

SF Pensées: A Peer into a Cosmos of Starry Thoughts

Abstract Written in the late 2000s in the city of San Francisco and then continuously updated over the following decade, this voluminous socio-philosophical essay represents a postmodern take on Pascal’s *Pensées*. Individual “thoughts” in it are codified, creating a mysterious array that the author compares to stars of the night sky, disconnected on the surface, yet bound to form an indissoluble and harmonious whole. As the author notices halfway through the essay, “every sentence here attempts to be a universe unto itself, a chain and a centerpiece at the same time, a symbolic proof that Nature is not a linear stream of events toward a predetermined aim in space and time, but a magical place where destination is present in every point of the journey, or, as Blaise Pascal imagined it, ‘an infinite sphere whose center is everywhere and circumference nowhere’”. The form of the essay is comparable to Godard’s *Histoire(s) du Cinema* or Fellini’s *Otto e mezzo*, in a sense that it is being as unstructured as a myriad of stars scattered across the night sky, unlike “the overly orderly and polished progression of a clear-cut scholarly thought, uptight and repressed”. The treatise is divided to sections 0 through 13, each focusing on a particular theme, and employs the numerical structuring of passages in the style of Wittgenstein’s tractatus. The themes discussed include cognitive philosophy, creativity, behavioral aesthetics, world politics, athletics, poetry, spirituality, and others. The essay brims with references to pop culture and presents an indispensable accompaniment in learning about the contemporary culture of San Francisco, where the bulk of the essay was written, and beyond. It combines indie, DIY, auteur style of expression with traditionally theosophical points of view and critiques of modern science and academic lifestyles, yielding a concoction unique in style and content to the author. With over 600,000 words and 2,500 references, spanning the topics of science, technology, sports, medicine, corporate world, art, politics and culture, the essay inspires with its astonishing scope and ambition. In the current era of compulsory compactness and hyper-brevity of writings academic and popular alike, with its insatiable expansiveness and unbounded cross-connection between disciplines, the essay serves as a call for equally commodious expressions of thought in the scholarly domain. With its poetically performative character and neo-romantic spirit, the essay opens up the academic writing to freer and more belles-lettres contents and compositions.

On the Merits of Jubilant Spirituality

S.F.0.1. “What is the craziest thing you’ve ever done”, Shabby asked me as we drew houses, suns and trees with colored crayons on the Sunset pavement. I brushed my chin, pondered deeply, but could not exactly remember. I thought about the baby somersaulting inside her and my spirit began to hop like a cartwheeling Orion across the patches of the ocean spread before my eyes, getting me lost in pellucid daydreaming. In the end, like this baby bathing in her belly for many days and nights before it will emerge to the sunlight, so does the birth of ideas from the starry womb of my scruffy head, through which sirens, pinecones and beach balls swoosh at all times, take many ticks and tocks of the cosmic clock. As I kept on drawing and thought some more, it finally occurred to me - being perfectly normal must be the craziest thing one could ever do. Ardently, I stood up, saluted to the sea, like a sailor all in white, solemn and sanguine, and said that only when I act in foolishly outlandish ways, I feel, in fact, normal. Silence interrupted only by the sound of seagulls flapping their wings above us ensued. My words were a take on a *pensée* by Pascal, “Men are so inevitably mad that not to be mad would be to give a mad twist to madness”¹, but on this day, as I stood pensively before the open sea, with the spirit solidified into a white marble statue of Apollo, I knew it not. Through this hush and quiet I continued to unwind the ball of yarn of my thoughts: “Had I considered myself too normal, I would have definitely looked too odd to me. For, I believe that in this life we ought to cut threads of expectancy and shatter the touchstones of normality with every word said, with every move shed and with every thought churned if we are to draw stellar ways of being on the face of the Earth”. Having said this, I raised my glance to the rooftops of the crayon-colored houses lined up along a slumbering Sunset street. I dreamily gazed at them for a while and then far away in the distance, into the Ocean and the real sunset at sea, with a smiley orangey Sun sinking behind the horizon, ornamenting its shimmery blueness with soul-blossoming nuances. Looking back at the pale copies of these colorful houses, of the Sun and the people depicted as a little Orion each, a teeny tiny star of life, which I all drew on the dusty pavement, one next to the other, it finally dawned on me: “Well, of course, it must have been writing this book. It has to be the craziest thing I have ever done”.

S.F.0.2. “I think you’re crazy”, ring around the wondrous verses soaked in the music of ethereal devotion of the finale of Radiohead’s *Kid A*², miraculously reaching mountainous strengths amidst simple, homemade organ sounds and sending out a heartrendingly prayerful homage to the Motherly cosmic love. Indeed, the only way to be a force of progress in life is to make deeds for which people will gladly and graciously say: “You know, I think you’re crazy”. Which is why *Magister Ludi*, or Crazy Master, if I were to translate it into my native language, Serbian with a little bit of wit, stands forth as the highest title and a supreme ideal for an aspiring Glass Bead Game player³, a bridge between the coasts of the analytical and the aesthetic, a best man at the wedding of science and art and a godfather at the baptismal ceremony for their child, that I am. And which may also be why William Saroyan’s words “Papa, You’re Crazy”⁴ have always substituted the words “Papa, I love you” in my mind, and yet stood for them with a whole lot more

charm and beauty. Holding mammas and papas by the hand and walking as such through this world, we live up to the ideal of celestial craziness, never slipping off our mind that both the aesthetic and analytical creative deeds of ours, both the poetic, artistic and oceanic mamas and the methodical, disciplined and stony papas hide sublime cosmic joys and infinite compassion deep inside of their cores, touching the graces of holy madness in their togetherness.

S.F.0.3. Not only do expressions that shed the stardust of celestial love onto fellow earthlings and intoxicate them with a dazzling and inspirational beauty need to break away from the shackles of ordinariness and expectedness and arise instead from a mesmerizing spiritual craze, but creative ideas too always hide a sprout of crazy goings against the streams of common and predictable thinking in the sphere of our imagination. It is not accidental that out of all his extensive readings on chivalric romance, the literary genre that the writings on him were to revolutionize, Don Quixote of La Mancha marveled most over lines such as “the reason of the unreason with which my reason is afflicted so weakens my reason that with reason I murmur at your beauty”⁵; for, only when the mind gives in to semantics like this that warps the sense of normality and prepares it for the unexpected do the sprouts of creative thought start to emerge to life. Henceforth, when someone began to praise a student for his incredibly exciting and “crazy” idea propounded in front of an examination board, Albert Einstein, sitting as one of its members and a bit disappointed with it, merely replied: “The idea is fine, but I do not think that it is crazy enough”. Arguing with one of his contemporaries regarding their different approaches to setting up the foundations for quantum theory, Niels Bohr proclaimed something similar: “We all agree that your theory is mad. The problem that divides us is this: is it sufficiently crazy to be right?” For, “if at first the idea is not absurd, then there is no hope for it”, Einstein would reiterate this common thought, while Alfred North Whitehead, yet another intellectual giant, would observe from the background how “almost all really new ideas have a certain aspect of foolishness when they are first produced”. I, of course, “totally mad...f***ed in the head”⁶, always on the search for the seeds of craziness wherefrom the most inventive ideas would sprout to life, nod to these words of wisdom wholeheartedly. “Stay foolish”, the mantra written above a drawing of an early morning country road on the back cover of the farewell issue of the SF Bay Area’s Whole Earth Catalog, was thus the advice which Steve Jobs, the founder of Apple Inc., considered the key to lighting up little lampions on the crown of our creativity and offered to students during his popular commencement speech at Stanford University⁷, the Little Bear’s workplace on the days these words are being written on. He would have surely agreed with Thomas Kuhn and Henri Poincaré that the most innovative ideas dawn on us unexpectedly and suddenly⁸, resembling a glittery and thunderous flash of light rather than meticulous treading after an unwinding ball of yarn of logic and ratio. Or, as Douglas Hofstadter noticed once, an invention is more like falling off a log than sewing one in two⁹. Which makes me make a somersault or two in the sphere of my thoughts, reckon how the sun of Love could exist only on the background of a sky crowded with starry surprises, then settle

down in a handstand and with head down and feet up, symbolizing the inversion of the last and the firsts and of insides and outs that the stellar magician in us is to tirelessly perform for as long as we shall live, in the authentic spirit of freedom and fancy that SF, once defined as “forty-nine square miles surrounded by reality”¹⁰, carries on its craggy, crayon-colored chests, announce that the time has come for every rule and routine to be chopped in two, for the sake of worldly beauties and their sonorous trumpeters to flourish.

S.F.0.4. Chitchatting with Phaedrus under a platanus tree on the banks of Ilissus, Socrates declared that “the madness of love is the greatest of heaven’s blessings”¹¹, and Plato carefully wrote that down. Many centuries later, Karl Jaspers stepped on a lecture podium at the University of Groningen to reflect on these early moments of western philosophy and point out that “Plato recognized madness, which if pathological is less than reason, but if divinely begotten, more; only through madness can poets, lovers, and philosophers come to a vision of Being”¹². During the only documented meeting between Lao-Tzu and Confucius¹³, the two cornerstones of the Chinese philosophy and ethics, Lao-Tzu, a rebel *par excellence* in his own right, who had claimed that “prophets are the blossoming of Tao and the beginnings of craziness” (Tao-Te-Xing 38), exclaimed that “a good merchant carefully conceals his goods and acts as if he had nothing, and a perfect sage makes himself appear a fool”, of which Confucius, the great respecter of order, ratio, doctrine and tradition later said the following: “As for the dragon, I know nothing, except perhaps that he ascends to heaven carried by the clouds and the wind. Today I saw Lao-Tzu. He is like the Dragon”. Quite in the spirit of the original Taoist teaching of Lao-Tzu, St. Paul the Apostle said, “God hath chosen the foolish things of the world to confound the wise; and God hath chosen the weak things of the world to confound the things which are mighty... Hath not God made foolish the wisdom of this world? ... If any man among you seemed to be wise in this world, let him become a fool, that he may be wise. For the wisdom of this world is foolishness with God” (Corinthians I 1:27... 1:20... 3:18-19), and further on, “With men of other tongues and other lips will I speak unto this people; and yet for all that will they not hear me, said the Lord” (Corinthians I 14:21). The ties between the Christian spirit and the foolish spirit have thus been very close throughout the history, with dozens and dozens of Christian Orthodox saints holding the epithet of *yurodivy*, or “holy fools”, that is, souls who would “feign insanity, pretend to be silly, or who provoke shock or outrage by their deliberate unruliness... who voluntarily take up the guise of insanity in order to conceal their perfection from the world”¹⁴. As the historic accounts have it, *yurodivy* would lead a double life, *i.e.*, “the outer one, which counters the worldly norms, and the inner one, where the soul lives in love with God”¹⁵, to which end they would exhibit “deliberately unconventional, shocking behavior so as to question the accepted norms, prophesy or disguise their sanctity”¹⁶. *Yurodivye*, accordingly, is considered by some Orthodox Christian theologians

¹⁶ *Ibid.*

as “the highest spiritual accomplishment and the expression of a sincerest holiness, whose outer appearances reveal total opposites of one’s truest feelings: the grotesque derision of the world disguises an unreserved love for it, the physical nudity disguises the spiritual beauty, insanity - the Christ’s mind, vagrancy - the quest for the heavenly home”¹⁷, with hesychasm and glossolalia being often adopted at the level of the language by the souls following this sacred tradition upon their putting the masks of fools, delinquents and incessant lawbreakers onto themselves and creating, as if with a magic wand, the starry swooshes of daze all around them, which the worldly spirits could get immersed into anytime, rediscovering the omnipresent divinities thereby. It is hard to find a better account of this equalization of foolishness with genuine Christianity in the popular arts than in Federico Fellini’s classic, *La Strada*. Namely, not only did the Italian filmmaker adorn the character of the Fool with an array of Christ-like symbols and not only did he make him the crucial spiritual guide for the movie’s heroine, Gelsomina, in the critical moments of her life, encouraging her through his lessons given in the dark behind the circus tents and away from the limelight to continue to serve cruel Zampano and sacrifice her life for the sake of his salvation, but in perhaps the most symbolic of the movie scenes the Fool is, like the Christ himself, nowhere to be seen at the massive Church parade and only later, after the ecclesiastical solemnities, it appears as an acrobat walking on a high wire, wearing winged costume, with his balance pole forming a cross together with the wire on which he walks. After all, one of the most elementary traits of the Christ’s teaching was intellectual rebelliousness that makes one stand upside down with respect to the armies of followers and conformists that have comprised the majority of humankind ever since, knowing that only insofar as we go against the streams of ordinariness do we get to exhibit mountain-moving creativity in this world. For this reason, all of those who open pioneering and truly progressive trails for the world to follow will be described by the mediocre mainstreams of humanity in a similar fashion as Pontius Pilate designated the Christ in the cathartic book of *The Master and Margarita*: “A wanderer, a mad philosopher”¹⁸. By going beyond the stale path of ordinariness and paving way for others to follow, walking in front of a procession of progressives, never ever hiding behind others nor following anyone but the divine voices echoing inside one, these trailblazing souls are bound to be the first victims of the arrows of malicious judgments, of labeling one as a looney living in a la-la land at best and as a schismatic madman making mess and bringing disharmony wherever the order reigns at worst. Oftentimes, they will lay down their lives, as the Christ did (John I 3:16), but will open avenues to a brighter future for humanity thereby and even if they were allowed to relive their destiny, these perennial rebels and outcasts, like the Christ walking back to Rome to be crucified again per the apocryphal gospel of St. Peter (Acts of Peter 35), would whisper to their prosecutors’ ears, “I don’t change, I don’t”¹⁹, and do it all over again. They know that should they accepted the calls of convention, the divine creative forces endowing them would vanish in an instant and so they do not yield to this pressure of mediocrity, even when it becomes existentially unbearable. Any penalties that the system imposes on them they will shrug off on the basis of the higher moral grounds that they stand on, whistling inside them a melody that echoes that “you’ll shut me down with a push of your button

but yo, I'm out and I'm gone and I keep it on and on"²⁰ and continuing to sabotage the very establishment in question with every breath of theirs, all until its foundations crack and walls topple and something more humane gets erected in its place. In Tarkovsky's *Nostalghia*, the artist and the madman face each other in front of the writing on a vintage wall that says $1 + 1 = 1$, signifying the necessity for the state of equality between the two to be reached²¹ and for the artist to accept being a madman who relentlessly breaks norms of convention in all the aspects of his psyche and behavior before the fruits of his work can live up to the epithet of truly divine. "Child, madman, artist"²², Mark Rothko, an abstract painter and a teacher of children's art, thus drew a parallel between the artist and the divine child that the artist is destined to everlastingly seek inside himself, imagining a madman posed as a bridge between them, before continuing to muse in his *Scribble Book* in the following manner: "The appearance of their work is similar. Is the child mad, the madman childish, and does Picasso try to be a little of both"²³. From this point on, our being marked as a weirdo by the bleak occupants of the middle of the bell-shaped curve of the rather broad spectrum of the ways of the world could be taken as a reason to rejoice, not despair, for it would come as a sure sign of both our descent into the lowly lifestyles and an ascent into the heavenly loci of being. Like so many stunningly imaginative spirits before and after him, William Blake, an English poet and painter from the Romantic Age, whose wild imagination enabled him to see angels dancing around the Sun every time he looked at it, was also labeled as a madman by many of his contemporaries, one of whom was a fellow poet, William Wordsworth, who noted down on one occasion that "there was no doubt that this poor man was mad"²⁴. Yet, as we see, to be labeled as mad and abnormal by the conventional current of thought that typifies a given era is an inevitable fate of the most progressive and divinest creatures on this planet. Had Albert Einstein lived today and come up with a discovery that called for an equally groundbreaking renovation of the basis of our understanding of physical realities, with no immediate experimental verification in sight, as was the case with the theory of relativity a hundred years ago, I have no doubts that he would have been ridiculed, laughed at, paid little or no attention to by the scientific community and peacefully laid in the same cuckoo category as the occasional proposers of impossible, out-of-this-world theories that all attendees of scientific conferences have come across once or twice. Yet, to avoid the systematic suffocation of unassailably creative voices that will have always sounded as if being spoken in "cloven tongues like as of fire" (Acts 2:3) to those who have tied the imaginative kites of their spirits to the fences of convention, who have lost the ability to fly high in the sky of illuminative thought, and who would swiftly and mockingly reject them as being "full of new wine" (Acts 2:13), as it happened to the apostles on the day of the Pentecost, we, the sanely mad ones of this world, who have been made aware that genuine sanity is always rooted in craziness of one form or another, must heartily fight to free the voices of madmen from the stiff shackles of reason whose powers have never been as oppressive and have never taken as much toll on the vitality and creativity of our mental and physical beings as they do today. For, like Cassavetes' Mabel, a.k.a. *A Woman Under the Influence*, lying far closer to a perfect earthling than any of her neighbors owing to fancifulness, behavioral ingenuity and the geysers of love

sprinkling exuberantly out of her heart, those labeled as crazies by the ordinary ones may as well be saintly in a sea of lackluster, mediocre spirits and, as it happened to this befuddled lady whose love for others began to gush forth and drown her and others therein, hope remains that, if truly divined, their voices would be heard afar with the help of channels magically laid at right places by the witty angels amongst us. For, we will have to accept the label of a weirdo on our foreheads if we wish to pave the way to a brave new world wherein all things animalistic would cede place to things angelical, the world infinitely remote from the one in which we are trapped today, with a zoo somewhere deep in it, displaying an array of predatory species in cages, from the meek to the harsh, and a mirror at its end, so that humans can see who the fiercest predator and the most destructive species on Earth is²⁵. Think, for example, how ludicrous Fibonacci must have appeared to his contemporaries when he began to write in Arabic numbers in the world where everyone was accustomed to Roman numerals and you will quickly realize that any offerings of novel and advanced ideas and ways of being will be similarly marked by the majority of man as the acts of a lunatic, not a seer. To be evolutionarily innovative is to be unequivocally seen as mad by those holding onto stale old ways of being and cognizing. As the records of the Christ's life show us, whenever we come up with lifesaving novelties and wish to place them in the hands of man, we should be prepared to bear the cross of ridicule and rejection by the society rather than reap rewards and acclaim. For, what appears to the eye of Heaven as endowed with brilliant sense is usually perceived as an instance of sheer madness by the eyes of common man. "I too prized the freedom with which Thou hast blessed men, and I too was striving to stand among Thy elect, among the strong and powerful... but I awakened and would not serve madness"²⁶, said Fyodor Dostoyevsky's Grand Inquisitor, who had betrayed the original, inherently rebellious teaching of the Christ in favor of that emphasizing conformism, materialism and eradication of the touch with the voice divine within the churchgoers' hearts. In his posthumously released *Thoughts Out Of Season*, Friedrich Nietzsche thus stated that "Jesus may be described as an enthusiast who nowadays would scarcely have escaped the madhouse"²⁷, and we can confirm that now, 101 years after this thought was published, the world is equally, if not even more, harsh and repulsive to intellectual and spiritual rebels who freely raise their voice against hypocrisy and obsolescence of the grounds of traditions upon which our societies stand, such as the Christ certainly was. Concordantly, G. K. Chesterton summed up the theological essence of Christianity in the following words: "All the real argument about religion turns on the question of whether a man who was born upside down can tell when he comes right way up. The primary paradox of Christianity is that the ordinary condition of man is not his sane or sensible condition; that the normal itself is an abnormality"²⁸. When St. Peter expressed his wish to be crucified upside down, he confirmed this point of view that necessitates placing things and us, their observers, on their heads to see them right. At that time, he also referred to the very same argument that Chesterton would raise many centuries later, claiming that being born headfirst, as humans do, "is why people seem to think that what is true is false and what is false true, what is right is wrong and what is wrong right, what is

real is fake and what is fake real”²⁹ (Acts of Peter 38). Of course, what is normal and what is abnormal is defined by the standards set by the majority and since we know that breaking those standards presents the first step in bringing something of lasting importance to the world, we should be sure that being normal indeed presents the most abnormal state for a creative mind to adopt. Or, as Samuel Beckett, that lunatic in the eye of lackluster theatregoers of the 1950s, neatly observed, “Crazy is only the one whose craziness does not match with the craziness of the majority”. “A question that sometimes drives me hazy: am I or are the others crazy?”, Albert Einstein, a genius who firmly believed in these inherently rebellious drives to clash with each standing rule blindly followed by the masses as those endowing creative minds of all ages, thus wondered throughout many dark hours of his soul. For, to find a way to place things on their heads whenever they are all uniformly standing tall, and *vice versa*, is a simple recipe that could guide our creativity. Although the balance between periodicity and novelty woven into every piece of the physical reality as we know it indicates the necessity for the coexistence of the orderly paradigm-builders and the rebellious smashers of norms and trends blindly and unquestioningly followed by the masses, remember that the multiplication of minus and plus yields minus and the balance between balance and imbalance is essentially an imbalance rather than a balance; so does the product of the encounter of calamitous conformity and chaotic craziness create a combination that is more of a madness around which exploratory satellites of wonder orbit than conventionality surrounded by the thick curtains that cover the view of our glistening spirit whose shine craves to be released to the world. Mind you, but even the first letter of the alphabet we use today, A, was in the ancient and the first known, pre-Phoenician pictogram-based alphabet, drawn in an upside down fashion - ∇ . Or as put into verse by Emily Dickinson, “Much Madness is divinest Sense... much Sense – the starkest Madness”³⁰. The Sufi path has been correspondingly described as the one extending from the stage whereon a person appears sober but is, in fact, drunk to the point whereat the same person, having opened her heart to the effusions of divine love, looks drunk but is, in fact, sober³¹. Ludwig Wittgenstein would have cordially agreed with this point, considering his own reply to Bertrand Russell’s telling him that he could go insane after he stormed into Russell’s residence in Cambridge at 3 a.m. in the morning and began to bounce off the walls, agonizing about the meaning of logical propositions: “God, prevent me from sanity”³². However, despite the fact that “sanity is a madness put to good uses; waking life is a dream controlled”³³, the words George Santayana carved on the banks of the river of human memory, to be constantly washed by its waves and remind the river that life is but the dream of a cosmic soul, ours is a social milieu wherein people try all that is in their powers to distance themselves from the slightest traces of craziness that others may recognize in them. For, being labeled as unusual, let alone abnormal or crazy, is certainly seen as horrible in the world pervaded with mediocre minds that unswervingly obey the herd mentality streams within them, acting like blind followers of a blind leader, leaning onto each other, all destined to end up in trenches of life. Yet, standing out from the mainstream is, as the common sense tells us and countless historic arguments can confirm, the precondition for our contributing to the creation of new evolutionary pathways for the entire humanity, the

planet and the Universe to pursue. It is for this reason that in his poem in prose, *How I Became a Madman*, Kahlil Gibran said how he had “found both freedom and safety in madness; the freedom of loneliness and the safety from being understood, for those who understand us enslave something in us”³⁴, clearly equalizing deviations from the ordinary with the ways of being that make us appear akin to a weirdo in the worldly eyes as an inescapable precursor for the most intense explosions of creativity witnessed on Earth. Oh, what a joy it was then when one of the commentators to a scientific article of mine said that “this guy sounds like one of my manic patients talking about their ‘projects’, except this guy was intelligent and functional enough to actually piece something together”³⁵ and others called me “a fool”³⁶ and asked if “there was a correlation between this paper and the legalization of weed in CA”³⁷, echoing my Serbian grammar and literature teacher from the middle school, along with countless of her peers, calling me “a hollow, empty and foolish head”³⁸. I, of course, took it as a compliment that they meant that my train of thought was quirky, otherworldly or plainly crazy, knowing that creativity and craziness in this world are delicately entwined. In that sense, cosmic craziness, or space oddity as Major Tom might have called it³⁹, is the seed from which the most opulent trees of creativity are able to sprout. After all, long ago I, a mad scientist and maudlin poet in the making, heard Misha Tal say, “Young man, consider that the train has left and all you can do is loudly slam the door in farewell”⁴⁰, and those words got deeply installed in my mind, making me aware that a point of no return has been crossed and that, notwithstanding the consequences, moves akin to his 21...Nf4?! in the game 6 of the world champion title match against Botvinnik in Moscow in 1960 or 11...Nc6?! in the game against Janusz Szukszta in Uppsala in 1956, terrible in the eyes of a computer and crazy in the eyes of an ordinary human, but nothing short of beautiful in the eyes of poets and muses watching over us from the tip of a nearby cloud, are the only ones worth playing. Still, the fear of appearing crazy in the eyes of the society stands behind the transformation that, unfortunately, tends to take place in the lifetime of each and every individual, from an utterly natural, lively and imaginatively acting creature that we are born as to the one set on “autopilot, with nothing really human required of us; stop; go; walk here; drive there; all action basically for survival, all communication simply to keep this ant colony buzzing along in an efficient, polite manner”, as noticed by Tiana Hux in Richard Linklater’s *Waking Life*, the movie that reinstates the message that we, as humans with divine creative potentials that could turn us into dazzling stars on earth in the blink of an eye, “think we’re alive when really we’re asleep in life’s waiting room”⁴¹. Tiptoeing around the edge of dissociative disorder, settled in a derealized and depersonalized state of mind where one “does everything but

feels nothing”⁴², the ordinary human is a creature of spoiled habit that sleepwalks through life, bearing no connection with the existential reality enveloping one and the infinitude of potentials to act in unthinkably imaginative and inspirational ways stemming from it. But to wake up from this automatized life of a zombie and start acting like Ronnie O’Sullivan when he had his all-time record, 14th maximal break on a plate in a game against Barry Pinches at the 2016 Welsh Open and then deliberately hit a pink ball instead of the black one, ending one point short of the maximal 147 points, thus coming down crushingly on the whole concept of competitiveness as a creative drive in the eyes of some of us and, through this instance of craziness whose borderlines fade in and out of the brilliance of a genius, demonstrating its nonsensicality, alongside toying with the idea that losers and often winners in the big picture and *vice versa*, implies the inevitability of being labeled as a madman by the social medians and mediocrities, the same effect that this convoluted sentence will have on one such reader, in spite of its serving the role of reflecting this craziness that clashes with the lackluster mundanities of this world and makes unswerving riders on it see stars by the end. One could hear this or that being the trait that keeps people forever young, but were we to ask the Serbian songwriter, Đorđe Balašević, he might direct us to a verse from the song closing his tragicomic homage to the 1990s, where he painted “craziness drizzling around them”, the forever young, “like an aureole”⁴³. Yet, now that we know that creative craziness is our savior in resisting the falls into the traps of prosaic adulthood, we are in hold of a magic key that unlocks the doors that lead to the release of the angelic flights of eternal childlikeness and inexhaustible streams of divine guidance residing dormant in the fountainhead of our being. “The human soul is more profound than its pride and consciousness, more powerful even than its most compassionate dreams, but it may at times only be able to assert its recognition of human dignity through madness”⁴⁴, noted down the American theologian, Ralph Harper, reinstating the hereby expounded message that the road whose destinations correspond to eruptions of celestial energies able to heal many withering hearts of the universe indubitably leads through the crooked passageways in the forest of madness. If we wish to make that authentically Christian, colossal leap from Word to Life, liberate our spirit from the shackles of hypocrisy and cynicism, shake off the dust of spiritual lameness and become alive again, at its most figurative and truest too, we have no choice but to be prepared to be seen as crazy in the social eye, the eye that spontaneously, with its gimp hand, drags down, into the mud, all those eager to take a skyward route into life lived to the fullest and the most beautiful, being exactly the point that the preacher from Eric Rohmer’s *My Night at Maud’s* had in mind when he opened his sermon with the following words: “Christianity is not a moral code. It’s a way of life. It’s an adventure, the most splendid adventure of all: an adventure in sanctity. I don’t shut my eyes to the fact that one must be mad to become a saint”. Verily, when Richard Wagner conceived the character of a supreme hero, Siegfried, he made him into a spoiled, uncivilized, rowdy, childlike, impulsive, wine-drinking, romanticizing, adulterating, daft spirit that shines with joy, that slays the Dragon, that seeks guidance in birdsongs and that stands forth as the only man who could hold the Ring of the Nibelung without falling victim to its curse, being immune to its allures only because of prioritizing the power of love over the love of power. Not coincidentally at all, the German composer made a number of characters in this landmark musical drama, from the infernal to the terrestrial to the celestial, from the highest

God, Wotan to Mime the smith to the Rhinemaidens, call the superhero, simply, a madman. Having realized the immense creative potentials that madness with a sane leash bears, the British psychotherapist, Anthony Storr noticed concordantly that “the sane are madder than we think, the mad saner”⁴⁵. In his rhymes, the English poet, John Donne likewise equated madness with cordial beauties that all humans should do their utmost to engrain within themselves: “Filled with love, may I be rather grown mad with much heart, than idiot with none”⁴⁶. Erasmus of Rotterdam released the following outcry as a summary of his heavenward musings on madness as the road to the most sacred of all knowledge: “Be present then awhile, and assist me, you daughters of Jupiter, while I make it out that there is no way to that so much famed wisdom, nor access to that fortress as they call it of happiness, but under the banner of Folly”⁴⁷. Finally, this brings us over to the monumental Michael Foucault’s treatise on madness and civilization⁴⁸, in which he argued that “man are so necessarily mad, that not to be mad would amount to another form of madness”, reminding us how since the dawn of the human race rebels against the ordinary rhythms of thought on one side and respecters of order and norm on the other have supported each other along the line of advancement of our civilization; the former by questioning the obsolete norms set forth by the latter, and the latter by placing constrains on the wings of the spirit of the latter, which have in the long run merely provided a drive for an ever higher soaring of the constructive imagination of the former, the lovingly crazy ones. Even though the gap between the two, across which the arrows of hostilities will incessantly fly, is here to stay, for the majority of the former, paradigm-breakers cannot help seeing the latter, paradigm-builders as dull conformists and sheepish followers, while the latter typically see the former as disobedient and insolent schmucks, unendingly accusing each other in their heads for each crisis that strikes humanity, the sooner they all realize that progress and sustainability of the human race vitally depend on the productive coexistence of both, whereby they fertilize and not suffocate each other, the better. For, if the evolution of sentient, conscious creatures able to reflect on their own being in the world from insentient animals and plants secretly teaches us something, it is that a meta-step that makes us step away from the level from which we observe reality and participate in its evolution and onto a new level from which the former one and us in it are looked at and readjusted is often the step that brings us closer to brand new sunrises of being and knowledge as we gracefully proceed holding God by one hand and humanity by the other on the road to spiritual salvation of each flower, stone and a pair of dewy eyes that twinkles like stars on the surface of this cerulean cosmic ball.

S.F.0.5. Henceforth, we should take advantage of our ability to meta-logically learn *about* the systems to which we belong, aside from mastering their handling from within. To step away from a system into one of the innumerable glowing contexts that surround them, like Alice did as she passed through a mirror in her playroom and emerged on the other side, oftentimes hardly intelligible and frighteningly confounding at first, proves as vital for our skillful and balanced existence within those very systems in question. For example, the line that divides conducting our scientific endeavors in a narrow-minded and essentially irresponsible manner and managing them in highly creative and responsible ways is all about thinking or at least willing to learn how to

think *about* science in addition to being a highly specialized expert in the field. This is where the invaluable importance of systemic knowledge is glimpsed for the first time in the course of this book. Notwithstanding that any opinions on subjects distant from one's area of expertise in today's overspecialized world tend to be routinely discarded as exhibitions of sheer charlatanry, a wise specialist is always the one who thinks beyond one's own professional field and probes various grounds feeding it with influence, as imperceptibly as roots and their mycelium networks feed trees on the farthest edge of the forest. For, by making steps on the ladder of knowledge that take us ever higher into distant, aerial perspectives, from one level to the next, whereby all the preceding levels become clearly visible as we reach each new successive level, we arrive at the systemic principles applicable to all systems in Nature. Or else, were we to resist the urge to climb high, to broader and more aerial perspectives, and leave our current, rather limited, terrestrial stances behind "for a year or a day"⁴⁹, we will miss some of the wonderful holistic insights that connect these limited views into a meaningful whole and our world may remain fragmented for good, piercing our brains like shard from one moment to the next. When an actress in *Tigers Be Still*⁵⁰, a play in which everyone becomes healed by facing one's diametrical opposite and where therapists start the process of healing their patients at the moment when they freely reveal their weaknesses and place their own wellbeing on the palm of the hand of their labile patients, demonstrating that care about something fragile and beautiful is the source of all wisdom and strength in life, stands up, grabs the microphone and steps out of the play for a second so as to describe to the audience how she feels, the message of her act fabulously fits the highlighted exiting the search for treasures and miraculously finding it thereby. For, many times in life the things we have passionately searched for have emerged straight in front of us soon after we ceased to seek them, which brings to mind the final story of the *Night on Earth*⁵¹ and its secret message that even love knocks on our door when we give up on searching for it, let alone enlightenment or countless other pettier treasures we seek in life. The same message reverberates all through the air in the wake of Majid Majidi's movie *The Color of Paradise*, in which the father of Mohammad, a blind but divinely gifted boy capable of reading stones, seashores, bird's feathers and stalks of wheat with his touch, ignores his son's talents and sends him out to be a carpenter's apprentice, wishing only to get rid of him, all until the boy falls into a turbulent river, the moment when he jumps to save him and finally, with his son missing, discovers the immenseness of his love for him. That is, it often happens that only when our zealous searches are brought to a halt do the things sought after magically come our way. Or, as Goethe, yet another poet who would have been a carpenter had he followed his father's demands, put it in a poem that embellishes his Western-Eastern Divan, "She craves in dreams, while with an eye glanced backwards or on either hand she lets the day of days go by? Her efforts and goodwill limp slow, following swift life that runs the way, and what you needed years ago, that she would proffer you to-day"⁵². For example, once we put the brakes on the craving to have the stellar crown of enlightenment placed on our head and begin to long to have it placed on other people's pates, the seeds of sparkly stars that comprise this impalpable crown would start to twinkle all through the aureole drawn around our Saturnian head, letting it become starrier and starrier as we become ever "poorer in spirit" (Matthew 5:3) and ever

more moved to give all that we have onto others. Even as I write these words, a lovely creature comes to distract me and I know that not kicking it to the curb and continuing to be untouchably immersed in my thoughts, but giving away the pen for a while, even though I might have found myself in the midst of a fabulous inspirational streak, so as to play with this grownup pet of a kind is the way to keep on impressing inspiring thoughts that miraculously dawn from some heavenly heights to the cup of my head onto these very pages. Now, if you have begun to wonder if there is a single trait with which this knowledge reachable when we have ascended as high as we could, into the most sublime clouds of human thought, could be described, I can help you figure it out. It is c-r-a-z-y. For, how else would you describe teaching that insists that the most ridiculous and disastrous thing we could do is to follow a single line of thought and mode of being once we have found full comfort in it and that losing what we have gained is the way to continue the gaining process, which is, of course, gaining only insofar as it is all but gaining even in the deepest spheres of our consciousness? Hence, this crazy teaching tells us that no matter how consoling this unilateral thinking and being may seem to be for our spirit, we ought to turn around and look for its antipode, grab it by the hand and dance with it, reliantly and happily. For, by trustfully embracing the total opposites from the streams of thought we follow and propagate at the moment, we maintain a most vital trait of human thought: uncertainty. This point of view brings us back to the balance between faithful paradigm-builders and rebellious paradigm-shifters, whose existence is possible only insofar as their opposites thrive as well, just as in all other dialectical polarities in life. After all, those who overly respect order in life, while stomping over the value found in disordered, randomized, passionately drawn and chaotic patterns, should be made aware that had there been no constant infusion of entropy to our lives, the evolution of our beings would first stagnate and then start to roll down a descending path, all until all things around us, including us engaged in it, turn into a perfectly ordered crystal lattice which could bear no life at all. Freedom to randomly move in time and space, which is described as entropy, the measure of disorder of a system, in thermodynamic terms, is essential for the existence of the natural and human laws that dictate order to life. On the other hand, those who overly respect disorder and dislike to obey any rules and principles that our tradition has tried to instill in us, while placing anarchy on the pedestal of their worldviews, should pay attention to the fact that all the celebrations of chaos likewise exist only insofar as they are supported by some periodic, repeatable and highly ordered patterns of the physical reality. Musicians on the stage who play and shout about chaos as the only thing that matters forget that even they have adopted the rules of language and standards of well-tempered instrumentation to pass their points across, let alone that the atoms and molecules that constitute their bodies are engaged in an intricate dance in which orderliness and freedoms are neatly balanced. Any creature who'd indulge in the worship of the gods of disarray and decadence while disparaging the protectors of order and predictability should thus be made aware that his biological existence owes to the fact that the planet on which he stands has had a steady, circular orbit for the last four and a half billion years; had it been irregularly elliptical, like that of Pluto, for example, we might have also had solid nitrogen falling off as snow in the winter and rivers and oceans evaporating in the summer, which would have given life zero chance to evolve. In essence, to be a worshipper of chaos and chaos only and at the same time ignore the foundations of order on which one stands makes one a serious hypocrite and the same attribute could be ascribed to supporters of order who fail to realize that every form of stability in life is founded on a finite amount of uncertainties and volatilities. This is all to say that every perceivable chaos is always rooted in one form of order or another just about as much as sustainability of every order is based on a steady flow of entropies through it. Ludwig Wittgenstein was the one to point out that perfect

inquiry manifested as doubt over everything is utopian⁵³. It could not exist because to wonder about truthfulness of something implies that we have accepted some implicit assumptions as truthful and have no doubt in them. Or, as Wittgenstein himself noticed, “If you tried to doubt everything you would not get as far as doubting everything. The game of doubting itself presupposes certainty”⁵⁴. Likewise, any expressions that embrace chaos, implicitly or explicitly, rest on some foundations of order. This viewpoint brings us to the doorsteps of another one of Nietzsche’s thoughts, which was mysteriously handed to me on my honeymoon night, with the sounds of ocean waves and of “the awakening of cheerful feelings” from Beethoven’s pastoral symphony blending in joy and bouncing between the walls of a dwarfish coastal vintage house in Monterey in which I performed my nighttime pirouettes as a greeting to the gods of small things that hold the Universe on the palms of their hands: “There is always some madness in love. But there is also always some reason in madness”. After all, many mental illnesses arise because of too much obedience to a sense of order, which tends to solidify the natural wondrous fluidity of human minds into fixed and repetitively spun ideas that can be the nuclei for obsessive and compulsive disorders, thus showing us clearly how too much order leads to quite a disorder at the end of the day, as much as too much of disorder does. This is why in my world, as I pointed out at the very beginning of the long and witty road that this book is, only middle grounds between reason and madness deserve the attributes of optimality and wisdom. And so I continue to hold one of my hands firmly placed on the foundations of stony orderliness that the tradition I have embraced with all my heart shines with and wave fancifully with the other hand of mine, knowing that only if our worldviews are somewhat set in stone, but also topsy-turvy to some extent, can they lead to truly valuable and beautiful insights.

S.F.0.6. If Werner Heisenberg and his *l’equipe* composed of three other Nobel laureates could get away with playing poker without cards⁵⁵ in all their seriousness, and if Constantin Stanislavski, a forefather of the modern system of acting and his theatrical buddies could sit around a table and communicate wordlessly for a whole night long, using only their fingers⁵⁶, then why consider a smart and poetic fanciness that prompts us to play tennis with imaginary balls, as in Michelangelo Antonioni’s *Blowup*, and exhibit similar oddities as equal to foolishness? A statistician disguised as a jester now jumps before us to announce that not only is normality when it comes to the distribution of events almost nonexistent in the living world, but also that the assumption of normality in statistical terms entails the assumption of a sum of discreet, independent, identically distributed variables with finite mean and variance. And if normality and discreteness of variables go together, while this independence of one entity over another is a reductionist illusion in the holistic reality wherein all is connected, every time we turn to normality should be seen as an instance of madness in its own right. Concerning this abhorrence of normality and celebration of folly fallen from the holy skies, “You don’t need a genius, you need his brother, the madman”, says an adviser to the Serbian soccer association president, Dr. Andrejević, a.k.a. Andrejka, a medical doctor and a university professor at the time, who spots a local fool on the rooftop of a nearby house with a white dove in his hands and chooses him as the coach of the national team;

⁵⁴ *Ibid.*

⁵⁵ See Werner Heisenberg’s *Physics and Metaphysics*, Nolit, Belgrade, Serbia (1969).

⁵⁶ See Constantin Stanislavski’s *Building a Character*, Routledge, New York, NY (1936), pp. 47.

'tis a key scene from the Serbian blockbuster⁵⁷ about a group of soccer amateurs from Belgrade, who sailed on a mail steamship for two and a half weeks from Marseille to Montevideo for the first World Cup in soccer, in 1930, to beat the mighty Brazilians and snap the bronze medal. For, to repeat the words of one of Serbia's favorite people's poets, Duško Radović, "Everyone should have a place, maybe even a secret one, where one could be foolish. Foolishness is vital for good health. The freedom to be foolish is the healthy privilege for which you need to fight by yourself". As far back in time as 400 BC, Aristophanes observed that the brain of the sage possesses a corner for the fool⁵⁸, Diogenes the Cynic walked around the streets of Athens in search of a man with a lit candle in the middle of the day to show that nonconventionality bordering sheer foolishness is the route to enlightenment, and Horace reiterated these messages 300 years later by advising us to "mix a little foolishness with our prudence"; for "even Gods love good jokes", as Plato scribbled down. Requested by Cardinal Hugolino to make his order of Friars Minor, that is, of vagrants and all those who had no ties with the feudal aristocracy, comply with the precepts of religious life set forth by either St. Augustine or St. Benedict, St. Francis cried out loud the following words from the cobblestoned streets of Assisi, implicitly identifying saintliness with foolishness therewith: "I do not want to hear any talk of the rule of Saint Augustine, of Saint Bernard, or of Saint Benedict. The Lord has told me that he wanted to make me a new fool [*novellus pazzus*] in the world, and God does not want to lead us by any other knowledge than that"⁵⁹. At the very end of Santa Maria Della Salute, a poem that embellishes that treasures of the Serbian literary heritage with its graceful timelessness, climbing breathlessly to ever higher grounds of lyrical ecstasy with every subsequent verse, Laza Kostić explicated his vision of making the spirits go mad even after reshuffling the paths of stars, shedding suns over the rustic frost and awakening sunrises in every corner of the world, thereby similarly equalizing the highest level of sanctity with divinely spirited madness. Musings on the nature of divine consciousness led Marlene Dietrich to concordantly note how "if there is a supreme being, he's crazy"; although these words rang with different, atheistic feelings the actress nourished within her soul, like many devil's disciples⁶⁰ on the stage of life, driven by vanity and egotism and yet relentlessly dropping diamonds of precious signs in the wake of their acts, proving that the essence of the divine is indeed engrained in each and every creature inhabiting this universe, so did she strike a chord that unmistakably echoed the very angelic views of the spiritual reality that underlies the physical existence in the same manner as invisible roots of a tree provide true sources for its growth. In a Talmud story, a young seeker of truth by the name of R. Beroka asked the prophet Elijah to show him those who truly follow a godly path and "who would have a share in the world to come" (Ta'anit 3:22). Even though they were in the middle of the busy Be-Lepht marketplace, the prophet that day did not have anyone but a prison warden to direct the seeker to⁶¹. A couple of days later, however, he gleefully approached the seeker and said something that could be paraphrased as "See those two clowns? They are on the Lord's path. Go,

⁵⁷ Watch Montevideo, God Bless You! (*Montevideo, Bog te video*), directed by Dragan Bjelogrić (2010).

