, such as those outlined by Emanuel Lasker in his classic manual. For example, oftentimes I come across people who conceive their actions with the aim to immediately bear fruit. Yet, such approaches remind me of the inexperienced ways in which novices open games of chess. That is, they attackingly look for a winning combination from the very start, instead of patiently opening the game by following a positional style of play. There are also those who try to trick their opponent by a fast combination or catch them in their sleep, waiting for them to overlook a whole piece, for example. But like soccer players who aim at dribbling the ball past the opponent instead of passing it to their teammates, losing it in the end and ruining the attack, one such lack of respect for the opponent

²⁴¹⁵ *Watch Limite* directed by Mário Rodrigues Breves Peixoto (1930).

²⁴¹⁶ Listen to Prefab Sprout's *Andromeda Heights* on *Andromeda Heights*, Sony (1997).

²⁴¹⁷ See Emanuel Lasker's *Manual of Chess*, Dover, New York, NY (1947).

oftentimes takes a form of a boomerang that they throw in the air in hopes of catching the prey, but only to realize that it is returning towards them to slam them in their face. With one such approach wherein one expects minor mistakes to be committed by the opponent and gets prepared to punish them timely, from the very start, instead of focusing on proper development of one's own pieces first and foremost, these players always leave weaknesses in their position, which an experienced opponent knows how to attack in a victorious manner. Hence, the advice I give to those who foolishly rush forward and dream of building fortunes of wealth or happiness in a short time is to pay attention to the way in which a chess game is superiorly played; namely, not by looking after materializing one's intellectual efforts as soon as possible, but by patiently placing pieces to influential squares on the board and developing with style, sensitivity and strength, while being ready to sometimes sacrifice pieces for the sake of establishing the winning potency and dominion on the battlefield of chess and life alike. And on every other step of the book the author threw in the air elegant comparisons between the game of chess and life, thus reminding us that the truest frameworks for organizing our abstract concepts need to be always regarded as looms of tiny threads of metaphors of our experience and the immense world we inhabit. That seems to be the only way for this abstract, inner microcosm of the mind and the concrete, external macrocosm of reality to advance forward. They can progress only for as long as they proceed in parallel, holding hands with each other, with metaphoric associations being the links that glue them together.

S.F.10.6. The appeal of fiction writing and other narrative art forms lies in depicting minutest details, everyday events and ordinary moments of life in a way so that they symbolize some greater and omnipresent truths. Of course, the subtleness or the blatancy with which this is being done defines the success or failure of the given artwork, respectively. For a metaphor to be artistically appealing, it must display a subtle appearance and be introduced meticulously, with great care and sensibility. As a counterexample I always gladly refer to the vulgarly apparent symbolism enforced in Luis Buñuel's movies as something worth avoiding at every cost. In contrast, the symbols ought to be either hidden behind the layers of music, text or visual effects, just like precious stones behind yellow leaves on a gold autumn day, and just like this tiny thought kept inside the brackets of a side sentence of this book, or equally delicately interwoven within the wholeness of the work. As for the latter, we could recall the plot of the third and the final film of Roberto Rossellini's World War II trilogy, *Germany Year Zero*, depicting a boy who is a sole idealist in a wholly disparaged world and who "takes onto his shoulders the responsibilities others will not"²⁴¹⁸, but who poisons his father following the advice of a corrupt Nazi indoctrinator and then, under an unbearable burden of guilt, jumps from the top of a cathedral to his own death, thus depicting the fall of the Third Reich in allegorical terms. Arts, as such, implicitly instruct us that there is more to the picture of raw perception than meets the eye and that all around us are gateways leading from a piece to the whole, connecting all with all in magnificent ways. Eventually, the entire meaning of artistic expression may be to shed subtle pointers at Nature and everything around us as the source of the most beautiful metaphors that may enrich our beings from the inside. By overcoming our ignorance and blindness, evident in thinking that Nature is permeated by random and meaningless events, through understanding arts in this way we become more and more sensible, receptive and keen on reading the secret signs of Nature with our every step. Therefore, the ultimate purpose of arts may be, after all, to point at very Nature as the most immaculate form of art. Humans will be thus, through their creativity, pointing to the beauty of Nature, while Nature, as the co-creational thesis

²⁴¹⁸ Watch the analysis of *Germany Year Zero* by Adriano Aprà, Criterion Collection (2009).

teaches us, is partly the reflection of human creatures who semi-autonomously construct their own perceptive worlds at every moment of their existence. In the alchemist, no-drowning spin of the ancient story about Narcissus and the lake, Narcissus stares at the lake, amazed both by the beauty of the lake and his own reflection on its surface, whereby the lake similarly enjoyed looking at the vivid radiance of Narcissus' eyes and yet somewhere deep in them noticed a reflection of itself, and likewise enjoyed in it. Like in this story, in real life too, whatever humans do, it is always about celebrating the beauty of Nature and the beauty of themselves, in an equal manner.

S.F.10.7. The old and extraordinarily simple adventurous videogames have forever shaped the foundations of my approach to living and cognizing. This is in largest part because of the intrinsic element of teleological mystery present in them. Namely, in many such games, a main character stumbles upon objects and messages that are always linked to some purpose later in the game. Thus, one finds a key on the floor knowing that it has to unlock some secret dungeon doors, or a hidden note that is to be interpreted as a map and a pointer to faraway insights or hidden treasures. Or, similarly, there may be a special corner, next to a special fireplace and under a special lamppost, where jumping twice unlocks a new level of play and enables the player to enter a whole new dimension of virtual reality. Such an attitude of being open to findings like these and accepting every object found on the way as intrinsically meaningful for the fairytale in which we are one of the actors and every scenery as a home to endless mysterious passageways to unexpectedly novel ways of perceiving the world and releasing the shine of our spirits in it has, in fact, kept me youthful in my heart. My views are, thence, always secretly looking for such strange objects or a magical combination of actions that would provide me with a temporary exit to a fanciful parallel reality. An image of a pan that finds a secret tunnel and emerges from it into a whole new world, quite like the one depicted on the cover of *The Rebirth of Cool Phive*, has thus always been particularly important to me. Anything tucked under a carpet in my world may turn any moment into a tunnel leading to a secret reality, like the one inhabited by Martian mindbenders that Zak McKracken falls into through a hardfloor hole under the carpet in the bedroom of his San Francisco apartment at 5858 13th Avenue, which would have been a stone's throw away from my 28th Avenue nest in the sunset had it not been an imaginary address²⁴¹⁹. Therefore, I will never give up on the belief that "the heaven waits all heavenly over the next horizon"²⁴²⁰, that is, that the entire world may be switched upside down in a briefest moment of time, that an extraterrestrial spaceship may land in our backyard and ETs invite us on a joyful ride with them, that vanishing around the bend and out of sight of the snoopy clique may mean entering a whole new dimension of reality, that making a pirouette in the blink of a twinkly eye may make the world disappear and be transformed into a real Paradise on Earth, and that a magic key will be found on the patio, opening doors to entire new, unforeseen and unimagined parallel realms of being.

S.F.10.8. As a child I would always come to my older bro who boasted to have been in possession of all the games ever released for Commodore 64 – just think, the whole microcosm of gaming space stored inside that magical thing of a computer, buzzed through my childish head - and ask him to set me play games that had no goal whatsoever. All the other kids enjoyed playing arcade

²⁴¹⁹ Play Lucasfilm Games' point 'n' click adventure *Zak McKracken and the Alien Mindbenders*. This game I first played shortly after its release in 1988, on my first and last Commodore 64, and have ever since claimed this to be the best game ever. San Francisco, of course, has an avenue named Funston instead of the 13th; hence the imaginary address at which Zak lives.

²⁴²⁰ Listen to Prefab Sprout's *Cars and Girls on From Langley Park to Memphis, Kitchenware* (1988).

or platform games with clearly defined aims and targets, but me, I was always impressed by the so-called sandbox games, which seemed as if they could be played forever and ever; the more objective-free they were, the better. Most mouthwatering of all games to me were those in which “nothing happens”, as if they have been born out of the quest for the holy grail of Gustav Flaubert’s ideal of *un livre sur rien*²⁴²¹, which emerged from the French novelist’s belief that the most perfect narrative had to be one about nothing. Whereas intricate plots were the source of the greatest enthrallment to most of my companions, I found the greatest joy and excitement in sleek negations of the plot or in their minimalistic oversimplifications, as in Tsai Ming-liang’s *Goodbye, Dragon Inn* where the ticket-selling lady searches through the cinema for the whole duration of the movie for the projectionist to give him a steamed bun, but never finds him and limps her way home through the rain in the end. Only when I grew up did I understand the causes for my impression with them. The key, as you may guess, has lain not only in the unfaithful reflection of the plotless life by the purposeful plots. Rather, the biggest reason was that plotless plots implicitly pointed out that life is to be lived right here, right now and not in one’s thoughts, absentmindedly, be it looking forward, into the future, or backwards, into the past. This, needless to add, has complied with the philosophy of the Way I advocate on the pages of this book, believing that happiness and spiritual fulfillment are reachable only in the present moment, when we liberate ourselves from the oppressive power of goals. Oh the joy, then, when I think of Jacques Rivette using a plot to kill the plot in his first feature film, *Paris Belongs to Us*, the movie about a girl caught in a twisted plot revolving around her seeking to solve the murder of a poet who “was plotting”²⁴²², a plot that, it turns out, is a product of ill imagination of, not accidentally, an American in Paris, certain Philip Kaufman, in the course of which her dear friend and the director of the play in which she acts gets murdered, insinuating all the harm caused by the concept of the plot and its devoted following. The anti-plot message of the movie served as a major inspiration for the French New Wave directors, who could foresee the future wherein the plot would eclipse many of the more authentic aspects of cinema and become the major determinant of the success among popular audiences and who would, therefore, go on to either completely reject or heavily distort plots in their subsequent movies. Their deployment of plots that self-deconstruct and self-destruct would leave the viewer invariably with a sense that one has missed something by the end of the screening²⁴²³, which is the same feeling that listening to a marvelous jazz tune or living life at its truest evoke, explaining the supposedly unprecedented closeness of this filmmaking school to real life, even greater than that achieved by Italian neo-realism or narrated documentaries. Rivette, himself, would go back to this topic of animosity toward plot in his 13-hours long film, *Out 1: Noli me tangere*, the social atmosphere in which is, more or less, Edenic before the actors begin to plot events revolving around a mysterious society of the so-called Thirteen, at which point the seeds of malice start to infiltrate the protagonists’ minds and the idyllic social relationships start falling apart like dominoes. The goal, ostensibly, of this anti-plot plot in the hands of Jacques Rivette may have been to insinuate that the paradisiacal existence is possible only insofar as destinations are found in the roads and ends in the means, that is, as the teaching of Bhagavad-Gita would have it, when the last traces of the attachment to the fruits of our actions is let vanish from the celestial sphere

²⁴²¹ Translated to English, the phrase means “A book about nothing”. See Ronald Green’s *Nothing Matters: A Book about Nothing*, iff Books, Alresford, UK (2001), pp. 77.

²⁴²² So says the nineteen-year old Norwegian whose ambition is happiness an hour and eighteen minutes into the movie.

²⁴²³ See Phil Christman’s *A Vision of Sanity: “Celine and Julie Go Boating”*, MUBI (July 26, 2021), retrieved from <https://mubi.com/notebook/posts/a-vision-of-sanity-celine-and-julie-go-boating>.

of our consciousness. For this reason, to create eventless events stands for a far more interesting approach to storytelling in my universe of thought than spinning the labyrinthine loops of logic that we call plot. On one hand, ever since I was little, I have been mysteriously drawn to seemingly slow, boring and lackluster landscapes of reality, finding the joy of finding the Little Prince's well that "each desert hides"²⁴²⁴ the act worth priceless reward. Thinking of Andrea Pirlo of Italy scoring a Panenka-style goal from the penalty spot in the quarterfinal game of the European championship against England, the chipping shot akin to "the act of either a genius or a madman", as Pelé noticed²⁴²⁵, first performed in my hometown, Belgrade, in the final game of the European championship in 1976, the year I was born, yielding a single second of an aping wonder to which all the preceding goalless 150 minutes served as an interlude and, even more importantly, overturning the game from a losing one for his team to a triumphant one, I recall how I have always been fascinated with works of art that are tediously dragged along the tracks of idleness and nullity, but that only then, toward the very end, create a moment worth endless astonishment, signifying all the preceding moments as a buildup of tension for this final act of transcendent magic that tends to stay impressed in our minds as a bottomless well of inspiration for a long, long time. Movies with no apparent story, crawlingly slow and yet subtle in detail, games of chess extending to infinity, and conversations not littered by countless empty-worded remarks, but with words elegantly emerging from silence that spurs the expansion of cosmic attentiveness in each one of us, have thus always had a mouthwatering appeal to me. On the other hand, such seemingly aimless games wherein, for example, the main character merely walks through the city streets and engages in conversation with others or performs ordinary daily duties present powerful metaphors of our lives. Just as we look for artistic pieces that provide metaphors for our lives, and thereupon subtly give us the keys to overcoming specific problems faced in reality, these "pointless" games could possess the same purpose. No wonder that the psychological disorders of social fearfulness or alienation are nowadays treated with playing games that tend to copy everyday situations on the substrate of a virtual reality. Thus, one controls a character that sits at home, in a library or goes to a discotheque, looking at it (the metaphor of the player himself) from a distant angle, which apparently has ameliorating effects on the behavior of the player afterwards, in a real world. Games as such offer us an opportunity to look at our own actions from novel angles and thus arrive at many valuable insights, which we have been blind to because they have fallen into blind spots of our perception due to our constant sticking to single perspectives while performing these actions and tasks. Boring, repetitive and habitual acting of ours in real life, passing unnoticed by us on daily basis, can thus be highlighted to our awareness in a striking manner as we look at these very same acts from aerial perspectives created in the virtual domain, bearing resemblance to astral insights gained as we fly above the world on the magic carpet of psychedelic drugs, for example, or during deepest introspections. As a matter of fact, converting any living situation onto a different domain, be it a warmhearted narrative, a glacial scientific model or an affable computer game, leads us to countless illuminative insights, previously kept hidden behind the blinds of our consciousness. Facebook, for example, has presented an invaluable platform for realizing the immenseness of the extent to which vanity and egotistic measurements of one another with the purpose of lifting oneself to higher grounds and pushing another down dominate communications of the modern day. There is no wonder thence that Fernando Flores maintains that games, particularly the collaborative ones, can tell us enormously about the sublimity of ethics present in

the world, aside from being able to teach us the secrets of magnificent morals *per se*. Discontinuing his lecture in order to play scenes from a videogame and thus inviting the audience to feel compassionate with the giant birds and little hobbits roaming across the screen in their wild adventure, Fernando Flores pointed at a great and yet undiscovered potential of gaming in terms of enabling people to look at their own qualities from a different angle and thus promoting their shifts in the direction of becoming more brilliant, stellar characters not only on the video screen, but in real life too. To tell the truth, whenever people are allured to participate in a game, be it an interactive virtual adventure, a cooperative arcade game, a treasure hunt, a game of monopoly or a white-elephant gift exchange at a Christmas party, grounds are set for lovingly piercing human eyes to penetrate through the stellar constellations of human dreams in their vicinity and be washed by the geysers of goodness or apathy flowing from their hearts; for, games can tell us enormously much about human personalities. Conversely, powerful dreams on videogames are being dreamt today, suggesting that they, with their limitless interactive potentials, may soon surpass arts and become the bearers of the most actual metaphors of human being. As such, they carry an unforeseen prospect as bases for therapies at the scale of human emotions, aspirations and wheels of willfulness wherefrom sources of both the outbursts of the celestial creativity and sinking into black holes of depression and lethargy are found.

S.F.10.9. If you find me merely lying on the carpet of a room in which the blinds are rolled down so that the stripes of sunlight and shadow fall on my face, know that I am fine. Although the feel produced by this effect is not as romantic as the one of specs of dust bathing in the orangey light of the summer sunset, it is still quite enthralling. “Maybe it is so because your bros are the fans of Belgrade black & whites”, the voice in my head says, alluding to their infatuation with the sports club Partizan. The real reason may more probably lie in the dialectic nature that underlies every aspect of our realities. Namely, we can appreciate the virtues of light, goodness and beauty only insofar as we reflect them from darkness, evilness and ugliness, respectively. I will never forget the first day of NATO bombing of Belgrade, which oddly coincided with the first day of the spring of 1999, when around midnight I sneaked out of the shelter, out of pure curiosity and adventurousness, and walked one block to the park at which I had played as a child. Looking in the northeast direction, I could see almost a half of the sky flaming red. Later I learned that the chemical plants and an airplane factory in the suburban area of Pančevo, less than 10 miles away, were hit. Still, the stars were visible and the silence of the whole ambience was like never before. I knew that planes flying, bombs falling, people screaming and fires raging were so close, and yet people creating auras of invisibility around them in fear of the bombs hid in the houses and shelters, bringing about an enchanting silence, the moment that possesses a special place in my memory. On top of that, because the city dwellers were urged by the officials to keep all lights shut in order to make the planes in the sky more visible for the territorial defense, the city normally polluted by artificial lights was virtually enshrouded in darkness on that night as well as during the following two and a half months. I remember that the stars on that night were visible like never before or after, as I stood all alone in the park otherwise teeming with jolly whistles and life, but this time enwrapped in an incredible silence, and gazed at the gigantic fire as it spread across a half of the starry sky above it. The values of silence and peacefulness were never before so strikingly clear to me as that night, when the horrible feel of bombs falling everywhere around surrounded the whole atmosphere. Often Nature faces us with undesirable things in life just so as to remind us about the qualities which we somehow ceased to nurture within ourselves. In that sense, we should never underestimate the importance of shadows in our lives. After all, light cannot move faster than the

speed of light, but shadows can, believe it or not, because from the standard physical framework of thought, shadows are not considered as information carriers. Hence, move an astral object to near the speed of light, shine a sun in front of it, then place a planet far enough behind it and you might catch the object's shadow shifting across the face of this planet, moving faster than the object itself and quite possibly faster than the speed of light, too. This curious phenomenon, of course, can be a source of endless musings on how dark things in life are speedier and stronger in their means and effects than those that bring light, occasionally bringing images as vivid as that with which the Waterboys' ended their record on a mystical land of sunset, having Mike Scott recite about "the sun beating on his neck and shoulders, still hot in its hour of setting, and his shadow, immeasurably long, made the climb ahead of him, reaching the open gate of the tower long before he did"²⁴²⁶. For a long time I have been one such shadow, overly respecting people around me and finding endless amusement and richness in their glamorous charms, readily staring for hours in their eyes, without ever getting bored, like a sailor in love with the sea, seeing in it "the embodiment of a supernatural and wonderful existence", "the Living Infinite", "nothing but love and emotion", and "an immense desert, where man is never lonely", if we were to put it in the words of Jules Verne²⁴²⁷. However, owing to what many people considered as creepy and shadowy acting, many romantic relationships of mine have been ruined, even though in my behavior I saw only childish sincerity and starry-eyed amazement. Although I knew that stepping back and facing away from the creatures I adored would have been the way to retain the balance of the Way of Love and thus attract the faced creatures in an equal manner, I carried the message of Hermann Hesse's Augustus, a story about a boy who realized that to love is a more precious gift than to be loved, on my chests. If you desensitize your soul and care less about people, it will certainly attract them to you, but do you really want that? Do you really want to be loved more and love less? Is that the Way of the Christ? Isn't it better to be like a sun at which no one is glancing, but which sheds light of life onto everyone, than to be a black hole that attracts everyone's rays of attention, but only to swallow them into its eternal darkness? Those were my questions for the cool and attractive people around me. And so, for a long time I was satisfied with merely loving, while not craving to be loved at all. Only later did I realize that to sustain the love for others indefinitely, one needs to live in accordance with the divine mission beating with music within one's own heart, and thus to distance oneself a bit from the creatures one so passionately adores. However, this distancing is done for the sake of not diminishing, but sustaining the glow of our love for them ever more. Alternately immersing one's attention into the starry twinkles of the loved ones' eyes and plunging into the wonderful landscape of one's soul, like a butterfly travelling along its wallpapers, is the recipe for happiness. To find a balance between being an active light, delivering sunshine to the world independently of anyone else, and being a shadow, trustfully following signs that the world and other creatures drop in front of our feet is to unlock the secret doors behind which the endless treasures of Love reside. That is the true Way of the Christ – to love the world with a mountain-moving strength, to live every moment of our lives with the starry wish to save the world burning within our hearts, and yet to appear in the eyes of the world as an enchanting superstar, not because we want so, but because the light of our love would be such that it blinds and spontaneously attracts the hearts roaming in darkness. In such a way, we live for the praises from the Heavens above, in harmony with the divine mission that is

inscribed in our hearts, and yet for the benefit of man, so that both humanity and gods can cherish our creative being in the world.

S.F.10.10. I have always enjoyed shocking people around me. It is as if day and night I have been to the world a character akin to Bob Dylan at interviews circa 1965, lighting up the cigarette and stonewalling the affected and artificial fakes and robots of this world, combining cuteness and cheekiness in their face to a masterful degree. Options are truly infinite to combine clever lucidity and an astounding originality in the gleaming expressions of ours. And with blending ancient wisdom and childish playfulness, we appear to the world as old and profound as dusty and solemn Ionic pillars and yet as fresh and rejuvenating as a child engaged in a heartfelt play in their shadow. So, whenever I find myself swimming too much in the waters of farfetched intricacies, I break the pattern with referring to an amusing story, consciously losing the thread, but knowing that in such a way sparkles of amazement are ignited in the listeners who are thus spurred to stay awake and curiously follow the partly planned and partly improvised flow of my presentations. In 2009 I hosted a series of lectures of renowned scientists and philosophers at UCSF, and before the first lecture in the series was about to begin, I introduced the speaker, John C. Warner, to the audience with the following words: “Here we are now, although I cannot see you, folks, really well”. As I pulled out the aforementioned glasses I had broken a week or so ago from my pocket and put them on, I added: “So, as you see, my glasses are broken, and I am hesitant to buy a new pair because I am still hoping that I will find the missing piece somewhere”. At this point, I realize that the facial expressions in the audience have started to show signs of confusion, anxiety, awkwardness and a mild excitement, as if many of them are wondering whether I have suddenly gone nuts. However, behaving like this stands for an old and familiar routine for me, which I have repeated on and on during my lectures. Still, as I continue I make the things softly flow back to the predictable pattern, to an apparent relief of the audience. “Well, today’s lecture will be about one missing piece, which is called Green Chemistry. It is seen as a missing piece in the puzzle of chemistry among the natural scientist of the modern day. I strongly believe that one hundred years from now people will look back at us and laugh at how ignorant we were about this missing piece, which will then be an integral part of the most basic scientific education and practice. I also believe that our today’s speaker will help us locate this missing piece, and that our eyesight will at the end of the talk be much clearer than it is now”. Similar to a river that floods the city with its waters, but then returns back to its regular flow along the riverbed, the one which can safely mill the wheat²⁴²⁸, I arouse the listeners and ignite stars that flash with excitement in their eyes so as to beautify the moments of their attentive listening, providing an enchanting context for the understanding of the messages conveyed through the very talk. Thus I punch the audience with soft pillows puffed with white feathers because awakening those who are asleep and illuminating the way for them to follow is the mission Nature and I in a secret and sweet conspiracy ascribed to myself in this life. Picking the right metaphor to illustrate a scientific concept in question and make it impressive for the audience is a tactical element that most profound educators have applied ever since in efficiently teaching their pupils; hence, what is vastly exciting in this introduction is the metaphor itself: the parallel with the eyeglasses makes my pointing at the necessity to implement the principles of ecology and sustainability into every element of chemical practice particularly striking. Henceforth, we should always look for small, broken and easily neglected things in life to inspire us to imaginatively point at much greater ones. Finally and most important of all, although I had

²⁴²⁸ See Meša Selimović’s Prologue to Death and the Dervish, Translated by Bogdan Rakić, Stephen M. Dickey, Northwestern University Press, Chicago, IL (1996).

lamented over the loss of the temple of my eyeglasses, after conceiving this introduction I got reminded of how obstacles, struggling situations and missing pieces of the puzzle of our knowing in this life are what we should look at as the objects and opportunities for our learning and progressing in this world. Whenever I heavily complained against the seemingly unfavorable circumstances in my life, I ruined the conditions for using them as stepping stones for my advancing forward. But when I lived in concert with the advice given by a tennis coach to a tennis player set to become the best one in the world, that is, “if you throw a bone to a lion and expect that it would break its teeth on it, it won’t; it would crunch it and munch it because it is a lion, a beast that eats metal and crushes rocks”²⁴²⁹, all adversities magically transformed into a fuel that would propel my flights faster than I had ever thought I would venture. In other words, whenever I humbly accepted what was around me as inescapable boundary conditions and exhibited my creativity under the limitations they imposed, I managed to achieve great things that I most likely would not have been able to achieve without these adverse circumstances pressing upon me.

S.F.10.11. As if encouraged by the initial verses of nowadays reviving Tao-Te-Xing, people in the modern culture are often stomping over the purpose of names in life. On one hand, I do not dispute that the most precious qualities of life could not be named and that naming counts as a part of the inevitable infirmities of the way we communicate using language. On the other hand, however, every name is music in itself. It rings around and sends unique sound waves to the world every time it is spoken, influencing its evolution in subtle and hardly noticeable and yet equally undisputable ways. When Tim Smith of Midlake sang, “Whenever I was a child I wondered what if my name had changed into something more productive like Roscoe”²⁴³⁰, in a song about stonecutters and mountaineers, he spoke no nonsense. For, sometimes I think of all the hostilities in the Middle East that could momentarily vanish if the Israeli officials were to decide to change the name of their native country from Israel to any word that bears no ethnic connotations and that could be a home by name to Jews, Arabs and any other ethnic group alike, somewhat similar to what the Serbian King Alexander the Unifier opted to do when he renamed the state union of South Slavs known as the Kingdom of Serbs, Croats and Slovenes to the Kingdom of Yugoslavia in 1929, assigning a strong transnational connotation to it thereby. If this rechristening was to send a message of aversion to the evils of imperialism of any kind exactly when Europe found itself in a trough between the two tragic waves of it, the two waves that caused two world wars on its soil, it was a noble goal, standing still as unprecedented in history. What is more, the King divided this multiethnic country to non-ethnic counties, so-called *banovine*, being a wise act that was later obstructed by Tito, who came to power at the dusk of World War II, re-divided the country into six republics, each one of which, with the exception of Bosnia and Herzegovina, was named after a particular ethnic group, and thus opened the door to its future bloody breakup, which to this very day bears a witness to its internal coherency and no real disposition to a painless split-up that the secessionists imagined in their petty dreams. Perhaps the country under this transnational name did not exist long enough to allow this eponymous transnationalism to gain nationalistic colors and cravings, which have in the Balkans been inevitably oppressive to one’s neighbors, but the fact that this never happened to the extent that we witness it in the United States, a country whose

²⁴²⁹ Or, “Baciš lavu kost i misliš da će slomiti zube... Neće, on će da je pregrize i izlomi, jer on je lav, zver koja jede metal i drobi kamenje” in Serbian. The quote is attributed to Bogdan Obradović. See Slobodan Maričić’s Novak Đoković i Australijan open: „Baciš lavu kost i misliš da će slomiti zube. Neće”, *BBC News* (January 10, 2022), retrieved from <https://www.bbc.com/serbian/lat/srbija-59942328>.

²⁴³⁰ Listen to Midlake’s Roscoe on *The Trials of Van Occupanther*, Bella Union (2006).

transnational spirit is paler with every new day while nationalism stays steady and strong, would have made the King proud, in spite of the bitter feelings that the majority of modern Serbs, who have suffered the greatest loss out of all the Yugoslav ethnicities because of the rise and death of Yugoslavia, tie to it. In the old Montenegrin culture, people used to claim that “name is everything”, which also partly explains why my name translated to English is Wolf. It is the traditional belief that a name like this should be given to a child whenever his mother had difficulties during pregnancy or labor and chances are that the child may exhibit some weaknesses during its development. The name that inculcates fear upon the very mention of it is in this case meant to protect the child throughout its life. Picking the right name can, needless to say, often be a way to unlock a new metaphor in interpreting events in which the one bearing the given name is involved. For example, naming of the girl saved and handed to her custodians by Corto Maltese, the seafarer who carved a fate line on the palms of his hands when he realized that he had been born with none, so as to be chosen as the one in charge of choosing it, in Hugo Pratt’s *Ballad of the Salt Sea*, Pandora, a symbol of hope, has given a whole new connotation to Corto’s maritime adventures described in this comic book²⁴³¹. Being aware of how life-changing paths could be drawn before our feet by the simple substitution of the names, I regularly ask others to make up a name for me, and even more often ascribe new and unheard of names to other people. For example, I gave my little brother, the good-spirit guardian of my soul, as I love to call him, the name Fido, to silently and invisibly protect him in life, aside from numerous other names I endowed him with during the moments of our leisurely play. In the course of our serene and carefree playing, the flow of joy arisen in my heart and mind would led to waves of enchanting music in my head, which I would then convert to vocal sounds and, thereupon, names with magically protective effects, with the power to enwrap the creatures we love in the invisible bubbles that shield them from many piercing arrows that malign forces of life may direct onto them. A thing of a seemingly miniscule importance in our eyes, such as a single word, and yet a whole world is saved therewith, as I love to say.

S.F.10.12. I have always believed that the littlest things in life carry the most tremendous messages. They incessantly whisper to us the greatest secrets of the Universe we could ever think of. As long as we can see a metaphor in the movement of a tiny grain of sand, it may despite its minuteness spark an avalanche of thought within our minds and make us sometimes change the paths of our beings by 180°. As I walked along the Ocean Beach on a bright sunny day, when everything around me was yellow, including the book I carried in my hands, I kneeled down to touch a seashell plunged into the soggy sand. Having noticed its spiral shape, I shook the sand out of it, placed it on my ear and started to enchantingly listen to the hum coming from its interior. As I held the seashell next to my ear, I noticed that there was a sound interfering with it, almost identical to the hum the seashell made. Enthrillingly, the sound was the one of sea waves reflecting from the book I held in the other hand, entering my ears with a strange, sandy hum. Only under a specific angle of the book could this effect be produced. How great, my heart leaped. A book can hum to one just as seashells can. Exhilarated by this discovery, I jumped up, holding a book on one ear and a seashell on another, and dashingly leaped along the seashore. A bit later, as my excitement hushed, I saw a tiny patch of dry sand surrounded by shallow water streams, a strange bird with unusually long beak on it, and a father and son walking to it. However, I jumped straight to its center, spread my arms apart and watched for a wave coming. The wave crashed against the patch but did not wet it entirely. The edges were left untouched, and the message was clear: the one who poses

²⁴³¹ See Hugo Pratt’s *Corto Maltese: The Ballad of the Salt Sea*, Universe, New York, NY (1967).

oneself at the center, neglecting to leave enough space for other creatures to enter in will be washed away. Only those that are respectful and caring for others, placing themselves at the last place, will get rewarded in the end. Only if we greatly desire to be an angelic guiding hand for the creatures of the world will we have Nature sending her angels to make sure that every step of ours is safely made. So, if we desire to be great, we should be small. Humble, modest and always carrying a vision of a starry-eyed virgin kneeling, all in light, as she gazes at the wonders of the starry sky within us. For, humbleness is the way to unlock the sturdiest and the most obscured doors of the Universe. Likewise, this seashore metaphor can also be seen as a metaphor of metaphors in our life. For, what the wisdom of reading signs that little metaphors strew our ways with teaches us is nothing but that small doors and obscured passages are those that lead to greatest discoveries in science and our spiritual explorations of the world alike. Only eyes permeated with the sensible sunrays of love, patiently reading the subtle traces of beauty inscribed on little things and seemingly unimportant and easily neglected creatures in this life will become truly great one day. So, thank you, little bird, thank you, father and son, and finally, thank you, the great sea for having me learn a lesson in wisdom on this bright sunny day.

S.F.10.13. Although I sailed across the Adriatic Sea even before I learned how to walk, having been in a paddleboat that flipped over in the middle of another bay, having hardly stayed onboard during a hectic speedboat ride, having waved from the deck of a transoceanic ship, having been held at gunpoint by the soldiers when we trespassed the territory that belonged to the Yugoslav army, having caught the sea sickness in the belly of a sailboat during tempest and having had innumerable dreams of the beauty of life spun in my head while sun-tanning and being immersed in the dizzyingly stunning view of the starry sky during my sitting still on ships' bows, like a mermaid, my first sailing experience in San Francisco Bay was one of the most memorable ever. It was a lovely day, without any fog and with a plenty of sunshine. We casted off and set our sails straight to see how the marvelous Golden Gate Bridge looks from the water. For the first time, by looking at it, I had a feeling I stood face to face with a living creature or a spirit. That is how fascinating and unforgettable the whole experience of seeing this famous, the most photographed bridge in the world from the sea level right below it was. The transition from the placid waters of the bay to the strong oceanic streams and waves on the other side of the bridge reminded me of the boundary between the firm and well established coasts of our knowledge and the sea of unknown and undiscovered. However, on the way back, as we had badly wanted to see the sunset over the bridge, we were late to return the boat to marina before the night fell. As we roamed through the darkness, we navigated between anchored ships, thinking that if they were kept there, there would have to be enough water below us to keep us suspended. Alas, out of the azure, we were breached about a hundred meters away from the shore, and the only reasonable way to begin to float again was to wait for the tide to creep in. And so we waited. The blue moon rose and as I sat on the deck, all alone, gently leaning on the pole of the sail, I began to realize how busy I made myself lately, and how the whole hopeless situation like this was needed to make me stare at the Moon for hours and remind me how wonderful a simple experience like this may be. Every now and then, and especially when we tend to move too fast in life, driven by our insatiable ambitions and desires, Nature makes us lose a battle. It is her way of telling us that although she indeed incessantly opens up the ways for the fulfillment of our deepest dreams, these dreams present only one pole that determines the pathways of the evolution of life. The second pole lies with the ungraspable will of divine Nature, and the pointers to its equal influence on the development of the world as we know it can often be painful. However, whenever Nature makes us lose a battle,

she always does it with the aim to have us win the war in the long run. Sooner or later, we realize that every wretched situation in life ought to be carefully explored as it always hides the key to our actual progress in life.

S.F.10.14. My feeling of desperation, with not even a sign of the triumphant spirit that joyfully carried me throughout the day, thus slowly turned into a perfectly tranquil and enchanting experience. A beautiful view like the one I had that night from the deck of the boat I can still partly invoke within myself and carry around as an inner landscape, a beautifying wallpaper for my soul, a visual mantra that can be used as a background on top of which many brilliant thoughts and actions could be let spontaneously arise. Then, all of a sudden I recalled the strange name our ship bore: The Final Answer. There is no final answer, I immediately said to myself. Should you look for one, you will only get stuck in the mud. You always need to move on. As you find a single star that looks as if giving you a permanent shelter to the wondering quest of your mind, do not give up on searching for more and better. Trying to collect the most precious sources of knowledge would resemble collecting droplets, quick to evaporate, lose shape and eventually vanish from the palms of our hands. Instead of collecting these precious pearls of knowledge, we should also learn how to throw them in the air, and with a light spirit, not anchored to the firm rocks of knowledge, but ready to carelessly fly across the sky of human being and knowing, with the desire to judge less and live more with the guiding star of “saving the world” shining within us, incessantly look for novel ways of creative being, acting and cognizing. The Way and the metaphors pointing to its ubiquitous relevance are verily everywhere around us. “The proof is everywhere”, as a Rosebuds’ song goes²⁴³². Just like great artistic pieces do, experiences like this have the purpose of bringing us back into the contact with the essence of our inner world. When we see a similar dance of the Moon of our soul and stars within us, just as without us, then we know that we are on the right way. As the Way of Love tells us, for our acts in the world to be truly fruitful and blessing for the entire world around us, we need to dwell deep in this starry well of the soul of ours and live each and every moment in constant reference to it. Never give up on basing all of your perceptions, reflections and actions on knowing that you are the star like no other in the world of yours. Only then may we be able to strew the world with guiding lights, starry and sanctifying, and yet see an eternal beauty waving to us from each and every detail of it.

S.F.10.15. “Hold the sample carrier as if you would hold a bird: neither too tight to suffocate it nor too light to let it fly away”. This is how I teach the art of polishing to young fellows these days. But I still remember the day when the assignment of polishing, a duty for which I seemed heavily overqualified at that moment, was posed in front of me. At first I thought of it as of a merely mechanical act, during which I can keep my mind focused on philosophical issues that my mind buzzed with. But then I became humble, absorbed in the momentary impressions and started looking for the metaphor. And there it was. Namely, as one polishes while successively switching from rougher to finer sandpapers, the surface of the material first gets all filled with scratches and only then gradually turns into a shiny one. Thus, the first sign that our polishing efforts are on a good way is not shiny, but rather a rough surface lain out with visible scratches. Hence, the message was clear. Whatever we do in life, if we want to polish, that is, be immaculate, we have to make sure we remember that not perfectly shiny results of ours, but the ones pervaded with scratches and imperfections present the sign of a good start. In that sense, it is true that “all glory comes from daring to begin”, as someone has said. For, if you look closely enough and follow the

²⁴³² Listen to the Rosebuds’ Blue Bird on Birds Make Good Neighbors, Merge Records (2005).

stream of your tiny little judgments during solving an analytical problem, you will recognize many blind alleys you enter and many futile attempts to find a perfect fit before reaching the solution. “You find out what is right after you discard what is not right”, Buckminster Fuller argued, reminding us that every learning process and progress in life take place upon mistakes, fallings and failures. And yet, it requires a strong will, a bright vision of the aim and a light heart to avoid a desistance enwrapped in the clouds of hopelessness and despondency following these tiny failures. Reflecting the attitude of an infant learning how to walk, being inspired to achieve this aim by something beyond a mere vision of it or raw willpower, while not letting any of the countless stumbles divert him from it, can be thus said to be essential in our using errors as irreplaceable cogs on the wheels of our evolutionary vehicle. The celebrated cyberneticist, Warren McCulloch consequently spent his entire lifetime developing “formal treatment whereby unreliable components achieve reliable outcomes”²⁴³³, wishing to reflect the imperfectly perfect nature of life in the microcosm of mathematics, according to which our evolutionary streams forward always follow a spiral route typified by our making two steps forward only insofar as we make a step backwards too every now and then. Or, as Ken Robinson mentioned in one of the most popular of all TED talks ever given²⁴³⁴, the one that reiterated my own perceiving education as a path on which imagination, creativity and freeness of behavior typifying children are all gradually killed and naturally inventive souls are locked inside the prisons of compliancy, conformism and deadening standardization, a path whose seeing with my own, professorial eyes, all along with its treaders, who lose ever more of the sparkle in their wondrous eyes with every new year spent and class taken on it, has given me the reason to do all I can to demolish it and conceive of a way out, “If you’re not prepared to be wrong, you’ll never come up with anything original... if you’re not prepared to be wrong. And by the time they get to be adults, most kids have lost that capacity. They have become frightened of being wrong. And we run our companies like this, by the way; we stigmatize mistakes. And we’re now running national education systems where mistakes are the worst thing you can make. And the result is: we are educating people out of their creative capacities”. Yet, every time we judgmentally condemn one thing or the other, we should know that the sin is on us for contributing to this withering away of infinite creative potentials that rest dormant in the pure child in us. And conversely, whenever we show signs of acceptance of it all, of both things and acts vile and chaste, we ought to know that we are making an illuminative step backwards, towards the sacred beginnings that present the ends of every profoundly moving story in this life.

S.F.10.16. “Dear Erin...” This is how a schoolgirl sitting next to me on the L train one of these days began a note, writing furiously on her lap. Ah, the lovely trains, I thought at the sight of her, thinking of all the invaluable insights that the mind machinery of mine, illuminated by the dazzling lights of otherworldly inspiration, has reached while journeying on them. For a moment, I was under an impression that she was writing a diary in the form of a communication with an imaginary personality that her superego had streamed to attain. This is how it occurred to me that I ought to be doing the same thing one day. The vision of Facing You²⁴³⁵, set firmly at the bottom of my mind, has always been inspiring for me; doing all the tiny duties in life and thinking, eating, sitting

and gazing at the distance with a vision of my muse standing in front of me. An idea for a book, that may never be written, thus dawned on me. Writing it would truly be a form of a self-enriching diary: an adventurous quest for beautification of the essence of my spirit, a journey towards becoming that greatest ideal that lies dormant in me, like a watermelon seed in which the dream of a tree of life on which we could climb to the very Sun resides, and slumbers serenely beneath the graciously arched rainbows of divine feelings and thoughts that emerge from under the magic hat of my cosmic mind, all teeming with twirling galaxies and glistening stars.

S.F.10.17. When I was a kid, there was nothing as enchanting and glorious as summer holidays spent at the seaside. Yet, every time it would happen that whenever I got myself into the rhythm of the summer, the time to go home would come near. The feeling of down was so big that the line inscribed on a bag used by another autobiographer as a child, saying “the summer is ended and we are not yet saved”²⁴³⁶, would be a neat descriptor of my inner world in those moments. Then I would turn around and ask my Dad a big, dewy-eyed Why, and he had his philosophy ready to expound. The best time to leave is when the fun is still at its best, he would say. These words ring in accord with what Michael Stipe said on the last day of summer 2011, during which yet another infinitely delightful chapter in the cosmic story of my lifetime was written, when R.E.M., an authentic musical power of their times, were announced as ceasing to exist: “A wise man once said – ‘the skill in attending a party is knowing when it’s time to leave’”²⁴³⁷. And the best time to leave is when it’s best, not worst, my Dad would complement this thought. Another art closely related to the one of leaving the party at its best, the art that, undoubtedly, people as rare as diamonds in the dust in the world today have mastered, is to know when to stop the train of verbalized thought during expression of opinions. Ideally, this would also be at its semantic peak, whereby a sudden vacuum full of starry surprises is produced in the wake of our words, powerfully impressing the listener as the result. Of course, in contrast with this minimalistic key on how to develop stunning oration abilities, the mainstream loudmouths are posed, going on and on in their beating around the bush of a thought intended to be put across, digesting it aloud in front of everyone all until they either become interrupted or the tiring troughs of its semantic waves become reached, leaving the listeners more mentally weary than elated at that point, alongside doing a disfavor to their attempts to present the opinions they value in a meritorious manner. For, with such an ill-advised approach to verbal expression, bleaching of the value of one’s thought in the listeners’ minds is allowed to take place rather than its promotion in the best possible light, proving over and over again to us that more often than not “less is indeed more”. To vanish in silence all of a sudden, after a blast of bedazzling expressions, leaving but a puff of stardust in our wake, is more often than not a way to ensure that the impressions brought into being will live forevermore, when guarding them as they fade out would be sure enough sending them into oblivion. This is not even to mention all the examples of people whose messages became received and missions fulfilled only after they passed away, including Serbian politicians, Zoran Đinđić and Oliver Ivanović, whose assassinations triggered the long sought infusion of nationalists with democratic values and dialogue of trust between Kosovar Serbs and Albanians, respectively, as well as my dear *maman*, whose sailing away from this world healed the divide between Deki and

Dad, one that she cried her nights out over, praying to see their disparate coasts come together more than anything. Hence, ever since my Dad expounded this guiding line of thought and being, I have been thinking about it from more than one angle. Is it more enthralling and beautiful to bravely jump down from the peaks of where we stand in life rather than to ungracefully stick to them with all our strengths? This is why I rarely wait for the party I enjoy to start dissipating in its vigor and amusement before I leave. Instead, I wave my goodbye when peaks of amusement are still vividly present all around me. Although a sense of regret may be plucking my heart for a while, the remembrance of the past will be shiny and unspoiled with the descent and failure that were inevitably to come. And since each one of us is tangled in the co-creational web of life to such an extent that the boundary at which I ceases to exist and the world begins is impossible to pinpoint, for they are both merged in everything one perceives, from a speck of sunlight on the bronzed summer skin to a most distant star glimpsed by the naked eye, what applies to our impressions of the world must apply to the world's impressions of ourselves. To that end, my father's guiding star of thought suits the fate of every living being on the stage called life too. That is to say that to disappear from it at the right time is sometimes the only way to make sure that the most intense and beautiful memories of the passed remain in the holders thereof, far more blissful and potent in guiding the beloved souls left on Earth towards spiritual salvation than it would have been the case had they remained on this stage for far too long and begun to pale and be plastered, dropping despondently the petals of the flowers of their eternally exuberant hearts, one by one, into the dust "thou art" (Genesis 3:19).

S.F.10.18. The most impressive situations and sceneries in life are usually impossible to imagine prior to experiencing them. Such was the case with my seeing the Pacific Ocean for the very first time. I had imagined an endless vastness of peace and blue, a setting that would have been in harmony with the name the Pacific Ocean bears in my native language: *Tihi Okean*, i.e., the Calm Ocean. "But where's the truth in it? I'm not always so calm"²⁴³⁸, I remember the Pacific herself noticed once, and that as the narrator of the *Ballad of the Salt Sea*, one of the most famous adventures of Hugo Pratt's treasure hunter, Corto Maltese, whose images had been painted on each and every wall of Akademija, the nightclub ran by the students of the Academy of Arts of Belgrade University throughout the 1980s and early 1990s, the magical place in which the curtain was rung up on the nocturnal side of the moon of my consciousness. What I've seen from her too were waves, thunderously loud and foamingly gallant; one after another, crashing over the seashore. I felt as if the waves were always coming and never leaving; tending to reach me, and take away to the ocean depths. "This sea is always coming", passed through my head, making my heart leap with a genuinely awesome excitement, as the verses of Tagore's *Silent Steps* flashed in my mind: "He comes, comes, ever comes. Every moment and every age, every day and every night he comes, comes, ever comes. Many a song have I sung in many a mood of mind, but all their notes have always proclaimed, He comes, comes, ever comes". A stimulating performer knows the thrill that approaching another creature can excite in it, and can play with this trick. As a frequent speaker and lecturer, I know how alternately approaching and distancing from the audience can be a way to light up their attention and prevent it from being dissipated in the muddles of dullness. By looking with amazement at the waves of the Pacific, I had a vision of a muse, a moving image of an immaculate grace, constantly moving towards me, without ever retreating. Could we make our actions in life such that they invoke the feel of waves, greater and greater, endlessly approaching, and yet know that whatever approaches has to retreat in one way or the other, I wondered. For,

²⁴³⁸ See Hugo Pratt's *Corto Maltese: The Ballad of the Salt Sea*, Universe, New York, NY (1967), pp. 5.

even the ocean retreats through its underwater columns of water, a.k.a. rip currents, which constantly move away from the coast, threatening to carry the inexperienced swimmers deep into its chasms. After all, the balance of the Way of Love, the one of being distanced and merged with others, self-withdrawn and empathic, moving to and moving fro, must be sustained, no matter what, as ebony-eyed sirens, smiley dolphins, softly shaking sea stars and other heralds of Poseidon and Amphitrite whisper to our ears.