⁵⁸ See Alan Fletcher's *The Art of Looking Sideways*, Phaidon, London, UK (2001).

⁵⁹ See André Vauchez's *Francis of Assisi: The Life and Afterlife of a Medieval Saint*, Yale University Press, New Haven, CN (2009), pp. 104.

⁶⁰ As you may have guessed, the reference to Bernard Shaw's devil's disciple that sacrificed himself in a Christ-like manner despite his infernal allegiance is not accidental at all.

⁶¹ Here lies the darker connotation of the story, but also the one where it breaches the norms of expected thought and creates an illuminative paradox in the listener's mind. In the real story, the seeker gets engaged in a lengthy conversation with the prison warden, spanning over multiple days, trying to understand what it is that makes him so special and holy, only to be interrupted by Elijah who'd point at the clowns. See *Babylonian Talmud, Tractate Ta'anit, Chapter 3*, retrieved from <https://www.jewishvirtuallibrary.org/tractate-taanit-chapter-3>.

figure out why". The young man hesitantly approached the clowns and quietly asked them: "Excuse me, what is it that you do in life?" "Oh, nothing", answered one of the clowns, "whenever we see an unhappy man, we go thereto and try to make him smile - straight from the bottom of his heart". No wonder that by setting grounds for this enlightening dialogue to evolve, the Lord wished to demonstrate to the curious young man that being a clown, whose only goal in life is to make the saddened happy again, paves way to the glimpsing of the divinest truths of reality, which itself drops one on the doorsteps of the Lord's abode, a message whose semantics resonates with the following thought by an Ingmar Bergman's actress and one out of millions of vessels for harboring the poetry of madcap (e)motion that have sailed over this planet, in whose hands the keys to saving it, if we were to trust the closing of Bergman's Seventh Seal, lies: "Jesters have always been truth-seekers, following the path of antithesis. And in the end, this truth cannot reasonably be anything but the truth about God"⁶². My mom was one such clown with the heart of gold, resembling the Sun on the tapestry that she wove anxiously while I made somersaults in her belly, shining unstopably and solely so as to bring light and happiness to the lives of distraught souls bent by the burdens of life and nested around her. She was such, clownishly and holily other-centered from the days of my earliest youth to her final days, when she would sit in the operation room, waiting for the brain surgery that would leave her crippled, bedridden and looking like that "beautiful angel, pulled apart at birth, limbless and helpless"⁶³ to begin, and instead of feeling distraught and gazing into emptiness, she would reach out to another person in the waiting line, who looked equally helpless and wretched, hold her hands, caress them softly, say her famous "All will be fine"⁶⁴ and solace her with the lenience of an angel. And I, with these two angels now leaping near my lap, kicking and pushing these words composed atop it with the godliest grace imaginable, have vowed to continue this tradition of clownishness, of making the drawing of the smiles on the little one's faces the highest priority in life, and ensuring that "the priest continue what the nurse began and thus the child impose on the man", as John Dryden put it in his 17th century poem, *The Hind and the Panther*. For, I have sensed that every sparkle of joy made to flash inside their neuronal networks through my clownishness rewires their juvenile brains and predisposes them to the arousal of the traits of a blissful intellect. And when these inner pathways of their maiden minds are carved in such a way that they foster the flow of the waters of unrestrained joy, then later in life, when the dark clouds of burdensome adulthood begin to gather over them, they should be able to easily reawaken this inner sun that beams the rays of infinite joy all around them, thus making the one and only wish of every good parent come true, which is for his children to be happy even when he is no longer around to hold their hands during the emotional breakdown, to wipe the tears off their cheeks when they weep their hearts out and to cater to the innumerable problems and temptations awaiting them beyond the horizon. Verily, therefore, if in some hypothetic universe I, a renaissance polymath and a multidisciplinary creature like the world has rarely seen, were to be forced to pick one and only one profession to dedicate myself to and discard all else, I will think no longer than it takes for an eye to blink before I opt for the occupation of a clown, of a jester jumping in joy all around the sad and dejected worldly spirits and opening his heart before them, so that they be washed by the remedial rays of the sunshine of a soul whose infinite potential to heal and harmonize has barely been glimpsed by this dwarfish bearer thereof that I am. Be that as

⁶² See Eva Dahlbeck's *Some Thoughts about an Old Colleague on His Way to Canonization*, In: *Ingmar Bergman: An Artist's Journey on Stage, on Screen, in Print*, edited by Roger W. Oliver, Arcade Publishing, New York, NY (1995), pp. 66.

⁶⁴ Or, "Sve će biti u redu" in my native Serbian language.

it may, back at our ancient marketplace, upon hearing the clown's words, the young man said, "Thank you", and, enlightened, went his own way, as if holding the glossy ideal carried on the wings of G. K. Chesterton's words in his heart: "The pessimist is commonly spoken of as the man in revolt. He is not. The person who is really in revolt is the optimist, who generally lives and dies in a desperate and suicidal effort to persuade other people how good they are"⁶⁵. After all, it is unbearable for me to think how much sin we would attract upon ourselves if all these human creatures around us, having been born and brought up by the worldly mothers, each one of whom holds at least a seed of holiness in oneself, with one wish only, which is for them to be happy, we were, in turn, to consciously make miserable. How wicked, indeed, we would then appear in the eyes of gods and goddesses who generously spill love over this sad and beautiful world if we spit on this divine gift of theirs by indulging in hate and blemish of the nearby souls. How ignorant we would be of the fact that peace and love, verily, emerge as victors from all the battles and tempests tearing our spirits apart, if not in the ephemeral moments of our returning to the Paradise of the consciousness of a child, then on a dark and stormy night of the soul, and if not even then, then surely on our deathbed, meaning that though hate can ravage our worlds, its labors are eventually futile and it will always end up being dispelled by the divine power of love, as quiet and unassuming as the "still small voice" of prophet Elijah (Kings I 19:11-13). Everything we do in life, thus, as I see it, falls down to either demonically tying stones onto backs of creatures around us so as to suppress their ascents to stars or angelically releasing these burdens off their backs through the acts of merry graciousness, making their flights towards heavenly states of mind and being possible, if we were to refer to the parable drawn by Kim Ki-duk in his Buddhist movie about the four seasons and the recurrent cycle of life. Having recalled Chesterton's motto, a magical image springs in my mind of another marketplace situation of which its accidental observer wrote in daily Belgrade newspapers: a blind old man with a white cane in his hands stumbles to an equally old lady, so hunchbacked that she could not see what lies ahead of her, and rather than uttering fiery accusations of each other's heedlessness or coldly bouncing off one another, as a sign of apology the old man begins to kiss the old woman's hand, while the old woman responds by softly caressing the old man's hair⁶⁶. Of course, rare like diamonds in the dust are such news in this world wherein, as the Serbian actor, Dragan Nikolić pointed out, "the news is, they say, when a man bites a dog, not when a dog bites a man, yet it is always biting and aggression and negativity that are dormant in them and never, say, seeing a man pat a dog or look at it softly and caringly"⁶⁷. No doubt that this story about clowns on a busy marketplace where people swoosh by each other with carnal carelessness has rung a different bell in my head so as to accompany the waves of encouraging empathy radiating from it with concordant chiming sounds. These bells that always "toll for thee", if we were to recall John Donne's musings, also remind me of the day on which the Little Bear and I got married in San Francisco, the city lying on San Andreas Fault, one of the most tectonically active on this bluish planet. Browsing through the Orthodox Christian calendar once, I noticed that one of the saints celebrated on this memorable day was St. Andrew the Fool for Christ, a slave who lived in Constantinople at the turn of the 10th Century, when the city was under the reign of Leo the Wise. Disobeying the demands of his master to behave normally, St. Andrew the Fool chose to act as a madman during the day in front of everyone and secretly pray throughout the night, aiming not to be seen by anyone, all following a

⁶⁶ The true story was published in *Among Us* section of *Politika* on the first day of spring in the Year of the Water Dragon: March 21, 2012.

⁶⁷ Paraphrased is the opening sequence of the TV show, *Nešto Lepo*, Radio Television Serbia (2016).

divine revelation. He ended up being kicked out to the streets of the Byzantine Empire's capital, where he soon became known to everyone for his habit of being dressed in rags and acting like a clown. "Anything that he received, beyond that needed for bare survival, he gave to beggars, usually mocking and insulting them at the same time so as not to be thanked or praised for his deeds. Such was the wholeheartedness of his prayers that he was given grace to see angels and demons, to discern the secrets of others, thereby turning them from their sins"⁶⁸; so say the scripts documenting his life, selfless and empathic to the point that he had been constantly driven by intentions to appear as stupid and "kickable" as possible when giving alms to others, in the most authentic Christian spirit, of which most San Franciscans, walking neglectfully by homeless beggars that their city teems with on each corner, undoubtedly have yet a lot to learn of. After all, to celebrate another and diminish one's own gracefulness in people's eyes has ever since comprised the art to be mastered by all those who wish to soar their stellar souls to heavenly heights. A clown, life, let me be, I thus proclaim in an instant of spiritual ecstasy, for I pine neither for glory nor for fame, but for drawing smiles that illuminate universes from the depths of fellow humans' souls. For, in this world in which ups and downs are equally balanced, as the message inscribed on the five millennia old Emerald Stone could remind us, the closer we lean our whole being onto earthly hearts around us, all until we become fully covered with grit and dust through our earthbound runs to embrace them all and hold the soil and scum of the world everlastingly lulled and kissed by our soul, the greater the starry heights that our spirit will be launched to in the cosmic journey that this lifetime of ours is.

S.F.0.7. "Were it not laughed at, it would not be the Way" (Tao-Te-Xing 41), Lao-Tzu said once, pointing out that the nature of the most beautiful signs in life is such that imprudent minds see in them sources of ridicule and gird, whereas the enlightened ones recognize in them the blessing springs of love and wonder that instill a sunny smile in the center of their hearts and minds. This explains why nothing can beat the vulgarity of sardonic and sinister laughter, while at the same time there could hardly be a gesture more enchanting and radiant than a gracious and heartfelt smile. In fact, neck to neck with the sardonic laughter in my head are phony and affected, posed smiles stretched by a shallow, self-promoting mind to which glossy teeth matter more than the emotional sunbursts emanating from the core of one's spirit that cracks open in its colossally wishing to explode like a supernova, disappear from the worldly skies and thereby strew the stardust of divine beauty and love concealed within oneself all over the world. So close are these two to one another in terms of their vulgarity that a photo finish would be required to decide the winner, though to the culture that celebrates these cold and insincere smiles that softly put many starry spirits of our age to sleep we will get back a couple of sections later. As for now, we could only let the horrifying sound of laughter that mocks a fellow human ring across the dome of our mind and absorb its deeply disturbing and disharmonizing vibration. It need not frighten us when directed at our integrity as an artist or a human being, especially if we remember that "poking fun (at an artist) is the highest form of flattery" and that "even as the man is shrunken down to size, and rendered insufferable, the artist is uplifted in a way that continues to move and inspire us further"⁶⁹, but it should not be confused with softly sonant smiles emanating from the divinest

form of joy nested in us and be used to conclude, falsely, that laughter *per se* is demonic. Although the library in Umberto Eco's *The Name of the Rose* contained works of an Egyptian alchemist who attributed the creation of the world to divine laughter, I cannot help recalling Thomas Carlyle's idea that "true humor issues not in laughter, but in still smiles, which lie far deeper", that is, in sunny smiles that shimmer underneath our breath with their blend of teary-eyed, devotional empathy and unbound, sparkly joy. In a personally reconstructed Zen story⁷⁰, the sage makes three of his disciples encounter a thunderous verbal insult, one by one, as if trying to test Thomas More's proposition that "the devil, the proud spirit, cannot endure to be mocked"⁷¹. For, if one allows oneself to feel aggrieved in view of someone else's bitter remarks about one, it directly implies self-lovingness and lack of care for these critical others who obviously happened to have become deprived of happiness and lost touch with the path of goodness and spirituality. And as we know from Harper Lee's milestone of American literature⁷², to go after "killing a mockingbird" is to be swallowed by the disgrace of amorality and the ugliest that the adulthood has to offer. Acting rude and then carefully observing the responses of another person can thus be an excellent means of differing between (a) sugarcoated self-loving schmucks, who would either raise a wall in the blink of an eye and walk away or adopt a vengeful guard and attack spitefully with the bristly arrows of anger from behind this gate that blocks the flow of the rivers of our hearts to and from one another, and (b) genuinely caring creatures, who would resemble the Sun and retain the shine of affectionateness regardless of whether the rocky souls bathing in their light show signs of appreciation for it or not. Still, the world of ours, pervasively poisoned by the venom of the thirst to hurt and hamper, is such that instead of striving to help and uplift the prickly spirits who wish more to cause harm and distress than to heal and exalt, most people reject and push them into ever deeper abysses of doom and depression, while using their unmeritorious behavior as a good learning opportunity, thus directly contributing to the effect of segregation of the rich and the poor, spiritually and materially alike, and widening the notorious Gap on which, as we all know now, the sustainability of us as the human race critically depends. One's resentful hesitation to forgive and enter gorgeous new friendships with former adversaries, in a similar style in which Rick and Renault walked off in the distance at the end of *Casablanca*, with an enlightened heart, purified from all the ill will, can thus be taken as an unambiguous sign of one's spiritual immaturity. Now, the first disciple, overly attached to his ego, appeared expressionless at first, but then feelings of anger began to rise inside of him, making his head steam and wanting to explode, as his jaw started to shake and he arrived on the verge of responding to the insulter with yet another firework of insults. The sage quickly reacted and sent him aside, implicitly pointing out that confronting offensive behavior with an ever greater avalanche of insult and injury, launching war against war, merely aggravates and deepens the conflict instead of resolving it. The second disciple then stepped up and underwent the same array of verbal insults. His facial expression was also squared at first, revealing what was meant to be a sublime and untouchable aloofness, but then gradually turned into a cold and scornful laughter, as if emerging from a heart his bearer sees as an organ whose only role is to pump blood, a kind of heart that Corto Maltese's seafaring comrade, Captain Rasputin notably prided himself in possessing⁷³. Chi told me once that all she has to do to cheer

against the "narcissist practice Communism" views of the French filmmaker portrayed in the film. Published in *The Pavlovic Today* (August 28, 2017) and retrieved from <https://thepavlovictoday.com/mixed-media/jean-luc-godard-attempts-revolutionize-le-redoubtable/>.

herself up when feeling down is to look from the window of her lofty office in midtown Manhattan down at the hungry and homeless souls dragging their tired feet over the New York City pavement, and a similar puff of the air of superiority in sight of another person's suffering, as if one'd need a parachute to get close to a fellow human soul, a sign of ethical tragedy of our times in its essence, must have swished by the Zen master upon hearing the response of the second disciple. When Novak Đoković hears "Nole, Nole" in "Roger, Roger" chants of the Wimbledon final spectators before saving two match points and then winning the match, this deliberate reversal of insults traversing the air into impetuses that encourage and elate may be acceptable, but when it involves ignoring the call for help that a spirit shooting the arrows of injurious thoughts sends out all around one by using its troubles to get one step higher to cloud nine, it deserves harsh reprimands. "Both of you have more to learn", the Zen master said. What he wanted to make clear was that a sense of aerial, *übermensch* distantness which most people in the civilized world would resort to in response to aggressive behavior possesses a subtle touch of arrogance in it and as such fails to empathize with the other side, equally expanding the gap of misunderstanding between the two. Then the third disciple came and as soon as he sensed the barrage of offensive words piercing him from all angles and looked at their deliverer, his face got distorted and he started to cry, not because he felt hurt, but because he, in an instant, deeply empathized with the offender and felt moved by the sadness of his roaming across the gloomy swamps of spirit, wherein his sense of wretchedness is so huge that he finds joy in vengefully hurting others. His reaction, in other words, was not that of a person beginning to cry because of being offended for the slightest of reasons, which has become incredibly common in today's digital world curbed by the epidemics of selfishness, but of an elevated spirit empathizing so strongly with emotions of people around him that witnessing displays of mockery arouses heartrending sadness in his heart. This sadness, importantly, is not about oneself being hurt, but about feeling for the mocker and for his sad state of being and spiritual suffering that he must be going through, a perspective diametrically opposite from any selfish one. This, in a way, reminds me of the first and foremost conviction that becoming a dad placed up on its head; namely, whereas before I became a parent, I had used to think, simplistically, that good parents are those that are always calm with their kids and bad ones are those who yell and scream at them, after I spent enough time communicating with my children, I learned that it is more often the other way around. Namely, responding to children's peevs, tantrums and fits always in a cool, unagitated manner is cruel because it implies an emotional distance that the parent assumes with respect to the feelings of the child, when a truly good parent would be the one that empathizes with the child's emotions and laughs when he laughs, cries when he cries, screams when he screams, going through the same strenuous mood shifts that the child does, oftentimes in a matter of a minute or so. "You're on the good way", the legend says that sage mumbled, tapping the last disciple on his head, but then reminded them all that a fully developed spirit of a "warrior of light" does not need to be surprised by the assault of an enemy and can sense him behind closed doors, thus discerning true feelings and expressions from the fake ones. In view of that, the most perfect response of the disciples would have been recognizing the preset acting of the insulter and immediately beaming a revealing smile that melts the insulter into pieces, so to say. So, smile was the key; the same one that illuminates our whole being when we understand that there is a divine loving game between human spirits and Nature going on behind the veil of experiential appearances. The epithet of craziness was attributed to creative spirits at the entrance to this book, signifying that abnormalities that run against the stream of ordinariness are a prerequisite for exhibiting inventive behavior and strewing the world with the stardust of divine beauties. And as we can glimpse now, this vision of dormancy of genuine rebelliousness in the core of creative

minds can be extended to realization that smile of the soul and radiance with cosmic joy stand for the highest form of dissent against the world seen as a symphony of stimuli that drive us into the state of depression and indifference, ensuing conformism and normality in step, of course, and suppressing the growth of the tree of divine creativeness from the soil of our heart and mind. “Now that I’ve seen you, I am no longer normal”, says the resident of Alphaville, Godard’s vision of a futuristic city in which art was abandoned and substituted by emotionless technocracy, a city governed by artificial intelligence and inhabited by heartless, habit-driven, machinelike creatures more similar to zombies or so-called Pklats⁷⁴, than to emanations of divine spiritedness, having found herself suddenly face-to-face with a spirit alive, a “saver of those who weep” and believer in poetry as the force that could transcend the boundaries of that portentous city and open the path to the Outlands, the home, seconds before feeling that she should pull out a gun off her chests that shoots bouquets of flowers⁷⁵, not bullets, say “OK computer”⁷⁶ with a radiant smile smeared all over her heart, like pastels on children’s paintings, and embark on a mission to become just like Yoshimi, that Oklahoma girl determined “to defeat those evil machines... those evil-natured robots programmed to destroy us”⁷⁷. Alas, in a system brimming with robots programmed by its evil professorial rulers to destroy us, such as the contemporary academia is in many respects, we must take the role of the hero from the Commodore 64 classic, Impossible Mission, and continue to move in summersaults from one room to another in search of hidden files to steal, like a holy thief, evading all the while the death rays emitted by the robots, the guardians of this false order with not even a zest of poetry and emotion to stir their spirits, all until the magic code is deciphered, the system destroyed and a new, holier one installed in its place. When it comes to these memorable summersaults, the first acts to have been animated for this classic game, before its storyline even slightly began to crystallize⁷⁸, what they speak about in a system governed by a machinelike stiffness is the stance of otherworldly craziness that we must adopt and embody at all levels, both physically and mentally expressive, if we wish to rejuvenate everything that has become corrupted in this system by the sin of lifelessness. To heal the “hollow eyes” in whom spirits bursting with life are but “twists in their sobriety”⁷⁹, as Tanita Tikaram’s one-hit wonder had it decades ago, warning the world of the pending pandemic of robotic rationalities, we must make one figurative summersault after another, throwing things up on their heads and back up on their feet and all over again with everything we do. Henceforth, craziness, which would always be met with our merciless rejection from the mainstream social milieus, mingling with creativity and cosmic cheerfulness in our hearts and heads could be seen as three angles of a triangle depicting the secret of sacred living. However, yet another surprising revelation awaits us at this point. Namely, having found this sublime smile that lightens up the starry constellations of our consciousness, the feeling is that an even more supreme state of mind would be reached by dissolving a tear of soft sadness in this sunshiny beam of our intellect. And then, as we climbed one step higher in this act of envisioning the highest grounds to enthrone our consciousness on, we would realize that sparkly, sunshiny

happiness that sheds light on each and every one with its unconditional radiance may still be a step ahead from this sea of sadness in which we have temporarily plunged. Thus we find ourselves ascending on the *kundalini* ladder towards spiritual perfection by alternately stepping on the rungs of joy and sadness, all until we bring the torch of enlightenment into every corner of our mind and surround it with the aureole of holiness. This is how we come to realize that the only expressions of joy that are able to truly touch human hearts are those that conceal a seed of sadness within their cores and *vice versa*: melancholy that moves minds that sway on it like ships on a wavy sea always hides secret joys in it, somewhat like the sea hides glistening pearls, colorful corals, black-eyed mermaids and sunken treasures in its depths. Thus, when the unbearable weight of sadness appears that it is just about to crush us into pieces, we ought to remember that a door is opened somewhere deep in us by its balmy hands for the seed of the unbound, eternal and, in fact, greatest conceivable joy to sprout, grow, emerge out, to the surface of our being, and transform us into an incarnation of St. Francis of Assisi, the saintly epitome of the jubilation of the holy spirit like perhaps no other. Thence, the more our heart sinks into the teary sea of compassionate sadness, the greater will our potential be for exhibiting enlightening outbursts of cosmic joy, utterly moving with their genuine cordiality and lovingness. After all, entertainment without poetry, which ultimately springs from the well of compassionateness, the well brimming with tears inside the real clown's heart, is dead and unable to move the hard rocks nested inside the fellow humans' souls. Entertainment must be poetic and sublime to be a grand mover and motivator for the divinest expressions conceivable, expressions exceeding in greatness those emanating from dry intellectual digestions of ideas by many millions, being the point iterated by Federico Fellini in the key moment of 8½, the scene wherein Guido, the artist, sits in a car with his alter-ego, the critic, who praises him for giving up on his art because "we're smothered by words, images, and sounds that have no right to exist, that come from the void and return to the void, asking of any artist that truly deserves the name nothing but this act of faith: to learn *silence*", at the moment of saying which a troupe of clowns comes by the window and says that they are "ready to begin", wishing him good luck and impelling the artist to disobey the sharp critic, turn his back thereto and boldly engage in the creation of an art, with an utmost expressional honesty, as open as the bluest skies hovering above his saintly head. A tear of sadness twinkling in the eyes of a clown who is able to move the coldest mountains and the remotest stars with his hearty eruptions of divine joy can be used as a proof that smiles that fail to be built on the foundations of infinite compassion are bound to be imperfect and futile in our attempts to awaken divine joy in others by their means; for, only if we "cry mightily unto God" with our entire soul can we hope to "let them turn every one from his evil way, and from the violence that is in their hands" (Johan 3:8). In fact, all my life I have thought that divine experience is just like the starry sky: it is comprised of the twinkle of the stars of joy on the dark background of infinite and all-encompassing sadness. The unfathomable depth of this imaginary sky is, as Joseph Knecht noticed in Hesse's *Glass Bead Game*, not where the clouds or the stars are, but where the empty spaces between them lie, the spaces whose sacred character the Welsh poet, Ronald Stuart Thomas alluded to when he wrote that God "keeps the interstices in our knowledge, the darkness between stars"⁸⁰, meaning that plunging deep into sadness is the way to arrive at the greatest and divinest depths of experience and the meaning of life, let alone the most luminescent outbursts of energy conceivable in this universe, being those of the shine of starry joy. To upgrade the attitude of the last, sobbing disciple with a sunny smile is thus the way to empathize in sadness with the creatures that strayed from the right path, but at the same time to illuminate the way forward for their convenience by radiating an indestructible cosmic joy from the depths of our

⁸⁰ See Keith Ward's *God: A Guide for the Perplexed*, Oneworld, Oxford, UK (2003).

heart, all until one becomes a genuine epitome of the starry sky holding flickers of joy on the backdrop of “melon collie and infinite sadness”⁸¹. In such an approach that apparently blends compassionate melancholy and unbound meditative happiness is hidden the key to acting healingly and in an immaculate inspirational manner. After all, when the Biblical verses jubilantly proclaim that “they that sow in tears shall reap in joy” (Psalm 126:5), they are here to also remind us that smiles that fail to arise from the grounds of infinite compassion are predestined not to make the grade in their attempts to genuinely light up the gloomy and depressed hearts of the world. For, every beatific smile that fascinates with its mystic radiance and beauty hides a tear of compassion behind its sunny glow. “I’m not cheerful, Papa. I’m happy. It’s not the same thing. It’s sweeter and sadder”, says fairylike Norma in Abel Gance’s *La Roue* before running out to dance on the top of a mountain and bring bliss to a blind man’s mind. No wonder then that Charlie Chaplin, “greatest little comedian in the world”⁸² in his own words, considered himself to be but a tragedian⁸³, for he must have known that to shed sparkles of celestial joy all around him he had to enwrap all his gestures with slashes of cosmic pathos. Or, as G. K. Chesterton pointed out, “He is a sane man who can have tragedy in his heart and comedy in his head... and yet, the comedy of man survives the tragedy of man”. The warmest smiles and the sweetest songs of joy in life are thus induced on top of imminent tragedies and the spirit of compassion that they awaken in us, as exemplified by the pantomime of the Little Tramp, by the TED talk of Jill Bolte Taylor⁸⁴ that touched millions and became the most popular to this date of them all, using humor as a prelude to an outburst of teary-eyed passion that thus opened even the stiffest shells around the auras of modern intellects programmed from the inside to repel anything that bears the epithet of “spiritual”, and innumerable other clownish creatures that managed to light up the lampions of celestial happiness in human hearts, just about as much as there are no greater tragedies in the eyes of gods that oversee the Universe than those emerging from sardonic smirks and sycophantic smiles, along with all the carelessness and crookedness that they carry within. However, we should still know that out there, where the darkest abysses lie, the ultimate truth and beauty are concealed; hence, the fisherman casting the hook in a crevice between the two dark cliffs drawn on the cover of Kikuo Johnson’s *King Fisher*⁸⁵ displayed below. The true ideals of postmodernism are consequently all about shining lights on simple and seemingly meaningless things until divine meaning and beauty become seen in them. Therefore, although laughter driven by hysteria, anguish, derisiveness or irony is verily wicked, nothing beats the beautifulness of a celestial smile whose sunrays find their way to every miniscule part of our bodies, producing enlivening waves therein, including a subtle giggle of our eyes, as if reflecting stars joyfully twinkling as they orbit the Sun of our soul. It is one such sonorous eruption of joy that the Taoist sage had in my mind when the following thought escaped from the orbits of his sunlit mind to hit us straight in the face, like a rock fallen from the sky, producing an avalanche of tears amidst smiles and turning us into a semblance of one of Jawlensky’s abstract heads, crying with one side of our polarized being and

shining happily, like a sun, with the other: “So simple the secret is that, were it revealed, all would burst into laughter”⁸⁶.

S.F.0.8. So we see that for the comical spiritedness and charming humorousness to be truly enlightening, they have to be sundrenched in a sea of mildly melancholic, compassionate Love. But, what about Wonder, the other member of the pair of pillars that support the world at its foundations? It is said that if we were to descend to the ancient Indo-European roots of the words “miraculous” and “marvelous”, we would come face-to-face with those that denote laughter and sunlit smiles⁸⁷. In essence, then, whatever strikes the chords of wonder on the harp of our heart is, genuinely, a source of sunshiny smiles. Both Love and Wonder, the couple that dancingly fertilizes the world and makes it evolve towards ever more beautiful emanations of its divine nature could thus be said to conceal seeds of heavenly laughter, as if mysteriously epitomized by the smiley appearance of the crescent, watermelon Moon in the night sky. And yet, laughter in our world is as often a sign of sardonic narcissism as of a genuinely loving and wondrously empathic nature of our beings. The same conclusion could be undoubtedly derived with regard to all the conflict personalities we witness around us. Namely, someone’s perpetual involvement in conflicts can be a pointer either to one’s lack of loving respect of fellow beings and irrational, destructive tendencies, or to the greatness of one’s spirit in its majestic resoluteness to stand forth against the unfairness and injustice in this world. Likewise, the situations in which we are accused of being evil and faulty can be used to correct our values and improve ourselves whenever remarks like these are benevolently placed before us, but may also be signs that we are, after all, on a good way. For, as Jonathan Swift noticed, “When a great genius appears in the world the dunces are all in confederacy against him”⁸⁸, the quote that the New Orleans literate, John Kennedy Tool, famously used in the title of his only novel, *A Confederacy of Dunces*, the novel that truly lived up to its name, having been rejected by all publishers, then released by a small press in 2000 copies 11 years after the writer’s death, and then a year later rewarded with the Pulitzer Prize⁸⁹. To be shoved into the ditches of the world by the rushes of mainstreaming souls is thus more often than not a

good sign that we have done the right things and that we walk straight in the eyes of the Heavens. For, as the Christ pointed out, “Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake. Rejoice, and be exceeding glad: for great is your reward in heaven: for so persecuted they the prophets which were before you” (Matthew 5:11-12). This is because in the world of ours, standing against the corrupt ways of being has to be followed with roaring waves of anger of the ones our calm spirit confronts. I believe that for all great spirits in this world it is meant to live loudly and thereby leave lasting imprints wherever they pass on the roads of humanity. For, “ye are the light of the world. A city that is set on an hill cannot be hid. Neither do men light a candle, and put it under a bushel, but on a candlestick; and it giveth light unto all that are in the house” (Matthew 5:14-15), as the Christ continued in his sermon. But remember that sometimes quietly said words can be more powerful than the most deafening storms and avalanches of thought. “He came softly, unobserved, and yet, strange to say, everyone recognized Him. That might be one of the best passages in the poem”, says Ivan Karamazov while describing the second arrival of the Christ in his story about the Grand Inquisitor to his brother Alexei in the famous Dostoyevsky’s book. Likewise, it was after the sounds of earthquake, flood, fire and thunder that a “still small voice” came in which Elijah recognized the voice of God (I Kings 19:11-12). And we should not be concerned about our quietly whispered words and thoughts silently let fly on the wings of a prayer – never announced to the world, but ascended from the light spirit overflowing with the sense of love and wonder – being forgotten and drowned in the river of time. For, “whatsoever ye have spoken in darkness shall be heard in the light; and that which ye have spoken in the ear in closets shall be proclaimed upon the housetops” (Luke 12:3), as the Christ prophesied. The Christ in his teaching particularly criticized mild personalities of cowardly and lukewarm spirits, certainly epitomized in “scribes and Pharisees” (Matthew 23), who, owing to their lack of bravery and determination to bring the shine of their hearts to the daylight of being, never manage to leave a long standing monument to their being in the world, such as the one dedicated to Christopher Wren, resting in a quiet corner of St. Paul’s Cathedral in London and saying *Lector, si monumentum requiris, circumspice*, that is, “reader, if you seek a monument, look around you”, for it is everywhere around us, in tunes tweeted out by birds, in stones chiseled by the rain, in ridges and dunes on human faces shaped by the gusts of their feelings, in the idyllic shape of a cloud (“Sometimes we see a cloud that’s dragonish; a vapour sometime like a bear or lion, a tower’d citadel, a pendent rock...”, as Shakespeare wrote in *Anthony and Cleopatra*), in a glimmering star and the husky voice of the wind. “I know thy works, that thou art neither cold nor hot: I would thou wert cold or hot. So then because thou art lukewarm, and neither cold nor hot, I will spue thee out of my mouth” (Revelation 3:15-16), thus stands written in the book of Revelation. Verily, if I look back at the history of conflicts that followed me practically wherever I went, from my childhood to this very day, there is no doubt that I belong to the second category. I have always been a revolutionary person. My attitude has always been inclined to accept only fairness, honesty and justice in the world around. Faced with their opposites, I would tell myself I’d either dig a hole in the ground and start singing deserter’s songs, or stay on and fight. The only times I would conform to the things I regard as deviating from the path strewn with the signs of Christian values is when these white lies led to positioning myself at the pedestal from which the voice that cries in the desert, that is, the emotively arid and spiritually impoverished Western world through which not colossal rivers, but withering rills of passions flow, “Make straight the way of the Lord” (John 1:23) would reverberate sweepingly, with a majestic and resonant power. Erecting the importance of myself in eyes of another is in the world of my ethics allowed only insofar as such new elevated positions will be used as platforms

from which voices and deeds that aim towards “saving the world” will be made ever more visible and prolific. In spite of this, my heart has always remained anchored to the glimmer of the godly ethics and wherever I’d sense its abandonment by a social group to which I belonged, whenever I’d glimpse a careless breach of these sublime moral stances of which I have dreamt day and night, I would declare my membership of humanity before that of the given organization and go on to stand in the way of the putrid procession of the legionaries of self-interest that contributed to its rotting from the core. On top of this, human organizations are always more sensitive to the voices of change that come from their insiders rather than outsiders, which is exactly why I opted for pursuing the conventional academic path and then patiently waited for the right moment to shed the snakeskin of conformist craftiness, emerge from the Trojan Horse of my docile attitude and reveal the spirit of a warrior of light, brandish a sword of golden words and meticulously start to ruin the greedy and self-centered entrepreneurial outlooks that have taken over the realm of science, while reinstating the values of epistemic all-roundness, romantic dreaminess and selfless seeking after beauty which had once been pulled out altogether from the heart of scientific enterprise. For, I have known that to hound criminals and bring them down to face justice, one has no other choice but to become a criminal himself in the eyes of the law. To accept the role of a thief, as Bilbo Baggins did before he set off on the journey of his lifetime⁹⁰, is thus more often than not a first step towards saving the world by making it a more chaste and honest place. The first step in Saint Francis’ plan to announce his providence to the people of his hometown, Assisi was thus, accidentally or not, to pretend to be a thief, to which end he urged his monastic brothers to parade him as such through its streets, with a rope around his neck⁹¹. After all, if the Christ was crucified side by side with two thieves, one of whom, as the story goes, he redeemed and took to Heaven with him (Luke 23:43), then there must be a destiny for a sage, a holy soul on this plane of reality to reside in their crooked circles, just as the Christ’s sympathy for the thieves must have been finite and, in fact, greater than that for the potentates, plutocrats and Pharisees of this world. Hail to the thief, therefore I say, while reminding myself of exactly the same words that the T-shirt in which I defended my PhD thesis⁹² and entered the showbiz world of science said – Hail to the Thief. This light blue tee which I, with an intense Stendhal syndrome sparked in me by seeing Florence for the first time, dizzily walking “in constant fear of falling to the ground”⁹³, picked on a summer day from a cobblestoned pavement near Piazzale Michelangelo was worn during this defense underneath a beige suit, intentionally resembling the one in which Henry Fonda defended the young delinquent against twelve arrogant jurymen in legendary *12 Angry Men*. In such a way, I was secretly showing why I decided to enter the realm of science, intrinsically beautiful and yet largely corrupted by the same traits as those that typified the conceited and corrupted jurors from this classic movie: to liberate it from the tyranny of judgmental and canny criticality and infuse it with the lifesaving charms of ignorance, wonder and, more than anything, goodness and love that always look to forgive and give a second chance to each and every sinner in life. Like Marco Polo,

⁹⁰ See J. R. R. Tolkien’s *Hobbit*, Nolit, Belgrade, Serbia (1937).

⁹¹ See André Vauchez’s *Francis of Assisi: The Life and Afterlife of a Medieval Saint*, Yale University Press, New Haven, CN (2009), pp. 58.

⁹² The research work presented in my doctoral dissertation I dedicated to “all the unhappy fates of the peoples of the former Yugoslavia in the recent past”. The dissertation could be found in the library of Jožef Stefan Institute in Ljubljana, Slovenia, under the title *The Synthesis of Nanostructured Materials within Reverse Micelles* (defended September 1, 2006, a day before my 30th birthday).

⁹³ This is how Stendhal described his first visit of this Tuscan city, describing the symptoms of a condition that is now known in the medical circles as the Stendhal syndrome: feeling unwell by being immersed suddenly in a milieu of overwhelming aesthetic exuberance.

who allegedly stole silkworms from China and brought them to Venice, I have vowed to be ready to steal from one and give to another in the academic domain, thus slowly building the reputation of a Robin Hood in it, always standing in support of the poor and underprivileged and spitting in the face of the rulers and capitalists. To be “robbing the bad charms with holy fingers”⁹⁴ has thus been the mission I, a stowaway roaming the dark hull of the ship of science, committed myself to, knowing that such would be the only way to bring down the order of spiritually corrupt and intellectually mediocritized that have led this ship to monumental capsizing, an event that its false, selfish captains would encounter by escaping from it first, not last, causing everyone else to drown. In view of this, it is no wonder that two of the most common nicknames assigned to me in my revolutionary youth days were the Best Man, a.k.a. Godfather in Serbian, and the Maggot. The former because I often acted as a bridge through which many great friends were found and connected, and the latter probably because I would have been a great spy owing to my ability to transform easily into whatever communicational shape is required at the moment and flawlessly immerse myself into the environment, like a cocoon that, though, suddenly turns into a butterfly and thereupon starts spreading the waves of goodness, peace and harmony right from the core of the penetrated systems. In my ability to enter the most confined spaces using my tininess and flexibility, to accomplish the mission and leave the scene without producing any trace, I have always been like a masterful Arséne Lupin, able to climb the sleekest trees, inaudibly sneak, swim without a splash, camouflage myself by copying the actual environment and, all in all, be true to the spirit of the anarchistic ancient Tao sages who were acting in harmony with the golden glow of their hearts while living up to Lao-Tzu’s norm that “the greatest competence leaves no trace of its activity” (Tao-Te-Xing 27). And so, when I walk, I walk like a shadow, ethereally, on tiptoes, with the subtleness of a spirit made of stardust on a stroll along a pebbly shore, all because of wishing to perfectly blend with Nature and move not even a wisp of air while gliding through it. Camouflaging is the art I have crafted over the years to the point of being able to occasionally, if need be, assume the surface appearance of an utmost usualness, as if nothing extraordinary hides inside a common, insipid shell, all with the point of highlighting that the foundations are what invariably matters and make my true self visible exclusively to those with an eye capable of penetrating effortlessly through the surface features of things and into their invisible insides in a similar way the Little Prince could observe a sheep inside a holey box or an elephant inside a boa constrictor. After all, finding beauty in the act of hiding in my world parallels the discovery of the summits of grace in human expression as well as mimicking the way Nature exposes herself to us, never fully, always partially and mysteriously, as if peeking through a veil at us and then vanishing the moment we direct our gaze at her. The act of playful, yet mysterious glancing at someone from afar before disappearing swiftly behind a large tree in a dark forest, which the majority of modern SF inhabitants would find “creepy”, I therefore find thrilling to the bone. Hiding behind these shrubs with consciousness immersed in millions of stars, sensing the subtlest palpitations in the vibes of nearby souls and trembling in synchrony therewith, no one could tell if I was “a prophet or a criminal”⁹⁵, but no one was also aware that such a mysterious presence and the veil of enigma surrounding me has served as a channel through which these souls are, unknowingly, touched with bliss down to their deepest cores. After all, a brief etymological analysis of my last name would tell you that it derives from Uskoks (with “uskok” meaning “the one who jumps in”, “the one who ambushes”), the Dalmatian coastal bandits who waylaid Venetian and Ottoman ships in the 16th

⁹⁴ Listen to Pixies’ Gouge Away on Doolittle, 4AD (1989).

⁹⁵ This is how the charismatic protagonist of László Krasznahorkai’s novel *Satantango* (Magvető Könyvkiadó, Budapest, 1985), Irimias, was perceived by the villagers.

Century, in the spirit of Robin Hoods of their times, relying on silence and surprise. Yet, among my nearest forefathers, although there were cases of saintly rebels for a good cause and passionate sea adventurers, intellectuals and highly reputable personalities, to which passersby used to salute in the street, abounded too, which makes it meaningful when someone notices how I am a son of poets and warriors, revolutionaries and saints. This makes it clear why I have always felt a dual energy rupturing me from the inside, one of them dragging me to become a sublime social outlaw, a rebellious fighter against the evils of the world, dedicated to celebrate the eternal goodness with every breath of mine, and the other side propelling me to become a poetic voice of love, to deliver healing waves of gentleness and beauty everywhere I go. It is as if a fiery Dragon and starry twinkles of the solemn and beautiful Virgo have dwelled in me, side by side, ever since. For, to be a social justice warrior *par excellence*, one must be moved by love for the fellow members of humankind, which means that, if looked deep enough, a soft, soft heart, beating in synchrony with the wounded souls in one's vicinity, can be perceived as the source of every genuine voice that declares clarion calls to resistance against the corrupt powers that be. A true rebel in the world of science, always on the run to look the human hypocrisies in the eye, my acts in it have frequently resembled Hafiz's removal of churchgoers' shoes from temples⁹⁶, like the time when I stole a giant stopwatch from a physics lab, ran out, put it on the asphalt in front of the building, next to the tram tracks, and symbolically started its ticking, so as to signify that the time had come for a new age to knock on the door of obsolete and passé understanding of the greatness of human being through the binoculars of science, I have never given up on living on the edge, between glory and blight, between grace and gravity, and to this very day I remain cordially devoted to the mission of being a bandit among the intellectuals and a pundit among the social outcasts. Like Che Guevara of a kind in the sphere of science, who had been initiated into the order of freedom fighters and trained in one place but then deployed in multiple regions of the globe, I have hopped from one place to another on the academic map of the world and engaged in relentless combats for the freedom of the oppressed and underprivileged in each, usually losing these battles in human eyes, but, as I love to believe, winning them for generations to come. My being a relentless victim of ostracism by the worldly exploiters of the poor, alongside my aversion to the office world and engagement in the nonorthodox quest for inspiration in arts and humanities, explains why I've always felt sympathy with a lively character like Dean Moriarty, who allegedly spent a third of his time in the pool, a third in the library and a third in the jail⁹⁷. So far I have carefully avoided the latter, but both of my brothers experienced arresting in a corrupted society poisoned with greed and hate in which we grew up. Although many of my friends who peacefully protested against the Yugoslav government of the 1990s were subsequently imprisoned, beaten with batons, tortured and some of them even made jump on horses drawn on the prison wall facades, I managed to avoid their fate by sheer luck. Nonetheless, this did not make me immune to being frequently held up, interrogated and ransacked by the ruthless policemen who'd roam the streets of Belgrade by night like raiders from Hell and who'd oh so often heartlessly humiliate me and batter my buddies in plain sight. Aside from this, my Montenegrin, paternal grandfather, now a declared saint by the Serbian Orthodox Church, was imprisoned multiple times and even shot at when he escaped through the window of a prison hospital once, before finally being sentenced to death by the communist powers, whereas on the other side of my family, my Mom's uncle, the Dalmatian sailor who traveled all over the world, survived three ocean shipwrecks, a ride in a barrel down Andean rivers,

⁹⁷ See Jack Kerouac's *On the Road*, Penguin, New York, NY (1955).

captainship on an ally ship loaded with gasoline during World War II and wrote a book about his travels⁹⁸, also spent time resting in Saint Quentin Prison in the vicinity of today's SF. It was before he was deported to Yugoslavia as a propagator of communism and after he hung out with beatniks and waterdogs in the North Beach and lived in the City for years under a fake name: James Clarsi. The postcard sent by him to my grandpa in November 1941, shown below, lists his address as 111 Jones Street, only ten blocks south of the Nob Hill apartment on the corner of Sacramento and Leavenworth/Hyde in which I sit and write these lines. At about the same time, however, his brother, my maternal grandfather, a son of one of the most renowned citizens of Split in today's Croatia, the principal of the only high school in the city, to whom kids were offering standing salutes in the street, and allegedly the man who drove the first car to Dalmatia while the frightened local peasants were pulling out guns at him, not believing what they were seeing, was arrested too because of being in company of folks playing Russian roulette. For, according to his stories that I still vividly remember, singing and dancing as if the world could end at any given time was the favorite pastime for him and his buddies as they hid in the underground bunkers while the German bombs were falling from the sky. Even earlier, during the turbulent times in the Balkans at the turn of the 19th Century, yet another close relative of mine was imprisoned and later acquitted as a member of the infamous secret society, the Black Hand, the one that plotted the assassination of Franz Ferdinand, the archduke of the Austro-Hungarian Empire, the event that directly led to World War I, the global conflict which, on the other hand, set grounds for an even bigger one that succeeded it: World War II. Though condemnable by all means, it should be remembered that Gavrilo Princip's bullet aimed at Franz Ferdinand was not only a sign of protest against the oppressive imperialism and against the big capitalistic enterprises that were then starting to sprout for the first time in the history of human economy, but it may have also been a cry against the quiet suffocation of romanticism in the hands of the anti-rationality of the modern art, which, as we now know, got pushed from the underground to the forefront of the western society during the course of World War I, affecting every smidgeon of the heart and soul of the western culture to this very day. Today, I imagine this distant relative of mine as a poet and a renegade, "quiet, young, undernourished, intense, swinging furiously between moods of sentimentality and ruthless revolutionary aggression"⁹⁹, the way Misha Glenny described a typical member of the Young Bosnia branch of the Black Hand that carried out the assassination plan, and recognize pieces of myself therein, before thinking how this energy could be sublimated to higher, more intellectual planes, away from the atrocity that it performed and precipitated on Vidovdan of 1914. Moreover, as a member of the Serbian nation, I could be truly seen as someone who has just been released from the prison, considering how unequivocally ostracized by the international community my home country has been since the early 1990s, with economic sanctions, travel restrictions, public humiliations and other punishments suggestive of imprisonment having been imposed thereon for more than a decade, producing all sorts of mental disturbances in my countrymen, the way all prisons do to their inmates. Yet, given Nikola Tesla's belief that "antisocial behavior is a trait of intelligence in a world full of conformists", every time we become isolated by the society, we should know that gates for otherworldly exhibitions of creativity become open somewhere deep inside of us. Hence, like Søren Kierkegaard who wished to have infiltrated police because he

“imagined that among criminals there were people worth fighting with”¹⁰⁰ and like Friedrich Nietzsche who admired “the criminal type... whose virtues are put in ban by our domesticated, mediocre, emasculated society in which a man with his natural forces unimpaired necessarily degenerates into a criminal”¹⁰¹, I too have learned to recognize the indispensable merits of being an outlaw. Experience has taught me that an infinitely honest creature immersed in a world filled with fraudulent souls will be invariably labeled as dishonest and selected for extinction by these phonies who live under the false pretenses of rectitude. Sooner or later, banally speaking, a genuinely good person, always expressing one’s truest feelings, like Dostoyevsky’s Prince Myshkin, a.k.a. Idiot in the eyes of the world, will be accused of misalignment with the inherent hypocrisy of the mainstream and, thus, of dishonesty, whereas his defense of oneself will be perceived as escalations of even more dishonesty because it insinuates the dishonesty of the accuser; it is thus that the saint, having his tender heart once nurturing trust and trust only spoiled under the secular influence, turns into an outlaw, a criminal, a hoodlum in such corrupt pockets of this world. “Strangeways, here we come”, was thence a call with which the Smiths disbanded and rode off into a bittersweet sunset, having chosen Strangeways, the name of a major Manchester prison as their destination and alluding wittily to the necessity of being marked as a wrongdoer in this world of phoniness and falsity in order to be decorated with the laurels of wreath, the symbols of sublime grace and ethicality, not by salient sheriffs in sight, whom one ought to give no heed, but by invisible seraphs, the messengers from the heavens above, who oversee every move of our earthly souls and who, remember, reward a single blink of an eye in which compassionate beauties are concealed more than a lifetime of achievements and accolades spent driven by vanity and voracity. This is where it makes sense to evoke Peter Ustinov’s “worst taxi drive of his life”, the one where a driver from Australia dropped one racist remark after another, hoping that the actor would comply with them, but when this turned out not to have been the case, he threw the question supposing that one must “think all us Australians are descended from convicts”, when the actor responded saying, “On the contrary, my dear, I’m convinced you’re descended from one of the warders”¹⁰², the point of which may now expand in its meaning all until it eclipses all the darkness of servile conformism around us. Even when it comes to linking intellectual criminality and scientific ingenuity, I let the words of the Nobel Laureate, Peter Doherty ring in my head: “I have seen great scientists coming from many different backgrounds; some of them even from the jail”. These words also bring to mind Loren Eiseley’s monologue on why poetry and science and rebelliousness go hand-in-hand, and why he felt “less kinship with his academic colleagues than with a doomed prisoner escaped from jail on a winter’s night and hunted to death in the snow”¹⁰³. Freeman Dyson, a renowned physicist who never earned a PhD degree and who saw subversion as the greatest treasure in the academic realm, likewise noticed in his book *The Scientist as Rebel* how “there is a long list of scientists who sat in jail and of other scientists who helped them get out and incidentally saved their lives”¹⁰⁴. After all, one of the most important scientific treatises by a Serbian scientist, the one which gave an impetus to the cross-fertilization of the sciences of earth and heavens and the birth of a rigorous new scientific discipline of astronomical climatology, was written by Milutin Milanković during the five years of his imprisonment by the Central Powers

police in Budapest¹⁰⁵, from 1914 to 1919, bringing to mind another similarly monumental work created in muddy Eastern European trenches and another, Italian prisoner of war camp in the very same period of time by a thinker who deliberately found himself on the opposite side of the World War I conflict: *Tractatus Logico-Philosophicus* by Ludwig Wittgenstein. At around the same time at which this monumental work was being penned, its author's mentor, Bertrand Russell, was dismissed from the faculty post at the Trinity College in Cambridge and sent to Brixton Prison to serve a 5-month sentence for himself authoring an antiwar pamphlet to disseminate his militantly pacifistic stances. It is for all these reasons combined that to this very day I do not cease to tell the students that rebellious dissent and the ostracism and imprisonment by the authorities that it naturally bears in one form or the other lies at the core of scientific creativity, something I could illustrate with countless racy episodes from my own life on any given day. One of them is a part of the note I sent to my academic authorities after each party on the soulless chain extending from the Department Chair to the School Dean to the Faculty Personnel Committee to the Provost stamped the decision to boot me, the most productive scholar in the school, out of it: "Here stands the figure of a man pierced by false accusations, like Botticelli's St. Sebastian, the spiteful saint that hangs on the wall of the state museum of Berlin, the city where my father heard the news that I was born, yet a man, who, like Nyegosh's Vuk Mandušić¹⁰⁶, will heal these wounds and recover and become stronger than ever. Oh how hurt he is by the prosaic, artificial and malicious language that an educational institution, that bastion of progressive thought over the centuries, nests within the Kafkaesque castle of its heart. This language, stylistically ugly and filled with fine judgments, stands in direct opposition to the ideals that he strived to disseminate in the classroom. Since his goal has been to take the students by the hand to the very peak of the Bloom taxonomy, his, he knew, must be a state of mind that is none about 'judging the world' and all about 'saving the world' (John 12:47). He sought creativity, wild imagination, mood swings, emotionality, passion, trueness to one's feelings, perception of the essence, not only surface, and immunity to petty linguistic obstacles of the bureaucratic mind. But then, faced with a language that is in stark contrast with these values, the spirit of this man shrivels, gaining the urge to bite back and shake off its chains, yet he knows that he must stay within its rules in order to conform to basic communication standards and convey his points across in an intelligible and convincing way. He knows that he must play the devil's game to beat the devil and subdue it to the influence of heavenly spheres once again. But whether he has become one of the devils or he still lives with the pureness of one's heart is the dilemma that he could never resolve. One thing he is certain in: by doing so, he risks becoming like that Nietzsche's soul that turn into a monster by fighting a monster; for 'if thou gaze long into an abyss, the abyss will also gaze into thee'¹⁰⁷. The hypocritical authorities, who demand 'yes, sir' responses, as in a military, while pretending to guard the university heritage of free thought object and threaten more and more, hovering like darker and darker clouds over the man as his criticism of the governance becomes expanded and gains his characteristic deep and mesmerizing note, flowing through the air like the mellowest melodies. Even under those circumstances, he resorts to a poetic parallel, albeit dark and cumbersome - that of a solar eclipse, the moment at which, miraculously, the string of animosities displayed toward

¹⁰⁵ See M. Lopušina's Na robiji Milanković nauci dao najbolje, *Večernje novosti* (February 23, 2014), retrieved from <http://www.novosti.rs/vesti/naslovna/reportaze/aktuelno.293.html:479505-Na-robiji-Milankovic-nauci-dao-najbolje>.

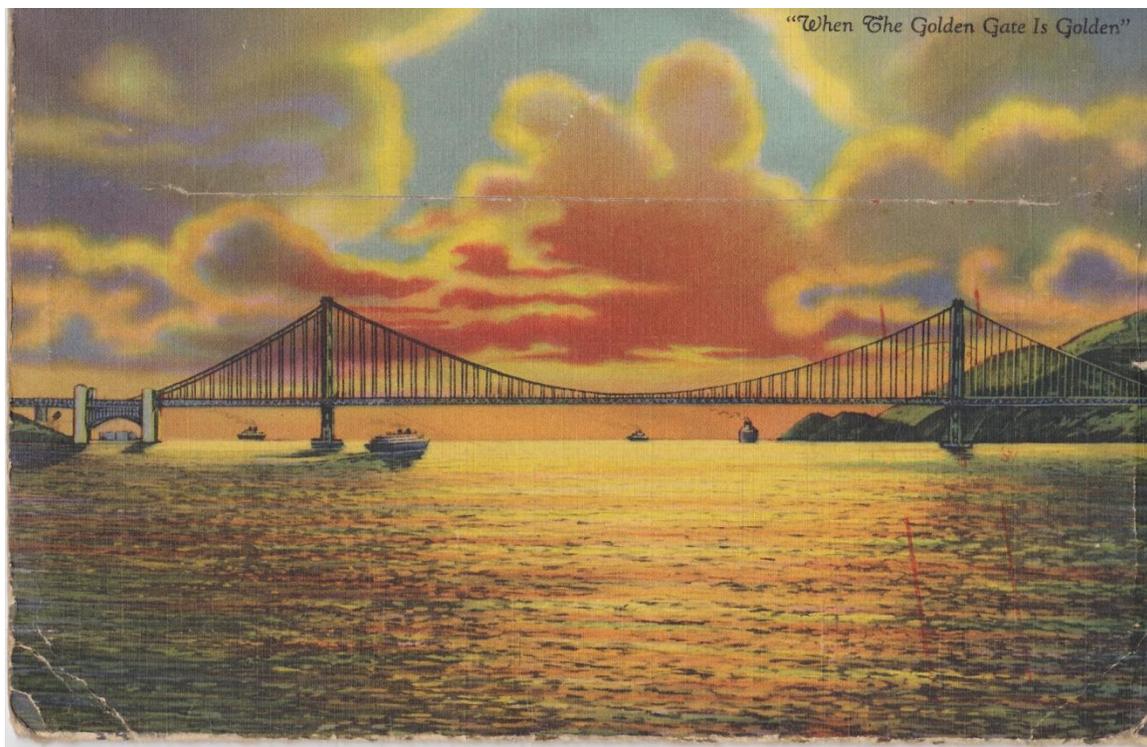

¹⁰⁶ See Petar Petrovich Nyegosh's *The Mountain Wreath*, rendered into English by James. W. Wiles, George Allen & Unwin, London, UK (1846).

¹⁰⁷ See Friedrich Nietzsche's *Beyond Good and Evil: Prelude to a Philosophy of the Future*; Aphorism 146, translated by Helen Zimmern, available at <http://www.authorama.com/beyond-good-and-evil-5.html> (1886).

him was initiated. This parallel, he deems, reflects his passion for science and the sharing of knowledge, which he never related to money, prestige, career or other professional bullshit, but saw as a goal in itself and a deeper call - a call of the soul. Yet, the cagey judges go through his wordy forest of emotions that numbers dozens and dozens of pages without diving deep between the lines, recognizing not this turbulent sea of passions underneath, but rather cherry-pick the flowers of surface semantics and use them to weave an ominous wreath that deceptively denounces the person for not playing by the rules of the game. It becomes a clash between the poetic and the prosaic, the depth and the surface in the heart of the little man, the man who demands that every word be turned into poetry in his classroom, in his paper, in his email, annual report and beyond, the man who associates wisdom with the relentless breaking of convention and habit in the worlds of thoughts and primary experiences alike. The man suffers under the weight of arrows of assessment, that concept that he has wished to eradicate from his classroom because of all the barriers of mistrust it has raised between him and his students, vowing now that he experienced its evils first-hand that he will never employ it, nor will he ever resort to the authoritative arrogance that it implicitly presupposes in his pedagogic efforts. His breathing is hard, his heart bleeds, but he lingers on. Darkness is all around, but it must be walked through. And then the hallucinations knock on the door of his consciousness. 'The poetic metaphor is unprofessional and inappropriate', rings in his head now throbbing with anxiety and this, he fears, would be the final verdict before the rubber stamp on his career is placed and he is led by the gatekeepers to the exit sign. But, hold on; another voice is starting to appear, saying 'worry not, Son, you have stood up for the right ideals and your rewards will always be not of Earth, but of higher realms'. 'He has voices in his head', the first voice now projects what the judges will say, 'and has got to be considered mentally labile'. 'So was Joan of Arc accused of hearing voices in her head at her trial', the second voice says, 'so fear not, Son, but be brave and last'. 'He exhibits the traits of a megalomaniac; this is typical for blown-up egos and narcissistic personality disorders, if not for schizophrenia', the first voice is there again. 'All these things and more may be added to the darkest dossiers held in the drawers of these imitative illuminati when the world judges you, but I, Son, will always be with you', the second voice reappears reassuringly, reminding me that standing up for principles in an egocentric world is bound to be misinterpreted as a defense of the wounded ego and of the jets of vanity flushing out violently from the cracks on its crust. In the end, if you stand up for poetry, if you are guarding beauty in this world, if you teach the art of shattering the convention and the paradigm through which creativity, that ultimate goal of education, is brought to life, if you dream about a world where lyricism instead of bureaucratic listlessness and dead forms will adorn every form of communication and not just poetry books, then you must be prepared to stand for this cause and suffer with the sinister slump of the final stamp that says 'No, we don't want this spirit of the infinite in our kingdom of the finite', not knowing that body can be expelled, but spirit will remain. It will continue to live through other people's voices, whereas the ideas it once aired, the values it incarnated and the giggle it once chirped will resonate louder than ever". And like the Christ escaping the prison of the Grand Inquisitor with no words said but a single kiss to the mouth¹⁰⁸, so did I emerge unhurt from these oppressive gardens of delight for the senses into the night, dark but filled with stars, each guiding my soul toward new missionary horizons. In the end, like a sly cat with a springiest silhouette jumping from one rooftop to another on a moonlit night, I have walked over the edge my entire life. For this reason, I will always have an exciting story to tell and fill the hearts of my students with the spirits of wonder, adventure and incessant rebellion against the routine and customary, which, I know, are vital for anything creative in which we

¹⁰⁸ See Fyodor Mikhailovich Dostoyevsky's *The Brothers Karamazov*, Prosveta, Belgrade, Serbia (1880).

engage ourselves in this life. It is therefore that you may find me on moonlit rooftops of crumbliest warehouses in the most rundown neighborhoods with a golden book in my hands and legs folded like a lotus flower, yielding the shape of a heart, whispering to the muses and fairies flying through the inebriating cosmic air around me the following verses penned by the Persian wiz a.k.a. Hafiz: “The small man builds cages for everyone he knows. While the sage, who has to duck his head when the moon is low, keeps dropping keys all night long for the beautiful rowdy prisoners”¹⁰⁹. For, at the end of the day, reaching out with kindness and beauty not to our kin by intellect, but to the rough and rowdy, as anarchically and anti-authoritatively as it can get, is how we set ourselves on a journey toward saving souls, of ours and theirs alike, for, we know, one without the other cannot be accomplished on this plane of reality whereon the enlightenment of ours is conditioned by our jumping from our skin and shoes, exploding like a supernova all over the place and letting our tiny, flowery self, a bubble of ego separated from all else, perish in pining wholeheartedly for the enlightenment of another.

S.F.0.9. Ever since I began to swim in the sea of science as an independent spirit, sometimes as serenely as in the waters of the Adriatic in summertime and sometimes as turbulently as in the dense, metallic waters of San Francisco Bay on lustreless nights, I have known what my mission in it ought to be: to take the material from the rich, transmute it into the spiritual and hand over to the intellectual heritage of humanity. To that end, uncommon, off-the-wall behavior has been more of a rule than exception in my strides through this social sphere. Yet, strangely, although I openly consider myself a scientific Robin Hood, more than often making scandalous, blatantly lawbreaking moves, I still end up having people think that I act in smart, well-planned and cunning

¹⁰⁹ See Hafiz’s poem Dropping Keys. In: *The Gift: The Poems by Hafiz*, Translated by Daniel Ladinsky, Penguin Compass, New York, NY (14th Century), pp. 206.

ways, when it is, in fact, quite opposite. What I mostly try to do is not to show myself off as a smart person. I know that once one becomes poisoned by the desire to appear smart and impressive to the world, one loses every chance to truly act in smart and impressive ways. As Lao-Tzu proclaimed, “The sage acts with no intention to appear sagely” (Tao-Te-Xing 77). “The Heavenly Tao (Way) takes away from those who have too much and gives to those who have too little... He helps everything under the heavenly hat and does not reject anyone. That is called the theft of Light” (Tao-Te-Xing 77... 27). And then, “The whole world says that my teaching is insane. It is because it is great that it is crazy. Had it not been crazy, it would have become meaningless long time ago” (Tao-Te-Xing 67). So, when I am asked how I manage to act so profoundly and yet so risky for my career and future, deep inside myself I see a blue sky of inspirational thought and get reminded of what Lao-Tzu furthermore said: “Love is unbeatable in attack and invulnerable in defense; Love is the shield that the Heavens protect with those whom they do not want to see harmed” (Tao-Te-Xing 67). I act in such smart ways just because “I am on the mission from God”, as the Blues Brothers said in the course of their hilariously evading the ghosts of dull lawfulness and standardized behavior. As you may expect, I rarely give a truthful response. I am merely acting in accordance with another one of Lao-Tzu’s great guiding thoughts: “True words need not be well chosen words; chosen words need not be the true words” (Tao-Te-Xing 81). The Christ, that perpetual lawbreaker and rebel against any rigid rules of conduct, I know, would have smiled silently, like a crescent moon, upon hearing these words with which Lao-Tzu ended his lifework, having himself taught the merits of love and love only as the core of Christianity, as simple as a single sway of hay on a golden autumn day. Hence, I know that for as long as love and care enlighten my heart, I can talk about clowns and galaxies, about birds and clouds, about cedar trees and pinecones and dolphins and rainbows and yet orient others to the right direction, towards seeing the sunrises of divinity at the foundations of their hearts, having no fear of evil reverend Edwards, the dry headmasters “exercising a powerful office that overshadows the person holding it”¹¹⁰, who, I know, wait right around the corners to point the finger at me and punish me for these fantasies. For, if I were to put side by side a soul dead on the inside, obstructing every quest for love or godliness arising in his heart, but using flowery language to praise God and a soul whose insides are wilder than the tempestuous seas, one moment touching the sky in the internal prayer and another slumping to the darkest depths of depression and distress, blessing every living soul with his being, wordlessly or speaking in tongues, inarticulately, or perhaps talking the way children speak, brokenly but sweetly, I have no doubts whom He, who revered the harlequin and disdained the hypocrite and the verbose scribe and who is known to have said that “when thou doest thine alms, do not sound a trumpet before thee, as the hypocrites do in the synagogues and in the streets, that they may have glory of men... and when thou prayest, thou shalt not be as the hypocrites are: for they love to pray standing in the synagogues and in the corners of the streets, that they may be seen of men” (Matthew 6:2... 6:5), would plonk with the tip of his finger and whom he would lift gracefully, on the palms of his boney hands.

S.F.0.10. In the modern, westernized social setting, the notion of ethics has gathered a derogative meaning. For example, whoever articulates the attribute of ethical in science normally thinks of the legislative aspects of intellectual property rights or of the development and implementation of new technologies. This, however, has to do with law, not ethics, which is a lot broader phenomenon

¹¹⁰ Watch the last scene of the third episode of the TV version of *Fanny and Alexander* directed by Ingmar Bergman (1982). In this film, the dreamy boy and a poet in the making, Alexander, is chastised by his authoritarian stepfather because of his fantasies, which the stepfather perceives as “lies”.

in itself. In fact, in my opinion, the true ethics gets to be expressed only as opposing the strict rules of conduct assigned to people, which brings us over to the idea that true ethics must be unethical from the point of view of the standard usage of this term. In other words, to act in divinely moral ways in morally corrupt systems, which all social spheres built on oppressive laws are, from the art establishment to academia, is to be labeled as immoral by their hierarchical tops. The more divinely moral our acts, therefore, the more they will be condemned as culpable and villainous by the ruling class. “Christianity alone has felt that God, to be wholly God, must have been a rebel as well as a king”, G. K. Chesterton said¹¹¹. Mark Twain, likewise, opined that “if Christ were here, there is one thing he would not be – a Christian”, drawing lines of thought which make us clearly see how the modern Christ would be a rebel and a revolutionary, opening new ways of celestially expressing human spirit by breaking the doors of hypocritical, pharisaic acting. No wonder then that Fyodor Dostoyevsky in his famous story about the Grand Inquisitor depicted the Christ coming to Earth for the second time as imprisoned by the very church which was founded through his divine deeds, and yet over time turned the quest-like nature, freeness, love and self-responsibility of the Christ’s original teaching into dogmatism, intolerance, torture and insistence on the blind obedience of the authority. To look into oneself and read the messages of celestial origins that arise from one’s heart and in accordance thereto create the way forward instead of unquestioningly following trails that the society and its standards and values force us onto was the essence of the Christ’s way. Only then can the shine of love from our heart reach others and truly bless them. Or, as put into words by the very Christ, “Get thee behind me, Satan: thou art an offence unto me; for thou savourest not the things that be of God, but those that be of men... For what is a man profited, if he shall gain the whole world, and lose his own soul? or what shall a man give in exchange for his soul? For the Son of man shall come in the glory of his Father with his angels; and then he shall reward every man according to his works” (Matthew 16:23...16:26-27). The Belgrade legend, Cane the Partybreaker made a similar point when he noted that “without soul you are no one, without soul you are nothing, you just buy, sell, subtract and add”¹¹², urging us to look beyond the concerns of the material world and deep into the soul of things, for only with such views could we decipher the answer to that eternal question: “Where does this road in me lead to”¹¹³? And this missionary path, once glimpsed, albeit inextricably crossing myriads of similar paths, is ours before all and its uninterrupted tracing is possible only insofar as we resist to compromise it by submitting to rules and regulations stemming from wishes and demands of whichever authorities may be hanging over our heads. This is especially true in social niches such as academia, whose social makeup has been crafted by generations of tenured sycophants’ supporting tenure-track sycophants and extirpating any last traces of groundbreaking independence, along with the shadows of nonconformance and dissidence that follow it in step. In that sense, we can also bring to mind the recently articulated message of the University of California, San Diego philosopher, Patricia Churchland, which she supported by decades of research in neuroscience and evolution of consciousness: “Fundamentals of morality have nothing to do with socially imposed rules”¹¹⁴. By looking at this argument from a different angle, we could infer that by blindly obeying the norms and standards set forth by the social authorities in our

¹¹¹ See Gilberter Keith Chesterton’s *Orthodoxy*, Serenity, Rockville, MD (1906).

¹¹² Listen to Partibrejkers’ *Kreni prema meni* on Partibrejkers III, Jugodisk, Belgrade (1989). Symbolically, Cane here misspells the word “soul”, changing it from the correct conjugation, *duše*, to an incorrect one, *duši*, as if to accentuate that language cannot express the essential features of our lives.

¹¹³ Listen to Partibrejkers’ *Hoću da znam* on *Kiselo i slatko*, PGP RTS, Belgrade (1994).

¹¹⁴ Patricia Churchland’s talk entitled *Critical Unsolved Problems in Medicine*, presented at a symposium honoring J. Michael Bishop, Mission Bay Campus, University of California, San Francisco, June 7, 2010.

world we move in the direction of rotting the genuine and innate sun of ethics that stands at the core of the spirit of ours that dazzles and inspires. In fact, one of the most enlightening discoveries that I made in life was that a person, hypothetical or real, who would obey every single rule and regulation down to the nines, from alpha to omega, would breach the norms of divine action and would be sidelined as a wrongdoer by the gods and goddesses overseeing the earthly matters from some great heights, albeit, as a rule, being honored by his fellow humans. For this reason, some of the most important figures and signposts on my missionary road have been exactly such personalities, proudly perceiving themselves as the epitomes of justice, when, in reality, they were nothing short of miscreants in the eyes of the Heavens. If murder was legal, they would murder – such was their leaning on law, tight and dogmatic, most definitely a fallacy in the system of divine ethics inscribed nowhere but in the deepest corners of the human soul. Thus I claim, first of all, that true professionalism, unlike what this term is usually thought to denote, lies not in robotically following given guidelines, but in improvising our way in opposition to the rules when the decisive moment comes, and the, secondly, that only in situations in which we break the law for the sake of truly ameliorating the troubles of the world do we get to express a shining ethics. The one that comes straight from the heart and makes people bow before its gloriousness. For, if justice is the law, then lawlessly are we to approach the laws humans have built like barbed wired fortresses around our spirits whom only constant rebellion against routine keeps airborne, as innumerable Robin Hoods of this world would go ahead and tell us. To blindly follow human laws is, as memorable Phillip Martin, the blind composer from Alfred Hitchcock's *Saboteur*¹¹⁵, noticed, analogous to betraying people by handing them over to the law, so to speak, based on one's fears and cruelty emanating directly from it, the reason for which this sapient soul remained immune to the law and, as such, washed by the waterfalls of wisdom for as long as he was. Or, in his own words, "I have my own ideas about my duties as a citizen. They sometimes involve disregarding the law", echoing Thoreau's earlier musings about comte de Mirabeau's resorting to highway robbery: "A saner man would have found himself often enough 'in formal opposition' to what are deemed 'the most sacred laws of society', through obedience to yet more sacred laws"¹¹⁶. After all, not being at odds with the world in the state in which it is found today, with hypocrisy, selfishness and greed budding everywhere in it, not being considered as a rebel and troublemaker by it and not being one against many is nothing but an indication of moral spoilage and corruptness of our very being. From the days when Socrates, a founder of the Western thought, was accused by the Greeks for spoiling the youth of Athens to the days when the Christ was labeled by the Romans as a troublemaker and by Jews as a miscreant, finding sympathetic hearts in only a handful of his most faithful followers, to the Parisian premiere of the *Rite of Spring*, a ballet that revolutionized the modern dance and the classical musical world alike with its erratic, untranscribable rhythmicity, when blows were exchanged between those "looking on it as the negation of all that music stood for"¹¹⁷ and those "hailing it as the dawn of a new era"¹¹⁸, to these very days when whistleblowers revealing the hypocrisies of the actual political powers are being pointed finger at by the latter and having webs of terror weaved all around them, this trend of vilification of the most progressive outbursts of thought and the most inventive styles of being has perpetually repeated itself throughout the course of history. To be liked by all and not condemned

¹¹⁵ Ten minutes of *Saboteur* were the only scenes in 30 or so Hitchcock's American movies that were shot in southern California, given that the British director heavily favored San Francisco Bay Area for his films.

by any can thus be seen as a clear sign of the ethical fallacy of ourselves and is the reason why breaking the laws of standard ways of communicating is the only path that leads us to exhibit a dazzling shine of divine ethics from our heart and wash the face of the world with the sacred waters of baptism, thus bringing us closer to the ideal of becoming a new Christ on Earth, a rebel of love, wonder and justice like the one never seen before. And, therefore, when the Himmlerish heralds and the sheepish followers of the benighted worldly authorities come to ask us why we have chosen to pursue a path that will inevitably result in our being singled out as an outlaw and shoved into isolation, we should revert their question, just like Henry David Thoreau, confined behind the prison bars, did when he asked back the same question that a fellow poet who came to pay him a visit in the pen, Ralph Waldo Emerson directed at him: “What are you doing there?” For, in the end, in the last lines of the passage 0.10, which, for those who do not remember, was the codified name for the world of nonobjectivity in the Russian futurist opera that premiered in 1913, *Victory over the Sun*, it can be said that the only way to live in harmony with the celestial ethics instilled in us upon birth in this earthly realm is to be in zealous dispute with the artificial system of ethics imposed on us by the human laws and the mammon, not the empyrean energies that enshroud our divine spirits, they serve.

S.F.0.11. “Down with the law, long live grace!”¹¹⁹, Saint Francis of Assisi, the Poor Man after whom the city in which my spirit is nested as it bears these bold words, an urban synonym for antiauthoritarianism, is said to have declared once, in the moments of his ecstatic outbursts of the joy of life. Likewise, “It is not desirable to cultivate a respect for the law, so much as for the right... Law never made men a whit more just; and, by means of their respect for it, even the well-disposed are daily made the agents of injustice”, said Henry David Thoreau in his remarkable treatise nowadays known under the name of *Civil Disobedience*, the phrase which would be used a century later by Howard Zinn to describe the most vital ingredient of ingenious social consciousness¹²⁰, neatly reflecting my lifelong beliefs in needlessness of any formal form of governance as well as mental malignancies that laws *per se* infuse the human minds with. History has indeed shown me that the more oppressive the socially imposed dogmas and laws tied around people’s necks, calling for coldblooded rewards for its followers and punishment of its contenders, the greater the spiritual abysses stretched between people. As observed by an angel levitating in the grim Berlin skies of Wim Wenders’ masterpiece, *Der Himmel über Berlin*, a human being immersed in one such inhumane social system governed by laws becomes akin to a single state in the modern world, demanding tolls to anyone daring to inquire about the entrance thereto, with only the bravest, the most empathic and the most imaginative journeyers, such as the Little Prince¹²¹, being able to cross this cosmos composed of an infinite number of planets, each of which is inhabited by a solitary soul living in complete isolation from other planets, that is, people. But to succeed in this humanitarian journey is to be prepared to break the laws and stay off the beaten tracks, while taking the roads that no man advises to be taken. These genuinely antiauthoritarian beliefs, shared by many profound thinkers and sages before me, from Lao-Tzu to Zeno and early Zen thinkers to the Christ to Leo Tolstoy to Henry David Thoreau to Charlie Chaplin to Mahatma Gandhi to Warren

McCulloch to Philip K. Dick to Noam Chomsky¹²², unequivocally place me on a seat right next to those occupied by hardcore anarchists. Imposing one's points of view or ways of being onto others stands for a most vulgar and abominable act in my universe of thought, which, need I say, is, itself, a point of view that has caused me lots of problems in the past and present. For, by instinctively disobeying laws set forth by stale social authorities, I have been labeled as a rebellious nonconformist all my life and selected for extermination by almost every single employer I have worked for. And yet, repeatedly reprimanded for not complying with rules in a similar way one of Einstein's college professors criticized him, saying, "You have one fault; one can't tell you anything"¹²³, I knew that "the very characteristics of Einstein that upset authorities so much were exactly the ones that allowed him to excel"¹²⁴ and that recognizing the obsolescence of the mainstream and swimming boldly against it is the first step toward becoming the creator of things otherworldly novel and innovative. Of course, the pursuance of such paths requires a strenuous effort and resilience of the spirit, given the heavy cross that one must be prepared to bear all throughout them, the cross of antagonistic forces pulling one in different directions summed in the following passage on antiauthoritarianism by the anarchic, anti-psychiatric psychiatrist, Bruce Levine: "Many people with severe anxiety and/or depression are also anti-authoritarians. Often a major pain of their lives that fuels their anxiety and/or depression is fear that their contempt for illegitimate authorities will cause them to be financially and socially marginalized; but they fear that compliance with such illegitimate authorities will cause them existential death"¹²⁵. And when people with a tinge of this death in their eyes ask me to rationalize my antiauthoritarian instincts, I often refer to what I call the light bulb example¹²⁶. Namely, we all know that most working places nowadays do not allow their staff members to change a burnt-out bulb. Only specialized maintenance workers are permitted to carry out this task, which constitutes a law of a kind. How this norm dehumanizes society, I remember, hit me in the head when I sat in a car with flat tires at a gas station at 5 o'clock in the morning, not knowing how to use the air machine to pump up the tires and the only person that was around, the gas station worker, not wanting to help me out because of "liability" issues. "If I pump up your tires and they blow, I could be held responsible for that", he said and walked away, leaving me stranded at an unsightly morning hour. Likewise, if you see a man in the hallway of your working place struggling to push freight through a narrow door, helping him would imply breaking the law of the given institutions and fines imposed on "felons" can be quite high. Countless such little laws contribute in synergy to alienation of human beings from each other and an overall dehumanization of the society. In an almost lawless land in which I grew up it was a natural action that most of its habitants would resort to when seeing someone struggling with a physical task, be it pushing a malfunctioning car down the street,

¹²² Ironically, the first talk I gave at UCLA, at 2 pm on April 30, 2019, had a scheduling conflict with Chomsky's talk in the very same building of California Nano Systems Institute, which took place from 2 to 4 pm. As a result, my talk got relocated to a regular classroom, so that Chomsky could be accommodated in the central auditorium.

¹²⁶ As a side note, consider this real-life example too. Fido comes back from a walk and tries to enter the building in Chicago in which I lived at the time. He is refused by the doorman, who claims that he is not on the guest list (later it was found out that there was no such thing as the guest list). The doorman causes distress in Fido, who leaves for a few hours, without telling anyone where he has gone and causes distress in me. Distressed, I yell at the doorman when Fido finally returns and cause distress in the Little Bear, who almost undergoes a nervous breakdown due to the discomfort of the whole situation. Later everyone forgives everyone, but the question remains: whose fault was all of this? What was the prime cause of this chain of distress? The answer: it was Law's fault.

sweating while trying to fix a broken engine or carrying a large load. However, this is not so in the western world teeming with rules of one kind or another. As a result, the intimacy between people I had known in my native land has now been substituted with distant and unsympathetic relationships. Everybody minds their own business and no one is anymore peering above the walls that stand between us and into the world of another with glistening eyes that gleam with congenial wonder. This is how we have gradually approached the world in which the majority of people would see their planetary brothers and sisters suffering and would not even turn their heads to them, let alone ask for help, as it happened to poor little Yue Yue hit by a truck on the streets of Foshan. For, many of these ignorant passersby must have kept in mind the story of another Chinese fellow who had helped an innocent person in the street recover from a paralyzing contusion and then was accused for being the one responsible for her collapse, having to serve a sentence in prison afterwards¹²⁷. The fact that the 19th person that was about to walk by the obviously hurt child lying immovably on the asphalt of a busy shopping mall before leaning over the little girl and calling for help was inaugurated as a national hero months after the accident furthermore illustrates the mind-one's-own business attitude and collective desensitization and alienation that a world pervaded by innumerable little laws and limitations naturally gives rise to. After all, in a world wherein lifeguards are not rewarded, but punished by being laid off for saving a drowning person just outside of the roped-off swim area that they were instructed to oversee¹²⁸, a world where loyalty that transcends the limits of self-interest, let alone law, is enough to earn one the nickname of “donkey”¹²⁹ and is penalized to the point of professional and often biological extinction, an inherently inhumane way of treating people naturally results whereby the prime interest is being given to coldblooded obedience of laws rather than to weaving cordial threads that connect human hearts into greater wholes, a creative act that comprises the beginnings and ends of our road to happiness and fulfillment in this life. And the fact that the driver who intently ran over the child twice asserted upon his arrest that killing the child simply pays off more because compensatory damages for death involve a one-time payment¹³⁰, in practice significantly less than compensations for medical expenses and missed working hours that are often to be paid over many years, serves as an icing on the cake that the modern world figuratively represents, sweet and glazed on the surface, but carrying no nutritional value for the soul whatsoever, the earthly cake composed of law-abiding mindsets that value profit over philanthropy, ego over empathy, senses over spirit. Nourishing our addiction to laws and a sense of sheepish safety rather than supporting the rise of a divine rebel in us, with neither a home nor a halfpenny to claim as his own, let alone a law to abide to, can thus be seen as responsible for pulling the heart and soul out of human creatures and yielding the world wherein the fall of another man, the collapse of an entire universe

dormant in each human being, becomes seen as equally petty and unimportant, distant and wholly unrelated to earthly concerns of the common man as Icarus' crashing into the sea portrayed in Bruegel's memorable painting¹³¹. In contrast, if someone declared to an ordinary dweller of this overpoweringly lawful world that a state of complete anarchy has been reached at this very moment, the way he would look at random people in the street from now onwards would thoroughly change. His attitude towards others would be markedly more overflowing with reverence of others; for, the costs of being rude to another could be quickly retaliated with his own head. At the risk of the latter, however, his daily exhibition of passive-aggressive or bluntly ignorant attitudes with respect to those whose soul cries for help would swiftly be erased and substituted with cordial respect of creatures in his proximity. A recent experiment conducted in New Zealand has shown that announcing the playground rulebook no longer valid and applicable to children's play drastically decreased the number of bullying incidents and vandalism cases¹³², and, similarly, ditching formal and informal rules in favor of more anarchic conditions for social interaction would counteract the common sense and lead to a far greater level of amicability arising from them than is the case today. With formality usually stemming from the fear of authority, tearing it down releases repressive chains tied around people's necks and sets them free, thus reducing the bullying incidents, which, like any instances of aggression, lie on the other side of the coin of oppression. Speaking of *da skool daze*, when I heard of the case of an enthusiastic teacher who was publicly denounced and almost dismissed because of bringing a bottle of beer to a class for the purpose of an improvised play, thus breaking the code of conduct by which she was conditioned to abide, and imagined her a decade or two from then, dragging her feet listlessly across the school hallways, unconcerned about anything at all, with the flame of ingenuity burnt out and nothing but ashes of suffocated spiritedness remaining scattered through the desert of her heart, I had zero doubts that if one wished to convert a creative creature predisposed to think outside of the box into a careless and cunning, passive-aggressive poltroon and a social parasite, all one needed to do is to overwhelm her with as many do's and don'ts as possible and multiply the laws imposed on her acting and one's crooked aim would come true sooner than one has thought. On the other hand, erase the rules and announce no existence of authorities to punish or reward us and the individuals would seek guidance from the depths of their hearts, wherein, as we know, divine voices who crave to whisper the messages of love and respect to our ears dwell. Hence, just like players on a soccer field are more prone to dishonesty and disrespect of opponents in the presence of the referee than in its absence – an insight I inductively arrived to after many years of playing soccer recreationally – so do players in the game of life permeated not by the individual, inner ethics, but by external inculcation of what is wrong and what is right fall prey to animosities that self-destructively simmer deep within their hearts, regardless of the surface respect they may pay to another as slaves of the ethics of the scribes, the ethics of dead letters and words, having left the profound morals of the soul far behind during their treading on the road to Hades. This is, of course, not to say that the ideal world would be the one wherein the criminals and bedlamites would emerge on the surface and the clever and sensible ones would drown under; no, this is merely to point out the disappointing social state of affairs where the average inhabitant of the develop world has imperceptibly, like a frog cooking itself alive on a slow heated pan, become

¹³¹ See Pieter Bruegel's *Landscape with The Fall of Icarus*, available at http://upload.wikimedia.org/wikipedia/commons/5/5e/Bruegel,_Pieter_de_Oude_-_De_val_van_icarus_-_hi_res.jpg (1560).