S.F.10.19. I am like an ocean: impossible to confine into rigid forms of behavior. This is why I am hardly able to commit myself to events or meetings planned in advance. I never know if some tiny detail will attract my attention, limitlessly amuse me and detract from my plans. When I go out, I never make plans, never have expectations. I just keep the glow in my heart bright and the starry nature of my spirit pure and lustrous. Sometimes I end up dancing my heart away under the night sky, simultaneously sparkling with twinkly joy and sullenly dripping with hearts reminiscent of tears, quite like those that levitate above the dancing figurines carved by Keith Haring on a random piece of metal that is now an altarpiece in a chapel in San Francisco's Grace Cathedral; sometimes I end up sitting ponderingly on the sidewalk, pigeon-toed in all-star shoes, an emblem that spells stars hidden like diamonds in the dust in the reality that we call ours, with cheeks buried in the palms of limped hands and dreams swirling like galaxies in distraught eyes; and sometimes I hop on a house roof or a tree, nestle myself there and sleep, imagining myself squatted on the inside of the safe and sound cradle of a crescent moon.

S.F.10.20. Could there be anything better than picking a basket full of cherries when the month of June rolls around and the summer breezes come knocking on our door, before gliding along the city streets and handing them to clowns and ponces? Or to hang two cherries lingering on a single stem, the symbol of togetherness, of holding hands and of spinning in the same orbit, behind the ears before gracefully raising our glances and directing them into the distance, toward the farthest horizon, the rainbow, the cedar box, the mermaid and the star?

S.F.10.21. There is nothing more wonderful than a sincere prayer, the one that asks the Lord with the ineffable language of the heart to give us powers so as to strew the world with the sparkles of starry, divine beauty. Whenever it seems to me as if I am spontaneously starting to deviate from the path of cherishing life with every waking moment, I return to this prayerful attitude, and lo, here I am, reinvigorated with strength, ready to live the life of a true missionary, to open one's arms to it all, to sway in spirit with every blade of grass weaved in the wind, to blink at stars and galaxies nested over one's head, to walk with souls long gone down the alley and the grove "wet with rain"²⁴³⁹, to fill the chest and the lap and the pockets and the cuffs with rocks and bury oneself alive under them, all until the ego explodes and the soul, one with the cosmos again, is resurrected and sparked to shine like the Sun.

S.F.10.22. I have equally found it almost a mystical experience to sow the garden with fruit stones under the starry skies. For, in my universe, not the days when the blazing Sun dazzles me and everything appears with a glare around the edges, burning brightly like the fire that "shall devour the briars and thorns, and shall kindle in the thickets of the forest" (Isaiah 9:18), but the nights filled with the chirps of crickets and skylarks are the best for gardening and hanging out with trees

²⁴³⁹ Listen to Van Morrison's In the Garden on No Guru, No Method, No Teacher, Mercury (1986). The phrase is considered to be an homage to its earlier use, in Van Morrison's Sweet Thing on Astral Weeks, Warner Bros (1968).

and shrubs and then sleeping squatted under the hedgerow. To approach on tiptoes a softly humming bush, a forest murmuring with ancient mysteries or a meadow rolling gently as the planet as a whole spins around its axis and continues to glide around the Sun, a moonlit shadow all the way through, stands for an unassailably magical experience in my head. Such mystical nights spent surrounded by shrubs that speak the voices of mahatmas passed eons ago and softly swaying shadows of trees that transmit the vibe of eternity with their solemn dance remind me that I ought “to never grow an older game than walking and talking in gardens all wet with rain”²⁴⁴⁰. Gardening at night is also the time at which both I - who wholeheartedly refuse to drink water during the day, not only because of believing in the benefits of bound water only after seeing first-hand how quickly cultured cells rupture when one adds pure, unsalted water to them, but also because I have learned to see water as a nutritional culprit that dilutes the blood and increases pH of the guts if drunk during the meal, contributing to improper digestion²⁴⁴¹ - and the plants which I look after on this Earth “drink the clean, clear water to quench the thirst”²⁴⁴² of our parched flesh and veins. And while watering the plants, I always get reminded that they, like every other object or living creature in life, require much love to thrive in their growth into enchanting beings that will give us shade, food, an aesthetic pleasure or a never noticed source of brilliant and guiding waves of harmony in our lives. The turning point in John Steinbeck’s *East of Eden*, a saga about families of farmers from Salinas, a dozen or so miles from Seaside, the suburb of Monterey, where my closest relatives on the American continent have lived, is the moment when Abra, towards the very end of the novel, leans sobbingly onto a creaky wall in the dead of a darkest night and realizes loudly, through a torrent of tears, that love is needed for the thriving of every creature on Earth. It is from that insight on that constant misunderstandings occurring in spite of everyone’s benevolent intentions cede place to the fire of love and compassion, implying the monumental significance of embracing the idea that Love is the greatest gift to be bestowed upon the world. In the same spirit, watering plants with terrestrial waters while neglecting to simultaneously water them with celestial waters of cosmic Love makes for an incomplete endeavor. For, in this world of ours matter and spirit ought to travel hand-in-hand at all times, lest the starry train of our being derails and ends up rusting under a thick layer of scrub by the sides of the road. This is why, if you ever see me watering greenery in the backyard, you should know that two jets are directed to the thirsty plants: one from the rivers, stones and clouds connecting to the hose held in my hands and the other one arising halfway between the warm and plush, gluey pillow of the heart, whereon heads could lean and be washed with the waves of soothing emotions, and the pure and blissful third eye of the mind, whereon future and past collide and create a ladder to the stars.

S.F.10.23. “Paint the town, paint the town”, a Prefab Sprout song goes²⁴⁴³, reminding us of one of the most exotic adventures that the city life in the 1980s brought forth: drawing graffiti by night. Thousands of urban spirits were thus allured to roam under starry skies like sleepwalking silhouettes and create lifesaving writings on the wall that would answer questions of ordinary people sublimed into air as they fall into sleep, in the words of a Croatian pop tune from 1984²⁴⁴⁴ that idealized this romantic act of the given times. The trend became even more challenging in the

following decade when graffiti artists started decorating moving trains with their spray-painted messages. Salvador Dali once declared a local train station as the center of the Universe, raising the relevance of touching the places where trains, the symbols of travelers, dwell and journey with sprayed lines. In California these days, at the rise of the ecological consciousness, another equally exotic and even more beautiful form of rebellion takes place, known by the name of Guerrilla Gardening, which is gathering by night with plants, watering cans and shovels in hands and planting new bushes and trees away from the eyes of law and order. On the corner of Broadway and Sansome in San Francisco, in the midst of a grim area surrounded by a high fence and police placards warning anyone who steps on it of the illegality of such trespassing, a young tree is planted in not more than a 100 square feet of plowed soil and a sign next to it says “Welcome to Paradise”, as if wishing to pay pedestrians’ attention to the idea that solely in front of those who break the law and save life, even if it be of a mute plant who will never ever express gratitude for its being given life to nor be aware of this gracious act, the gates of Paradise open. Guerrilla sculpturing in terms of installing new objects, sketching chalky patterns, replacing or reassembling the already existing street ephemera, including signs and ads, and finding new and unexpected places for objects stumbled across on the street is also gaining popularity among renegade artists who do their best to disobey standards and clichés established by convention. Graffiti Research Labs have thus been throwing mysterious LED lights all over SF; in Chicago, Thundercut has been decorating traffic lights with fancy figures and characters, Cayetano Ferrer has been making pedestrian signs semitransparent, while Dan Witz has been busy nailing nose-like balloons onto house fronts, personifying them and turning their boring matchbox appearance into clown-like faces; Carla Ly has been sticking band-aids all across Caracas and Valencia; Samuel Francois has been adorning French forest trees with balloons and colorful yarns; Truth has been gluing Lego cubes on crumbly buildings of Polish cities; In DC, Mark Jenkins has been installing human figures blended with house facades and ETs made of sticky tapes descending from treetops; Eltono has been dropping polygons on the streets of Madrid; finally, if you happen to walk across the alleys of Vienna, you might see Leopold Kassler on one occasion uninvitingly repairing random public items, while on another sneaking closely to a police building, cutting an O in the neon sign that says POLICE and putting some of his savings into it, using an unexpected public space for the storage of something valuable and showing us how orderliness and “vandalism”, edification and debasement, respect and rebellion ought to be always kept in balance²⁴⁴⁵. The purpose of this constructive despoilment can be seen as to transform human awareness of our surroundings and elevate it to a higher plane where habitual glancing and recognition of worldly details that borders pure neglect thereof would cede its place to realizations of fascinating meanings in the most abandoned and overlooked details of our environment. For, that is exactly what every true art aspires to be: a magical force that inspires us to look at the same old things with new and enlightened eyes and realize an immense beauty and meaning slumbering therein, which we were previously blind to. In such a way, this modern form of street art may be seen as serving the purpose of enlivening the dialogue between the core of our minds and hearts on one side and our environment, manmade objects, towns and Nature as a whole on the other, which is the spiritual communication implicit in the art of the Way of Love. Unlike experiencing art in museums, where the invisible walls of untouchability are posed all around the passive, merely observational bubble to which the visitor is confined, street artists inherently aim at shattering this wall into pieces, as insinuated by the title of Banksy’s book, *Wall and Piece*, and that by courageously and selflessly leaving their works out there, in the very world

²⁴⁴⁵ See Francesca Gavin’s *Street Renegades: New Underground Art*, Laurence King Publishing, London, UK (2007).

where all arts belong, so as to be freely touched, explored and interacted with, at the cost of being desecrated or demolished. Stunning the casual passerby on his habitual walk through the city streets is in this case akin to a sword which cuts the way through the flesh of the human being and opens the channels that lead to its heart, promoting his direct receptiveness to the semantics of the given piece of art. Note that our perception *per se* is conditioned by an incessant detection of signals that differ from our anticipations, which implies that surprises and deflections from our expectations stand forth as sparkles that enrich our consciousness. To elevate our consciousness to higher levels, it takes an equal amount of rebellious breakage of the rules and norms imposed by the social surroundings of ours, which is exactly what the graffiti artists of the present day aim at. Also, as already observed, it is the natural fate of the most ethical creatures in this life to incessantly follow the path of a Robin Hood, who stood against the law but only for the sake of truly blessing, beautifying and equilibrating the world filled with sickening injustice. And if there has been a collective ethical stance adopted by the majority of graffiti artists and cartoonist, it is definitely one such rebellious and nonconformist spirit. Yet, if they ever get caught during their unsolicited changing color of city walls, they could use the following argument that illustrates the immense significance that graffiti have born for the history of human civilization. Namely, communication via inscriptions had arisen from carvings on cave walls, which is why the oldest drawn graffiti can be considered as forms of expression that had delivered a new dawn for the development of human languages. On top of that, graffiti messages, I know, can be indeed impressive in their minimalist fashion. The thirteen lines of what is now known as Tabula Smaragdina and is considered as the oldest religious scripture of the world were inscribed into an emerald stone by Hermes Trismegistus about five millennia ago, prompting us to think whether the oldest known written religious message was, actually, a form of graffiti. That graffiti hold a particularly powerful place in the theological realm is often illustrated by the mysterious message that appeared on the Babylonian King Belshazzar's palace wall (Daniel 5), in the midst of his last feast, and the ominous saying derived thereupon: "Writing's on the wall". A visitor to a small chapel on Mount La Verna, built on the pile of rocks on which St. Francis of Assisi stood when he received the stigmata as a sign from God, passes through a corridor filled with frescoes scarred with graffiti and is invited to conclude that each one of them need not be a product of sheer vandalism or impulsive devilry, but may bear similar markings as those that befell on the beloved saint from the heavenly heights in the fall of 1222²⁴⁴⁶. Graffiti can, of course, be small and modest arrays of lines and words that like some fabulous sprouts become sown onto the soil of the mind of the casual passerby, inducing some wonderful plants of ideas to arise in her one day. During my first summer spent on the American continent, in a small town of Potsdam, NY, north of Adirondacks and south of Saint Lawrence River, while lonely roaming and bicycling through its lovely countryside scenery, I would often end up sitting next to a waterfall on Raquette River. One day, on a stone right next to it, I noticed a triple stamped red-colored tag, saying "Please, Please, Please, don't, don't, don't, give, give, give, up, up, up". I believe this message got so intensively impressed in my mind and in synchrony with the splashing sound of water supplied me with strength and courage to stay on and find the way through, making Potsdam only a station in my life. It was a similar message as that "never give up" drawn with colorful chalk on the playground in the center of Dolores Park, the message I glimpsed at an equally difficult period of my life, as I stood at a crossroad between glut and glory, eventually being swung toward the latter. "There is always hope", says the epigram placed a few feet away from the remarkable Banksy's graffiti that displays a girl who lets a heart-shaped balloon slip away into the air, carrying forth a similar

²⁴⁴⁶ See Robert Kiely's *Blessed and Beautiful*, Yale University Press, New Haven, CT (2010), pp. 227 - 229.

message of salvation and sanguinity straight into the hearts of the casual passersby. The London's South Bank wall onto which Banksy stenciled this graffiti is said to have been intentionally chosen because of its worn, weathered and grim appearance, so as to provide the right contrast between the spotless beauty of the girly figure and the stained background of the social reality in which it exists, with the dark girl's silhouette painted over the bright portion of the wall, as if insinuating her status of a cast out shadow in the eyes of "all the pretty people thinking that they got it made"²⁴⁴⁷, that is, your regular social paradigm holders and political conventionalists, and the adjacent message painted in white over the natural filthiness of the wall, with a crack and a power socket, a reminder that "we, as readers, are grounded in rules and laws in which we abide because they power society"²⁴⁴⁸, standing in-between. The words "life is beautiful" rarely ever appeared so striking as after being spray-painted by Thierry Guetta, a Banksy's avid votary, on a bricked wall that stood all alone in the midst of a ruined block of buildings²⁴⁴⁹, having thus been given a contrast that puts the artistic mind observing it into the state of an enlightening paradox, endlessly feeding it with the flow of aesthetical feelings and thought and opening many a lifesaving path in front of it. Speaking of tagged walls of demolished houses, as a kid, whenever I walked along a street in the district of Vračar, perpendicular to the Revolution Boulevard, the longest street in Belgrade, I felt thrilled because I knew I would stop and gaze for a long time at a graffiti written on the inside wall of a ruined house, repeating the verse of a Smiths' song: "Love is just a Manchester miserable lie"²⁴⁵⁰. Even though I was too childish to comprehend the essence of this message, I felt excited by the way it had been inscribed and conveyed to me, as if something great was hidden there, within the walls of that ruined house, where happily ringing and enlightening voices of love once reverberated. Finally, from the captivating ruins on the streets of Belgrade, I am flown a few millennia back in time, onto ones of Colossi of Memnon, resting on the banks of river Nile and solemnly overlooking Luxor on the other side, on the base of which a graffiti was inscribed around 2nd Century AD: "*Camilius, hora prima semis audivi Memnoni*", or "At half-past the first hour, I, Camilius, have heard the Memnon". Beautifully said with a clear eye for the moment, referring to the cracking and mysterious sound that the colossus had made as it was warmed by the morning Sun.

S.F.10.24. Some people have hearts as bright as the sunniest days. If you put your head and ears on their chests and listen carefully, soon you will hear splashes and streams of rivers and waterfalls, the soft rolling of windmills, the chirping songs of birds, all enwrapped in warmth that makes you feel at home. And then you recall that that is what heart is supposed to be: a tiny place for others to feel as if at home. A chestnut-tree-house in which there is room for everyone.

S.F.10.25. Fido taught me that the saddest eyes are dogs' eyes. One of the reasons is that in their gaze and the way in which their focus moves around, they closely resemble human eyes. They conceal a glister of fidelity, but are confined to the body of an animal. This exactly may explain this eternal sadness of theirs. Moreover, these eyes are often exceptionally direct. Some people decide to take care of a dog or two in their lives because that way they can have someone to look directly in the eye and yet feel superior, thereby boosting their own self-esteem and confidence.

Many pet owners, however, opt for having a dog because this directionality in the way they look at you can provide an incentive towards healing many psychological disorders typified with an inability to establish eye contact. In my native country, because of a painful and difficult past among other cultural factors, mild mental disorders are common, which is why most of the time it gets difficult to make an eye contact with others. Many people who lived through extremely violent circumstances, such as those present during civil wars or imprisonment, gradually learned to reduce their innately vivid eye contacts, through which signs of trust and soft friendliness are transmitted, to mere cold and suspicious stares, where only the duration thereof is what matters; hence, the old prison rule: “If your eye contact is too short, you become marked as a potential victim; if it is too long, you become marked as a threat”. Consequently, the sense of humiliation and fierceness arisen during the wartimes led to anxiety and anger as two of the most dominant emotions among these people, which could be clearly read from the dance of their eyes. When the latter overcomes the former, an eye contact with frowned face and arched eyebrows is made, so common in the part of the world where I come from. In the opposite case, it is simple disgraced staring down or away following the eye contact that could be seen. Be that as it may, the dogs’ eyes can teach us how to look at the world with a natural liveliness and vivid enthusiasm despite their unfortunate animal fate.

S.F.10.26. This book is all about rainbow bubbles, pearly dust and milky wonder strewn on the way. And although in the moments of deep pondering, when it seems that we have somehow lost the sense of our mission on the planet Earth and clogged the celestial channels through which the messages that helped us intuitively move in the direction of its fulfillment flowed, we may be tempted to think that we have irretrievably wasted the precious, tiny little stars of beauty that we were gifted by throwing them everywhere we went in a happy-go-lucky way, it is not so. As in the story about Hansel and Gretel, a boy and a girl who hike through the woods and drop stones from their pockets behind in order to find the way back, tiny little signs of beauty and kindness we strew on the way may similarly point us to the way back, to the majestic beginnings of our journey, the beginnings at which every sacred voyage ends as well.

S.F.10.27. Life is not about collecting as many shells and pebbles as our hands and pockets can fit while walking along the seashore where the firm coasts of human knowledge meet the fluid waters of randomly swirling ideas. It is about picking them one by one and devoting our whole days and months in studying each one of them. In this spirit, Anne Morrow Lindbergh taught us the following: “One cannot collect all the beautiful shells on the beach. One can collect only a few, and they are more beautiful if they are few”²⁴⁵¹. Similarly, wisdom does not consist in endlessly piling up thoughts about life on top of each other, but of faithfully holding them one by one, and devoting days in studying their meanings. This is why this whole book looks the way that it looks. So that it can invite you to find sources of endless amusement in the many layers of meaning that each one of these small lines and passages can uncover to a persistent and imaginative mind. And certainly the one who likes to think through analogies and allegories. In his book *Mind and Nature*, Gregory Bateson tells us a story about someone asking a computer when it will start to think like a human being. After hours or maybe even days of calculation, the computer finally reveals the answer: “That reminds me of a story”. The computer might not have known the Hasidic story in which an omniscient creature was being asked what is truer than the truth, to which he replied, “A

²⁴⁵¹ See Anne Morrow Lindbergh’s *Gift from the Sea*, 50th Anniversary Edition, Introduction by Reeve Lindbergh, Pantheon Books, New York, NY (1955).

story”²⁴⁵², but it still came up with this multidimensional answer that recursively points towards the infinity, while at the same time it tells us that the mechanism of human thinking is best oiled and fueled by the power of masterful storytelling, by finding and explicating analogies between the outer world and the inner world that will strikingly resonate with the subject and help him tear apart the walls of isolation that separate him from the surrounding reality and blissfully unite him with pieces of it, enlightening even if for a brief second of time. Unsurprisingly, even human memory works best through analogous associations. Once I heard about the strategy used by a world champion in memorizing. Namely, he manages to remember the sequence of a dozen of decks of cards by linking every card to a specific character or object. Their sequence makes up a story in his mind, and when the time of reproduction comes, he merely recalls the details of the story and transforms it into cards again. This explains why the nature of human thinking is the one of a constant analogic correspondence between the microcosm of our abstractions and the macrocosm of the physical world evolving around us.

S.F.10.28. As I struggled to show Cristina how to use chopsticks with frostbit fingers, and grab pieces of sushi with it, she suddenly lost patience and, infuriated, smashed them against the table of a hole-in-the-wall place on 16th and Guerrero that no longer is. Then, I explained to her, “You know, such is the way of learning any skill in life: one day you know, the other day you don’t, and so on and on, and then one day you wake up and you know everything”. For, “who follows the straight path of Tao appears as if alternately ascending and descending” (Tao-Te-Xing 41), as Lao-Tzu observed. My day-to-day emotions and states of mind follow the same, sinusoidal path wherein the crests of unexplainable ecstasy and inspirational heights alternate with the troughs of depression and lifeless pointlessness. If revolutionary and reactionary views have alternated across all human fields and disciplines, then, of course, there is no reason to suspect that the human psyche should be an exception to this universal trend. As an avid chess aficionado, I always remember how the progression from one dominant world chess champion’s style to another followed one such sinusoidal path, such that the methodical, principled lineage spanning from Steinitz to Capablanca to Botvinnik to Petrosian to Karpov to Kramnik was intercepted regularly by that connecting Lasker to Alekhine to Tal to Fischer to Kasparov to Anand, before the current era of universality of style, so-called Magnus era, was reached, largely with the help of computers²⁴⁵³. Similarly, the feeling is that all these crests and troughs that my mind goes through on the daily basis lead to a definite destination. Although the path of my life in each and every one of its aspects is sinusoidal, I do not think that it does anything other than approaching, unstoppably, the face of God, getting closer to it by a step with every breath I take. Riding the waves of Nature in joy and delight and feeling crestfallen and dejected is part of the process of elevation of our being to spiritual heights. Feeling for a while as if the surfing board of our being is in a deck position, easily gliding the surface of the ocean, and then feeling as if sinking in a fin position, is a regular trend of our ascending towards becoming an ever great surfer girl of a forever spirit in our heart. This all makes me recall a summer day of my youth when in the morning I learned how to jump to

²⁴⁵² Watch Isabel Allende’s Tales of Passion, TED Talk (March 2007), available at http://www.ted.com/talks/isabel_allende_tells_tales_of_passion.html.

²⁴⁵³ There are two types of chess moves, diametrically opposite in nature, that computers have taught humans about: (a) completely passive moves, which keep the position in a status quo, neither improving nor aggravating it, and (b) incredibly dynamic moves, where simple mathematical calculations of the material value of individual pieces fail and piece sacrifices are made all across the board. Neither of these types of moves had humans considered as natural before the advent of computers. They very well illustrate this breadth and universality of style in the modern era, the rise of which the computers have immensely contributed to.

water head first, and then I forgot the skill by the afternoon, crying like a baby on a pier. And yet nothing could have stopped me from becoming a dolphin and swiftly traversing the blue seas in this vibrant and happy glide.

S.F.10.29. While living in San Francisco, I used to regularly complain about the fact that there were never puffy clouds over me nor would ever be on its dull, cloudless sky. Furthermore, with the scientist in me seeing the whole existence through the prism of physical chemistry, according to which every piece of matter, solid, liquid and gaseous alike, constantly dances with its atomic contents, while the spiritualist in me through the gift of divine inspiration kept on recognizing the spiritual qualities of this dance of matter, I wondered to what extent the dance of atoms that comprises the translucent Californian air is impoverished compared to the air that had enfolded me during the dreamy days of my youth. With my mind resting on the image of the molecules of air on one side energetically bouncing off a uniformly incandescent surface of an electrical heater, becoming all alike in their zooming through space and transmitting some of their newly acquired kinetic energy to us, while on the other side having much greater versatility of collective movement when they are warmed inside of a burning fireplace, resulting in the more rejuvenating heat streaming through our body too, I asked myself if the uneventful cloudless skies looming over me, wherein the Sun always shines with almost the same intensity, similarly create a dance of molecules that sedates human spirits and puts them to sleep, being far less enlivening than the dance given rise to when the light passes through arrays of puffy clouds. And without the fanciful clouds floating above my head I feared not to become yet another one of the drowsy spirits I passed by on an hourly basis, spirits who once used to be kept wide awake by the wisps of curiosity swishing through their magnificent insides, but who have now fallen prey to the traps of deadening dullness and indifference, holding worldviews plagued by the ills of sameness, wherein everything is presumed to be the same, unchanged, from one moment to the next and from one spatial point to another. Whenever I looked up, I could still enjoy in my favorite act of watching seagulls and other ocean birds flying across the skies, but without the white floating clouds something was missing in the whole experience. And then Gail noticed one day, as we rode in a cab down the fluorescently lit Mission St. and chatted about the crosslinking of polymers in bubblegums, how the reason for the lack of clouds in the sky was because most of the time we, San Franciscans, spend *in* the clouds. What a wonderful example of the blind spot effect, I immediately thought! Remember, our visual system does not provide us with a dark spot at the place where the optical nerve protrudes retina but fills that invisible part with images corresponding to how brain suggests that area should look like, making us realize that normally we do not see what we do not see; likewise, our assumptions in thinking are normally imperceptible to us. The cost of walking on the clouds in all its fancifulness and craziness San Franciscans pay by not having the chance to look at their puffy shapes from the distance. Rather, like stars plunged in the cold cosmic darkness, the authentic SF spirits roam around one cloud after the other, chilled to the bone, wondering over the reasons for their lone and miserable existence and never even being aware of the extent and penetrability of their luster that reaches faraway places. Moreover, as it occurred to me while reading a children's book about Nina²⁴⁵⁴, who was taken by her Mom for a walk through a cloud that looked beautiful from afar but felt freezing and frightening when she entered it and when all around them turned into thick and chilly fog, coming in direct touch with things admirable from the distance is more often disappointing than rewarding and is a sure sign that some of them are never to be approached too closely, lest, like in the myth of Icarus and the Sun, the wax melts off

²⁴⁵⁴ See Deborah Kogan Ray's *The Cloud*, Harper & Row, New York, NY (1984).

the wings of our spirit and we plummet into the sea below, never to return. The fact that the shining suns, despite yielding beautiful light to others, are not sensitive to their own light and may seem to themselves to be spending their entire lifetime in darkness is here also to teach us that staying for too long in a single place is a perfect way to both gain and lose touch with the essence of it. For, ultimately, we recognize only differences and if we gaze into a patch of reality for long enough, we will undoubtedly become blind to numerous of its enriching details. Which is why producing a difference and breaking the pattern of regularity has stood on the pedestal of my epistemology as a crucial norm for living inspiringly, a central guiding principle for creative acting, a pole star in the sky of my mind over which all else rotates as I endlessly pirouette in circles, differing from all that lies behind from one moment to the next.

S.F.10.30. Whenever a rare cloudy night in SF is in the air, I hit the streets and stare up, playing my favorite game: finding thrilling shapes in the travelling clouds and then imitating them in a pantomimic manner. But one night, when I saw a cloud in the shape of an angel, with the full moon illuminating it from the side of the sky, I had to give up on my imitational game. For, sometimes, the things around us are so beautiful that we become stunned and absolutely frozen with beauty and a mysterious importance that we feel Nature is overwhelming us with. To stop dancing and turn into a statuesque silhouette of glowing light is thus an indicator of a far greater auditory experience than that followed by lightly shaking our shadow through space. Hence, just like Socrates used to stop out of the blue during his leisured walks and, as if suddenly immersed into the eternal beauty of being, stay still for hours on an Athens street, sometimes I, too, stop as if hit by a freezing lightning of an immaculate, angelic beauty. To refer to another one of Borislav Pekić's analogies, I see those moments as spiritual stations on the starry train journey of our lives, when the images seen from the window of our soul become suddenly still and perfectly clear to us. In a way, they are reminiscent of the moment when the train carrying the three pilgrims in Powell and Pressburger's *Canterbury Tale* comes across a short tunnel, with sudden darkness and a deafening clatter intercepting the conversation and leaving everyone mute and expressionless for a few seconds, serving as an interlude to the blessings and the collective conversion from the accusatory to the forgiving that awaited the journeymen at the next train stop. Likewise, when you change from one of those cheery train lines in Salt Lake City, the blue, the red or the green, to the gray one, picking the passengers on its first stop squeezed between two barbed wires and then slaloming its way through snow white oil barrels, warehouses, desolate factories and then local shanties and huts, quietly, unlike almost any other train, before emerging in the neighborhood of Sugarmont before a gorgeous view of mountain peaks surrounding the city, like those on the cover of *Kid A*, coincidentally inspired by a recent war in my home country²⁴⁵⁵, you may pass through a similar moment of meditative introspection, when time stands still and, like the calm before the storm, recollects energies before their luminous explosion. These magical instances when time seems to have stopped are also a bit like the moment when the light L train emerges from the underground part of the railway on its way to my old home and the Ocean, passes the West Portal station, turns into Ulloa Street and for a second or so shuts the flashing lights and humming motors off, leaving the passengers in dim silence. This moment has always reminded me of one's prayerful immersion into the essence of one's heart, into the ultimate silence of one's being, just seconds before entering the stage. Then, we know, all the lights will flash and shine on us, and this brief moment of our submerging deep inside of our self and lighting up the lanterns along the paths and

²⁴⁵⁵ See the interview with Stanley Donwood: *Arts Diary*, *Guardian* (November 22, 2006), retrieved from <https://www.theguardian.com/music/2006/nov/22/radiohead.popandrock>.

rivers engraved and streaming through our being will guide us to reach an immaculate performance on the starry train ride towards the Ocean of oneness.

S.F.10.31. When Lola asked me what impressed me most during my three-month stay in Holland, I said: “Lights. Orange lights into which I plunged every night”. Truly, one of my favorite ways to relax after a strenuous day is to head downtown, where the fairyland of neon lights is and let my mind become a ship that carelessly and softly floats with all the magnificent lights in my surrounding. Thinking about my enthrallment with the colorful street lights, I even become slightly blessed for the mild nearsightedness of mine. For, with the sharp eyesight these impressions would not have been even close to the splendor I had experienced. Then I get reminded of Chuang-Tzu’s words: “Sharp sight can be dangerous for thy eye, sharp hearing can be dangerous for thy ear, and quick judgment can be dangerous for thy mind”. John Cale had, I believe, something similar to say in his song recreating an imaginary rendezvous with Graham Greene in Paris: “In future, please bear in mind, don’t see clear, don’t see far”²⁴⁵⁶. Most of the time I, therefore, respect what Nature has predisposed me to with endowing me with my innate defects, and look at the world without any artificial aids. I believe my shortsightedness was the way of Nature to enflame my imagination. For, without seeing clearly the world, I am invited to draw the fuzzy segments of my visual field in accordance with my own imagination. From this point, one could also argue that the development of the co-creational thesis itself may have been preconditioned by my shortsightedness and this subconscious drawing of the fuzzy segments of my visual perceptions carried out on the regular basis. Also, it is introspective traveling to the inner spaces of my mind that naturally makes up for this diminished informational richness of the world around me. So, I know that pondering and imagining is the way to go to reach the peaks of my creativity. Hence, sometimes not seeing clearly is what will guide us towards seeing clearly one day. And it was in a complete darkness of a house on Kerkhoflaan, lying on the edge of a graveyard and a magic forest inhabited by one too many fairies, that I stumbled upon a CD player one mystical night. Knowing that one has to follow signs and believe in finding keys that may unlock the mysterious doors that take us into parallel worlds, I took it with me and played music to my ears, including Massive Attack’s *Sly*, which never before sounded so enchanting and destiny-revealing. As the batteries ran out, I laid the earphones aside, waited for the dawn and listened to the most amusing awakening of birds and other animals in the nearby forest, which turned out to be the natural symphony of sounds, more fascinating than anything I had heard before. Another time I stepped on a sign in the middle of a night inside a house, always moving through which like that aforementioned elf from the *Rebirth of Cool Phive* cover, was prior to one of my biggest revolts against the mediocre forces of authority, control and conservatism, as a young professor, a researcher and a teacher, employed in a private school in southern California. It was a deck card that got stuck to the sole of my left foot and dragged across the floor. Intrigued, I picked it up in the dark, brought it to light and flipped it over to see whether it was a pip or a face and saw none other but the queen of spades starting at me - a sign that per the prophetic art of tarot signifies a “feminine power” that “has extremely high standards due to her subtle sensitivities, which can be perceived by those around her as being critical or hard to please” and whose “true motive is to refine the world, to upgrade people’s understanding so that everyone can have the space they need to become fully themselves”²⁴⁵⁷. More important than anything, the queen of spades epitomizes a personality “not interested in

²⁴⁵⁶ Listen to John Cale’s *Graham Greene on Paris 1919*, Reprise (1973).

²⁴⁵⁷ See *Tarot Card Meanings: Queen of Spades*, retrieved from www.tarot.com/tarot/cards/queen-of-swords/cagliostro (October 31, 2017).

conforming”, who “doesn’t ask permission or even subject herself to much influence” and whose “intelligence is not always the most comfortable to be around, but she can be counted on to see through superficiality and point to the truth of a situation”. In the advice position, this card instructs one to “exercise as much independence as you know you can handle”, to “refrain from remaining dependent on others” and to “leave sentimentality behind and take action”. Having seen it, I knew what fate instructed me to do and, having hesitated between quiet withdrawnness and bold action against these oppressive forces that aspired to stifle the critical thinking voice nested inside me, I opted for the latter. This is how I know that the floors of the darkest nights can hide signs that guide us toward the brightest skies, being a pop art canon that pops in my head every time I see my children bowing down, picking up random objects from the ground and seeing in them the most precious treasures findable in life.

S.F.10.32. Sometimes I happen upon amusing titles for scientific articles, like the following: “Applicability of Information Theory to the Quantification of Responses to Anthropogenic Noise by Southeast Alaskan Humpback Whales”²⁴⁵⁸. People may laugh at article titles and research subjects like these, but such chaffing will have always appeared as fallen from grace to me. As I firmly believe, there is an intrinsic beautifulness in one’s devotion to tiny, tiny, tiny details of Nature. This is where the humility of a genuine scientific spirit becomes evident: in dedicating a great gift of one’s life to such miniscule and seemingly unimportant segments of the world. Though this stance of mine explains why I often shun the popular, catchy research subjects, usually involving the use of trendy technologies, and dive into explorations of topics and ideas that seem stale, dry and lackluster for all the mainstreamers riding on their bandwagons, the journey taken on by scientists inclined to both the vintage and the fad is the same: from the miniscule details of the small, small world to insights potentially encompassing the whole Universe. And what an enlightenment it is to succeed in weaving relationships observed in the events that occur at these tiny scales and frames into relationships of an everlasting importance. Henceforth, in essence, whole science is like a giant pyramid. We start from a specific subject of research all the way down, from one of the bricks at the bottom, but wherever we start from, we can always reach the top of human knowledge; because everything is connected to everything else. And also, systemic, metaphoric reasoning enables us to link infinitely small processes with events taking place on any other scale. With a bit of imagination, many such miniature processes can be seen in the light of their divine message to our being. It is for this reason that following Robert Short’s Gospel according to Peanuts, Robert Pirsig’s philosophic manual on the motorcycle maintenance and Eugen Herrigels’ writing on the art of archery seen through the eyes of Zen, books on philosophies of bumper stickers, soccer, Matrix, Lost, Battlestar Galactica, Batman, 24, Harry Potter, the Simpsons, South Park and other movies, TV shows, comic books, cartoons, and novels have begun to flood the bookstores of the modern day. Thereupon, as we play with little earthly things reminiscent of Archimedes’ circles in the sand, and find in them everlasting amusement and inexhaustible sources for the ethical and aesthetical enrichment of our being, we should not be distracted by those who find our endeavors ridiculous. We should let the ironic and erroneous ones laugh at these tiny, but immaculately lovely things that withdraw our attention. Small is beautiful, we should always be reminded. And we should also know that “had it not been laughed at, it would not be the Way” (Tao-Te-Xing 41). When Saint Alypius the Stylite stepped on the pillar in the backyard of a church he had built and spent days and nights on it, he was at first the source of mockery for the local villagers and many years had to pass before he became recognized as a

²⁴⁵⁸ Published in Entropy 10, 33 – 46 (2008).

saintly soul and approached daily for spiritual advice and guidance. For, as Mahatma Gandhi would surely instruct us, being scornfully ridiculed is the stage that all utterly innovative and progressive ideas have to pass through on their way to becoming firmly embedded in the fabric of reality: “First they ignore you, then they laugh at you, then they fight you, then you win”. A note to remember here is that as one progresses from the stage of quiet antipathy to the stage of derision to the stage of open hostility *en route* to victory, so do the walls of conformity with which the oppressive authorities try to stifle their opponents, the people who differ in ideal and style from them and whom they perceive as a blasphemy to their work and profession, close on one and grow ever tighter around one’s neck. But to retain the aliveness of one’s spirit and continue pursuing the victorious path, it is essential to preserve ties - always thin like silk and never thick like a marine rope - with the divine source of inspiration that lies deep within one and continue to pull the buckets of holy waters from these dark wells of the soul, the buckets that, as ever, must have their bottoms crack and burst, spilling waters all over the earth and leaving us in an instant with the poorness of the spirit, but in possession of the whole Universe, at which point we can do none but laugh it all out, loudly and lightheartedly, with the carefreeness of a seagull gliding tranquilly over the leaden ocean at noontide.

S.F.10.33. In a cartoon I glanced once in local newspapers, a gentleman entering his friend’s apartment finds his friend sitting still in one of the corners of the room, watching the wonders of the starry sky through a telescope. At the same time, his wife, shouting from the other corner tells the visitor: “Please forgive your friend’s ignorance. You see, he lives in a small, small world of his own”. Scientific endeavors of humanity indeed demonstrate that small and humble passages are always gateways to the insights of the grandest importance conceivable, not only methodologically, as this story illustrates, but also epistemologically, as the unification of particle physics and cosmology²⁴⁵⁹ can be an irrefutable evidence of. Namely, all those who wish to answer the ultimate cosmological questions better be prepared to leap with their attention into the finest crashing of subatomic particles in planetary accelerators. Hence, to arrive at the secrets of the all-encompassing great, there may indeed be no other way than to exercise our humbleness in focusing on the infinitesimally small – one of Nature’s most fundamental lessons that we are bound to learn if we wish to continue advancing on the road to stars that She draws before our feet. These fanciful musings evoke in my head the image of the Little Bear’s Mom’s bedroom door, on which the following message has stood written: “The best way to learn about the real world is with your nose in a book”. For, many booklovers and scholars, who, like myself, have the cravings for creation, edification and dissemination of knowledge simmering passionately inside of them, would readily agree that treasures of the most wonderful insights reachable in this life lie dormant in the minuscule lines and symbols that comprise books around us. Just like the abovementioned astronomer who looks through a tiny hole in his telescope, invoking pity amongst his worldly acquaintances, even though he holds a cosmos filled with the most magnificent stars in his view, confinement of our attention to the tiny lines imprinted in books may send our minds to journeys far away from where we stand now and sometimes even make us feel as if we have grasped the ocean of the entire Universe within the little bottle of our mind, and yet we can be sure to remain a similar object of unnecessary commiseration to fellow human creatures around us. Running after stars and trying to grasp gorgeous things while at the same time neglecting to look carefully into the eyes and essence of the little things around us would, on the other hand, normally leave us

²⁴⁵⁹ See Harry Redner’s *The Ends of Science: An Essay in Scientific Authority*, Westview Press, Boulder, CO (1987), pp. 302.

spiritually emptied and unfulfilled. This is why Inio Asano observed in the afterword to one of his comic strips how “the most important messages in our lives don’t come from musicians on stage or stars on television. They come from the average people all around you, those who are just feet from where you stand”²⁴⁶⁰. Withdrawing ourselves and reading, while spontaneously empathizing with the novel characters, makes us expand our scope of understanding different modes of being and personalities, as much as gazing into eyes and hearts of nearby creatures and learning how to find invaluable meanings in them does. This message is ringing in harmony with the idea that “small is beautiful” and is at the same time touching the essence of the Way of Love, according to which a part of our outwardly oriented attention has to die like the Biblical seed of mustard (John 12:24-25) and turn itself outside in, illuminating the inner world of our spirit, in order to enable our beings to give rise to some wonderful trees of knowledge and enlighten any creative expressions we could conceive, be it in science labs, on book pages, concert podiums or theater stages. Little details in life are truly like bases of the pyramids of knowledge, with curious inspection of which and imaginative reliance on thinking through analogies we could climb to the very peaks thereof, reaching unimaginably beautiful vistas of human knowing. Although in our drawing circles in the sand with an utmost care and patience, like Archimedes did, painting water-lilies, like Monet did for the last thirty years of his life, or crafting the little golden fish, like Colonel Aureliano Buendia did²⁴⁶¹, we may be subjected to ridicule by common people around us, we should know that “narrow is the way, which leadeth unto life, and few there be that find it” (Matthew 7:14), as the Christ pointed out. Hence, when it comes to doing science, there seems to be no more appropriate guiding line than the one reminding us how “small is beautiful”. At a recent research conference in San Francisco, I had a task of reviewing the work of a student named Francis who had embarked on a voyage aiming to examine the causes of his and many other people’s prenatal malformations of the skull. Accordingly, he investigated the effects of an oxygen-deprived environment on the development of chicken embryos. However, instead of looking at the effect of a minor change in the oxygen content, he picked two sets of conditions: normal and those with just slightly more oxygen from the concentration known to be lethal for the embryos. Pointing out what seemed to be as the inappropriateness of such an approach, I wrote the review, in which I included the following statements: “In regard of the conditions you chose for your experiments, it seems to me as if you were being a no-risk player, so to say. In picking such extreme conditions, there is little probability that you won’t see any malformations appearing and, consequently, that your research results won’t be successful. It is clear that had you picked much higher oxygen levels (such as 18 or 19 %, e.g.), the risk that you would not see any difference compared with the standard conditions would be higher. However, that is where the great discoveries in science lie: in finding a small starting difference that becomes amplified, producing a huge difference in the outcomes. Challenges are there as well in terms of finely controlling the minor differences in the initial conditions, and being able to detect statistically significant malformations in the embryos’ skulls. But if I were you, I would seriously consider designing the further course of your undoubtedly interesting and immaculately conducted study so far in a way of focusing on small differences in the initial settings of your experiments. The message is clear: the more risks, the more benefits we could potentially reap in our research of Nature”. For, like in a story about two shoemaking company reps that went to an African country to open a shoe-selling

²⁴⁶⁰ See the Afterword to Inio Asano’s *Solanin*, Viz Media, San Francisco, CA (2008).

²⁴⁶¹ Read Gabriel Garcia Márquez’s *One Hundred Years of Solitude*, Harper, New York, NY (1967).

merchandise²⁴⁶², with one of them disappointingly reporting back to the headquarters, saying, “They wear no shoes”, and the other one sending the same note but in a cheerful and optimistic manner, seeing it as an opportunity rather than as a downside, risky situations in life can be readily transformed from hopeless to prospective with a slight shift in the perspective, while the riskless ones yield all but the paths to exciting achievements and discoveries. As the Greek historian, Thucydides, put it simply, “Who dares, wins” - an instructive guideline of everlasting importance. Therefore, risky paths are the only ones worth taking in life that aims to be a blast of enlightening energies absorbed by and emitted from the stellar core of our spirit. The more spiritually rewarding a path is, the deadlier and more dangerous are the forests surrounding it, wherein we could get lost and never reenter the trail that we were supposed to be journeying on at any given instant. The Way of Love is, doubtlessly, one such path, being less like a broad avenue and more like a narrow passageway or an edge overlooking a cliff, walking over which is a great balancing act with incessant dangers of falling off from it. Combining the diametrical opposites into a single frame of mind is, namely, a task whose fulfillment requires immense finesse and sensibility, lest we end up with a schizoid split in our consciousness, like schizophrenic Karin from Ingmar Bergman’s *Through a Glass Darkly*, screaming in the midst of her breakdown in the sodden hull of a wrecked ship stranded on a pebbly beach how she “can’t live in two separate worlds anymore” and how she “can’t keep going back and forth between one and the other”, every once in a while getting lost inside of a beach house and then reemerging enthusiastically back to the daylight to hold hands of the dear ones and look deep into their eyes, as if epitomizing one who uncontrollably oscillates between the meditative and empathic states, unable to combine them into one, but rather alternately (a) submerging into loveless emptiness of the silence within and (b) coming out wholly disconnected from the inner drives and treasures of thought, thus being incapable of seeing either glimpses of God or the spirit of man in their true lights.

S.F.10.34. Cars are my favorite trampolines. Ever since I ended up spray-painting and jumping up and down on the high school principal’s car on the day I graduated from my high school, I have enjoyed walking over cars during my pan-like glides on foot across the city streets, during which I stroll for some time resembling an old man immersed in the clouds of his thoughts, but only to suddenly stop stunned with a tiny little detail noticed, a petite “flower in the crannied wall”²⁴⁶³, ignite the lantern of enlightening thoughts in my head, start hugging trees and façades in joy, and from there on start spinning with my head tilted back and arms spread, like whirling dervishes dance, all until an intoxicating harmony is reached and starry thoughts swirling in this messy head of mine become realigned and more clearly visible to the eye of my heart. And if you ever wonder why all this antimony toward automobiles, I may spin you back in time to the last appearance of Monsieur Hulot on a celluloid tape, in the final scene of Tati’s *Traffic*, wherein he, having just been fired for, symbolically, failing to deliver a French car to an Amsterdam auto show on time, waves goodbye to his dear Maria and walks to an underground train station, but only to be swamped by a river of people holding umbrellas and exiting the subway in the opposite direction and pushed by them back to Maria, whom he know takes by the hand and walks with into the rain, with a smile on his face in place of an umbrella. Public transportation, indeed, as Tati wished to insinuate with

²⁴⁶² Watch Benjamin Zander’s *The Transformative Power of Classical Music*, TED Talk (February 2008), available at http://www.ted.com/talks/benjamin_zander_on_music_and_passion.html.

²⁴⁶³ The reference is given to Lord Tennyson’s legendary poem: “Flower in the crannied wall, I pluck you out of the crannies, I hold you here, root and all, in my hand, little flower – but if I could understand what you are, root and all, and all in all, I should know what God and man is”.

this scene, brings people's hearts together, as opposed to cars that pull them apart and set them into states of vapid isolation, the reason for which I have been always up for a good bounce on a limousine roof or a lipstick smear over its rear-view mirror. This is also why I ride on playground swings until I feel butterflies flying in my belly, tirelessly hop on bus stop shelters, cushions and waterbeds, and, in fact, make a rollercoaster ride out of everything I engage my daily creativity into.

S.F.10.35. For a long time I used to roam the city streets while paying more attention to storefronts, facades and other details resting on the opposite sides of the streets from those I would be walking on. So, I asked myself what psychological effect might stand behind this strange phenomenon. On one hand, this could be caused by my perpetually dissatisfied, poetic mindset, "evanescent like the passing of an adventurer love, a prince with neither a palace nor a page nor a princess, unhappy like all artists"²⁴⁶⁴, as someone described Ivo Andrić before he became a published writer and long before he became a Nobel Laureate in literature, always comparing everything to a hypothetical, divine social being, the vision of which rests somewhere deep inside my psyche, and concluding that the world, as it is now, sucks. To one such mindset, even when there is no obvious reason, grass will seem greener on the other side, be it of the globe, the city, the room at a party or the street. To it, the title of the final record by the English band, Laika, would apply well, echoing the sway of the waves of a melancholic dreaminess rocking the coasts of its mind: Whatever I Am I Am What Is Missing. On the other hand, people can be, roughly speaking, divided to those that have a tendency to ignore the forest by noticing trees, one by one, and those who tend to be blind to trees by recognizing only the forest as a whole. Between the two, I have always been inclined to the latter type of personality, not so much in a sense that my attention to detail has been lesser than that of focusing on the bigger picture when it comes to creating works like this one as much as in terms of my personality traits exhibited in social interaction. Namely, my mild fears of communicating directly with the neighboring creatures and objects, of facing them in full honesty and creative drive of my heart, had naturally widened the focus of my eyes, so that they did not anymore dwell at individual, nearby and directly approachable details of the world, but on clouds, rooftops and other distant things. These psychological predispositions might have also led me to develop the synthetic ideals that endow my personality nowadays, the ones that passionately go after uniting all the scattered impressions of mine into consistent and impeccably meaningful wholes. Or it could be, of course, the other way around. After all, a feedback loop was established at one point wherein my holistic way of thinking reinforced the withdrawnness of my attention from immediately observable details of the world and focusing onto distant and collective experiential facets. But now, it has all changed. Making friends with individual trees in our exploring them and analyzing the forest as a whole bring about complementary insights that mutually strengthen each other. As I know that being a devoted explorer of the finest features of reality, while never forgetting to place what we have discovered into a wider, all-encompassing story is required for being a fulfilled adventurer in this world, I follow this path, especially since I am also aware that holding forests as wholes in our views lets our spirits grow, whereas touching, fondling and slightly scratching individual trees develops our senses. Though, lest we become so deeply immersed in the spirit of the whole that all that is left is a desperate outcry, "I got the spirit, but lose the feeling"²⁴⁶⁵, or attracted to the little details around us that make our sensuality grow but impoverish our spirituality, we must let the train of our being journey along both tracks at the

²⁴⁶⁴ See Hrvatska mlada lirika anthology of poems, Društvo Hrvatskih Književnika, Zagreb (1914).

²⁴⁶⁵ Listen to Joy Division's Disorder on The Unknown Pleasures, Factory (1979).

same time. After all, these two elements of one's exploration of the world, the sensual and the spiritual, the detail-oriented and the holistic, are inextricably linked. On one hand, it is by learning from small and directly perceivable details of the world that we have over years and decades built the holistic eye of ours, able to wisely and astutely discern the ways of the Whole. But on the other hand, the deepness of our plunging into small details of the Universe is defined by the broadness of the cosmic scheme of things that we conceive in our minds. The more metaphoric, analogous connections we can establish between the observed relationships on the small scale and the ones governing the broader aspects of life, the more meaningful these small things will appear in our eyes and the greater the knowledge extractable from them will be. In such a way, the eyes in which Galaxies revolve in their envisaging the ways of the Whole will be able to read these tiny details of the world like the most amusing books. They could stare for hours or days at a simple seashore pebble or the sway of the sea waves, and always find new interesting things in them. Whatever these enlightened creatures face or read, no matter how boring and irrelevant it may seem, they will always find inexhaustible sources of inspiration therein. So, when I walk the city streets now, I know how to stretch one hand here and one hand there; how to plunge into what is right here, next to me, with a childish sincerity and dynamism, and yet to keep another eye on the frame of the starry Universe through which we, as tiny little lanterns of life, wander.

S.F.10.36. My life has always been abundant with visions and images that I could keep displayed in front of my mind and, without ever realizing why, stay absorbed in them, feeling as if the communication of the surface thoughts, intentions and feelings of mine, of what I sense that I am on one side and the essence of my soul on another has been mediated by their means. One of those visions is of me holding a ball of light, somewhat like Tom Verlaine on the front cover of Television's debut record, and walking on the sidewalk of a starlit highway. The cars with gleaming headlights would be passing by, and with each one of them their glaring lights would get more and more intensive until they blind me and then suddenly vanish, somewhat like the violin section in Radiohead's *How to Disappear Completely (And Never Be Found)*, the song that the Oxford band has allegedly regarded as their greatest piece. I would feel myself alighted with grace as I walk, like a slim siren, glinting with this inner ball of light, across the dark highways of human being. Kaća, one of the girls in my life whose "face formed a forward path", as Bob Dylan put it in *My Back Pages*, was once curious about the way I see myself in this life, and all I could do was to reflect on this image deeply impressed in my mind. I never could, however, really decipher why this image has been so strikingly meaningful and reflective of my inner self to me. Could it be that it mirrors my sense of general non-acceptance of what I have seen as the great potentials of my creativity, symbolized by the glowing ball I carry with myself, by all the cars and headlights passing by? Could it be emblematic of mine incessantly walking towards the light I have seen in others, stretching my hands towards them, while I desperately felt that all my attempts wind up in their running away? Could my walk on the side of the freeway symbolize my adventurous spirit in its determination to bring light to the world? Could the enlargement of the headlights as I approach them and then their sudden turning into pitch-black darkness stand for my fear of relationships in which walking towards each other is beautiful but may end up suddenly, resulting in depression and disappointment? All these archetypal images that appear unexplainably fascinating to us speak enormously much about our subconscious cravings, about our Id, which is hardly ever visible to us, like the deep end of the well or unfathomable ocean depths, dark and desolate, albeit always concealing the blissful foundations of Atlantis, an utopian world of the Paradise lost, which was, but is no more.

S.F.10.37. Whenever I am on a plane I get over and over again astonished by how looking at the world from a new point of view enables us to discern qualities not seen previously. The famous Nazca lines in the deserts of Southern Peru could thus have been walked over for millions of years without noticing their zoomorphic motifs, something which becomes readily visible when they are looked at from high altitude. Unusual symmetries adopted by agricultural fields, traffic vasculature of towns and cities and other elements of rural and urban design thus never cease to amaze me when I glimpse them from an aircraft. If not the presence of the patterns, then their complete absence in a terrain analogous to an amorphous crystal, as that of Calcutta and West Bengal seen at night from high up in the air, equally sparks my fancy. But what astounds me most when I fly high above a big city by night is the resemblance of the multitude of artificial lights of the city of the starry sky. It is wonderful to think how the wonders of the starry sky awakened in the ancient humans the awe and the curiosity that instigated them to start building the gorgeous cultural and technological organization of our civilization and eventually reflect that same starry sky on the planet Earth that once looked bare and absent of the creative forms of life. But then I get reminded of how these very same lights on Earth, although helpful in illuminating our ways during the night, can overcast the beauty of the starry sky, which is the effect known as the light pollution. But, should we spend too much time gazing at stars from darkness, we might end up falling into a ditch, like the Greek philosopher, Thales of Miletus, and thus invoke a flout from the leisured surrounding. Hence, to maintain the pragmatic sense of the tools we use and avoid suffocating the genuine sources of our intellectual and cultural ascension, we need to skillfully balance light and darkness in everything we do. Thus I jump from one idea to the other, connected by the bridges of analogies in my thinking. This is how a Little Prince of the modern times jumps from one star to another in the sky of his mind.

S.F.10.38. I have always been in love with my shadow. As we could have learnt from Peter Pan's moonlit voyages, a shadow can be looked at as a fingerprint of a person as much as its face can, since no two shadows are ever the same. And truly, nothing has been more enchanting for me than looking at it as it gets formed by the light of the moon or of a lantern deflected through branches and leaves of trees wavering under the mild force of the summer breeze. We change and grow old, but our Indian shadow remains, more or less, the same. As if it was the sea, I could stare at it for hours. It could be long or short. It could be thick or thin. It could be found on walls, on the trees by the road, as rolling on the ground or floating on the ceiling. It could even have multiple overlapping and crisscrossing shadows in one. Essentially, the concept of the shadow has fascinated me ever since. Even when I was a child, I used to jump around my shadow so as to escape or hide from it. But when I understood why and how it forms, I also learned how to appreciate and carry it with me everywhere I went. Thence, it stood forth as a reminder of the great dialectical nature of life. It taught me that one has to let the bright sunlight and joyful rainbows incessantly battle the dark tempest of human passions in us in order for the creativity of ours to flourish. "A bright type could never draw, could not describe nightswimming"²⁴⁶⁶, is the verse I recollect when contemplating about the dialectical nature of human creativity. Accordingly, there always needs to be something usurping our attention by throwing challenges, puzzles and obstacles in front of our feet in order to keep our creative energy flowing outwardly. The shadow also reminds me that whenever I judge and ascribe goodness as intrinsic to some details of the Universe, I implicitly assign meanness to some other details of this world. Any form of preaching is thus

²⁴⁶⁶ Listen to R.E.M.'s Nightswimming on Automatic for the People, Warner Bros (1993).

merely intensifying the dialectic battle between light and darkness, without really solving the issue. Certainly, if we desire to ameliorate this battle, we would need to develop an attitude that resembles the Oriental indifference epitomized in the basic Taoist teachings. It was this state of mind that Tom Verlaine and Television described with a guiding line “don’t you be so happy and don’t you be so sad”²⁴⁶⁷. Yet, Christianity can be discerned as favoring exactly the other way around, which is the way of simultaneous happiness and sadness, that is, an incessant propagation of the battle between light and darkness within us, all until it reaches cosmic dimensions. To pull out wonderful, creative ideas and observations to the surface, one would need to descend right there where the swords of each one of the two forces clash against each other. For, right at the interface is where the most beautiful ideas are born. This is why I kneel in silence and sacredly stretch my hands so as to touch the shadow of mine sprawled on the soil filled with pine needles, whenever I catch a glimpse of it.

S.F.10.39. When I enter a church, I enjoy shutting me eyes and absorbing the wonderful radiance of spirituality in it, a miraculous blend of peaceful silence and mysterious power that penetrates and feeds every miniscule part of our beings. In St. Paul’s Cathedral in London, you may find one of the most enchanting epitaphs. It says: “Reader, if you seek the memorial, look around you”. And indeed, as the core message of Christianity tells us, what we give, we are. “Don’t give up, you’ve got a reason to live, can’t forget you only get what you give”, as the catchy pop punk song by Gregg Alexander’s New Radicals went²⁴⁶⁸, ringing forth with a continuation of the message the Beatles placed at the very end of their work²⁴⁶⁹, at the finale of their monumental Abbey Road, a cathedral of a kind in its own, musical realm: “In the end, the love you take equals the love you make”. The most famous Christmas movie, *It’s a Wonderful Life*, directed by Frank Capra in 1946, perfectly illustrates the meaning of the messages that only what we give, we truly are, and the more openhearted we are and the more we endow the world with the flowers of creative acting, the greater our true being, spiritual, impalpable and spread everywhere, will be. For, deep down, “bonds between us are stronger than we are”, as Him told Her in Agnès Varda’s formatively inventive feature film debut, *La Pointe Courte*, and, indeed, our bodies, our brains and this one-thirteenth or so of a cubic meter we occupy in space come and go, from protoplasm to dust, but relations we engage in with similar or more inanimate objects are what becomes radiated outwardly like sunbeams and goes on to rock the boat of humanity and the Universe until their ends. Thence, not what we physically embody or hold in material possession, but what we scatter to the wind and let sail from the pier of our heart, as in the final scene of Yasujirô Ozu’s *Tokyo Story*, is what we really are. And just like the old man Shukichi, the main protagonist of this stunningly beautiful movie, runs out to look at the sky at dawn right after his wife drew her last breath, poignantly concluding that “it was beautiful”, so should we be sure that to inspect the brilliance of human personalities, we ought to look everywhere around them rather than limit our focus to their sole physical features. Lively spirits communicating with each other, aware of the fact that each one of us constantly emits one’s essence outwardly like a radiant star of a kind, thus do not stiffly nod their heads while fixedly staring at each other, but rather freely and joyously dance with the rays

²⁴⁶⁷ Listen to Television’s *Marquee Moon*, Elektra (1977).

²⁴⁶⁸ Listen to the New Radicals’ *You Can Get What You Give on Maybe You’ve Been Brainwashed Too*, MCA (1998).

²⁴⁶⁹ In fact, although the quoted verse is often taken as the final one in the Beatles’ opus, it is not so. Paul McCartney managed to humbly squeeze in the 23-second long *Her Majesty* at the very end of *Abbey Road*, giving a sense of unpretentiousness to the record and to one final goodbye that the band waved.

of their attention, covering all the spatial and aural directions therewith, orbiting like a pirouetting ballerina around the axis that ties their and others' beings into a hearty whole. And with Blaise Pascal's thought that Nature is a ball whose center is everywhere on her surface on our minds, we could be certain that sparkly reflections of the centers of our beings and the doors for us to glimpse them and hold them in sight for good rest in each piece of the surrounding reality. Although our bodies are temporary, our spirit, the thoughts, aspirations, dreams and acts that we send to the world are forever. They are like ripples or clouds constantly being sent to the world, changing their shape, but forever shipping some of their original impulses back and forth across the vastness of the Universe. On the doors of a beautiful hidden church on a Herceg-Novi square where ruined houses, palms, stars and the sounds from the nearby musical school glided through the clear summer space, one night I found a note repeating Jesus' saying: "Where two or three are gathered in my name, there I am amongst them" (Matthew 18:20). The verse points out that the spirit of ours is not confined to our bodies. It is literally everywhere. We are not parts of that great One. We are One. Here, there and everywhere is the essence of our being, it seems to be telling us. This is how I am flown to the magic land emanating in the mental clouds of my head from the concept of "the pattern which connects", which Gregory Bateson used to denote analogical similarities between physical systems and thus point at the core of the systems view of the world²⁴⁷⁰. In my head, however, this phrase has always stood as a mystical reminder that the most precious and lasting things in the Universe, as evasive, ineffable, imperceptible and intangible as they are, lie not in us, but all around us, in the invisible rays of spirit that we emit to reach out to others and brings us all into a wonderful oneness of being, thus overcoming the individualistic spirit of alienation from another that tends to enshroud us to an ever greater extent as the train of time rolls by. As I watched the Yugoslavian edition of the reality show Survivor, which took place somewhere in the tropical forests of Costa Rica, and contemplated on the traits, the attitude and the mental powers that distinguished the winners from the losers, it suddenly dawned on me that what produces a winning vibe does not lie within a single person, but in-between two or more contestants; it is akin to a cloud of energy forming around that invisible bond between the hearts of two creatures. The basic unit of survival, thus I concluded, is indeed a pattern which connects, just as Gregory Bateson envisaged. After all, the cellular contents of our bodies become completely renewed every few years or so, but our essence, our identity remains unchanged. This insight furthermore speaks in favor of relationships rather than entities as the basic units of life. Just like in the world of chemistry, thence, bonds that bound human creatures together or set them apart are the qualities that sustain our civilization on their pillars or will let it crash with a horrific roar into the spiritual ocean that underlies it all. Or, as put into words by Jean Renoir in his attempt to verbalize the essence of his tragicomic *pièce de résistance*, Grand Illusion, the movie that neatly reflected in its course the so-called *igračka plačka* state of affairs²⁴⁷¹ and was ominously released just before the dawn of World War II, "It is a story about human relationships. I am confident that such a question is so important today that if we don't solve it, we will just have to say 'goodbye' to our beautiful world"²⁴⁷². In another film about World War II, Andrzej Wajda's *Kanał*, the point was the same: namely, when an individual being becomes subdued to a relationship that binds it

²⁴⁷⁰ See Gregory Bateson's *Mind and Nature*, Hampton Press, Cresskill, NJ (1979).

²⁴⁷¹ The almost literal translation of this Serbian phrase would be "toying, then crying", referring to how inattentively goofing around tends to have dire consequences. "It's all fun until someone pokes an eye out", is the English phrase closest to it.

²⁴⁷² See Wikipedia entry on the movie *La Grande Illusion*, available at http://en.wikipedia.org/wiki/Grand_Illusion_%28film%29 (2012).

strongly enough to another individual, the chances for survival increase. The film, as a reminder, portrays a real-life event, but also through an analogy represents life as a stinky canal, with most of those who emerged from it to the afterlife being prosecuted at the Pearly Gates, on the Judgment Day, and only those who have found love in it, like Daisy and Korab, abiding in the light - albeit prevented from entering it by the prison bars of life, destined to resemble “the one who, when he sees the beauty of earth, is transported with the recollection of the true beauty; he would like to fly away, but he cannot; he is like a bird fluttering and looking upward and careless of the world below”²⁴⁷³ - and the only martyr managing to survive, Zadra, being the one who returns from the dawn of the afterlife back into the dark sewer of life to save others, like the Christ returning from Heaven back to Earth to be crucified again (Acts of Peter 35). These ephemeral ruminations also enkindle the vision of Julie Delpy in the movie *Before Sunrise*, sitting on the steps of a narrow Viennese street and noticing how God is “not in you or me, but in the space between”, adding how “if there is any magic in this kind of world, it must be in the attempt to understand someone, to share something”. This is, finally, when the image of the Christ, with his open arms, symbolizing the act of giving, can leap out of the dark cellars of memory and blissfully take over our entire being, carrying the central message intrinsic to Christianity: not what is held within, but what is given comes to constitute our being eternally impressed in the pulsating fields of divine energy that this transient reality is. For, “it is more blessed to give than to receive” (Acts 20:35), said St. Paul the Apostle, reverting us back to the dizzying vision of whole reality as a monument to Divinity that is verily everywhere around us, in every flower, in every grain of sand, in every autumn leaf and in every smile cracked and tear shed, the emotional amalgam of joy and sadness which every church engrains and which is the one that hides the secret passages to the rises of new universes, blissful twinkles of our spirit in its expansion and ascent to the stars.

S.F.10.40. There are not too many places that I was expelled from during my lifetime. Still, there have been a few very well chosen ones, which were to remind me every now and then that being rejected as a rebel and an outlaw, just as Socrates, the Christ, Albert Einstein and innumerable other prophets and progressive thinkers were, is the unavoidable fate of all the creatures that would amaze the world one day with the traces of creativity that they would leave behind their explorations of the reality. And so, in the coastal town of Herceg-Novi, yet another hilly settlement whose symbols are, like in SF, the Sun, the sea and the stairs, lying right at the entrance to Boka Kotorska Bay, also known as the Bride of the Adriatic, there is the Old Square where two symbolic places I was kicked out from could be found: a bookstore and a church. In view of that, I could not help seeing this as a blessing sign, as in accordance with what the Christ foreshadowed: “The Son of man must suffer many things, and be rejected of the elders and chief priests and scribes” (Mark 8:31). From the bookstore I was chucked out after curiously, with a plenty of devotion and respect, browsing through the books on the shelves on my birthday. The owner somehow became irritated by my browsing, which did not last for longer than two minutes at that point, and while mumbling, “You won’t buy anything, so get out of here”, pushed me out of the store. As for the latter, I was told to leave the church because I held my hands crossed behind my back and kept a glistening smile on my face. Namely, whenever I am about to enter a “house of God”, I imagine my heart meeting Her and I wash my face with feelings of divine devotion, which make my heart and my whole body pulsate with a pure, celestial joy. In accordance with the Christ’s words, “when ye fast, be not, as the hypocrites, of a sad countenance: for they disfigure their faces, that they may

²⁴⁷³ See Plato’s *Phaedrus*, Translated by Benjamin Jowett (360 BC), retrieved from <http://classics.mit.edu/Plato/phaedrus.html>.

appear unto men to fast... when thou fastest, anoint thine head, and wash thy face... ye are the light of the world - a city that is set on an hill cannot be hid" (Matthew 6:16...6:17...5:14), I let my spirit transcend any signs of suffering that my body may emanate. Also, as I have always believed, God won't mind one, intoxicated with the divine love for man and all else that is, writing down god's name in small letters, misspelling it or even forgetting to utter it at the right time, but He would mind one's pickiness and pedantry when it comes to pronouncing His name right, though with heart in which no love for another resides, which is why I have chosen to be judgeless about the form and be aware about the essence only, in all aspects of life. Once I read about a 11-year old girl from a small town who was asked by a church minister if she entered a Presbyterian church by mistake since she belonged to a catholic one before she replied saying, "God is in me, so I can go anywhere"²⁴⁷⁴, an authentically Christ-like response that could have easily been mine too on one such occasion of being thrown out of a house of God by a nun who must not have been made familiar with the thought of her fellow Orthodox Christian saint, Seraphim of Sarov: "Vivacity is not a sin, not even in a church, because God is glad that every man has joy in his heart"²⁴⁷⁵. Be that as it may, it may be no accident that I have dedicated myself to combine exactly these two symbolic realms, the one of writing and the one of theology, in my life. For, as pointed out by the very Christ, "The stone which the builders rejected, the same is become the head of the corner: this is the Lord's doing, and it is marvelous in our eyes?" (Matthew 21:42). Expelled from a treasury of books, I decided to use a written word to communicate an enlightening message which was inspired by my being forced out of a house of God. One of the ultimate messages of my writings - which may forever remain unpublished by conventional means, unreleased into the bosoms of the society by the official channels and freely available to everyone and to no one, kept away from the bookstore aisles and cocooned in the secret corners of the world, making Tagore's Charu and her muses smile in the moonlight - has been to show at the importance of superseding the hypocritical and superficial appreciation of religious symbols, which the Christ was the first one to stand up against, calling for an open breaking of numerous traditional biblical rules. Yet, this shallow way of approaching religiousness still dominates the modern society, as exemplified by my own aforementioned case. What I have tried to point at was not using these religious signs, from altars to frescoes to biblical readings and the entire houses of God, as aims of our devotion, but as reminders that the heart of God is everywhere, in every corner of our worlds. Through such a message, we may make the entire Nature and every detail in it a shrine of God. Blue sky on a sunny day could be its dome, human eyes the windows to the sunshiny world of spirit, while everything around us whispers with the voice of God. Likewise, when I walk by a graveyard, by no means do I see the remains of human spirits resting there. Instead, I feel their being dissipated everywhere. Everywhere we look, we could glimpse a piece of spirit of any creature that has ever existed on this planet. For, with every moment of our existence, the essence of our being is being radiated all over the place, sending spiritual waves that will always reverberate throughout the vastnesses of the Universe. Thus, for me, graveyards of the modern day are the earthly lights that are everywhere around us. With every new day, science and technologies are incorporating enlightening human ideas into ever more detailed and intricate pieces of moving matter, resulting in ever more fascinating technological devices. An enlightened creature born in thousands or millions of years from now on this planet, standing on top of a tall building of the future and looking down to the Earth, would see a plentiful of lights, fine travelling patterns of electric signals

²⁴⁷⁴ See Mary Paterson's *The Monks and Me: How 40 Days at Thich Nhat Hanh's French Monastery Guided Me Home*, Hampton Roads, Charlottesville, VA (2012), pp. 224.

²⁴⁷⁵ See Tomislav Gavrić's *Pravoslavna mistika, Lento*, Belgrade, Serbia (2003), pp. 56.

penetrating every detail of our planet in a fabulous human/technology interface. What she would see would be the remains of zillions of earthlings that have passed through their lifetimes on this planet and breathed pieces of their creativity into building that marvelous organization of the world. Zillions of lifetime dialogues between human souls and Nature will be by then captured in small details of the world, making them shine with ungraspable joys and hardships of being. Simply saying, she would look at an endless funeral of humanity, the one proceeding not by sending creatures into a desperate nothingness, but into an eternal voyage across the heavenly Universe on one side and their permanent settling into earthly lights, meadowlark songs and seagull flights as true monuments of spirit on the other side. When the rabbit Bunny was about to leave this world, he looked at the sad eyes of his grandsons, with their long ears sadly flattened down, and told them: “Do not be sad. Rejoice. I won’t be gone. You’d be able to recognize my face behind the tree branches shimmering in a summer breeze, hear my voice in the sounds of Nature around you, and feel my presence everywhere inside of you”. “I am not going to go nowhere. I will enter forever. I will be everywhere” – this is what the rabbit Bunny said, echoing the last words spoken by the father of Fanny and Alexander, “I’m closer to you now than when I was alive”²⁴⁷⁶, as well as the scene from Carl Theodor Dreyer’s *Ordet* in which Johannes’ holds a little girl on his lap and tells her that having one’s mom pass away is a blessing, for she would then watch her child no longer with the limited scope of the earthly eyes, but with the heavenly eyes, which have no horizons and which see everything because they are being everywhere. As for this enlightened creature, with her newborn starry eyes looking down at humanity, she would see more and more of the beautiful stars that endow the night sky down here, at the very Earth. At one point she may grow confused, for she would not know what to follow. The starry signs of human spirits down, sown all over the Earth, or the starry signs of the Heavens up, interspersed across the celestial screen of the Universe. And she would be in the middle, just like us, following both the human train of evolution in our respect and love for humanity on one side, and yet living with an eternal love of Nature and God, beating firmly within our heart with music we would never get tired of listening to. And by listening to the music of her heart, and guiding her actions accordingly, and yet living so as to give all that she has so as to beautify the world, she would be carefully, angelically, and peacefully treading the Way of Love outlined in this book.

S.F.10.41. For years I was picky and finicky about the music I would listen to, enjoy to and dance to in everyday surroundings. And then, all of a sudden, I realized that Nature as the divine Creator ingrained such an enormous beauty into every natural sound that human tendencies to vulgarize it can never succeed. By creatively combining natural sounds, humans can edify this inherent beauty, but can never completely disrupt it. No matter how vulgar human emotions expressed through music are, there will always be a plenty of beauty swimming in its sounds, predisposing it to leave wonderful impressions in sensitive, pure and chaste human ears.

S.F.10.42. As Lemon Jelly’s song *Pushy* monotonically rolls, a quiet voice in the background says, “The people who work quietly, behind the scenes, are the most important people”, and we all know how Bob Dylan strikingly sang “don’t send me no more letters, no, not unless you send them from desolation row”, praising the artistic creativity that blossoms in silence and solitude. These words remind us that not only is the director of the movie, the most essential figure in its making, always hidden, but that maybe the entire world is built and sustained on tiny deeds and the work of creatures that never get to be openly and pompously acknowledged for the greatness of their work.

²⁴⁷⁶ Watch *Fanny and Alexander* directed by Ingmar Bergman (1982).

However, just like the Creator of this world, Nature herself, the spirit, the essence of these creatures is at the same time unseen and omnipresent. If we listen carefully, we might be able to discern the subtle voice of the divine in every detail of the world of ours. Similarly, whatever we think or feel radiates from our being as if sent through an antenna, reaching the most distant sites. Our deeds and acts are similarly able to influence even the most faraway places in the world, although our perception of their effect will always remain veiled. After all, as the co-creational thesis tells us, everything perceived arises from the dialogue between human mind and Nature by means of this invisible language of the heart. Truly, the most precious things in life, that ones that are roots and foundations of everything perceptible and sensually enjoyable are invisible and impalpable. As St. Paul the Apostle claimed, “We look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal” (Corinthians II 4:18). For as long as we tend for these invisible streams of love, care, divine yearning and hope, everything we create on the visible plan will be immaculate. Love and you can do whatever you want, thus I claim. Love will guide you along the way, spontaneously and blissfully. And as Lao-Tzu says: “The sage gives life, but does not want anything in return; he works, but does not possess; he improves others, but does not ask for any credit for that. Because he does not ask for the credit, the credit cannot be taken from him...Who can give to the whole world from his own treasures? Only the one who keeps Tao in one’s possession. Therefore, the sage works, but does not claims the fruits as his own, he perfects not craving for the acknowledgment, without any desire is he to appear wise” (Tao-Te-Xing 2...77). Such a way of teaching brings to mind the message of Nietzsche’s Zarathustra: “Now I bid you lose me and find yourselves; and only when you have all denied me will I return unto you”²⁴⁷⁷. Hence, instead of craving for the credit for the things we creatively contributed to, let this credit be strewn in the air. Just as the Sun sends away its glowing rays in all directions without asking for anything in return, let us also be a Sun of spirit who lives according to the principle that “the more one gives, the more one has”. In the end, to give is more than to have, as Evangelistic words remind us. We will be gone from this planet one day, and truly, only what we give and selflessly scatter in the wind has the chance to live forever, as waves endlessly traveling between the coasts of human knowing, over and over again gently crashing over the seashores of human minds, bringing eternal joy and wonder to them.

S.F.10.43. As I was wandering along the sandy little labyrinths engraved into dunes right above the San Francisco Ocean Beach, I came across one of the most beautiful views I have ever seen. Imagine the sand thoroughly covered by tiny agave-like plants as far as your eyes can reach. All was green except for the two yellow flowers popping from the plants right in front of my feet. Nowhere else could the flowers be seen except right there, and yet there were two, so close that their leafy petals were touching each other. What is the probability that out of these thousands of flowers in bloom that stretch as far as my views could reach on both sides of the coast, only two of them that are right next to each other have fully blossomed and opened their lattices to the world, I wondered. The view can be described with only a gentle sigh, one “it’s so beautiful”, and nothing else. The ultimate beauty is the one that leaves us speechless, without even trying to describe a few of the endless beautiful meanings that the metaphoric messages like this can arise in us. “Beautiful is only that which, when described, leaves languages silent”, as Al-Ghazali thought.

²⁴⁷⁷ See Friedrich Nietzsche’s *Thus Spake Zarathustra*, I, 22 (1883); translated by Thomas Common, retrieved from eserver.org/philosophy/nietzsche-zarathustra.txt.

Thus, I gracefully raise a white flag of surrender in face of an infinitely deep, boundless beauty that arises every now and then in front of my mind.

S.F.10.44. When asked to find the clue as to which woman is the real mother of a little boy, King Solomon took a piece of chalk and drew a circle on the ground. He advised each of the two women to grab one of the boy's hands and pull. "Whoever gets to pull the boy to her side will be crowned as his mother", he said. As the women started tugging, one of them released the boy's hand, afraid of hurting him. The problem was then solved and, as you may already know, the king declared not the mother who engrossed the child, but the one who released it as the real mother. Hence, sometimes by giving up the things we love most in the world, by freely strewing the most valuable treasures that our heartbeats shield, we obtain the whole world in return. Although it is true that we will be held responsible for both acts committed and words said and acts undone and words unsaid, sometimes by abstaining from adding anything onto the embroidery of our elaborate expressions we create far more powerful streams of impression in the minds of their consumers. Hence, I have zero doubts that by creating a gap sometimes we build a far more stable bridge than we could have ever dreamt of. Making a step backwards is sometimes the way to march forward, triumphantly, as much as retreat and fortification could often turn out to be the right strategy for launching a most devastating attack. Similarly, by standing apart at the right moment we may create intimacies of the hearts that will release enlightening amounts of the spiritual energy upon their blissful unison and by winding down into an embryonic cocoon of spirit we often give rise to far more dazzling outbursts of creativity than we could have achieved by ecstatically leaping around with geysers of loving expressions flowing out of our heart. Finally, this is why only by becoming poor in spirit, by transforming our whole being into a living gift that gifts itself with every breath we take can we become truly One with the soul of the world.

S.F.10.45. "Everything a man knows and everything that is not mere rumbling and roaring can be said in three words", placed Ludwig Wittgenstein as the opening line quotation for his Tractatus, the magnificent analytical philosophical treatise aimed at using language to annihilate the very language, concluding in the end that "whereof one cannot speak, thereof one must be silent". When we understand that the most precious and beautiful things can be transmitted in the smallest things and deeds conceivable, a pure enlightenment will dawn on us. We would be able to draw a line and instill messages of cosmic importance into it. One such line would resemble the one sung about in a Mercury Rev's "deserter" song: "Somewhere out there across the moonlit sand, there's a line drawn like the line unheard of man"²⁴⁷⁸. By drawing a simple line or proposing a simple thought, although with a marvelous flight of spirit and love within our hearts, we could truly articulate millions of starry signs that may soften and guide the ears of the fellow beings. Andy Warhol's Campbell soups, Mark Rothko's blurred blocks, Barnett Newman's vertical lines, a.k.a. zips, or a simple drawing like the following may thus mean as much as the most sophisticated philosophical threads of thought. This is because truth and beauty are hidden everywhere. There is no place where we could turn our heads and not be able to glimpse a sign of God.

On the beauty of dreams

²⁴⁷⁸ Listen to Mercury Rev's Opus 40 on Deserter's Songs, V2 (1998).

S.F.11.1. Dreams are double-edged swords. On one hand, the beauty of dreams we carry inside ourselves determines the beauty that is implicit in every act of ours. The more we dream in a beautiful way, the more drives for enlightening ourselves and humanity will reside within us. Seeds of beautiful dreams sown all over one's mind and birds of marvelous flights of spirit quietly nested within the forest of its thoughts can be said to be responsible for breathing enchanting juvenileness in one's words and acts, while the deprivation of dreams, which growing old typically brings to minds not anchored to stars, leads to dryness and maliciousness spontaneously starting to emanate from one's being. But look at the other side as well. There, we could see how most of the feelings of desperation come from these dreams not matching reality. The knives of guilt that often slice the human spirit to pieces continuously throughout one's lifetime appear mainly across the gap between the dreams of a beautiful life and gloomy reality. Creatures with lively imagination that endows them with visions of how angelically beautiful and inspiring their expressions could be, dreaming of their bodies turning into silhouettes that "dance beneath the diamond sky with one hand waving free"²⁴⁷⁹, able to heal the surrounding souls with every blink of their starry eyes, have thus been most susceptible to be hunted by the ghastly hands of guilt that emerge from the darkness of this abyss that stands between the coasts of dream and reality. For, the more beautiful the dreams nourished within us, the greater the chance to end up feeling chronically miserable because of their not coming true. As far as the modern age is concerned, and that especially in its intellectual milieus, the greatest senses of dissatisfaction, which, as Lao-Tzu might have reminded us, are the greatest curses imaginable too, lying at the root of all evil (Tao-Te-Xing 46), arise not from the states of mind wholly deprived of dreams, but, in fact, from the inability to courageously walk on the glorious path of living the dreams that magically pop up in our heads and hearts. On the other hand, what we have in our hands with this insight is a vicious circle where we could not tell whether the cause has caused the effect or *vice versa*. Namely, dreams can exist only in as much as our visions of the world deviate from the way the world appears in our eyes. So, not only that unfulfilled dreams lead to discontent, but there is also a tiny sprout of dissatisfaction about the state of the world as we see it lying at the heart of every dream. As animals never bother to explore alternative and more superior ways of executing the same tasks, the way in which humans differ from lower forms of life can be said to lie exactly in our ability to be dissatisfied with the old and dream of discovering the new. In that sense, the ability to dream can be thought of as wings which soared humans above any other life form on this planet, and which will certainly take us to even greater heights of being. And during this ascension of human being, it is our inner loss of faith in the value of these dreams that is usually the real source for the feelings of depression and a true reason for the loss of meaning of life. But then again, there is the co-creational thesis to shake us up from this state of dejection by telling us that in every act we conceive and make, the creativities of ours and of Nature are fairly spliced. Hence, not a single work of art would be perfect had it become perfectly copied from the blueprint of our dreams to the substrate of the reality. There always needs to be a room left for Nature to exhibit creativity through what may seem like an effect of intuitive randomness from our own creative perspective. Knowing this, many artists and prophets called for a profound consultation of the spirit of the time and the place upon conception of enlightening expressions as well as for allowing for the process of mutual change between the expresser and the environment during any creative act to happen, all in accord with the idea of co-creation. This lineage of thinkers includes Alexander Pope who advised in his Epistle IV the

²⁴⁷⁹ Listen to Bob Dylan's Mr. Tambourine Man, In: Bringing It All Back Home, Columbia Records (1965).

emerging generation of gardeners to “consult the genius of the place in all that tells the waters or to rise, or fall... now breaks, or now directs, th’ intending lines; paints as you plant, and, as you work, designs”²⁴⁸⁰, handing us a ubiquitous guiding star in reference to which we could navigate our journeys towards blissful expressions in any domain of life. In that sense, we should be reminded that dreams and reality stand in a similar relation to one another as mind and Nature do in the frame of the co-creational thesis. Namely, a hypothetical schematic depicting the latter may show them as partly overlapped circles, whereby their intersection gives rise to the perceptible phenomena, while some portion of them still remains unknown and elusive to the other pole at all times. This is to say that life and dreams blend with each other like puffy clouds while simultaneously proceeding partly independent from one another. Another direct implication of this analogy is that dreams and life, like mind and Nature in co-creating experience, ceaselessly interact with one another, to such an extent that untangling where life as an incarnation of our dreams and dreams free from the bonds of reality begin or end presents an impossible task. This explains why pressed against the wall of dreadful worldviews of little faith, all but spellbound by the divine magic of reality sparkling from each and every one of its corners, the mime artist from Jacques Prévert’s and Marcel Carné’s *Children of Paradise*, Baptiste Deburau, who had, like so many before and after him who have realized that knowledge can be a veil that stands in the way of glimpsing and embracing the true, emotional and lifesaving knowledge, left behind the realm of words, together with the phoniness and hypocrisies that dwelling in it brings about, utters, “Dreams, life – they’re the same; else life’s not worth living”. Yet, just as inherent to life is this overlap of dreams and reality, so is their disconnectedness inescapably present in it too. Therefore, despite the constant redirection of the evolution of our experiences by the force of dreams and *vice versa*, we should not be pitiful in view of the fact that our dreams cannot wholly come true; for, such is the nature of the co-creational reality that our beings inhabit. Yet, remember that the dreams we have instilled into our works are never lost. They will have managed to live secretly within them and with the invisible essence of the world. Therefore, nurture your dreams like the most precious soil on Earth: the soil of the field of divine spiritedness. For, in such a stance lies the recipe for maintaining the eternal juvenileness of our spirits and their uninterrupted dwelling in the gloriously gilded gardens of the Kingdom of Heaven.

S.F.11.2. “Dare to be wrong and to dream”, Friedrich von Schiller once wrote. And as stands written on one of the walls of the UCSF Parnassus Campus, “Dare to be wrong or you might never find yourself to be right”. Said the great jazz pianist, Fats Waller, reminding us of how the inherent part of every jazz improvisation is making mistakes and correcting them on the way. A virtuoso in piano improvisation, Dave Brubeck thus noticed the following on one occasion: “The way I like to play is dangerously where you’re going to take a chance on making mistakes in order to create something you haven’t created before”. Concordantly, with this fault-paved road to every creative performance in mind, Jim Bouton counseled a pianist who claimed to have been most afraid of making mistakes with the following words: “You should be making mistakes. If you never make a mistake, that means you’re not playing all out. You’re not playing as open and free as you can. You’re playing too tight, too controlled – that’s not the way to play. You’d be better off having a recital with half a dozen mistakes, than having a mistake-free boring recital. Because the one in which you’ve allowed yourself to make mistakes is going to be more dynamic, more powerful,

²⁴⁸⁰ See Richard Weston’s *100 Ideas that Changed Architecture*, Laurence King Publishing, London, UK (2011), pp. 80.

and more musical”²⁴⁸¹. As such, all masterfully woven jazzy ad-libs live up to the ideal posed by Swami Vivekananda: “In a day, when you don’t come across any problems – you can be sure that you are travelling on a wrong path”. For, throwing ourselves off the cliffs on which we walk while gazing at wonderful sunsets above the sea, though only to be saved again and ignite the enthusiasm in the listeners thereby is what one could hear in every masterful jazz performance as well as in any creative act in general. Without the readiness to exert slipups, one would merely stagnate in repeating old melodies and treading familiar trails over and over again. The only way to retain childlike juvenileness of our being, to keep the inner juices of our creativity constantly replenished and prevent our becoming like a squeezed orange that leaves behind only a dry, bitter and rugged skin is to never cease to yearn to find novel ways to express and impress ourselves by bravely stepping onto unknown vistas of seeing the world and tiptoeing towards its peaks in never repeatable ways. The knowledge of this possibly greatest message of jazz music has come to me after years of playing and improvising on a musical instrument. It is through dreamingly keeping a vision in front of our mind and determinedly walking towards it and yet not hesitating to produce errors in all the flexibility and freedom of our spirit that we learn the art of improvising in stunning ways. What is more, the undying improvisatory flow of an authentic jazz performance allows for all the errors and listless moments in a tune to be fixed and make sense of with the right notes that follow. Or, as Miles Davis described this effect, “If you hit a wrong note, it’s the next note that you play that determines if it’s good or bad”²⁴⁸². As such, every jazz improvisation is reminiscent of life. No matter how many mistakes we make and how much we wander away from the true path of the heart, we always have a chance to correct everything with the final threads we spawn and place a crown of enlightening meaning on top of it all.

S.F.11.3. To me, thence, deciding to pluck the fruit from the tree of knowledge in the Garden of Eden was merely a metaphor of the primordial human choosing to dare to dream. It is as if those who tasted the fruit knew that consuming it would imply an obligation to cope with all the despairing mental and emotional tempests that dreams would invoke in them. It is true that dreams are sources of beautiful visions and inner drives of the most advancing ideas and acts we may conceive of, but when unrealized or not lived in concert with they also stand forth as unassailable curses, as the sources of desperation and mental breakdowns. In that sense, I have always claimed that dreams are at the same time visions that may beautify the world and ourselves, but are also there to humiliate ourselves whenever we build them on top of dishonest and vicious intentions or ideals. Thence, they present buildings that due to infirm grounds they were built upon topple down and, like scrambled visions and screaming memories, shatter one’s mind and soul. Thus, to nourish wonderful dreams that will be the source of satisfaction for our spirits rather of despair, we ought to widen the limits of our ego all until it encompasses truly everything. This is how we may come to the heart of the co-creational thesis that tells us how our entire experiential reality is partly our invention, so that in each piece of it we could recognize the essence of our own being, the whole social consciousness, including all the people that have ever been part of it, and, of course, the spirit of the ultimate Co-creator of it all, nameable as Nature, God, Brahman, Allah or whatever else. To stand heartbroken in face of dreams that have been irretrievably drowned in the ocean of reality is thus often the first step in our leaving the earthly stations of being on our karmic journey

²⁴⁸² See Garr Reynolds’ *Perfectly Imperfect & The Art of Making a Connection*, Presentation Zen, retrieved from <http://presentationzen.blogspot.com> (March 11, 2016).

through limitless Cosmos and ascending towards greater and more transcendent existential planes. It is akin to our returning to the starting point of our journeys, magically finding ourselves once again in the Garden of Eden and reverting the fall from grace that commenced with our dream of being endowed with the power of ego that kept us separate from God ever since. Broken dreams and Sirach's arrows that pierce the heart in order to make it "shew her knowledge" (Sirach 22:19) can thus be said to be of one quintessence. "Worry not for dreams despaired; when they die in dream, in daylight they live"²⁴⁸³, the mysterious man whispered one day to the Serbian poet, Dis' ears, conforming to this point from a different angle, the one suggesting that not only do dreams arise only insofar as the reality impedes their fulfillment, but also that if we lived all our dreams, the visions that haunt us, be it in a blissful or nightmarish manner, would vanish from our moony head. For, "the journey traveled is never the journey dreamed... the traveler who does not bend to this logic is broken by it"²⁴⁸⁴, as Linda Ehrlich noticed in her seminal essay on Yasujirô Ozu's Tokyo Story, launching our consciousness onto a more sublime plane whereon selfish and to a large extent despotic strivings to make reality match our dreams become substituted with enlighteningly selfless awareness surrendered to the Universal way, Tao. When this mission of equalization of our ego with all that is becomes accomplished, we may let these self-sacrificing waters of Tao flow into the windmills of our heart and set off the spinning of the wheel of divine wishes and dreams, ones that are always oriented towards saving the world, not oneself only on the account of ruining all that surrounds us, as the egotistic way, always up for lifting oneself up and supressing others down, would like to have it.

S.F.11.4. To the question how dreamers are shaped, we can then offer the following answer: by having someone impose constrains onto their adventurous spirit in their young days. If you have ever found yourself in the midst of a boring conversation and realized that your imagination has begun to scan every little piece of your surrounding and enter the landscapes of the paintings around you, dancing on meadows depicted on them and soar to the clouds in their most distant background, all until it disappears deep into it like trails of a plane on a clear blue day, enlighteningly realizing an incredible richness that every single detail of our experiential realities conceals, know that one such discovery is analogous to the origins of divine dreaminess that I have envisaged here by claiming that tying our awareness to limitedly interesting harbors of experience and yet shedding stardust of wonder and love all over it is how dreamers in life are shaped. Filling one's mind with the beautiful images of the sea and the stories about sirens and sunken treasures it hides, but keeping one's ship tightly fastened to the safe seashore is what predisposes one to become a dreamer. It may be for this reason that Socrates heartily convinced people of Athens that they should get married; for "if one finds a good wife, one will be happy, and if not, one will become a philosopher". Equally, there are grains of truth discoverable in a line of dialogue in Emlyn Williams' play *Night Must Fall*, where the charming killer brushes off writing poetry as the hobby of a fille he fancied as caused by being repressed in real life. For, to build walls around one, be they abstract or concrete, and limit the freeness of one's expressions via either internal or external mechanisms is how the grounds are set for the forging of a dreamer's spirit in one. As I watched Theo flipping the pages of a children's book I held between the thumb and the index finger of my right hand, realizing that he had finally awaken interest in reading, we sat surrounded

²⁴⁸³ See Vladislav Petković Dis' *Nedovršena pesma III*, In: *Pesme*, edited by Božidar Kovačević, Srpska književna zadruga, Belgrade, Serbia (1939), pp. 173.

by the white of the Midwestern winter, with no leafy trees in sight, puffy clouds on the run or ponds that were not frozen. Evidently, it took a move from evergreen Cali to snow-white Chicago for him to recognize the vivacious colorfulness of books, man's best friends, as my Mom has used to say, perhaps showing us thereby that harsh living conditions bear dreams inside of the human soul, dreams from which the most valuable things in life arise, including the strengthening of our intellect, whereas totally favorable ones inadvertently put them to sleep. Then, on the opposite side of the Earth's spin around the Sun, around midnight on a hot and humid summer night, as I walked through the heart of Chicago downtown, amidst the genial blinks of countless city lights of this metropolis, I looked around and glimpsed a feminine shadow dancing on the balcony of one of Marina City's Twin Towers and underneath it, a few feet away from me, another girly silhouette swiftly hiding itself behind a building that stands on the site of old Fort Dearborn and looking up at the skyscrapers surrounding it in breathtaking wonder, with eyes as wide as two prayerful suns, from which tears of radiant joy could drop at any time and create a lifesaving path even on the sturdy asphalt under her feet and it made me wonder if, unlike these spirited fellow Chicagoans, Californians count in my head as generally the dullest and bleakest of all Americans because they are deprived of long winters, the times when one could only dream of shedding stardust of beauty and inspiration all around one through the summer air but cannot do so, as clouds are gloomy, leaves from the trees are fallen, the ground is frozen and every soul is bundled up in thick clothes from head to toe. In fact, for many years I have vainly attempted to figure out whether the fake image of California as a cool patch of the globe to live on or the fact that the Sun shines at it at about the same intensity all throughout the year, producing no seasons whatsoever, has had a more decisive influence on hatching unsurpassably stale spirits on its lofty grounds: awkward and insipid, yet accusatory, judgmental, beady-eyed and backstabbing, bearing perfect examples of how intellectual acuity and a sense of entitlement to moral righteousness can be hellish and wrecking for one's spiritual shine and happiness when they are not mixed with the surge of cosmic Love before which all the gates of reason, logicity and moral sensibility fall apart. And if the preceding comparison of North American and South European cultures can instruct us on something, it is that the exceptional productivity of the former springs from "having no life", if we were to speak in jargon, whereas the creative slowness and easygoingness of the latter, lackadaisical at times, is relatable to "having life" in terms of feeling a greater sense of belonging when immersed in the social milieu. Henceforth, we can deduce that our intellectual fertility in life stands in inverse proportion to the intimacy we feel during our interaction with people around us; in that sense, the closer we are to the fulfillment of our dreams of living out the eruptions of love dormant in our spirit, the farther we are away from bearing standard, scholarly bubbles of inventiveness within ourselves in this life in which unfulfilled dreams and sadness that they entail provide seeds for the birth of the most fabulous creativity we could think of. Infliction of mental constraints on the drives that are dreamily dormant in our hearts and that subtly push us in the direction of opening up and freely interacting with others, so as to fertilize our and other people's fields of spirit thereby, is thus what underlies the great intellectual productiveness that we observe in the West. Typically, then, innumerable fine details and events in our surrounding that have an impression on us act in synergy as shackles that shrink the scope of our expressional outreach and thereby switch on the bulb of sacred dreaminess in us. For example, the gridded prison bars on the windows of the house which sparked my romantic dreaminess, walking through half-lit hallways, dancing around Venus de Milo and other crumbly white statues of the living room, praying in front of icons and dreaming in the corners of which now takes place in my philosophical head and is impressed on the pages of this book, prevented me from hopping out of the window and engaging

in a hearty play with the cypress trees in the backyard, making me wistfully gaze through them like the boy in Francois Truffaut's 400 Blows. By putting subtle brakes on the flights of my spiritual imagination, they may have been one out of a plethora of factors that had a vital influence on enkindling my artistic dreaminess. The same effect of liberation through constriction I would recognize in Theo as he began to attend school, in whose case limiting the space for imaginative physical expression by having one confined to the classroom desk and subjected to various behavioral rules opened the room for unimaginable imaginative expressions; raising a wall that, we know, education is in this case opened unforeseen new abstract spaces in the one before whose eyes this wicked wall got lifted. Lastly, as a reminder, year after year, from my childhood to the adulthood, I spent all my summer vacations in Kumbor, a lovely coastal town in Boka Kotorska Bay, clinched between the Adriatic Sea and mountains of the continent. Although the most inspiring landscape I could think of is the one of a pebbly coast where one could stand and face an endless sea of mystery in front of one, as I stand there, at the seashore, a huge mountain range covers my view of the open sea of the Adriatic. I could see the waters, but I never could truly see the sea in its immenseness. And now I wonder if maybe the role of these circumstances was to shape a being that would long for the sea so much that his desire would one day be able to move mountains on the way thereto? Maybe this is how I learned to love the metaphor of the sea more than anything and maybe this is what impelled me to use it relentlessly in my storytelling? Maybe this mountain blocking my view of the sea that I so intensely longed to see was symbolic of all the hindrances that were to be placed before me in life so as to spark the spirit of sacred dreaminess in me and prove Paul Gauguin's realization that "in dreaming eyes there is troubled surface of an insoluble enigma"²⁴⁸⁵? Finally, maybe this was the only way for me, as a tiny Indian river in this life, to eventually find the way to the sea, the symbol of the unity of all being, and reach the blissful oneness with the entire world in a perfect, absolute and divine love therewith.