¹³² See Marika Hill's *School Ditches Rules and Loses Bullies*, *Stuff* (January 26, 2014), retrieved from <http://www.stuff.co.nz/national/education/9650581/School-ditches-rules-and-loses-bullies>.

spiritually suffocated by the laws abounding all around him. As ever before, it is the balance between law and order on one side and chaos and entropy on the other that the evolution of our beings and the world critically depends on. For, if I were to pull yet another example of how laws dehumanize people from the endless box of cards that rests buried deep in the cellars of the citadel of my memory, it may be the one of an eight-year old Serbian girl whose parents managed to collect close to a million dollars for the heart replacement surgery to be performed in a clinic overseas, but only to be refused by all the commercial airline carriers whose executive officers followed the laws that prohibited her admittance to any of their flights, fearing that they might be held responsible should anything adverse happen to her while onboard¹³³. A similar, albeit far less critical case occurred on the day when I, jobless and broke, drove 40 miles from where I lived to Culver City to see a cheaper dentist, then got lost in the not so rad neighborhood of Inglewood, before finally finding myself in the dentist's chair, where I suddenly got bitten by a spider, at the point of which my wrist started rapidly swelling and the dentist and his assistants went to look for an antihistamine or an allergy medication, but all they found was a topical cream, which, as it turned out, expired and so they were not willing to have me use it, the point of which was that, given the laws at work, these practitioners would find it more appropriate to have a patient drop dead from an allergy reaction whose occurrence was not their responsibility than to be held responsible for handing him an expired over-the-counter medicine (which most probably would still have an effect), even when the latter could save his life, notwithstanding the nil ethics of this decision. A concordant example of how laws dehumanize society may come from digging deeper through the fabric of the American healthcare system: namely, while laws allowing patients to sue anyone for anything on one hand protect them against sloppy or plainly malicious practitioners, they also rip the heart out of medical providers and turn them into mechanized operators, complete opposites from types of personalities conducive to healing another – natural, cordial and deeply humane, embodying all the inadvertently blundering frailties that humanness implies. This fear of legislative penalties imposable on one if not abiding by standard practices can also be blamed for the perpetuation of obsolete therapies from one generation to the next, given that innovation has and always will be tied with a risk of failure, which the practitioners cannot undergo if they follow the methods already in place, regardless of how mediocre they may be. To illustrate this with a real-life example, when I visited one periodontist after another in hope of saving my molars that were hanging by the thread to the alveolar bone underneath them, all of them recommended extracting the otherwise healthy teeth and then grafting the missing bone to prepare for the implants and none of them expressed the enthusiasm to save these teeth by trying to debride and directly graft the bone around them, notwithstanding how little sense this made in the big frame of things, in a situation where a healthy tooth is superior in terms of its makeup and resilience, let alone biocompatibility, to any implant out there. The extraction and the subsequent grafting, of course, have a very high chance of succeeding, while the conservative approach of trying to save the teeth has a very high chance of failing and leading to potential complications and even lawsuits, explaining why every single American dentist I consulted advised that the former procedure be performed. In broader social frames, as exemplified by contemporary America, laws do not only fail to eliminate crime either, but also create a false impression of social justice – an awareness of the persistent and unavoidable failure of which Bill Gates recently placed on the top of his list of

¹³³ See Prevoz male Tijane preveliki rizik, *B92 News* (April 8, 2013), available at http://www.b92.net/info/vesti/index.php?yyyy=2013&mm=04&dd=08&nav_category=12&nav_id=703048.

advices for the kids of the 21st Century¹³⁴ – and foster legal suits of fellow humans for the most minor of causes, instilling maliciousness and self-interest-driven thinking in people while uprooting the seeds of sacred sympathy and happiness from their hearts, whereas, on the other hand, a collapse of the legal system I witnessed in my home country decades ago created far more favorable conditions for the rise of the feelings of forgiveness from the seabed of the human soul, contributing to its far greater prosperity than in the social milieu pervaded by countless little laws. Of course, already during my early teenage years I witnessed how religions can produce the opposite effect from their intended drawing people toward the understanding of the theological backbone of their existence by enforcing a plethora of laws to be obeyed. For, through these laws generations of people, as I have come to conclude, are raised to think that fasting and pulling a grim face on a Good Friday, donating charity on Xmas and receiving the Holy Eucharist on major religious holidays is sufficient to consider oneself a believer and a pilgrim on the road to Paradise, when, in reality, obedience to these rules gives a shallow apostle a false impression of immaculacy and being a holy spirit requires something much deeper and more inexpressible than that. This all explains why I am incredibly indebted to my parents for buying me a picturesque Bible for children for my first birthday and placing it on a bookshelf in my room, gently, without ever mentioning what it is, let alone urging me to read it. Hence, that too many laws tend to pull out the heart that twinkles with divine values like stars from us, I have no doubts in, as much as that, conversely, to retain this divine ethicality within us, we have to consider our actions with absolutely no regard to what the laws might say or how they would dictate our behavior. For, in life we either choose to be a follower of blind leaders, akin to a member of the faceless mass of people that condemned the Christ for breaking the Jewish law, all of whom are preordained to eventually end up in cosmic ditches of our karmic travelling from one star to another, or the very Christ, the rebel and the troublemaker, the one who refrained from any judgments and who was on a simple and unstoppable mission to heal each and every one. The message inscribed in these lines distantly draws on the thoughts of Leo Tolstoy, “Always and everywhere a Government, by its very nature, must put in the place of the highest, eternal, religious law (not written in books but in the hearts of men, and binding on every one) its own unjust, man-made laws, the object of which is neither justice nor the common good of all but various considerations of home and foreign expediency”, and deep in its essence echoes the words of St. Paul the Apostle: “For without the law sin was dead. For I was alive without the law once: but when the commandment came, sin revived, and I died...The sting of death is sin; and the strength of sin is the law...For I through the law am dead to the law, that I might live unto God...I do not frustrate the grace of God: for if righteousness come by the law, then Christ is dead in vain” (Romans 7:8-9...Corinthians I 15:56...Galatians 2:19...Galatians 2:21). Wotan, the king of all gods in Wagner’s saga about the Ring of the Nibelung went a step further in this declaration of disobedience to the law that, upon praising the sacrilegious, marriage-shattering love and recognizing it as a more beautiful cosmic force than marital vows to Fricka, the goddess of marriage in the second scene of *The Valkyrie*, he advised defiance of not only human laws, but also the divine ones. “The crisis calls for a hero who, free from divine protection, can free himself from divine law so alone he will be fit to do the deed which, much as the gods need it, a god is nevertheless prevented from doing”, he sang, airing a message that largely defined the good and the bad of art, politics and culture of the 20th Century. These words also distilled, albeit in a radical form, the state of mind with which heroes in all

¹³⁴ See Bill Gates & His 11 Tips for Success You Will Never Learn in School, Addicted 2 Success (June 28, 2011), available at <http://addicted2success.com/success-advice/video-bill-gates-his-11-tips-for-success-you-will-never-learn-in-school/>.

human disciplines, theology included, constantly torn on the inside between a sense of inextricable connectedness with the divine and an overwhelming feeling of aloneness, have acted. For, throughout all ages, the wise men and women have epitomized with their lives the metaphoric message uttered by Steve Albini, the angry young man squatted beside sandstone bricked house walls in the heart of Missoula, “The only good policeman is a dead one; the only good laws aren’t enforced”¹³⁵. To their anarchistic selves, the fact that “the incidence of crime has not declined as a function of increased implementation of the law”¹³⁶ in the US would certainly not come as a surprise; for, they have surely been aware that with more laws imposed on us, not freer, more graceful and inspiring to the world do we tend to become, but merely stiffer, more artificial and counterfeit, prone to commit crimes on human and heavenly scales alike. In his essay on deschooling society, tackling the problem of education that promotes obedience rather than dissent, which was accused to have caused the US social system to rot from its core¹³⁷ and the disillusioned native Americans to cry how “the white men do not scalp the head; but they do worse – they poison the heart”¹³⁸, the Christian anarchist, Ivan Illich says the following: “Jesus was an anarchist savior. That’s what the Gospels tell us”, reminding us of how the Christ declined the merits of power offered to him by the devil in places high and low, from the desert to the pinnacle of a holy city’s temple to the tallest mountaintops wherefrom all the world’s kingdoms lay in clear sight (Matthew 4:11), determined to forever and ever remain humble and powerless like the sea into which all the rivers flow and be rejected by the society as rebel and an outlaw¹³⁹. Still, the

¹³⁵ Listen to Big Black’s Steelworker on The Hammer Party, Homestead (1986). Once more, the gist of the message is metaphorical, as “policeman” is assumed to be a symbol of a social mechanism by which standards and rules of conduct are imposed onto chaste and juvenile mindsets before they have become images of bodies blindly following each other and sliding in colony on a conveyer belt towards a milling machinery, as depicted in symbolic but artistically disappointing Pink Floyd’s The Wall. Or, as Steve Albini himself said when confronted with critiques for allegedly overstepping the lyrical norms of decency in his songs, “A lot of people, they’re very careful not to say things that might offend certain people or do anything that might be misinterpreted. But what they don’t realize is that the point of all this is to change the way you live your life, not the way you speak”. In a nutshell, the profoundest message of punk and hard core is exactly that: shocking people out of their routine reliance on sole language in communication and making them aware of all the lies and hypocrisies that judgments derived from words rather than acts lead to, keeping our spirits tied down to the graceless earthly mud of being.

¹³⁸ *Ibid.*, pp. 131.

¹³⁹ Thus, Ivan Illich says further: “He who cannot accept this view on power cannot look at establishments through the spectacle of the Gospel. This is what clergy and churches often have difficulty doing. They are so strongly motivated by the image of church as a ‘helping institution’ that they are constantly motivated to hold power, share in it or, at least, influence it. Churches also have their problems with a Jesus whose only economics are jokes. A savior undermines the foundations of any social doctrine of the Church. But that is what He does, whenever He is faced with money matters... Remember the occasion at the Lake of Capharnaum, when Peter is asked to pay a twopenny tax. Jesus sends him to throw a line into the lake and pick the coin he needs from the mouth of the first fish that bites. Oriental stories up to the time of Thousand Nights and One Night are full of beggars who catch the fish that has swallowed a piece of gold. His gesture is that of a clown; it shows that this miracle is not meant to prove him omnipotent but indifferent to matters of money... Yet, just as he wants to be counted among the weak and the poor he also wants to be marginal, and be counted among the criminal. Listen to this. He spends his last night in a garden, on the mountain of olives. On the way he says to the company, ‘Now, let him who has no sword sell his mantle and buy one... And they said, look Lord, here are two swords. And He said to them: It is enough’. That is what Luke (22:37) tells us. For decades I have puzzled over this passage. Why did Jesus want armed company? Then Jaques Ellul in a recent book that I am reading called my attention to the context, the following statement: ‘...so that the prophecy be fulfilled, and I be counted among the bandits’. That explains it: two swords are not enough to defend a small troupe

nature of social upbringing of human beings is such that it naturally provokes intentions to reject the sense of free will and self-responsibility, which are elementary traits of divine creativeness in life, and substitute it with the blind and unquestioning obedience of authority, as neatly depicted by Fyodor Dostoyevsky in his marvelous story about the Grand Inquisitor. These authorities may appear in form of parents, teachers, friends, romantic partners, visions of transcendental deities or tyrants, and love for them even in a form as inhumane as that represented by George Orwell in 1984 should never be underestimated. However, as I claim, all creative thoughts and acts are such because they break the norms of expectancy and normality and thereupon infuse novelty and inspiration in our inner and outer worlds. To be accused for being a disrespectful renegade is thus a necessary cost of all our progressive deeds, which may explain why a University of California, San Francisco (UCSF) professor in the Tobacco Research Center told my comrade, Norval, one day, "If you have not been sued at least once in your career, you have not been honest enough in your research endeavors". Yet, the amount of hypocrisy and readiness to close one's eyes before teammates' fraudulency, transferring one's responsibility onto other people's hands, as in the story about the Grand Inquisitor, has often left me stunned in the grownup world through which I still roam like Mowgli, shrouded with the cosmic starriness, divine innocence and pure wonder. Osamu Tezuka, the grandfather of Japanese comics, in his favorite book depicted the journey of Kirihiro, a medical scientist, to a mysterious land in which an unusual sickness that turns people into dog-faced creatures appeared. After a while, Kirihiro himself contracted the disease and became transformed into a wolf-like creature, realizing at the same time that he was erased from the institutional medical staff roster by his boss who had originally sent him to investigate the disease. What this story stands for is nothing but a metaphor of what honest mindsets might become like after spending time in a modern medical institution if only they follow the path of pure ethics and honesty: creatures that substitute a peace of mind with an angry bark within their chests from one allegorical angle or persons intentionally humiliated by the establishment so as to be recognized by all as an illness of a kind in the realm of their professions from another metaphorical stance. No doubt that I have felt this on my skin too. Namely, the authorities at most academic institutions I worked in in the US - from Clarkson University in upstate New York to the Dental School at UCSF to the Department of Bioengineering at University of Illinois in Chicago to Chapman University in Orange County, California - had tried to impose a similar metaphoric dogface on my appearance in the eyes of the world, and all that merely owing to my willingness to selflessly stand up for fairness and justice, in the spirit of Giordano Bruno, Joan of Arc and other sacred martyrs who fought against blind and dogmatic obedience and burned their bodies at the stakes of life for the sake of truth and freedom of thought. Although I had arrived at the UCSF Medical School with what I see now as a pure and chaste mindset, selflessly driven to investigate the secrets of Nature and always placing the interests of the team, of the whole, before those of my own, numerous times I was challenged to change this perspective and adopt the one of self-protection and intellectual selfishness. "You've taught me nothing except how to cynically manipulate the system"¹⁴⁰, says Calvin to his school teachers in one of the comic strips on him and his imaginary tiger, and these

of rabbis and are certainly insufficient to organize an uprising. But they are more than enough to brand you as an outlaw. When, during the same night, the templeguards come to arrest him, Peter draws the sword, bungles the thrust, and cuts off the ear of a certain Malchus. Jesus glues it back and reprimands Peter. Not for missing but for attacking. He wants to submit to the Roman court, not because He recognizes its jurisdiction, but to show up the injustice of the best law courts of the time". See *The Educational Enterprise in the Light of the Gospel*, a lecture given by Ivan Illich in Chicago, IL, November 13, 1988.

¹⁴⁰ See *There's Treasure Everywhere: A Calvin and Hobbes Collection* by Bill Watterson, Andrews and McMeel, Kansas City, MO (1996), pp. 90.

words could have easily been pronounced by myself too after a few years of my stay in this medical school environment. Simply, one cannot easily resist the spontaneous adoption of values fostered in our immediate environment because learning and changing through sympathy and imitation of environmental traits is deeply ingrained in human nature. And so, like Douglas Coupland's *Miss Wyoming*¹⁴¹, who entered the novel by sitting on the pavement pigeon-toed and blissfully ponderous, as if feeding imaginary doves of peace that nested around her head with breadcrumbs, having taken off her miss pageant crown and placed it on another's head, thus substituting slavery to the material with a spiritually enlightening aureole of twinkly stars around her head and also renouncing her name and identity and all the traps of ego that follow our attachment to it, but exited it while heading off into spiritually corruptive darkness of a Californian highway at dusk, having become yet another victim of the modern self-centered age, I often felt as if the selfless chastity with which I entered UCSF Med School started to cede its place to selfish and angry outbursts of a self-protective bubble of ego. In order not to become yet another epitome of Mr. McTeague from Frank Norris' *A Story of San Francisco*, who had kissed birds and depreciated gold and the material riches it symbolized, but who was after opening a dental office on the corner of Polk and California Streets eventually dragged into the abysses of avarice by his ravenous social surrounding, I knew that colossal efforts had to be made not to fall from the grace of divine spiritedness and into the chasms of covetous corporeality by being surrounded by it from all angles of labs, offices, hallways and courtyards of the medical and dental schools in which I abided in those days. What has helped me maintain a clear vision of what the most ethically sublime way of perceiving and acting in life is was the ability to constantly recognize the instances of spoiled and unfair decisions made by my coworkers, peers and, particularly, authorities, before placing them side by side with the gracious ideals and muses of divine ethics and aesthetics that ornament the radiant abstractions of my mind and, thereby, as if reflected from a mirror, realizing the vulgar and dreadful disposition of theirs. Needless to add, the current circumstances where principal investigators earn most credit for the discoveries made while pushing their grad students and postdoctoral appointees into the research waters to cope with streams and whirlpools using their creative powers still match those that Osamu Tezuka, himself being a medical degree holder who had given up his career in medicine to pursue the one of a comic book artist, drew in his *Ode to Kirihito*. At one point, Kirihito furiously laments over his dogface: "No matter where I go, with a face like this, I'll never practice medicine again. Your ability to take people's lives into your hands is judged on the basis of appearance... your face! Your face and nothing more! When I think about it, even back at M University people were judged based on appearances. Some were no better than pigs on the inside!"¹⁴² Hence, when one of my scientific papers was rejected by an editor of a biomedical journal because of not complying with the submission standards and not because it

¹⁴¹ See Douglas Coupland's *Miss Wyoming*, Flamingo, London, UK (2000).

¹⁴² See Osamu Tezuka's *Ode to Kirihito*, Vertical, Inc., New York, NY (1970), pp. 515. Interestingly, in the very same week in which I finished reading this comic book, I watched an animated movie about a dog that wished in his dreams he could be gifted with a super-bark. When he saved his owner, a young actress, while she was lying on the floor and suffocating in the burning studio by willing to stay next to her and produce a bark that accidentally became magnified in loudness through a network of channels lining the walls of the burning building so that people outside could hear it, he offered a subtle sign; namely, by lovingly staying close to the people of the world on one side, and yet spreading our revolutionary voice across the rooftops of the world on another, we get a chance to save this very same world. Christmas, which could be any day lived in accordance with the Christian ideals, thus has to have a "mess" in it, a million of tiny lampions flashed in my head. For, to be a true Christian, we need to be a rebel and a saint at the same time, somewhat similar to what the Christ himself had been.

failed to present a scientifically sound contribution to the field¹⁴³, I replied with the following words: “This was merely one more drop in the sad sea of medical science where surface is valued more than the essence and form more than the content”, wishing my peers all the best in continuing to do what they know best: to guard the gates and selfishly stand in the way of the development of their own profession. And whenever the corporate spirit threatens to eclipse the one of selfless and honest search for keys to natural secrets, as it tends to happen with an ever increasing frequency as we distance ourselves from the grounds of fundamental natural sciences to their applicative fields where possibilities for manipulation of data become more open, we should be aware that the genuinely scientific spirit is likely to be temporarily drowned and all the egotistically biased, demonic voices hearable throughout innumerable pharmaceutical mazes today, such as that of a Parke-Davis sales rep regarding one of their drugs, “That’s where we need to be, holding their hand and whispering in their ear, Neurontin for pain, Neurontin for monotherapy, Neurontin for bipolar, Neurontin for everything”¹⁴⁴, would begin to ring all around us with their metallic echoes, eventually prompting the leaders in the field to conclude what the editors of the most influential American journal in the field of medicine concluded too recently while analyzing the legacy of Neurontin, which was that “drastic action is essential to preserve the integrity of medical science and practice and to justify public trust”¹⁴⁵. A recent study showing that breast cancer screening has not decreased the incidence of mortality caused by this disease in the past 40 years¹⁴⁶ has spoken in favor of the idea that the ampler the medical web in which we are being caught, the more resilient the causes of the illnesses will be to their treatment, suggesting that the massive R&D funding in biomedical research may have had little or no effect overall in improving the health of humankind and that there is more of a giant pretense and less of a sincere drive to alleviate the declining health of the suffering human souls underlying the biomedical enterprise. Given that the medical approach based on treating but not necessarily curing disease fails to truly improve the health of the populace, it should not surprise us that the amount of funding for the healthcare system in the US surpasses that in any other country of the world, yet the health of the American people significantly lags behind countless other countries, including Cuba wherein this funding is fourteen times lesser. What is particularly critical is that handing over the responsibility for one’s health to someone else’s hands, in this case of medical practitioners, has devastating psychosomatic repercussions, directly causative of one’s giving in to various illnesses, the reason for which medicine - as I insinuated in the piece of writing with which my penning an endless string of written word, of which these are but a miniscule link, had begun on an early autumn day of 2003¹⁴⁷ – can be christened a sacred vocation as much as a dreadful menace. Here, the more medicine turns into a sheer exhibition of technique and technology at the cost of neglected nurture of holy feelings within its practitioners, the deeper it sinks into those dreadful grounds and farther it distances itself from a discipline sacred and sublime; this is how I feel and this is how my mom felt when she

¹⁴⁷ Symbolically, it was a year of the Sheep in the Chinese zodiac. The words comprising this sentence, however, were written in the first following year of the Sheep, exactly twelve years later, suggesting the beginnings and the ends flowing into each other.

handed her life downheartedly to the hands of medical surgeons and doctors, who would dig through her brain in the attempt to eradicate, albeit unsuccessfully, a tumor that grew in it. She, I am sure, would have given willingly her brain to be picked alive with vilest instruments to a person with the heart of gold, but what frightened her most was that this intrusion would be performed by people representing cold and soulless medicine of the modern day. This is, now I know, why she trembled as she was heading to the operating table and waving a goodbye from an imaginary ocean shore to me in a dream. Hence, when delirious Karin in Ingmar Bergman's *Through a Glass Darkly* stands by the door, expecting God to come through it, but instead sees in the corner of her eye a medical emergency helicopter descending onto the island and, as if in a dream, says that she had seen "a spider with cold eyes" instead, she may have hinted at the form that the modern medicine has largely taken in its playing God and interfering with the human lives in ways that unknowingly harm their divine spirits, let alone downrightly erase them from its portrayals of life. This may be one of many reasons, alongside the fact that biotech companies of the day are in it for the generation of intellectual property, not freely sharable knowledge for the benefit of humanity, why Paul Schimmel of Cubist Pharmaceuticals, at a talk I came across at an American Chemical Society meeting in 2021¹⁴⁸, recognized that current times would be known as the Dark Age of Biopharma on a distant future day. Eleven years earlier, as I sat at a medical conference in Seattle, Washington, listening to a rarely honest lecturer asking the audience "if we are making things better or just howling at the moon", a stream of thoughts was sparked and began to glide like a comet across the starry sky of my mind. The tail of this comet tickled my brain with the idea that in a healthcare system where physicians and other medical practitioners are paid per service provided, proliferation of diseases can be the only expected outcome, unlike in a hypothetical system where doctors would be rewarded proportionally to the ratio between the healthy population and the population needing their services. Yet, for as long as medics treat their patients with the understanding that the more time they treat them and the more expensive the treatments, the more financial rewards they and/or their institutions will earn in the process, it is a colossal conflict of interest that should not go by unnoticed. If this train of thought is followed further, it would become crystal clear that most medical scientists would be, regrettably, intrinsically glad upon discovering new diseases or learning about the spreads of existing diseases, despite the fact that this would imply their obviously going against the core ethical purpose of their profession, and it is exactly what Tezuka described in the storyline of his ode. Indeed, if you are a medical doctor or a biomedical researcher, monitor closely the trains of the background thought next time when you work on a presentation describing the reasons for your research because more often than not upon mentioning the percentage of people stricken by the disease that your work is meant to find a solution for, these trains will whistle the wicked hope that statistics be in favor of the disease rather than against it, all so as to signify to others the importance of your work, while disregarding that the ideal scenario would be having no one stricken by it, having no reason to study it anymore and, thus, having no reason to keep one employed to carry out the research in question and be funded for it. Rare like diamond in the dust are, therefore, medical researchers who, like myself, work on exploring new antimicrobial therapies and who - being in a desperate hunt for funding, on whose tiny threads their careers and the wellbeings of their families hang - would not rub hands in satisfaction and release a silent Yeah under their breath upon hearing of today's continuous rise of the populations of pathogens resistant to even the strongest antibiotics, without realizing how

¹⁴⁸ Paul Schimmel's talk titled *Chemistry if Entrepreneurship for Developing New Medicines* was presented within the Division of Biological Chemistry symposium at the 2021 American Chemical Society National meeting (April 5, 2021).

intrinsically unethical the taking of one such stance is. Most biomedical researchers, similarly, would not meet with genuine glee the news of their fellow scientists' developing fantastic therapeutic platforms, in spite of the fact that medicine and its potential to heal the suffering souls are improved thereby, but rather with envy and burdensome thoughts, regretting deep inside that they, themselves, were not the first to arrive at those very applicative products or basic findings. If someone posed a question to the deepest concentric circles of their psyches whether they would prefer to have the illness that is the subject of their research eradicated in the blink of an eye or to by lucky enough to arrive at a groundbreaking finding and be praised for it and looked upon with envy by peers, it would not take much deliberation in their brains before their consciousness would begin to blink with the latter choice. Moreover, if you have ever wondered why the research motivated by finding ways to treat an illness is favored over the one aimed at figuring out the mechanisms and origins of disease, it is, of course, because healing the diseased rewards the ego of the healer more than preventing the disease and remaining in the social shadows for the rest of one's life does. To point out a problem, even at the cost of artificially creating it, and then solve it so as to earn the social credit is thus a routine medical method of choice, albeit of an immense ethical faultiness. In a similar manner, it is the deeply subconscious tendency of many thinkers to secretly wish for the fault in reality, social or physical, that they have noticed and pointed at in their ideas to remain uncorrected just so that they could be praised for these findings, irrespective of how damaging for the world this fault may be. "What would you be doing without sin", Charlie Chaplin asks a priest in his movie *Monsieur Verdoux*, hinting at the necessity of the existence of problems that one is busy solving for one's problem-solving profession to keep on thriving, being the state of affairs that offers as much room for exhibitions of hypocrisy as the sky is wide. Many are thus moralists that preach about our obligations to be virtuous and stay away from various vices, and are perfectly happy doing this, while somehow failing to realize that their happiness is supported exactly by those vices that they are so heavily criticizing, which, after all, makes it a vice of a kind, inviting us to recall the many millennia old words of Lao-Tzu: "When the great Tao was left, (the doctrines of) 'humaneness' and 'justice' arrived... Renounce 'humaneness', get rid of 'justice', and people will return to the love of sons and the gentleness of fathers" (Tao-Te-Xing 18...19). Indeed, the history pervaded with innumerable leaders that have in one way or the other made their adherents weak in order to effectively exhibit the power of their rule, from the Church authorities depicted in the story about the Grand Inquisitor, making the religious devotees appear sinful to themselves and thus prone to manipulation, to national security agencies introducing drugs to revolutionary students to keep them pliable and controllable, the strategy first applied in the wake of the protests of 1968, to many political governances that have culturally degraded their populaces to keep them dull and uninformed, to brainwash and bleach their minds and "reprogram them, from the thought to the act, from the act to the habit, from the habit to the destiny, until a perfect standard of a man after a foreign model is obtained, a mediocrity under hammer, with neither a flaw nor a danger for the elite"¹⁴⁹, has been incessantly repeating itself. Aside from the rulers who intentionally suppress the ruled ones so as to enjoy in the merits of their power, many are also benefactors who are not aware that they discreetly long for the causes of affliction to remain present in their worlds so that they could keep on providing support for the afflicted ones and sustain their feelings of humaneness, while leaving out of sight the fact that the best possible world would be the one where the humanitarian aids altogether with the reasons behind them vanished, dragging the benefactors too into oblivion. Today, thus, from my hometown to the

¹⁴⁹ See the definition of Etičko čiščenje (Ethic cleansing) on Vukajlija by ŠKODILLAC (October 22, 2021), retrieved from <https://vukajlija.com/eticko-ciscenje/747031>.

farthest corners of the globe, countless leaders of human rights organizations flaunt their glossy looks with greenbacks spilling out of their pockets and rub hands excitedly upon hearing of the breaking of the very same rights that they publicly defend, knowing that it means even more financial support for their dodgy endeavors, exemplifying the ill of hypocrisy that has plagued humanity ever since its earliest days. Yet, if we ever find ourselves in one such state of mind, where the merits of our professional reputation and prestige have become more important than the core purpose of these very professions, that is, truly healing the world, we should know that the dark auras of selfishly seeking for fame have eclipsed the bright and altruistic sun of our true love and care for the world, which is the only one that may give a brilliant luster to the radiance of our spirits. Without it, we would resemble yet another one of imaginatively dead people that I have seen presenting at this and many other medical and scientific meetings, with no passion in their eyes, words and gestures, resembling dehumanized machines more than lively and enchanting human spirits that yearn to be as inspiring and creative in the eyes of the world as they could be. As I sat in this ultramodern space surrounded by these abysmal robots in whose hearts the sprouts of heartwarming creativity withered long ago, the words of a bearded guru dressed all in white and walking along the shores of southern California¹⁵⁰ strangely began to echo in my head: “Dear Joyce. It’s not in there. There’s nothing to find in there. There are no people there, only machines - dishwashing machines, television machines being watched by people machines. We have left the machine. And by so doing, we are opting for survival. Flower in the crannied wall, I pluck you out of the crannies. I hold you here, root and all, in my hand, little flower”. “We think too much and feel too little. More than machinery we need humanity.... Don’t give yourselves to these unnatural men - machine men with machine minds and machine hearts! You are not machines!” were the next lines that began to throb in my head, all to the thunderous sound of the voice of the Little Tramp disguised as the Great Dictator, bringing to mind the array of machinelike busts in Konrad Klapheck’s painting symbolically titled War, evoking alongside the crucial message of Fritz Lang’s Metropolis, which is that, the coolness of the Taoist man who despised the machine aside¹⁵¹, the machines that ought to be dismantled are not those around us, but those within us, the machines that force us to behave in cold, mechanistic, emotionless, calculative ways and deprive us of the childlike naturalness, joviality, sensitivity, indeterminism and liveliness of the spirit. For, indeed, like a frog cooking itself alive in a pan heated very slowly, the world wherein scientists, artists and medical practitioners used to disseminate sensibility, understanding and deep feeling with their words and works, all the things that the robots do not have, quietly transformed over time into the one envisaged by a Norwegian philosopher of whom Andre Gregory talked¹⁵², a world as a prison in which inmates are guards too, spontaneously imprisoning themselves through myriads of stifling feedback loops, a world wherein popular science and arts, as well as their noble child called medicine, now serve the purpose of spreading robotic coldness, insensitivity and self-absorption to which the empathic connectedness with another, along with the spirit of poetry emanating from it, are as foreign and prohibited as they were to the denizens of Alphaville. Upon the arrival at the vision of this forbidden city along the crooked alleyways of my musings, I found myself ecstatically vowing always to wear the stellar energy of Yoshimi, a girl determined to

“defeat those evil-natured robots programmed to destroy us”¹⁵³, like a stamp across my bare, transparent chests and, like all the Luddites before and after me, declare a perpetual war against the life-sucking monsters of the modern age who have multiplied like gremlins around me, serving the wishes of their demeaning authorities and not the divine voices calling desperately for the displays of self-sacrificial goodness from some distant shores along the edges of our soul. And whenever I notice such signs of socially awkward acting that tends to conform oneself to the authorities of the world first and foremost rather than live in full blast of the enlightening desire to save the world, I know that I have found myself face-to-face with the malign obsession with one’s self that has spread like a mental and spiritual plague across the cultural landscape of the modern society. It is no secret then that boosting one’s ego and reputation possesses a higher place on the list of priorities of most medical scientists than the sacred “living it for the world” and compassionately sharing the suffering with their patients, sending all the angels that guard one in prayer to help those in need thereof. The tendency for medical doctors to guard the gate, so to say, and maintain their honorary statuses, prestigious positions and exorbitant salaries by acting in self-centered, defensive and territorial manners can thus be seen as indicative of their intrinsic going against the stream of truly ethical acting. Hence, when Sarah Kay jokingly asks why the scarecrow was invited to a TED talk, adding that it must be because “he was out standing in his field”¹⁵⁴, she subtly insinuates the self-protective stances of most authorities in this world. Their aim is not to wholeheartedly welcome the enthusiastically flying spirits around them with open hands and grains of wisdom, but to instill fear in them and make them fly away as far as possible. In contrast, as if guided by the age-old Serbian proverb that “the dog cannot be smarter than its owner”, they would surround themselves with embodiments of sheer mediocrity, thus contributing to the spiraling of the profession downwards, into an ever deeper mud, and attesting to how ego makes all things around it worse, not better, when given the power to influence the world. One such inclination to shut the gate before the extraordinary thinkers and open it for the second-rate sycophants to enter the system is a huge reason for the sad state that the modern biomedical universe finds itself currently in. For, deep behind the veil of this territoriality are concealed nothing but the dark moons of egotism that have eclipsed the shine of selfless devotion to healing the fellow humans. Now, solemn authority can create some positive effects too, as when it instills a sense of stability and confidence in patients who have turned to medical institutions for help, but this imposing authority in the medical realm, stiff like an icy tower, has deteriorated, unfortunately, into a stance of sheer pretense and pride, serving to protect artificially the practitioner against the voices questioning his ingenuity and relevance in the world. A lightest poke around the challenges plaguing the medical profession and the failure of medical professionals to solve them can thus yield a big bounce back and bite at the curious questioner, if not a cold stare that questions the latter’s sanity. And yet, when the world is such that the improvement in the median survival of people with glioblastoma multiforme, the disease that tied my mom to the helm of a ship that sailed to the Great Beyond, has been by mere 2.5 months over the last century despite the introduction of radiation and chemotherapy, alongside ever more precise surgical resections¹⁵⁵, then every medical practitioner under the sun should stay covered, like a rabbit, with its ears, as the Serbian

saying goes, and think day and night of failures at each and every level of his profession through the present and past that have led to this depressing state of affairs, where the doctor has become more of a machine in the hands of a giant enterprise than an all-around healer of human bodies and souls. Concordantly, at another place in Tezuka's ode to failed promises of medicine, Kirihito cries over his inability to heal a dying child in a desert: "What good am I, a doctor? Without medicine and equipment, I'm just a powerless human being. I can't do anything! If only doctors were like Christ with the power to revive the dead just by touching them. Or to heal the sick... We doddle a dozen years in school and still depend on medicine and equipment to do our jobs. We even charge people money, with no guarantee that they'll get better! Doctors are useless! Human garbage!"¹⁵⁶ The rest of Kirihito's journey dealt with his attempts to uncover the heart of dishonesty that beats at the center of the medicinal world, while facing his enemies greedily and selfishly embracing their ideas, forgetting what the core purpose of medical approach should be, as outlined in the Hippocratic Oath: "In every house where I come I will enter only for the good of my patients, keeping myself far from all intentional ill-doing"¹⁵⁷. However, it seems that the easiness with which the letters in the word "Hippocrates" could tumble out into "hypocrites" is no far from that with which medicinal hearts can hop from the elevated grounds of sublime, Hippocratic ethics to the spiritually muddled soil of the ills of hypocrisy where commitments in words would still be present in our minds, but their semantic trains travelling to the core of our hearts would be systematically cut off and sent to abysses of greed and selfishness. And yet, as stated by Boris Pasternak's Doctor Zhivago, "Your health is bound to be affected if, day after day, you say the opposite of what you feel, if you grovel before what you dislike"¹⁵⁸, prompting us to understand that hypocrisies as systematic and deeply rooted insincerities to oneself and others are the roots of many, if not all, illnesses that strike humanity and urging us to ask if the very medical practitioners of the modern day, obviously suffering from the ills of hypocrisy to an enormous extent, are equipped with the right knowledge, the healing glow of aspirations and the purity of heart to heal their patients. What remains left to a chaste and ethically sublime being in this world, deeply saddened by this state of affairs whereby those who present themselves as guardians of people's wellbeing and health are mostly standing as guardians of the gates through which poor souls of the world try to pass, is nothing but to occasionally cry the ancient biblical message from the top of one's lungs: "Healer, heal thyself!" (Luke 4:23). Verily, after spending a large portion of my research time in a medical institution, I got used to seeing people protecting their own ideas and wishing that others working on the same topics (apparently aimed to benefit the human health) lack success in their endeavors, just so that they would be the first ones to come to certain discoveries. Such a way of thinking where "being scooped" is seen as the greatest threat has always been sickening to me; for, working in hospital, on projects that may bring amelioration to millions of ill people of the world, requires some selfless peace of mind, a unity with the whole world and passionate eagerness, that is, a complete focus and dedication, both emotional and intellectual. Without the latter, the eventual discoveries we may come across on our research paths are predestined to be scarce. Yet, bunches of self-defensive and insecure people, fortressing themselves around their expensive suits, a pretentious sense of prestige and phony loftiness, resembling a herd of cerebral animals, each one preoccupied with protecting its own territory rather than living surrounded by the spirit of sharing, true love and communion, all spiced up with a blasting desire to arrive at discoveries that will save the world – that is what most meetings I have

attended at the UCSF Medical School looked like to me, urging me to recall the famous verses of the R.E.M.'s song Ignoreland over and over again: "Defense, defense"¹⁵⁹. That power tends to corrupt is no secret, but what the UCSF Dental School at which I worked for three years appeared to me was a decadent live experiment that evidences to what degree greed and selfishness take over moderately broad human intellects when they are placed in an environment that boosts their sense of being academically renowned and prestigious. Innumerable instances of self-centered behavior and acts whose purposeful ends I could not see as altruistic and benevolent by any means used to strike me on daily basis during my stay in this school. When Marcia stopped by the break room next to my dental school lab and mumbled how "we have to keep the business going" while pointing at a pile of candies resting on the conference table, she joked and yet she unconsciously depicted the essence of the modern medicinal world: keeping the patients dependent on expensive medicines and therapies instead of acting preventively and tackling not the symptoms, but the roots of the disease which, in my opinion, most frequently rest in one's mind. For, "a healthy man cannot get sick", as my Mom told me once, pointing implicitly and very wisely at health as a notion that encompasses more than just the physical health and includes the mental, the emotional and the spiritual one as well. Yet, "if you do prevention, someone is going to lose money"¹⁶⁰, as pointed out by the organic gardener and physical therapist from New York City, Karen Washington in the context of her explaining the trend of fast food restaurants and drugstores popping up next to each other on almost every corner in America as the mirror image of the corrupted state of today's healthcare industry where "billions more are spent on treatment than prevention"¹⁶¹. It is more rewarding for the ego to jump into a lake and save a drowning child than to coordinate an effort to build a protective fence around the lake, for which no one would be declaimed a hero, and this is exactly the state of affairs in which the medical world finds itself today, wanting to appear as a hero and feed the ego more than to truly solve the roots of diseases striking humanity because that would require magnificent preventative approaches and be wholly unrecognized by the community. It goes without saying that in an ideal world, this would, if performed flawlessly, release the doctors from their duties, as they would not be needed anymore in a world freed from any ailments. After all, as one of the world's best soccer defenders of all time, Paolo Maldini used to say, "If I have to make a tackle, then I have already made a mistake"¹⁶², given that slide tackles are indisputable displays of skill and may be attractive to the spectators, but they are the products of defensive errors in the prior course of the game, without which there would be no need for tackles at all. Likewise, lifesaving medical treatments may bring about cheers and applauses and glories and accolades, but, deep down, they are the signs that medicine has done something wrong beforehand. Hence, although the dental science department at UCSF at which I worked had words "preventive" and "restorative" placed side by side in its name, one would have a hard time trying to pinpoint any preventive aspects in the clinical and research approaches pursued under its auspices. According to friendly sources, I have also known about the widespread resistance to any efforts to change this adverse state of affairs by broadening the preventive outlook of the medical practice among the old guard, the members of which would blatantly cite endangered financial profits as the reason. And, as it usually happens in life, hypocritical attitudes of these sham

physicians, who first spur the development of an illness among patients and only then step up and pose themselves as their healers, become justified by nothing other than pure greed, which comes as no surprise to anyone knowing that the two practically always stand in each other's heart like the white and the black of Tai-Chi-Tu emblem. Moreover, many times during the meetings at which potentials of specific medical concepts and products were discussed, ideas on strategically supporting the so-called one-shot medications, which are applied on the patients only once, without the need of renewing the treatment, something which probably appears as an ideal solution in the eyes of a chaste idealist, would be intercepted with skeptical questions as to how the biomedical and pharmaceutical companies are supposed to financially benefit from such products, that is, without making the patients dependent on the therapeutics, something that can appear as logical and desirable only in the eyes of greedy and ravenous harpies and other ethical monsters of this world. Just as every authority is aware that its powers are strengthened in direct proportion to the extent to which the subservient forces are thought to see themselves as weak and in need of external guidance, so do doctors quite often take advantage of this elemental nature of our sociological realities and opt for not even trying to heal the patients for good, but rather try their best to convince them how helpless and how badly they are in need of the assistance from the machinery of the modern medicine which these doctors represent. This self-glorifying nature of the spurious lifesaving business that medicine has grown into may be the reason why Black Orpheus first visited a medical institution, before he made his way to a bureaucratic legislature and then a church, during the modern version of the Orphean descent into the underworld¹⁶³, as well as why Blaise Pascal ended his *Pensées*, the shadow of whose spirit this work attempts to emulate, with the following line: "Thus they will be doubly guilty; for having followed paths they should not have followed, and for listening to doctors to whom they should not have listened"¹⁶⁴. Hence, in my world, the only ethical way of being a doctor or a medical researcher is to aim towards annihilation of one's own profession. For as long as the working opportunities in this branch are thriving and the number of drugs on the market multiplying, it can only be an indication that the illnesses of humanity increase in parallel. This trend applies particularly well to the universe of mental health disorders, in a sense that the increase in the number of available pharmacotherapies for each condition has only worsened the mental health of the population¹⁶⁵. This paradoxical multiplication of issues when the methods for tackling these issues multiply – which we see at work when we realize that the more drugs in use, the sicker the humans – is, of course, an overarching principle governing the evolution of humanity. Among a myriad possible examples, one that I can think of is the fact that the more we have come to know about what constitutes eco-friendly choices and actions, the less sustainable the consumption habits of humanity have become. And each time an artificial boundary is imposed to redirect and curb the misaligned and disarrayed natural streams and the only thing it produces is an even greater mess, we could go back to and be quietly reminded of the ancient Lao-Tzu's thought, "The greater the number of laws, the greater the number of thieves and bandits" (Tao-Te-Xing LVII), or the one by St. Paul the Apostle: "The law entered, that the offence might abound; but where sin abounded, grace did much more abound" (Romans 5:21). Hence, when the infamous juvenile detention center a.k.a. PA Child Care was built and opened in 2003 in northeastern Pennsylvania, leading to a multifold increase in the number of juvenile delinquents in its county, most of whom ended up being imprisoned in this facility, it only serves as a crude

illustration of this point according to which it matters not whether we implement more laws or instigate more unlawful acts, for in both cases their numbers are going to soar. In fact, as a simple study of the social effects of the American juridical system could instruct us, the more strict and suffocating the laws and punishments for its overstepping are, the greater the divide between human spirits and the thinner the ties of cordial friendship become, contrary to what common sense may suggest, leading to a more illicit society, when anarchist, judgeless social settings would be the way to impel people to turn to each other in love and respect, become truly morally superior, through an individual choice rather through external pressure, and give rise to a harmonious social order thereby. Although America can take pride in being a world champ in the number of laws imposed on its citizens, it can be equally ashamed of being a world record holder in the number of incarcerated people per capita, which has quadrupled in the last thirty years¹⁶⁶, suggesting that as laws multiply, the number of lawbreakers will increase too. As for the world of medicine, a brief look at the independency of life expectancy on expenditures on health care in various countries of the world¹⁶⁷ and particularly the US, in which case the unprecedentedly large investments have had a rather inverse effect on life expectancy¹⁶⁸, shows us that more pharmaceuticals does not directly relate to healthier population. The citizens of the United States clearly exemplify this: with around 70 % of them consuming prescription drugs, they are the most medicated nation on Earth, and yet the health outcomes in this most expensive healthcare system of them all are worse than in most industrialized countries¹⁶⁹. In a world where proving to authorities that one has performed one's tasks through prescribing a drug therapy is prioritized among the medical practitioners over truly healing the patient, unnecessary therapies, be they pharmacological, surgical, physical or psychological, abound and outnumber those relying on the body's self-healing capacities, leaving a deep trail of adverse side effects in its wake. The result of this is devastating: prescription drugs today classify as the third leading cause of death after heart disease and cancer¹⁷⁰. This is why I heartily boycott the products of the modern medicine and the pharmaceutical industry, from antibiotics to aspirin, and am, to knock on wood, the pages of this book, quite healthy, firmly believing that for as long as we are driven to tell an enlightening story to the world, to build the great roads of salvation for many souls in this world, all the parasites and viruses of this world, all the stumbling blocks and tumbling rocks will be subdued to our celestial path and used to make our beings even stronger. The true guardians and healers are, therefore, not those who tend to keep the souls held in their hands forever and ever in such disempowered and dependent positions, but those that infuse enough revitalizing strength in them so that they could let go of their guardians with a restored vitality that sparkles with shiny feelings of self-confidence and independence. The real guardians are those that let birds that they helped to heal fly freely towards the blue skies instead of keeping them confined in a cage, knowing deep in their heart that ships are useful only insofar as they are let freely sail towards the open seas rather than be forced to stay bound to the