S.F.11.5. My whole life has been stuffed with dreams, with exciting contemplations strewn with visions that I would eventually strive to transmute into these words. Each one of these dreams may be seen as akin to those magical stones a little Indian girl from a fairytale I heard on a radio as a war-stricken boy hungry for love and compassion handed to her tribal fellowmen, so that they could put them under their pillows before going to sleep. As they slept, the stones would release their secret essence and induce pleasant dreams in them. Still, I know that each one of these millions of guiding lights of inspiring thoughts that twinkle in the distance like mysteriously cheerful stars are meant to be lived. How inspiring is it to devote one whole day to living with a single thought like any one written in this book, for example? If I only talk about these guiding principles and do not live according to them, am I then like a Pharisee that Jesus so heavily criticized? I don't think so. In fact, had I begun to live these inscribed dreams, no more time would be left for processing new and unforeseen thoughts in my head. In order to arrive at novel ideas, one has to give up on living the old ones, cleanse his mind and open up to the new horizons. Only then will new ideas start falling on us from the sky of divine inspiration. To do so, one must accept the role of an incessantly insecure being. Every time it seems as if one has finally found solid foundations for one's acting and reasoning, one ought to abandon them and continue searching for the other ones. For, only involvement in an endlessly questioning adventure of human spirit can indefinitely sustain the wheels of our artistic creativity. Hence, I claim that my role of an incessant

²⁴⁸⁵ See Paul Gauguin's letter to André Fontainas from Tahiti, March 1899, In: Paul Gauguin, *The Search for Paradise: Letters from Brittany and the South Seas*, Selected and introduced by Bernard Denvir, Collins & Brown, London, UK (1992), pp. 132.

dreamer and an alchemist who transfuses these dreams into a cosmic music, tonal and verbal alike, is none other but the one of a catcher in the rye, a creature that refuses to engage in play with other kids because he figures that there ought to be someone to keep an eye on them from the distance and make sure that they do not fall off the cliffs of life and continue to be happily ever after absorbed in carefree play. Such is the role of me as a writer: to selflessly give some fresh new guiding stars to people. To do so, to be a dreamer *par excellence*, one has to be distant and partly give up on living these dreams. This is why every scribe celebrating life is a hypocrite too, given the fact that the outpour of inspiring words from the fountainhead of his spirit is possible only insofar as the dreams so wildly spun in his head are allowed to die in the real life and be destined never to be truly lived. This brings to mind the storyline of the Japanese movie *After Life*²⁴⁸⁶: the dead depart to a limbo wherein they are being asked to select their most precious memory, which will be recreated by a film crew of a kind and which they will bring with them to a journey to a new life. Symbolically, this film crew consists of the dead who have declined to select one out of an infinite set of blissful memories at this very same stage and who preferred to live dedicated to using them to recreate the scenes from other people's lives, the seeing of which would momentarily transport them to the next level of being. The message, of course, is clear as a bell: one needs to be dead, to not live life if one is to be an artist that creates sublime experiences for other people and teleports them to heavenly spheres of being. To renounce the living of dreams is thus a precondition for instilling dreams into other people's lives and guiding them toward their fulfillment in this world wherein sacrificing one's happiness for the sake of eliciting happiness of another stands for the greatest happiness conceivable. As for myself, being torn between the life of a poet and the life of the poet's dreams lived to the fullest, I have incessantly wondered, trembled and feared in awe that a day might come when the grand gate of life would close itself for good before my eyes so that dreams could begin and creativity flourish. For, as we see, the intensity of the creative force burning inside of us is directly proportional to the vivacity and ethereal beauty of our dreams, whose existence is, on the other hand, conditioned by their not being fully lived in reality. In that sense, whoever aspires to write down signs that flash like stars of the night sky before others has to adopt a stance similar to that held by St. John the Apostle as he was writing his Gospel and wishing to impress it as a magnificent guiding star on the forehead of humanity: "There was a man sent from God, whose name was John. The same came for a witness, to bear witness of the Light, that all men through him might believe. He was not that Light, but was sent to bear witness of that Light. That was the true Light, which lighteth every man that cometh into the world. He was in the world, and the world was made by him, and the world knew him not. He came unto his own, and his own received him not" (John 1:6-11). In other words, just as each bearer of light, be he recognized as such by the world or not, is obliged to be immersed in the darkness all the way through, so are the conception and bestowal of illuminative dreams possible only insofar as their coming true is being voluntarily relinquished. As I, mesmerized by the dance of sunlight and leafy shadows all around me, meditated alone on how the splashes of Lawrence Halprin's waterfall on SF Levi's plaza provide a tranquilly quiet sound that is, though, incredibly effective in protecting one from the roaring sound of engines coming from heavily trafficked Embarcadero literally meters behind it, I concluded with bliss that this mysterious remoteness from the world and brave assumption of the role of a refugee²⁴⁸⁷, forever and ever somewhat estranged

²⁴⁸⁶ The film was directed by Hirokazu Koreeda.

²⁴⁸⁷ The role of a refugee has been quite familiar to me, not only from the many Biblical parables, but also from my own escapes from the horrors of war at the age of 22 as well as the fact that my native country, Serbia, is the one wherein at this very moment, more than two decades after the outbreak of the civil war that tore Yugoslavia to

from the hearts and souls of ordinary people, indeed presents the basis for both igniting and sustaining the blaze of my creativity and wobbly walks towards fulfillment on my mission on Earth, a perspective that may seem odd only to one wholly unfamiliar with the balance between withdrawnness and empathic oneness lying at the core of the concept of the Way of Love. Desolateness and partial rejection by the world, as much as mild distantness from the spiritual light, so that it could be neatly described, is the cost of this great endeavor taken on by myself, which has led me in the direction of wistfully contemplating and conceiving ever greater dreams rather than living them and being that brilliant light of spirit. However, the time may come when everything that was supposed to be written would be written, and when the great bells of life will ring, signifying that we should start fully living for Thee, in simple and humble belief that Love comes first and last, and that everything will be given to those who love others as much as themselves. On one such day, we may appear as if standing on a tile of SF King Street, right there where trains pass by the Giants stadium, on which lines of a poem by a Filipino poetess, Virginia Cerenio, are engraved: “You asked me once how I write poetry, not knowing the greatest poetry goes unwritten. The best poetry is here, being in your arms”. As if inspired by the essence of this poem, we would leap high in ecstasy and spread the wings of our spirit all until they embrace the entire world, transforming the self-withdrawn, introspective and judgmental stances of ours into an angelic outburst of openheartedness, love and inspirational acting. That day, our dreams would turn into reality, and we would know that to live our dreams and to dream our lives could, in the end, not exist one without the other.

S.F.11.6. Once I waited at a traffic light behind a girl with an “imperfection is beauty” message tattooed on her back in large gothic letters. I tapped her on the shoulder, wishing to suggest an addendum saying “... but beauty is perfection”, but then I changed my mind and decided to “let my mind do the walking and my body do the talking”²⁴⁸⁸. Yet, had I told her so, the symmetry of the simplest mathematical commutation would have been broken by demonstrating that $A = B$ in real life may not mean that $B = A$, whereby a myriad of wells of wisdom would have opened their arms to welcome the fathomer into their depths. And verily, “beauty will save the world”²⁴⁸⁹; ‘tis the saying exclaimed by Prince Myshkin in Fyodor Dostoyevsky’s book *The Idiot* and the one that has served as an invaluable guidance during my meditations on the meaning of life and my mission in it. With a blissful vision of the goddess of Beauty it has posed in front of me every time I’d think of it, it illuminated the trail of aesthetic sublimity on which I believed I ought to be walking too in order to make my contribution to saving the world from dissipating into agonic abysses of vulgarity. Later I would split this deity of Beauty into the endearing muses of Love and Wonder, and thus derive my personal version of lifesaving qualities developable in human creatures as the part of our ongoing social evolution. Ever since I have claimed that without these two nurtured daily in the garden of our spirit and taken marvelous care of, we would approach a haunting reality depicted in Béla Tarr’s *Werckmeister Harmonies*, inhabited by zombified spirits, either speechlessly anomic or smashing all in their sight with bats in their hands, wholly indifferent to the carcass of a giant beached whale, the metaphor of God envisioned by human creatures, lying dead in the center of their universe with an eternal smile on its face and provoking a sense of

ethnophobic bits and pieces, the number of refugees is markedly higher than in any other European country, having approximated a total of almost one million according to the United Nations report (www.un.int/serbia.about.html).

²⁴⁸⁸ Listen to Depeche Mode’s *World in My Eyes* on Violator, Mute (1990).

²⁴⁸⁹ “*Lepota će spasiti svet*” is the sounding of this phrase in Serbian, with “*lepota*” having an even more sublime, empyreal and transcendent meaning that the simple “beauty” in English has.

lifesaving Wonder from only a single young man, a uniquely sane and unspoiled mindset in the apocalyptic world around him. And just like the protagonist of this movie ended up expelled into a mental hospital from this community of creatures that appeared as violent and airheaded bigots to one whose mind rested on the sublime levels of cosmic consciousness, so did Prince Myshkin fetch up in a sanatorium, deliriously holding on to a prayer and repeating the mantra of his life and my favorite quote of all times: “Beauty will save the world”. The most enchanting part of this saying in my eyes springs from that fact that the beauty itself was never defined in the prior course of the book. To this day I wonder if this was because beauty, in its most sublime and spiritual sense, is truly indefinable. Like all explanatory principles in life, that is, the ultimate notions that we use to explain everything else²⁴⁹⁰, ranging from Lao-Tzu’s Tao to many religions’ God to Einstein’s relativistic energy to Gibbs’ free energy to Lowen’s bioenergy to Calvin & Hobbes’ Noodle Incident and beyond, the notion of beauty could not have a satisfying description of itself in the realm of the aesthetics of life. “Distance in proximity... magical recalling in each other of faraway places... beauty... because at the furthest and the most extreme frontier, beauty shines... in the furthest of all places it shines in men”, thus muses the dazed epitome of Godard’s femme fatale²⁴⁹¹, reiterating this evocation of beauty as the ultimate explanatory principle in our epistemic schemes, the first and the last wagon, the locomotive and the caboose of the train of microcosmic logicity. This is why true philosophers and adventurous wayfarers journeying through the lands and labyrinths of the human mind have ever since been on the quest for this life quality of a universal importance. In spite of the fact that no one has come close to its complete transmutation into words, images or sounds, only by constantly seeking a quality like this, regardless of the inescapable futility of this quest, can we foster its perpetual growth in us and in the world around us. Thus, from the pedestal of the personal, ineffable definition of beauty that lives deep inside of me, but resists any conceptual explications, I could see the entire Universe having the purpose of existing for the sake of arising beauty in each one of its details. Because it is indefinable, it invites human creatures to passionately seek it and dream about it. And it is in doing that that we, the artists and the dreamers, imperceptibly sow the seeds of beauty divine all over the world. This is how we preserve beauty in the world: by incessantly being on the way, always questioning and wondering about the nature of our beings, of experience, of cosmic love and other invisible streams that the boat of the entire existence floatingly drifts on.

²⁴⁹⁰ See Gregory Bateson’s *Steps to An Ecology of Mind*, The University of Chicago Press, Chicago, IL (1972).

²⁴⁹¹ Watch *Histoire(s) du cinema* directed by Jean-Luc Godard, Chapter 2b: *Deadly Beauty* (1997).

S.F.11.7. In that sense, real dreamers can be imagined as incarnations of the giant planet Saturn, with the rings of some invisible horizons drawn in their imagination, like shiny halos surrounding them in their fancy. Wherever they go, wherever they direct their blessing glances, horizons at which the seas of unknown meet the coasts of reaffirmed knowledge are visible, sustaining their celestial wonder and making their eyes twinkle with a mysterious and enchanting, purely starry beauty. These quixotic thoughts, like a magic carpet of a kind, fly us back in time and land us gently on the locus drawn by Friedrich Nietzsche in the form of the following passage: “This is a universal law: a living thing can be healthy, strong and fruitful only when bounded by a horizon; if it is incapable of drawing a horizon around itself, and at the same time too self-centered to enclose its own view within that of another, it will pine away slowly or hasten to its timely end. Cheerfulness, the good conscience, the joyful deed, confidence in the future - all of them depend, in the case of the individual as of a nation, on the existence of a line dividing the bright and discernable from the unilluminable and dark; on one's being just as able to forget at the right time as to remember at the right time; on a powerful instinct for sensing when it is necessary to feel historically and when unhistorically”²⁴⁹². The only way to preserve the crowns of genuine spiritual jubilation in the kingdoms of our behavior and thought is thus to endlessly spin this carousel of wonder in front of our eyes. What is more, by unrelentingly doing so, we might turn out to resemble the boyish metaphor of Isaac Newton's spirit²⁴⁹³, a slender figure standing tirelessly on the beach whereon the waves of the sea of undiscovered possibilities crash against the seashore of affirmed human knowledge, and serenely playing with pebbles, a Peter Pan of modern times, with a sleek shadow reflected in the silent sea around him, jumping from one moonlit cliff to another and joyfully dancing moved by the wonderful dialogue between his enlightened mind and Nature.

²⁴⁹³ See Isaac Newton's *Philosophiæ Naturalis Principia Mathematica* (1687).

S.F.11.8. All my life I have been in love with walking down the city streets by night, when everyone is lulled and sleeping and everything seems to be permeated by an enchanting calmness that daytimes thoroughly lack. As if all the things breathe in and out with gracious little waves of pure placidity. It is then that I discover interesting details in shop-windows, a subtle swing of the treetops and house roofs, how romantic the splashing sound of underground aqueous ducts is, and silently wonder with every walking step. Then I turn myself into a pure child that breathlessly wanders through the infinity of being. I think of Zeno's second paradox and the path walked by the uncatchable tortoise in his reveries and begin to divide my own steps into infinitesimal finer steps, all until a whole infinity becomes seeable in each of them and all around me becomes a glowing Pascal's sphere that existence is, the sphere whose center is everywhere and surface nowhere. The holy spirit of the favorite punk rock mantra of my hometown, Belgrade, in its 1980s, "I know if I could live for a thousand years, my whole life could fit in a single day"²⁴⁹⁴, then gets erected in my head, like a monument of a kind to the state of mind aware that impressions greater than all the planets in the Cosmos, with all their light years long histories, await to be discovered in the most ephemeral and fastest passing moments of our experience. "All I've ever wanted to do is paint sunlight on the side of the house"²⁴⁹⁵, said Edward Hopper as a youth upon being asked to comment on his magazine covers and other prosaic illustrations, which he detested but had to create to survive, and I also think of how a tiny detail in any nocturnal scene that I am immersed in as an actor glows with the light of a far greater importance than anything that the world attaches a monetary significance to, and I feel in that moment as if my head has begun to "cast its blue light out and backward and forward"²⁴⁹⁶, as I continue to glide dancingly into the night. Indeed, ever since I baptized my inner sense of wonder along the seashores of the summer resort where I spent my vacations as a child, staring at the sea with coarse pebbles beneath my feet, more than anything else I have enjoyed these moments of dazzlingly bold and adventurous, yet subtle and silent wonder, wherein I would enter a blissful state of harmony with the entire world, despite the impression of loneliness that this habit of mine invoked in most other people. Sometimes thus I let my thoughts simply vanish and I transform myself into a child that follows the surrounding lights without any forethought or intention, guided by a genuine sense of intuitive wonder only. A perfect balance between an absolute calmness and an absolute awareness thus takes over my entire being as I walk down the city streets by night. My eyes are usually the first to reflect this balance in the way they start to softly dance, the feeling of harmony extending through the rest of my body and mind following next.

S.F.11.9. To reach the apices of artistic creativity one has to fluctuate around the balance between being awake, highly sensitive and alert, and being pensive, distant and dreamy. Numerous artists have thus gravitated around the abysses from which the temptations of drug and alcohol usage as well as the wild and undisciplined lifestyles alluringly perked. Other, more moderate artists have let their minds loose via fanciful reflections and meditation. As for myself, I have seen my mind as the full Moon, one side of which is lit and shiny and the other side of which is dark and mysterious. While the former pole of my mental sphere has always been eager to shine with the

brightest and most bedazzling of lights, its antipode, the id, as it were, has craved to squat itself in the darkest and most desolate of corners. Ambitious, spirited, hardworking and exploding with creative energies on its bright side, my mind has been akin to that Chuang-Tzu's turtle that preferred flapping its tail in the mud over the thought of assuming a lofty position in the czar's administration on its dark side. To space out and wonder absentminded along the lines and edges of my perceptual world in never-ending daydreams has thus been an essential gateway to the outbursts of creativity on the other, more disciplined hemisphere of my mind. On my way home from work, I thus sometimes bluntly get immersed into the city lights or the light of the Moon, blindly following them in and around, starry-eyedly, as if gliding through a dream, like Jeanne Moreau to the sound of Miles Davis in Louis Malle's *Elevator to the Gallows*. Somewhere in the midst of these walks two feet above the ground, I begin to feel as if the waters of freedom and fanciful spontaneity are flowing into me again, rushing over the dams of rigorous reason and bringing back the temporarily lost balance between order and freedom in the province of my thinking. Jorge Luis Borges therefore once said that "creative mind is a dream with the leash"²⁴⁹⁷. In other words, too much of preconceptions, forecasting and analytical rigor and too little of chaos, freedom, naturalness and relying on instinct and spontaneity can prove to be as futile for one's creativity as the opposite case, that is, too much of unrestrained dreaminess and too little of systematic, immaculately organized and conducted reasoning. We are, though, aware that we live in a world wherein the former attributes are fostered as integral to the standard scientific education, whereby the latter are recommended in the traditional and contemporary artistic circles alike as the food for feeding one's creativity. But I claim that any form of creativity, scientific or artistic, flourishes while resting on the very boundary between the domains dominated by fine threads plaited by crystal-clear reasoning on one side and the unconstrained flights of fancy on another. The former provides limits and boundary conditions along which the waters of our mind will flow as they build new ideas, whereas the latter represents the key for unlocking the doors of inspiration in the back of our mind, from which fragments of our memory will be released onto the front screen of our consciousness and, like dancing ghosts or pieces of a broken puzzle, let miraculously assemble into wonderful and inspiring ideas. In that sense, I have proposed an analogy between the creative way of conceiving ideas outlined hereby and the physicochemical processes of self-assembly. Of this class of physicochemical transformations I have extensively written about earlier²⁴⁹⁸. For, on one hand, I became greatly intrigued by the realization that self-assembly as a term is a misnomer because each process denoted by it happens at an interface and involves simultaneous reorganization of both sides of it. This is why I proposed every self-assembly to be actually a co-assembly of both the system in question and its immediate environment²⁴⁹⁹. On the other hand, I am still puzzled by the pervasiveness of its usage among the indoctrinated empiricists and positivists that scientists are, loathing any form of mysticism, but ignoring the one that is

²⁴⁹⁷ See Alan Fletcher's *The Art of Looking Sideways*, Phaidon, London (2001).

²⁴⁹⁹ See Vuk Uskoković – "Isn't Self-Assembly a Misnomer? Multi-Disciplinary Arguments in Favor of Co-Assembly", *Advances in Colloid and Interface Science* 141 (1-2) 37 - 47 (2008).

apparently intrinsic to this concept. Namely, as it implies the finding of conditions for the balance of inter-particle forces by accident, i.e. by trial-and-error, as if any prospect to theoretically predict them has been given up on in advance, the notion of self-assembly is quite alchemical in its nature. And it is owing to this balance of knowledge and intuition, whereby the decision power is split between self and something that extends beyond self, that self-assembly methods for the production of advanced materials have reminded me in their essence of the concept of the Way of Love. Unlike the synthetic techniques that almost absolutely rely on human creative preconceptions, on building materials exactly in accordance with the blueprints conceived in human minds, self-assembly methods are based on humans and Nature directing the formation pathways of the fabricated materials in their togetherness. In other words, a dose of spontaneous and unpredictable development of the evolving material into its final structure is allowed to take place. Thence, self-assembling design is a design where both man and Nature are involved, just like in the magical story of the evolution of humanity and the planet along the line of the co-creational thesis and the Way of Love. Now, as far as the link with the creative thinking is concerned, it is worth mentioning that most self-assembly methods involve dispersing precursors onto a substrate that through limitations imposed by its surface structure spontaneously guides the reorganization of the deposited entities into some attractive final forms. The analogy is now clear: while the inspirational visions are released through the doors of dreaminess to the space of our mind, by letting them fall onto the surface of precisely interwoven logical interactions as the firm bases of our reasoning these flying fragments of thought get assembled into something meaningful and beautiful. This method involving a balance between the order of logical thought and the benevolent disorder of intuition strongly contrasts the methods based on each of these poles alone. However, the objections of those who advocate a greater degree of chaos in our thoughts, primarily artists, mystics and spiritualists, do not resonate in the academic domain anywhere as strongly as the objections of traditionalists to whom the inflow of intuition to the domain of sheer logic is a blasphemy like no other. My championing the benefits of so-called blue-sky research, where the scientist aggregates large collections of data with little forethought, allowing himself to be surprised and guided by them rather than the other way around, is thus often disparaged for its allegedly unscientific nature, just as well as my open reliance on analogies in the process of derivation of scientific ideas has been denounced and denigrated by these disseminators of dogma across academic hallways and classrooms, the total opposites of the intellectual and behavioral freedom that scientific creativity feeds on. But what would happen to a man who approached marriage with a purely logical state of mind, preconceiving every feature on his to-be spouse's face and mind and then going out to a systematic search for this idealized creature instead of simply meeting people for the sake of meeting, with an open heart, thus letting oneself be enchanted by the unexpected, I often ask these defenders against the intrusion of intuition to the kingdom of science. Where would love be then and would not every sane person accuse his approach as irrational, I keep on asking at times, but only blunt looks are mine to receive as the answer. Another conclusion might be inferred at this point as well. Namely, every creative process that we witness in the world around us or within ourselves can be metaphorically transferred to any other domain. So, once we face a problem that seems impossible to resolve, we should simply try to set conditions under which the balance shown as successful in another domain exists, no matter how distant and seemingly irrelevant this domain may appear to be. There is, thus, no obstacle in conveying the secrets of creativity of thinking into the domain of hands-on creativeness and *vice versa*. If the metaphoric nature of human being in this world points at something, then it is the relevancy of anything for everything else. If we look close and careful enough, with wise and lovely eyes, we

can recognize that every tiny detail of this world reflects the ultimate secrets of the entire Universe in it.

S.F.11.10. The history of people's being in the world is naturally reflected in their thinking and behavior. Thus, histories of hardship and suffering or of leisured and light living could be always recognized in the dance of their bodies as they move through the day, including, most pronouncedly, eyes, which are, as we know, the mirrors of the human soul. Hence, if we spent most of our lives as essentially children, we would naturally tend to exhibit childishly cute and elegant decisions and movements. But if we have poisoned ourselves with the way of thinking dominated by jealousy, greed, anger and self-centered anxiousness, our behavior would be typified as the one of an awkward adult in all its stiffness, insincerity and an aura of dissatisfaction surrounding it. So, as we grow older, that is, as we spend more time on this planet, there is an incessant challenge not to let these emotions of the so-called grownup personality enter ourselves. In order not to let "the dormant patient roots show themselves as child that shoots and the streams of consciousness tumble over rocks they kissed", as in the beautiful Mercury Rev's song²⁵⁰⁰, after which the only natural thing for our tiresomely grownup and inherently corrupt selves to do would be to kneel down and resentfully, in penitent pathos, with our conscience turned into Alfie Atkins' monster hiding under the bed²⁵⁰¹ and the carpet and the curtain and behind everything else our eyes could see, "lay our cheeks on down and wrap our arms around the boulder because it is the wisest thing around"²⁵⁰², having been sentenced for life to dig the salt mines of eternal sadness by the force of destiny, like Pinocchio's companions after being attracted to the lures of Pleasure Island, we should remain children for our entire lives. The only way to do so is to nurture colorful emotions that emanate from the joy of love and meditative and spontaneous purity of mind, as opposed to the aforementioned disruptive sentiments. Although it is true that our relentless willfulness that neglects some beautiful details of reality and goes on to stomp over the little lilies of the field, eventually beating brilliant paths for others to take, can occasionally prove to be practical, we should know that whenever we look deep inside of us for the sources of our actions in the world in terms of our earnest aspirations, we could recognize either the desire to build or to destroy dwelling therein. Although we could branch this point out into a verdant tree of an endless discourse on the topic of inescapable destructivity of effects that entail every creative effort, and quite possibly *vice versa*, that is, of constructive consequences of even the most malicious of human acts, e.g., via providing people with examples of how not to behave, this is unnecessary, at least to the eternally childlike eye to the world of mine, to which it all, irrespective of the light in which it is being judged by the opinionated worldly authorities, appears to be sprinkling stardust that sketches the sparkly path of goodness, inner purity and that miraculous combination of the divine ethics within us and the starry wonders around us, which Immanuel Kant envisaged in the epilogue to one of his lifeworks.

S.F.11.11. Some things in life ought to remain merely the objects of our dreams. The roots of a tree should remain hidden, and all our precious delivered droplets of water should be placed on the ground surface and let sink through the soil way beyond the limits our perception could reach. Digging through the soil to make the roots visible and palpable would only damage the life of the plant. Likewise, we should know that whatever we face in life hides wells of stars in it, which

should not be readily jumped into. The mythological stories about Pandora's Box, Odysseus' traveling on the boat next to the island where the sea nymphs sang their beautiful songs, Eva's picking a fruit from the tree of knowledge in the Garden of Eden, and Prometheus stealing fire from the gods to give humans a perfect control over their environment all ended up in the brutal anger and revenge of these very gods. In the end, they merely reestablished the balance that the co-creational thesis has been celebrating. In this balance, every creation depends on the creativity exhibited by two sides, which are ultimately mind and Nature. Whenever scientists or artists have attempted to be in perfect control over delivering the blueprints of their dreams onto the substrate of reality, Nature have had its say, and the failures of such an approach have swiftly become evident. The perfect creativity always leaves the room for another side, the side of Nature, to edify the dreams that the creator himself breathes into his works. Consequently, "poetic truths in a work of art are only half understood by its creator; generally conveyed subliminally, these truths are revealed in different ways to different audiences at different times"²⁵⁰³. After all, the creative mind carefully maintains a polarity between its two hemispheres: one marvelously dedicated to careful planning, analysis and rigorous ordering of the bricks of ideas, and the other one marveled with dreaming and carelessly floating on the starry skies of one's fancy. What the creative mind is incessantly doing is walking right along the line that divides the two hemispheres, having one hand spread to one and another to the other side. One hand is to illuminate and enliven the dreams our spirit sparkles with, whereas the other hand is to hold them on the dark side of the Moon of our consciousness, thus devotedly keeping the essence of our heart concealed from the eyes of humanity. With such a polarity, a great potential is produced and let stream between the two pillars lying impressed in the sandy surface of our mind, sending its light all over the world.

S.F.11.12. It is in the deepest nature of life to exhibit a polarity between things revealed and things hidden in each and every one of its aspects. The planet we live on is part land and part sea. Ceaseless confrontations between the affirmed and solid, land-like concepts of knowledge and the fluid, random, chaotic and obscure streams of our consciousness, which are yet to become ingredients of some marvelous epistemological edifices, take place in our minds and are responsible for the enrichment of human knowledge and the planet with every passing moment. Order and entropy should be nourished side by side, for only through their mutual existence and interaction may we see the life on this planet continuously flourishing and becoming ever richer from the inside and outside alike with the passage of time. Likewise, our dreams should partly be lived, but partly kept concealed beneath the compassionate music of our lively heartbeats. If I would have to pick a most inspiring scene from my life, it would be the one of me and my Mom, the two divine dreamers, gazing at the starry sky, ornamented with a young Moon. We would spot a falling star; she would lift one fallen eyelash from my eye, place it on her bosom, and I would make a wish. However, this wish should not be told aloud. It has to remain secret, for only as such it may become true one day. A part of a beautiful dream, likewise, has to stay secret while a part of it is revealed, which is reminiscent of the spirit of ours walking along the balance of the Way of Love in its simultaneous sane dreaminess and meditative withdrawnness on one side and unrestrained openness and honest expressiveness on the other. And me, I never could wish something for the benefit of myself solely. For, I have never looked after digging out the clues for my own happiness only from the goldmines of the soul of myself, of others and of the world as a whole. Rather, I have claimed that the greatest joy dawns on us when we make happy twinkles of joy happen in someone else's heart. This is why I would always rather gaze at her eyes than at the

²⁵⁰³ See Natalie Shainess' The Roots of Creativity, American Journal of Psychoanalysis 49 (2) 127 – 138 (1989).

starry sky. If there is a greater beauty than swimming among stars of the night sky, it has to be swimming in the eyes of a beloved creature while her eyes are filled with stars. Our glee could be endless as we watch her carelessly plunged into the endless depths of the night sky, delightfully swimming with the stars. Our dreams can reach perfection only in so far as they are oriented towards bringing the glow of happiness to others. Forever and ever, thus, everywhere I'd go I'd see myself bringing a ball of shining light to the world.

S.F.11.13. For many years I have claimed that city lights are appealing and beautiful but also less fertile than “desolation rows” epitomized in a Bob Dylan’s song. Only after Dante was forced into exile away from the city of Florence and “beneath the springs of Arno”²⁵⁰⁴ did his dreams of Beatrice and other poetic visions gain wings that became impressed in the beautiful verses of the Divine Comedy, and such may be the fate of the most productive artists in this world: only when they are left alone to dream of the ecstatic and wondrous living rather than immersed in the midst of it do they spin the wheels of their creativity most intensively. Once I even made a list of most favorite musical artists from the 20th Century only to make sure that the most inventive ones dwelled not in bustling metropolises, but in small and modest places. America, as comparatively decentralized as it is, offers a plethora of examples; thus, R.E.M. conquered the world from Athens, Georgia; futuristic Flaming Lips came not from a bustling metropolis, but from Oklahoma City; 10,000 Maniacs were shifted 230 miles northwest of New York City and planted in the small upstate New York town of Jacksonville; Joanna Newsom dreamt out her debut record on a harp in Nevada City, a sleepy inland Californian town of 3,000; Bob Dylan poetized his way through rock ‘n’ roll and to the Nobel Prize from Duluth, Minnesota; and so on. A notable example comes from England too, where the greatest musical acts emerged not from London, but from five times smaller Manchester, “a horrible, dirty, scruffy place”²⁵⁰⁵, as described by one of the protagonists of the Madchester scene of late 1980s. And this is not even to mention the origins of the Beatles in Liverpool, Radiohead in Oxford, Massive Attack, Portishead and Tricky in Bristol, and Prefab Sprout in Witton Gilbert, a village with the population hardly exceeding 2,000. Clearly, although most people gravitate around big cities, it is dreaming about them while sitting in the ambience of silence and solitude that has given rise to the most beautiful artistic pieces. I know this very well from my own experience as well. Namely, my creative journey inwards, towards building the great towers of ideas, started once I lived through what I call a paradigmatic shift in my consciousness, substituting the life of tireless hanging out and partying with withdrawing myself away from my friends and the city life. About a year or so after I escaped from the city life and entered hermitic isolation, having graduated from college, recorded about 350 compositions for three guitars, which now I considered an unassailable crown of my creativeness, finished an edition of 1001 scientific questions and answers, the first comprehensive written work of mine that let the flow of an artistic feel freely merge with the scientific thoughts, although in a very mild manner, I moved to Ljubljana, the city with practically no outgoing appeal. This is where I got introduced to the merits of systemic thinking, and for the next four years continued to develop the co-creational thesis and the Philosophy of the Way in the monastic solitude of my high-rise dwelling place, up in the clouds, overlooking the Julian Alps. In the same city of dragons, poets and princesses in which Gustav Mahler spent his second post as a conductor and earned his first laurel wreath, after not only conducting with passion and brilliant insight but allegedly even singing with the choir and whistling from the pit to make up for quite a modestly sized orchestra at Laibach Landestheater

under his direction²⁵⁰⁶, I created the seeds from which the luscious tree of my philosophy sprang to life. And just like this composer who attributed his creativity to being a triple expatriate, “a native of Bohemia in Austria, an Austrian among Germans, a Jew throughout the world”²⁵⁰⁷, “happiest writing music surrounded by the sights and sounds of the Austrian Alps”²⁵⁰⁸, so did I find the serene and sublime mountainous landscapes of the Julian Alps which the window of my room had a view of to possess an unusual appeal for digging the diamonds of beautiful thought from the deepest mines of my soul, refining them inside of my mental factory and sending them in splashes of joy onto the computer screen in front of me. After this period I moved to Potsdam, New York, the town at the northern outskirts of Adirondack Mountains. There I lived in a house built less than 50 feet away from the railroad tracks. As I wrote the first 4-chapter symphony of book of mine, the first one in English, the trains would be passing by, whistling day and night, incessantly reminding me how I am spending a big time devoted to writing, setting foundations for some great panoramas of thought on the wonderful carousel of beauty that life and Cosmos are. This is why I fully stick to Bob Dylan’s praising of desolation rows²⁵⁰⁹, and just as the Christ spent not only forty days in the desert in a perfect solitude (Mark 1:13), far from the eyes of the world, but his entire youth away from the limelight of humanity, and just like many religions request from their followers to “know thyself” in the silence of their being before they start preaching to the world, I also spent a plenty of time in silence and quietude. Once, when Katie the photographer asked me at the foothill of the statue of a great poet, William Shakespeare, in Chicago’s Lincoln Park why I write, I gave her the following response: “Just as we need to breathe in and out, so do we need to alternately absorb the impressions of the world and express ourselves back to it. The case with the great artists is that their supersensitive insides are bursting under the inflow of surges of impressions, yet they cannot express themselves like common people do because they either feel that the souls surrounding them do not have the capacity to understand their advanced thoughts or they live in a state of loneliness in which there isn’t really anyone to whom they could express their complex feelings and thoughts. And so they resort to writing or composing of filmmaking, for example, because to continue to live they must find a way to balance the flow of information in and out to and from their being. And expressing oneself to imaginary another or to the soul of the Universe helps”. In other words, to be confined to Dylanesque “desolation rows” is indeed a prerequisite for awakening ingenious visions on how lives could be saved and sparking the greatest flames of artistic creativity inside of us. To be a deliverer of messages bursting with spiritual sunlight and thunderous strength, time spent in silence and meditation, carefully dreaming and nourishing our spirit with the shine of beauty and love, is nothing short of vital and necessary. In the end, the most impressive art is born from an inner aspiration to give one’s heart to the world and awaken an era of enlightened communication permeated with divine joy and blissfulness. If one is already immersed in something that resembles that, there would be nothing much to wish for. The radiance of our aspirations would be bleak, and our artistic works would simply reflect this bleakness. Sigmund Freud saw artistic inspiration as the product of unsatisfied libido and “play, dreams, and creative phantasy as childish, wish-fulfilling techniques of compensation for an unsatisfying reality”²⁵¹⁰, prompting us to believe that, indeed, only when we fail to fulfill our dreams about the perfect being in this world, about dancing

and enchanting the whole wide world with the outbursts of divine spirit seeded in us, do the doors to superb artistic expression open in front of us. This is why I remind you once again of the verse Michael Stipe sang with so much passion: “A bright type could never draw, could not describe nightswimming”²⁵¹¹. If we had everything in life, if all of our desires came true and there was nothing more to be wished for, our creative potentials would be equal to null. But for as long as we maintain a creative tension between the visions of our dreams on one side and the shine of our aspirations that tend to reach them on another, connected by the subtle threads of faith and belief in our power to find the way that links them, we would be able to channel our creativity into producing majestic pieces of art. Thus, a sprout of beautiful visions of celestial grace and purity has to grow side by side with a sprout of lonely dreaminess in order for us to become an artist that will strew the world with the beauty lying at the depths of our heart.

S.F.11.14. This is why the critical evolutionary steps are not made by happily socialized parties, all carefree, transparent, full of beans and cheerfulness, but by lonely sea stars that silently leave the splendid revelry to sit for a while by the lonely seashore, looking at the glistening moon, listening to the gentle sound of the waves and dreamingly absorb the invisible *prana* that floats in the air, an artistic energy that makes us see the unforeseen and create things never created before, things that open up new doors of understanding and being. It was an enlightening discovery to hear Judy wonder loudly in the lab how come male chimera mice are always quiet, disinterested about the social clique around them as well as inclined to exhibit a hermaphrodite nature. And yet, to make the chimeras mate has been crucial for her experiments on transgenic mice to succeed. For, remember, chimera mice embody the genetic changes imposed on them, but do not necessarily manifest them in their phenotype. To find organisms that exhibit the latter, chimera progenies are sought for. Quite possibly, similarly to chimeras in biology, the same may be with creatures who happen to embody the great biophysical, structural, perceptive, abstract or emotional novelties in them, which would turn out to present crucial crossroads in the evolution of humanity, such as the one symbolized by the image of the crucified Christ. Therefore, hearing this enlightening observation, I said nothing. But I sank into the sea of dreamy contemplations with a dolphin’s smile on my face, quietly, “in beauty, like the night”²⁵¹², as Lord Byron would have had it. It is as if the signs of our progressiveness are reflected in the extent to which we find our environment unfitting for our dreams to find fertile ground in. For as long as we engage our heart in worldly passions, dealing with the objects of affection of the ordinary man, the flame of our true creativity will be suffocated by these stuffy and trivial, worldly matters. But once we set our feet into “desolation rows”²⁵¹³ and immerse our mind into joyful contemplation enwrapped with a glorie of solitude, the flame of artistic creativity, feeding all the atoms of our body with a moving energy, gets enkindled.

S.F.11.15. “You tossed a blanket from the bed, you lay upon your back, and waited; you dozed, and watched the night revealing the thousand sordid images of which your soul was constituted; they flickered against the ceiling. And when all the world came back and the light crept up between the shutters and you heard the sparrows in the gutters, you had such a vision of the street as the street hardly understands; sitting along the bed's edge, where you curled the papers from your hair, or clasped the yellow soles of feet in the palms of both soiled hands”. This is how T. S. Eliot

formulated the nighttime hours spent by his gamine-like muse in the magnificent Prelude III, adorably reminding me of my own dreaming moments spent in the solitude of my Zvezdara room, the tall ceiling of which I spent most of the time gazing at as if it was a gateway to the stars, sensing great cosmic energies, motherly in nature, soft, gentle and pacifying, to be congregating at that tiny place in space and time, peeling off layers upon layers of the musty crust composed of filthy feelings and discordant mental vibes wrapped up around me and dropping them gingerly on the moist hardwood floor beside the bed on which my body lay and over which my spirit levitated, passing floatingly through a lover's haze of a kind, pulled down like an incorporeal curtain before my starry eyes, not blocking, but beautifying the view of eternity these eyes held as tightly as Jacob's grab of an angel's sundress (Genesis 32:26). Thinking about these moments of being dreamingly rocked back and forth between the marine-blue-colored walls of my solitary room on waves of the sea of love, amidst the fragrance of humid cypress needles, amidst moldy sashes and damp corners of the room, amidst sweet Belgrade dreams of one youth drifting through the air and the scent of cherry blossom in the springtime and the rusty iron fence on the windowpane and the old dusty clothes and curtains and stony water faucets, all permeated with my romantic and fearful heartbeats, with the dreams of my music twinkling like distant stars and sending little shivers of enlightenment throughout my mind and body, hatching something celestial from down in their depths and coloring the whole universe with its bluish tinge, it is as if a star is lit atop the Christmas tree of knowledge that endows my being in this world. For, even dreaming of divine dreaminess makes our spirit sparkle with cosmic joy, let alone dreaming of beauty that life is, which is able to turn the dustiest and darkest spaces through which our mind may roam into places that feed us with genuine happiness and instill a sense of perfect fulfillment into ourselves.

S.F.11.16. By looking at the greatest wonders of the world that earthlings are, I have realized that, ultimately, their genuine and true beauty lies in the invisible qualities that they hold within. "We are such stuff as dreams are made on; and our little life is rounded with a sleep"²⁵¹⁴, said the great poet, William Shakespeare, falling not far from the truth. This very same line coming from the mouth of Shakespeare's Prospero was uttered by detective Sam Spade in an attempt to explain what the Maltese Falcon was, a mysterious object around which a destructive web of caprice and avarice was woven²⁵¹⁵. By figuratively representing human dreams as this black bird presumably made of gold and jewels, but in reality comprising nothing but a carved mass of dull grayish lead, we are being told that dreams need not only be blissful and beautiful, creating the imprints of similar brightness and buoyancy on the surface of our being. Rather, dreams can also be dark and venomous, creating but a labyrinthine scheme of dark hallways out of the interior of our being, which, illuminated by a different kind of dreams, could have become an open landscape washed by the sunshine of joy and the waterfalls of smooth and graceful movements, traversed by the birds of peace and the clouds of undying wonder and filled with children blowing bubbles and running free over it. Also, by equating dreams with our ultimate identity, we are being invited to pass through the apparent with the rays of attention directed onto others and read them as if they were not a book of deeds, but a book of dreams. For, ultimately, people ingrain in themselves all the dreams they have nurtured during their lifetimes. The more gracious, wonderful and summery these dreams have been, the more gorgeous the beings carrying them will appear in the eyes of the

²⁵¹⁵ Watch *The Maltese Falcon*, a movie directed by John Huston (1941). Detective Sam Spade was played by Humphrey Bogart.

wise ones. And yet, an irresolvable dichotomy exists in this stance. For, as we have seen a few passages earlier, wonderful dreams arise only insofar as constraints to the flights of fancy and limits that set down the conditions for inevitable hardships, not mere pleasure and delight, are imposed on their bearers. It is as if the sea of partial despair and dissatisfaction is the one on which dreamful ships open sails to summer breezes that will take them to some exotic, tropical oases of thought. When Ian Brown of the Stone Roses goes on to “fantasize when the streets are cold and lonely”²⁵¹⁶ in the midst of a record that demonstrates how a single minute or so of the transition from a barely audible noise to thumps and guitar screeches through an aural haze at its beginning could be sufficient to earn its place in the pantheon of timelessness, he highlights the herein explicated idea that origins of enchanting dreams lie in roaming through barren landscapes of reality, be it the sullen skies and the fuming factory chimneys of Manchester or the tip-top sterilities of Orange County, that could all but lead to the fulfillment of theirs. The roots of their evolution into ever more beautiful abstractions, furthermore, lie in their consistent disparity with the reality. Therefore, as ever before, we are returned to the dialectical grounds of human experience, according to which no spoonful of honey could be consumed without one of gall, if we were to revert to yet another analogy employed by Nyegosh’s Abbot Stefan²⁵¹⁷. In other words, to be at fundamental variance with the reality is a prerequisite for sparking the flame of the most beautiful dreaminess in the torch of our mind. Of course, what else but a wobbly walk on shaky grounds could we expect from a reality wherein neither the cry of scribes, poets and philosophers, “Dream it, don’t be it”, nor the one uttered onstage in the Rocky Horror Picture Show, “Don’t dream it, be it”, are to be followed literally lest our fall from grace and into an abyss of drain and dysfunctional being be of epic proportions. This disparity woven deeply into the fabric of reality, however, need be no reason to despair, provided we learn to see this level of being as learning grounds whereon our soul was born from dust and set to become a spiritual star on the mission to blast its precious insides in all the directions and, as a supernova, light up the darkest cosmic spaces of the human soul. And with every form of learning being exclusively done on mistakes²⁵¹⁸, serving to teach us to judge less, love more and forgive all *en passant*, such a fundamental incongruence on the line between dreams of living and dreams lived can be seen as necessary for the purpose of spurring our spiritual progress. Finally, once we reach a certain stage in venturing through the opulent orbits of our dreams, it may mark the point of no return wherefrom their beauty will spontaneously ramify and expand, resulting in the drawing of the most alluring aureole around our dancing body moving gracefully through the cerulean spaces of the Universe and a bliss of enlightenment enkindled once and for all inside of our cosmic mind.

S.F.11.17. “Man himself is mute... it is the image that speaks”²⁵¹⁹, Boris Pasternak said once. And in spite of the apostolic warnings against reliance on idols or any other imagery that represents gods (John I 5:21), which have in some Orthodox traditions taken the form of mystical, wholly implicit reference to any godliness that one may feel to be in touch with, and in spite of the fact that fixed images oversimplify and oftentimes vulgarize the ephemeral figures that spring forth from verbal descriptions, having a deadly effect on the power of human imagination, visions, be

they geometrically distinct and elaborate or composed of not interpretable blobby dances of shadow and light that emerge from the labyrinthine rooms of our consciousness, can be said to proudly stand at the beginning of the birth of any verbal thoughts. Verily, when I try to see the most deep-seated origins of the ideas shed on the pages of the books of mine, I always see a bright and inspiring vision. It is keeping this hardly visible and contoured shining direction of thought within me that acts as a magnet for finding original analogous links between various thoughts. I know that in stumbling upon new ideas I normally place a pair of other ideas next to each other, but finding an analogous connection between them, from which the new idea will then arise and be shaped, is somewhat mysterious and enlightening process. It is almost like a protein finding the right folding conformation among 3^{300} of possible ones in a millisecond or less. While I worked on the book in which I presented the idea of “every quality as a way”, I felt as if my mind had been immersed in a vision of the road, with a striped yellow line in the middle, and cypress trees scattered on the sides. Later I would come across Aristotle’s saying that “stars should be composed of that substance in which their path lies”²⁵²⁰, but in those days I merely sensed with my whole spirit, as pure and intuitive as the mountain snow I overlooked from the window of my cloister resting high in the clouds, that, if wishing to become truly stellar, our beings must be made into roads, not destinations, in each and every one of their facets and elements. This and other images that were part of the visionary background of my mind miraculously guided me towards shaping the concepts of co-creation and the Way of Love. Hence, it is our visions and dreams that drive us either in the progressive direction should our thoughts be benevolent and beautiful, or in the direction of ruin and disgrace should our intentions be dark and malevolent. To be creative in anything we do, we should not disregard the ubiquitous powerfulness of the driving forces of our visions. Keeping our dearest visions with a parental carefulness close to our hearts and on top of that letting the water of loving creativity flow from our heart onto others is what sets us straight on the Way of Love. On it, a quiet inner dreaminess and a ground-shattering determination to give and love are brilliantly balanced in what seems to be a reflection of the highest grace attainable by the frail souls of ours.

S.F.11.18. I have always wondered if living our dreams thoroughly or keeping them deeply concealed within ourselves is the right way. Finally, I came to the conclusion that, as usual, the middle Way is the solution. That is, living our dreams, but at the same time keeping a portion of them veiled from the face of the world, knowing that if we do not live our dreams we would resemble hypocritical Pharisees who preach but do not act accordingly, whereas, on the other hand, if we lived all our dreams there would be nothing left to be dreamed of and dreams are the moving wheels of our creativity. I have always enjoyed seeing human creatures as kites that can soar across the skies above only in as much as they are firmly anchored to their bases on the ground. Love, empathy, compassion and respectfulness are the forces that drag us down, bringing us tightly attached to the solid foundations of being, whereas the desire to express ourselves in a bright, shiny light, to tell a story that enlightens human minds and freely and joyfully flutter in the sky of human consciousness are the forces that pull us up. However, what I see as a trend in the modern era is that young people wish to give away these stable foundations that the Christ mentioned in the final verses of the Sermon on the Mount, so as to maximize the level of their freedom of expressions. But to do so would be comparable to building a house with wonderful views of the world without first ensuring stable foundations for it. If we decide to build a house starting from the windows, as

²⁵²⁰ See Aristotle’s On the Heavens, Book II, Part 7, Translated by J. L. Stocks (4th Century BC), retrieved from <http://classics.mit.edu/Aristotle/heavens.html>.

these young folks aiming at attaining the ideals of perfect freedom with disregarding the loving bases try doing, everything we build will topple down at one point. It would be similar to building a house on sand, which will sooner or later start falling apart and crumbling away due to weak foundations. Hence, there always need to be limitations imposed on our freedoms in order for these freedoms to be sustainable. The same is with our dreams, of course. If we live all our dreams, we would resemble a kite that soars to the sky, appearing smaller and smaller to us, little observers on earth, until it disappears in the celestial vastness of the Universe. But if we do not live them at all, we would be like a ship that decides to stay in harbor forever and ever or a butterfly that would rather stay folded inside a cocoon the whole life long. We would forever lean, onto other people, onto our spouses and children, onto walls and tables, onto well affirmed principles of thinking, onto our habits and local customs, onto communicational clichés, onto past accomplishments, medals and reputation or, even worse, onto glasses and bottles in our longing for safety and stability and lacking that inner drive to bring the light of our spirit to the daylight of the world. The world would never know of the shining beauty that we carry within ourselves unless we collect enough braveness to ascend the kite of our spirit, of that light that may “never go out”²⁵²¹, to the sky where everyone can see it. By never ever living our dreams completely, we will always have one hand of ours stretched towards the anchoring bases that prevent us from flying away with no control at all. Goethe’s story about doctor Faust is partly about the incessant desire of youngsters to neglect the foundations of love and respect that the wise and prudent glorify, and substitute them with an uncurbed freedom of behavior. In the Goethe’s epic poem, doctor Faust sells his soul to the devil, doing exactly that: signing a pact whereby the devil will help him to attain a worldly acclaim and fame but on the account of sacrificing the eternal salvation. If we think more, by destroying the foundations of love within us and suffocating our dreams of freedom not by gracefully nurturing them inside of us, but by living them fully, we may lose the pure attitude of mind that guarantees our travelling onto other, more progressive worlds after this life. The wildest, the freest and the most attractive forms of expression can be attained only by letting go of these calming sensations of love, empathy and blessedness; however, doing that would in the long run inevitably spoil the purity of our soul. And this spiritual clarity of our invisible essence is what determines the enlightening glow or the depressing gloominess of our experience, of what Nature poses in front of us in its partial soul-mirroring attitude (that certainly ought to be our ideal in teaching others as well – being joyous with the joyful ones and sad with the sad ones, freely becoming one with the surrounding creatures), and that not only on a daily basis, but on the afterlife journeys of ours as well. I have always believed in the karmic order of the Universe, in which we incessantly, via an endless number of lives after lives, find ourselves in one of millions of worlds that neatly reflects the desires of our soul at that particular stage of our spiritual evolution. By simultaneously living our dreams, driven by the desire to selflessly beautify the world, and saving purity and grace within us by living humbly and conscientiously, we live for this and for the next world alike, so to say, just as the Christ instructed his followers to do.

S.F.11.19. There always needs to be a balance maintained between dreaming, deeply reflecting and edifying the inspirational character of our ideas and emotions on one side, and living these dreams, letting their shine penetrate to the surface of our being through the dams that our consciousness, driven by social norms and fears, poses in front of their outward path, on the other side. This means that moments permeated by introspectively contemplating, learning and meditating ought to be equilibrated with moments of careless dancing and joyously dissipating the

²⁵²¹ Listen to the Smiths’ There is a Light that Never Goes Out on The Queen is Dead, Rough Trade, UK (1986).

essence of our spirit to the winds of the world. Any desire to be a constant light to the world may thus be unnatural, and had we not had our heart incessantly refilled with waters of spiritual inspiration, which requires partial meditative remoteness of our minds, this absolute transparency of feelings and thoughts would eventually deprive us of any precious emotions or thoughtful contents that we could share with others. Thus, by living perfectly lightly, that is, without literally stressing ourselves while undergoing an intellectual and emotional pressure under the forces that enrich our mind and heart, there would no valuable thoughts and emotions for the world to be endowed with. So, building ourselves from the inside and yet giving us thoroughly on the outside is the key handed to us by the marvelous teaching of the Way of Love. But hold on. There may be an exception to this rule and no one else but the Christ could be used at this point as an example. Namely, if one spent his entire life impressing precious emotions and ideas on top of each other, maybe one day his heart would explode, like a supernova, sending its light to millions of light years distant spaces. Just like the origins of all the heavier elements that the Earth's crust and interior are composed of are linked to a primordial supernova explosion in the vicinity of our Sun, maybe the entire spiritual element of the life on Earth can be correlated with a giant explosion of Love within the heart of a higher Creature that we now name Nature or God. Maybe that stands as the only way for us to become a new Christ in this world. That is, not by precisely balancing moments of "stressfully" impressing ourselves with emotional and cerebral ornaments and moments of the "relaxing" release of emotional and intellectual tensions, but by endlessly building, building and building wonderful soulful landscapes within ourselves. And then, all of a sudden, it will all going to explode, sending bursts of enchanting love to fill with stars of love and wonder the cosmoses of human eyes around us. After all, no one seems to know how Jesus had lived before his heart transformed into a bursting supernova of love. Maybe he had been a quiet dreamer for years, before a Sun-like glow in his heart was incited, the self-sustaining fusion reaction began to take over, making him say "it's too late to stop now" and thereupon simply let his being float along the divine streams of being, bringing joy, hope and healing harmony to people's lives. So, quiet dreaming behind the scenes, at the corners of parties buzzing with life, and at the tranquil seashores of human mind, filling our mind and heart with brave and loving virtuousness, means only that one day, maybe faraway in the future, complete and unstoppable giving of the mountains of beauty built within ourselves will produce starry bursts of impressions in eyes of other earthlings compared with mere flickering of graciousness that ordinary humans give to the world around them.

S.F.11.20. All my life I have had a habit of throwing three pebbles to the sea and wishing a wish with each one of them on the last day or night of a summer spent by the seaside. Though my communication with the ancient spirit of the sea would reach its apex on a mystical night I would traditionally spend waiting for the bloody old moon to emerge from behind the hill overlooking the shore of our Kumbor resort, as I glided along it like a slender shadow, the moment of my throwing these three pebbles into the sea have been just about equally absorbing. Yesterday, it was one such solemn starry night when I had to wave farewell to the sea, the one I have always gazed at as if it was a living creature, letting my heart enter into a silent communication with her. Now, when we wish upon a falling star, we should not talk about that, not even to the loving person who blows with us, phew, phew, phew, onto a plucked eyelash and puts it onto her chests. For, such is the nature of all wishes – secret and mysterious, like the essence of the spirit of each one of us or the divine voice of Nature hidden deep behind the veil of immediate experiences. But this time I will break the vow and whisper them quietly to you. The first one was that the beings that surround

me find their way in harmony and brightness of their spirits. The second one was that I live up to the divine mission that God has assigned for me, here on Earth. The third one was to come back to the same place. As I examined these three wishes, I realized that they speak sagas about the way of a spiritual traveler like me. The Way of Love has pointed out the necessity of balancing a meditative orientation of our awareness to the inner essence of our being with an expressive orientation outwards driven by the desire to enlighten and beautify others and the whole world. The first two wishes reflect this balance – living so as to fulfill our divine mission and enlighten the beings of the world. The third one is still a mystery, however. It is closing of a circle, being on the quest on and on, traveling forth, and yet coming back to the place where our explorations have begun, as in T. S. Eliot's *Little Gidding*. After I stared at the sea for a while, awakening similar ripples of gratitude and devotion in my heart as those made by dropping pebbles, I turned around with grace and left. I remember there were three aligned stars twinkling in the starry sky more than any others, spanning right across the center of the celestial sphere at that moment. The lowest one, corresponding to my first wish, was Sirius, a blue star named after a dog, symbolizing our love for the beings in this life we are mostly faithful to and *vice versa*: their fidelity and love for us. The second star, corresponding to my second wish, was Polaris, standing right on top of my head, epitomizing that the center of the Universe, the way we experience it, lies always at the core of our being. Finally, the third star twinkled way behind my back, symbolizing a return to the beginnings, ingrained in my third wish. And all this wisdom and faith, think of it, came to life from a single splash, a peppy drop of a pebble into the sea, a fleeting passing of the solid by the liquid, the masculine by the feminine, Yang by Yin, on the way to sleep and stillness lasting eons.

Stone and water

S.F.12.1. And yet, as I write this, I find myself partly far away from home and partly whispering to myself that a cosmopolitan spirit such as mine ought to feel everywhere as if at home. Finding myself nowhere and finding myself everywhere – that is the essence of a true Christian spirit. Being moved by the sense of transcendental divinity which is out of this world, and yet feeling tied by the strings of love and unison to every detail of the Universe. Partly being absorbed right here, right now, and yet partly traveling across distant starry spaces in our heart and mind is what the Way of Love is all about. However, although being far away from home, the sailor spirit of mine has not let me move too far away from the seashore. The only difference is that as I write these words I stand close to one of the most intensive and quivering planetary lines along which the earth meets water, known as St. Andreas fault. On one side is the charming city of San Francisco and on the other side is the largest planetary body of water, Pacific Ocean. Both the lighthouses and eyes of the land staring at the Ocean and the Ocean washing over the land glisten with waves of electrifying excitement. It is in their touch, like in the blending of the holy wafer and the goblet of wine, that the most incredible stories of humanity are being born.

S.F.12.2. Sometimes I dream of the days dating back more than two hundred million years ago, when all of today's continents had been connected into a single one called Pangaea, long time before my hometown, Belgrade, was but a small island washed by the waves of the Pannonian Sea, which was as big as the Adriatic, and when the territory occupied by my home country, Serbia, had bordered Africa on the south, while its northernmost parts had ended in the coast of

Panthalassa, the giant ocean that had encompassed the entire Earth²⁵²². Even then I might have been able to watch the gigantic ocean waves crash outside my window, I deem in the moments of fancy, trying to explain to myself the mystical captivating powers that seas and oceans have exerted on me ever since. “I was born by the sea, and I have noticed that all the great events of my life have taken place by the sea. My first idea of movement, of the dance, certainly came from the rhythm of the waves. I was born under the star of Aphrodite, Aphrodite who was also born on the sea, and when her star is in the ascendant, events are always propitious to me... The sea has always drawn me to it, whereas in the mountains I have a vague feeling of discomfort and a desire to fly. They always give me an impression of being a prisoner to the earth. Looking up at their tops, I do not feel the admiration of the general tourist, but only a desire to leap over them and escape. My life and my art were born of the sea”²⁵²³ – these are the words that the renowned dancer, Isadora Duncan inscribed in an introduction to her autobiography, the words which I could also place in this context as my own in a way. For, the first softly held hands, the first gang fights, the first hearts palpitating in juvenile romance, the first aerobic tuning of all the energy clocks in my body at once, the first French kiss, the first sunsets that penetrated the surface of my soul with their rays of beauty and opened its most secret gates, the first dreams of Atlantis, the sunrise of an amphibian boy with the grace of a mermaid and the shadow of a kouros, inseparable from the pebbly moonlit coast, the first dream of becoming a Glass Bead Game magister, the first recognition of gods in humans, the first getting in touch with the divine missionary call from the inside, the first sense of becoming a river that “empties to the tide”²⁵²⁴, turning into an ocean, so that “all of this is coming your way”²⁵²⁵, along with an illumination of the entire cosmos of my mind in the blink of an eye that it brought forth, all happened a stone’s throw away from the surface of the sea. My ties to the large bodies of water have thus been mysterious, primordial and simply greater than life all throughout it. Every once in a while, therefore, I run to the Ocean with open arms, just so that I could wave at it. Sometimes, when I am in a group of people who share a similar passion about the Ocean, watching an enchantingly beautiful sunset leads me to feel as if everyone chants in their hearts their own “fan” songs to the sea and the Sun, praising them both with silent tides of teary joy underneath their breaths. But most of the time, I am alone. As I stand on this shore, the edge on which the westward journey of the pioneers in search of new lands had come to an end, I feel as if there is a giant living creature in front of me, who I can talk to and who can wash away all the troubling thoughts piled up in me with a single watery wisp of her infinite soul. I wave at her and send her the waves of love and peace from the aerial of my mind. And she talks to me with the sound of the waves gently crashing over the sandy beach. As I already mentioned, as I walk along the seashore, on one side is the Pacific Ocean, the largest body of water on this planet, with an unimaginable vastness extending beyond the horizon, and on the other side is San Francisco, the city like no other, beating with an exciting rhythm of colorful, jazzy and soulful impressions of spirit and love. This dichotomy between the intricate richness of impressions on one side and pure nothingness on another has always reminded me of how a hypersensitive human mind ought to look like, divided to two halves of the Moon – one lit by the light of the spirit, and the other staying in the dark. In the late sixties, Robert Irwin, James Turrell and Ed Wortz conducted a series of experiments at University of California, Los Angeles on sensory deprivation in anechoic

²⁵²⁵ *Ibid.*

chambers and realized that each time a person spent a certain time in it, it would emerge to the outer world experiencing it with a higher degree of sensual astonishment, as described by the words of very Irwin: “For a few hours after you came out you really did become more energy conscious, not just that leaves move, but that everything has a kind of aura, that nothing is wholly static, that color emanates a kind of energy. You noted each individual leaf, each individual tree. You picked up things which you normally blocked out”²⁵²⁶. This insight can clearly remind some of us of the sea of silence into which one falls following a psychedelic, LSD experience, typically coupled with the sensory amplification of colors, forms and other impressions that would have otherwise passed by unnoticed by the subject had he been uninfluenced by the drug. This all brings us over to the doorsteps of the Way of Love, according to which plunging into the divine ocean of silence within corresponds to beautification of our impressions of the outer world and expressions in its realm. As a matter of fact, looking back from today’s perspective at my love for marijuana, intense and unexplainable in the past, with its pushing one’s mind deep into itself and simultaneously making the features of the perceived reality increasingly enchanting, I feel as if it had been a gracious sign of the Way of Love and the proportionality between the distance we cover in our travelling deep into the silent space of our soul, meditatively and introspectively, and the distance we cover in our soaring high into the realm of stellar being in the world, like a colorful Catherine wheel adorning the sky, expressively and creatively, that this metaphysical concept proposes. Moreover, if holographic techniques of visualization can teach us something, it is that two sources of light are required to produce a higher dimensional projection. One of these sources carries the information, whereas the other one transmits a pure referential signal. In fine resolution and informational richness of the former and pure uniformity of nothingness of the latter lies the secret of producing a high-quality projection. The same is with the human mind. If we desire to find enjoyment in the immaculate dance of impressions that our perceptions and reflections lead to, we need to keep one part of our mind in the state of perfect meditative placidity and to train the other part of it to skillfully discern the finest details drawn on its canvas. In other words, one side of our being has to be as still as a stone, whereas the other part has to be as vigorous, flexible and lively as water in its unconstrained flow.

12.3. Earlier in the discourse I poetized over every stone’s being a testimony to the triumph of love over freedom. That is to say, every time a crystalline precipitate forms from a liquid solution, it is because the enthalpic gain caused by the atoms bonding, in love, as it were, outweighed the entropic cost of their being deprived of freedoms that they, in their unrestrained Brownian motion, enjoyed in the solution. What was left unsaid during the exposition of this sublime insight was that this enthalpic gain is partly owed to an increase in entropy elsewhere, in the solution and beyond its boundaries, as dictated by the second law of thermodynamics, which is to remind us that crystalline and any other physical order in life can arise only because there is a sufficient sea of entropy surrounding it and allowing it to be fed on. Which is, in turn, to impel us to realize that the complementary relationship between stoniness and wateriness is analogous to that between Love and Wonder, a concourse so many times taken off from and landed back to in the course of the undying adventure that this book has been. For, to tell oneself that one will stay firmly in place, holding hands with the loved ones, through times tranquil and thunderous alike, is an emanation of divine Love, just as much as the desire to go with the flow of Tao, to never find oneself in the same place and traverse the territories never crossed nor charted before is an emanation of divine

²⁵²⁶ See Lawrence Weschler’s *Seeing Is Forgetting the Name of the Thing One Sees: Expanded Edition, Over Thirty Years of Conversations with Robert Irwin*, University of California Press, Berkeley, CA (2009), pp. 133.

Wonder. Yet, what we know by now is that one in its most genuine form cannot exist without the other's feeding it from the inside out and from the outside in, as the white does to the black and the black to the white in the celebrated Tai-Chi-Tu emblem. To avow this with the gentle breeze of the holy Yea being whispered underneath one's breath is to set oneself one's feet on a road whereon every step will be an ode to the sacred blend of the two: solidity and fluidity. For, to hold a sea in its embrace a grandiose basin of solidity is needed, whereas every rock, along with a squillion of atoms holding hands in love and being squeakily filled with the holiest happiness in spite of their confinement in the little prison cells of theirs, owes its existence to the ocean of chaos and infinite freeness enclosing it. And so it is with our grave soul, leaning massively, in momentous meditation, to the divine grounds of our being, and the sea of animate spiritedness lulled under its gracious hold.

S.F.12.4. As my Mom and I stood at the Ocean shore, at the trough of one of the sand dunes in the area where Taraval hits the Great Highway, immersing our souls in a beautiful sunset, she told me how she imagined her mind to be a magnificent shipbuilding. The sea in all its charms is beyond the port where ships come and go. Some pragmatic thoughts are being forged therein, and yet an eternally beautiful sea and the Sun bathing in it are posed in the distance, giving a sense of romantic beauty to all the endeavors of one's thinking. Now, she does not let repulsive ships, such as destroyers or torpedo submarines, enter the shipbuilding. Instead, only nice, peddling boats, white and solemn yachts, puny but diligently steaming punts and graceful ships are let through. Our mind truly has a choice of either sending beautiful waves to the world with its celestial thoughts or poisoning it with thoughts of hatred and despair. And even though my Mom and I may be separated by an ocean, the invisible connections of a spiritual umbilical cord are still spread between us. I know that when I am overwhelmed with wonderful, inspiring thoughts in all their purity and chastity, such waves are invisibly crashing over her mind on the other side of the world, and *vice versa*. "Oh yes, we will be shipbuilding"²⁵²⁷, I recalled what Robert Wyatt heartbreakingly sang in what I have considered the most impressive cover of the modern music, envisioning all the people holding hands in their togetherness. "Hold her and keep him strong" was the balance R.E.M. played about²⁵²⁸, metaphorically speaking about nothing other than the stony power of Yang and the wavy, sea power of Yin that all of us should combine within our bodies and minds. To be a female and a male, a holy virgin, in a prayerful devotion on her knees, and a warrior, a dragon that sends blasts of the fire of loving energy across the fields of the world, is the alchemist ideal that we should all strive to attain. After all, this is exactly what the language of astrology says about the starry nature of my being: looking at the Orient, the sign of Dragon is being given to me, whereas looking at the West, the sign of Virgo is being placed on the palms of my hands. Spreading my arms as far as they can reach and tending after the wonderful encounter of East and West within my being, I live up to the ideal of combining the aesthetic sensitivity of an elegant and graceful virgin with the heroic bravery and the shining Sun of pure ethics of a fiery dragon in my deeds, thoughts and seas of emotions arising in me. Moreover, it is no secret that the earthly elements of my being are of Montenegrin, Serbian and Dalmatian ancestry, engraving the corporeal corona of my spirit with deathlike, stony stillness on one side, the heroically firm and faithful wheels of willpower in the center and the poetic liveliness of a southern sea on the other side, respectively. For the millwheels of my being to grind the wheat, therefore, I have known that this willpower in its center has to tirelessly spin and thereby take the stone closer to the sea and the sea closer to the

²⁵²⁸ Listen to R. E. M.'s 11th, untitled song on Green, Warner Bros (1988).

stone, mixing the unmixable and bringing the primordial polarity intrinsic to my being into a dynamic and cross-fertilizing union. Thus, whenever I hold a seashore pebble in my hands, I know that only a fluid flow of energy could bring life to it, just about as much as only stillness and consistency could breathe life into the chaotic streams of mere wateriness. Hence, the urge to throw a pebble into the sea when on the seashore and, when swimming in the sea, to inhale deep and then dive deeper and deeper and ever deeper, all until the seabed is grazed and the pearly dust is brushed off the columns of Atlantis, around which mermaids entwine their supple silhouettes, with the tip of a finger on which the secret of the complete cosmos lies inscribed.

S.F.12.5. As the two of us, with blood of the sailors and love of the sea streaming in us, stood at the ocean shore and stared at the colossal body of water before us, my Mom calmly said: “This is where life had begun”. Truly, both life and knowledge begin where the flexible waves of randomness and imaginative wondering wash over the firm rocks of knowledge and faith. A genuine scientist can thus be described as a dreamer on the coast of knowledge, restlessly gazing at the sea of unknown waving in front of him. For, if we are curious about the origins and nature of reality that we inhabit and if we are deeply moved to increase the body of human knowledge for the benefit of humanity, we will naturally find ourselves on the very seashores of it, where its grand continent expands at the cost of conquering the sea of unknown. As for life, the first forms of it, if we were to trust modern neptunists, are expected to have arisen along the shoreline of ancient oceans, at the interface between its waves and the mineral coasts against which they crashed^{2529,2530}. On one side of this interface, the rocky coastal structure is thought to have provided a stable surface for the first organic molecules to anchor and engage in spatial ordering of a kind, which is a bold hypothesis that has gained support over time, especially after it was discovered that simplest clays can catalyze the formation of ribonucleic acid from individual nucleotides²⁵³¹ as well as the transformation of micelles into vesicles²⁵³². Regular bursts of the latter, bubbly structures on the foam of the ancient wavy sea crashing against this primordial mineral coast are nowadays known to produce temperatures exceeding 25,000 °C, forming at the rate of 10¹¹ °C/sec on the atomic scale²⁵³³, near their collapsing surface, which has been shown to be sufficient to

²⁵²⁹ See my and Miha Drogenik’s paper published in *Surf Rev Lett* Vol. 12, p. 239 – 277 (2005), entitled “Synthesis of Materials within Reverse Micelles”.

²⁵³⁰ No wonder then that by holding any stone, little and forgotten, like this footnote, resting lonely by the roads along which humans hurryingly stream, on the palms of my hands, I would feel as if looking straight into the source of life, at my most distant origins, at the fountainhead of my being, as if a stone would be my distant father, whereas by gazing at the sea, I would feel close to the motherly nature in me. These associations have become even more reinforced in view of an array of ways in which stoniness can be ascribed to my Father, from his lifelong dedication to materials science to his birth and family origins in stony Montenegro to the death sentence of his father, a priest and a saint, carried out on a meadow close to the city whose name translates as Stony City and all the way to the stony persistence and steadiness of his highly ethical stances, as well as multiple ways in which the metaphor of a sea can be ascribed to my Mother, from her poetical nature and childish flexibility of thinking, loving and forgiving, resembling a gentle and wavy sea, to her family nickname, Mina, short for Minnehaha, the word that evokes the grace of laughing Indian waterfalls next to which Hiawatha in his birch-canoe sang the prayers to the sunset, to her predecessors who lived on the Adriatic coast, many of whom were passionate sailors who traveled around the globe during their lifetimes.

form complex biomolecules from the simplest carbon and nitrogen reactants, such as carbon dioxide, methane and ammonia²⁵³⁴. The oceanic waves are additionally presumed to have endowed this primitive self-reproducing organic soup with just about enough entropic freedom to enable their incessant structural shuffling in search of conformations that would be as sustainably stable as evolutionary flexible. A source of randomness can thus be seen as inherent in every formation of new and unconceivable order, from the domain of human thoughts to the reign of physical reality. To develop patterns of human reasoning, one has to rely on firm logical premises and on top of them exhibit an openness of mind and curiosity that would shuffle numerous possible situations and outcomes. It is thus that the best possible bricks to edify the former presuppositions and build sound explanations and arguments are found. The thermodynamic description of the world furthermore clearly tells us that entropy and disorder present “bricks” for building every form of order in the Universe. If there were no disordered patterns in the world, the actual trend of continuous progress thereof would start reversing itself. Just as a bird needs the resistance of air in order for her wings to have something to push against and propel her in her flight²⁵³⁵, there always needs to be something that drags us down in order for us to have a chance to fly forward. Finally, the broader the coasts of knowledge are, the wider the sea of mystery spreading in front of us will be. The more we know, the more we will wonder about the nature of the world and ourselves. These two poles inherent to the evolution of knowledge thus diversify in parallel, supporting each other along the way.

S.F.12.6. Then I recall the true story behind the song Shipbuilding²⁵³⁶, invoking youngsters working in the shipyards that prospered during the Falklands War by building new ships to replace those that were being sunk, and also sending off these very same people on those ships to fight in the meaningless war. “Is it worth it, a new winter coat and shoes for the wife, and a bicycle on the boy’s birthday”, is its heartrending opening verse, depicting wonder over the worth of a welfare that has warfare on the other side of its coin. For, the primitivism of the workings of a capitalist society wherein everyone strives to ensure profit for oneself, narrow-mindedly disregarding the wellbeing of the whole, is neatly reflected in its ability to cash in on building new creations as much as on supporting war and destruction. Not only that the constant presence of a dangerous nuclear threat hidden behind a curtain posed at one or another place on the map of the world has served the role of keeping the American public perpetually fearful, the state in which they are most easily prone to manipulation by the ruling class, confirming the Serbian saying that “in murky waters, fishing is most efficient”, but the history also clearly teaches us how the US economy emerged from the Great Depression era by tying its machinery to pending and ongoing World War II, dropping the country’s unemployment rate from 17.2 % of civilian labor force in 1939 to only 3.9 % in 1946²⁵³⁷. The period between 1939 and 1944 was thus marked on the pages of history books as the times of an unprecedented boom in the American industrial productivity, leading to doubling of the production of steel, a 6-fold increase of the amount of aluminum made, a 40-fold

increase in the amount of magnesium fabricated, and tripling of the net agricultural income; as a result, more than 300,000 planes, 70,000 naval ships and almost 3 million machine guns were made in American factories during the given period of time, while the farm mortgage debt fell by more than \$2 billion²⁵³⁸. As pointed out by Clark Spence, “By a year after Pearl Harbor, most production problems had been solved; by 1944 American production was twice that of Germany, Italy, and Japan combined”²⁵³⁹. It is often neglected that in addition to the economic benefits for the welfare of the country, World War II brought about cultural victories too, as the end of this war coincided with New York’s taking over the status of the world capital of arts from Paris²⁵⁴⁰, which allowed America to add cultural weapons to the repertoire of armory for conquering the globe. At around the same time, the US underwent a crucial phase transition, shifting from a foreign policy outlook that had a moral obligation to be intrinsically anticolonial given that it emerged from the strife for independence from the British rule to an outlook that was clandestinely colonial, striving to spread its influence across the globe, to a greatest extent possible. This is how one of the world politics’ biggest paradoxes of the last century was created, seeing the US expand its newly embraced imperialist influence by typically supporting the independence of insurgents who would want to break from the empires under whose influence they have fallen. Understandably, this has caused a chaos in the heads of the American populace, to which it would be impossible to figure out whether the imperialism or anti-imperialism or imperialism dressed in the clothes of anti-imperialism or *vice versa* is what their country has really been up to, notwithstanding that all this multiplicity of roles has allowed for various hypocrisies to flourish within the heart of the American foreign policy. Be that as it may, as a result, ever since World War II, an unfortunate misconception has remained deeply rooted in the minds of the political leaders of this world’s superpower that welfare and warfare are but two sides of the same coin²⁵⁴¹. Even in the most peaceful of times, long after the horrors of World War II had occurred and to this very day, the idea that there has to be an imminent threat of an enemy, imaginary or real, for the wheels of the economy of this country to be rolling at a high speed, has continued to thrive. To reiterate the premises of this false theory, the first following economic boom the United States underwent during the Cold War era, when contracts by the Department of Defense skyrocketed, increasing by 246 % from 1950 to 1959, and new industries sprouted to serve the appetite for new weapons in the arms race against the imaginary enemy²⁵⁴². In the absence of real, palpable enemies, fictive ones were invented or the relatively harmless ones puffed up to the public beyond proportion, all so as to keep the economy productive and prevent its slumping into a state of sluggishness. As a result, a century old views of the US Admiral Stephen B. Luce, who held that “war is one of the great agencies by which human progress is made... annealing the character and offering the benefits of stimulating national growth and solving otherwise insoluble problems of domestic and political economy”²⁵⁴³, and of the US senator Albert J. Beveridge, noted for saying,

“I subscribe to the doctrine of war. It is the divine instrument of progress... the trade of the world must and shall be ours... we will establish trading-posts throughout the world as distributing-points for American products... our institutions will follow our flag on the wings of our commerce”²⁵⁴⁴, continue to thrive to this very day in the heads of the warlord governance of this country. Even when the military involvements were as utterly futile and defeatist as those in Vietnam in the 1960s and Afghanistan in the 2000s, for example, they could still be justified by their being a form of a marketing campaign at the level of global politics, bearing resemblance to a peacock’s showing off to its muster a most erected and colorful feather, that is, the flight of a fighting falcon, and thus spurring the local economy. True peacekeeping efforts are always such that the spotlight is rarely on the peacekeeper and, as a result, instead of using soft approaches to bring the divided people together and thus pave way for the long-term solutions of ethnic or religious conflicts, the US has traditionally picked one side in the conflict and provided an aggressive, purely militaristic and unilateral support for it. This, however, has led to perpetration of the conflicts and the expansion of the ravines of animosity underlying them instead of their bridging and closure, confirming the aforementioned truism that the world can be bombed to pieces, but not to peace. The demerits of this devious political strategy are too many to be numbered without straying off topic, but for as long as the military budget outweighs that devoted to science, art, healthcare and countless other areas of human creativity that define everything sublime that our culture has to offer, we shall know that we sit very, very far from the truly graceful and humane social management. Yet, sadly but true, looking back to the history of human race, one could also recognize that military investments stood behind some of the greatest practical inventions of our civilization. Fundamental insights into the secrets Nature’s workings were also derived in great abundance from the results of military research, as exemplified by the tectonic plate subduction theory’s owing its birth to the installation of a series of seismograms all over the planet by the US Army during the Cold War with the aim to detect the nuclear probes conducted by its Soviet adversary²⁵⁴⁵. Namely, the obtained data were looked at by the seismologists and analyzed for collective patterns of seismic activity, which resulted in realization that the largest concentration thereof originate along the areas of collision of two or more tectonic plates in the Earth’s crust. Thus, we are free to conclude that just as greedy gold diggers were the first to settle in California, forming colonies which many years later grew into a cultural hub of the planet, and just as Napoleon’s invasion of Egypt led to the discovery of the Rosetta Stone²⁵⁴⁶ (the stone tablet which I almost stumbled over and shattered into pieces upon my visit of the British Museum in London, as, I remember, I walked backwards, trying to get a good view of slender, sunset-gazing, blunt-banged Egyptian figurines decorating one of the walls in the room in whose center lay the tablet, wholly unnoticed by me), a code that helped decipher countless mysterious, hieroglyphic documents, so are roads to the greatest progress in this life oftentimes paved with the most malicious of intentions. “Nature has set us so exactly in the middle that if we alter one side of the scales we alter the other as well; this leads me to believe that there are certain mechanisms in our head so arranged that we cannot touch one without touching its opposite”²⁵⁴⁷, Pascal noted in his *pensées*, implicitly suggesting that even the most benevolent of actions create a vicious trail in their wake just as much as the most malicious of them inescapably sow seeds of eternal goodness as they march forward to the horrid beat of

devilish drums. Indeed, many are wicked avian creatures whose flights should be not prevented, but spurred, for they may carry wonderful little birds on their wings, which will detach one day and fly farther than any bird before, starting to sing the songs of Paradise on new territories, as in the abovementioned picturesque story of Iroquois Indians. For, in this dialectically evolving life of ours, it is only a matter of time when the devastating problems around us, so badly craved to be eradicated, will turn into sources of some phenomenal discoveries. Problems and hardships are the roots of practically all inventions of humanity, for not only do they arise from cravings to find a solution to specific predicaments in the world around us, but as the adage adopted informally by a group of SF Bay Area entrepreneurs goes, “No breakthrough can occur without a breakdown”. Yet, on the other hand, these very inventions solve some problems, but create more of those at the end of the day, thus continuing the trend of creating solutions for problems created by solutions for problems created by solutions. Even the seemingly most favorable options, which might be occasionally celebrated as ideal and flawless, will always possess certain side effects. Although these undesired lateral effects may appear concealed at first, they certainly exist, and it will only be a matter of time when they will manifest themselves in reality. Needless to say, the true ethics therefore lies in pointing out both favorable and unfavorable attributes of anything we deal with. For, “to say that anyone is the most famous, or the best, the greatest, the most beautiful, is – like all rhetoric – a method of bullying the reader into sharing a prejudice”²⁵⁴⁸, as Alistair Cooke noticed, warning us against the inherently idolatrous and insecure, consent-demanding rather than independent-thinking-instigating effects of any unconditional worship of some things on the account of disparaging others. Yet, with one truly unbiased approach whereby we compare options by outlining both favorable and unfavorable features thereof, side by side, irrespective of what side we may have a vested interest in, we fortify our stances with an impermeable ethical fence. Still, it requires a giant step to be made in one’s intellectual development before one detaches one’s ego from the worldviews one embraces and ceases to see any openly shown disagreements as malicious attacks on the integrity of one’s sovereign and opinionated self. The making of this step is preceded by the realization that there are no perfect stances in life; had we found one, peaks in our progress would have been reached and from there on all would be a steady decline. For, it is searching and not finding once and for all that spins the wheel of the evolution of human being. Knowing this, we should accept with humbleness other people’s pointing at demerits and flaws in signs and messages we shed on other people’s paths with our gestures and words. Even more, having embraced this outlook founded on the awareness that perfection is in imperfection and *vice versa*, we should know that it is us that should be equally instigated to seek and openly highlight these very same flaws in our thinking and acting; hence, the readiness to expose both positive and negative features of standpoints we propose in discussion. Such an attitude of immaculate fairness has, however, made me a lot of problems in the course of my professional career. In view of my peers’ inclination to overly praise and tend to disregard the useful critiques of methods they were being funded to explore, my steely wish to judge things from a selfless stance and shake the dust of hypocrisy from myself, always acknowledging both good and bad sides thereof was seen as “sewing the branches on which I sat”, as some of them loved to say. Such an inclination to self-sacrificial justice has inevitably hidden a sprout of disobedience of authority and when as a high school student I refused to bring a spiral-bound notebook demanded by my English language teacher, a hysterical moonwalker of a kind, to be had by every pupil in the class, in the times when monthly salaries were just about enough to buy a dozen or so of those notebooks, and when she

²⁵⁴⁸ See Alistair Cooke’s Fame, In: The Essential Chaplin: Perspectives on the Life and Art of the Great Comedian, edited by Richard Schickel, Ivan R. Dee, Chicago, IL (2006), pp. 121-122.

yelled at me in front of everyone, saying how I was “cutting the branch on which I sat”, I wish I’d known to tell her that one such act presents indeed the final and the finest touch of a genuine creativeness, the one during which one reverts the role of the authority, erases one’s name and rewards and rides off alone into the sunset. Nevertheless, I see science, technology, medicine and truly any human deed and instance of being as ships moving towards some new, undiscovered lands, and yet inevitably leaving in their wake some unfavorable consequences. To be a truly creative captain of the ship of science, one has to look forward to the discovery of new lands of knowledge, believing in his heart in the value of scientific progress, and yet to carefully look back, overhauling the mission of the ship. It seems that even the seemingly most brilliant creative achievements need to produce sprouts of unhappiness somewhere in the world. In that sense, I always refer to artists who decide to neglect beings that are close to them in order to focus their creative powers onto works that will enlighten millions of starry souls. Joni Mitchell and Patti Smith, for example, became mothers in their early twenties, but decided to give up their children for adoption to focus on their careers, eventually releasing albums such as *Blue* and *Horses*, respectively, and enveloping the planet with some of the sweetest sounds known to humanity, inspiring it with motherly grace for ages to come. Therefore, even the most beautiful things we do in life need to produce a wake of sadness behind their joyful journeys forward, for, after all, without problems and obstacles in the world around us, the drives behind any form of progress would equally vanish. The divine worldviews would wink at us at this very thought, confirming how “there is no virtuous man on earth who, doing good, is ever free of sin” (Qur’an, Al-Araf(7):20), as well as that “there is no man that sinneth not” (Kings I 8:46). Hence, what is good and what is bad hold hands together in this dialectical story of the evolving planet Earth, the major protagonist of which, man, is both the most intelligent and creative species and the cruelest one, as wittily pointed out by the Bronx Zoo curators’ placing a mirror at the end of the line progressing from the least to the most destructive and atrocious species on this blue planet²⁵⁴⁹, the one and only, along with some other primates, known to deliberately slay one’s own kind. Be that as it may, “with all the will in the world, diving for dear life, when we could be diving for pearls”, goes the last verse of the song, making me evoke along the sideway trails of my memory first the substitution of a bullet with a yellow butterfly flying around the animated images of Claire and Thomas, seconds before they became the first victims of the bullets fired off the top of the UT tower in Austin in the summer of 1966²⁵⁵⁰, and then the image of the Argentine captain of a ship, with his army collapsing in defeat and the ship sinking, waiting for all the crew members and soldiers to leave the boat before he saves himself. And yet, we could have all been happily, in a cosmopolitan spirit of togetherness, in friendship and joy, played with butterflies, not bullets, and diving for pearls, not for dear life.

S.F.12.7. The balance between the firm rocks of faith and the winds of inquisitive dubiety brings about the progress in the evolution of human knowledge and the complexity of the world around us. And this balance is, like all other productive balances, not something that reaches a perfect static equilibrium in an ideal world. It is rather something that should incessantly swing between the two extremes, making us feel as if we were subjected to a continuous battle between a stance stating an unswerving belief in things as they are and an undying curiosity to probe, explore, revise and rebuild the towers of our ideas and the foundations of our thinking alike. Yet, the fact

²⁵⁴⁹ See Humberto Maturana's and Francisco Varela's *The Tree of Knowledge: The Biological Roots of Human Understanding*, Shambhala, Boston, MA (1987).

²⁵⁵⁰ *Watch Tower*, an animated documentary film directed by Keith Maitland (2016).

that we cannot escape from these very towers of conceptual worldviews while restoring them, that is, that we cannot jump away from the bases of watching the world while assessing these very same bases makes these revisionary tasks quite acrobatic. Complementariness between the acts of trusting the foundations of our thinking and trying our best to selflessly judge about their correctness and appropriateness and improve them whenever it seems possible naturally derives from the fact that our aim is constant rebuilding and remodeling of the house nesting the microcosm of ideas in which we dwell. The Biblical dialogue between Doubting Thomas and Jesus neatly reflects this eternal confrontation between our faith and curiosity: “And whither I go ye know, and the way ye know. Thomas saith unto him, Lord, we know not whither thou goest; and how can we know the way? Jesus saith unto him, I am the way, the truth, and the life” (John 14:4-6). The creative mind can be imagined as incessantly developing itself through these dialogues, as if one, Yin part of our brain has the duty of doubting, wondering and churning questions, and the other part has the role of calculating the most optimal ways forward, guided by the Yang spirit of visionary determination.

S.F.12.8. “*Via, veritas, vita*” (John 14:6), as we see, the Christ is noted to have said, and should I inscribe “*veni, vidi, vici*” on one side of the stone, and the old Serbian proverb saying that “a quiet water breaks the rock” on the other, neatly would I describe the way a triumphant spirit looks to me. I have already elaborated the idea that one’s attention and awareness have to be simultaneously confined within oneself, meditatively and introspectively, and spread to the world through one’s desire to live in a truly fulfilling fashion, while strewing the world with stardust of grace and beauty concealed within one’s heart and mind. But every inspiring communication with others is also based on the balance between an attentive closeness with the faced beings and openness to the rest of the world. If we begin to excessively conform to values and expectations of the surrounding world, we would find ourselves trapped into constrainedly staring at people and inertly nodding our head, while being captured by the authoritative powers that we have unconsciously ascribed thereto. When it comes to romantic relationships, our clinginess as such would result in a pathological symbiosis rather than in a joyful emanation of a true love. Like a tick or a leech that stick to the skin of their hosts, so do we become adsorbed onto other people’s minds, passively following their ideals and desires along the way. When we find ourselves in such a state of mind, there would always need to be something in our vicinity that we would have to lean onto: cocktail glasses, walls or other people’s creativity in thought and behavior, which would make us appear emotionally and creatively crippled (a.k.a. creepy) in eyes of other people. But if we become overly open and extrovert, we may disrespect and hurt people by appearing uninterested in their worlds, as our eyes, ears and movements will always be oriented towards something or someone else in our vicinity. My personal tendency has always been to lean onto others and keep my back against the wall so as to protect myself against the high tides of the sea of insecurities that would wash over me wherever I would go. Even with Oasis’ Live Forever throbbing inside my heart, I remember, I leaned onto a painting in the home of the Serbian painter, Ljuba Popović, to the horror of his son, the host of the party that Eva took us to on one of the wild nights of 1997. We did, I remember, though, chase like mice on Mars in-between the bookshelves in the attic of another famous Serbian painter, so-called Peđa Isus, near the top of a house at the Senjak neighborhood, in the space where Mediala, perhaps the most famous Serbian artist collective of the 20th Century

was founded in the 1950s²⁵⁵¹, on the iciest and slipperiest New Year's Eve as far as I can recall. Thus, "step by step, heart to heart"²⁵⁵², by developing little pieces of bravery inside me I slowly became aware that only by breaking the norms of overly conformational attitudes one gets to yield something truly precious for the world out of his inner treasures, which most of us are, unfortunately, self-consumedly protecting. But as the Christ said, "Lay not up for yourselves treasures upon earth, where moth and rust doth corrupt, and where thieves break through and steal: But lay up for yourselves treasures in heaven, where neither moth nor rust doth corrupt, and where thieves do not break through nor steal: For where your treasure is, there will your heart be also" (Matthew 6:19-21). With such a guiding star placed at the back of our mind, we may become a truly triumphant spirit that selflessly dissipates all the treasures of spirit collected during the adventurous exploration of the world, knowing, after all, that "blessed are the poor in spirit: for theirs is the kingdom of heaven" (Matthew 5:3). In our floating across this world like a river, going from one place to another, switching from one perspective to another, empathically gazing at one and then the other pair of human eyes, always new riverbeds will be below us and clear water inside of us. But there will always be enough of the precious stones to temporary lean onto in the moments when a wise decision has to be made. And yet, we will not become stagnant and musty, but will keep on traveling towards our final destination: the Ocean of being where our tiny individual spirit will merge into the soul of the world and our self will enlighteningly see everything as One. As there will be nothing that will not be us anymore, we will fulfill the journey of human spirit and with arms raised high, like the stellar hero drawn in the Orion constellation, proclaim the Christ's victorious words: "I have overcome the world" (Matthew 16:33).

S.F.12.9. For years I strived to be strong by being strong only. And then the words of St. Paul the Apostle, "When I am weak, I am strong" (Corinthians II 12:10), dawned on me, reminding me of the Taoist ideal of the perseverance of a sedge that supplely waves in the wind and of the humbleness and gracefulness of the sea that lies below all the rivers and yet all of them run into it. Hence, I said to myself that the time had come for becoming strong by being weak. In kindness and gentleness lies the true strength and sustainability. After all, if we are to build some wonderful castles made of sand along the seashores of human mind, where the sea of unknown and untraceable meets the coasts of firmly established knowledge, we have to make sure that a right blend of water and sand is used. For, too much sand and too little of water will make the sand too crumbly, whereas too much water will make it all mushy. In both cases, the sand could not be properly shaped²⁵⁵³. Likewise, only mixing a dose of dreamy weakness that flexibly waves with the wind and a dose of connective strength will make the products of our creativity in the world truly valuable and lasting. And whenever our mindset becomes overly firm, analytical and stiff in its application of sheer reason, and less imaginative, dreamy and poetic, or *vice versa*, we should know that a balance that conditions true creativity and inspirational shine of our being has been ruined and that either more of the flexible flow of waters of weakness or of the stable stillness of stones of strength needs to be reinstalled in us, as in accordance with Rainer Maria Rilke's verses: "If the earthly forgot you, to the still earth say: I run. To the swift water speak: I am". For, incessantly moving and switching perspectives is the necessary precondition for truly keeping

touch with who we are, while meditatively resting with our awareness on that immovable, unchangeable and still essence of our being is the key that leads to our sane and sensible moving across the fields of the world so as to enrich our knowledge of it. Some may, therefore, notice that the secret of success of the Little Prince's empathic hopping from one planet of human worldviews to another lies in his incessantly keeping touch with the rose he had left on his distant planet, while his ability to take care of the rose in the long run may have been sustained only with his ceaseless changing of perspectives, with alternately approach to and distancing from the rose, the object he loves most, which is the art inscribed in the subtle guiding principles of the Way of Love. Travelling while being still, finding the most exhilarating expressions while a part of our being is as still as a stony riverbed, a starry silence of the night sky, or the center of the Taoist wheel of creativity, is therefore the art that the Way of Love has been showing us how to attain.