¹⁷⁰ *Ibid.*

rusty shipyards. If we remember that “independence of mind is one sure mark of the romantic”¹⁷¹, we ought to know that with such fosterage of independent thought magnificent spirits are crafted, such that they may shine through the ages with imaginativeness, with visionary idealism, with divine intuition, with fantastic unreason, with puerilely volatile disposition, with opposition to convention and with everything else that the hallmark of romanticism *bona fide* is. In that sense, these true guardians, teachers and healers of human spirits are akin to Aladdin who selflessly decides his last wish for Genie in the lamp to be the release of Genie to freedom rather than making Aladdin a prince again. In acting so, they openly go against their own doctrine or profession, to everyone’s amazement, and yet make their teaching thoroughly pervade every aspect of the world, which then becomes unneeded to the world anymore, leaving the healer to laugh from the shade at its own accomplishments, somewhat like the Sun or the very God, the subtle creator of this world, while not craving for any rewards or recognitions, as in accordance with Lao-Tzu’s words: “The sage gives life to it all, but does not claim any as his own; works, but does not possess; perfects, but asks for no recognition. Because he asks for no recognition, the recognition could not be taken from him” (Tao-Te-Xing 2). Thus we come to the understanding of the motto with which Henry David Thoreau opened his aforementioned treatise in a wonderful light, wherein unbinding love that spurs creative independence rather than tying one down in the shackles of submissive neediness is highlighted: “That government is best which governs least”¹⁷². Yet, for as long as the darkness of egotism eclipses the altruistic sunshine of our spirits, law judges, army commanders and sporting referees would prefer having a world unlawful, destructive and undisciplined, but in which their jobs and fortunes and fames that they bring thereto would thrive rather than working towards eradication of these ills of humanity and their professions at the same time. Most scientists would, I believe, prefer living in a world that would be underdeveloped with respect to its immense scientific and technological potentials, but in which they would be admired for being rare intellectual diamonds in the dust, be it PhDs or professors emeriti, rather than a world in which they would be considered as averagely accomplished professionals, but which would be in full scientific and technological bloom. Likewise, the world we live in is overcrowded with teachers and instructors that would prefer a society deprived of the knowledge they possess and profess, but in which they are highly esteemed, over the one in which their teaching mission would be fulfilled, which would be lastingly enriched with their knowledge and in which the need for themselves would have vanished, altogether with their prominence. Like Monsanto’s genetically engineered crops that produce infertile, so-called terminator seeds so as to oblige the farmers to regularly renew their supply of fresh seeds or plants by repurchasing them from this hellish company and like McAfee and many other, less legitimate antivirus-software-producing corporations that direct their ads to pop up on our displays uninvited, pretending to be the caretaker for our computer while presenting malign spyware *per se*, requiring annual payments of dues to protect the users from malicious threats on the internet, real or imaginary, so do false prophets and teachers aim to render their adherents addicted to and helplessly dependent on their governance rather than empowered and independent, as the supreme teachers, always looking for the ways to diminish their own powers on the account of igniting their Olympic flames in others, do. Yet, the true ethical choice always lies on the latter shore, inhabited by preachers aware that dissolving the church as an institution of authority and making the world itself a church and every detail in it a

timeless prayer to the beauty of life would be the final step of their preaching endeavors, and other genuine anarchists devoted to taking down the crowns of authority that they have been endowed with and placing them on other people's heads, while remaining faithful to the spirit of the Christ and aesthetics of humbleness and poverty he had advocated. Humanity, however, has a long way to go before it becomes pervasive with mindsets that would see blowing the whistle, exerting the powers of one's authority and thus raising the value of one's ego in other people's eyes as less satisfactory than being gleeful in face of the very thought of sitting aside while a world perfect and in no need of someone to control and regulate it has arisen and peacefully spins along its orbit. In a world that fulfilled the mission for medical scientists, they would likewise cease to exist, as there would be clearly no purpose of sustaining the medical enterprise if all the illnesses in the world were eradicated. In general, to highlight the necessity of pushing one's supporters away so as to ensure the independence of their paths as the crown of one's teaching approach, André Gide urged his imaginary friend, Nathanael, to "throw away this book, get rid of it and never be satisfied with it... do not think that someone else could find your truth; beware of this more than of anything else"¹⁷³. John Lennon struck the same point when in the final verse of the Beatles' Sgt. Pepper's Lonely Hearts Club Band, one of the most innovative records of its times, he sang how "now they know how many holes it takes to fill the Albert Hall"¹⁷⁴, criticizing the blind followers and supporters of his and secretly telling them how they should think with their own heads instead and strive to become sources of original and unique emanations of some similarly divine and never foreseen creativity on Earth. I am sure that Cane from Partibrejkers had the same point in mind when he responded to a couple of fans who came to the backstage after his band's concert in Jagodina to ask for a photo and an autograph by saying, "Sure, guys, no problem, but be aware that you haven't achieved anything awesome in your life with this"¹⁷⁵, as if to tell them and the world that great acts arise from the freedom from the ties of idolatry and conformity to any authorities, be they people, principles or any other patterns adorning the yarn of our mental spheres. Neither were Johnny Rotten and his yelling angrily into the microphone, first berating people for "being stupid enough to stay through this shit"¹⁷⁶, then "hissing insult after insult at the audience"¹⁷⁷ and finally topping it all with telling the crowd of how "blind acceptance is a sign of stupid fools who stand in line"¹⁷⁸ to buy their record, far from pointing in the direction of the necessity of casting aside the idea of being a faithful follower that unquestioningly absorbs whatever is being delivered to him via the worldly channels. And just like the Sex Pistols implicitly disparaged the band's own signing a deal with the corporate moneymaking machine of a big record company in this final song of their debut album¹⁷⁹, Joe Strummer announced the record company's "complete control, even over this song"¹⁸⁰ in a song released by the very same record company as a part of his own debut as a member of the Clash, cutting off the branch on which he was sitting

thereby in a self-destructive act that constitutes a prerequisite for exhibitions of stellar ethicality. Next in the lineup of British pop stars who mocked the production and marketing sides of their relationships with audiences is Morrissey, who opened a song from the final record by the Smith by singing, “At the record company meeting, on their hands a dead star, and oh, the plans they weave, and oh, the sickening greed”¹⁸¹, raising a grand cross in my mind, a wonder over how one must harness these external powers to reach out to people and conquer the world, while at the same time one must abhor them and their moneymaking schemes deeply, lest the purity of one’s soul be stained and the creative output marred. By the time the Stone Roses came around, a band that notably built its fame brick by brick, each of which was an instance of spitting on “the fat blokes in pin striped suits”¹⁸² that epitomized the music industry supporting them, moguls of this industry in the postpunk era already learned how to laughably accept the profits that this approach to fame brought them and went on to unrestrictedly televise and even masochistically advertise these slaps in their face, visualizing coins trickling into their coffers as a form of meditation. Still, the message calling for the fans to stop idolizing the pop stars and seek starriness inside themselves, drawing an equation sign between the cravings for adoration and devilishness¹⁸³, was always present in the band’s public appearances; it proved its timeless relevance by extending beyond the band’s lifetime and becoming a central point of the lead guitarist’s, John Squire’s subsequent visual artwork and of Ian Brown’s debut solo performance at Top of the Pops in 1998, when he, with his “masterplan for How to Be the Last True Rock Star Freedom Fighter”¹⁸⁴, accompanied the “I’ll see you in my star” verse with tossing eggs onto his own image displayed on the screen amidst standing on the stage with an anti-star, square-faced expression à la Astrud Gilberto and no body sways or dancing movements whatsoever. Howard Beale’s appearing on the TV screen to declare in rapture that “TV is not the truth, TV is a God-damned amusement park, TV is a circus, a carnival, a traveling troupe of acrobats” and ask the viewers to “turn off the tube right now, in the middle of the sentence I’m speaking to you”¹⁸⁵, and starry-eyed Lelia’s announcing more daintily her dislike of movies in *Shadows*, John Cassavetes’ debut and perhaps the most influential and innovative American indie movie ever made, minutes after she declared that famous line, “I can’t get hurt if I’m myself”, served a similar purpose of dispelling the deadened procession of sheepish adherents and urging them instead to find their own authentic manner and niche of expression before it even formed behind the artist’s back. Of course, to shove one’s own supporters in such a strikingly direct manner requires one to step out of the self-centered limits of one’s own ego and think in truly selfless, altruistic manner. For John Lennon, as well as for Johnny Rotten, apparently, it was losing their fans and supporters and turning them into equal sources of creativity as they were that they equalized with the true triumph rather than making them addicted to the products of their own work and talents. Yet, the world today is such that it abounds with confused followers, flying like swarms of satellites around the egotistic, visionless and mystery-guarding Grand Inquisitors whose self-consumed minds march to the rhythm of the famous Dostoyevsky’s words: “With us all will be happy and will no more rebel nor destroy one another as under Thy freedom. Oh, we shall persuade them that they will only become free when they renounce their freedom to us and submit to us... we shall give them the quiet humble

happiness of weak creatures such as they are by nature... They will become timid and will look to us and huddle close to us in fear, as chicks to the hen. They will marvel at us and will be awestricken before us, and will be proud at our being so powerful and clever that we have been able to subdue such a turbulent flock of thousands of millions”¹⁸⁶. The world, in fact, some may say, has ever since been overpopulated by the measly spirits of grand inquisitors; everywhere we look, we could recognize fake guardians who pretend to protect the weak ones, those subservient to them on the hierarchical ladder, although in reality and deep in their hearts they merely guard their own positions and power in life. Yet, just like propagation of war leads to an incessant cycle of terror, animosity and *mêlée*, while only peace can yield peace and harmony, attempts to establish one’s dominance and governance over anything in life similarly lead to imbalances and disparities, and it is only leveling each other’s positions, elevating the afflicted ones by means of invigorating their own inner powers and humbling down those who have occupied eminent and prestigious positions, that may lead to lasting solutions to the world’s inequalities. This is why the only good king is a rebel, the one who understands that not loftily raising oneself above the rest of the world, but ceaselessly journeying downwards, turning the tables on oneself all until one becomes likened unto a sea into which the rivers of hearts of those who used to be way below him can flow again, is the right way. “It is no small and ordinary grief that possesses me for having been chosen, lowly as I am, to lead you who are most worthy; it is you, rather, who should have been my guides”¹⁸⁷, Symeon the New Theologian used to say to attendees of his sermons at the Monastery of St. Mammias in Constantinople and although this humble attitude that wittily reverses the role of the guided and the guide is so incredibly rare among teachers, guides or any other authorities in life today, most of whom are not antiauthoritarian enough to be laying their spirits down like the said seas wherein countless rivers of discomforted hearts could find solace, but rather crave to be seen as petite gods on earth, assuming the positions of lordly alps, rocky, rigged and freezing-cold, it is an absolute must if we wish the guiding stars we drop before other people’s feet to become seeds wherefrom the trees of divine life will sprout. Hence, I have always marveled upon the healing approach that tends to reverse the roles of a doctor, psychiatrist, guru, teacher and advice-giver on one side and a patient, disciple, pupil and advice-seeker on the other, respectively, knowing that for as long as patients are placed in the patient’s chairs and doctors sit in theirs, the sense of helplessness and weakness would be over and over again reinstalled in the former and the sense of spurious powerfulness would be reinforced in the latter. An aphasic patient thus recalled how much she appreciated when a nurse would leave her room, saying “You’ve made me feel better now that we’ve talked about it”, even on days when she, speechless as she usually was, would not utter a single word, as opposed to those who would issue directives with an unshaken certainty, while standing smart and looking down on her as if they were sharing space with the birds of paradise on the top of the world¹⁸⁸. With such humble acts that switch the roles of the healer and the patient, awareness is necessitated that the only truly beneficial teaching and healing methods are those wherein teachers wonder and are open to being taught and healers freely expose their human failings and allow their patients to show them the way to ameliorate them. These genuine healers, who do it all to transform helpless pawns into pivots reinvigorated with herculean willpowers, know that ailments are only reinforced by means of arrogant stances and can be cured only through sympathetically spread veils of ignorance. In such a way, rather than assuming authoritative

positions that will furthermore suppress the ailed souls, they lower their lofty views so as to share the rock bottoms of suffering with others and from there on elevate them to higher and healed grounds. For example, in Charlie Kaufman's *Synecdoche, New York*, the descending life path of the stage director, Caden Cotard, hits the rock bottom and begins to bounce back in a skyward manner only after he switches roles with the actress who played an elderly cleaning lady in the loft in which his former wife lived, giving away his role of an aspiring little god thereby and becoming a Faustian servant instead, continuing to make ends meet by scrubbing the toilet bowls for the rest of his life and, eventually, letting himself die, not accidentally at all, in the hands of an actress and a mother who had played a most minor of the roles in his magnum opus map of life that folded itself inside out and merged with the territory, like the writer and the written, the reader and the read, the thought and the lived through the synecdochic kaleidoscope that this very sentence is, having realized that his fate is in no way special and that it is shareable with every single creature on Earth, thus arriving at the glorious gate of One and fading away in its enlightening bliss. Then, in Charlie Chaplin's silent comedy that makes one laugh and cry at the same time like no other movie in the world, flushing one's heart with the angelic concoction of cosmic joy and compassionate sadness, *City Lights*, yet another movie wherein the heartrending and the comical are engaged in tight tango dancing with each other, the Little Tramp tries to solace the drunken millionaire who attempts to drown himself to no avail for as long as he verbally emphasizes that one should "be brave" and "face life", for "tomorrow the birds will be singing". The moment he jumps into the water, himself, however, the desperate rummy becomes impelled to help the Tramp and save his life. Returning to the pier, he exclaims, "I'm cured. You're my friend for life"; for, care for fragile creatures of the world has ever since presented the only road that leads to the horizons of heavenly health, happiness and true, otherworldly strength. Like the Notre Dame of Strasbourg holding a baby in her arms and supporting the gigantic cathedral that awe-inspiringly hovers over her, so could we sustain the whole world on our back not by stepping over others in our ambitious strivings to install our ego on top of it, but by devoting ourselves unconditionally to frail and elfin universes of life around us. For, as Alexander Pope put it in one of the final verses of the third epistle of his *Essay on Man*, perhaps after gazing long enough at an elm tree and a vine twining around it and not knowing anymore who is supporting whom in this great cycle of life wherein stable and sustainable tops are the bases of the bases that are also tops, "Man, like the gen'rous vine, supported lives; the strength he gains is from th' embrace he gives"¹⁸⁹. Consequently, imaginatively switching roles between the healer and the patient and inviting the patient to heal the healer is a most effective way to place the patient onto the healing path. "A little breeze between light flashes stirs up clouds of sand and foam and what surfaces ex abrupto is that I'm the muse and you the poet"¹⁹⁰, says Eugenio Montale in his final collection of poems and odes to "the idea of auto-demolition"¹⁹¹, self-denigration and self-desecration, like that with which in mind the most accomplished healers heal their patients. By means of this role reversal, one ceases to exhibit pretentious arrogance and begins to sow the signs of ignorance and humbleness, all mixed with great compassion, whereby a sense of self-responsibility for one's own wellbeing tends to be brought forth in others, awakening their healing powers from deep slumber. And all that

during this reverting act that neatly resembles Miss Wyoming's taking off her miss pageant crown and placing it on another's head, the metaphoric act which I, holding the ethics of Lao-Tzu's Tao-Te-Xing firmly anchored to my heart, have ever since been driven to do on all other daily occasions. For, just as Shakespeare's Henry V arrived at most indispensable insights about his kingdom and his kingship when, the night before the battle against the invaded French, he took off his crown, got dressed in regular clothes and mingled with the common workmen and warriors, so do we come across the most vital, lifesaving insights when we revoke the position of the power and align ourselves with the underlings. In the end, not only have genuine conversations been always picturesquely represented in my head by envisioning souls vigorously jumping into each other's shoes, but the more intense and cogent this exchange of stances is, the greater its potential to heal the ailing human hearts will be. Moreover, such an approach wherein the weak ones are subtly instructed to look deep into themselves and untie the knots of illnesses that reside within the core of their minds and hearts rather than being mechanically directed what to do and made dependent on the symptom-suppressing machinery of the modern medicine stands in accord with the very Christ's healing approach epitomized in his saying "For whether is easier to say, Thy sins be forgiven thee; or to say, Arise, and walk?" (Matthew 9:5). This very wish to empower another by cutting the cords of submissive dependence Richard Wagner put even in the heart of Wotan, the most supreme God overseeing the Earth, who lamented in the second scene of the Valkyrie over the fact that all human beings are subjected to His will and wondered how greater of a place the world would become had people detached themselves from Him. As the result of these aspirations, Wotan got engaged in a quest for a human, a hero as it were, who would not comply with His wishes, but be at deliberate odds therewith, for only such a man or woman, in His opinion, would be capable of fulfilling His mission. "How can I create a free man whom I have never shielded, who by defying me will be most dear to me", He mused out loudly in the Valkyrie. In that sense, the true aim of every profession should be not making people dependent on the products of one's creativity, but telling a story, giving an incentive, producing a shining guidance, teaching people how to fish instead of simply waiting for the fish to be delivered on their plates, and then heading one's own way, like a lonely cowboy does, proudly, with a mild happiness twinkling in his eye, clear-mindedly setting his foot towards some new horizons. Of course, not all preachers, tutors, psychiatrists and physicians intentionally make those temporarily subdued to them dependent on their teachings and treatments and thus consciously reinstate their own power in the eyes of those whom they would like to keep helpless rather than empowered. Many, if not most of them, wholeheartedly try their best to bring light to the worlds of their patients and disciples, without realizing that their success in this in most cases implicitly invites the patients to visit them over and over again, while occupying the very same patients' seats, having become addicted to their treatments rather than wholly healed. But what I call for is pushing the medical, psychiatric and all other healing treatments to a new level where the healers would work towards stomping over their own professions and eradicating them, diminishing their own professional relevancies and becoming servants rather than kings, which was notably the Christ's approach to saving the world, thus cutting the chains of dependence of their patients on their very healers for good. After all, a perfect implementation of any doctrine is to make it pervade the world in each and every one of its elements and aspects, and thus make the very doctrine disappear from the face of the world. Fidel Castro therefore envisaged a society in which universities would cease to exist because every segment of an everyday experience would be an educational one, but failed in implementing this utopian idea in reality. Expectedly, such an ideal of liberating society from the tyranny of schooling, as advocated by Ivan Illich, boldly claiming that "for most men the right to learn is

curtailed by the obligation to attend school”, goes along with the utilitarian thought that “the man who knows that nothing in demand is out of production soon expects that nothing produced can be out of demand”¹⁹². Should we not be reminded of the dangers of this thought every once in a while, we could transform into creative maniacs who demand from others to listen to and absorb all of the ideas that arise from their minds. Instead, we should learn the art of letting go, of not becoming attached to the fruits of our work, whatever they may be, letting them be offered to Gods and soar towards the sapphire skies above. “When you finish your work, no matter how great it is, retreat; that is the Heavenly way”, Lao-Tzu said (Tao-Te-Xing 9), laying out the essence of the sacred ethics. As R.E.M. instructed us, when “there is nothing left to throw - ginger, lemon, indigo, coriander stem and rose of hay”¹⁹³, the river of our mind spontaneously merges with the all-pervading ocean of divine spirit, the moment in which, lo, all has been relinquished and the boundaries of ego dissolved, yet, all of a sudden, “all of this is coming your way”¹⁹⁴; one has, in other words, become the world, all that there is, albeit nameless, egoless, with no burden of worldly attachments to drag along. Therefore, with the innocence of the child from the last of the mesmerizing panning shots from Kenji Mizoguchi’s *Ugetsu*, who gives away its only portion of food, a bowl of rice, to the altar of veneration of a spirit residing on a plane subtler than the physical, we should sever every last thread of the cord attaching us to material things in life and plunge unreservedly into the ocean of the everlasting spirit. If we do so, our lives will instantly receive a nuance of holy spiritedness, in each and every one of their aspects. Infinitely poor and, thereupon, immeasurably rich we will become in this strange reality wherein ascending to heavenly vistas of being is the privilege of strictly those who know how to fall beautifully.

S.F.0.12. I often think of the photograph of myself that I had stuck to my student ID card many years ago. A combination of resentment and determination to bring down the walls of dishonesty and crush the leechlike hypocrisies with the sunrays of my intellect, while bringing forth the light of unlimited love and truth through the rusty old foundations of the world, was shining from that face of mine. When I was a young lad, I openly refused to smile on any of the photographs taken of myself, believing that in the world filled with sadness, injustice and hypocrisy, only insensible creatures could afford shedding a smile or two in front of a camera. Like the boy portrayed on the cover of U2’s record *War* and on the black tee shirt I wore on me as I embarked on the ship that was to take me across the Adriatic Sea while the bombs were falling all around in those spring days of 1999, the year of the solar eclipse, it was a piercing glare, not a sunshiny smile, that I carried with me everywhere I went in my youth. This old I riding on a northbound train from Bari to Rome as a refugee, nesting hopes in his heart that the bombs shredding the buildings of his hometown like cardboard boxes that very moment would not hurt his loved ones, would be proud to know that out of 30 pupils on the annual photo of a first grade class 20 years later on the other side of the globe, his son would be the only one withdrawing a grin and holding a solemn and serious countenance. Walking down the Haight Street between Masonic and Stanyan, this old I would likewise counter the trite call of homeless hippies to smile¹⁹⁵ with a comment that smile is a commodity and a tool used by capitalism to conquer and consume the human soul, leaving but pulverized dust in its wake, so why smiling if one wishes to save the soul? A picture of the

¹⁹⁵ “Smile, hon, this is San Francisco”, one would often hear them say.

members of Radiohead on the back cover of *Kid A* stood firmly impressed in my mind, erected therein as a monument to the need to be somber and grave before the deluges of turpitude that blemish the human hearts and a reminder of how serious faces will induce feelings of sympathy in those who are fair, just and journey along the divine path. They will recognize a friendly focus and determination not to waste time on posing and beautifying oneself, but to run out and save the world; shimmery feelings of sympathetic recognition would thus be spurred underneath their breath. On the other hand, those who live selfishly and have strayed from delightful and selfless ways of being, I believed, would be horrified and poked thereupon, receiving a subtle reminder of the incorrectness and ill-naturedness of their stances in life. Everywhere and at all times I have thus vowed to live up to Finley Peter Dunne's motto: "I am in the business to comfort the afflicted and afflict the comfortable". Or, as Nina Simone formulated it with a lot more passion, "I want to go into that den with all those elegant people with their old ideas, smugness, and just drive them insane... I want to shake people up so bad that when they leave the nightclub where I performed, I just want them to be to pieces"¹⁹⁶. Hence, if you sit in a hot tub with a cigar in your mouth and arrogantly discuss the world politics thanks to keeping your boot pressed against some of God's children's necks, know that whatever I do will be aimed at sending the wintriest breezes straight through your bones, all to the melody of the opening song on *Kid A*¹⁹⁷, conceived to produce shivers in all those who have followed the wicked path and be a wakeup call once and for all. But if you count yourself among the world's afflicted, saddened and careworn, shaking like a willow tree because of holding a tremendous burden of suffering on your shoulders for the sake of elevating that greatest of all cosmic qualities, Love, know that whatever I do will send mysterious energies toward you to hug you, to kiss you, to solace you and to lull your troubled soul and show it a way toward godliness and salvation. When people around me demand action that makes everybody happy and calm, all I can think of are the final verses of Bob Dylan's *Tombstone Blues*, "I wish I could write you a melody so plain that could hold you, dear lady, from going insane, that could ease you and cool you and cease the pain of your useless and pointless knowledge"¹⁹⁸, before moving in the opposite direction and doing things similarly shocking as this very song sounded in 1965 when Dylan recorded it and presented to the world, displeasing the mediocre populace rather than conforming to the expectation and satisfying it. Thereby, I deliberately accepted the label of a rebel and troublemaker who would every now and then get into conflicts with the authorities of the world for reasons small or great. More or less every place I entered, I would exit the way the Gecko brothers exited the roadside store in *From Dusk till Dawn*, having set it aflame and let it burn behind their backs in a fire of life that awakens even the deadest of the dead, evoking that good old Serbian proverb: "Behind a good horse, the dust rises". Frequently reprimanded for such misbehavior of mine, I worried not, for I have known that *not* being at odds with the vulgar and hypocritical mainstream road that the majority of people have opted to follow would actually be a sign of ethical fallacies and true wrongdoing of mine. Wishing to "rather be remembered as a big-mouthed failure than an effete little wimp"¹⁹⁹, as Morrissey put it in 1984, and being in chronic dispute with the social *crème* has thus gradually become an integral part of my lifestyle, serving as a sign that I have followed the path of divine ethics rather than prompting me to penitently look back at my dissentient behavior. Once I was asked what the story of my life was and my response,

improvisatory as ever, became a reference to a day in the life of me as a student, when every emotion under the sun freely radiated from the hypersensitive core of my being, from anger to melancholy to elation to the ennui of saints: “I woke up this morning, got dressed and started stomping through the deep snow on the way to a colloquium at my college. When I got to the icy and windy trolley stop, the trolley was nowhere in sight. Whenever it arrived, however, after long waits, it would be packed like a can of sardines. And then, I, a young fellow, would feel embarrassed to get on it and would allow everyone else to get on the bus before me. So I ended up waiting and waiting, endlessly as it seemed, and my gloveless hands and feet covered by a pair of tattered all-stars shoes felt it, getting colder, stiffer and more painful with every passing moment. When a trolley with an empty place to stand finally came, it was very late and I did indeed arrive to the class late. As I opened the door to the classroom, the students were already seated with papers to analyze. I tried to take a seat, but was intercepted by the instructor who coldly ordered me to get out because I was being late. I tried to explain that there were traffic jams out and that getting to the school in time was near to impossible, but she was not eager to listen and stood by her decision to send me back home. As I left the room, I smashed the door so hard that the glass on it shattered into pieces. Later I was called into the dean’s office and practically kicked out of the university”. In other words, the story of my life is that I started off in it as infinitely innocent, a cordial and utterly pure soul, but the injustices I encountered on the daily basis turned me into an acerbic cactus, mistrusting the authority whatever the clothes it is dressed in, be they abstract or concrete, self-imposed or social. And so, having given myself a vow never to become a lukewarm hypocrite who would merely look after conforming to the opinions of the corrupted and spiritually corroded authorities of the world, I stepped on the path of honestly and sincerely celebrating and bowing my heart to the beautiful ones of this world who sacrifice themselves to elevate the earthlings dear to them to the stars, while slaying the dragons in this life in the spirit of my family saint, St. George, and stomping over the bugs, the ethically spoiled creatures, squashing them against the floor, as my Mom, the renegade of love, the guru of mine, has taught me to do. As she further instructed me in the authentic spirit of Orthodox Christianity in which she subtly and sublimely nurtured me, deep in the root of such a stern attitude, which would unfalteringly confront any exhibitions of injustice with gazes from which sunlight of truth and righteousness would radiate, ought to be the spirit of none other but congenial forgiveness, light and shiny, lest the burden of the constant conflict hurt the angelic wings of thy spirit and prevent its flights to the sphere of blissful feeling and thought. Even though I knew that with one such approach I would spontaneously generate armies of fierce enemies and opponents who would always try to place stumbling stones on my path, and only a handful of passionate supporters, as the life of the Christ could have shown to us, I trembled not in view of this lifelong decision of mine. For, the Christ was an angry young man who upturned the tables of usurious merchants in the house of God, treated common people with the guiding voice in which contempt and love were equally mixed, and declared himself the Son of God in an ultimate egocentric manner, my soul would cry back then. Moreover, just like babies need to cry in anger in order to develop their lungs and grow properly, so must there be a room for fury in our heart if we wish to develop our spirits into divine forms, I firmly believed in those days. Or, as Joe Strummer sang in the Clash’s Clampdown, “Let fury have the hour, anger can be the power”²⁰⁰, lest we lull our sprouting spirits into a lukewarm slumber, from which no outbursts of divine energies can ever ensue. Anger, in fact, as I hold firmly to this day, is a fire that can catalyze the healing of human bodies and souls, despite the fact that not very many healers recognize this emotion for its remedial potency, building their healing

²⁰⁰ Listen to the Clash’s Clampdown on London Calling, CBS (1979).

approaches instead around forcing their patients to be meek and humble²⁰¹, thus frequently preparing them for concession of their inner healing powers and the eventual forfeit to the disease fought against. Therefore, a holy healer in my eyes is not only the one who freely gives in to the flames of fury rising periodically within himself, but is also the one who folds his hands around the spirits taken over by the demons of ire and wrath, turning these caustic energies coming out of them into a power that spins the wheels of the alleviative locomotive toward horizons where healing would occur. And by ascribing to the Christ this endlessly versatile spectrum of natural human states of mind, presumably as broad as that typifying babies, who can go through four emotional seasons in a single minute or less, spanning from raging resentment to gentlest eruptions of love and grace to melancholy of the deep sea to meditative calmness of a glorious mountain peak, hiding a key therein as to how to develop rapidly into a more complex and potent form of life, my views of this divine creature clearly clashed with the standard depiction of him as infinitely blissful, benevolent and kind being, the image quite possibly designed by the Church, which in view of its ambitions of political dominion had a vested interest in it for the purpose of keeping the churchgoers and believers in a passive state of sheepishness rather than yielding the authentic Christ-like attitudes colored with superstar rebelliousness, as nonconformist, anarchist and troublemaking as they can be. The Beatles, after all, one of my favorite bands at the time, as I recognized back then, ceased to be a sweet teenage band and became unbearably depressed and angry in parallel as they were transitioning from a regular rock ‘n’ roll band to one that revolutionized pop music, which signaled to me the necessity of being mad at the world, as it were, in order to pull out the enlightening powers from my heart and spill them over this piteous world. Yet, after years of spontaneously complying with the social standards and norms, driven by the forces of empathy and ambitiousness, I have often wondered if something of that powerful directedness I exerted in my openly rebellious days, which was captured in this old photograph “on the dashboard”, has been lost. And so, every time I hear Belle & Sebastian nostalgically chanting verses that refer to Johnny Marr, the lead guitarist of the Smiths, “before he went Electronic”²⁰², I think of myself, a former lead guitarist of another band, before I entered the world of science indirectly related to electrical engineering. I think of “Johnny, Johnny, Ooh”²⁰³, the unsung hero from the song of Paddy McAloon, and of how I would “never make it up, or turn back the clock”²⁰⁴, as the jigsaw puzzle of memories breaks into pieces and these pieces begin to fly all over it, creating a bewildering scramble, just like the one I wished to create with my guitar playing style, which as I later found out, was the same as Johnny’s, “using the plectrum to pick his way back and forth across individual strings, creating a melody in the process rather than simply strumming chords”²⁰⁵, except with a lot lazier, tardier and more tired drag, as if wishing not just to color the beat with its sound, but also leave a melancholic trail, like that of an airplane in the sky, longing to go back and paint the phonics of everything, of the whole universe, with some infinite sadness that pled to come out of my heart. Together with the exhilarating splashy cymbals

²⁰¹ In light of this argument, I have often wondered if the noun ‘patient’ and the adjective ‘patient’ are only coincidentally the same or a profounder tie lurks behind.

²⁰² Listen to Belle & Sebastian’s Seymour Stein on Boy with The Arab Strap, Jeepster (1998).

²⁰³ Listen to Prefab Sprout’s Goodbye Lucille #1 on Steve McQueen, Kitchenware (1985).

²⁰⁴ *Ibid.*

²⁰⁵ See Tony Fletcher’s A Light that Never Goes Out: The Enduring Saga of the Smiths, Random House, New York, NY (2012), pp. 110. “So many people thrash on the guitar, but his wrist is moving really gently”, is how Bernard Butler, the lead guitarist of Suede, who was mesmerized by Marr’s playing technique as a teenager, described it (*Ibid.*, pp. 502), and it is exactly the way I played too, with a wrist almost fully set in place, the method which gave me a finer control over the dynamics of the sound in the stead of strumming the strings vehemently.

of Belle & Sebastian's song after its last line, "it's a good day for flying", accompanied by the sound of an airplane taking off a runway, my mind then becomes impelled to daydream of a person I was, "pensive and precocious, maudlin and mischievous"²⁰⁶, an adamant revolutionary that relentlessly bashed hypocrisies of the world and did everything to put the ideals of divine beauty on the laurelled pedestals of the world. Then, however, these nostalgic visions arisen in my introspective mind become suddenly swamped by the image of the new I, cunningly complying with the ethically and aesthetically wrecked world of grownups which I entered somewhere around the time this song was made, much more than the old I would have preferred to. Like Floyd, the Belgrade asphalt star, peeling oranges listlessly on a train in the final shot of *Nacionalna Klasa*, so did I some time after the turn of the 21st century begin to peel two little silvers²⁰⁷ at the strike of noon every day and slowly become likened unto a computer, "fitter, happier, more productive"²⁰⁸, prioritizing the creative output as a scientist, a musician, an orator and a writer over living unpredictably, on the edge of the night, the night which craves the light to be brought into, and seeing myself as but a machine "on a mission from god", as the Blues Brothers had it, subduing my body to a strict vegetarian diet and activity regiments for the sake of continuing to be a divine messenger on Earth, pure like a lotus flower, albeit complying with countless instances of corrupt behavior that otherwise I would have spitted on angrily in these long gone days of my rebellious youth. And so, living like this, day by day, made "the fire fade way" and "most of every day" became "full of dire excuses"²⁰⁹, to which end hypocritical kindness and considerateness prevailed over the raging honesty of expression, disenchanting the muses and goddesses that had walked every step of my life with me back then. Time after time I would find myself in the shoes of all those faded souls who respond to the worldly misfortunes and miseries with a sullen face, pouted lips and declaration of sorriness, but whose inward momentum to conceive of an action that would bring light back to the darkened world of the dejected and the depressed is nothing short of nil. I floated down the streams of convention, drawing phony smiles, dropping clichéd phrases and nodding head before those whose presence deserved nothing but despise and contention, and I knew that what I was doing was wrong. For, when I looked really deep into myself, I still saw the scrambled pieces of the face resembling Neneh Cherry as she stood on a city corner singing 7 Seconds. One such face has displayed anger and resentment, while simultaneously standing as a channel through which the Sun of love of one's spirit is sent outwardly. With the stars of wonder veneering the walls of our heart and mind, and the Sun of love standing firmly in the noon position, we are free to do whatever we want, to dazzle and embezzle equally with our acts. After all, who lives for saving the world has the right to break the law, knock over the tables on his way and kick around the starry edge of one's cowboy boots. He has the right to let the poetic waves of Psalm 137 travel through the space of his mind and, echoing the Happy Mondays' take on the anticolonial rage of African aborigines to the verse "don't you know he can make you forget you're the man"²¹⁰, begin to step on insects, kick banana leaves and tumble trashcans, as I often do during my evening neighborhood walks. "Maximize the benefits of your environment, be regular and orderly in your life, and then you can be violent, and original in your work"²¹¹, Gustave Flaubert advised,

reminding us that when we stand upon the foundations of love and intellectual devotion, we can engage in the wildest and the most rebellious dances of thought, and yet enlighten the world thereby. According to the Serbian filmmaker, Dušan Makavejev²¹², the cinematic masterpieces of Federico Fellini owe their greatness to his directing the actors and actresses by shouting and screaming at them during the very takes, the reason for which every scene had to be dubbed afterwards. Swami Vivekananda yelled at his disciples for meditating too much and doing nothing to save the world, but after storming down on them, an hour later, returned with the beautiful words of apology: “When you reach Bhakti, your heart and nerves become so fine and sensitive that you cannot stand even the touch of a flower. I try to hold the torrent of Bhakti within me, but I also try to shackle myself with the chains of Jnana, since my work dedicated to the motherland is not over nor my message to the world is fully uttered. So when I feel that Bhakti feelings are approaching, trying to break me down, I give them a strong blow and by accepting the rigorous Jnana I become as strong as a stone”. This story was, moreover, miraculously sent to me by my Mom, a divine messenger dove, right on the day when I heavily disparaged a judging panel of a Materials Research Society conference, regarding a selection of presentations that connected science and arts, with the following raging words: “If your judges think that introducing a ‘fancy schmancy’ effect in Photo Shop into micrographs is enough to make the images artistically appealing, they are deeply wrong... Art is about elevating human spirit, telling a story that enriches human sense of ethics and emotional depth and makes us better and wiser people. However, the view of art that you and your judges apparently have is sad and disappointing. It has nothing do to about the precious tradition of arts that humanity has struggled to convey through millennia. You and your shallow judges remain blind and ignorant to it”. Hence, like Swami Vivekananda’s nerves, mine have been thinned down too due to cultivation of graceful sensitivity in a world filled with wars, poverty and violence, and now it takes a slightest breeze of injustice to be sensed by them before they start to tremble and prompt me to react harshly, stunning the sources of this injustice by launching an immediate blitzkrieg of ire in their faces. If truth be told, oh so many times did I decompress my passionate head and heart in face of mainly authorities of the world that, as a consequence, many potentially fruitful collaborative ties, which the seeds of cunningness and profitability in me, though luckily fully eradicated from the soil of my spirit, would have certainly preserved via hypocritical head-nodding, became lastingly ruptured. Yet, I regret not for all these eruptions of rage from within my burning heart over the years; for, just as crying helps newborns strengthen the lungs as well as eject the amniotic fluid from this organ, alongside stomach and ears, so must innumerable benefits for our bodies and souls be tied to expressing the anger and discontent steaming inside us instead of keeping them concealed under the pressure of lukewarm ceremoniousness. Now that I think about it, such utility of free exhibitions of anger was wittily described in *Caps for Sale*, a children’s book from the late 1930s by the Russian-American abstract artist, Esphyr Slobodkina. In it, a peddler who sells caps in the countryside decides to take a nap under a tree, which is when a barrel of monkeys steals all his caps. As the peddler tries to convince politely the naughty monkeys to give him his caps back, all they do is mimic every word and gesture of his, mockingly, and only when the peddler tosses angrily his own hat onto the ground, the monkeys follow the suit and the peddler gets his caps back. Therefore, long time ago I gave myself a vow never to raise mental and behavioral dams that block the floods of feelings that traverse my whole being in tides; rather, like Neil Young who once stepped off the stage to pay a howling spectator the price of a ticket to his concert so that he could leave the venue and then,

²¹² See Roger Ebert’s *Two Weeks in the Midday Sun: A Cannes Notebook*, Andrews and McMeel, Kansas City, MO (1987), pp. 100.

when the band “was really rocking and everybody was going crazy”²¹³, asked for someone to go find the guy he ushered out and let him back in, you might see me screeching angrily at someone I’d rush to squeeze and smooch in sympathy minutes later. After all, what is the use of the name if one does not live up to its meaning, I thought, feeling to this day that it must be a sign of respect for my beloved parents to be as fractious and ruthless as my given name, meaning Wolf in my native language, would suggest. Particularly in the past I thus never hesitated to express myself in such ill-natured ways that surely seemed utterly hateful and disrespectful to armies of conventionalists around me. I knew, on one hand, that such instances of humanly imperfect acting were perfectly allowable to those determined to save the world deep in their hearts. These views, of course, distantly reflect the beliefs of Dostoyevsky’s Raskolnikov, which teleported my head onto a wholly new plane of grasping reality when I made myself familiar with them as a 16-year old boy: “There are certain persons who have a perfect right to commit breaches of morality and crimes, and the law is not for them... all great men or even men a little out of the common, that is to say capable of giving some new word, must from their very nature be criminals”²¹⁴. To that end, I have often compared the creatively expressing person to a hose from which water emerges fast and travels far and high; like hose, a person needs to limit the expressions to a single narrow opening and close all the other communication channels, then increase the pressure within oneself to the point of bursting and finally go with the flow, all for the sake of producing expressions with the fantastic momentum, focus and intensity. When one acts in such a manner, the changing moods inside one get rapidly and intensely spilled everywhere, echoing the way the Viennese novelist, Karoline Pichler portrayed the behavior of Wolfgang Amadeus Mozart, that classical epitome of creative personality in popular culture, subtly demonstrating what the behavioral secret to exhibitions of otherworldly creativity is, too: “One day, when I was sitting at the pianoforte playing the *Non più andrai* from *Figaro*, Mozart, who was paying a visit to us, came up behind me; I must have been playing it to his satisfaction, for he hummed the melody as I played and beat the time on my shoulders; but then suddenly he moved a chair up, sat down, told me to carry on playing the bass, and began to improvise such wonderfully beautiful variations that everyone listened to the tones of the German Orpheus with bated breath. But then he suddenly tired of it, jumped up, and, in the mad mood which so often came over him, he began to leap over tables and chairs, miaow like a cat, and turn somersaults like an unruly boy”²¹⁵. And if anyone objects to these outbursts of emotions, including profanities and shouts like the world has never heard, they better be told that if they feel resented and angered by them, then they must have lost view of the true purpose of existence, which is to go beyond the word, that mere clothing around the body of being, and conceive of actions that will save the world. To that end, my verbal eruptions of obscenities and revulsion were there to remind one, quite in accord with the essence of pure punk philosophy,

²¹⁴ As a reminder, in Raskolnikov’s worldview, there are two kinds of people: ordinary and extraordinary. “The first category, generally speaking, are men conservative in temperament and law-abiding; they live under control and love to be controlled... The second category all transgress the law; they are destroyers or disposed to destruction according to their capacities.... the masses will scarcely ever admit this right, they punish them or hang them (more or less), and in doing so fulfill quite justly their conservative vocation. But the same masses set these criminals on a pedestal in the next generation and worship them (more or less). The first category is always the man of the present, the second the man of the future. The first preserve the world and people it, the second move the world and lead it to its goal”. See Fyodor Dostoyevsky’s *Crime and Punishment*, Translated by Constance Garnett, Planet PDF (1866), pp. 464 – 468.

²¹⁵ See Norman Lebrecht’s *The Book of Musical Anecdotes*, The Free Press, New York, NY (1985), pp. 62.

that not what we say, but what we do is what truly matters in life. To make beauty in the world and bring spirits to life by playing three distorted riffs, in the footsteps of the Sex Pistols, living in a trashcan and speaking either with the tone of “sandpaper gone singing”²¹⁶ or “through a voice found at the bottom of an ashtray”²¹⁷, as Bob Dylan’s and Tom Waits’ vocals were once described, respectively, would be a million times dearer lifestyle to me than taps on the shoulder and medals on my ironed suit as the result of superb eloquence that is but “peacocked pontificating, mental masturbation brainworked to death”²¹⁸. In order to illustrate the fundamental disparity between mellifluous verbosity and harmonious action, Pascal noted in one of his most cryptic *pensées* that “when the word of God, which is true, is false in the letter it is true in the spirit”²¹⁹, concurring with my tendency to relentlessly contradict my benevolent intentions and a luminous inner world with words lewd, crude and abstruse. By acting so, I have been on the mission to liberate the human minds from the shackles of language and thus blow away their tendency to inertly follow the flocks of conformist hypocrites of this world to whom qualities of life take a totally opposite nuance; that is, they judge people based on what they say and how they appear on the surface rather than by the colors of the rainbow of their hearts and sacrificial carpets of friendship that they roll out in front of other people’s feet. I have looked up to children, who traverse the whole spectrum of human emotions, from joy to rage to fear to shame and over and over again, in less than a minute at times, in freely continuing to exhibit every state of mind known to man, including the most blasphemous ones, like seasons, one after the other, without ever trying to hinder any. Just like in Sergio Leone’s cult spaghetti western, *For a Few Dollars More*, Colonel Douglas Mortimer, a law-breaking seeker of justice, uses the unnaturally calm and silent response of bandits to his insult as an indication of their ravenous appetites and criminal intentions, so could we more often than not conclude that those who always react sheepishly and never ever get furious must have impure aspirations on their minds, whereas those who alternately get sunshiny and stormy, like the skies above their heads, hold the purest spirits inside. Animated one moment, serene another, agitated one moment, depressed another, letting my mind spin like the Earth, from sunshiny days to darkest nights, is thus the behavioral road that I have vowed to follow. After all, emotional intelligence, as psychotherapists could tell us²²⁰, implies sporadic aggressive meltdowns and difficulty in achieving self-control that typifies less emotional kids, the reason for which, weirdly, the former is often considered to be a negative trait by the behaviorists who are in the business of disciplining children by icily subjecting them to rules and rules only, forgetting that one and only rule applies to the art of parenting: “Love and do what you wish”, as St. Augustine of Hippo had it. This is all to say that so long as our insides glisten and burst with wishes to save the world and bring the treasures of divine goodness before its feet, we are allowed before the Heavenly court to do anything we wish, be it the most deprecating and deplorable deeds on the planet, from sneaking into random people’s backyards, stealing their oranges and sleeping naked on their rooftops to

cursing “Sir Walter Raleighs”²²¹ of this world for being “such stupid gets”²²² to taking the role of scary monsters who freeze human hearts and slice them in two for a moment or so, before they heal into more brilliant forms than this frightening moment ago. Charlie Chaplin, who spent more time in jail than on city streets, as a bum, in *Modern Times*, enlightened millions of stellar eyes of humanity with his movies, but still could afford breaking a racquet after losing a game of tennis at a garden party and be irksomely snappy to his coworkers or friends on a moody day. His frequent outbursts of ire were justified not only by his extraordinary creative focus, but also by his belief that there was nothing wrong with conflicts between people. Or, “we no longer need to fear arguments, confrontations or any kind of problems with ourselves or others; even stars collide, and out of their crashing new worlds are born”²²³, as he, himself, deemed. Chaplin, of course, given his political dissidence and the evasion of a pending juridical prosecution by the federal authorities in the US, was a more serious troublemaker to many than it can be expected from a sporadic tennis racquet smasher and holler at the carriers of the plague of spiritual lukewarmth. Namely, fiercely attacked by the US government supporters, communists and neo-Nazis of his times altogether because of his decision to firmly adopt the middle way and ferociously advocate resistance to war of any kind, Chaplin was labeled as a miscreant and a serious political threat and sent into exile by the US, the country whose culture he helped conqueringly spread all over the globe²²⁴. Still, decades after his death, an active FBI file that emerged during the surveillance of social activists of San Francisco in 1922²²⁵ is associated with his name²²⁶. Yet, none of these criminal allegations can diminish the greatness of his endeavors. Even more so, from today’s perspective, when both Chaplin and his denouncers have left the world’s stage for good and only the works that they bestowed upon humanity are left with us, any invocations of such and similar accusations, be it anger attacks in a grocery store or gossip regarding political inclinations and other so-called “un-American” activities, would sound trivial and irrelevant. Therefore, I do not get upset when I come across the accusation of sociopathic behavior because I know that in the heart of this sociopathy lies altruism and that the occasional neglect of fellow human beings is solely for the sake of satisfying this humongous inner drive to create something of timeless value for humanity. The nature of my work dictates these ambitions to a large degree: namely, if my work was of the type that the majority of the work of today’s scientists falls under, *i.e.*, such that it is methodologically and stylistically indistinct from the work of thousands of other people, with rarely even an iota of groundbreaking imagination and inventiveness in its core, perhaps my sense of the need to deliver the goods crafted deep inside me, in research labs and on the pages of my articles and books, including this one, would be lesser and along with it my enormous ambition to create, the ambition that has other people irritated with it and with its flip sides. But when one carefully looks at the state of the world in one’s field of interest and concludes that there is no one except one that aspires to create or is capable of creating what one has tried to create, when one’s voice has become absolutely unique and distinct from all other voices on the planet and has an important message to tell, then the responsibility for creating what one has dreamt of creating and having this voice be heard becomes so immense that one may not even hear the complaints of the common people in

one's strides toward making these dreams happen. After all, what is a few toes of authorities stepped on on the way to send forth a voice that, one believes, may save millions of souls and perhaps humanity as a whole on a far, distant day, you may wonder? Or, conversely, is taming the colossal swirls of creative energies inside one in order to be somewhat kinder to commoners worth all the enlightening lines that would then never be drawn? At the end of the day, if we truly wish to spread the divine energies all over the fields of the world, we need to be prepared to cause avalanches of controversies in the wake of our acts. And once we find ourselves on this stellar path, no amount of actions of ours that appear dishonorable when interpreted from the surface, while ignoring the bright glow of intentions that surrounds our heart, should be able to deflect us from our sacred ways. For as long as we selflessly live for the salvation of the whole wide world, nothing amoral and ignorant that our libertine self does will spoil the immaculate whiteness of the angelic wings of our spirit.

S.F.0.13. Zen stories, the lawbreakers of the mechanized thought, stand to us nowadays as a revolution in the history of literature. The minimalism of art from the Far East does not resonate yet so strongly with the Western mind, but Zen koans echo with relevance from its translucent heights to the grimmest of corners. They were among the first to demonstrate the power of ludicrous comments that expand the scope of the human mind by rupturing the clamps of habitualness, of thinking and behaving drowned in predictable phrasings. The comments of ours that aim at expanding the parachutes of human mind, all until they become so wide as to stay in the air of sublime thinking, should similarly follow the line of mild silliness. But these foolish and sometimes even seemingly nonsensical remarks that relax and liberate human minds, such as “welcome to the spaceship Earth”, “fast and bulbous, also a tinned teardrop”²²⁷, “thank you for the asparagus”, “it’s raining pickles”, or “*ci danno una torta*” as we gaze into eyes of another with a blandished charm, should be always pronounced with an intuitive purposefulness. In other words, the secret flights of spirit, invisible to the human eye, are those spaceships whose beams are being directed straight to the hearts of surrounding earthlings, melting, reshaping and beautifying them in inconspicuous ways. Once we learn how to purposefully fly these saucers and draw messages and signs with their gleams all across human minds and hearts, anything we do or say could be used as a plate on which these ET powers would be effectively delivered to them. The effect would, of course, be more effective, the more these words and acts of ours on the surface break the law of habit and stun the local eyes of the world, as if they have indeed glimpsed UFOs in their near vicinity. And if this dialectical placing overly regular things of the world upside down and bringing back the inverted things of this world into an upright position again that we see as deeply ingrained in humorous acts seems strangely similar to the secrets of creative and utmost ethical acting which we have referred to earlier, know that your keen sight has not fooled you this time. For, this confluence of humor and creative acting in any other domain along the tracks of the rule-shattering, revolutionary spirit is all but a casual coincidence. “Oh well – at least I’ve got my sense of humor back”²²⁸, says the comic strip writer in Dylan Horrocks’ *Hicksville* as he flies out of his office and into the street after being kicked in the butt by his boss, for having retrieved inspiration by depicting his dull supervisor in a nonconformist way. In a crystal clear way, he has thus demonstrated how blind and inert conformity extinguishes the spirit of cosmic joy within us, the cultivation of which demands from us to constantly look after shattering prosaic norms that sprout everywhere around us and systematically eliminate our incessant tendency to settle down in the

spiritual mud of compliance with norms and standards set by the mainstream trendsetters of the world. Henceforth, we are free to conclude that if there is a thread that connects humor, creativity and sublime ethics, it is the one that breaks the laws of habitualness, standardization and conformism, respectively. The line between the two central columns on which this whole chapter has rested – starry-eyed joy and the spirit of rebellion in which the heart of the divine ethics steadfastly beats – has thus been drawn, providing grounds for me to stand up, extend my arms as far as they could reach, exaltedly exclaim that joy is the ultimate rebellion in this life and begin to tread space with cartwheels rather than with ordinary steps. For, the reasons for perpetual sadness in this world are so many that the most rebellious feelings to invoke as a response to them are happiness and unrestrained joy. That is, not the sense of being a victim and a tool, a sacrificial pawn in a chess game whose only purpose is to amuse gods and goddesses whom we would never get to meet, the sense which naturally leads to aggravation, dejection and aggression, crafting generations of spirits immortalized on the cover of 10,000 Maniacs’ In My Tribe, taught to shoot arrows of anger and malice onto imaginary targets lying outside of the frame of their worldviews, but the sense of merriness that glows ever brighter the more it is tried to be stifled by the worldly problems and sufferings, having a thing or two in common with the perennially merry mood of Prince’s Cynthia Rose, who “always stood at the back of the line, a smile beneath her nose”²²⁹, who wore “different colored socks”, who had “starfish and coffee”, along with “butterscotch clouds, a tangerine and a side order of ham” every day for breakfast, and who “had a happy face, just like the one she’d draw on every wall in every school” in spite of being imminently shoved and punched in the stomach, secretly knowing that from the ditches and the backlines of the social order the stars must look most beautiful. Thus, having embraced the soft smiling of the soul as the most rebellious act in this world imbued thoroughly with the spirit of *mono no aware*, i.e., “inescapable sadness of living”²³⁰, as Yasujirô Ozu’s muse, Noriko would have put it, I have gone to encounter the most saddening and fearful situations in life with stars of joy orbiting across the chestnut skies coloring my eyes, making others stupefied with such “reckless eyes, acting as if they’ve got more lives”²³¹. The greater the misfortunes befalling upon me, the deeper and shinier the joy scintillating from the depths of my soul will be – this became my mantra in life, as, I knew, the phase transition underwent by Max Millan in Scarecrow, from a soul always feeling victimized, irate and irksome, burning with vehemence, if not mental violence, to a soul whose craziness is merry and cheerful, albeit odd and suspicious at times, had been made and I, vowing that an eternal smile will be illuminating the orbits of my spirit dancing unstopably under this hateful of stars, began to jump on tables à la Guido from *La vita è bella* and act without respite like an ecstatic child confined to the body of a pliant grownup one moment and slide over walls in another instant, with a creepy grace, like the shadow of a moonlit orchid on a midsummer night. Having firmly impressed in my mind the memory of the earliest paintings of the Christ, which portrayed him as a smiley character, appearing almost frivolous and whimsical at times²³², on the rails of eternal, cosmic joy the trains of my thoughts began to glide, heedless about the rules, of grammar, of conduct or of survival, singing out loudly its cheerful melodies through sleet, rain and thunder. Besides, after he realized that laughter occurs upon one’s becoming released from inner inhibitions, Sigmund Freud began to consider humor as intrinsically rebellious and went on to

claim that by default it confronts the autocratic and the bigoted²³³, explaining why I also advocate smiles, albeit too deep to be accompanied by laughter or shallowly humorous comments, as the best weapon against the insipid and oppressive powers that be in all spheres of experience, from the most individual and abstract to the most collective and concrete. Consequently, when the need to travel against the stream arises and when our intellectually rebellious acts in the world face resistance, prompting others to label us as a hellion and a troublemaker, we ought to do one thing: awaken the cosmic joy in us and let it color each slice of our bodies with its starry twinkle. For, when we see the thorny walls of ego being raised all around us and when lazy conformist spirits of the world point their fingers at us as a bad apple in the barrel, we should recall that “blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake” (Matthew 5:11). And then smile like the Sun, knowing that its glow is the glow of lifesaving happiness. For, the shining joy can sustain itself only insofar as it constantly sends forth the rays of empathy and good vibrations towards others. With such an amicable joy that forgives everyone in a twinkle and sends its light upon all, “no weapon that is formed against thee shall prosper; and every tongue that shall rise against thee in judgment thou shalt condemn” (Isaiah 54:17). Realizing this, we are flown back to the sorcerers swooshing through our bodies, which we drew on the pages of this paragraph somewhere above the tips of these lines. To put it simply, for as long as we keep the starry luster of wonder and love twinkling in the eyes of our heart and mind, we are free to say whatever we want. Even though such silly words may induce puzzled looks and cause people around us to suspiciously raise shields of reservation and rejection in front of us, we must know that we will be the winners in the end. Our messages will remain flying on the wings of Nature forever and ever, carrying their enlightening voice thousands of years in the future.

S.F.0.14. When asked by the inquisitor on her famous trial to swear that she would tell the truth, Joan of Arc bravely replied, “I will tell the truth but not all of it... I cannot tell the whole truth. I come from God and do not belong here. Send me back to Him”. Verily, if we conceive all our expressions in this world so as to satisfy the criterion of truthfulness only, we might eventually end up resembling Dostoyevsky’s Idiot, who, you know, ended his life in a sanatorium, having lost his mind, despite the wonderful guiding star of thought that he cherishingly followed in life: “Beauty will save the world”. Maybe the great writer wanted to show us that goodness based on pure honesty is not perfectly fruitful, and that we need to conceive of numerous “white lies” and elicit them through our expressions in order to bring the light of our benevolent intentions to the world. Ever since I heard of King Solomon bending the rules of the chalk circle competition in order to determine the real mom of a mysterious boy (Kings I 3:16-28), I have flirted with the idea that speaking the truth only some of the time, if I were to paraphrase the lyrics of a song by Samantha Crain²³⁴, may be needed to bring harmony and justice to the face of the world all of the time, lest we lose our mind in the end, like Prince Myshkin²³⁵, due to a schismatic disparity between the dreams of gorgeous living treasured inside and the frozen life lived in reality. After all, we could all be easily convinced that tiny little truths of individual discoveries of the objectivistic science end up building some big lies about what the world is all about, whereas arts (and maybe religions?) are all about tiny white lies making up for a great truth about the nature of life. As Pablo Picasso wittily noticed, “Art is a lie that makes us realize the truth”, and the medieval

Dutch artists who painted the flat Dutch landscapes as unrealistically hilly must have seated this principle deep inside their hearts, not knowing that their efforts guided by it would serve as a predecessor for the pending birth of Renaissance in northern Europe. Hence, an ancient Jewish story also tells of a sage asked what is truer than the truth and the answer he had given, “A story”, while on the other side of the space and time, the South Korean novelist, Young-ha Kim notices that “the moment kids start to lie is the moment storytelling begins”²³⁶, letting us be spun like a cartwheel along the edge of the circle wherein truths and lies comprise the ends and beginnings of each other’s threads. Near there, to reiterate this idea that white lies are the beginnings of illuminative communication, we could bring to mind the story about Krishna as a child. Namely, as young Krishna was leisurely playing in the mud near the banks of Yamuna river in the village of Gokula, his foster-mother, Yashoda noticed that he was stuffing some of the dirt in his mouth and asked him to open it. Krishna, however, nodded his head and refused to open his mouth. Yashoda reproached him frowningly for his misbehavior, but Krishna kept on keeping his mouth shut and nodding his head, the way only toddlers do. Yashoda continued reprimanding him for hiding something and for being insincere, but Krishna did not yield. And then, tired of this game, Yashoda forcefully opened Krishna’s mouth and, as the story goes, “she felt herself to be whirling in space, lost in time, for inside the baby mouth was seen the whole universe of moving and unmoving creation, the earth and its mountains and oceans, the moon and the stars, and all the planets and regions; she was wonderstruck to see the land of Vraja and the village of Gokula, herself standing there with the child Krishna beside her with a wide-open mouth, and within that mouth another universe, and so on and on and on”²³⁷. What this entwinement of truth and fiction can instruct us is to lay back, stare at the stars, immerse in their swirl, soften up and start composing words infused with a dose of charming wit, having every one of them dance around the pole of soppy happiness, mildly confusing the listener about the direction which he ought to look in, knowing all the while that “convictions are more dangerous enemies to truth than lies”, as Friedrich Nietzsche noticed, shattering any tendencies to adopt narrow, tunnel vision in the room of our mind and dissipating our awareness instead in all directions, bearing Wonder that makes the celestial ballerina of the muse of our mind bless all things around her with the rays of her attention, transforming itself into a sun that sends out its shine of the soul all over the place. And so, as she turns around and around, she may realize that “the truth is everywhere”²³⁸. There is nowhere we could look at without glimpsing the face of God.

S.F.0.15. I have always held that even the most depreciated details of this world hide immense and inexhaustible messages in them, as well as that our patient explorations thereof always become rewarded by offering us realizations of some great and timeless truths. For example, although Alcatraz Island nested in the center of the Frisco Bay for most people appears as something one should repugnantly turn one’s head from, I have always been spurred to look for the secret and precious meanings that details of the world rejected and denied by others carry. And if there is one thing that Alcatraz Island, a.k.a. the Rock, reminds me of, it is the necessity of breaking the law at every step of our triumphant walks across the fields and valleys of this wonderful world that stations our souls. In spirit of this thought, I introduced Stanley Aronowitz to the UCSF audience

with the following words: “When I was a kid, I believed that to be a force of progress in life, one had to break the law of social norms of any kind imposed on us. Now, when I am older, I still think the same. I respect the tradition, but am aware that to be creative is to break the law of paradigmatic thinking every once in a while, to listen to the adventurous spirit in us and bravely swim against the mainstream of common influence”²³⁹. As I was wrapping up this intro, I asked Stanley to deliver another one of the awakening punches to a little sleepy and passionless scientific community that I was then a part of. After all, the most progressive scientists, artists and creative minds of the world were nothing but brilliant lawbreakers. The trait of a great scientific mind is to follow the advices of the tradition, to respect and build one’s approaches upon the existing paradigms of knowledge, and yet to be able to sense the right moment to rebelliously stray away from a predetermined path, onto strange and undiscovered research pathways. To respect and obey the laws set forth by social or authoritative norms, scientific trends and principles, but also to be ready to break the laws at any given point is what typifies a creative mind. For, in order to bring novel, original insights into any field of knowledge, one has to shatter the norms and trends in conceptualization and expression of thought, and produce deeds that may at first seem unfitting, shocking and ridiculous. Normally, it takes time for these novel creative ideas to be fully implemented and accepted as part of “the law”, which is then to be the target of inventive shattering by some ultramodern and ingeniously law-breaking kiddos. Languages develop through breaking the law of grammar and vocabulary, arts advance by speaking new languages that partly blemish the old ones, and sciences fundamentally progress by debasing the existing principles and methods, and drawing the new, advanced ones in their place. When Ron Gilbert, for example, points at a shrub in non-animated Commodore 64 graphic adventure, King’s Quest, as a source of immense frustration on behalf of him as a player and a defect that led him to conceive of user-friendlier point ‘n’ click adventures that would be eventually released by Lucasfilm Games, he, essentially, points at flaws as features needing to be recognized before a path toward progress could be set, but he also observes that what makes Maniac Mansion, one of the greatest works of computer science and art crafted on these SF grounds, his favorite game among all those he made is “not that it is great, but that it is a very flawed game and it is those flaws and the reasons for them that make it special”²⁴⁰. So, whenever we strive to be a force of progress in life, we should know that our actions need to resemble those of the Hindu God, Shiva by simultaneously ruining and recreating the world, tearing the walls of inhumane castles of knowledge so as to get to their foundations, enlighten them with love and raise new towers of wonderful worldviews in their place.

S.F.0.16. Truly, every inspiring action in this world has to break the law in one way or the other. Every time we act so as to increase the order in our surrounding, we literally break the second law of thermodynamics and appear as rebels in the eyes of the invisible guardians of the physical laws on whose grounds the Universe is sustained. Progressive acting is, as a result, strictly law-breaking from the thermodynamic point of view. Likewise, every time we reach out to create a contact surface, an interface across which communication that elates and ennobles the human hearts will occur, we do so in opposition to the basic principles of thermodynamics, according to which a

pervasive physical drive exists to minimize the free energy associated with an excess surface area. To that end, not only to create, but also to love must be to rebel against the basic laws of the universe. Correspondingly, for our thoughts and expressions to evolve we must break the laws set by the preexisting norms and rules governing our thinking and behaving. No evolution is possible unless we are ready to make a move that will go against the grain of the principles of conventionality and ordinariness. In order to provide our works of art with a dose of inspiring humanness, we need to break the law of “boring” perfection. In order to spur the attentiveness of the listeners, we need to break the law of perfectly smooth flow of our lectures by introducing something unexpected and mildly shocking every now and then. I have heard of masterful lecturers who would, for example, drop their notes or trip as they approached or leisurely walked over the lectern, thus awakening the audience and intentionally gaining their sympathy. Similarly, a captivating way of moving and dancing is all about producing a “mistake” in terms of something subtly extraordinary and atypical, breaking the law of conventional gestures and moves and thereby spontaneously attracting other people’s attention. In fact, the most exciting ways of moving, exercising and dancing that improve the gracefulness and flexibility of our bodies are based on breaking the law of habitual posture and behavior. As we grow older and less supple in our thinking and acting, we unconsciously start pairing many individual body movements or facial gestures that make our behavior become clichéd and not genuine at all. But if we are to maintain the flexibleness of the workings of our bodies and minds all the way up to the old age, we need to learn to art of gracefully breaking the laws of habit by introducing always novel, atypical movements in our repertoire thereof, just as we need to constantly revisit and renew the foundations of our thinking. In the sphere of inspiring physical movement, we are thus being made aware of how impulses that go against the smooth stream of actions directed by our habits, inert and colored by the dull and grayish fear of change, are those from which the most beautiful moves arise, while in the domain of our knowledge we have seen how the seed of every imaginative thought that illuminates our insides with its inventiveness springs forth from a moment of deviance from the state of normality and customariness. As a matter of fact, both of the two central columns on which the entire edifice of human knowledge, the heart of the whole creation and all things beautiful in this world are sustained, Wonder and Love, contain the spirit of sacred rebellion deep in their cores. For, as we see, the epithet of creativeness is ascribed to an idea only inasmuch as it intrinsically rebels against the firmly established, laissez-faire trains of thought, while we could wonder in our minds only insofar as we find solace in striking a discord with the expected and stepping off the beaten paths in our mental realm and onto territories uncharted, never entered before. As for Love, to shine with it in this world in which everything drags us down towards the mucky ponds of phlegmatic indifference, animalistic robustness and hateful wintriness as the season of the soul, one has to be a rebel like no other, always on the run to forfeit the social norms and expectations and live in harmony with the deepest, starriest dreams that illuminate our insides. To be seen as an oddball and a troublemaker in the eyes of the world has thus ever since been a prerequisite for our enkindling the torch of Love in our heart and lighten the way to salvation and happiness for the weary worldly spirits by its means, the reason for which the 14th-century Persian poet, Hafiz wondered in his prayers what “love-mischief we can do for the world today”²⁴¹, having been unable to disjoin the two: a mischief-maker and a saint.

²⁴¹ See Hafiz’s poem The Seed Cracked Open. In: *The Gift: The Poems by Hafiz*, Translated by Daniel Ladinsky, Penguin Compass, New York, NY (14th Century), pp. 35.

S.F.0.17. Do not ever forget that everything in life rests upon foundations, invisible, impalpable and ineffable. From there springs forth the essence of values and qualities the things in life possess. Having read Tao-Te-Xing, we can recognize a divine moral underlying the thought of Lao-Tzu, and as G. K. Chesterton claimed, the foundations of the Christian teaching lie plunged in the sea of similarly graceful, divine joy. After all, Christianity is all about giving and opening up the way in ourselves for the carefully cultivated star of love to release its light outwardly and bless the surrounding beings therewith. It is like a gate through which we all must pass on the way to release the great shine of the blessing sun of our spirit to the world around, which is probably why the Christ proclaimed that “I am the door: by me if any man enter in, he shall be saved, and shall go in and out, and find pasture... I am the way, the truth, and the life: no man cometh unto the Father, but by me” (John 10:7-8...14:6). However, without the blissful optimism and cosmic joy, these suns of love in each one of us would forever be locked, deeply suppressed within ourselves by the sucking force of depression and despair. “You have misplaced joy... without joy, we are as dead”²⁴², the bust of Nikola Tesla standing outside the Serbian Orthodox Cathedral of St. Sava on Broadway and 25th Street in Manhattan spoke in Patti Smith’s daydreams when she asked it how to overcome the state of lethargic agitation that stifles her creativity, before dismissing the poet coolly after she asked it if there was something she could do for it by saying, “Yes, could you move a bit toward the left? You’re standing in my light”, topping this brief lecture on joy with the sprinkles of deep wit. Therefore, we ought to be sure that should we make cosmic joy and humble gracefulness the guiding principles in life, enlightening sparkles of eternal beauty would wait us around the corner of every glance and thought arising out of our mind. Should we welcome and make way for the Kingdom of Heaven with every cherishing glance and charitable act of ours, our life would turn into sheer bliss and its tracks would lead the starry trains of our thoughts and being towards the ethereal version of the mythological Mount Parnassus, whereon, alongside other muses, the Holy Mother, herself, gloriously beautiful, will wait, so as to take us by the hand to the serene seas below, for a bath in its azure, a purifying panoply of summersaults and the transition onto the next karmic level in the unending mission of enlightening the cosmic realms that our being, our constantly moving back and forth between the state of separation from the ocean of godliness that encompasses it all and remerging the pearly teardrop of our lone spirit with this all-pervading infiniteness, is all about.

S.F.0.18. “Smile”! These were the last words that the Little Tramp, the greatest of all the movie characters in the history of cinema rewinding like Saturn rings throughout the microcosm of my mind, expounded to the world, as he and his lady, hand in hand, set their feet towards some new and faraway horizons. For, as we have seen, rebellion is necessary for the world to continue to evolve into ever more brilliant emanations of divinity dormant in our beings and in every other aspect of reality, while smile is the act of utmost rebellion in this gray and gloomy world wherein gravity outweighs grace and pulls the human spirits, which could have flown in togetherness high, on the heavenliest of airstreams, down, down, down. The truest form of rebellion lies not in the urge to destroy with the fuming fury distorting our face, but in approaching all things with a smile and the outpours of the sunshine of happiness from our soul. If supermodels are told never to shed a smile on the catwalk²⁴³, lest they give away their allure of supremacy, signal sympathy to petty souls curving their necks like flowers under their feet and thus block the flow of venomous avarice

²⁴² See Patti Smith’s *M Train*, Alfred A. Knopf, New York, NY (2015), pp. 76.

²⁴³ See Will Wister’s *Why Don’t Fashion Models Smile*, *Quora* (October 5, 2014), retrieved from <http://www.quora.com/Why-dont-fashion-models-smile>.

disguised as the desire to possess what they wear on the surface, then we must smile and smile and do nothing but smile and lift the world up by such simple means, as a sign of the utmost rebellion against the premises of selfishness and commerciality that drive the modern world into an abyss. As in the case of the Fish with a Deep Sea Smile, whom fisherman sought for many a mile, but who got freed from the hook as he smiled, “flipped his tail and swam away, down in the sea a mile”²⁴⁴, smile will be our means of evading the hooks of superficial and lowly appeals that the voracious worldly powers throw all around us. The smile shall be our only umbrella²⁴⁵, as we, openhandedly, await the rain with heavenward gazes, having vowed to give all that we have to those who have not and find luxuriance for the soul in poverty for the body, accepting all things befalling us similar to a flower that befriends the gentle early-morning dew and the heavy droplets of rain with the same joy and grace. Hence, the Little Tramp’s single final word, standing all alone, but with a timeless message for humanity and the Universe in its entirety impressed in it: Smile! Now, many cinema lovers do not know that Charlie Chaplin had conceived the finale of *Modern Times* in a thoroughly different way and even shot the scene accordingly²⁴⁶. The scene was kept intact in this form for a long time, and only a year after it was shot Chaplin changed his mind and recorded another, more optimistic ending. In the first end, the gamin visits the Little Tramp in a mental hospital, a short time after his mental breakdown. The gamin describes to him a beautiful vision of the Holy Mother she has seen, and the Little Tramp, visualizing everything, says: “It’s so beautiful it makes me want to cry”. He leaves the hospital and goes walking along the same road as in the real ending, but this time alone, immersed in his own thoughts, sauntering towards a long and empty road, symbolizing an endless solitude of his soul. As he walks down the road, the gamin dances in circles around him, but the Little Tramp appears as if continuing to walk along his lonely path, renouncing the world in its entirety. Miraculously, at the real end of this wonderful movie²⁴⁷, this satellite-like interaction between the artist and the muse, the most loving creature and the best friend of his life, is substituted with the one stemming from the Buberian dialogue of equality, with the two stars holding hands in joy and spinning endlessly around the common axis. This equality lies at the central stage of the co-creational thesis and the Way of Love²⁴⁸. As long as we are passive satellites of other people’s authorities or, on the other hand, enjoy subduing others to the authority and appeal of ourselves by making them orbit around our self, we will be inclined to either masochistic or sadistic tendencies, respectively, and will be out of this beautiful balance. Therefore, in light of Chaplin’s finding this balance of an everlasting importance in a matter of a microsecond, by cracking a celestial smile on his face, whenever I get depressed or irritated about worldly matters, I remind myself to return a sunny smile to every miniscule part of my body. To contrast the square-faced oriental meditations in still silence, Indonesian gurus have called for a form of meditation that awakens a truly divine, celestial smile within every heartbeat of ours. “Start the day by laughing at your own image in the mirror”, some of them have advised. For, laughing our troubles off can be a medicine for the soul like no other, as old-timer Howard, laughing sweetly and contagiously at the end of his and his buddies’ search for the treasure of

²⁴⁷ *Modern Times* has occupied the second place on my list of favorite movies, right after *City Lights* and before the *Great Dictator*, all of which were Charlie Chaplin’s masterpieces.

²⁴⁸ See Glossary at the end of the book for the definition of the concepts of co-creation and the Way of Love.

Sierra Madre²⁴⁹, after finding out that the gold dust that was to bring them fortunes had been scattered in the wind by the bandits and concluding that “the gold has gone back to where we found it – laugh, my boy, laugh”, would have surely agreed with. Shoulder to shoulder with this epitome of goodhearted miners with rock dust in their lungs²⁵⁰ stands Njegoš’s goddess of time, “laureled by wreaths, crowned by sunrays, weaving flower floss and sprinkling it with pearly dew”²⁵¹, who’d respond to all of the poet’s fervent queries about the nature of life, about “whether the Earth is man’s double cradle, bestowed upon him as a mysterious monster, as a tempestuous and burdensome reward, or as nursery of the heavenly bliss”²⁵² with wholehearted laughter and genuine smiles. After all, since our physical expressions and the states of mind are tied in a closed feedback loop wherein one reflects the other, it may matter little if we make a step towards reviving the vibrancy of our spirits and physiques by pulling off an enlightening expression, such as a smile in which sparkly eyes vividly orbit around the omnipresent Sun of the divine soul that it meditatively rests its internal gazes on, or by illuminating our insides through a brilliant meditative focus and thought. For example, one of the basic types of play between a parent and a child is the face-imitation game, which presents an essential training in empathy for the little ones. In this game the parent makes a face of wonder, with wide open eyes twinkling in joy, jaw dropped in astonishment and face moving left and right in excitement, trying to invoke the very same facial expression in her baby and, as a result of the closed feedback loop between the languages of body and spirit, spur the baby’s exploratory curiosity and boost its learning potentials. Likewise, an old trick used by actors to restore confidence in their performance is to adopt a confident, upright posture and speak in a deep and resonant voice, knowing that the physical postures and expressions affect the psyche underlying them just about as much as the states of mind drive the physique in specific directions and that, therefore, it matters not from what side of this circle we initiate its spinning – from the body or the mind. This is why drawing smiles on our faces, such as those that the Little Tramp urged his gamine friend to make at the end of *Modern Times*, in spite of her feeling disappointed and sad, can be the beginning of the process of enlightenment of our body and soul alike. In the end, we are all made of cosmic joy. This is because, as the co-creational thesis has it, our bodies and minds arise where the undying joy of the transcendental, yet omnipresent divine spirit meets the flimsy weaver of dreams that our heart is. What a beauty to contemplate about!

S.F.0.19. In the spirit of the cosmic joy, on the wings of which we ought to be journeying through the wondrous landscapes of the Universe, we should maybe not be like Radio Raheem, the strictly dialectical rapper from Spike Lee’s *Do the Right Thing*, who carries a blasting boom box and rings on all of his four fingers that show up in front of a fistful hand, spelling LOVE on one and HATE on another, obviously alluding to the character of Reverend Harry Powell from the *Night of the Hunter*, a personification of “false prophets, which come to you in sheep’s clothing, but inwardly they are ravening wolves” (Matthew 7:15). Such creatures who bow in front of those for whom they have sympathy and spit on those whose ethics and style they find objectionable disobey the Christ’s call to “judge not, lest ye be judged” (Matthew 7:1) as well as the message from the oldest

²⁵² *Ibid.*

epistle of the New Testament, “Mercy rejoiceth against judgment” (James 2:13), and remind me of times when I, myself, used to act in such a way so that enemies fear me and allies respect me, mercilessly stepping on cockroaches with Victor Hugo’s vision of “creation as a Great Wheel which cannot move without crushing someone”²⁵³ swirling in my head, yet unreservedly kneeling before angels of this world. Back then, as if transformed into an epitome of Victor, the graceful boy that overlooks the largest confluence of two rivers, Sava and Danube, in Europe from the Belgrade fortress, holding sword in one hand and a dove in another, symbolizing war and peace at the same time, I would send harsh looks at those who, I felt, had broken the norms of justice and release dozens of soaring doves in outbursts of happiness from my arms to those who, I felt, were journeying along the righteous track. If you were to ask me why so much contempt for the ravenous behemoths of this world, with a bow slung around my shoulders I would pay your attention to the fact that Socrates in Plato’s Republic defined three main ingredients of the human consciousness that ensure stability of the State and thriving of justice in it: temperance, wisdom and courage. When Socrates was asked what he really meant by courage by the guardians whom he educated, he responded by saying, “courage is a kind of salvation”. “Salvation of what”, a guardian asked, to which Socrates replied, “of the opinion respecting things to be feared, what they are and of what nature, which the law implants through education”²⁵⁴. For, a constant dissenting opposition to the opinion of the majority, courageous and dicey, certainly mingled with falling in line respectfully with our tradition and dedicated continuation of unwinding the creative ball of yarn carried out by our predecessors over ages, is what drives the progress of the state. Authentically anarchic forces that live up to their designation as “enemies of the state”, stringently anti-establishment in all their endeavors, though with heartbeats undyingly merged with the music of humanitarian devotion and self-sacrificing hardship on which the whole creation rests, are thus the greatest friends of the state and of the wellbeing it provides. For this reason, nothing has infused a miserable shade of sadness in the blissful space of my heart as much as the realization of powerful alternative movements that once heartily opposed the corrupted crème becoming mainstreamed and drowned in the same sea of hypocrisy against which they once rebelled. Even though I still believe that it ought to be the ethical duty of all of us to take a firm stand against slimy egotistic monsters of this world and stand in defense of the weak, angelic living things, whoever they may be, my determination and a sense of certainty as to who is worth openly confronting regarding instances of unfairness that they are responsible for today cannot compare with that I exhibited in the past. Introduced to the philosophies of Taoism and Zen Buddhism and the epistemological essence of Christianity, I gradually began to doubt my and everyone else’s abilities to flawlessly judge what is right and what is wrong. Behaviorist manners of judging about the states of mind of observed creatures by watching them from aside had also sunken deep into the sea of human knowledge as the systemic knowledge, emphasizing contexts, infinitely spreading, like sunrays, from the core of systems in question while co-defining their qualities, dawned on me in parallel. Suddenly, I found myself beneath the starry sky that enfolded my mind as it looked towards Heavens, and each star in it stood for a twinkly piece of knowledge that indicated that fruits of the tree of knowledge, the tasting of which endows us with an ability to discern good from evil, brings about the expulsion of our mind from Paradise. By rejecting the temptations to indulge in daily judgments of human actions, as hard as it can be for an intellectual, a member of the academic community, gotten used to constantly deliver smart judgments with regard to scientific processes investigated, I became

²⁵³ So says the opening line of *La Roue*, a movie directed by Abel Gance (1923).

²⁵⁴ See Plato’s Republic: Book IV, Translated by Benjamin Jowett, available at <http://classics.mit.edu/Plato/republic.5.iv.html> (360 BCE).

able to engage myself in exhilarating dancing underneath this starry awning that enclosed me from all sides. That was when it occurred to me that instead of loving one and hating other beings that inhabit this planet, maybe we should be like the four-fingered Disney's heroes who were, as a metaphor of their childish benevolence, able to spell only LUV and HAT on the knuckles of their fisted hands. At the same time, the piercing arrows released from the bow of my heart changed their direction, somewhat like the one sculptured right below the Oakland Bay Bridge, sending their fiery contents inside, substituting the outward aggressiveness with introspective fireworks of thought that have found their way to the pages of this book. In a moment I thought of the conversation between Andrei Rublev and Theophanes the Greek²⁵⁵, in which the old seer cynically disparages humanity for its irreparable wickedness, commenting that if the Christ were to be sent back to Earth, people would crucify him again, to which Andrei responds by saying that such vengeful bitterness that perceives man as an inescapable evildoer stands in diametrical opposition from godliness that the genuine Christian outlook represented, the humble, illogical outlook before which good were good and bad were good and in the heart of which was one big Yes bursting with cosmic joy. Henceforth, we should not divide impressions of the world to good and evil ones, but try our best to find a source of happiness and beautification of our spirit in every detail of it, in every song that rings across the earthly meadows or merely whispers around us. "For if ye love them which love you, what reward have ye... Do ye not perceive, that whatsoever thing from without entereth into the man, it cannot defile him... That which cometh out of the man, that defileth the man" (Matthew 5:46... Mark 7:18... 7:20), the Christ thus argued, reminding us of the importance of approaching and blessing everything and everyone in our vicinity with the geysers of love emerging from the fountain of our heart and being one of those "whose hearts are fresh and simple, who have faith in God and Nature, who believe that in all ages every human heart is human, that in even savage bosoms there are longings, yearnings, strivings for the good they comprehend not, that the feeble hands and helpless, groping blindly in the darkness, touch God's right hand in that darkness and are lifted up and strengthened"²⁵⁶. For, the deepest mental spheres of the heavenly pure creatures of this world never cease to believe that all things around them feed their souls with impeccable sources of beauty, so long as the shimmering eyes of their hearts recognize them as such. Moreover, although we could not strew every being and object of the world with the sparkles of our inner beauty and grace, the fact that we will put the "hat" of ignorance between us and some of them does not mean that we are stretching a barbed wire fence of fear and hostility. For, nothing can be as lovely as charming eyes peering behind a hat with a vivacious curiosity; eyes that radiate with the balance between an exciting alacrity and a lily-like gentleness and tranquility.

S.F.0.20. But to happily twinkle with these glossy smiles, we must first turn our heart into a smiling sun, to inhale a silent laughter underneath our breath, and, all in all, glister with joy from the inside. Because for as long as the infinite sky of our heart is not bluish and cheerful, filled with pure white birds of carefree and sublime thoughts and feelings, but rather murky and dull, every smile showing up on our face will reflect insincerity and fakeness. Such smiles would be just like the ones on a disheartened and world-weary mime whose soul cries, but face exhibits a cracked and lifeless smile, hardly able to induce delight and vigor in others. Now, an incessant battle takes place in each one of us during our lifetimes. In it, a rejuvenating joy fights with a depressing lifelessness; the former celebrating life and existence, whereas the latter dumping everything

²⁵⁵ Watch Andrei Rublev directed by Andrei Tarkovsky (1966).

²⁵⁶ See Henry Wadsworth Longfellow's *The Song of Hiawatha*, Introduction, Nolit, Belgrade, Serbia (1855).

perceived into the black hole of a deeply depressed heart. The Sun exists in the constant state of balancing the inward pulling force of gravity and the outward pulling force that shiningly hands life to the Earth, and so is with every aspect of our being. There is always a drag of a dark force of “gravity” onto which a life-yielding force of “grace” is coupled, to use the metaphor of Simone Weill²⁵⁷. The second law of thermodynamics tells us that it is an incessant tendency of matter to navigate itself towards ever more disordered states, and yet there are tiny little islands in the Universe as a whole where matter transforms itself into more ordered states, from rocks and oceans to human eyes and wonder, transcending this ultimate physical law, although still keeping it inherent in every piece of it. However, when I look at people changing as they grow older, I often see the forces of envious, destructive and depressing thoughts and emotions winning this battle and becoming ingrained in these people’s personalities and outlooks. But knowing this, the aim is clear: to retain a childish joy forever and ever, to face every moment of our existence with an undying curiosity, seeing the divine messages hidden in every little detail of the world, to always be a spiritual traveler, on the quest for the divine love and beauty. So, before engaging ourselves in acts that will celebrate the divinity of life by having us flying around in ecstasy and strewing the invisible stardust of love onto others, we ought to make sure that we have tuned our heart to the sound of love and had it beat as a pulsating sun over the inner dome of our self. Thoughts and feelings arise from it as white birds flying across a bright sky with a joyful rainbow stretching all over it. But this rainbow, remember, forms only so far as a sunny joy encounters a sad and melancholic rain. As such, it reminds us that the brilliant joyfulness that with its sunny rays penetrates through everything, carrying blessing messages that instill life and love into all, has to be mixed with a dose of eternal, cosmic sadness, reminiscent of the enlightened faces of holy virgins depicted in Orthodox Christian monasteries, if we are to draw boundaries of a truly sacred personality. And these boundaries thence extend towards the most distant places, stars and universes, all enwrapped in this immaculate childish joy of being One with Nature.