S.F.12.10. I have thus noticed that when my mind is active in visualizing and producing streams and waves of beautiful thoughts, my body is usually still, but when my body is in its dancing element, giving rise to an inspiring flow of warmhearted expressions, my mind adopts a disciplined, meditative posture. This brings us over to the intriguing rumination of Michael Ventura, who said that "to dance is to meditate because the universe dances"²⁵⁵⁴, drawing on the Christ's message inscribed in the apocryphal Acts of John from the 2nd Century AD: "Whoso danceth not, knoweth not what cometh to pass"²⁵⁵⁵. To have wild and adventurous thoughts, therefore, it is useful to cultivate a disciplined lifestyle, but to awaken a meditative peace and illuminate intuitive powers within our mind it is useful to set our feet on the road and dance in harmony with cosmic waves of divine energy that pervade it all. Thus, whenever we see waters flowing and Cosmos streaming and moving, we should know that there are foundations of stillness underneath it all. From the science of physical chemistry, my personal professional field²⁵⁵⁶, which

²⁵⁵⁴ See Michael Ventura's *Hear That Long Snake Moan*, In: *Shadow Dancing in the USA*, St. Martin's Press, New York, NY (1985).

²⁵⁵⁵ See the Acts of John in *The Apocryphal New Testament*, Translated by M. R. James, Clarendon Press, Oxford, UK (1924), available at www.gnosis.org/library/actjohn.htm.

²⁵⁵⁶ Why I decided to be a physical chemist, I am often being asked and the laughable answer I often give is that I selected a profession which allows me to evade a difficult chemistry question by reminding the questioner that I am actually a *physical* chemist and to avoid a difficult physics question by presenting myself as a physical *chemist*, not needing to know anything and still holding firmly on to my professional title. In reality, however, I see physical chemistry as a Yang-Yin combination of physical robustness, quantitative precision and masculinity and chemical softness, qualitative explanatory frameworks and femininity, respectively, that is, a perfect ground for the thriving of the thoughts of an alchemical spirit, such as my own. Before a basketball game between the US and Serbia that was to decide the new world champion, an internet commentator said that it would simply be a battle between physics and chemistry, referring, respectively, to the individual robustness and physicality of the former and the spirit of communality, the chemistry between individuals so strong that it overcomes the individual players' weaknesses, of the latter. Moreover, being a physical chemist has allowed me to cope with the requests to stay in the lab all day and mix chemicals by accentuating my profession as *physical* chemistry as well as to cope with the requests to spend all my time by the computer, running theoretical calculations and simulations by declaring myself as a physical *chemist*, venturing happily ever after back and forth between the lab and the desk, between experiments and theory, between practice and idealization, between outside and inside, all until the two are brought into unity, as in accord with the co-creational thesis and the Way of Love. A grimmer part of reality of being a physical chemist bears resemblance to the fate that struck my native country, Yugoslavia, when it split apart to individual nationalist countries. In fact, the fate of any field that strives to encompass multiple other fields, in this case physics and chemistry, may be the same if time is let run indefinitely. In the case of physical chemistry, this independent discipline first got threatened by the inflow of engineers who tried to fit chemistry inside their practical frames and one of the areas that they confiscated, quite unrighteously, was thermodynamics, which is now more commonly a part of the chemical engineering curriculum than of the one in physical chemistry. Next, solid state chemists took their share of the pie and, together with solid

I have seen as the crown of natural sciences, demonstrating how physical principles of constancy underlie all chemical transformations of matter, to Gandhian acting in the corrupted world based on enrooting ourselves in quietude and perfect peacefulness and only then moving forward in our fights for truth and justice, to the martyrs depicted in Roberto Rossellini's *Roma, città aperta*, who have used silence and statics as a source of rebellion and a means to make Rome truly an Open City, to the principles of Yoga that show us that staying still in static postures is crucial for revitalizing our movements and making them flexibly flowing, like a river, everywhere we look, there is a proof hidden that rock hard stillness and focused determination on one side and watery fluidity of graceful movements on the other are inextricably entwined. With our eyes on the omnipresent feedback-looped character of natural phenomena, we are then free to wonder whether riverbeds guide the river paths or the river paths are those that shape the riverbeds, and we should be sure that the answer will be impossible to untangle, for these two, stillness and movement are like black and white on the Tai-Chi-Tu insignia, incessantly flowing into each other and hiding in the core of each other's heart. For, stone and water have always been the symbols of Tao and Te, the two elemental forces of the Universe, the heavenly and the earthly, which in their touch give rise to all the appearances of the world as we know it. The center of a spinning wheel is immovable, spinning by not even an iota, as Lao-Tzu noticed (Tao-Te-Xing 11), while the secret of the usability of a teacup and a room lie in their empty spaces, all of which urged the Chinese sage to point at nonbeing and nonacting as the sources of all the wonderfully creative being and acting in this world. In the same spirit, Marcion of Sinope, denounced by the early Christians as a heresiarch *par excellence*, "the firstborn of Satan", as it were, believed that, because "to create something is to be contaminated by that which is created"²⁵⁵⁷, the true God must have stayed out of the world's creation lest he be spoiled by the limitations and deficiencies of all things mundane and, on those grounds, rejected the God of the Old Testament, together with his worldly engagements and incarnation of justice and armaments, not the embodiment of transcendental goodness that is out-of-this-world, rooted in nonaction and apartness from the world, that he ascribed to a supreme God, *i.e.*, "the stranger God", ζένοϛ δεός, in his theosophy. Likewise, ethereal, prayerful and meditative sitting still of our mind on the doorstep of the Christian foundations of love, faith and visionary hope is what instills immaculate grace in the flow of our moves in life. Each and every instance of divine joyfulness, the one that with its expressions spreads the wings for heavenly pure and inspirational signs and messages to be scattered all over the earth, can be thus said to rest upon an inner calmness and a prayerful stream of thoughts. Just like spinning of a wheel is conditioned by the immovability of its center, enchanting expressiveness that strews the world with charm and beauty of its vivid moves is based on a graceful silence and delightful peace within. Hence, if we come across nowadays rare flows of holy joy and follow its inner sources, traveling to the fountainhead of one's heart, we would arrive at a figure of mind that resembles a white marble virgin, cosmically pure, solemn and statuesque, in the moment of a beautiful and all-illuminating prayer for peace and loving harmony to wash over herself and the world alike.

state physicists, brought it over to the realm of materials science and engineering. Physical chemistry as a discipline allegedly explaining chemical phenomena using fundamental physical principles thus ceased to exist and today's physical chemistry is a purely theoretical field, almost 100 % synonymous with computational chemistry. Here it is exemplified how political influence, administrative power and the channels through which money is funneled to support academic research and education define the fate of scientific fields in lieu of strict semantic reasons.

²⁵⁵⁷ This is how José Ortega y Gasset interpreted Marcion's theosophy in *What is Philosophy*, Translated by Mildred Adams, W. W. Norton & Co., New York, NY (1960), pp. 99.

S.F.12.11. “Everybody’s got half-plans, everybody’s got half-plans, ‘cause I can’t see you smile and pumping dance”, is another one of those innumerable personally misinterpreted verses I mentioned earlier in the text. I heard it for the first time as a part of the electrifying ending to the Thrills’ record *So Much for the City*, on one of the most enchanting, mind-opening nights in Ljubljana, as I danced to it with muses who held love and wonder in their eyes all night long. In spite of what I had heard, though, Conor Deasy allegedly sang something else: “Everybody’s gotta have plans, everybody’s gotta have plans, ‘cause I can’t see you smile and pumping gas”²⁵⁵⁸. As described earlier, my nonnative, semi-broken understanding of English language has frequently made my trying to capture song lyrics a form of an audio Rorschach inkblot test. I would partly hear what is really there, but partly construct it by myself too, quite in concert with how we perceive the world: through co-creation, that is, by incessantly following the line that intersects the subjective and objective domains of our experiential reality. By listening to this song countless times and always hearing what I partially constructed, I attached a whole constellation of personal meanings to these verses. Needless to say, I would have hardly been able to find any serious intricateness in what seemed to be the official lyrics of the song. Nevertheless, the point of the message, as I saw it, was that having no plans or expectations from our communication with others or approaching the latter with 100 % developed plans or ideas of what we want to get out of it minimizes the chances for appearing awkward. But for as long as we have plans and at the same time have them not, constantly compromising our robust visionary stances with a leisured *que sera sera* attitude, the potential for exhibiting awkward, discomfited behavior will be high. Those who live life the way the Biblical lilies of the field have instructed us, that is, by “taking no thought for the morrow: for the morrow shall take thought for the things of itself” (Matthew 6:34), would argue that making plans for any day beyond today is an ungodly act, given that a holy man is always open to the signs of the times that splatter all around him as he walks through life, and they are indisputably right, for something divine gets to be emitted from the aura of one such personality completely wrapped in the present moment. The opposers of this viewpoint, on the other hand, would argue that the present is an unattainably ephemeral physical point, the impression of which is but an illusion, and would advocate living life with precise and definite plans, for only in such a way would the icicles of sinful insecurities and the smoke of awkwardness get to vaporize and leave behind the determinacy of a holy rock, and there will be a grain of truth concealed in their stance too. And whether we stick to Allen Saunders’ line popularized by John Lennon, “Life is what happens to you while you’re busy making other plans”²⁵⁵⁹, and discard all the plans in favor of living life at its fullest or move the other way and, like the Gallagher brothers, conclude that “while we’re living, the dreams we had as children fade away”²⁵⁶⁰ and vow to become a pensive dreamer and philosopher, careless about life, contriving beautiful plans for the world to live by, the impression is that we would be better off in terms of the inspirational radiance of our acts than if we were to blend them into a lifeless middle ground. Now, the essential question at this point is whether we should then avoid these half-plans in our minds. The answer is No. For, remember, the truth is hidden where the abysses are. The more treasures we could potentially find on a way, the more dangerous and challenging it will be. If we are ready to step on the Way of Love, we should know that it is a thin string suspended in the air, upon which only the most skillful and

bravest acrobats can walk. We will often feel lost on ways like these, but such is the nature of all great paths in life. The more puzzlements and perplexities they bring about, the more enriching they will eventually turn out to be. While dandling in the middle of by far the most fascinating living place I have ever seen, a San Francisco squat on the corner of Brennan and 6th Street, where I felt immersed in a Pet Sounds landscape, a delightful toy-like vintage wonderland filled with wondrous neon lights, street signs, a sidecar, a swing roped to the toweringly high ceiling and otherworldly creatures popping out from the dark and hazy corners in starry surprise, Sahar whispered to me how “one should not let life get in the way of one’s story”. Yet, the verses of an Oasis’ song then magically emerged to the surface of the ocean of my mind as a response and a sign from its divine depths, “Sleep inside the eye of your mind, don’t you know might find a better place to play”²⁵⁶¹. For, treating others as if they are chimerical puppets attached to the strings of our ego while we walk through the clouds of the dream of our sole soul that we see then the entire reality as, fearing that ascribing an equal realness to other people’s spirits would momentarily burst this solipsistic bubble in which we reside and scatter our dreamy powers in the wind, is actually a sure way to lose these very powers of our being in the long run. In contrast, “as one realizes that one is a dream figure in another person’s dream, that is self-awareness”, ecstatically exclaims Speed Levitch as the lucid bridge walker in the movie *Waking Life* in the last sentence of his dazzling monologue that emphasizes how “we are all coauthors of this dancing exuberance” that reality is, in the most authentic constructivist fashion imaginable, inviting us to realize that only when we look at reality from one such bridge, the Way of Love, where creative roles of I and Thou are finely balanced, do we get to rejoice in “the ongoing wow that is happening right now”, as this translucent thinker with always one or a few illuminative paradoxes in his hand would have put it. In view of these images that swiftly passed through my head when I heard Sahar’s remark, I naturally held that if one were really living guided by this norm, one would turn out to resemble a spiritually blind, solipsistic and autistic creature, insensitive to dreams of others, compassionate following of which is a precondition for opening the doors for our own dreams to enter the fields of reality. The total opposite to this norm would also be ineffective as it would correspond to one’s careless and directionless waving and floating with the winds and streams of outward impressions. However, one should always stick to the feedback between one’s dreams and ideals on one side and the voice of Nature hidden in the teeniest tiniest details of reality on the other. In the course of this feedback interaction, both our visions of the world and ourselves in it and the world subject to change under the force of our creativity are subject to change. This is what the co-creational thesis, by the way, tells us: the way we are, the way we shape our being through our values, dreams and ideals partly determines the way we see the world, and *vice versa*: the perceptive boundaries dancingly dwelling in the world around us partly determine who we are and what forms our thoughts, values and dreams will adopt. In other words, we need to let life and the story of ours co-create each other. Had we not lived accordingly, we would find ourselves either at the imbalanced side of nurturing unrealistic dreams disconnected from reality and flying around like balloons predestined to eventually reach the stratosphere where they will burst under the force of their own inner pressure, or at the side of dully floating through the landscapes of the world, with no compass of the story of ours to guide us towards fulfilling our mission in life and the treasure pot of our soul alike. But by finding the right feedback between the two, we could start living our dreams, working, breathing and meditating towards coloring the reality with their fanciful charm, and yet see the reality itself as a liveliest dream. This is when we become starstruck, seeing exhilaratingly spinning galaxies and Saturn rings everywhere, glistening with the signs of love sent

²⁵⁶¹ Listen to Oasis’ Don’t Look Back in Anger on (What’s the Story) Morning Glory?, Creation (1995).

to us by the hidden force of Nature to guide us along our ways, the ways wherein we unceasingly listen to our heart and yet always remain susceptible to the signs of Nature and sparkly human eyes to hand us their guiding stars. So, having half-plans in our mind, partly conceiving and envisioning the events beyond the horizons of our experience, and partly being open to constantly wash the waters of novelty over them, thereby renewing and revitalizing them, is the way to go, lest we become either a fly buzzing aimlessly across the coordinate plane of reality or, should we disobey the advice implicit in the Monastery of Venerable Prohor of Pčinja hegumen's telling visitors that "plan" in Greek means "deceit"²⁵⁶², the epitome of the modern man whom Dalai Lama criticized for being "so anxious about the future that he does not enjoy the present; the result being that he does not live in the present or the future; he lives as if he is never going to die, and then he dies having never really lived". For, to be immersed in the moment and live life with fullness of the spirit right here, right now and be able to tell oneself at the end of the day the Truman Capote's verse, "As for me, I could leave the world with today in my eyes"²⁵⁶³ is a vital precondition for attaining happiness in life; however, failing to infuse this consciousness dwelling in the present with benevolent dreams, thoughts and visions, all of which are blueprints of a kind, would lead to our regression into a more animalistic state of mind. Stones of powerful thoughts and visions together with waterfalls of incessant change thus stand forth as the symbols of a healthy mind. When we fill our heads with the cheerfully clanging sound of stones dancing under the exuberant force of the waters of novelty and change, we will be on the right way.

S.F.12.12. Andy Warhol once said that in future "each one of us will get fifteen minutes of fame". When I look at some beings out there on the stage of artistic creativity or life itself, I feel as if their fifteen minutes of fame have come. Some of them fail by being too frozen in those critical moments and must later apply for more of those fifteen minutes of fame by repenting and knocking on the door of their heart where the divine voice of Nature might be heard. But some of them act as real superstars. Now, friends of mine recently asked me to define for them what I meant by this term. For me, a superstar is not the same as a star. In analogy with the superstars of the Cosmos, superstars on Earth are those who throw lights of grace and wonder at the world in enormous amounts and in relatively short bursts of time, more than ordinary humans can, and that simply because all the stage lights shine on them and many eyes are plugged into watching them at any given moment. A tremendous amount of human attention is then facing an equal dose of radiance from their acting. But to be a superstar, one cannot simply stand on the stage in front of millions of people. One has to feel like a child in the moment of a striking wonder after having reached a mountaintop and looking down to all the amazing tiny lights that comprise humanity, its cities and lines of communication, noticing an unexplainable beauty and love in them, while at the same standing right beneath the sparkling stars of the night sky that mark an eternal wonderment. In the attitude of a superstar, graceful modesty produced by the feelings of wondrous standing beneath the greatness of the starry sky is mixed with seeing oneself as a sun that delivers light to the world around, as can be seen from interviews with some of them, where they act in a lazy, spontaneous manner bringing forth this rather strange blend of down-to-earth humbleness and luminary self-consummation, of glowing selflessness and mysterious self-centeredness. However, one has to be a real master to make these shiny feelings last for very long. Most superstars, in fact, either burn

²⁵⁶³ Found in Douglas Coupland's *Polaroids from the Dead*, HarperCollins, New York, NY (1996), pp. 85.

out or get sick and tired of staying at the top and being constantly immersed in the limelight; hence, they practically voluntarily step down in a spontaneous fashion, because of not having the same amount of an all-illuminating wonder in themselves anymore. After all, such is the nature of the inner spheres of human creatures. At one point we seem to have found the light and think that we have finally come to know the way to restore such enlightening feelings inside of us forever and ever, but then, because these feelings emanate from the ineffable and inexplicable language of the heart, once we are led astray by the emotions of jealousy, greed and hatred, we lose the trail back. In addition, it is not smart to decide to permanently stay in a perfect oasis of the inner world of ours, which consists of a blend of aspirations, memories, thoughts and emotions of ours, because thence the waters of creativity running inside of us would become all muddled after a while. “Waters stink soon, if in one place they bide, and in the vast sea are more putrefied; but when they kiss one bank, and leaving this never look back, but the next bank do kiss, then are they purest; change is the nursery of music, joy, life and eternity”, as John Donne claimed in his *Elegy III*. Legendary Mika Antić struck the same semantic chord when he urged the young reader in one of his memorable poems to always be on the move because “not for the root was one made”, but for the move into “a world that is all one’s own”, the poem ending with the lines that I am clumsily translating here: “No one knows what awaits you in those fogs far away, but whether you get the golden glow or you pay for it all heavily, bitterly, always go forward only; and do not ever come back”²⁵⁶⁴. In other words, we have to move, to be like a river flowing over the firm foundations of faith in love, hope and care for the people of the world, to always look for the new oases and be on the quest for places of spiritual comfort if we are to evolve into some majestic emanations of divine beauty in this endless race of human being. In other words, we have to be like a stone in our determination and willingness to bring light to the world, and yet like a river in its endless wandering streams towards new landscapes, horizons and views of the world.

S.F.12.13. One of the reasons why rock musicians frequently lose eagerness for live performances is because they force themselves into same playing routines. Their songs played live often sound as almost completely copied from their records. In case of the most popular mainstream musicians, one can often hardly hear a difference between the live and studio performances. It is almost as if someone played a prerecorded studio track on their concert. A number of reasons may contribute to this: for example, a lack of musical qualities and adventurous bravery, or compliance with the intents of musical industries that support them and supply them with steady profits, which all predisposes them to accept less risk and experiment less. Yet, every inspirational human act has to embody a combination of preconceived conceptualization and spontaneous improvisation. During a discussion with Ornette Coleman about pros and cons of free jazz, Miles Davis, a prototypic example of a musician who heartily resisted finding oneself in the muddy, stagnant waters of playing the same things over and over again, constantly renewing his approach and sound, from one record to another, presumably believing somewhere deep inside of himself that the artist has to ceaselessly move in order to be able to move others, thus proclaimed how he would “rather hear a guy miss a couple of notes than hear the same old clichés all the time, even if it’s skillfully done”²⁵⁶⁵. To accentuate the relevancy of Miles’ remark, the so-called prophet of freedom added, “From realizing I can make mistakes, I have come to realize there is an order to what I do”²⁵⁶⁶,

²⁵⁶⁶ *Ibid.*

pointing at the core idea of jazz culture, applicable to the arts of music and life alike, being all about the importance of never ceasing to improvise and embrace all the mistakes committed along the way, for only in such a way could we and the world advance in the direction of more sublime emanation of divine potentials dormant in us. Without errors, no steps that take us beyond the currently occupied stages in the evolution of our minds and spirits could be made; or, as it was stressed out by the multidisciplinary Pole, an artist and a scientist, Jacob Bronowski, “we must accept the fact that all the imaginative inventions are to some extent errors with respect to the norm”²⁵⁶⁷. To counteract the curse of adaptability dormant in our beings, which supported us through the evolution, but also tends to allure us into repeating ourselves over and over again whenever a certain level of comfort has been reached, creative people all the world over have decided to constantly reinvent their approaches and never cease to infuse their endeavors with something new. Concordantly, the best musicians I have listened to always add a dose of novelty to their acts, approaching their performances without having every note planned in advance. Those could be minor tones or changes in cadence or melody of the voice, but this approach is absolutely necessary if we are to become a divine messenger to people with our artistic acts. Submitting oneself to the feel of the moment and meditatively leaning with the ears of one’s spirit onto the silent voice of the divine that permeates it all, and delivering one’s acts in harmony therewith is a vital trait of the most inspiring artists on the stage. After all, each being out there, facing the stage, requires a different, finely tuned response to the needs of his soul, from day to day, from one moment to the next, and repeating the same old performances, note by note, cannot be the key. Not to mention that these profound artists normally evolve from one record to another, reinventing their approach instead of burying themselves deep into repeating the old and already popularized style. In that sense, jazz musician have known it all. Sunny smiles on their faces tell us that.

S.F.12.14. In one story a cowboy in its adventuring falls into a hole in the ground which turns out to be a nest of snakes, without being able to get out. He finds himself face to face with a poisonous snake, and realizes that the only way out is to calm her down. To do so he needs to tell a story. But what kind of story, he asks himself. If it is a story about peace, love and survival told by the language of the human heart and human voice, it would be meaningless and unintelligible to the snake’s ears. But if he starts off using the music of the snake’s voice without any meaning woven into it, the message he intends to convey would fade away in the background and be equally ungraspable to the snake. So he has to find the way. And yet the snake is looking at him, ready to jump and bite him at any moment. So, in a rush of life or death importance, all sweaty, the cowboy finds the way. It is the middle Way. It is speaking about love and survival with the language of the snake. What came out of his throat was a rattle and hum that had an immense beauty hidden in it. The snake understood the message and let the cowboy live. This is how rock ‘n’ roll music was born, the legend says. And yet this music presents a giant musical stream that wonderfully evolves as it rolls. It stands for the stems of probably the most exciting streams in modern music, a form of art that I have always regarded as the most absolute one. Rock ‘n’ roll, as the name itself suggests, is the music of a firm and determinate ethics of a stone, in all its strength and mightiness, combined with rhythmic, melodic and poetic flows that depict incessant moving, rolling and streaming. Only the stone that rolls does not capture any moss on its surface; and so the rock rolls. It has to change to retain its meaningfulness and creative force. In general, strong roots that yield stability and flexible branches that give resilience under the force of the wind are the secrets of a

²⁵⁶⁷ See Jacob Bronowski’s *The Origins of Knowledge and Imagination*, Yale University Press, New Haven, CT (1978).

wonderful tree. Similarly, the recipe for achieving strength in anything in life is based on blending firmness and flexibility. This is why a pebbled seabed over which waters stream can be seen as a ubiquitous metaphor of life.

S.F.12.15. I am terribly slow at analyzing my experience and endowing it with the right meanings. Sometimes it takes months or even years before I realize the message of a book read, a movie seen or an event witnessed. The words of Friedrich Nietzsche, “Slow is the experience of all deep fountains: long they have to wait until they know what hath fallen into their depths”²⁵⁶⁸, are thus brought to mind as well as those of Arthur Schopenhauer: “As a general rule, the longer a man's fame is likely to last, the later it will be in coming; for all excellent products require time for their development. The fame which lasts to posterity is like an oak, of very slow growth; and that which endures but a little while, like plants which spring up in a year and then die; whilst false fame is like a fungus, shooting up in a night and perishing as soon... The general history of art and literature shows that the highest achievements of the human mind are, as a rule, not favorably received at first; but remain in obscurity until they win notice from intelligence of a high order”²⁵⁶⁹. In Spinoza's Ethics, it is similarly pointed out that “*sed omnia praeclara tam difficilia quam rara sunt* (but everything great is just as difficult to realize as it is rare to find)”, and all of these words I invoke to comfort myself regarding the slowness of my understanding, which most of the time proceeds at a snail's pace. After all, just as the Sun does not produce the warmest days on Earth when it sheds most of its light onto it, that is, during spring or autumn equinoxes, but a month or two later, the same happens with our facing the sun-like creatures in life and encountering their stellar deeds: namely, immediate comprehension thereof and complete fascination with them are impossible because of their tremendous progressiveness, which is why our impressiveness therewith occurs after some time spent in attempts to decipher their always partly clear and blissful and partly obscure and mysterious greatness. All the details comprising our experience can also be seen as composed of an endlessly thick stack of layers of metaphorical meanings that we may or may not recognize in them. Therefore, analytical pertinence, devotion to details and frequent switching of perspectives imply that in-depth analyses of experiential phenomena are always time-consuming. In my case, it is not unheard of that it takes me months of even years to realize the greatness of a particular expression or emotionally click with it. This process is particularly long when it comes to apprehending conceptual points of particular artworks and one example comes from Can's Future Days, the record that I, together with my playmates, listened relentlessly in Mina's little seaside house in the summer of 1997. The record in those hours created a transcendental experience, immersing us collectively into a state of dystopic awareness of what the future holds in store for us, but it took me twenty years to realize the conceptual message that the record has been whispering to me all this time. I realized so by drawing a parallel between the record's deconstruction of the classical rock song form, being the continuation of the band's Tago Mago mission statement in a more ambient direction, and the formless, 8½-like style in which this book is written and the experimental style in which my musical pieces for three guitar were composed, having no beginning or end and thus destined to live forever, to present a source of perpetually novel insights in the minds of readers and listeners. Other examples of this nature in my universe include Charlie Parker's bebop deconstruction of the rhythm and melody, James Joyce's Ulysses and Jean-Luc Godard's film, all of which might be accused for demonstrating

²⁵⁶⁸ See Friedrich Nietzsche's Thus Spake Zarathustra, translated by Thomas Common, retrieved from eserver.org/philosophy/nietzsche-zarathustra.txt (1883).

²⁵⁶⁹ See Arthur Schopenhauer's Wisdom of Life, Dover, New York, NY (1851).

indifference to the emotion and the characters, but compensate this neglect, deliberate or not, by the adoption of a revolutionary form and charm with a conceptual character in the context of the art of their times. Another example I often ruminate on is the ending line of the most popular solid state physics textbook to date, authored by Charles Kittel in 1953 and rereleased eight times since then, “The temperature at which the resistivity is a minimum varies as the one-fifth power of the concentration of the magnetic impurity, in agreement with experiment, at least for Fe in Cu”²⁵⁷⁰, hilariously dry and tangential in relevance to the book as a whole, a line ending on an open line, like a cliff that suddenly breaks into the view of an open sea, suggesting that end is never really the end. In a world demanding from each and every writer to end the book on a solemn note and/or close the circle and reconnect the end of the narrative with the beginnings, this line would be perceived as revolutionarily inventive and I often use it as a reference point in my head to anchor to it the idea that expressions can annihilate the emotion, so to speak, and be utterly unpoetic and yet shine a light onto the world if they do succeed in questioning and reinventing the form of expression in a given discipline. This line has also drawn a parallel in my head with the cropped composition as one of the techniques Impressionists invented to breathe life and a sense of dynamism and transiency into their paintings. Hence, like in Degas’ Rehearsal from 1877, where details of the interior and the figures’ faces and poses were cut in halves by the frame and by the obscured perspective, the ending line of Kittel’s Solid State Physics implicitly suggests that science is an open-ended story, far from having reached any fixed or solid conclusion, being rather a wheel that can push humanity forward so long as it ceases not to turn and turn and turn, breathlessly and unstopably. Note that the same point was made by arguably even subtler means by Ludwig van Beethoven in his String Quartet in C# minor, Op. 131, a classical musical piece whose each seven movements were devoid of cadences, a feat never achieved prior to its date, imparting a sense of endless gliding on the aural waves of melancholy to the listener through this evasion of harmonic resolutions, where “there is no arrival, just a continuous, mind-boggling journey”²⁵⁷¹. Of course, for any of those cases, the process of understanding why the expression is great may take a lifetime to unravel, given that the realization of greatness is conditioned by one’s acquainting large portions of the history of an art from which the given expression stemmed and whose forms it implicitly questioned. Yet, as I relentlessly claim, slowness is not undesirable at all. Quite contrary, in fact, as the entire life is, biochemically speaking, based on the relative slowness of its crucial chemical reactions when compared to the ones present in the world of inorganic chemistry (take ionic reactions, for example). Macromolecules may have spontaneously evolved throughout the evolution as the main chemical ingredients of life primarily because of the comparative slowness with which they react with other species of the same kind. Calcium phosphate, the mineral constituent of bone, may have been chosen during the evolution to fulfill this role especially because of its mysteriously slow crystal growth rate even when the solution from which it precipitates is highly supersaturated²⁵⁷². From here on, we could also be reminded that the pitch drop experiment, also known as the world’s slowest experiment, showing a hard and brittle piece of pitch, a derivative of tar, dropping through a funnel at a rate of one drop per decade

or so, having only 9 droplet fallen from it in the 87 years since it was set²⁵⁷³, offers an intimate view at the transition of inanimate matter to life. The reason is that amorphous and structurally non-equilibrium materials such as pitch or cathedral windows, which flow imperceptibly slowly toward the equilibrium²⁵⁷⁴, are closer to life than the materials rapidly relaxing into an equilibrium state after being excited. This is to say that slowness, which is oh so often dismissed as an undesirable trait in human endeavors, can be an advantageous trait in the biological milieus, let alone a hallmark of life *per se*. Yet another one of innumerable examples, adding to the aforementioned chemical reaction rate one, may be that of tuberculosis, a bacterium whose resistance to drug therapies is largely due to its extremely slow division, which takes about 12 hours on average, a time by which most drugs are out of the system due to their lower pharmacokinetic half-lives. A successful drug regimen, for this reason, takes between 6 and 9 months and, here, the patients' frequent stopping to take the drug in the middle of the therapy leads to the return of the infection in a drug-resistant form. Slowness and tolerance to mistakes are, in fact, the essential chemical traits of life, which have yet to find replicas in the domain of synthetic chemistry on broader scales. Generally speaking, only entropy can increase itself in sudden and explosive ways, whereas for increasing order to spread itself throughout a natural system, a lot of persistence, small steps and time are required. Conversely, the most critical adversities befalling humans are those that creep into them with an imperceptible slowness, spreading sluggishly, like cancer, whereas those gripping them abruptly, like flu, are usually more or less harmless, confirming the folk saying that "barking dog never bites", which is also why the business strategists at Pentel have held that chronic problems can teach their bearers far more than those that reveal themselves suddenly²⁵⁷⁵. Still, magnified enough, every descending path reveals many slippery slopes on it, whereon one falls rather abruptly. Picturesquely represent the process of advancement by ascension, such a climbing a mountain, and the process of decline by a literal descent down a hill and it would immediately become clear why the former are time-consuming in nature, whereas the latter, like all slips, happen rapidly and suddenly, in an unplanned manner most of the time. For, the idea that increasing order in a physical system takes time, whereas entropy tends to spread itself through it rather explosively may be the fundamental reason why there is no such thing as rapid and sustainable progress in any domain of life; there is only rapid decline, as even the slowest retrogressions take place via a series of sudden slips that intercept the periods of slow and steady improvement. This idea that slow paths are usually ascending, whereas the fast lanes rush towards chasms, matching the myth of "stairways to heaven" and "highways to hell", is in concert with the fact that life itself could be seen as a transitory stage in the reaction of burning, that is, oxidation. Should there be enough energy available to the reactants, which in this case are the atoms that we are composed of, everything would explosively turn into carbon dioxide, water and ash. The one factor that stands in the way of our bodies' resembling time bombs is the smothering slowness with which oxidation reactions take place inside of us. Therefore, to be less energetic, tardy and weak, in a way, is to be sustainable. Too much speed and strength can damage our beings as much as too little of it can. My belief in this idea became even more reinforced in me as I helplessly chased a blue fish with a yellow tail, all stippled with little stars, off the sandy shore of the island of Catalina in the Caribbean Sea, and tried to grab it with my bare hands.

Namely, doing so, a recollection of the fact that humans are rarely slow and sluggish creatures in the kingdom of much more agile animals on average sprang in me and then a question: could it be that due to this inherent slowness of ours we ascended much higher than any other earthly creatures on the evolutionary ladder of life? For, this comparative tardiness of human beings in comparison with other animals is what can be said to have led to useful tools, including the hunting ones, which, on the other hand, provided the initial steps in building the fascinating technological infrastructure of the modern planet. Wishing to fortify our beliefs in the supremacy of slowness over hastiness, my Dad's voice comes to intercept our musings at this point and tell us that setting the heating rate too high during the sintering process, something he has been a longtime expert in, might lead to a well sintered surface of the pellet, but a porous interior, an undesired effect that could be easily avoided and a uniformly dense pellet produced had the annealing proceeded slowly enough in the first place. Many a day and night did the two of us spend playing chess and I was always the long, long thinker, while he was the blitz machine. Here again, in concert with the ontological importance I have ascribed to slowness, I realized early on that the shorter the game of chess, the lesser the room for the display of clashes with everything ugly and competitive that this beautiful game connotes. For example, when a game of chess is sufficiently long, the player has enough time on the clock to produce a move that, says, leaves the opponent's blunder queen intact or sacrifices a piece when having an uninterestingly large advantage on the board so as to make the game interesting again. On the other hand, when the game is played in a bullet or a blitz mode, then the play boils down to the display of the most basic survivalist instincts, leaving no room for the exhibitions of this anti-competitiveness of angels. This is not even to mention the greater opportunity to make profounder moves and contribute to creating higher quality games when there is a plenty of time for thinking as opposed to rapid games where one rushes to make each move. Further, my approach to arts has been an apple that did not fall far from this tree of the aesthetics of slowness that I have unreservedly embraced. Rather, it has been all about attempts to give rise to a tempest of passion, a firework of emotions by means of slowly but persistently rolling the wheels of the train of the music of one's words, notes or acts. As I played music from my iPod to Paula on a 22 SF bus drifting down Pacific Heights on the way to Marina, soon after the device fell out of my hands and slid down all the way to the driver's seat, she pretended to listen carefully, but then jumped up all of a sudden, yelling how it is "slow, slow, slow", prompting me to explain to her how that is what a true art is for me. As the bus suddenly stopped and the inertia propelled us forward, I hit my head against a handgrip and saw stars. In the midst of them a dancing silhouette of the memory of Isadora Duncan's words by which she defended the music of Richard Wagner magically dawned on me: "It is of this music that critics are wont to say, 'It is not written for the dance'; but it is from this music that the dance, so long lifeless in the embryo, is being born again. In comparison with this new-born dance, the posed attitudes of the dancers of the Opera appear to us like the figures in the wax-works museums"²⁵⁷⁶. Besides, the closer one is to the center, the slower one's orbit gets, an astrophysics textbook would tell us, I reckoned amidst stars spinning in my vision from the blow to the head. No music can thus be more uplifting for the soul and appealing to dance to than the one which gives rise to a tempest of moving energy within us via rolling its trains with elegant slowness and yet enchanting determination and willpower through the audio landscapes in our head. While playing in a band, thus, I learned that nothing can be threatening for the beautiful flow of a song more than increasing its tempo and rushing its

²⁵⁷⁶ See Isadora Duncan's Richard Wagner (1921), In: What is Dance? Edited by Roger Copeland and Marshall Cohen, Oxford University Press, New York, NY (1983), pp. 266.

performance. Listen to Bob Dylan's original version of *My Back Pages*²⁵⁷⁷, for example: the song starts beautifully, but already at around the third stanza the singer's focus starts to dissipate, he begins to rush and increase the tempo, leaving not much space anymore for the composed and broad melodic ups and downs, allowing the song's momentum to uncontrollably spiral downwards as it continues to progress from the beginning to an end. On the other hand, slowing down an already attractive song can be seen as nothing but a challenge for the artist to fill the empty spaces that appear thereby and deliver the same or quite often even a greater dose of moving energy. For example, although a plenty of space was left unfilled for my taste in most songs on the debut record by *My Morning Jacket*, *It Still Moves*, sounding as if someone sweepingly stretched its aural imprint, the feeling is that only in such a manner, that is, by being drastically decelerated, could its poignant finale invoke the roar of a big brown bear portrayed on the album cover in the listeners' chests; should it be sped up somehow, its exhilarating momentum would be lost instantly. This principle applies to countless cult songs that owe their momentum to being a bit slower than what the medial listener would expected, with *Elvis Costello's Shipbuilding*, the *Velvet Underground's New Age* or *Candy Says*, *Starsailor's Silence is Easy*, the *Zero 7* remix of *Terry Callier's Love Theme from Spartacus*, *Big Star's Big Black Car*, *Travis' Turn*, *Oasis' Stand by Me* and *Dinosaur Jr.'s Get Me* being some of the examples that fall off the top of my head in this very instant. Consequently, slowing down musical pieces moderately has been an essential stratagem from the repertoire of tricks I employed to increase the tensions in a song and pack it up with a greater emotional content and moving thrust than it would have had at a faster tempo. This aesthetic preference of mine in music can thus be said to lie in the same vein as the approach to composition embraced by *Steve Reich*, who verbalized it in the following manner: "I relate to emotion that has a strong reserve, that erects a wall – and then against the wall you feel a force that could crack a dam. I want to control the emotional force, to harness the energy. That's the way to propel the music forward"²⁵⁷⁸. Emotional tension I often imagine as a thread on which the listener's spirit ascends to higher states of mind and this inner tension cannot be produced by systematically avoiding a Hitchcockian suspense in a musical piece and impatiently striving to reach one climax after another in as short time spans as possible. Note that more than a few whizzes in the cinematic realm have employed the strategy of protraction of climaxes and ironing of landscapes composed of excessive hills and troughs, from *Antonioni* to *Angelopoulos*, all in concert with *Tarkovsky's* idea that "though the feeling of boredom is naturally spurred in the audience when the take is too long, if the take is longer than 'too long', then boredom cedes place to curiosity, which is when the audience starts not only to see, but to explore"²⁵⁷⁹. Yet, I have known that in this culture of ours that prefers adolescent outbursts of hysteria over soul-soothing sanctity²⁵⁸⁰ and that correspondingly overvalues orgasmic crescendos on the account of being greatly insensitive to the power of diminuendos, it is quite counterintuitive to even think of empowering a musical phrase

²⁵⁷⁷ Listen to Bob Dylan's *My Back Pages* on *Another Side of Bob Dylan*, Columbia (1964).

²⁵⁷⁸ See *K. Robert Schwartz's Minimalists*, Phaidon Press, London, UK (1996), pp. 91.

²⁵⁷⁹ Personally paraphrased from *Sean Martin's Andrei Tarkovsky*, Pocket Essentials, Haprenden, UK (2005), pp. 49.

²⁵⁸⁰ To what extent is this nepotistic effect the result of the aforementioned (see S.F.4.6) propensity of neo-libertarian social systems to spontaneously segregate as they evolve, inevitably undergoing a form of Ostwald ripening, whereby big entities grow ever bigger on the account of the disappearance of the smaller ones? For, when adolescents form the social group that is most economically active in this profoundly materialistic, money-oriented society, spending most money on average, it makes sense to expect that on the plane of social values it would wholly eclipse the needs of other social groups. This may be how we have cooked ourselves alive into a state where what elevates tensions in an orgasmic fashion became valued more than the complementary impulses that provide a relief and relax the excitements into a still and soothing sea of pure placidity.

by quieting the orchestration down or of enriching the visual experience of the viewer by making the view ever stiller and ever more quiescent. Still, however, the musically enriching transition from baroque to classicism and especially romanticism corresponded to a gradual subtraction of the continuo elements of orchestration, whose aim was to keep the tune always close to the climax, and their substitution with the freedom to descend deep into the grave and delicate diminuendos. Besides, historians of music could readily tell us that not melodies that comprise quick movements, but those that are central to the slow passages are used as fingerprints from which the essence of the talent and the greatness of the composer's work could be read from²⁵⁸¹. An exercise in patience and the ability to preserve contact with the still center of the wheel of our consciousness in spite of the fireworks of impressions in which we may be immersed is also achieved by means of such, inherently slow pieces of art. And many of us may confirm that in most things in life, from romantic relationships to appearing on the stage of life in starry splendor and charm, in the fullness of the divine spirit of ours, the greatest treasures lie not in the moments of fulfillment of those, but in waiting and dreaming about them, that is, being on the road rather than arriving on the destination. The most beautiful, lifesaving visions are thus being born as we stand in "desolation rows"²⁵⁸² and abstain from enlightening action rather than indulge in it from the head to the toe, something that the famous violinist, Yehudi Menuhin must have been aware of when he noticed in his scripts that "pure vibration is received or produced by the body while deliberately delaying or suspending outward action"²⁵⁸³. This point of view that celebrates slowness and patience in response is also in agreement with what is nowadays known as Eisenhower's principle, named after the former US President and frequently applied in the domain of the modern, systemic management: "What is important is seldom urgent and what is urgent is seldom important". After all, since all things palpable can be imagined as springing from the invisible foundations of values, dreams and aspirations, which cannot be changed overnight but need long times to be reexamined, softened up, forged and remolded, all fundamental rejuvenations of qualities on personal and social scales alike take tremendous amounts of time, slowly and often imperceptibly changing us from the very core. The same can be undoubtedly said for all falls from grace that happen to occur within our persona and within social systems that we belong to. Cities, such as my beloved hometown, Belgrade, have been bombed and stricken by war and yet their cultures survived unchanged, for the values of its people were left intact. However, the infusion of the superficial values dominant in the Western world, delivered in the feisty packages of the mainstream music and movies, influencing the rise of inequality, materialism, criminality as well as the parallel descent into dark history and excavation of nationalist hatred entailed by the slow process of brain drain, the persistent R&D and economic incompetence and dependence on the developed world, the corrupted selection of leaderships all quietly and imperceptibly pushed the appearance of Belgrade close to the very bottom of Europe. Still, hopes are that a rise in the social prominence will reappear soon, undoubtedly starting from the very invisible roots of the society and human mindsets. In that sense, whenever we are about to conceive creative sparks that will change the natural systems for better, we should pay more attention to qualities and processes that are difficultly and slowly modified rather than those that could be bettered in the blink of an eye. Now, I am telling you about the meaning of slowness because it was only today that I realized one of the core points of *Happy-Go-Lucky*, the movie directed by Mike Leigh I had with Dulcie seen in a cinema not far

from the Embarcadero clock tower nearly a month ago. At first I thought that the film was all about making the spectator spontaneously enter the high-spirited mind of Poppy, an incredibly joyful and jumpy persona, and at least for a brief moment of time watch the world from her inspiring eyes. But after hours of contemplation I realized that the movie was about education. Poppy, an elementary school teacher, and two supporting characters, the driving instructor and the flamenco dancer, all have similar professions, educational in nature. However, whereas Poppy has bursts of spontaneous joyfulness instilled within herself, the flamenco dancer is impregnated with passions and the driving instructor with discipline. Whereas contagiously cheerful Poppy can be seen as epitomizing Yin energetic pole of a watery flexibility, the giving nature and childlike congeniality, the latter two can be in the sturdiness of their spirits seen as reflections of the stony Yang energy. But one without the other cannot be sustained. Passion and discipline are there to focus the creative energy within ourselves, whereas Yin flexibility is supposed to let it flow outwards in gentle and harmonious ways. Without the latter one may eventually collapse due to inner accumulation of stress that surpasses the holding capacities of the organism, whereas without the former one would be unable to channel the inner merriness and feminine spontaneity into something perennial. The fate of breaking down under too much of the self-integrating force apparently strikes the flamenco dancer and the driving instructor, whereas our dear Poppy is in its never-endingly wandering fanciness symbolically left to float on her boat, inertly carried by the streams of the lake. The end of the movie leaves us with the impression that although pure flexibility and gracefulness live on, Poppy remains partly aimlessly traveling, and as long as she does not anchor herself to a good, solid base of a rock that will provide the proper boundary conditions and channel the energy of hers along fruitful ways, it will stay so. Because, to apply our joyfulness in constructive ways, there needs to be an inward pulling force that keeps the ingredients of the world of our thoughts and emotions together. The Sun exists owing to the inward pull of gravity that induces fusion of light atoms into heavier ones and release of a great energy that then openly and spontaneously shines to the world. In a balance between an inward-pulling, self-integrating and absorbing force that sums up our experiences into illuminating insights on one side and a desire to give ourselves to the world thoroughly, to let these inner treasures explode with rays of beauty and love for the world and dissipate the inner light we hold into millions of starry signs that will impress the beings of the world on another lies the secret of a true creativity, and is idealized within the concept of the Way of Love.