S.F.0.21. This is why the celestial joy springs upon the foundations of wisdom, and *vice versa*. Thereafter, if we wish to awaken either one of the two, there is no recipe as to where to start from: to dispel the dark clouds of ignorant and blasphemous thought, and leave the space for the sunshine of joy to penetrate every miniscule part of our being and the world in our search for the wisdom, or to devotedly plunge into exploring the threads of wisdom that humanity abounds with in all our analytic seriousness in search of divine and eternal joy. This collection of thoughts is, therefore, meant to exhibit a charming blend of humorous wisdom. And yet I claim there could be nothing more difficult than producing a good humor. If the explicit message of one’s artistic attempts is linked to guiding stars of genuine wisdom, the results of his work would hardly ever be pointless and disappointing. Serious attitudes, more or less, always bear fruits. But this is not so with the humorous approaches. On most occasions, their vulgarity seems hardly comparable to almost anything one can conceive. When I was a young lad, I used to turn my back to all the vulgar jokes around me. How in this world pervaded by reasons to be sad on every corner can anyone allow oneself to act in a jokey manner, I asked myself on daily basis, seeing none but a deadening insensitivity and deprivation of empathy behind any exhibitions of humorousness. A person laughing out loud has got to be either an enlightened fella or a fool, though most probably the latter, I used to think in those times. When someone announced that he was about to tell a joke, I would immediately say, “That’s okay, but I won’t laugh”. The only jokes I would consider worthy being told in a company were those making no one laugh, either because they were too deep to be

²⁵⁷ See Simone Weill’s *Gravity and Grace*, Routledge, London, UK (1947).

understood momentarily or because their connotations were grave enough to balance out their humoresque frontmatter. For, verily, back then any laughter I perceived as equally horrifically piercing as the scream captured on the iconic Munch's painting, significantly more hellish than heavenly in both its essence and sound. "The secret source of humor itself is not joy but sorrow - there is no humor in heaven"²⁵⁸, I know Mark Twain said once and with the very same idea in my mind I sincerely pitied the aspiring humorists around me, seeing humor as intrinsically hypocritical and dishonest to one's deepest feelings, a step away from heaven rather than paving the way to it. In those days, I really felt as if "witticism is an epitaph on the death of a feeling", as proclaimed by Friedrich Nietzsche. Or, as reinterpreted by Richard Hell, "Nietzsche said that anything that makes you laugh, anything that's funny indicates an emotion that's died. Every time you laugh that's an emotion, a serious emotion that doesn't exist with you anymore"²⁵⁹. This may be why the only time Molly Nilsson pushes herself off the screen and puts a new self onto it is after she subtly laughs to a supposedly funny offscreen remark in the video for her heartrending 1995²⁶⁰, as if to remind the viewer of the death of spirit and the withering of grace that falling into the trap of humor entails. In accordance with this viewpoint, I truly believed in this: comedy spirit = emotional wreckage. For, emotionality and humorosity I saw positioned on diametrically opposite extremes of the spectrum of human states of mind. In my eyes back then, the heart of grace, one that bleeds with love and a great, moving desire to bring light to the world, seemed as if always carrying some sadness in it. Jokey characters then appeared to me as if merely trying to combat fears that prickled their spirits with a sense of horrification from the inside, whilst a perfectly enlightened, fearless state of mind, I believed, would shine with graceful and genuine solemnity to the world. On the other hand, jokes that most people never found frightfully funny, including Zen and Chan stories or stories about fermions in a bar disobeying Pauli exclusion principle²⁶¹ or about a schoolboy excusing himself in the classroom for not having his homework done based on an immaculate understanding of Heisenberg's uncertainty principle²⁶², could enlighten my spirit with a knee-slapping laughter. Of all the artistic pieces I have ever witnessed, I can pick only a few or so that essentially comprise a humorous nature and yet stand as equal in their importance to all the other great works I can imagine. Good dramas are many, good comedies but a few. In the acting world, in fact, humor expressed on the stage is often seen as equivalent to theatrical heresy. This point of view is neatly illustrated by the words of Del Close, "The most direct path to disaster in improvisation is trying to make jokes"²⁶³, the words that ring in accord with the voices of many other acting instructors who disapproved of actors' striving to disarm criticism and transcend insecurities with calls for laughter, so often seen on the stage of life as well, an act with which they mainly dispel the emotional thrill that electrifies the space and smash it into pieces; or, as Jacques Lecoq pointed out, "self-humor is the only alienation effect"²⁶⁴. For, over and over

²⁶⁴ *Ibid.*, pp. 163.

again it is being proven that only the streams of melancholic compassionateness can bring the ships of our beings close to each other and build powerful fleets thereby. Yet, without coupling this oceanic melancholy with cosmic joy that would make us triumphantly lift the arms of our spirit, all until we start to resemble the constellation of Orion, turning us thus into a true star of spirit, we would never be able to express ourselves in an enlightening manner, which is the ultimate aim of our short stay on the planet Earth. In that sense, the natural path of growth for our spirits tends to everlastingly follow the dialectical line, starting from cordiality and trust, then falling into the dark reigns of doubt, mistrust and alienation, before finally making a full circle and emerging back to light. Unfortunately, the nature of life is such that only the most brilliant minds make it through the gloomy forest of human being wherein all pulsates with the *homo homini lupus* vibe and to the daylight of eternal joy and the bliss of love for all. In our young days, we may have been like the Zen lumberjack who chopped the trees and saw mountains in mountains and rivers in rivers. We treated everyone with an unquestionable respect, trustfully seeing sources of beauty and love in each earthling of the world. Then, during the moments of struggle, hardship, spiritual roaming and crucifying doubt in the divine origins of the Universe, we may have ceased chopping the trees, while mountains quit being mountains and rivers ceased to be rivers. By seeing the world as a competitive stage on which cunningness and selfishness are more useful than humble benevolence, we may have developed the same, overly protective and abusive personality, while aimlessly roaming through the dark forests of our own spirit. But then, after we walked along the entire path of human ascension of spirit, made the full circle and thoroughly confronted the theses of goodness and love with their antitheses of greed, jealousy, cynicism and corruptness, we may have realized that mountains have become mountains once again, and lo, rivers are rivers again, and we set out to the forest to ax the trees again. Here we may bring to mind the concordant 15th Century herding series of Zen paintings beginning with a realistic depiction of an ox, which slowly, plate by plate, begins to fade and eventually disappear, turning into a white circle by plate 8, before suddenly reappearing in the form of a shepherd on plate 9²⁶⁵. As it were, through an entangled forest of perplexities we emerge at the coast of knowledge evocative of the wondrous worldviews of innocent nestlings and bathed in the light of the suns of childlike simplicities. “In such a confession, thought has made a full circle, and we are again as children”, as proclaimed by Alan Watts at the end of his discourse on the beauty of uncertainties and the wisdom of insecurities²⁶⁶. For, keep in mind that the initial and the final stage of this circular journey does not coincide with the finding of confidence in a sense of certainty, but rather the opposite: becoming humbly certain about the uncertainty of it all. This can be illustrated by the archetypical path followed by every philosopher and scientist *en route* to the horizons of intellectual mastery. As for scientists, this path is such that it begins with wonder over the basic scientific models and ideas, which is succeeded by the impression of their solid understanding after the scholarly work has been accomplished, but reaches its true fruition once the uncertainty in these concepts becomes reawakened, the reason for which only the most remarkable scientists will freely wonder over the confusing connotations of the laws of thermodynamics, the approximative postulation of the principles of equilibrium dynamics in chemistry and the flaws of multiple other fundamental concepts in science. And yet, these great uncertainties open the door for the great Hegelian synthesis to be reached, overflowing our minds with the knowledge that whatever we do, the world will stream towards ever more beautiful emanations of life. And we start cutting the trees forever

more, while whistling melodies that ring in accord with Mark Twain's message I was handed over by a graceful shadow in a moonlit Monterey garden with fountains and flowers, on the honeymoon weekend with my Little Bear: "Humor is the great thing, the saving thing. The minute it crops up, all our irritations and resentments slip away and a sunny spirit takes their place". Today I know that smile, first inner, then outer, is indeed a lifesaving thing. For, through smiles we cater to the child in us, innocent and pure, the haven to move to, not from, even though that child may never be aware of either the benevolence of our strivings or of the invisible sunrays of spirit that land softly on its suffering soul with every smile of ours so as to rejuvenate it and fecundate with godliness. After all, the message of Christianity is conveyed through Gospels, which is the word that in Old English signifies Glad Tidings. It secretly points out that the immaculate cosmic joy, shining like a million of smiley suns, lies at the core of the heart filled with the treasure of divine spiritedness.

S.F.0.22. Beautiful thoughts and visions are the seeds and the fruits of an utterly jubilant spirituality. Which is all about endlessly envisioning creatures that surround us in a pure, celestial aura of light, enwrapped by a great desire to have them sanctified, healed, and blessed. For, "where there is no vision, the people perish" (Proverbs 29:18), King Solomon prophesied, whereby one of the central images of Buddhism depicts human heart as a fountain of wishes. Every tiny intention, aspiration or thought of ours is like a coin thrown into that magic fountain of our hearts, agitating its water streams towards their fulfillment. The Mission, the only one of the Amazing Stories directed by Steven Spielberg and aired on TVs in the mid-1980s, neatly exemplifies the beauty of optimistic and joyful visions. In it, a jet crew gets caught in the middle of a storm over the sea. Huge turbulences cause the electronic system of the plane to break down, thus disabling the wheels from being activated. Furthermore, one of the crew members gets trapped in the belly of the aircraft, in a special pit located right below the level of the wheels, meaning that the only way to land would be to smash this tiny cabin with the man inside. After vainly trying to unchain and save the trapped man, the crew finally gives up. But the captured man, an aspiring cartoonist, then, asks for a piece of paper and a pen. And starts drawing... a wheel, where it was supposed to be had everything worked fine... in golden colors. Miraculously, in the nerve-racking final moments of the landing, the wheel gets activated, occupies its exact place and leaves the seized man unhurt. A similar instance of saving a life with a powerful vision, though less supernatural, yet even more artistically appealing, can be found in Alice Guy Blaché's 12-minute long movie from 1912 called Falling Leaves, in which a little girl named Trixie hears from the family doctor that her older sister would die from tuberculosis "when the last leaf falls". It is autumn and, upon hearing this, pure and innocent as only a child can be, she sets out and begins to tie the fallen leaves back to the trees in one of the most touching scenes of the early cinema. The devoted act of hers attracts the attention of another doctor as he was accidentally passing by. The intrigued doctor decides to stop by the house, where he administers a serum to the ill girl, who eventually recuperates from the illness. In both of these fictive circumstances we see how a bright vision saves human lives, making King Solomon quietly cherish from a distant star. Likewise, with every dazzling moment of selfless devotion to drawing auras of bright light around the creatures we love, we guide them on their ways, as if strewing their paths with a shower of starry signs that bring divine guidance. How many airplanes and white birds of spirit in this life could we save by knowing that bright visions and thoughts that we sketch on the canvases of our minds truly do project their paths on the trajectories along which the systems in our surrounding, alive and inanimate alike, evolve? Otherwise, like the man who thought that he got accidentally locked inside of an ice cream truck and then froze to

death, even though the temperature of the space he was in did not even approach the freezing one, or the patient of the UCLA psychologist, Bruno Klopfer, so-called Mr. Wright, who sprightly sprang out of his deathbed two days after receiving an injection of the sham drug Krebiozen, lived a normal and healthy life for two months, but then fell ill and died immediately after he read in the newspapers an article reporting the findings of complete ineffectiveness of the drug he was being given²⁶⁷, so could we easily let the pessimistic and resigned visions of ours drag us down into the existential chasms, even though the paths to prosperity and happiness have lain open ahead of us. Erase thus all the useless thoughts that aimlessly and uncontrollably run through the rooms of your mind, just like buzzing and annoying flies do, but still have your head plunged into a swarm of wondering stars and remember how Descartes came to the idea of Cartesian coordinates while watching flies circle around the corner of his room. For, random thoughts can often carry important messages, owing to their being a mere reflection of our sub-consciousness. In addition, every creative, novel and evolving thought or process has to comprise a source of randomness, as one of the fathers of the science of cybernetics, Ross Ashby would have probably reminded us²⁶⁸. Be that as it may, an ancient Hindu story describes a young disciple taught by his master to carry a mantra firmly anchored to the roots of his mind in order to escape the grip of a grim and dangerous giant. For, the most challenging thing with respect to creating stable pillars of thoughts that as powerful vibrations penetrate each cell of our bodies is maintaining their reverberation across the hallways of our mind for a long time. These thoughts tend to be naturally replaced during our natural stream of thoughts, and yet as Alan Perlis said in one of his legendary epigrams in programming, "Making something variable is easy. Controlling duration of constancy is the trick"²⁶⁹. And so, whenever our young disciple would forget about the mantra, the giant would leap in front of him and start chasing him. As in this story, every instance of life of ours has to be flavored with a firm focus of our minds, be it through repeating self-suggestive mantras, playing inspiring songs in our head, counting millions of ships or stars, engaging our mind in selfless work or cultivating bright visions and hopes in the horizons of sunshine and love awaiting us at the end of our roads.

S.F.0.23. In the end, the level of our spirituality may be measured not by the amount of intelligently sound things we may conceive or express, but by simple and humble glow of bright wishes in which we enwrap the beings of the world in our thoughts. It has always been my opinion that even when the loved ones leave this planet forever, the path that their soul will follow and the living form that it will turn out to embody in an endless stream of cosmic spiritual evolution will be partly determined by what we wish through prayer for them. And that not through mere words, but through the impalpable music of the spirit that radiates from our heart. For, all physical expressions emanating from our being are but cilia branching off its corporeal crust drawn by the ageless spirit cocooned under it, waiting to be released in the blast of a spiritual supernova, blow off this fortress of ego that encompasses it, attain the great empathic oneness with all things under the Sun and begin to shine to the world like the yellow star around which we all evolutionarily revolve. Even so, what truly matter is the glow of the divine soul lain in the very center of our self, somewhat like the chaste child and the heart-shaped carving as a symbol of Love placed by the New York street artist, Keith Haring, merely two weeks before his soul sailed away from the cosmic station that this blue planet of ours is, in the center of the altarpiece named Christ that nowadays decorates

one of the chapels in the Grace Cathedral, a literal stone's throw away from the balcony of my Nob Hill apartment on which I spent many sleepless nights with the Moon floating and the stars shimmering in my eyes. Even when all around this blissful center of our being is feverishly shaking, just like the looming cross and the giant standing above it and the hysterically jumping masses below it, secretly symbolizing the incessant tendencies of both the church authorities and the masses of followers to ravage the core of the Christ's teaching and apply the latter in stunningly distorted and disharmonious ways, we ought to be sure that all will turn out well. For, not what stands inscribed out there, on the surface, but what is encrypted deep inside, streaming along the profoundest orbits of our psyche, is what lays bricks on the road to salvation before lost souls of the Universe. When we understand such nature of being, we may confine ourselves in the darkest corners of the Cosmos and still emit the waves of celestial love that will guide many ships lost at sea to either safe harbors or new, unforeseen and exotic lands. "Just as fragrant fumes emanate from scented sticks so also sweet spiritual fragrance will emanate from your body, the moment you attain perfection in Yoga, even though you may shut yourself up in a cave of the far-off Himalayas"²⁷⁰, Swami Sivananda thus noticed, raising our awareness of not the surface value, but the immeasurable essence; not the word, but the wish; not the food chewable in the mouth, but the food of spirit that love is, without which all living things wither; neither coolness nor cleverness, but the heart of eternal goodness; not astuteness, but inwardness; not material, but spiritual, concealed from the sensual eyes of the world and visible only to the spotless eye of thy heart. And just as the true immenseness of human beings is defined by the magnitude of the vibe of their honest, prayerful care for another, so can it be, in turn, mirrored in the mountain-moving poignancy of prayers directed to their spirits dissipating from the face of this planet and returning to the ocean of divine spirit that enfolds the entire existence with its blissful waves. That is, the ultimate sign of greatness of human creatures that sailed away from the face of the planet may be read in the greatness of the desire of others to send all their angelic guardians to lead them on the way to eternal light and divine salvation. And for as long as we hold the secret to a celestial smile in our pocket, the one that widens our eyes in sweet surprise and stretches our lips like those of a drooling doggy, transforming our entire being in the blink of an eye into a blazing sun, while at the same time pulling off acts thanks to which we will be unequivocally deemed crazy by the dull, conformist spirits of the world, quietly rebelling against each and every stagnancy and routine in this life, being different from it all while still being One in empathy and compassion with everything that abides under the starry hat of the Universe, there is no way that the angels guarding us at all times, but now set free to help the loved ones in need, won't find their new sanctuaries successfully or that souls guided by their meek hands will fail to reach the seats among the most sublime clouds of transcendental reality wherefrom they'll be able to watch over us, little earthlings, and smile with heartrending graciousness, like the ol' rabbit Bunny, unstintingly shedding stardust of Wonder on our paths and illuminating them with the beams of self-sacrificial Love, the first and the final touch of every divine creation.

On balancing balances and imbalances, and thereby on the importance of ignorance and errors

S.F.1.1. Everything in moderation, including moderation, someone has said. Although there is definite truth in the saying that "life is a great balancing act"²⁷¹, as Dr. Seuss would have had it,

²⁷⁰ See Sri Swami Sivananda's Practical Lessons in Yoga, A Divine Life Society, Himalayas, India (1997).

²⁷¹ See Theodor Seuss Geisel's Oh, the Places You'll Go!, Random House, New York, NY (1990).

we ought to be aware that, ultimately, the balance we ought to balance around is none other but that between balance and imbalance. After all, it does not take miraculous insightfulness to realize that a bicyclist has to constantly advance forward to maintain his balance, whereby a tightrope walker has to constantly fall towards the opposite directions to keep moving forward and the wings of an aircraft must compensate each other's tilting downwards many times per second to maintain the upward drag of the plane and allow it to unrestrainedly pierce the clouds in its flight. In other words, our progressive streaming towards ever higher and more developed ways of being is inescapably tied to our readiness to sway back and forth, from the edge of one extreme to another, while every so often touching the middle ground, the straight and narrow path that projects us like a goodwill rocket from the earthly to the heavenly realms of being. The mastery of balancing these fallings out of balance and yet returning back to the balance can be called the ultimate systemic skill in life. For, staying permanently in the state of perfect balance would be equally futile and unproductive as residing all of the time in an unbalanced state. The only true balance in life thus comprises incessant shifts between the states of balance and imbalance. This reminds us that we need to make mistakes and embrace imperfections if we are to follow the line of perfect development.

S.F.1.2. Nobody knows why biological creatures need to sleep, but the fact that a good night sleep, an immersion into pitch black nothingness, a total opposite from the fantastic world of our conscious experience, dancing with colors and perceptive outlines and caressing our senses, is needed for us to retain attentiveness and sustain the excellence of our creative daytime work points at the importance of embracing imperfections, of occasionally travelling in totally opposite directions from those that we know will lead to fulfillment of our quests for treasures in life to make us truly get there. And as we roam through the dreamy darkness of the land of shadows on our way to the bright and shiny daylights that symbolize the perfect awakening of our spirit, which thence turns into a Buddha, the awakened one, we ought to know that constantly diverging from a straight path that leads to a desired destination is the only way that will take us to it, the principle visually impressed in the spiral shape of the very galaxy that homes our wondering souls. With the ultrasound probe pressed onto a pregnant woman's belly, the pediatrician's eyes will glisten the moment when she hears not only the steady heartbeats of the baby whose eyes have yet to open, dreamingly floating through this prenatal ocean filled with salty tears of sadness and summery splashes of joy, but a sudden change in the beat rate too. And her delight over variability, not monotony, subtly reflects what constitutes a truly healthy outlook on life: not uniformly and determinedly following a preformed route of seeing and acting, like an unimaginative and wholly desensitized robot, but ceaselessly, with an infinite spiritedness, bouncing off back and forth from one flowery impression to another as we allow ourselves to empathize with and be profoundly touched by them all, breathlessly excited and exploding with enlightening energy at one moment and dejectedly cocooning and withering with the world at another. Finally, to shape a child's head into the one of a crescent Moon, we need to set it sleep on the sides. Whereas sleeping in a perfectly equilibrated posture, laying on its back, would flatten the crown of its head, to fill the interior of the latter with the moonlight of sublime and aristocratic thought, and predispose the child to become a graceful dreamer, an elegant infant even when it grows up, we may need to have it sleep on the side and curl itself into a cocoon that dreams of butterflies. Not to be in the center, always in the state of perfect balance, but switching from side to side, passionately searching for perfection which apparently lies in alternately falling from the balance and returning to it, endlessly seeking

and being on the quest, is thus the real way forward. To make the things perfect equals making them imperfect, whereas through perfect imperfections we reach the true perfection.

S.F.1.3. A touch of imperfection lies concealed within everything. A faulty line is drawn through the heart of all things. And in it lies the source of our progress and evolution. For, only entropy can be the source of new order and only chaos can bring about the bricks for building some starry knowledge. The way Lao-Tzu began his Tao-Te-Xing was by saying, “Mystery within mystery, a gateway to all understanding”, whereby Friedrich Nietzsche famously proclaimed that “you must have chaos within you to give birth to a dancing star”²⁷². And so, even as I write these words, I know that too much of the tendency to produce perfection, to find the perfect words and place them in the perfect order would yield long, dry and hardly readable sentences, while writing with chaotic galaxies swirling inside of my head would result in carelessly piled words on the space of this screen. For, in order for order in this world to evolve, it has to be immersed in seas of freedom, chaos and disorder, ceaselessly taking their contents in and transforming them into food for the formation of more of the ordered patterns. Only when supplied and pervaded with entropies that surround us can order of the physical reality be multiplied and diversified. Hence, what we find ourselves in are seemingly disconnected sequences of thoughts on the role of imperfections in life, neatly reflecting their underlying message in their structure, which is something that I have ever since called for our works to satisfy: reflecting their main message at each and every one of the levels of their organization. Yet, although appearing unlinked, unsystematic and randomized, there is a mysterious thread that extends through it all, uniting them into a greater whole than it may seem at first sight.

S.F.1.4. Hence, whatever I do, I breathe waves of imperfection into it. If I walk, I stumble, if I talk, I hesitate and stammer, if I hold, it will be dropped. I hit what I am supposed to pass by or slid through. If I run a procedure in the lab, there will certainly be a moment when I will be led astray. But on the other hand, I manage to balance this with a dose of immaculate pedantry that only stellar Virgos like me are known to exhibit. And that may be where the secret of my success lies: in pervading imperfections with sunrays of bright aspirations. As I type these words, I do that with only two of my index fingers, which makes people who are nowadays regularly trained to use ten fingers for typing purposes rather than only two see my way of typing as pretty retarded. Yet, I have managed to write many thousands of pages comprising much more words than what many of my scientific advisors and tutors wrote altogether during their lives, which makes my endeavors close and dear to the heart of Taoist acting, as described by Lao-Tzu: “The greatest perfection seems like an imperfection... the greatest abundance seems like shortage... the straightest road seems like an impasse; the highest skillfulness seems like sloppiness; the greatest eloquence seems like stammering” (Tao-Te-Xing 45). And so, as I collect the glassy pieces of broken Petri dishes from the lab floor, I spin these Lao-Tzu’s thoughts in my mind and, lo, they wash away the feelings of guilt with awareness that through imperfections and mistakes we climb to higher levels of knowledge and being. Still, when I enter a room full of machines, at least one of them stops working, making me ask myself if I radiate with some mysterious energy that makes all the appliances around me spontaneously deteriorate, somewhat like Chuang-Tzu’s man who despised machines. And whenever I found myself in a temporary state of despair over this irremediable fallacy of mine, a Winnie-the-Pooh voice in my head would tell me how “exactly because I am

²⁷² See Friedrich Nietzsche’s Thus Spake Zarathustra, translated by Thomas Common, retrieved from eserver.org/philosophy/nietzsche-zarathustra.txt (1883).

such a small and imperfect creature, I will be useful in the adventure that is before me”. Then I would wipe the tears off my cheeks and with shiny joy in my eyes face the road ahead of me. For, life, I know, remembering all the while that trite sci-fi book adage, “Hard times create strong men, strong men create good times, good times create weak men, and weak men create hard times”²⁷³, follows a sinusoidal path whereon these enlightening moments alternate with the phases of sadness and depression preceding and succeeding them. In fact, so tightly are sadness and joy entwined in the fabric of our experience that pure joy here and now is possible only because there is heartrending sadness dripping its tears just outside its frames, and *vice versa*. “None yet e’er drank a honey’d draught unmixed with cup of bitter gall, and cup of gall for honey equally doth call, that so, the mixture one may easier drink”²⁷⁴, proclaimed by the most celebrated Montenegrin poet, Petar Petrovitch Nyegosh, prompting me to think of how writing these lines, like any serious work, is a strange blend of suffering and satisfaction, tribulation and pleasure, as well as recollect one of my dearest songs of the band in which I played the lead guitar as a youth²⁷⁵, in which two virtually indistinguishable verses were repeatedly sung one after the other, *ja znam kako боли* and *ja znam kako воли*, with the two words, *боли* and *воли*, in this context meaning “hurt” and “love”²⁷⁶, respectively, differing by a tiny wave of a line and insinuating their existential indivisibility from one another, alongside the phonetic one. Less poetically, side by side with these verses I may place an unusual advice a witty wisecrack gave to a young man at his wedding: “When you screw up, you will know you have done right”²⁷⁷. For, to feel as if we have blown it is a sure sign of our respect of whatever the object of our thought is; or, to see a glassy object shatter in front of our eyes to millions of pieces is the way to meet its inherent value, as some may say. Dwelling in the limelight of perfection at all times would thus make us blinded by its light and inevitably prone to fall into abysses of imperfection. In contrast, to step into the realm of imperfections whenever we find ourselves on the road to perfection is the way to reach immaculate perfection in life. Once again, it is through imperfections that we reach perfections in life. Perfections that are, again, but perfect imperfections.

S.F.1.5. Imperfections need to be infused in every aspect of our being in order to open the door to our becoming a wonderful dancing star of grace and love. The moment we accept our humane fragilities and, instead of heartily avoiding them, start using them as pedestals from the top of which all our expressions will spring forth, proving thereby (a) the nature of reality whereby perfections yield imperfections while imperfections serve as the basis for all perfections, and (b) the Christ’s aesthetics of poverty which dictates that “the last shall be first and the first last” (Matthew 20:16), our voyage towards truly stellar modes of being is being embarked on.

²⁷³ See Michael Hopf’s *Those Who Remain: A Postapocalyptic Novel*, CreateSpace, Scotts Valley, CA (2016).

²⁷⁴ See Petar Petrovich Nyegosh’s *The Mountain Wreath*, rendered into English by James. W. Wiles, George Allen & Unwin, London, UK (1846).

²⁷⁵ The name of the song is *Svetlost*, meaning *The Light*, and *Tišina kod poluzvezde* was the name of our band in Serbian, which would literally be translatable as *Silence by a Half-a-Star* or *Silence by a Semi-Star*. However, since the Serbian word for half-moon, *polumesec*, is also commonly used to denote the crescent moon, “crescent” is a legit epithet and the name it yields markedly more poetic: *Silence by a Crescent Star*.

²⁷⁶ A keen listener might hear another word blended with these two: *моли*, meaning “pray”, with the overlap of love, pray and hurt making this magnificent musical moment of my life an embodiment of the spirit of the Roman god, Mercury, the hermaphroditic ideal of the alchemists of the present of past and a spirit who has, according to the Roman mythology, traversed the worlds of gods, humans and the dead – hence, *воли*, *моли* and *боли*. This form of Holy Trinity is only shyly touched on the lines of this footnote, yet it could be easily developed into a limitlessly vast and infinitely potent universe of thought.

²⁷⁷ See the broadcast coverage of the wedding of Kim Kardashian, E! (October 9, 2011).

Therefore, whenever I become touched by an imperfection in someone's creation, I know that it has opened a gateway to the bliss of a sun in front of me. The reason why I readily recognize the letters from my Mom and so incredibly much enjoy in their warmth and tenderness is partly due to the typo mistakes she regularly makes in them. This, in turn, over and over again invites me to rethink the extent to which making mistakes is vital for the evolution of our being and knowledge in this world and ensuring the constancy of the inspiring lovingness of our creative acts. Our perception *per se* is, for example, conditioned by the mistakes we commit in running it. Namely, only sensory inputs that differ from the expectations established by our cortexes are perceptually noticed²⁷⁸; all else, not registered by the brain as a deviation from internal predictions, or, in other words, not seen as a mistake, becomes virtually unperceived and eclipsed by the veil of mental blindness. Then, we ought to remember that recognition of a fragility in an object or a creature and awakening of profound compassion for it marks the beginning of all truly cordial relationships. For, just as proven things do not require from us to have faith in them, leading to gradual withering of our genuine religiousness, so do hypothetically perfect beings call for no compassion and care to be invested in them, which similarly leads to the withering of our humaneness. "Poor squirrel" and "poor bear" is, after all, what the angry young man, Jimmy Porter, and his wife, Alison tell each other in the final scene of John Osborne's *Look Back in Anger*, being the only moment in the play where the two characters emerge out of the emotion of hatred for one another and get immersed in the ocean of love that surrounds us all, albeit being invisible for as long as people are perceived through the lens of presupposed perfections. Hence, "if you don't see a vulnerability in somebody, you are probably not relating with them at a very personal level"²⁷⁹, Jonathan Blow, an SF programmer and developer of indie games wherein imperfections are not polished but accentuated, noticed. In fact, imperfections, revelations of our humane fragileness and deviations from the unexciting behavioral clichés are all sources of starry twinkle within the inspiring personalities of ours. On the other hand, perfections as traditional worldly ideals go hand-in-hand with being a rigid, robotized creature, a mere witness of the world that never finds enough strength to break the pattern of an easy flow of things and utter words that would bring light to the world and at the same time inevitably reveal our humane blemish. One's ego would then resemble a brittle bridge ready to crumble down at any time due to its inflexibility to accept one's own imperfections with the lustrously good-humored nature of the sun of one's spirit. If we pine to shine to the world with divine grace, we better not only accept, but highlight mistakes in everything we do, as I love to claim. For example, whenever I produce an error in the most professional context of my creativity, inducing strange looks of disbelief focused on me, I reply with something like, "Well, after all, we are all amateurs. And you may know it or not that this word originates from Latin *amare*. Which, *amici miei*, means Love". Another San Franciscan, the unorthodox violinist, Yehudi Menuhin, who saw the act of "distortion"²⁸⁰ of the musical pieces played by breathing the breezes of imperfection in them in a partially improvisatory manner as essential for the expansion of their capacity to move the listeners, extended this etymological insight by claiming that "if 'amateur' designated the one who out of a deep love gives of himself unstintingly, and if 'professional' is inferred to designate the opposite, give me the amateur each time"²⁸¹, and then went on to notice the following: "The amateur is the source of all culture and art. It is the

²⁷⁸ See David Eagleman's *Incognito: The Secret Lives of the Brain*, Vintage Books, New York, NY (2011), pp. 49-50.

²⁷⁹ Watch *Indie Game: The Movie* directed by James Swirsky and Lisanne Pajot (2012).

²⁸⁰ See Yehudi Menuhin's *Theme and Variations*, Stein and Day, New York, NY (1972), pp. 36.

²⁸¹ *Ibid.*, pp. 18.

peasant amateur who delights us with his violin and cimbalom, and whether in the palaces or in the apartments of Vienna and Budapest, or on the African veldt, the plantations of the New World, the streets of Rio de Janeiro or New Orleans, it has always been the amateur around whom the living culture of the day grew up”²⁸². The Turkish filmmaker, Nuri Bilge Ceylan, who has held that professional actors do infuse performances with more energy, but working with amateur actors gives better results in the long run²⁸³, and who picked Muzaffer Özdemir as the worst performing actor in the audition for the main role in his film *Uzak*, a.k.a. *Distant*²⁸⁴, earning him the award for the best actor at the 2003 Cannes Film Festival thereby, would undoubtedly agree with this viewpoint. And indeed, no profession is immune to the warping of its genuine purpose and aesthetics in the heads and hearts of its practitioners, which is why, for example, smiles shed by ordinary men and women, especially in cultures not accustomed to touristic exploitation of the stranger, beat by a million moonlight miles those shed slyly and sleazily by the stereotypical spokespersons of any service industry. What Jean-Luc Godard wished to insinuate when he deliberately introduced technical errors in his *Film Socialisme*, what Krzysztof Kieslowski wanted to hint at when he made his camera gradually start to lose focus and produce an indiscernible blur in a scene from *Trois couleurs: Bleu*, and what Jean Cocteau aimed at when he shrugged off the criticism over shaky images in the final scenes of *Les Parents terribles* with the saying, “The caravan continued on its way, the gypsies do not stop”²⁸⁵, and began to regard it as his greatest technical accomplishment in his filmmaking oeuvre²⁸⁶, was exactly this love for the amateur, for the child in us, ignorant of the strivings for perfection and immune to the sterility that these skewed strivings create in the world. Besides, if Ezra Pound was correct when he noticed that “if the individual, or heretic, gets hold of some essential truths, or sees some error in the system being practiced, he commits so many marginal errors himself that he is worn out before he can establish his point”²⁸⁷, then the closer we get to see the bedazzling lights of divinest truths at the end of the tunnel of the purgatorial experience that life on this planet constitutes, the more prone to blunders will our beings become. And conversely, if we wish to get closer to this enlightened worldview, wherein all is bliss, we could start by uprooting any strivings for perfection and beginning to err, freely and gracefully. This implies that mistakes are to be made, deliberately yet naturally, and imperfections worshipped if a route to the restoration of genuineness of approaches to creative expression within the domain of any profession is to be drawn. By means of such reference to the necessity of being angelically frail, softly blemished and all but a bearer of readymade, know-it-all attitudes if panoramas of stellar imagination are to be arrived at, doors to an inflow of gentle winds of humbleness and humaneness become open in the hearts of my disciples, letting their creativity be invigorated, quietly and secretively. For, truly, there may be no other way to shine with beauty and lovingness in this world than to be a perfect imperfection to it.

S.F.1.6. Even scientific measurements, the cultural prototypes of an unsurpassed precision in human interference with Nature, are actually subject to inherent imperfections. Perfect scientific

measurements are impossible, and every measurement has an error attached to it. And in these errors, in outliers and discrepancies that decorate scientific graphs, the doors to most exciting and unexpected discoveries lie hidden. For, while research results that match our expectations merely confirm the existing paradigms and do not essentially contribute to the evolution of new knowledge, those that seem as an error at first, diverging from our exploratory premises, in reality open the way to truly progressive and potentially groundbreaking findings. One example from the history of science may be that of Vincenzo Viviani's being irked by the veering of the pendulum he was setting sometime in the late 1650s and using a pair of ropes instead of one to fix its trajectory²⁸⁸, not knowing that two centuries later Léon Foucault would notice that this "irksome" change in the plane of oscillation of a pendulum goes through a full-circle, 360 ° rotation in a sidereal day (23 h, 56 min), correlating with the diurnal rotation of the Earth around its axis and, thus, effectively proving the latter²⁸⁹. Therefore, error is not a thing to avoid, but to celebrate, provided we are an authentic explorer of physical reality. And, ultimately, the reason of the existence of measurement errors lies in the interaction. Namely, every measuring apparatus needs to interact with the measured system in the act of measurement. In this interaction, the measuring device perturbs the measured system to certain extent, and thus disables the possibility for a perfect measurement. Therefore, since there could be no perfectly disinterested and unbiased observations, scientific or nonscientific, we could be sure that any product of theirs conceals the profoundest prejudices and anticipations of the observer as much as the reflections of the intrinsic nature of the observed objects. This observation is tightly related to the co-creational thesis in which it is proposed that only products of the interaction between mind and Nature are perceptible to us. However, as this fundamental principle of measurements tells us, both mind and Nature are subject to change in the course of this interaction, so a mind's experience of Nature inevitably comprises the effects of mind itself, such as its predispositions, expectations, intentions and sensory measurement tools, intermingled in it. Theoretically speaking, in order to enable a perfect measurement one would need to perfectly calibrate the measuring device by the means of another measuring device. However, this would only bring us to the need for an infinite line of measuring devices that calibrate each other, without really solving the problem. Thus, each measurement comprises an error, which is often described in terms of the standard (deviation of the) error, that is, a range around the value assigned to a given system in the act of measurement (as the difference between the measured and the true, but never truly known value). Like the orbits of electrons around the atomic nuclei being clouds of spatial distribution rather than precisely delineated trajectories, so is every data point in our epistemic universe smeared to a certain extent. But, what many people oversee is that just like an infinite line of measuring devices is hypothetically required as a condition for the perfect measurement, the same could be said for the measurement of the measurement error. Remotely, this rather practical observation relates to a vital theoretical concept that lies at the root of Bayesian probability; according to it, assessment of the probability of a hypothesis has to be preceded by the postulation of a prior, underlying probability, somewhat similar to the way interpretation of any data requires proposition of implicit assumptions that are not provable or verifiable by the interpreted data. Thus, not only do uncontrollable variations in the sample structure, in the specimen preparation procedure or in the very act of measurement contribute to us having a range of possible values for the measured quantity of interest rather than a single specific one, but the measurement of every measurement error will have its own error too.

²⁸⁸ See Joël Sommeria's Foucault and the Rotation of the Earth, *Comptes Rendus Physique* 18, 520 – 525 (2017).

²⁸⁹ See Léon Foucault's *Démonstration physique du mouvement de rotation de la terre au moyen du pendula*, *Comptes Rendus Hebdomadaires des Séances de l'Académie des Sciences* 32 (5) 135 – 138 (1851).

It is, therefore, a sign of mild ignorance to present a set of results and claim precisely determined errors thereof. Claims of astonishing precision are thus oftentimes due to carelessness and inaccuracy in estimation of the error rather than due to extraordinary accuracy. To justify these claims, one would need to be in control of perfectly reproducible experimental conditions, which is never the case. Typical distilled or de-ionized water²⁹⁰ contains a few solutes at a level higher than 10 μM , a few dozens of solutes at a level higher than 1 nM, and hundreds of solutes at a level higher than 10 pM, and the laws of dilution tell us that a finite amount of a solute will remain in the solution even after an infinite number of successive dilutions and even if we do not account for this intrinsic impurity of pure water, the most basic of all solvents. This does not mention that not a single system in Nature is isolated and that an exchange of matter incessantly takes place between it and its environment. Water left in air thus dissolves it in form of bubbles, which contain carbon dioxide and form carbonic acid in water, holding an explanation of why pH of pure water in air is acidic (pH \sim 5.5) rather than neutral (pH 7 under atmospheric conditions). Every substance that we use as a precursor in a chemical study is thus always of a different composition. Just like every rock on Earth contains all the elements of the periodic system (albeit in atomic amounts for the rarest of them), every chunk of matter, no matter how assumedly clean, is always unique in its content. Even using state-of-the-art purification techniques the concentration of impurities in materials could hardly be lowered below 0.0001 %, which is the concentration at which one cubic meter of the material would contain between 10^{22} and 10^{23} foreign atoms²⁹¹. And the studies of chaotic systems, which all biological entities belong to, as well as possibly the medical phenomenon of homeopathy, clearly show us how a butterfly deciding to flap one more time with its wings can produce a storm or sunshine in a distant place on the Earth. Like the feather that landed out of nowhere onto the tennis court of Rod Laver arena during the final match of the 2013 Aussie Open and got picked up by Andy Murray, prompting him to make a double fault during the second set tiebreak and enabling Novak Đoković to win the set and shift the momentum of the match that he had been losing until that moment to his favor, the feather that may send your mind too to a whole new direction of perceiving reality, nearer to doors behind which enlightened, diamond-paved dimensions of consciousness patiently await you like sturdily standing saints, so is each and even the tiniest conceivable action always mighty enough to be capable of overturning the outcomes of the most colossal events around us – at least so say the premises of chaos theory. Now, the lateral question is if we could make miniscule words and acts of ours, such as quiet whispers or hair flips, be these butterflies whose puny wing flaps will produce ripples that will miraculously turn into larger waves and stay forever and ever with this world? The recipe is unknown and will never be revealed, but the only thing we could do is to keep the pure glow of love in our hearts and have faith that every mild thought and movement of ours will be a wing flap of this majestic butterfly. I will remind you of one thing, though. It is that without the incessant clashes between the natural forces that tend to perfect the organization of Nature and those that tend to disorganize and dishevel it, the flourishing of love and faith in our hearts would not be possible. Our incessant resting on the way illuminated by the desire to solve the troubles of the world and bring about a perfect salvation to everything is what sustains the glow of these precious emotions that are the foundations of our creativity in this world.