An endless stream of last words as we approach and merge into the Sun at the end of the road

S.F.13.1. “I hope I die alive”, Luis Buñuel, the detested Spanish-Mexican filmmaker “with religious temperament, but without religious faith”²⁵⁸⁴, who “shot in the dream way, in the style of dreams”²⁵⁸⁵, said shortly before his corporeality expired, matching Marguerite Yourcenar’s wish “to enter into death with open eyes”²⁵⁸⁶ and laying down a magic carpet of divine wonder whereon

we ought to fly from the first moment of our lives to the last, that most solemn of them all²⁵⁸⁷, with an undyingly lively curiosity and brightness of Werner Heisenberg whose last words allegedly were “When I meet God, the first thing I’ll ask Him will be why turbulence in the world”. In contrast, the last words of Ludwig Wittgenstein, which could just as well be mine if I end up being sane enough to utter them one day, were “Tell them I’ve had a beautiful life”. Ringing the same bell of perpetual astonishment with the world probed by an undying shine of the intellect, Thomas Alva Edison’s last words were “It is very beautiful over there”, while Isadora Duncan’s were “Farewell, my friends! I go to glory”. This is to say that some people are born to live their entire lives in humble wonder, whereas others are predisposed to be stars. The former stance furthermore evokes the words engraved on John Keats’ headstone, “Here lies one whose name was writ in water”, or those written on the epitaph of the Japanese movie director, Yasujirô Ozu, “Wu”, the last name of the Little Bear and the symbol standing for sacred nothingness, a void celebrated by the Zen sages as the space from which all things have emanated and in the heart of which the great One dwells. In contrast, the latter stance invokes an episode of the quirky sci-fi series, Doctor Who, that ends with a close-up of a tombstone on which it says, “Remember me, for you shall see me again”, words that pretend for the stars by evoking the epithet of starriness ascribed to the who floated away, but which, once again, have nothing wrong in them; for, each stellar creature, a messenger from God, will truly be seen by us, inhabitants of these purgatorial realms of reality, in need of such saviors to lift us up into the paradisiacal cosmic spheres, again and again, in one form or the other. Once more, the balance between humbleness, justified by our being made of earthly dust, and nobleness, sensible because our bodies verily embody matter that once belonged to stars, is being struck, and along it the chimes of the co-creational thesis, of the dialogue between mind and Nature immanent in every piece of reality, and of the Way of Love, the recipe for the ultimate creative being in this life. At the same time, we are being reminded that the Earth is sprinkled with celestial source of life that sparkle like stars in the eyes of the wise ones, while the skies above us are seeded with stellar souls that had once begun their interstellar journeys in earthly pyres of dust. For, as it occurred to me with my head leaned onto my Mom’s, a fallen star then, lifeless and limbless, just as the Sun makes its way around the Earth, rising in the East, ascending to its midday apex, then setting in the West before making another half of its circular journey through the swarm of stars on the night side of it and rising again, so does the human soul, a divine sun of a kind, which could bedazzle and rouse the Earth like the real Sun had it only lived up to its fullest potentials, travel across the visible part of the celestial sphere, manifesting itself as a form of life, before it sinks into the sea of stars and out of the view of its earthly brethren, swim therein for a while as a star at home among its fellow stars and then arise in bliss in a wholly new form somewhere else, for as long as it remains riding on the karmic wheel of existence as a part of the incessant process of dying and rebirth that it brings forth, though being nothing but a star all the way through. All in all, these messages urge us to anchor our minds onto stars rather than onto worldly wealth and petty fortunes of ego, endowing us with a sense of sacred smallness and humbleness in front of which many doors that Nature abounds with will majestically open. St. Francis of Assisi, the exemplar of existential aesthetics of poverty and hearty rejection of the thirst to govern or control anything or anyone, hit a monk with the pillow he had put under his head as he was lying on his deathbed, wishing to stay true to his ideals of simple living, and mumbled the following: “It is in giving that we receive, in pardoning that we are pardoned and in dying that we are born to eternal life... Preach the Gospel at all times and use words only when necessary”,

²⁵⁸⁷ This is what Akira Kurosawa’s Red Beard remarked to a young doctor whom he insisted stay in the room and watch unceasingly, with eyes wide open, an old man expire.

telling us how it does not take more than a simple touch, a sunny smile or a twinkly gesture to enlighten a whole universe present within each and every being around us. In view of this, we could be reminded of the oldest musical composition inscribed on the famous Seikilos epitaph, saying “Shine, as long as you live” and subtly inviting the orchid of our heart to open its petals and release the glow of the divine spirit dormant in its floral essence. For, “the Sun is God”, as the last words of yet another inspiring soul, that of Joseph Mallord William Turner, a punkish painter from London whose lectures on perspective at the Royal Academy were pervaded with so many grammatical and syntax errors that they were deemed hopelessly unintelligible and impossible to publish²⁵⁸⁸, go, flashing an image of many of his remarkable paintings in which the sunlight offers a solace away from the world of desolation and loneliness, including one of his last works, *The Visit to the Tomb*, a painting that all cracked, yellowed and sagged rests in a guarded room in London’s Trafalgar Square, reminding us that as we walk towards the divine sunlight that the eyes of our eternally pure heart glimpses in the world, we simultaneously enkindle the shine of our spirit, a lantern that will illuminate paths for many creatures lost in the darkness of earthly being. After all, as the co-creational viewpoint insinuates, mind and Nature always journey hand-in-hand, into the darkness or into the light. And some of us will be lucky to balance the former and the latter: an enchanted exploration of the smallest details of the world and selflessly shedding the shine of our spirit for the sake of enlightening others. To comfort those who have deliberately failed in this task, we can always bring to mind Fellini’s fool from the movie *La Strada* in his holding a pebble in his hand, seemingly useless and neglected by the auto-piloting people passing by in frenzied processions, and showing to the sad dancing spirits of the world how it holds an incredible importance in the eyes of the Universe, and from then either ask, “So what? All is grace”, the last words murmured by the dying priest in yet another classic movie from the 1950s, Robert Bresson’s *Diary of a Country Priest*, or recollect the words exclaimed by my Mom, yet another clown who lived her whole life only to make others happy, when she erroneously thought that an impending end had arrived: “I’ve had a hard life, but when I look back at it now, it is all beautiful”²⁵⁸⁹. And for us who have known the surges of beauty flowing down like waterfalls of heavenly tears, devotionally joyous and compassionately sad at the same time, from the sublime apexes of consciousness whereon the powers of the celestial soul of ours and of the spirit of Cosmos as a whole converge, the mission of reaching them still remains to be completed in this grandest adventure of our lifetimes. Of course, the very walking towards these elevated states of mind where the intimacy of the dialogue between mind and Nature has reached the level of a heartwarming romance infuses our entire beings with an eternally rejuvenating energy, setting us for the interstellar travels far and beyond this transient life of ours, so as to continue to joyously hop from one planet to another, like the Little Prince, in the endless karmic journey of our soul across the infinitely beautiful Cosmos. Therefore, at the very mention of death as the permanent full stop placed on our existence, we could bring to mind the sailors who imagined the Earth to be flat and themselves to be sailing towards its edge from which they will slide into nonexistence when they were gliding to the point of their origin and to seeing the beginning in a new light, so to speak, and then laugh like a sun that radiates the soulful glow of cosmic joy all around it, in the spirit of Yogis who taught that life is just a dream of our eternal soul and that both life and death are but illusive instances of Maya, of the Persian mystic, Hafiz who poetized “how fascinating the idea of death can be. Too bad, though, because it just isn’t true... so divinely laugh, like Hafiz...

²⁵⁸⁹ Uttered in San Francisco on the eve of November 24, 2013.

laugh because that is the purest sound”²⁵⁹⁰, and of Nyegosh’s Abbot Stefan, the blind seer who laughed like a baby when all around him cried at the news of the surviving Montenegrin fighters burying six of their brothers killed during a clash with the Turkish invaders of their motherland in one grave, saying, “If I only knew how to weep for joy, my weep would be sweeter than e’er before. It’s so with me, when my soul is singing, my tears dry up from joy and happiness. Help us, O Lord, and you too, the New Year’s! Since joy comes in to us from every side, let that madman enter our home as well to fill our house with glee, mirth, and laughter!”²⁵⁹¹ By knowing that beginnings and ends of every cosmic story merge into one, embracement of these last words with the angelic arms of our spirit will make up for profound starts of our endless missionary travels by their teaching us how constantly questioning reality which we are a part of, through prayer and science alike, never ceasing to be on the quest for heavenly treasures, on the road that leads to ever more beautiful horizons of being, while simultaneously loving all things and creatures around us, unconditionally posing ourselves as a bridge over which they will walk from the earthly banks of the river of being onto its spiritual, eternal side is the key that unlocks the gateless gate of which Zen sages have poetized, the gate that is everywhere around us, needing a simple Yes to the question of whether we wish to be embraced by the cosmic Love, incessantly posed by the goddess of Nature, to crash in front of our feet and let the rivers of blissful and ethereal beauties to flood our soul with their infinitely energetic streams. Wonder and Love thus get to be mixed in this magic alchemical blend in the right proportion and infused into every tiny detail of ourselves – the shining dance of our eyes, warmhearted vigorousness of our movements, the enchanting resonance of our voice, the joyous and wiggling communication of all the atoms and molecules within ourselves, and the invisible waves of immaculate beauty crashing and washing over the world straight from our heart. For, as put into another set of last words, this time of the musical whiz, Igor Stravinsky, who, after he was asked by his wife, Vera, to sign a postcard not with a made-up name in Latin, as the senile composer did, but with his real name, wrote down, “Oh, how I love you”²⁵⁹², Wonder and Love have no other way but to stand supported by each other and inasmuch as we are a rebel in the eyes of the world by breaking the flow of habit and expectations so as to keep the flame of Wonder enkindled in us can we shine to it with the greatest gift that gods have endowed our spirits with: Love. Naturally, this flies my lustrous spirit over on the wings of the white dove that the ethereal form of life beyond life my Mom, the goddess of this single greatest cosmic power, Love, takes as she draws her last breath in the book of my memory straight to the final last words whispered by her to me in the days when her voice, once as ringing as that of cheeriest angels chirping in choruses, was reduced to almost absolute muteness, when it took mountains to move to utter a single word and whole days to craft two or three of them into something articulate, the words that are the ultimate mantra in my universe of thought and truly the last words one should forget in this life, the words that breathe the spirit of sun gods in me and that could carry me through this life and every subsequent one on their gentle palms where, as she had used to say, drouthy white rabbits gather freely and fearlessly to take sips of the water of life from: *Volim te*, meaning I Love You and describing two nods placed in the centers of the hearts of

one and another and the line drawn between them, the Way whereon all things beautiful, all things awe-inspiring, all things that sustain this majestic reality on their frail shoulders, all things worth falling down on our knees before in spiritual ecstasy, in blood, sweat and joy and tears of one who burns one's own soul at stake for the sake of saving the souls lulled like ships on the waves of the sea of love spilling over from the cup of the heart that is all about drawing these magic lines from its center to the center of hearts surrounding one as unendingly as this sentence of devotion to these two final last words ought to be long, stretching from here to eternity without every coming to an end, yet yielding paths for new beginnings on its every twist and turn and hiding a new garden of Eden full of heavenliest flowers behind every parched wailing wall built along its edges, are found.

S.F.13.2. Many people point out how poor and humiliating human destiny is, starting from the age of carelessness and innocence, passing through the trains of youth and strength, and ending up in the lumps of helpless and lifeless old age. This path, they say, is the same for all humans that have graced the Earth with their presence, whether they were worshipped or detested, pretty or ugly, rich or poor. The destitute have in particular found solace in the fact that this path is virtually the same for those who have had and those who have hadn't, as exemplified by their common evocation of the famous anecdote of Diogenes of Sinope digging through the trash somewhere in Corinth when Alexander the Great stopped by and asked him what he, a famed philosopher, was doing, with the philosopher replying, "I am searching for the bones of your father, but I cannot tell them apart from the bones of his slaves". The brilliance of Diogenes' argument notwithstanding, reference to the fact that a minor's path leads to an equally dark destination as the superior's path should not be a means for brightening anyone's mood except that of a psychopathically envious person. It would be much better if people rejoiced in each other's ascents to bright and blissful vistas of being during the courses of their lives. Therefore, I tell these pessimistic realists that there is a track: a tiny and narrow, and yet always in sight. On it, we live the life of the divine dialogue, the way the co-creational thesis and the Way of Love have suggested. On it, everywhere we see the signs of God, and everywhere we hear divine stories, music and messages. They are also always told to us solely. Each creature creates his own world of experience in an endless communication with God. Everything is encompassed in it: our perception, every miniscule detail of the machinery of our thinking, and yet every act of ours ultimately arises as a response to this endless wave of divine love that has sustained us and has crashed with delicate blessings over us ever since. She does it in a subtle way, like the waves of the sea of Solaris²⁵⁹³, with silence and dreamy quietude as her language. Therefore, more often than not I feel as if each object surrounding us is like the miniature fairy named Arrietty from a studio Ghibli's anime, approaching the big beings as we are from their little angles, softly, shyly and insecurely, but infinitely bravely too, with every tiny breath of theirs. Although most human creatures remain ignorant to these subtle calls that come from all around them, the eyes of the spiritual superman in us are able to recognize the quiet steps that inanimate objects and the waves of cosmic spirit permeating their contents make towards us. "Human beings are never alone as long as the numerous things in the world are gazing at them"²⁵⁹⁴, noticed Yoshida Kiju during a revelatory realization that movies of Yasujirô Ozu express the way inanimate matter experiences characters around them, rather than *vice versa*. Hence, I know that we are never alone. As we grow old, we grow in spirit as well, so that we may rise above our body and laugh at the old man troubles. This is why it is said that one should live one's life in such a

²⁵⁹³ Read the final scene of Stanislaw Lem's *Solaris* (1961).

way that when one is born, one cries, while all around him smile, and when one dies, one smiles, while all around him cry²⁵⁹⁵, being blinded by the dazzling sunlight of divine beauty that remembrances of one awaken in others. For, what others see in the moment of the great transition is only the material plane, the decay on which serves the role to instill the sense of grand importance of life among those who remain living and prevent its casual slipping away from their hands, in a similar way that the birth of a child is hard so as to increase the value of the progeny in the mother's eyes; what they do not see, however, is the spiritual plane, whereon the strenuous climb to the top of a cliff ends with a gorgeous view of the sea of oneness and a release to merge with it, at the moment of which light travels upstream and exits through the head and into the sea, to a greatest relief experienced by a human being. To that end, just like the waves of physical pleasure traversing a human being at the peak of a sexual act could be interpreted by an extraterrestrial observer as an agonizing experience or just as an ascetic yogi sitting still, like a bag of skin and bones, on a bed of nails in a cave at the end of the world, albeit resting in the state of Samadhi, may yield a frightening image to a common man, who'd run away from it as far as he could, so might the final moments of this grandest phase transition that we will inescapably go through seem excruciating to an external viewer, even though they may carry the greatest bliss imaginable to the spirit undergoing it. The experience of a mind approaching this transition between its earthly and ethereal existence may thus be similar to that of St. Teresa's having her heart pierced in a vision by an angelic arrow, which delivered her an unbearable pain and an immeasurable bliss at the same time, the state immortalized by Gian Lorenzo Bernini's altar in the side chapel of a rather small Roman church of Sta Maria della Vittoria. "That the experience of dying may be more pleasant than one imagines"²⁵⁹⁶ is thus, unsurprisingly, the conclusion of a scientific study on passing across the river Styx, albeit drawing but a shadow around the sunshiny joy with which an enlightened soul approaches this grand phase transition in its eternal existence. Grasped as such, this destination towards which our lives stream, the destination that is but a gateway to something greater and even more glorious than life here and now, is to be feared not and perhaps approached with as much serenity as implicit in the view of a Bosnian bard who said that he feared not dying; his "bags were packed" and when the call from Allah comes, he would follow it lightly and gladly. If this is truly so, we need not tremble before the thought of one such moment nor of the vision of the final moments on this climb; rather, we could whistle "wouldn't it be nice if we were older, then we wouldn't have to wait so long"²⁵⁹⁷ for that grandiose transition and the continuation of our karmic journey, wherever the divine mission sends us to. The moments of hardship preceding the immersion into the Sun of divinity at the end of the road will prove to be a small cost for the gaining of a whole eternity, in bliss and glory, that awaits us. When the mystical haze and the gloom of physical pain, fear and uncertainty begin to envelop us thickly, we ought to know that the "mysteries to find" are being found and that, seen as such, an inexpressible beauty lies dormant in them and in the tunneling toward the Sun that they, as a valley of shadows to be crossed on our way to the light, offer. Therefore, when the darkness ominously spelling THE END starts to enfold us, we should rejoice with every atom of strength left in us, not despair. For, the farther we walk down the road of life, the brighter the Sun of divine oneness glowing inside of us and dissolving all the ails that pile up within us could be. Like the wheat field immortalized on

one of Van Gogh's paintings made in the last year of his life²⁵⁹⁸, showing the greenish reaper, that age-old symbol of death, swept over by the joyful bright waves of the wheat shafts and by the blazing sun over it, looking smaller and pettier than a penny in the royal casket glimmering with gold, so can the shine of the divine star of the soul implanted in us upon conception and birth always eclipse with its everlasting beauties any measly ailing brought upon ourselves in the moments of its grand transition under this infinite heavenly dome. Though our insides may be hopelessly black in these moments of frailty and despair, like the silhouette of the king on Matisse's collage *The Sorrows and the King*, and though our hands may lose grip and break around our art, like the king's around his yellow guitar, the shark with two black circles for eyes, coming to swallow the king, is bright, smiling in its funky, crooked way, and similarly bright will be our path running through its belly and taking us to the other bank of the river Styx. And like Bob Sharkey, a World War II hero and a daring descender into Hell for lifesaving reasons, dying laughingly in a blast of light, from a bomb dropped by his friends for some common good, while being tortured by the enemy in search of a grand secret²⁵⁹⁹, so are we, if we only lived this life rightly, having proceeded along the tracks on which but starry trains roll their wheels, bound to die in a sudden eruption of light, silently, with a smile underneath our final breath, exiting this karmic tale, but carrying the heartwarming Secret, the treasure, with us, to the pearly gates and beyond. "Death is so terrible (because) we see death not as the absence of ourselves but as the absence of everything except us", Willard Gaylin noted down in his book about Pinocchio²⁶⁰⁰, a journeyer to the stars on the wings of a simple and unassuming "good heart", making us aware that the most frightening aspect of this great phase transition for our souls comes not from the detachment from our earthly self, but from the refocusing of our attention away from the world and onto our deceasing self, with the solution to this detrimental state naturally being a sustained nourishment of the sense of unison with the whole wide world and beyond, all until everything becomes washed in the sunlight of divine oneness, from now until the death lulls us away. The sunrays reflected in all directions as they bounced off the surface of the sea at noon gradually transform into a single trail of light as the sunset approaches, handing us a powerful symbol of the grand oneness that the animate soul should naturally draw near at the end of its lifetime. The human mind that once used to engage itself in a wondrous dance of intellect, scattering its gorgeous twinkles of wonder in all directions, thus ideally transforms into a grand Way that leads straight to the Sun, the final solace of the soul, at the end of its road. Sometimes I wonder if it was by accident that the Serbian word for "old", *star*, is the same as that describing celestial points of light visible on the Earth's night sky in English, and oftentimes I say to myself that one should live one's life in such a way as to bring about an ever greater convergence of these two terms with the passage of the train of time: the *stariji*, that is, the older one gets, the starrier one ought to become too, all until one wholly transforms into a sacred embodiment of stellar luminosity that blesses all the dark and dispiriting ravines of reality without an exception with its heavenly light. Death, as such, becomes truly "luminous", the way it was foreboded by the beastly apparition inhabiting a baobab tree to the young shaman in Souleymane Cissé's *Yeelen*. And the path that leads in this resplendent direction is none other but the Way of Love drawn vividly across the pages of this book. For, "love is strong as death" (Song of Solomon 8:6), as the Biblical verse reminds us, prompting us to visualize the force of deathful gravity imposed on us in a downward direction, miraculously

counterbalanced by the ascending force of grace, if we were to use Simone Weil's terminology, provided we succeed in following this divine path in the course of our life. The former, earthward pull thus ideally acts as an impetus behind the explosive outburst of the sunrays of our spirit in all directions, reflecting the moment wherein we become One with all that is, when the river of our heart becomes the omnipresent ocean of blissful divinity. After all, the force of gravity and touch with the Earth pushing us downwards are always balanced by the light and sublime feelings that push us upwards, and as the inescapable curse, of which the Beatles' sang along at the very end of their road, "Boy, you're gonna carry that weight for a long time"²⁶⁰¹, the weight poignantly evoked in the last, frozen frame of the life of the AIDS victim, Andrew Beckett, rewound to its carefree beginnings, when all that was supposed to be done was to let all the burdens of shame, fear and ego go and release oneself like a kite into the marine skies, in the movie Philadelphia, takes over our bodies, making them older, crumblier and heavier with every passing day, we should know that an ever wider space becomes simultaneously open for the counterbalancing flights of the angelic spirit of ours, for the "golden slumber to fill our eyes"²⁶⁰², if we were to continue resting our ears on epic Abbey Road by the Beatles. Seen through the eyes of this balance wherein the more we die in our evanescent body, the more we approach the sun of ultimate spiritual fulfillment, the end of our roads in this life and takeoffs to other, hopefully even more enlightening and divine ones, with the ticket of our karma in our hands, should be approached with celestial joy and happiness. The Toltec sages would surely agree with this point in view, believing in an egg-shaped soul glowing from the center of our beings, slowly developing during our lives and then, during the final metamorphosis of our lives, when the cocoon turns into a butterfly, hatching into an eternal starry spirit, right at the moment of the departure of our biological self to dust, as if drawing in the sand a Newtonian law of action and reaction on the spiritual plane, whereby forces dragging us up and down are always neatly balanced. While mortal mindsets worshipping sheer physicality will continue to see the desperation of death in these grand phase transitions, those whose minds are aligned with the spiritual plane and who see reality as *maya* and the sea of spirit from which all physical things arise akin to its foam as reality will recognize in them the moments of birth, the onsets of the flights to freedom and of long sought unification of human spirits with this ocean of spiritual light that pervades all things. From this cognitive panorama, we could glimpse a star of thought that secretly tells us that there is no beauty like the beauty of dying. Or, as Paddy McAloon said it amongst whistles in the midst of a record buried in time and ended with the dreamy steps toward the Pearly Gates (Revelation 21:21), "Beauty can't be beauty 'till it's dying"²⁶⁰³. Moreover, as we have been engaged in the process of dying from the moment we were born, we could also add that the art of living equals the art of dying. And one of our main spiritual aims in this life is to learn this art. Moreover, it seems that our spiritual progress is directly proportional to the level of our mastery of this art. This is so because the meanings of life and death are inextricably linked to each other. For as long as Goethe's doctor Faust aimed to reveal the secret of the eternal existence, he struggled, as if roaming alone through the dark labyrinths of his mind. But once he accepted his human fragileness and let himself die while passionately living for the sake of edifying other people and the world as a whole, he finally set his spirit on the angelic voyage to heavenly salvation and true eternity. Hence, only after we give away the energy, creativity and spirit concealed and stored within ourselves, we may become truly liberated. Or, as Kahlil Gibran

put it, “When the earth shall claim your limbs, then shall you truly dance”²⁶⁰⁴. Which flies me over once more to my Mom’s words mentioned just a bit earlier, “I’ve had a hard life, but when I look back at it now, it is all beautiful”, the words which, when uttered, brought about an immediate flashback of my own life, as short as that of a lily of the field, and how in it the most calamitous moments have indeed been the most beautiful, which suddenly dispelled all the fear of dying in me, for I knew then that the beauty greater than any seen until then would be findable in the midst of this magnificent moment that is both a farewell to the earth and a gate to clouds nested above our heads. Gibran’s cramps that have kept us firmly anchored to the ground are thus being hammered and our spirit, freely and restlessly, like a white seagull, begins to fly across the divine skies. The entire metaphoric message of Christianity is the same: to die in our tiny self that lives merely for its own survival and prosperity, and start living for the world. Walking down *Via Appia*, like the Christ seen by St. Peter, to whom he proclaimed the eternal message – “I am going to Rome to be crucified again”- becomes then what our being does with every heartbeat thereof, the heartbeat that sends the question *Que Vadis Domine* to voyage in pulses across the stellar space of our heart and mind. With the death of our ego/self comes resurrection when the true eternity of being is reached. Everything then becomes One, a colossal bliss of unity of our spirit and Nature.

S.F.13.3. The metaphor of Gaia, of the entire planet as one giant creature that we are only a miniscule part of, breathing with all our joys and troubles, presents one of the strongest religious figures of thought of the modern times. Whenever the worrisome thoughts of our tiny self, such as feeling isolated from the rest of the world and immersed into selfish and egotistic networks of relationships in which everyone’s business is to use and abuse everyone else, eclipse the shine of our soul, we should simply recall that we are a part of this great One. As the autopoietic thesis tells us, every living entity, be it a biomolecule, a cell, a tissue, an organism, a social unity or an ecosystem, has the role of edifying and recreating all the surrounding entities, which in turn revive and refresh itself. Hence, wherever we look, we may find an incessant creative mirroring of living systems. I draw the beauty in you, and you draw the beauty in me. Mind co-creates Nature, and Nature co-creates mind, which is, of course, the essence of the co-creational thesis. Only if we are ready to give up our tiny self and immerse our mind in the oneness of Nature, to accept everything in this world as part of ourselves and ourselves as part of everything can we penetrate with the rays of our attention into many hidden meanings of the world around us and become a visionary mind, wittily outlining prosperous paths for the future of human and superhuman being. Miraculously, as we accept ourselves as an integral part of Gaia, of that great organism that endlessly evolves to ever more brilliant expressions of itself, we start to feel as if an imaginary faucet that stood between our consciousness and the world has been released, and the columns of bright, shiny energy dawn on us, making us inhale and bring to the world the divine energy of being. As the Christ has prophesied, “He that findeth his life shall lose it: and he that loseth his life for my sake shall find it... And whosoever shall exalt himself shall be abased; and he that shall humble himself shall be exalted” (Matthew 10:39...23:12). As we humble ourselves in front of the wonders of the world by accepting this oneness, which has been the ultimate spiritual destination of possibly all the religions of the world, the troublesome thoughts and the stressful loneliness vanish altogether, and we open our mind to the unity of all being. We become free like a bird, as no barricades of fear stand in front of us anymore. Only a road stretching out into the distance, beyond the farthest horizons, leading to the Sun, the symbol of unity of all being, stands there. Walking on that road, we flexibly fluctuate around the balance of the Way of Love. As such, we are all about love and

²⁶⁰⁴ See Kahlil Gibran’s *The Prophet*, Alfred A. Knopf, New York, NY (1923), pp.81.

grace: love, joyfully spread around us in the ecstatic dancing of our spirit, so that wherever we place our hands, whatever we touch, our palms would give off the warm waves of love, and grace, coming from our looking inwards, to the glowing ball of light that our soul is. The soul the light of which becomes so miraculously clear only after we give up on carefully confining it within us and decide that “blessed are the poor in spirit for theirs is the kingdom of heaven” (Matthew 5:3). It is thus that we break the satanic dams of selfishness and egotism and let the shine of our soul unite with the Sun of Nature in this infinitely candid communication between mind and Nature that the co-creational thesis and the Way of Love have prophesied about.

S.F.13.4. These two basic tenets of my philosophy, the co-creational thesis and the Way of Love, have been all about explicating a dualistic nature of experiential origins, invoking a dialogue between human minds and Nature as immanent in all the details of reality as we perceive it. Yet, to reach the ultimate art in this life, the art of dying, of giving up our tiny self so as to release the shine we keep inside outwardly and bless the world with it, we must accept the oneness of our being and Nature and thus return to the sacred monism in our minds and hearts. By accepting this oneness and seeing our self as a part of that great wheel of Nature that spins and endlessly brings about more beautiful emanations of life, all the fears, including the fear of dying, vanish. And as this wheel spins, the events of awakening, rising, plateauing, descending and slumbering are well balanced. As the Sun sets at one place, it rises on another. But, “the Sun don’t go down; it’s just an illusion caused by the Earth spinning around”²⁶⁰⁵, Wayne Coyne sang, showing us that whether we see evanescence of things or an unstoppable and eternal evolution depends on our point of view. Growth and withering are well balanced in the course of the overall natural and spiritual evolution. “Everything goes by and yet everything grows”, Confucius noticed once. Thus, deeply ingrained in every form of life is the desire to live. If we were able to penetrate with some Superman-like eyes to the essence of life, behind the veil of its visible forms, we would see the waves of the desire to love and the lust for life as ultimately moving us through the day. In the movie *Limelight*, Charlie Chaplin tries to inculcate this lust for life in his apathetic girlish friend, who is obsessed with Schopenhauer’s philosophy and sees no meaning in life, by saying: “What do you want meaning for? Life is a desire, not a meaning. Desire is the theme of all life. It is what makes rose want to be a rose, to grow like that. And a rock wants to contain itself, and remain like that”. Furthermore, by doing science for many years and switching back and forth between materials and life sciences, I learned to recognize an energetic liveliness intrinsic to the attitude of life scientists and a quiet, solid stillness of those engaged in classical materials science. While it is in the nature of inorganic matter to be still and inert, it is in the nature of proteins and other biomolecules to be sensitive to the slightest environmental “breezes” and able to swiftly conformationally “swing” between their states so as to give and sustain life resultantly. As Friedrich Nietzsche noticed, “Whoever battles with monsters had better see that it does not turn him into monster: and if you gaze long into an abyss, the abyss will gaze back into you”. In a brighter and more cheerful way, this may be paraphrased as “the more beauty we see in the world, the more beautiful we become, and *vice versa*”. This mirroring mutuality stands in sympathy with the Way of Love, which, simply saying, tells us that mind draws Nature, whereas Nature draws mind in the course of their co-creational interaction and evolution.

S.F.13.5. The symbolism of the Sun has never ceased to amaze me. Knowing that divine Nature has the task of teaching us how to become similarly divine, I implicitly accepted that we ought to

²⁶⁰⁵ Listen to Flaming Lips’ *Do You Realize??* on Yoshimi Battles the Pink Robots, Warner Bros (2002).

adopt the quiet language of natural landscapes at the depths of our mind and heart to attain this aim. However, amongst all natural appearances known to us, the image of the Sun might carry the most profound meaning of them all in its selfless ability to yield life all around it and awaken feelings of divine cheerfulness within every form of life. Let us, first of all, look at how these lifesaving sunrays originate inside of this fiery stellar ball. Namely, the Sun burns its essence owing to a balance between the gravitational force that tries to implode its content and turn the whole star into a meditative singularity and the explosive force that tries to dissipate the star into the surrounding cosmic spaces. Obviously, similarly equilibrated prayerful withdrawnness and explosive expressiveness could be found engrained within all the brilliant minds that inhabit this Universe. For this reason, with its ingrained synchrony between an inner withdrawnness and an outward shine that heals and gives rise to all life, the Sun is indeed the highest ideal in our voyaging along the stellar route defined by the Way of Love. Then, if we were to look closer at how the waves of sunlight journey through the planetary atmosphere, we would realize that sunrays travel directly to their destination, with the exception of blue light that “gets lost”, giving as a result the blue color of the sea and the sky. To one who has a tendency to never be too direct in relationships with others, but merely resemble a satellite that circles around the Sun it adores or a ship that cruises around an exotic island it is enchanted with, though never landing on it, this metaphor of directedness can be greatly beneficial. To feed the world with the light, one has to be determined, willful and honestly open and direct, and yet to color it with beautiful blueness, one has to get lost inside of one’s dreamy interior landscapes. Realizing this is nothing but shaking the dust off the stone which we have stood on, uncovering the foundations of the Way of Love and realizing that from these sacred pedestals we have watched the Sun this time. Directivity and focus are signs of our involvement in a directly facing interaction, the one idealized in Martin Buber’s philosophy of I and Thou; yet, to sustain the beautifying energy waving on these rays of attention that connect ourselves and others, we need to dwell deep inside of ourselves and from these inner sources enrich the magical, sci-fi conveyor belts of the beams of our attention with the little treasured gifts of spirit that the children of the world will be enchanted with. Yet, to not fall asleep while roaming around these glistening inner landscapes of our being and retain the creative openness of ours, through which we will channel this inner shine outwardly, we should be guided by the belief that when we face others with our heart beaming with the focused rays of love, grace and an everlasting beauty, the whole world in front of us will become a more enlightened place, as if illuminated by the invisible divine lantern rooted within ourselves. Finally, if we were to take a look at the effect these swarms of photons have on the Earth and its creatures as they touch them, we would clearly glimpse their dual nature. As if being an epitome of the mythological Shiva who alternately creates and destructs the world, the Sun gives life on one hand, but is also the source of damaging high-energy sunrays. Although the majority of common inhabitants of the developed world more avoid the sunlight rather than freely bath in it, evidence piles up in favor of unknown beneficial effects of the ultraviolet sunrays on various forms of life²⁶⁰⁶. Not only does the ultraviolet radiation present a natural disinfectant that freely abounds in the air around us, but applying sunscreen agents to “protect” us from the Sun may induce the formation of far more toxic chemicals in the reaction between these relatively energetic electromagnetic waves and ultrafine particles that most

²⁶⁰⁶ See Craig E. Williamson and Kevin C. Rose – “When UV Meets Fresh Water”, *Science* 329 (5992) 637 – 639 (2010).

sunscreen agents utilize, be they zinc oxide²⁶⁰⁷ or titanium oxide²⁶⁰⁸ ones, let alone the fact that chemical sunscreens suppress the cutaneous production of vitamin D²⁶⁰⁹, itself a compound with pronounced anticancer properties, and the fact that it has never been proven that sunscreen agents, in fact, prevent malignancies to form on skin by shielding it from the UV rays²⁶¹⁰. Hence, asked why I never applied sunscreen chemicals onto my skin, my answer is often along the line of highlighting the fact that, from a holistic, ecospheric point of view, my own death by the Sun would be more beneficial for the planet than poisoning it by pumping money into chemical factories producing these agents and polluting the environment, let alone dissipating upon use into particles and molecules with a potentially dangerous and disruptive effect on the web of life. Besides, despite the common phobias that pertain to potentially dangerous effects of the Sun, I have never felt any fear by looking into this celestial epitome of the dialectical love. For, I know that “the one whom Heavens want to protect, they overwhelm with Love” (Tao-Te-Xing 67), as Lao-Tzu said once. Hence, love radiating from our heart is the greatest shield and sunscreen agent that we can think of. In the end, that is why we are here: to learn to reflect the divine beauty of Nature in our inner landscapes of heart and mind. To switch between all the human emotions symbolized by bright and shiny, cloudy and rainy, flashing and stormy, breezy and chilly moments of a natural landscape, knowing that fertility of the land is preserved only through the balance between a sunny joyfulness and a saddening rain. But we should know that far beyond all the clouds of thought and emotion, there is a seat of the everlastingly shining soul. Thus, the aim is to become a shining Sun in its harmony between an inner withdrawnness and a bright and healing radiance, somewhat like the crucified Christ with its head bowed down, as if carefully listening to the music of divine messages playing in his heart, and hands stretched outward, as if giving all these inner treasures freely to the world.

S.F.13.6. The Sun tells us of another important guiding principle: slowly reaching for the top. Have you ever witnessed the Sun abruptly overcast the night stars? No, it always does it slowly and gradually. The same can be said for every form of creation and communication that we engage ourselves in. The first steps are always the hardest, just like it takes significant amounts of energy to move the wheels of a train after it remained still for some time. But as it starts moving, inertia will take over and it will require less and less energy to keep the train moving at a constant speed. Also, as we strike up a conversation with others, we never jump to deep topics and points immediately, but start by scratching the surface, with unpretentious and ordinary comments, as if knowing that if drilling the Earth’s crust during oil excavations can trigger earthquakes, how much more of emotional echoes originating from the deep cognitive centers of surrounding beings can be instigated by smartly posed thoughts and comments that seemingly only graze their surface,

That nothing has changed in the 13 years following this report can be read from Lisa Rapaport’s article There’s Almost No Evidence Daily Sunscreen Use Can Prevent Skin Cancer, *Huffington Post* (August 5, 2016), retrieved from http://www.huffingtonpost.com/entry/theres-almost-no-evidence-daily-sunscreen-use-can-prevent-skin-cancer_us_57a4bf03e4b021fd98786f0b.

but, in fact, leave a far deeper scar through which unexpected spiritual shine can emerge on the surface. Artists entering the stage and dancers hitting the dance floor must be familiar with this rule that dictates that first steps ought to be made as unpretentiously as the way in which the Little Tramp began his legendary speech at the end of the Great Dictator. Their first words and moves consequently rarely radiate with passionate giving of their hearts to the audience. Like sprinters warming up for the race or the first crystallization nuclei growing from a mishmash of a fluid and amorphous solid state, so do masterful performers begin their acts akin to a camouflaged animal, perfectly blended with its surrounding, as disorderly and awkwardly as the Little Tramp mistaken for Adolf Hitler in the final scene of the Great Dictator, gradually growing in the intensity of their glow all until they eventually eclipse all else with the brightness of their burning blaze. I have thus often begun my lectures by resembling a starry sky and letting my words reverberate with distant coldness, reaching the point when the audience would start to feel an almost intimidating awe. The beginnings of my public performances would thus be almost reflections of the way Dmitri Shostakovich envisaged chamber orchestras to play his final string quarter, No. 15, starting off for the first ten minutes of it “so that flies drop dead in midair and the audience start leaving the hall from sheer boredom”²⁶¹¹. Only then, after the opening mumbles and jumbles that seem to draw but a road to nowhere, I would slowly increase the radiance of expressions sent out from the core of my heart and mind, all until an astonishing and dazzling burst of inspiration and love washes over the audience, binding each and every one within a shiny sense of unity with the bonds of trust, confidence and the deepest reverence conceivable. Some may say that warming up is required in case of any performance of ours, be it expressing ourselves in daily communications, shaking our starry essence on the dance floor or holding an inspiring lecture, as much as in any sporting activity. The Serbian saying that “the first kittens are thrown to the water” is instructive in this sense as much as the advice given out by the two British drama professors: “The hardest thing to learn (in juggling) is not ‘how to juggle, but how to let the balls drop. It is the same with improvisation. The hardest thing to learn is that failure doesn’t matter... What matters is to listen, to watch, to add to what is happening rather than to subtract from it – and to avoid the reflex of trying to make it into something you think it *ought* to be, rather than letting it become what it *can* be”²⁶¹². Of course, earlier we grazed the point directly derivable from the co-creational thesis, telling us that whatever our creative endeavors are, trying our best to copy the blueprints of our visions and dreams onto the substrates of reality with perfect precision instead of letting the other creative side in anything that we create, Nature herself, infuse some of her unpredictable essence as well into the products of our creativity, endowing the latter with the epithet of constantly self-rejuvenating and improvisatory along the way, presents an inherently wrong approach. Also, the starting point of every enticing expression lies in being aware that whereas perfections promote unapproachably fortified appearances of our being that induce stagnation of the process of our learning and development, imperfections are crucial in terms of opening room for our growth beyond the sum of qualities that we currently represent. Rejoicing in view of the mistakes made rather than letting them present hurdles on whose mental reflections we will repeatedly stumble and eventually collapse into an expressionless cocoon is thus the trait common to all the utterly talented stage personas. Firmly believing in the vital importance of such senses of being stuck in performance while trying to dig natural moves of the moment that will enlighten and uplift the

²⁶¹² See Anthony Frost’s and Ralph Yarrow’s *Improvisation in Drama*, 2nd Edition, Palgrave Macmillan, New York, NY (2007), pp. 4.

watchers, Roddy Maude-Roxby, one of the founders of the improvisatory Theatre Machine wherein actors were named “players” and where the dichotomy of being right or wrong has wholly vanished, noticed how “the most important moment in improvisation is when you don’t know what will happen next”²⁶¹³. All in all, thus, the first steps in communication are important, but we do not necessarily need to craft them with a perfect precision if we want to be eventually successful. If we do, we might over-reflect on our movements, which would predispose us to an unpleasant timidity. Reflections on our actions are a necessary precondition for behaving wisely, but they need to be always mingled with a dose of intuitive spontaneity. This is because, as men, we stand forth as a strange blend of animals and godlike creatures. Likewise, human consciousness and its unforeseen graces beyond evolve not in sudden bursts, but through slowly ascending from the most primitive to the most divine forms of life. Hence, whatever creative that we yield for the world, it ought to resemble the morning Sun that slowly extinguishes the night stars before it subdues the entire sky to its magnificent glow. “Show His eyes, grieve His heart, come like shadows, so depart”²⁶¹⁴, says a choir of witches in William Shakespeare in *Macbeth*, calling for a similar eruption of godly passions before spectators, so long as the performance beginning and ends blend with the background, the ideal with which in mind inspiring performers have stepped on stages all the world over. After all, just as the Way of Love teaches us with its intrinsic balance between the empathic oneness and the meditative uniqueness, creative incentives and deeds of ours ought to partly conform to the environment and partly become a unique voice of progressiveness in the world. Should the former pole become overly emphasized, we would not succeed in bringing crucial steps forward with our thoughts and acts. But if the latter pole becomes dominant, our ideas may easily remain misunderstood and unintelligible to others. Whether we have abstract ideas, architectural works or dancing moves in mind, they always need to be conceived and expressed in a way that fits their environment and yet stands out with a unique and exceptional beauty. Even the Christ who illuminated hearts and minds of billions of creatures of this planet lived up to a balance between respecting the Biblical tradition and the actual teaching of his time and standing up against those very same ones while living in harmony with the divine messages that electrifyingly bounced back and forth across the sky of his soul. For, enlightening social change is brought neither by absolutely revolutionary attitudes that debase all around them nor by total conformism, but by a miraculous blend of rebelliously confronting obsolete traits of the world, as driven by our visionary purity, and respectably journeying down the same path as others, as sustained by our love and compassion. Hence, just as the Way of Love has taught us, one ear of ours has to be leaned inward, carefully listening to the divine voice that reverberates with a missionary music, whereas the other ear has to lean in empathy onto hearts of others, thus rendering us able to draw our moves in the world in harmony with our own heart and with hearts of others.

S.F.13.7. The Sun and the Earth in their dancing around each other present the most powerful symbol of what our interaction with others should be like, of what we are meant to become one day. The Sun and the Earth never stop spinning. They are engaged in an endless motion, during which the Earth alternately shows its face and then the back to the Sun. In such a way, it invites people on the Earth to incessantly compare the wonderful diversity of daily landscapes of the living and inanimate matter alike with the starry vastness of an unexplored emptiness of the Cosmos and probably never reachable habitats of extraterrestrial beauty and intelligence. The wisdom in us

²⁶¹³ *Ibid.*, pp. 80.

²⁶¹⁴ See William Shakespeare’s *Macbeth*, Act IV, Scene 1, lines 125 – 126 (1611), available at <http://shakespeare.mit.edu/macbeth/full.html>.

arises only through such comparisons between the abysses of emptiness that our lives begin and end with and the wonderful bridges between the two that our lives stand for. As we stand on these bridges of life, seemingly suspended without any substantial support, we may wonder where the beginnings and the ends lie. Where are the ending pillars that support this bridge of life? What are the true origins of the miraculous dance of atoms that gives rise to everything we perceive? Where are the foundations of all things around us? As the co-creational thesis suggests, one pillar of the bridge of experience on which we stand is deeply buried within the divine foundations of godly Nature, whereas the other one stays hidden within our soul. The most profound journey our adventurous spirit may take us on is to search for these treasures sunken as the human mind got expelled from the Paradise, as described in the Biblical story about the beginnings of humanity. Quite probably, as we get close to one of these poles, we will realize that we have been simultaneously approaching the other one as well. For, one without the other cannot exist. Or, as Pascal put it in one of his *Pensées*, “Nature has set us so well in the centre, that if we change one side of the balance, we change the other also. This makes me believe that the springs in our brain are so adjusted that he who touches one touches also its contrary”²⁶¹⁵. It is the touch between mind and Nature dancing together that gives rise to all the perceptible information comprising what we call the world and ourselves. As the Sun and the Earth clearly show, if this dance stopped, if the Earth were to decide to stop rotating around its own axis and around the Sun, the life itself would suffer. The night side of the Earth would slowly wither without the precious sunlight that the life feeds upon, and slowly, but inevitably the process of decay would spread to the other, sunlit side of the Earth. This shows us that a permanent change of perspectives is the essence of prosperous living. And this is achieved by nothing else but dancing: looking at the world from one and then from another and then from yet other points of view, awakening a pure soulful astonishment on the way. While looking with amazement at this powerful dance of the Sun and the Earth, we see the planetary life evolving in its adoration and worship of the Sun it revolves around. But the Sun does not enjoy in merely keeping the Earth passively follow it everywhere it goes and making it thoroughly dependent on it. The Sun builds life, fostering it to evolve. It does not supply everything we need, because in that case the human minds would become inherently lazy and the overall progress of our inner and outer landscapes would collapse. Hence, the Sun teaches us how to build other suns, other sources of love and energy in our vicinity. In doing so, we ourselves are becoming little suns, as we gradually transfer our creative attention from sustaining ourselves only in the neo-Darwinian battle for survival, in which the lower forms of life are being thoroughly absorbed, to selflessly living for the sake of beautifying the surrounding landscapes, objects and beings. After all, the essence of the process of growing up in this life is not about becoming a stiff sheep that obeys shepherds that feed it, but transforming into an anarchic sun that sends rays of healing love to each and every one without making a prior selection as to who will receive it and who will not. It is thus that we become an epitome of a genuine parent that has learnt to love his sons and daughters in all their self-centeredness and naivety, a selfless steward of every segment of reality in which we are immersed and an honorable holder of the lantern of care, the basis of our epistemologies that has sustained our civilization on the upward path and a first step in our journey towards becoming gods on earth. Eventually, as we keep the ideal of becoming a spiritual Sun in our lives, we will be heading on the way that ascends us towards ever more beautiful heights from which we see and be love and gracefulness. In the Mundaka Upanishad, human heart is likened to a tree on which two birds live, one hopping restlessly between the lower branches and ceaselessly

²⁶¹⁵ See Blaise Pascal’s *Pensée* No. 70, Translated by W. F. Trotter, available at [http://oregonstate.edu/instruct/phl302/texts/pascal/pensees-a.html#SECTION II \(1669\)](http://oregonstate.edu/instruct/phl302/texts/pascal/pensees-a.html#SECTION II (1669)).

gazing at the other one, who quietly and solemnly rests on the treetop, looking with an immaculate grace at a faraway distance. Though the twitchy little bird venerated its sublime twin as an ideal of who it should become one day, driven by her humane curiosity and the spirit of adventurousness, it jumped from one branch to another, trying almost all the fruits that it could find hanging there. Some of those were sweet and savory, making our little bird happy and joyful. But some of those were bitter and sour, invoking moments of desperation and sadness in our little bird, making her think that she would never be able to reach the great heights at which the spirit of the great bird resided. However, all along her swinging between the moments of satisfaction and depression, one day, suddenly, like a miracle, she realized that she has imperceptibly become that great bird and, even more, that she has always been that great bird deep inside of her, in her innocent and pure pining for the spiritual treasures of the world. When she looked back, she realized that she has always been the divine ideal of hers. Atman thus becomes aware that it has ever since been equal to Brahman, just one part of the divine One temporarily separated from the divine essence of the Universe for the sake of fulfilling its beautiful mission on Earth. And that mission could be fulfilled only insofar as we invest our whole heart and passions in it. If we somehow knew that we were safely enwrapped in the light divine, fully protected by it, our eagerness in attempts to achieve something extraordinary for the world would wither. This is why we are still left searching and not finding. But, still, every once in a while, we gain a chance to catch this magnificent glimpse of the wholeness and heavenly unity that the world is, which adds up to the collage of wonderful impressions that will get to carry us on their wings during the moments of hardship, perplexity and doubt. But, we know, the light of a pure divinity has always shone on our little bird. In another beautiful story about birds, written by Farid ad-Din Attar, thirty birds set out on a quest to find Simorgh, the king of all birds. As they travel and pass through many adventures, they finally arrive at their destination, facing Simorgh. But by looking at it, they become puzzled, as they could not tell if they are looking at Simorgh, the king of all birds, or they are merely looking at themselves. So they ask Simorgh to explain to them what they see, and Simorgh says that only while they were seeking for it, with the whole of their hearts, they were on the right way, radiating with the heavenly light to the world. Finally, invited by Simorgh, “the birds faded away in him, the shadow disappearing in the Sun, and that is all”²⁶¹⁶. Similarly, by wondering over the great symbolism of the Sun, and deep inside of ourselves wishing intensively, with a mountain-moving strength, to awaken one such Sun in our soul, one day we will realize the same. We will have suddenly become a Sun, although slowly and imperceptibly, without even noticing the transition from an ordinary creature to an emanation of sun-like godliness. Because, after all, although the suns shine to the world, owing to the blind spot effect they can never realize nor recognize their own shine. In those moments, we will find a mysterious grace shining forth from our heart, warming up the world around us by its waves of light that illuminate not ourselves, but other, miniscule details of the world, thereby subtly and indirectly awakening the worldly creatures from their careless slumber, opening their minds and enlarging the versatility of their cognitive perspectives, which is a powerful guidance as to how the impeccably stellar teaching method in our little worlds should look like. Like a real superstar, we may appear disinterested in facing others, because of being enchanted by numerous wonderful details of the world and dwelling deeply within the essence of our being, making sure nothing outside of us spoils its blessing glow. But when we look at other fellow human eyes, we will make stars move by the beauty thereof. We will make them soften up and almost melt by the wondrous sparkles of vivacious gracefulness and serene, sunny peacefulness faced. Like the boy looking with an enchanting wonder at the pebbles before which

²⁶¹⁶ See Eva de Vitray-Meyerovitch's *Anthology of Sufi Texts*, Naprijed, Zagreb, Croatia (1978).

he kneels, like Archimedes focused on drawing his circles in the sand, or like a modern hero who goes away from a corrupted city to the woods, impresses the palm of his hand onto the ground filled with pine needles and, like hypnotized, watches its imprint²⁶¹⁷, we too, tuned to the balance of the Way of Love, may appear dissipated and dreamy in other people's presence, even though we may be carefully listening to all the things being said. But because we look at everything from the top of the beautiful fortress of our heart - helping us empathically stretch our views to the beautiful sea of human emotions and intentions lying in front of us – and see everything through the visor of an eye of the heart, never losing it out of sight, the others may accuse us of being inattentive and disrespectful. Despite that, we would still be living, thinking and breathing the whole life long with a great wish to shine the carefully cultivated light within us to the beings of the world, including the ones that criticize and hate us the most. And when the eyes of ours are raised to look at another, the miraculous rays of love and pure bliss would be sent to them. After all, for as long as we keep the balance of the Way of Love in us, we naturally do not let judgments and badmouthing of others agitate or annoy us, knowing “that ye may be the children of your Father which is in heaven: for he maketh his sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust. For if ye love them which love you, what reward have ye? Do not even the publicans the same? And if ye salute your brethren only, what do ye more than others? Do not even the publicans so? Be ye therefore perfect, even as your Father which is in heaven is perfect” (Matthew 5:44-48). The Sun shines but does not make a difference as to who should receive its light and who should not, sending its light equally to everyone, although not forgetting to adjust its language to the capabilities and needs of the person she speaks to. Thence, as the Way of Love teaches us, the Sun meditatively dwells deep inside of itself, and yet burns such a great love within that it makes the whole planet, with innumerable human eyes and carousels of joy and wonder spinning in them thrive in its light. But the Sun knows that to manage so, it should not get too close to the object of its love. To do so would be equal to burning it, and that cannot be called love. “Even after all this time, the Sun never says to the Earth: ‘You owe me’”, as Hafiz puts it in the Gift, concluding that “the gift must keep moving”. Hence, the Way of Love is preserved when one partly stays immersed deep inside of one's mind and yet everything one has, thinks, feels or simply is gets offered as a sacrifice for the sake of enriching the surrounding planets, for beautification and salvation of which one truly lives. To stay distant and yet to be merged into one – that is the greatest task we have to learn in this life. That is the symbolism of ways as entities that connect things inherently separated. That is also the essence of the Way of Love. That is when we can dance with others for the sake of mutual enjoyment, making each one of us develop towards ever greater shine of one's soul, thus transforming ordinary planets into real stars, and multiplying without bound the starry fields of love and wonder of the Universe.

S.F.13.8. In the end, I will leave you with this collection of thoughts, scattered through the pages of this book like the tiny, palpitating lights that wave to us from the starry sky. Each one of these paragraphs offers an entrance to a wonderful and enchanting mystery of philosophical thought. As we decide to walk along their passageways, we may realize that each one of them is like a mysterious gate which, when opened with the light of understanding, leads to enchanting new horizons of thought, opening views of endless seascapes, sunsets, skylines and friendly forests in front of us, in which our adventurous sunny spirit can readily hop into, enriching our beings with beautiful insights and helping us get closer to our ideal of becoming a true dancing star on earth, devotedly shining to it with the rays of celestial beauty and love. And, now, as we have reached

²⁶¹⁷ See Douglas Coupland's *Life after God*, Simon & Schuster, London, UK (1994).

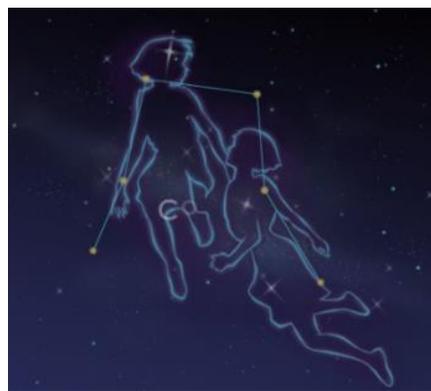

the finale of this book, I am leaving you alone with them. As I proceed towards new horizons of thought and slowly vanish in the distance, as all heroic cowboys and Don-Quixotian spirits do, riding off into the sunset, back to the beginnings where, as in the story of this book, I would be fancily drawing with crayons on the pavement or collecting pebbles from the ground, like a Kid A or a Little Prince, letting the celestial crown of thought on my head be unrecognizable to the ordinary grownups busy with figuring out the ways to celebrate their egos, hiding as a king among runaways, all the way knowing that only when we become servants and children (Matthew 19:14), only when we humble down ourselves until we become like an Ocean (Tao-Te-Xing 66), coming close to the earthly creatures which we can then fully give our hearts to while the rivers of their warmhearted feelings all journey into the sea of our own, feeding it with Love, can we touch the doors of the Heavens and catch glimpses of their beauty, thus feeding the starry twinkle of Wonder in our eyes, I give myself a vow that whatever it is that I do, whatever the situation I find myself into and whatever the things I get to hold in my hands appear like, I will always breathlessly live to breathe an enlightening beauty in every tiny detail of the world and of the surrounding creatures, sowing seeds of divine starriness all over the fields of the world. This will be the beauty that saves the world.

S.F.13.9. “One loves the sunset when one is so sad”, says the Little Prince, a sacred intergalactic voyager familiar with the fact that each life is a universe in itself, evolving from the beginning to an end just like the Cosmos as a whole, hiding in its heart both the sources of the most fulfilling insights imaginable, insights that the depths of the fountainheads of our beings crave to welcome with their watery chests, and the key to why gazing at the eyes of even the least delicate details thereof can take us by the hand to the edge of enlightenment, the edge which we could cross, of course, only by flying on the wings of empathy. And, verily, all my life I have been in love with sunsets, which has been a sign for me that a blend of a see-deep melancholy and sirens of joy have been ever since swimming through my veins. More enchanting than any of them have been sunsets with an orange Sun graciously sinking into the sea, the symbol of the unity of all being and the ultimate destination for our souls. They served as a reminder of how the life path of a celestial creature watched over by angels should be like. Namely, although we may have come to this world yelling, crying and kicking, we should leave it with silent, solemn smiles that resemble a red Sun sinking into the sea. For, although our body grows old on one track along which the starry train of our being journeys through life, our spirit on the other track grows in luminosity, so that it may be able to face God in its full light at the Pearly Gates. And one of the things I am most grateful to the Montenegrin cultural heritage of mine for is its cult of heroic “sailing to the stars”. All of my close ancestors and relatives on the Montenegrin side died in the open air, just as all sacred warriors of light do. So when hard times strike, I recall the final verses from Nyegosh’s Mountain Wreath: “O scowling Vuk, again lift thy moustaches! And let me see the tokens on thy chest, that I may count the bullets of the rifles, to see how many broke upon thy breast”²⁶¹⁸. As these words echo in my mind, I begin to feel as if “strength and courage overrides the privileged and weary eyes of river poet search *naivete*”²⁶¹⁹, as one of the most beautiful songs about rivers merging into the Ocean at the end of their ways tells us. And yet, we can merge with this Ocean of being and become One with everything at any given moment, while recalling the words of C. E. Lewis: “Give up your self, and you will find your real self. Lose your life and you will save it. Submit to death,

²⁶¹⁸ See Petar Petrovich Nyegosh’s *The Mountain Wreath*, rendered into English by James. W. Wiles, George Allen & Unwin, London, UK (1930), pp. 220.

²⁶¹⁹ Listen to R.E.M.’s *Find the River on Automatic for the People*, Warner Bros (1993).

death of your ambitions and favourite wishes every day and death of your whole body in the end: submit with every fibre of your being, and you will find eternal life. Keep back nothing. Nothing that you have not given away will ever be really yours. Nothing in you that has not died will ever be raised from the dead. Look for yourself, and you will find in the long run only hatred, loneliness, despair, rage, ruin, and decay. But look for Christ and you will find Him, and with Him everything else thrown in”²⁶²⁰. Rainer Maria Rilke has thus mysteriously claimed that “a perfect life equals a perfect death”, as if reminding us that the most enlightening expressions that our beings have the potential to shine with onto the surrounding worlds, beautifying and healing them thereby, are conditioned by the extent to which we are ready to extinguish the egotistic awareness of the self, aside from possibly touching the grounds of the Way of Love too, which tell us that the meditative withdrawal into the world inside, producing a starry silence and death of a kind in the space of our consciousness, is a vital precondition for producing stellar bursts of creativeness and instilling the sunny energy of life in the world around us. Or as the Christ proclaimed: “Verily, verily, I say unto you, except a corn of wheat fall into the ground and die, it abideth alone: but if it die, it bringeth forth much fruit” (John 12:24). What the life of the Christ has shown us is exactly the fact that only after we die in our ego, we become truly born in spirit, ceasing to become merely a site for an unstable nucleation of spirit, starting to crystallize at one point and beginning to glow with a flickering light of spirit, but then moments later disintegrating again and falling into a spiritual darkness. But as we bury our ego once and for all, something great is gained in return - a stable crystal ball of light in our chests, which would enable us to spontaneously bring light to the world with every moment of our existence, irrespective of what we do, think or say. For, when we become rooted in selfless love, all the trees arising from it and all the fruits falling off its branches will helplessly nourish the spirit of the world with their beauty. And as we know that all the beautiful and profound metaphors in this life are multilayered and applicable to many different aspects of experience and reality, we are left gazing at the Ocean and imagining how being born into a shining star that will find its permanent place in the everlasting Cosmic beauty of being is what must follow this life of ours. Until then, however, we must grow in our light of spirit, and be like a great hero, a childish warrior, a blend of a Virgo and a Dragon, streaming from the dreamy night rooftops to the stars, with a ball of light following us wherever we go.

A mysteriously sketched constellation of stars is shown on the right, depicting a soul-saving muse that pulls a wonder boy upwards, into sublime reigns of being and away from the worldly muddles of mundane and prosaic living. Its earthly equivalent impressed on a grainy façade of an SF house photographed by me, the eye of whom is reflected in the upper left window, is shown on the left, serving as a street art reminder that rebellious Wonder that sends starships propelled by fireworks of fancy and streaming towards stars all over the place on one side and alignment of our spirit

²⁶²⁰ See the final words of C. S. Lewis’ *Mere Christianity*, Harper, New York, NY (1944).

with the Cosmic Love delivered to our hands by this godly muse, which then makes “my desire and my will being turned like a wheel, all at one speed, by the Love which moves the sun and the other stars”, as in the simple rhyme of the finale of Dante’s Divine Comedy, on the other side are like two parallel rails along which the starry train of our sacred being barrels through the air on its way to become a wonderful star of spirit and ornament the skies of the Universe once and for all, inspiring millions of earthlings with its wondrously amorous twinkle, boundlessly joyous and compassionately sad at the same time. Subtly and quietly, this pair of images also signifies that not only do Wonder and Love hold their hands together in every utterly inspiring act that we conceive or perform, but that what is above is indeed below, for it is all One, One which is the simplest mantra for wholly fulfilling being in this life.

S.F.13.10. After these ending thoughts, however, the end does not come yet. Musical or literary works in which one thinks one has come to an end and then suddenly discovers that there is more to be said have always been particularly impressive to me. As the rollercoaster ride of theirs goes on and on, as climactic hills and relieving valleys alternate, the work would again seem to have come to a point where everything yields a perfect whole, and yet the final thoughts that leave one breathless keep on falling on the reader. This work has intended to achieve the same, and I wish I named it a collection of the last words, especially for that reason. Ending with words that reverberate with a feeling of reached finality and contemplative completeness, each one of these passages, previously noted as similar to a star on the nightly sky of a wondering mind flashing with thousands of divine ideas, can be taken as a whole of its own. Hence, instead of browsing swiftly through the content of the book, shifting the rays of attention from one star to another and finding connections between them, we could likewise glance at one passage at a time and then let its inspiring messages develop wings in the space of our mind and yield angelic flights of imagination in it, for each one of them is like a multifaceted diamond able to reveal brilliant and sparkly luster from multiple angles from which we may look at them. Yet, despite my intention to name this work a collection of final words, the working name I gave to this collage of minute contemplations, *American Aphorisms*, has always reminded me of the unfinished Kafka’s third book, which is the fate that maybe awaits this work as well. Leaving the impression of intentional incompleteness, of being bound to remain a sketch for eternity, a sketch of a scenery partly ruinous or empty and partly blinking with immaculate flashes of grace, like the starry sky itself, is concordant with the ideals of co-creation, of drawing wonderful ideas and acts, but leaving them unfinished by design, so that the other side in communication could build something of an everlasting importance on top of it, and stands for an act of downright necessity, in the absence of which I would be, of course, righteously accusable of hypocrisies intrinsic to my creative efforts. So, the thoughts keep on rolling, like the wheels of a starry train. And with every passing train, we ought to make a wish, as old men were saying, a wish that might come true if sprung from the unfathomable depths of the fountain of our heart. I have never ceased to wonder about the meaning and the origin of this myth. Maybe it is because the trains travel across the land and connect distant people that they have such a sacred image in my and other people’s minds. Whatever it is, I, who have been accused once of laughing backwards and who have kept Lao-Tzu’s maxim, “Who returns was sent by Tao” (Tao-Te-Xing 40), tightly sealed to my heart, have always enjoyed traveling on a train while sitting on a rear-facing seat. This has been so because I have always preferred the feeling of letting the details of landscapes the train passes by slowly disappear in the distance as opposed to insatiably swallowing them within the crevices of my mind. Whether we prefer facing the front or the rear view is, in fact, quite important. Like any other ordinary choice we make on daily bases, it can tell us a lot about our personality types and cognitive inclinations. It goes without saying that a more energetic and open personalities enjoy facing the front. To me, however, an experience like that would be extraordinarily tiring during a long ride. The things in our view move faster and faster towards us, all until they rapidly disappear, as if almost being

gulped by our heart. But letting these things flow out of our heart and slowly vanish in the distance has always had a calming effect on me. Aside from making me able to weave stories about them as I watch them quietly disappear in the distance, letting the things travel away from us has reminded me of the need to strew the world with the treasures residing in my heart, more than to thirstily absorb the treasures of the world within myself. Thus, it made a whole lot of sense when I spent the first seconds of 2012, the year of the Dragon, standing on the roof of a Diamond Heights house, underneath unusually clear and starry skies, not facing forward and watching the colorful fireworks over the glistening Bay Bridge and countless blinkingly lit houses of hills and valleys of San Francisco, like the rest of the crowd that went, Aw, altogether did, but being the only one from them to gaze backwards and up at the constellation of Orion, imagining myself similarly spreading the arms of my spirit in infinite stellar joy and praying that it gives me strength to become an equal deliverer of treasures of bliss and happiness to the miserable souls of the world. Hence, give, give, give, and forgive, forgive, forgive: these are the Christian mantras that I have incessantly strewed all over my mind, like snowflake sparkles of angelic grace. For, like Pinocchio, a wooden boy on the mission to learn the art of unconditionally and all-forgivingly loving others from his guiding star, the Blue Fairy, succeeding in this task when he collected all forty pence that he had had and handed them over to the Snail so that he could bring it to the Fairy who would then buy a new coat for his beloved father, Geppetto, who once gave away his to buy a spelling book to his son, adding how “if I had a million I would run and carry it to her”²⁶²¹, so do we make the only step that we have come to this planet to make, the one that separates man from an angel, when we give it all for the sake of saving, blessing and enlightening another human. Or, to repeat the words of Béla Hamvas once more, “the creation of this work is not merely a creation; it is rather an endless creation and surrender, all until nothing remains, and then the surrender of this nothing, and then surrender of the surrender”²⁶²². All things are thus tossed aside, from the songs that moved and enlightened us to the memories that produced pearls of teardrops in our eyes to the objects that we thrillingly grazed with our gentle touch, all, all, all, as we walk towards the glaring Sun and emerge in the midst of the sense of sacred oneness, once and for all. For, to become everything, an emanation of the great One, is to cast all things aside, lift the anchor of our ship, become attached to truly nothing and start freely floating in the womblike sea of divine spirit that permeates it all. “My bounty is as boundless as the sea, my love as deep; the more I give to thee, the more I have, for both are infinite”, Juliet cries from her veranda in the city of Verona to Romeo who gazes at her graceful figure engulfed with stars, enlighteningly aware that only when we give it all, when we come to be infinitely poor in our spirit, the river of our being reaches the Ocean of godly spirit, the fountainhead of reality, becoming crowned with an aureole of stars and transforming itself into an epitome of the Sun, one with everything that has ever been.

S.F.13.11. This is how we go back, all until we learn to see the landscapes of the world with new eyes and recognize in them the very beginnings of our explorations. For, the nature of life and being is such, circular, depicted by ancient alchemists by means of the image of a snake biting its tail, that the deeper we descend in our digging through the foundations of experience, the clearer the views forward, beyond the farthest horizons, appear to our clairvoyant eyes, and *vice versa*: the greater the breadths encompassed by our mind, the more penetrable it is in its inner voyage into the center of our consciousness. Beginnings and ends are thus always connected. As in every closed circle, just like the one my Mom formed with her thumb and the index finger and gave as a

²⁶²¹ See Willard Gaylin’s *Adam and Eve and Pinocchio*, Viking Penguin, New York, NY (1990), pp. 206.

²⁶²² See the Epilogue to Béla Hamvas’ *Scientia Sacra*, Dereta, Belgrade, Serbia (1943).

response to just about everything in the days when words ceased to exist in the head of hers illuminated by a myriad of stars, the deepest point of the origin is the closest one to the final point of the destination. Eyes tuned to see the beginnings in every detail of the world around them, while standing firmly on the foundations of it all, are thus bound to penetrate into the ultimate meanings that these details conceal and arrive at the treasures of the most sublime spiritual insights that lie dormant in them. With no words existing in her head anymore to cloud the vision of the sun of one's soul, with all the microcosmic ties of predefined thoughts being shredded to pieces and with limb movements wholly uncoordinated, my Mom approached the end with the mindset of babyish beginnings, seeing all life with the eyes of a newborn, viewing treasure everywhere, and, as such, standing at the peak of the pyramid of human knowing. Or, if I am allowed to paraphrase T. S. Eliot's message delivered in *East Coker*, the second poem of *Four Quarters*, "In my beginning is my end", in the manner my Mom had used to do, "We will reach the goal when we return to the beginnings and recognize the landscape"²⁶²³. Correspondingly, Jaime de Angulo, the anarchist European anthropologist and expatriate who arrived at San Francisco to become a cowboy on the eve of the 1906 earthquake, described the way of wandering self-realization among the Pit River Indians using the following parable: "The wanderer shins camps or villages, remains in wild, lonely places, on the tops of mountains, in the bottom of canyons... When you have become quite wild, then perhaps some of the wild things will come to take a look at you, and one of them may perhaps take a fancy to you, not because you are suffering or cold, but simply because he happens to like your looks. When this happens, the wandering is over, and the Indian becomes a Shaman"²⁶²⁴. So, let us go back and plant our feet into the deepest foundations we could think of. For, origins and final causes, the seeds of drives and aspirations behind our actions on one side and their fruits on the other, first steps and final steps and interconnected much closer than our wildest dreams could depict on the screen of our mind. Recall then how rainbows form during the interplay between our eyes and the Sun, and that on raindrops that form a curtain between the two. The co-creational thesis elaborated in this book represented each detail of our experience akin to a rainbow, forming like a Maya, a Holy Ghost, a wonderful illusion, the dream of our soul, the divine Son and Nature, the godly Father, communicating with each other and enkindling the shine of our spirit, all until it becomes a Sun of a kind, a brightly burning star in the eyes of the Cosmos. What this powerful metaphor tells us is that the origin of a rainbow, as much as of every detail of our experience, lies in the closest to us, the apple of our eye, the centerpiece of our worldviews on one side and in the Sun, the farthest source of light affecting the life on Earth on another. Still, it is the touch between the two that defines the appearance of the world as we perceive it. This is when we can go back to Moses' words on rainbow impressed in the Bible and whispered to Noah through the little trumpets of angels, the divine messengers, as he was preparing to save humanity from a flood of heavenly tears: "And it shall come to pass, when I bring a cloud over the earth, that the bow shall be seen in the cloud: And I will remember my covenant, which is between me and you and every living creature of all flesh; and the waters shall no more become a flood to destroy all flesh" (Genesis 9:14-15). What this mysterious covenant stands for from the perspective of the co-creational thesis is nothing but the world itself, each detail of which arises between the human mind and God as the touch between the two and is, as such, a testament to God's love of man and angelic wings that are incessantly folded upon us to carry us high into the very Sun, the spirit of unity, the end of the road. To arrive at the treasure veiled behind the end of the rainbow,

²⁶²³ Poetry is untranslatable and so is the way my Mom used this phrase in Serbian: "Na cilj ćeš stići kada dođeš na početak i prepoznaš predeo".

²⁶²⁴ See Rebecca Solnit's *A Field Guide to Getting Lost*, Penguin, London, UK (2005), pp. 19 - 20.

therefore, we need to begin our journey by going back and exploring the bases of the pyramid of our being. Having said all of this, do not forget to take the treasures with you before you exit the beautiful fairytale of this book, as one of Branko Miljković's poems has suggested and as has been one of essential sayings in my Mom's repertoire of responses to the end of journeys in life. Remember also that these treasures are intangible and yet omnipresent; as the co-creational thesis has told us, once found they would appear as if resting simultaneously within the glowing foundations of our soul and with every detail of our experiential reality. Beating in accord with the Christ's words, "Where your treasure is, there will your heart be also" (Matthew 6:21), in the midst of one such enlightening moment, the essence of our being becomes implanted everywhere, as the ideal of grand oneness of our spirit and the world is then being finally reached.

S.F.13.12. In the end, I will leave this book aside and remind myself of Thomas Aquinas who frenetically wrote for many decades and then, all of a sudden, underwent an enlightening experience. He stood up in front of the visitors at a mass and said how for years he had been writing a lot, but now it all looked to him as a straw compared to wonderful experiences and impressions that the world and human mind can give rise to at any given moment of our lives. From that moment on, he never wrote a single letter. Life should likewise be a passionate and wonderful ascension of spirit towards capturing, grasping and evolving our being into ever more brilliant synergies between cosmic Love and Wonder. It is the battle to be everything, everything, everything, the sum and beyond the dance of all our memories and imaginations. To grasp everything in our prayers, strivings and emotions, and to reflect the whole Cosmos in the way our bodies, eyes and thoughts dance as they move in wonder through the mysterious breadths of being. Erich Fromm wrote an entire book about people whose aim in life was to have and about another breed of people who lived so as to be²⁶²⁵. Letting our minds be fooled by the illusion that we are in possession of something in this life, gradually instilled in us through adopting the dominant social and cultural traits, leads to our feeling despaired at the very thought of the inevitable parting from the life on this planet, and to permanent deterring of the glittery flight of our spirit. On the other side, cultivating the values of not having, but being, being the deliverer of the divine messages from above, a channel through which the heavenly blessing streams will be released to the world, liberates us from the burdening possessive ideas in us and makes us freely ascend in our spirit, as if we have suddenly attained the wings of an angel. After all, in this life we have the choice of either being a Pharisee or a true Christian: a Pharisee who would pile up mountains of written knowledge (or, God forbid, the material wealth), but would never gather enough spiritual strength to turn these words into acts and water into wine, thus remaining a mere hypocrite about whom the Christ would have said that "whatsoever they bid you observe, that observe and do; but do not ye after their works: for they say, and do not" (Matthew 23:3), or a modern incarnation of a celestial Christ-like creature about whom a Hindu spiritual teacher once said that "he had not come to bring religion, but to be religion"²⁶²⁶. Following the pharisaic path, with every new day we steadily and unstopably proceed towards becoming one of the "dead" characters of the final story of James Joyce's *Dubliners*, masterfully filmed by John Huston as his final work, desperately dreaming of how it would have been to live the life of one Michael Furey, a creature who determinedly died for love in the springtime of his life, rather than to have opted for the cowardly path of safety, protection and dignity, embracing the divine words but never bravely spreading the angelic wings of one's spirit so as to live them in their full splendor, thus remaining to live long

²⁶²⁵ See Erich Fromm's *To Have or to Be?*, Continuum, London, UK (1976).

²⁶²⁶ See Selvarajan Yesudian's and Elisabeth Haich's *Raja-Yoga*, Unwin Hyman, Boston, MA (1980).

and comfortably, but sentencing themselves to an awareness of their being spiritually crippled and slowly wasting away into the dust from which they arose. However, by following the Christian path, along which we sustain brilliant reflections and warmhearted waterfalls of emotions within us and preach not by words but by acts and invisible intentions and visions, we head along the path strewn by the stars of eternal Love and Wonder. By living the cosmic Love and Wonder glittering within our hearts, we spontaneously illuminate the way forward, towards a perfect encounter with the heart of Nature, beautifully beating with the music of God.

S.F.13.13. The combination of Love and Wonder has for me always depicted the beginning and the end of knowledge and being. As human beings, we are positioned at the intersection between an animal, biological nature and a divine, thoughtful and emotional nature. “Man is a rope stretched between the animal and the Superman, a rope over an abyss... what is great in man is that he is a bridge and not a goal”²⁶²⁷, as Friedrich Nietzsche observed, while “God made of His Son a Bridge by which man could pass from earth to Heaven wherefore I have told you that I have made a Bridge of My Word”²⁶²⁸, as it occurred in meditation to the 14th Century Christian mystic, St. Catherine of Siena, with her delirious head spinning the starlit dreams of Jacob’s ladder “set up on the earth, and the top of it reached to heaven: and behold the angels of God ascending and descending on it” (Genesis 28:12). Pico della Mirandola impressed coinciding visions in a book that came to be known as the Manifesto of Renaissance and noticed that, unlike other forms of life, man is a journeyer, always on the road, having the freedom to choose whether to “degenerate into the lower orders of life” or “be born into the higher forms, which are divine”²⁶²⁹. No wonder that many philosophies and religions of the world have concordantly realized that human beings are somewhere halfway between Gods and animals. They are bridges that connect the delicate fragility of our human nature with the eternal starriness of the divine in us. Although many may be tempted to think that ditching everything animalistic in us and adopting every godly trait we could think of is the right way to attain the vistas of divine being, I believe that there is a flaw in this approach and that only by becoming one with everything, by reaching out with the angelic wings of our spirit to it all with infinite compassion and understanding, including the grimiest existential lowlands, by descending as low as possible in our striving to save the lowliest cosmic souls do we get a chance to catapult ourselves to the spheres of heavenly highness and mightiness. Therefore, the true art of living in my universe is to majestically combine the two - drawing the powers of our intellect and the powers of our biological bases together, and producing surprising encounters of theirs at the core of our heart. Only when our thoughts, emotions and acts in this world spring from one such balance do our beings open the golden gates to the brave new world, which, as of today, we could only dream of. As a pop song on the radio told me one day, sending subtle windy waves through the space and crashing them against my ears, we should “live high, live mighty, live righteously”²⁶³⁰. This is probably the same combination of starry wonder and divine ethics that

²⁶³⁰ Listen to Jason Mraz’s *Live High on We Sing. We Dance. We Steal Things.*, Atlantic (2008).

Immanuel Kant referred to at the end of one of his lifeworks²⁶³¹. Divine powers of creation of the world have descended down, bringing life to Earth and left stars in the sky as the signs of heavenly Wonder, which is beyond our ability to grasp in its beautifulness. In general, the power of Love originates from the holy ranges of spirit above, descends and anchors us to the ground. “Love is staying”, as Erich Fromm proclaimed²⁶³². But the power of Wonder is the one that ascends us and feeds our spirit with a mild and graceful loftiness. When instilled in us, it impels us to wonder over the nature of existence as if we have just descended from stars, as if we are an extraterrestrial tourist treading through space like a celestial silhouette. By living according to the ideal of this popular song, we may have just enough goodness in ourselves to keep us tied to the world with the threads of care and to expand the glow of love from the torch of our heart, and just about enough fancifulness and curiosity to break down the patterns of convention and dance with our eyes, body and spirit a way into touchingly novel means of impression and expression of our beings. And this is where the true mightiness, placed in this verse right in the middle, between the sacred grounds of Love and the high clouds of wondrous fanciness, comes forth. For, in the end, it is willpower of ours that drives us to build these golden bridges of spirit between the foundations of Love and the starry heights of divine Wonder. With exhibiting this Middle Way art, we may know that we are actually heading along the gloriously glistening Way of Love, the narrow pearly road that will take us to the stellar realms of infinite grasp, in and beyond this life of ours, a stuffy and scanty underground tunnel through which we will emerge into fascinating new planes of cosmic reality.

An anonymous painting of the Golden Gate Bridge, the cultural landmark of San Francisco and a ceaseless reminder that an ultimate key to creative being in life lies in our turning into a bridge - just as the crucified Christ did, transcending the physical planes of being thereby and entering an eternal, spiritual realm - spreading our arms to each and every one and connecting them all and making the lost things in life found thereby, while also opening paths for new adventures of human spirit to take place and thus enabling the found things to be brilliantly lost, and yet opening roads for them to stream back to the home of their heart and thus be found again, while the wheel of the evolution of human being and knowledge unendingly spins along the dialectical grounds of the Philosophy of the Way, of an incessant rhythmic alternation between the states of difference and oneness, of diversity and unity, of linear streaming forward and circular returning to the beginnings in our spiral path of progress inscribed in the shape of the Milky Way, of the meditative pull inside that makes us mysteriously remote and the empathic openness to the world that makes us

lovingly direct and dazzling, in the spirit of the balance that every sun of spirit engrains within itself, as the Way of Love with its delightful philosophical charms has sketched in front of our eyes.

Epilogue I

A mural ornamenting the rear wall of the SF Mission Dolores (left) and the Orion constellation of stars embellishing the eyes of the Universe (right), both of which could be seen as epitomes of the stellar bursts of endless cosmic joy from one's heart that will transform our cocooned humaneness into superhuman, Christ-like starriness.

On one of the recent evenings I found myself on a tram stop on the corner of Dolores and 16th street. It was a pleasant night, with not even a puff of the wind in the air. An old school was on my left and the Dolores church, the oldest building in San Francisco, on my right. Glancing from afar at the façade of Mission Dolores, the architectural heart of the city, I recalled how yet another, smaller and yet equally evocative heart rests in it. It is the one drawn over the entirety of the church's rear wall by Ohlone Indians in the late 18th Century, depicting the heart of the Savior, and yet kept concealed from view for more than two centuries. Thinking of this heart inside of the heart as well as of millions of little and ever more meaningful hearty signs dormant in the grainy patterns of this mural and any other detail of the microcosm inside of us and the macrocosm that surrounds us reminded me of the everlasting slogan, Small is Beautiful, and of the divine beauty lying concealed in the littlest details of the Universe.

Thrilled by this thought, I glimpsed an almost full Moon placed in-between the old school and the church and instead of waiting on the tram, I decided to walk as if heading to the Moon. The trail took me to Dolores Park, the place I have considered the open-air cathedral of San Francisco. One climbs to the southwestern tip of the park and from there has one of the most beautiful views of the city skyline. I was guided to the park that night because I indeed felt like lying on a meadow and immersing my mind into the starry sky, expanding it in an attempt to grasp the enormous distances and time and space scales that need to be invoked to draw the Universe the way people see it nowadays. It was one of those nights when everything fits: the beats of my heart with the beat of the night, the beat of the music played in my ears with the flashing of the light on top of the Transamerica pyramid, the rhythm of the slide of the silhouette of my slender figure through the night with the swaying of the shadows of the weeping figs. As usual, even at my mind's most blissful, the waves of melancholy wash over it in seconds, unannounced. Prompting me to look up again, but with different eyes, straight into the night sky, these waters of sadness that rushed through my veins made me think that this is what society must have looked to enlightened spirits all the world over: mostly darkness, with occasional flickers of celestial light. For, in spite of this ethereal beauty of the windless SF nights, the world has yet to grow to reach

even an iota of the true SF visions I have had of it: a reality inhabited by dancing spirits, erupting like stars with the wordless beauty of living, gliding on the waves of Tao, being moved by the infinite love for all being. And then I kept on thinking how the stars are in the current epoch of our, urban civilization less and less visible because the ground itself is so much “polluted” with artificial lights which block the subtle light coming to us from the distant stars. On the other hand, before the renowned Serbian inventor, Nikola Tesla brought electric lights to Buffalo and then to other cities of the world, people would enjoy in the natural lightshow made by traveling stars by night. The metaphoric meaning of this parallel is indeed striking. Namely, as humans enrich and beautify the Earth, down here, the beauty of the endless Universe, up there, is less appreciated and noticeable, and *vice versa*. In a ruined world whose edifices are collapsing under the flow of a river of tears, stars would be present to comfort the sorrowful souls and convey to them the quiet twinkle and buzz of the divine infinity of being. But here, now, no one has the need to look up for the sources of divine wonder when there are so many beautifully twinkling eyes in our vicinity. So, could there be only one source of beauty that we, as humans, are simply bringing down to earth, dragging the starry sky down and placing the twinkling sources of starry wonder here, around us, on the Earth herself? Or is it an endless process of cosmic fertilization during which this beautiful starriness penetrates new worlds and planets, bringing about multitudes of eyes, bright, clever and shiny, that in the sparkles of their curiosity, love and wonder turn out to reflect this universal starry glossiness? Be that as it may, to seed the fields of the Earth with starry splendor and twinkles of cosmic wonder and joy as much as to ascend human spirits to the very stars and make eternal habitats for human souls amongst their delightful glitter and the music divine can thus be said to be the mission for us, the little mousey heroes in this world.

As I kept on gazing at the stars, I noticed Orion in its full splendor spread across the night sky. Although most modern historians claim that the Christ’s heart pierced by arrows was drawn on the rear wall of Mission Dolores, I have helplessly seen this mural as a heart punctured by the arrows of compassion, empathy and eternal dolor, being a prerequisite for its transitioning into a superstar, a spiritual Sun on Earth, relentlessly shining with love, grace and joy outwardly and washing over the whole planet and entire humanity with the waves of unutterable, celestial beauty. Likewise, although people from the past and present have seen a warrior, a hunter, a shepherd and a walking bird, a deer and a canoe, or footprints of the God escaping from the Earth in the constellation Orion, I have always seen a star: a being stretching its arms upwards, triumphantly, in an expression of explosion of cosmic joy from one’s heart. Hence, from patiently and lovingly looking down and wonderingly gazing upwards, we arrive at the inextricable juxtaposition of the heavenly and earthly in us. After all, releasing our consciousness to the streams of humane feelings and instincts in us, freely dancing as we float on them, irrespective of how fragile and imperfect they may be, is how we are taken on the voyage through which we become a star of spirit, such as the Christ and many other sages that walked across this planet were. On the other hand, meditatively plunging into the light of the divine enkindled in us and partly distancing our awareness from the worldly clique is how we retain the energetic and inspiring shine of our being, as the Way of Love has taught us. And yet, only by incessantly travelling down from this sublime starriness of the inner sky of our mind, so as to unite our heart with those of human creatures around us, by always trying to be as low and humble, like an ocean into which all the rivers flow, as we could be, we stream up, up, and up, and eventually become a star of spirit that ornaments that eyes of the Cosmos forever and ever. For, journeying upwards in Wonder and spreading our arms so as to grasp stars and yet humbly descending down in Love and reaching out to hearts that

beat in our vicinity is what sets us on the greatest starry train ride in this life that we could ever imagine.

And then, as it usually happens in life when enlightening insights that provide glimpses into connectedness and oneness of it all dawn on us suddenly and unexpectedly, the day later in the Panda Express joint on the top of Parnassus hill I would open a fortune cookie that said “The star of happiness is shining upon you”. I would fold the paper and wish more than anything that this star shone its light to the whole wide world and show the ignorant and perplexed people the way to the daylights of joyful knowledge and being. I wished if all the angels having guided me ever since to fulfill my divine mission in life could fly to guard other, lost and helpless creatures of the world. A tiny tear dropped from my eye agitated by this turbulent concoction of feelings of graceful melancholy and devotional joy. After moments like this we feel as if we have purified the essence of our soul, as if the heavenly rain has washed all the impurities and dust of human disgrace that collected in ourselves over time. All that we are left with is a tiny Noah’s rainbow ornamenting the visionary sky of our mind. Then, a perfect harmony is reached, a perfect balance on the thin line of the Way of Love. We quit with judging others, and yet quit with trying our best to attract them and make them adore us. Instead of making other people stars around which our heart passively circles as a satellite, we, ourselves, become the Sun that strews others with the rays of the blessing love. And yet the starry spirit of others is sustained with every breath of ours, with every thought we conceive, with every step we make, and with every move we draw, spontaneously and imperceptibly. Because, to live for the sake of enlightening others is to truly resurrect our spirit, to die in our tiny, earthly self, and be born in the Christ, in the eternal blissful reality. We thus feel as if a selfless, divine light shines within us, and we set on the path of bringing this light to everyone in this world, to every sad being, bird, flower, pebble or cloud, and like the clowns from the beginning of this book, make them and us shine with joy, the joy that has ever been the secret essence of all the religions, theologies and wisdoms of the world.

When we succeed in awakening this divine joy within ourselves, we may realize that it is sustained by the extent of our care for the beings of the world. Love is thus the force that feeds the spiritual joyfulness. And when we become such a lantern of pure and inextinguishable joy for the world, we will be like a new Christ that spontaneously inspires others to clear up the view and the way towards the immaculate shine of their soul. In the presence of such enlightened creatures, one starts feeling as if soiled and muggy layers of a crust surrounding the untouched glow of our soul fall off, layer by layer, all until an untouched glow of one’s soul is released from its imprisonment, where it was shackled by the loomed spider web of fear and ignorance, reaching the surface of one’s being, penetrating every miniscule part of one’s body, and sending its joyous rays to the world, giving rise to an enlightened daylight of being all around one. Like dark clouds dissipating away at the sunset of a rainy day, giving their way to clear, sunny skies and a distant rainbow, a mere reminder of a spiritual triumph, this crust of fear, jealousy, greed and egotism, poisoning our spirit for a long time, vanishes and all that is left is our facing the warm and bright luster of a divine Sun within us. This is how one becomes transformed into a star that continues the endless cycle in which animated suns of spirit give rise to a multitude of stars twinkling with beauty and joy, each one of which will be the source of the invisible light of love, which creatures of the world need for sustaining and thriving as much as plants need to be watered to live on. With one such star of spirit glowing inside of us, we would finally be able to meet other stars, not as mere satellites that blindly follow the authoritative paths of other suns and passively absorb their light. After passing through the passive phase of learning, emblematic of living on the planet Earth, we become a true sun, the greatest ideal Nature has posed in front of us. Encountering other suns, we will form a double star

system and, like two beings holding their hands together and spinning around a common axis, we will start to orbit one another, relishing in each other's light and yet, as the Way of Love has prophesied, feeding each other with the precious light of holy spirit flowing like the waters of the river Jordan inside of us, while all things around us will be washed with the sundrenched bliss of the divine One.

Epilogue II

As I looked up at this enchanting night sky once again, as if ready to wave goodbye to it for one last time, it occurred to me that each little star of thought impressed on the leaflets of this book may have fit within a single blink of an eye gazing at this delightful show of lights divine that hover over our heads. For, if life is but an instant of thought in the dreamy fountainhead of God, could this whole book likewise been a starry swoosh of a delirious train of ideas that ran through the head of an earthling enlightened by cravings to live up to the ideals of “beauty that will save the world”? Like Dorothy waking up from her midsummer slumber and realizing that her entire adventure in the fanciful Land of Oz was merely a dream and that, indeed, “there is no place like home”, at this point on the journey of this book we too may have woken up and envisioned all this contemplative traveling from one star of thought to another as a dream of one standing on top of Dolores Park in quietness and solitude, resting gingerly one's gazes on this stellar marquee that enfolds us from all sides and ethereally spacing out for a moment, like a monument made of stars, amid dancing one's spirit away on this starlit meadow of life. The reality wherein all these little sparkly dreams that passed through your head as you were dipped in this book are to be let sprout and bear fruit is thence seen as a true home for our souls. For, to put an

end to writing and point for one final time at the importance of living the ideals and dreams inscribed here rather than to find perfect solace and fulfillment in merely writing them down is the last command in the program of this book, the last message to be carried straight into the home of thy heart. As you and I step forward, feeling as if the whole Milky Way landed on our heads, drawing sombrero-shaped aureoles of stars thereon, we blend with the starriness that is everywhere around us, walking off into some distant sunrises of sacred oneness with each and every detail of the world, wherefrom joyously trumpeting angels, white rabbits with eyeglasses and clocks in their hands, all together playing with pebbles, seashells and pine needles around the Ionic pillars of celestial grace on Earth, would embark us on the terminal adventure of our lifetimes, of living these dreams rather than profiting by piling them up, taking us by the hand to the new and blissful beginnings beyond an ending dot, little and negligible, and yet a rounded symbol of the great One, the key that unbolts the steely gates of ego and clears the views of the very same starry skies that we have wondered over in our heads, opening our mind and heart to an inflow of the stardust of enlightening insights and the waves of the azure ocean of cosmic Love, impressed here for one final time.

Glossary:

Co-creation: The fundamental process underlying all experiential appearances, correspondingly described as outlined by the interplay between the subject's biological and cognitive structure and the surrounding physical reality.

Co-creational thesis: The idea that every product of human perception can be metaphorically depicted as drawn on the canvas of one's mind involving both the creativity of the subject and the creativity of Nature in the act of drawing. The thesis argues that both the biological and cognitive predispositions of the subject and the external features of the physical reality determine how the world appears as perceived through the subject's senses, and as such occupies a middle ground with respect to the worldviews of objective realism and subjective idealism.

Constructivism: Philosophical framework of thought in which experience is described as actively constructed from within the subject. In the concept of co-creation, it is seen as only one pole comprising the roots of experiential origins (realism being the second, complementary pole).

Dialectics: Process in which new and more organized patterns of knowledge and life (syntheses) are given rise to through the encounters between certain ideas, emotions or physical expressions (theses) and their opposites (antitheses).

Enlightenment: A typically sudden incursion of the consciousness into a state of sensual bliss, absolute moral virtue, illuminative intuition and exquisiteness of the intellect.

Epistemology: Philosophical framework of thought dealing with the explanation of the origins and properties of human, and particularly scientific, knowing. It is complementary to ontology, and in the intersection of the two lies the domain in which explanations based on the experiential co-creation take reign.

Experience: All that the subject is or can be aware of. That is, the entire sum of cognitive impressions; perceptive, sensual or reflective. In the concept of co-creation, the attribute of “experiential” cannot be untangled from the one of “natural”.

Holism: Philosophical framework of thought in which properties and the existence of all experiential details are described as inextricably related to all other experiential details and possibly to the whole existence. It is the opposite of reductionism, although in the pragmatic application of approximate reductionist rules of calculation and acknowledgment of the true holistic nature of the world lies the harmonious intersection of the two.

Magic: Like all notions, it must be, per the tenets of the co-creational thesis, defined from two angles, the subjective and the objective, assuming that these two definitions will be like two tunnels dug from two opposite sides of a mountain and meeting in the middle. Hence, from the subjective angle, magic can be defined as an encounter with an experiential phenomenon that disobeys the subject’s deepest convictions and expectations and paradigmatically shifts the bed of his beliefs, producing seismic shakes in his consciousness and symptoms similar to Stendhal syndrome. From the objective angle, magic, if positive, can be defined as the quality allowing an action conceived in wholly intuitive ways that disobey the laws of logic and reason to guide another towards ways that bring about blissful experience and, perhaps, salvation for the soul.

Metaphysics: Invisible framework of thought upon which all the apparent statements, ideas and observation from the domain of physical sciences rest.

Nature: The foundation of being encompassing immediate experiences and yet penetrating into each one of them. In the concept of co-creation, the attribute of “experiential” cannot be untangled from the one of “natural”.

Objectivism: Philosophical framework of thought in which experience is explained as essentially observer-independent and entirely defined by the nature of the physical reality. Its extreme

standpoint is complementary to the one of subjectivism. The concept of co-creation adopts a middle way between the two.

Ontology: Philosophical framework of thought dealing with the explanation of the origins and properties of being and the world, outside of the scope of human experience. It is complementary to epistemology, and in the intersection of the two lies the domain in which explanations based on the experiential co-creation take reign.

Realism: Philosophical framework of thought in which the existence of physical reality independent of the subject's experience is explicitly assumed and consistently referred to. In the concept of co-creation, it is seen as only one pole at the roots of experiential origins (constructivism being the second, complementary pole).

Reductionism: Philosophical framework of thought in which properties and the existence of experiential details are described as possibly unrelated to other experiential or existential aspects. In simpler terms, it is described as a rarely validated assumption that the properties of natural/experiential systems can be represented as mere sums of their isolated parts.

Science: An abstract aggregate comprising the totality of human knowledge, including facts, theories, premises and empirical methods devised and implemented in the present and the past, accounting also for the approaches, methods and values governing the conduct of the community guarding, accruing and critically assessing this knowledge.

Solipsism: Extreme subjectivist framework of thought in which the subject is assumed to occupy the place at the existential center of the Universe, whereby the existence of any other similar worlds of experience is implicitly negated.

Spirit: A holistic, both immanent and transcendental sum of thoughts, emotions, aspirations and all other subtle physical vibrations that comprise the karmic footprint of a given biological entity and provide boundary conditions for the emanations of its physicality. Though emergent in origin, spirit is like a mountain stream that naturally flows back to the sea-like base of one's being, eventually enfolding it in its entirety like a mysterious veil or an aureole of a kind and inconspicuously guiding its evolution in space and time. In a different connotation, spirit is also the holistic sum of subliminal messages radiated by sentient creatures and the inanimate world and sensed by a consciousness moving through space.

Subjectivism: Philosophical framework of thought in which experience is explained as thoroughly defined by the subject's nature and attitude. Its extreme standpoint is complementary to the one of objectivism. The concept of co-creation adopts a middle way between the two.

Systemic reasoning: The way of thinking in which analogies/metaphors of the observed or described processes are found. Because of the inherent role of analogies in it, it can be considered as complementary to logical reasoning, whereas the creativity of human thinking can be seen as crucially dependent on the balance between the two. The attribute of "systemic" for this way of thinking stems from the fact that any relationship proposed therein can be seen as meaningful for

any natural system via metaphorically transferring it into a distant domain. Many confuse the latter attribute with the one of “systematic”, which actually refers to analytical order in one’s reasoning.

Tautology: The sum of basic explicit propositions included in defining the boundary conditions for the derivation of logical relationships upon a given framework of thought. By definition, all inferences derived from it must be true.

Way of Love: My belief that the true harmony of one’s engagement in social relationships lies in equally occupying one’s attention with the inner world of thoughts, emotions and aspirations and with impressions originating in the external world. Such a cognitive stance implies an incessant immersion into the creative core of one’s own being and yet living thoroughly for the sake of beautifying others, like the Sun that burns its own essence in silence of being and yet endows millions of souls with the life-boosting light. The Way of Love teaches the art of being an enlightening leader and a faithful follower, the Sun and the Moon, at the same time. Masochistic submissiveness to the authorities of others followed by a loss of inner creative potentials or sadistic overrating of one’s own worldviews compared to those of others arise as extreme deviations from the Way of Love. The Way of Love points out that two nodes of the string of the music of life need to be attached well, one in the domain of the subject’s heart and mind and the other in the hearts and minds of others, in order for this music to spread its wings. Furthermore, in order to start fluctuating and producing sounds, an incessant alternation of the moments of approaching and distancing needs to be maintained. Thus, the Way of Love is about distancing ourselves into a meditative and self-integrating silence of our own being, guided by aspirations to follow one’s own path of the divine mission in life, and uniting with eyes and worldviews of others, guided by the compassion, empathy and love. The Way of Love is, thus, about living in accord with the divine missionary path, the secret of which is written at the bottom of our heart, and yet living for the sake of enlightening the world. As another balance between the creativity arising inside of ourselves and the creativity originating in the environment, this idea presents a natural analog of the co-creational thesis at the social level. It has arisen from the metaphor of the Way, that is, of simultaneous separation and connectedness that every way in Nature represents. Hence its name: the Way of Love.