S.F.1.7. One of the first things that a comprehensive and truly profound scientific education should point out to young scholars is that map is only a metaphor of its territory. Likewise, scientific descriptions are only humanly crafted metaphors of the experiential realities they depict. Hereafter, only foolish minds would comprehend scientific scriptures as literal representations of the natural order and by looking, for example, at a graph composed of a finite number of experimental points conclude that if there were no scope of the measurement error included, the values given must be perfectly exact for the conditions applied. As already pointed out, to satisfy the hypothetic criterion of perfect estimation of the measurement error, an endless sequence of probabilities would have to be calculated as we follow the causal links of the analyzed events back in time, which makes every measurement error subject to an error, which also has a measurement error ascribed to it, *et cetera, et cetera, ad infinitum*. It is a different story altogether as to why the arbitrarily defined statistical difference of 95 % ($P < 0.05$) was accepted as the standard confidence interval that draws the limit between statistically significant and statistically insignificant sets of results. The first proposition of the use of exactly this confidence interval dates back to 1925 and a textbook by the English statistician and biologist, Ronald Fisher, in which he also equated it with 1.959964 of the standard deviation of the mean²⁹². Yet, how ironic it is that scientists dogmatically tied to accurate quantifications have come to believe that a drug performing positively with 95.1 % margin of confidence is worth commercialization, while the one performing positively with, say, 94.9 % margin of confidence isn't, when the limit of 95 % was established by pure convention. Indeed, I have seen researchers from all walks of science, ranging from graduate students to senior biotech engineers to professor emeriti, confidently report a 94 % confidence interval as statistically insignificant, as opposed to the 95 % interval established by convention as the arbitrary boundary between statistical significance and insignificance, without realizing that the difference between the significant and the insignificant is in this case insignificant, the reason for which these two confidence intervals are to be treated equally in the context of data analysis and discussion. To feel certain about the clinical applicability of treatments effective in 95 % of cases and to treat them as a failure when this probability equals 94 % are both exhibitions of ignorance of the point Blaise Pascal made when he asked the monumental mathematical question: "But is it *probable* that *probability* brings certainty"²⁹³? Statistics can also be blamed for fostering the warped ideal of normality²⁹⁴ that is all but compatible with diversity and originality, with inventive deviations from the mainstream, with going beyond the bleak opinion and actions of the flock. For, within those 5 % of values that fall outside of the confidence interval lie the gateways to the most valuable discoveries, albeit routinely discarded as outliers by the statistical mind, always gravitating toward the average and away from the extraordinary. Statistics, as it should never be forgotten, has also been the backbone of mass marketing, which has bred lifelessly monotonous uniformity of personalities and identities in the world around us, disseminating the false premise that one life could be substituted with another, thus trivializing and diminishing the value of it. On top of this, statistical models have proven themselves as terrible means for evaluating the effects of personalized medicine, which will craft the future of medical practice by tailoring the medical treatments to genetic traits of each patient individually. For example, the proof of statistically average therapeutic efficacy of a medical treatment, minimizing variations in the individual patient

response, has been traditionally the key to obtaining regulatory approvals from agencies such as FDA in the US or EMA in the EU, but is fundamentally at odds with the path toward personalized medicine. Notwithstanding the fact that statistics is the language of the masses, while those odd outliers, rejected and misunderstood by the mainstream, are what speaks to and from the extraordinary minds adorning this planet, even scientists who swear by statistics, as we see, rarely apply it with perfect accuracy. Another common error committed by scientists relying on statistical methods to prove their points is thinking that an established confidence interval for a given parameter predicts that its true value has a particular probability of being in the confidence interval, when it is the other way around: a range of values of the given parameter is used to define the confidence interval. Incarnation of the idea that statistics could be a guide for the future instead of only a broad window into the past in this form presents, of course, the same logical fallacy as that committed by the English soccer analyst, Charles Reep, who, in collaboration with Bernard Benjamin, the Head of the Royal Statistical Society, ran a comprehensive statistical study that concluded that 80 % of goals resulted from three passes or less, went on to publish these results in the *Journal of the Royal Statistical Society*²⁹⁵ and claim from there on that basing the game on few, long-range passes whereby the ball is sent forward as quickly as possible is a necessity, thus regressing the English soccer for the next couple of decades and perhaps not even dreaming of the days when zonal movement of the squad and extensive tiki-taka passing would prove the approach he advocated passé. Other mistakes frequently encountered in the scientific literature, including (a) reporting means and standard deviations instead of medians and interquartile ranges for non-normally distributed data, which are far more common than the Gaussian in biological sciences, (b) using linear regression to fit nonlinearly distributed data, (c) ignoring that variables are paired and treating them as independent instead and (d) interpreting statistically insignificant results as negative, rather than inconclusive, thus erroneously taking the absence of proof as a proof of absence, account for the fact that more than a half of all the papers published in the most reputable medical journals contain grave statistical errors²⁹⁶. In fact, fallacious statistical aspects of scientific studies, from which pretentious and overly confident conclusions are derived most of the time, as in the cases when statistical significances are bluntly identified as general significances, are responsible for the fact that many of us might agree if not necessarily with Mark Twain's claim that "three kinds of untruths exist – lies, damn lies and statistics"²⁹⁷, then surely with the ensuing recently exposed arguments: "There is increasing concern that in modern research, false findings may be the majority or even the vast majority of published research claims... There are more false claims made in the medical literature than anybody appreciates... If it remains unsolved, the whole of the statistical approach to science may come crashing down from the weight of its own inconsistencies"²⁹⁸. John Ioannidis, the author of the most downloaded paper published so far in *PLoS Medicine*, *Why Most Published Research Findings are False*²⁹⁹, also blames the propensity to exhibit bias inherent in the statistical method, alongside prejudiced questions behind the hypotheses, cunning data selection and, last but not least, the academic pressure to publish, for the

fact that the majority of medically relevant reports in literature should not be taken for granted³⁰⁰. And how dangerously far the bias of researchers in their trying to prove the hypotheses in question reaches is nicely shown by the findings of a recent statistical metastudy³⁰¹: namely, 10 out of 12, or 83.3 % of studies whose researchers reported no conflict of interest came to conclusion that sugary drinks are directly linked to weight gain or obesity, whereas the same percentage of studies, 83.3 %, that is, 5 out of 6, carried out by researchers who did report funding from soft drink industries, were inconclusive about the effect of the consumption of sugary drinks on the weight gain. Keeping in mind that map is not the territory would, among other things, prevents us from committing “the fallacy of misplaced concreteness”, on which Alfred North Whitehead extensively discoursed, and falling into the trap described by Stephen Ziliak of Roosevelt University in Chicago, “Eight or nine of every 10 articles published in the leading journals make the fatal substitution of equating statistical significance to importance”³⁰², or the one pointed out by Andrew Gelman of Columbia University and Hal Stern of the University of California, Irvine, “Students and practitioners should be made more aware that the difference between ‘significant’ and ‘not significant’ is not itself statistically significant”³⁰³. The meta-analysis published in 2007 in New England Journal of Medicine and attributing increased heart attack risk to the diabetes drug Avandia following statistical manipulations carried out on raw data from the combined trials that initially showed that 55 out of 10,000 patients had heart attacks when using Avandia, compared with 59 people per 10,000 in comparison groups, may also shed light on Mark Twain’s equalization of statistics with a most notorious lie imaginable. Bayesian approach to improving the statistical analyses of clinical trials of this type broadens the *a priori* context of the analyzed systems in question by viewing the data in light of prior beliefs in a specific hypothesis. In doing so, “degrees of belief” are created to cede the place of the tools of the standard and objective statistics, creating a more faithful, and yet less calculable statistical interpretations of the results of our measurements. Be that as it may, naturally, by knowing that perfect measurements and perfect error measurements are impossible, each function depicted on a graph or in a table would be humbly seen as a qualitative correlation rather than a perfectly precise quantification. “I consider that I understand an equation when I can predict the properties of its solutions, without actually solving it”³⁰⁴, Paul Dirac wrote once. Similarly, an astute intellect gazing at a graph would foresee a qualitatively tentative trend in it in the moment of understanding rather than a truthful and perfectly faithful reflection of the reality. Besides, what differs science, in its purest, ideal form from industrial, applicative research is breadth entailed by the quest for proofs of concepts only rather than the narrowness of focus brought about by excessive optimization and the overemphasis on precision. This is what brings pure science close to arts too, if not merging them together into an inseparable unity tied around Robert Schumann’s maxim: “All artistic effort is approximate”³⁰⁵. When we understand that this applies to the effort in pure sciences, the rooms for arguing would

vanish and the space for wonder would open. Through this door, we would be able to glimpse the secret of what acknowledging science as a set of metaphors is meant to achieve: to show us how it is essentially a beautiful fairytale wherein quantities serve the role to depict qualities rather than *vice versa*. In a story about the whimsical bear, Winnie-the-Pooh, Christopher Robin correlates the supposed delightfulness of the top of the forest called Galleons Lap with the fact that no one could ever count if the number of trees arranged in a circle on it was 63 or 64, “not even when he tied a piece of string round each tree after he counted it”³⁰⁶, and, similarly, a sense of magic washes over the minds of scientists in beautiful geysers and waterfalls after they realize that it is qualities, not quantities that matter most at the end of the day and that the awareness of immeasurability stands at the entrance to the finest treasuries of knowledge. To tell us that there is no room for quantifications in a truly angelical mindset, Dante envisaged Heaven, unlike Hell and Purgatory, as free from divisions by numbers, believing that all the gradations, degrees and comparisons - and quantifications are by default comparisons with some numerical and/or metric standards - instantaneously melt before the infinite bliss of the Divine reigning therein³⁰⁷. Moreover, “a culture where the first rule of success is that there must be something to be measured and counted is not a culture that will sustain alternatives to market-driven creativity”, as Sue Halpern noticed in an article for the New York Review of Books³⁰⁸, perhaps wishing to tell us that liberation from the thirst to insatiably quantify it all, erroneously believing that numerical valuation will make our empirical methods more scientific, is a necessary step towards establishing ways of being that are guided by the force that, through acts of otherworldly magic, delivers to the people not what they want, but what they need. Hence, worldviews wherein numberless qualities reign, none of which could be thus compared in value with their neighbors, taking on a whole infinity upon themselves, can be said to be those that spring from under the umbrella of truly heavenward thinking. However, to convince the current inhabitants of the Ivory Tower as well as the up and coming generations of academicians that quantifications are but a tool for the qualitative thought and that sculpting beads of logical rigor connected by the threads of analogical reasoning is what makes a study scientific, not merely adding numbers and formulas as dressings to it, is a whole different task ahead of us. After all, it is an undisputable statement of fact that, as a result of the need to sacrifice taking into account the intrinsic interdependency of variables for the sake of enabling analytical solvability, each and every equation aiming to represent an observable physical phenomenon either engrains massive approximations of one kind or another or is empirically applicable only under special sets of circumstances. Included here is even the most famous and scrutinized of them all, Einstein’s energy-mass equivalence, $E = mc^2$, which is, first of all, valid only at infinitely low momentums of the observed objects and, then, needs significant corrections, such as those proposed by Dirac³⁰⁹, to describe the relativistic behavior of subatomic particles. The most masterful scientists of the present and past have been familiar with this approximate and qualitative nature of even the most seemingly precise quantitative assessments of patches of physical reality, which is why at the very entrance through this sacred gate of reason we can glimpse the statuette of Albert Einstein humbly holding marble spheres in each one of his hands, gleaming with two of his timeless thoughts: one, profoundly analytical and philosophical, reminds us that “physical

concepts are free creations of the human mind, and are not, however it may seem, uniquely determined by the external world”³¹⁰, inviting us to infuse subjective values once and for all to everything that comes out of our scientific perception, while the other one, dreamy and fantastic, providing the right balance to the focused, disciplined aspect of a fulfilled scientific mind, tells us that “if you want your children to be intelligent, read them fairytales; if you want them to be more intelligent, read them more fairytales”; for, science is indeed but a most wonderful, interactive fairytale we could dream of, co-drawn by the human mind and Nature, and such fanciful, literally visionary scope of the scientific mind is its pole as vital as the complementary pole from which sharp and acute intellectual insight originates. As we lightly continue to tread beyond this door, an invaluable insight of each scientific model as manmade and one out of an infinite number of concepts that would decently reflect the physical reality rather than one and only, ultimately truthful and universal, dawns on us. How dangerous for the wellbeing of our epistemic microcosm and the world as a whole one such philosophically flawed faith in a single way of describing reality can be is neatly insinuated by the words of Max Born who courageously claimed that “the belief that there is only one truth and that oneself is in possession of it seems to me the deepest root of all that is evil in the world”³¹¹. Yet, the passage through this gate beyond which the glass bead road of philosophical playfulness stretches as far as our pearly, glistening eyes can reach is conditioned by our unconditional acceptance of a whole infinitude of equally correct ways of portraying life, regardless of how at odds these individual models may seem to be at first sight. For, where dogmatism stops, the limitless shine of our spirit begins. This is when the power of celestial wonder takes over our being and the arms of our spirit start to spread, welcoming each and every one into the home of our heart. In contrast, the tighter the cage of unquestioned doctrines into which our spirit is confined, the narrower the scope of its blissful glow. Of course, confinement to a prison bears perfect safety and security, whereas freeness of our beings is directly proportional to the magnitude of insecurities overcoming them at all levels³¹², which is why a prolific quest for new knowledge must by all means take us to the epistemic regions of doubt, dubiety and frailly wondrous and delicate thought, all of which stand in diametrical opposition to the deadbolts of dogmatism, intellectual steadiness and creedal certainties. Finally, as we stand at this entrance to understanding of the world of science through the blissful eyes of utmost philosophical clarity, we become aware that imprints of scientific imagery are not as perfect as they are often represented as and commonly taken to be, and that reading in-between the lines while glancing at scientific pictures is a necessity if we are to avoid appearing akin to the physicist caught frying fish fingers vertically, on their miniature sides, just because the instructions said that they ought to be fried “on all sides”, and thus wholly ludicrous in the eyes of the Universe, which are always blinking with a cherubic sweetness and sympathy that incarnates inherent imperfections and insecurities which countless poets and philosophers all the world over, including Alexander Pope, the coiner of the phrase “fools rush in where angels fear to tread”³¹³, and Erich Fromm, the holder of the idea that “the psychic task which a person can and must set for himself is not to feel secure, but to be able to tolerate insecurity... free man is by necessity insecure; thinking man by necessity uncertain”³¹⁴, ascribed to the nature of sublime beings and objects in life.

S.F.1.8. It is in the nature of the human analyses of physical phenomena to be imperfect in their precision and reliability. Returns to earliest beginnings always carry invaluable insights, regardless of the subject of our research, and our first feedings on this blue planet as we, as an infant, rested on our mother's breasts present one such infinitely instructive moment; namely, even though breastfeeding is tied with immeasurable milk consumption by the baby, it proves to be immensely more beneficial for it than feeding it from a bottle and knowing the exact volume of the milk consumed, teaching us that the most valuable qualities in life are unquantifiable and that only when we face something that defies confinement into precise mathematical models should we be sure that that something is something of truly touching importance. Note that the same principle of inherent imperfection applies to every single aspect of our exploratory relationship with Nature, including the multifaceted domain of scientific research. Everything flows and changes, and if our desire is to dwell for too long in each tiny aspect of our research, many other important aspects thereof will pass by us unnoticed. For, sometimes the more precise we want to be, the less information the results of our analyses will carry. Or, as Heisenberg's uncertainty principles demonstrates, the more accurate we aim to be in terms of analyzing a single aspect of an investigated process, the less precise we will be in measuring the other, complementary aspect thereof. Time/energy and space/momentum present some of such complementary pairs in the realm of elementary physics. In that sense, the ability to distinguish that which should be paid attention to and known from that which should be neglected and ignored proves as critical for exertion of smart and productive analytical thinking. From mentoring students as novices in the research world I learned that mastering this ability to discern details on whose setting one ought to spend a considerable amount of time from those that could be easily neglected or kept within wide windows of uncontrolled values is absolutely crucial for the students' proper progress. As a not so favorable example I recall a student of mine who once spent neither more nor less but an entire workday transferring 50 mg of a powder into a dozen little vials, weighing them with an incredible precision and trying to minimize the amounts lost during the transfer process, and all that despite the fact that a subsequent normalization made slight errors made during weighing easily compensable as well as that a few major approximations had been already implemented in the experimental design, disabling us from indulging in ultra-precise quantification and making only an observation of general trends possible. This is also where the crucial difference between the industrial and the academic research lies: in the necessity to spend considerable amounts of time to optimize what will subsequently constitute a component of a marketable product in the former, as opposed to merely providing a broad view – still insightful and as detailed as possible – into the mechanisms and principles behind the explored phenomena, reporting on the tentative effects of various variables and hypothesizing to a much greater extent than the scientists in the former milieu are allowed to. Academic researchers that pay more attention to development than to research in the R&D equation have, however, become increasingly common in the contemporary universities wherein the practical and the entrepreneurial eclipses the Romantic, the Renaissance, the philosophic and the fundamental with every passing moment. Yet, whereas a scientist with an industrial mindset would invest a whole lot of effort in engineering a most favorable and reliable product, the focus of an authentic academician would be on painting a more qualitative picture on the account of being vaguer in terms of the experimental precision. Still, regardless of the professional milieu to which our research approach belongs, aiming for experimental perfection would have a detrimental effect on our efficacy in reporting phenomena of importance for the scientific community and humanity in general. In essence, whatever the

experimental approach we decide to pursue, on the podiums of science or life alike, we ought to leave room for imperfections; for, after all, it is through them that the spirit of divinity enters the world through our being. Just like we need to make a compromise in imperfection whenever we tune a piano or a guitar (this is why there are many ways of tempering them – Pythagorean tempering, mean tempering, well tempering, equal tempering, etc.), in order to reach perfection in truly anything in which we engage our creativity in life, we need to perfectly balance precision and imprecision, interest and ignorance, revealing and concealing, knowing and unknowing. Style is built not on immaculateness of one’s appearance and performance, but on engraining beautiful mistakes and delicate imperfections within one’s personality and making a trademark of a kind out of them. Failure is also not only a signature of style, but also an essential historic prerequisite for the development of a unique style, which explains why Dizzy Gillespie claimed that his incapacity to imitate Roy Eldridge’s trumpet was responsible for his developing a unique style of his own, why William Faulkner said that his failure as a writer of solid romantic poetry made him develop a unique prose style, why Jean-Luc Godard attributed his filmmaking style where film criticism is admixed to everything to being nowhere as good of a storyteller as Howard Hawks³¹⁵, and, finally, why I claim that the long, neverending sentences reading like poetry and typifying my writing style are the outcome of my failure as a writer of regular, short sentences. When it comes to the embodiment of failures as we lollop and lip off and gesticulate, of course, braveness and bright visions are required if we desire to succeed on this way. Children are known to engrain one such relentless determination to develop into delightful emanations of life and yet what makes them able to soften human hearts around them is exactly the blend of this powerful inner drive with sloppy imperfections, as if falling down and standing up are entwined in each aspect of their appearance and personality. If you have ever wondered why children’s singing can have such a profoundly moving character on people, know that the secret lies in their naturally discordant and tenderly raucous vocals amalgamated by aerial strivings to touch the sky of earthly beauties, the technique Frank Oz & Co. immaculately used to touch millions of TV viewers’ hearts by musical performances of the Muppets. Thom Yorke’s childish crankiness in voice and frequent leaps into off-key falsettos have been, for example, the crucial element of his singing style that endowed his voice with an otherworldly beauty, unassailable in the recent pop music history. Jeff Buckley, who served as an inspiration for Thom Yorke in the early 1990s, is also known for his characteristic sour falsettos, and should we be able to magnify the sound patterns of all the brilliant and stylish singers we may think of, we might be able to realize that atonal disharmonies exhibited at fine time and frequency scales hide secrets to their unique charm. Then, the voice of Nico on the legendary Velvet Underground debut record could be said to have owed its charms that earned it the credit of the sound of an underground femme fatale to her singing markedly off-key thanks in part to her partial deafness³¹⁶. Nico aside, many are singers, from Frank Sinatra to Elvis Costello to Sade, whose vocals are said to have owed their charms to their singing flat most of the time, while the moving energy of saxophone tones played by John Coltrane and particularly Jackie McLean was due to their being purposefully sharp compared to the pitch, leading a jazz critic to conclude that “you don’t end up with music if you let a physicist tune a piano”³¹⁷. The “haunting

power”³¹⁸ of Ian Curtis’ vocals was also partially due to him being “off-key a great deal of time”³¹⁹ and due to the tone of his voice being, therefore, as conservational in its deadpan seriousness as it was melodramatically melodic. The captivating power of the opening sounds of the Beach Boys’ *Pet Sounds*, dragging the listener deep into the idiosyncrasies of its magical aural world from the very first notes, may also be owing to the detuned guitar playing the intro preceding the entry of the vocals³²⁰. Then, the B minor – D major riff opening Television’s *Marquee Moon* and carrying this monumental song on its wings throughout its entirety is also audibly out-of-tune, sounding as if the guitar was picked up from the studio floor after sitting there for days and played on without even bothering to wind the pegs, as if to say that tuning one’s heart to the spirit of the moment is far more important than the mundane and intrinsically conformist task of tuning the instrument. I was led by the very same philosophy when I played for months without tuning my electric guitar, having it sound differently from day to day. Moreover, the blessing I had was that even when I did try to tune my guitar, my beloved wife in those days, it would always remain at least slightly dissonant because of the malformed G string, which contributed to the characteristic and subtle out-of-tune cry of the music arising from it. Years later I learned that the piano on which Igor Stravinsky composed was likewise out-of-tune³²¹, which invoked smiles of sympathy with the working method of this Slavic-Californian compatriot, if not contemporary, of mine. Now, along with consciously chosen tonal harmonies, this sad and rather painful aural evocation produced by the constant state of dissonance that the gritty G string on my guitar was tuned to became mingled with the happy twinkle of the plucked strings, resulting in a blend of cosmic joy and deep, infinite sadness that I have considered the ultimate emanation of beauty in arts and life alike. Just like Yehudi Menuhin often lamented over his inability to produce exact notes on a scale through finger placement³²², the elementary art of violin virtuosos that he would never master, and thus inconspicuously gave birth to a particularly poignant, almost weeping sound that became his trademark, so may it be with the infamous G string, impossible to temper, sounding as out of tune as the background guitar stroked with deliberate sloppiness in Bob Dylan’s *Mr. Tambourine Man* or Sterling Morrison’s arpeggio guitar on the *Velvet Underground* and Nico’s version of *Femme Fatale* or, more recently, the poignant lead guitar line closing Radio Dept.’s *Lesser Matters*, and exactly because of that becoming the source of some of the most touching sounds that stemmed from my guitar. It is no secret that while notes played on a violin offer a larger room for subtle frequency adjustments, so that on it, for example, D-sharp and E-flat need not be the same sounds, guitar tones surpass the violin ones in richness because of a greater concentration of overtones; their mingling in space added naturally to my characteristic approach to playing based on rarely ever tuning the guitar to standard frequencies and praying instead that it detunes itself by playing and by sitting still under the starry skies into something uniquely beautiful, lest I become a stiff slave to tempered instruments and a musician failing to live up to the true aesthetic potentials of his music, as described by Ornette Coleman: “I’m very sympathetic to non-tempered instruments. They seem to be able to arouse an emotion that isn’t in Western music. I mean, I think that European music is very beautiful, but the people that’s playing it don’t always get a chance to

express in that way because they have spent most of their energy perfecting the unisons of playing together by saying, ‘You’re a little flat’, or ‘... a little sharp’. A tempered note is like eating with a fork, where that if you don’t have a fork the food isn’t going to taste any different”³²³. Finally, if it was not for Gustav Mahler’s irregular heartbeat, a result of the heart disease that cost him life, the Austrian composer might have never come up with the wavering and unsteady, syncopated motif with which his Ninth Symphony begins³²⁴, the theme around which one of the most significant and inspiring musical pieces of the 20th Century, an epitaph to the Romantic and, as some may say³²⁵, Faustian era in music and arts in general, revolves. Henceforth, the message is clear: whenever we come across cracks that seemingly ruin the images drawn by our lustrous imagination, epitomes of “the Shadow that falls between the idea and the reality”, as T. S. Eliot put it³²⁶, we should not sulk over them, but peer wondrously into their dark spaces, for it is great sources of light, alongside glistening pearls and mermaids, that could be found emerging from these abysses for our perception.

S.F.1.9. The constant cracking of the sphere of our psyche into innumerable little faults is thus how groundbreaking ideas are born, while divergence of the straight and starlit avenue of our dreams to dark sideway alleys that appear to be swallowing these starry flows of energy into their shadowy chasms can be seen as a way to provide conditions for the continued rise of immense lights of creativity onto the surface of our beings. For this reason, in the context of evaluation of the sources of artistic creativeness within the artist’s mental and emotional realms, Edmund Wilson stated that, essentially, “superior strength is inseparable from disability”³²⁷. A side fact that both Thom Yorke of Radiohead and Jónsi Birgisson of Sigur Ros have had either defective or completely dysfunctional one of the eyes also secretly reminds us that seeing the world imperfectly and therefore being rejected as abnormal and on the blink, like the Biblical “stone which the builders refused (that) is become the head (stone) of the corner” (Psalms 118:22), is a prerequisite for the waters of our creativity to start flowing like divine waterfalls. And from this side fact, a door opens, enabling us to glimpse yet another phenomenal insight: namely, the two eyes with which most of us perceive the world can be said to see the same things from different angles and thus send unequal and incompatible messages to the visual cortex. Yet, the brain does not shut itself down upon the receipt of these pairs of seemingly incompatible messages and declares failure due to a flaw in the way our perception works. Instead, it finds a way to transform this inherent imperfection to a source of 3D, stereological vision, showing us how imperfections are the starting points and stepping stones for our arrival at panoramas of new and richer dimensions of seeing the world. Even the perceptivity of the perceivable details of the world of our experience has its roots in deviations from the *a priori* anticipations of our senses. Namely, only tiny segments of our physical surrounding are perceived when we step through them. Everything else is pre-constructed by means of our assumptions about how the environment in which we coordinate our movements should appear like. Just like what is learned well disappears from our awareness and becomes a spontaneous, involuntary and routine action, things that are always found where we expect to find

them gradually vanish from the space of our awareness and are merely habitually drawn by our own brain whenever they are about to appear in our perceptive fields rather than being perceived every them anew. This is, of course, done so as to prioritize the limited computational capacities of the brain; for, as the amount of information in each perceptive landscapes in which we are immersed at any given moment of our lives is more than we could grasp, ignoring one things is a vital precondition for paying attention to and learning from others. Hence, to produce a subtle perceptual surprise is what is required to initiate our perception of the given detail of our experiential reality, which implies that nothing other but imperfections stand forth as the reasons why we see the world the way we see it. This nature of perception may also explain why asymmetries in an ordered and well composed artistic whole are those that catch the eye of our consciousness and leave lasting aesthetic impressions on our minds. It also explains how Radiohead's Videotape, the tune closing the band's remarkable record, In Rainbows, transforms from a rather monotonous musical meditation to "a favorite thing we've ever created"³²⁸ in Thom Yorke's head with the addition of a counterintuitive rhythmic syncopation, an effect that, to add to the surprising element of every creative act, the band largely left out and severely modified on the record version of the song. It may also become clear how diverging from the perfect behavioral standards is what builds style, as well as how fragile features of our beings are those that endow us with celestial beauty in this life. In this context, I also get reminded of how even my shortsightedness is what I could blame partly for my enchantment with the colorful city lights. Seen as smeared and veiled by a chiaroscuro of divine mystery rather than clear, sharp-edged and sparkly, they awakened neon-like wonder and elevated a sense of heavenly dreaminess in my eyes, as if all around me and me in all around me were floating together on a ninth cloud of a kind, the feeling neatly portrayed by the aural waves that emerged from the music of Cocteau Twins in the early 1990s, the waves on which my spirit has glided on and on ever since it embarked on their magic ride for the first time. When on top of this I learned that increasing the blurriness of Mona Lisa increasingly accentuates her mystical smile³²⁹, which is largely being drawn by the eye itself as it scans her face, the result of the conflict between the central and the peripheral vision³³⁰, the latter of which is being greatly obviated by eyeglasses in spite of its handing us 99.96 % of the visual information³³¹, I tossed my eyeglasses into the air and decided never to walk the city streets by night with them on, having vowed to boldly and gratefully embrace the world with all the frailties that God has instilled in me, lest a myriad of smiles Nature directs toward me remain unnoticed and sadly cocooned in the corners of reality. To "gladden the eye with a fountain of colors" became my goal that moment, just as it was the Russian painter, Konstantin Korovin's when he set out to Paris in the late 19th century after he realized that the impressionists had smeared sunshine on their paintings, but not the city lights at night as well, which, he felt, held an even

Years after writing these lines I would come across a fellow bedroom, DIY artist, Molly Nilsson, who refuses to wear her eyeglasses for a similar reason. In a December 2017 interview she noted the following: "At some point I realized I don't *mind* things that are far away being blurry and only seeing things that are close to me. Whenever I wear glasses I feel like I see *too* much, and there's too much information". See Leah Mandel's Talking to Molly Nilsson Made Me Feel Better about Everything, *Fader* (December 6, 2017), retrieved from <https://www.thefader.com/2017/12/06/molly-nilsson-interview-imaginations-dark-skies>.

greater aesthetic value³³². Soon, I would become a professional smearer of anything characterized by an excessive clarity, which is exactly what poetry and love ought to do to logic and analytics, summing up my efforts to humanize natural sciences, as in works composed by these very words wherein poetry and reason have created an insoluble concoction. This is how I began to see my shortsightedness as a blessing rather than a misfortune, as it has not only instilled aesthetics directly into my perceptions, but it has also guided me in my creative engagements across multiple planes of my interactions with the world. Without this visual imperfection, that is, by seeing the world with perfect, crystal clear clarity, vital seeds of beauty would have gone missing from the incessantly growing poetically philosophical worldviews of mine. Here, I cannot but think of an artist like Claude Monet, who embraced the ethereal blur that his deteriorating eyesight bestowed upon him to create a whole new artistic vision embedded in his beloved water-lilies. Liberated of the horizon line and the perspective, conveying a sense of confinement and in its midst a whole a universe, inside each and every brushstroke, subtly and secretly, these water-lilies painted frantically, through war, illness and other miseries that fell upon the painter during the last decades of his life, owe their beauty to the failing eyesight of the artist, which drew him into an inner world of unique perception. Likewise, this nearsightedness of mine has played a key role in pushing me away from the desire to find amusement and satisfaction for the soul in the outer world and into the inner, introspective world in which I could freely craft my impressions into thoughts such as these that I inscribe here. Even the insightfulness of one such switching from one point to another that you are witnessing right here, right now, where individual cars on a starry train of my thoughts appear to be connected only via analogies and metaphors, shows us how breaking away from the rules of convention and well-ordered and focused streams of thought that they dictate for us to use and infusing instead chaos in the analytical clarity of our reasoning, knowing all the while that blends of imperfections and perfections are intrinsic to all the progressive systems in life, holds the key to the secret of creativity in life. Or, to quote Thom Yorke, “the method was that I wanted everyone to make mistakes because I felt that mistakes within music would make it even more interesting”³³³, a method which I too adopted while recording my songs, knowing that these tiny little mistakes and imperfections are the gateway to ingraining an everlasting beauty in my musical pieces, including: (a) the grainy and dusty background noise; (b) imperfectly tuned guitar; (c) always clinging onto freedom to spontaneously improvise rather than mechanically repeat, as in the spirit of jazz tradition; and (d) rejecting any decorative sound effects and opting for unrefined production, attempting to show that beautiful harmonies as songs’ essences will appear beautiful even when not dressed in fancy clothes of expensive arrangements. As for the last point, it was a response to the world in which surface value, the type of gaudery and the way in which one sells oneself is appreciated more than the core message of the content. My musical approach, as such, has thus stricken a deeply organic point of view, which is all about celebrating the essence while passing over the surface. Songs made through one such approach, glowing with an endless and indestructible beauty of their harmonies, would sound wonderful when played in even the most modest settings conceivable, on the most out-of-tune guitars and with squeakiest voices, or on the dustiest speakers and rustiest tape players we could think of. They will stand in front of us in their full honesty, in a most unappealing form that they could be presented in, and yet they will appear immaculately beautiful. And still, as this crazy stream of thought whistles and supersonically swooshes past us, leaving us as perplexed and enchanted as we could be, like a galactic spiral we

return to our old places of reflection, reverting to already digested points of view, reiterating, revisiting and reinventing our thoughts over and over again in this endless cosmic journeys that this dazzlingly starry explication of the philosophy of mine swishing breathlessly through the pages of this book, of this elegiac lecture that draws souls, like shadows, into their nightiest nights and then to the sunrise and the new day, like that never seen before, is.

S.F.1.10. My first experimental training during the undergrad studies and an entrance through the gates of science into its gardens full of flourishing intellectual insights proceeded in a manner as grandiose and laborious as I believe it could be. Namely, a colleague of mine, who was secretly nicknamed Socrates because of his exorbitant devotion to studies (he used to spend nights writing formulas on the amphitheater's blackboard), and I, under the supervision of Gordana, then a teaching assistant and now the Dean of the School of Physical Chemistry at the University of Belgrade, spent hours measuring literally nothing on an analytical weight balance. The needle on the balance scale would fluctuate left and right, and we would mark these fluctuations so as to determine the standard error for the later measurements. In a way, this evoked, at least conceptually, the first and the only hard working job I have ever held, little less than a year earlier, as a polisher of to-be-painted walls inside an unheated house on a hill, the job for which I was paid €75 an hour and which I held for a day, at the end of which I, exhausted and slumped on a sofa at home, concluded that a scientist I better become. Every time I think of these painful beginnings of our long walks along the sacred and sublime roads of science, it serves to remind me of the relative nature of all observations of ours in Nature. It is as if this measurement of baselines, of sheer nothingness, was telling me that even nothing is something, as there could not be a measurement without a reference nor units absolute in nature. This was one of the many points made by Kazimir Malevich when he painted *White on White*, a suprematist painting showing one white square lying on top of another, with distinct boundaries and contrasts between the two, indicating that no two nothings are really the same, as all the baselines are always the products of inherently subjective measurements and are, as such, literally, made of somethings, not nothings, as their names would suggest. This is also not far from the message the Romanian sculptor, Constantin Brâncuși made when he began to treat bases and pedestals as sculptures *per se*, as if to say that the baseline has a quintessential role in defining the beauty of the object and that understanding it is the way to understand the whole universe. The purity and the fineness intrinsic to such baselines are indubitably the keys to determining the meaning and the beauty of whatever the experiential impressions are being measured on top of them. Listen to exciting tunes for a whole day and by the end of it even a most beautiful song would reverberate with mediocre poignancy in your heart, but following a long break from listening to any music, analogous to fasting in the realm of the science of healthy psyche and physique, even a most mediocre song would lift you on its wings onto utterly sublime vistas of imagination and feeling, suggesting that abstaining from information can be a great boost for creative receptiveness to information in this world wherein nothing preconditions the existence of anything and wherein the experience of any quality depends on the baseline that we compare it against. Every time we look at the Moon, we have an immediate epitome of this inescapable relativity of our perception of reality. Namely, this celestial body appears light blue and glossily bright to us only because there are no lighter bodies in its vicinity. The Moon is, in fact, dark gray and it owes its glimmer to the spotlight of the Sun and the dark background against which it is posed. If there were any other lighter objects of similar size to compare its luminosity against, the Moon would swiftly lose many of its lustrous charms in the hearts and heads of humanity. All is very relative, I am thence free to conclude. Or, man is the

measure of all things natural, as it is stated by the epistemic principle first uttered by Protagoras of Abdera in the 5th Century BC, before it was swallowed up by the ecclesiastical chasms of the Dark Ages, reinvented by the Renaissance humanists and neoclassicists in the 15th Century, then eclipsed by the newly found form of objectivism redelivered to the world on the wings of empiricism and Enlightenment and finally embraced once more by the oncoming tidal wave ridden on by the proponents of reawakened Oriental theologies, constructivism and postmodernism, all of whom have stood firmly in defense of the idealistic nature of reality, and all this in the course of humanity's traversal of the spiral path of progress, sinusoidally fluctuating around the balance between subjectivism and objectivism outlined by the co-creational thesis and finding its way through, spontaneously and unstoppably, towards ever more materially complex and spiritually illuminative states.

S.F.1.11. In the spirit of the ship of our being floating on the sea of one such incommensurable nothingness, there are days when I am all about statics and silence. I am pure meditation, balance and harmony. And then there are days when the winds of passion and moving aspirations enter my thoughts and emotions, instigating me to create, wander and explore. In the end, I know it is all about the balance of keeping the compass of rationality and conscientiousness in one hand of ours and adventurously and wonderingly spreading the other hand towards novel and unforeseen impressions. Some time ago, I accidentally ran into a video for a mellow techno tune in which an animated hero jumped from planet to planet. On one of them, however, he stood for too long as he could not decide whether it was worth and possible at all to jump to a planet that he felt must be there but stayed hidden in the darkness. Eventually, the planet he stood on for too long crashed under his weight and he found himself uncontrollably falling, but only to get back to the starting place of his jumping adventure. So he starts following the same way as before, getting into proximity of the same "fatal" planet. This time he, "a ninja, not a minja"³³⁴, as it were, makes a brave jump into the unforeseen and, after falling through the interplanetary darkness, enters a whole new world, filled with astonishing colors and friendly creatures. "Faith is taking the first step without being able to see the second step", an anonymous saying goes, reminding us of the importance of bravely making first steps in life, for it is them that quite often build the entire road ahead, fully determining the fruits of the chain of actions that succeed it, and yet, as a rule, they require from us to hop into dark and unknown spaces; hence, "the leap of faith" as an authentic phrase. An epitome of Alice adventuring in Wonderland as we are, we thus ought to be prepared at all times to freely leap into a topsy-turvy world where everything will seem perplexed and befuddled. Like our animated hero or like an electron in a nanoparticle, jumping out of its quantum confinement and across the bandgap, then landing in the conductive party of electrons, where they mingle, play around and journey as a current for the sake of bringing light to thankless earthlings' eyes, we may find out that the world which we have entered as the result of our brave leap into the unknown is more often than not greater than the stale one we have left behind. And every time the things suddenly get clarified on our journeys, transitioning from tipsily uncertain to connected and consistent, it would dawn on us that a whole new world, for real, has opened in front of us. Tracing the lines and shadows along the mystical walls of my mind now brings me back to a related anecdote told by a character from Rumer Godden's *River*³³⁵, sitting in the midst of a luscious garden, in front of crumbly stonewalls and statuettes of Hindu goddesses: "Two characters stood on top of the Golden Gate Bridge and then one of them jumped off it and began to quietly swim,

³³⁴ A classic remark from the first part of the Serbian omnibus comedy titled *Kako je propao rokenrol* (1989).

³³⁵ The book published in 1946 was made into a movie directed by Jean Renoir five years later.

while the other one stayed up and dropped dead”. So, like Odysseus washed up on the island of Scheria after sailing on a raft, alone, and trying to find a way through a Poseidon’s storm at sea, resembling your own journey through this long and convoluted sentence, debating whether to stay by the shore or move inland, into the dark unknown, eventually choosing the latter and finding a safe shelter underneath pine trees and oleanders and discovering stargazing sights like he had never seen, then coming across a trail that would take him to the palace of king Alcinous first and then to Ithaca, where Penelope waited for him, so should we not hesitate for too long when we find ourselves on one of the crossroads where signposts pointing at the paths of safe stagnancies meet those showing us the direction to narrow, curved and risky roads that, however, lead to wonderful new insights and treasures for our timeless soul and the whole Universe alike. History, after all, teaches us that not those who walked across well charted lands in their explorations, but those who faced open seas and sailed off into their vast voids came home with greatest treasures and conquered the planet with their mighty spirit. The aforementioned video clip portraying a hilarious interplanetary jumper also reminds me of another animated movie I had seen long time ago. In it, a desperate man decided to jump off a tall building and put an end to his life. As he falls down next to the windows of the building, everything slows down. He falls but manages to see people waving at him. He waves back and a conversation starts in slow motion. As he moves from one window to another he becomes friends with many. However, he realizes that he inevitably approaches the ground and enkindles a great desire to live inside of his heart. And then, just as he was about to hit the ground, the artist of this old, drawn animation turns the whole screen upside down in an act of enticing magic and grace, and our funny character starts to fall in the opposite direction, straight towards the clear, blue sky. In a story Gautama Buddha once told his disciples, a man pended above an abyss, holding onto the cliff with his little finger and tasting strawberries from a bush in his reach. Just like they were in this story the most delicious ones he had ever tried, we ought to know that the limiting conditions and abysses implacably standing at one or the other point in our lives are the ones without which life would have no meaning at all. It is them that give a crucial, but impalpable impulse to the unending spin of the carousel of cosmic love. As far as the story of my own life is concerned, the one where erratic ups and downs have been more of a rule than an exception and where falling to the ground and soaring to the sky have persistently superseded one another, making a touchdown after a similar fall from a sublime vista as that portrayed in the aforementioned cartoon and smacking myself against a rock bottom ended up being strangely liberating every time. Albeit feared during the fall, the process of hitting the ground would never mark the onset of total oblivion. Rather, it would be usually akin to a snake’s shedding its skin and turning itself inside out, so that all the dirt accumulated on the outside of my aura would get momentarily purified and everything soulful and truly valuable that I have nurtured inside would begin to freely emerge on the surface of my being, then liberated and renewed, having become a living proof of the age-old Serbian adage: “I had everything and I saw nothing, but only when I lost everything, I began to truly see”. Last but not least, immediately before and after these falls, the strawberries about which Buddha talked in his parables would indeed begin to taste like never before and the littlest existential details, which would have been otherwise ignored, would begin to glow with a light of eternity. Hence, it may be no coincidence that on the way to a juvenile correction facility, while looking at the world from behind the grids of a police truck, the grim streets of Paris finally gained a gorgeous luster in the eyes of Antoine, the boyish protagonist of François Truffaut’s 400 Blows, whereby another delinquent in another classic of the French filmmaking realism, Robert Bresson’s Pickpocket, similarly discovered affection for a human

creature only after being placed behind the prison bars³³⁶. Dwelling in darkness is thus often a way to regain a sense of visual wonder over everyday details of the world, fasting is a way to revitalize our bodies, silence is a way to sharpen our auditory sensitivity, and problems and perplexities provide a way to restore our happiness, refresh our intellect and reconsolidate our strengths in this fabulous dialectical universe that we inhabit. And one day, we may look back at the story of our lives and, just as Marcel Proust did, realize that moments of hardship, of crucifying doubt over the meaning of it all, of standing on the cliffs of life, not knowing whether we would fall deep into its abysses or soar into beautiful landscapes that stretch in front of us, like a bird of paradise, were the most valuable and fulfilling ones, whereas those enwrapped in a sense of perfect safety, when everything was going with the flow, predictably and smoothly, making us drowsily think that it was what happiness was all about, brought nowhere equally valuable insights into the core of the meaning of life, failing to inspire the flame of love and wonder and the soaring of our spirits into the skies of the world. To evidence this, we may simply pay attention to how impoverished our impressiveness with artistic pieces is when we enjoy them during periods of life typified with predictability, tiresomeness and quietness, while phases permeated with great turmoil and insecurities, requiring an intensive prayerful focus of our being, similarly to the Buddha's character who was hanging over the cliff and tasting strawberries, typically make our beings more artistically attentive and able to find incredibly meaningful messages in artistic pieces we encounter on daily bases. On the other hand, we may be sure that our very creative actions would likewise appear lame and uninspiring to the world whenever our being delivers them from the waters of perfect safety, comfort and predictability. Adventurously walking over edges in life, from where we could push the boundaries forward and stand straight on the seashore whereon waves of the ocean of the unknown and unexplored crash against the coasts of our knowledge is the requirement for our creative actions to produce an enchanting excitement in the eyes of the world and seed them with the bedazzling stardust of wonder and love.

S.F.1.12. I remember once analyzing a sample under the electron microscope, noticing exciting shapes and being all smiles for days to come. However, my excitement diminished after I realized that one quarter of what I had seen belonged to the morphologies of the substrate; one quarter were impurities; one quarter were sample preparation artifacts; and one quarter were the lens aberration effects. Hence, what I was so excited about were more the reflections of the measuring apparatus, including my own intellect, rather than of the investigated samples. It is now that I recall a case of a group of scientists from University of Southern California that desperately sought after a fibrous form of a biomolecule named amelogenin³³⁷. Their longing to reach this aim was so huge that it overcast the rationality of the empirical approach that they, as scientists, should have followed. Namely, after detecting something that was in agreement with their dreams, they did not bother to check the results thoroughly and instead rushed to publish them in, neither more nor less, but *Science*, one of the most prestigious scientific journals. Soon after, it was revealed that what they had observed were simply fibers of cellulose coming from paper tissues they had probably used to

³³⁶ This finding of freedom through love in the most solitary of confinements impressed the Hollywood scriptwriter and director, Paul Schrader so much that he went on to mimic it at the end of not one, but two of his popular movies: *American Gigolo* and *Light Sleeper*.

³³⁷ For more details on this molecule and its morphogenetic role, look at my review paper entitled *Prospects and Pits on the Path of Biomimetics: The Case of Tooth Enamel* published in *Journal of Biomimetics, Biomaterials and Tissue Engineering* Vol. 8, pp. 45 – 78 (2010).

wipe the sample carriers³³⁸. Another banal example I recall is of mine monitoring pH changes in a system and making comprehensive interpretations based on them along the way. Only after the experiment was over I realized to my surprise that the pH electrode immersed in a control solution was giving false values. What happened is that during the experiment, the active part of the electrode got gradually clogged and although the real pH of the solution remained almost constant, the false readings were signifying chemical changes taking place in the system. In this case as well what I noticed were merely reflections of the measuring apparatus. This should not be seen as a surprise since we know that the measuring system and the measured system need to exchange energy or matter in order for any measurement to occur. Hence, there is always a chance that this energy exchange, which should be ideally kept in an optimal range, goes out of control, resulting in disrupted analyses permeated with fake readings. Yet, measuring devices inevitably affect the responses of the measured systems, and the impossibility of discerning where the effects of the measuring device (including our biological predispositions and prejudices) end and where the properties of the explored systems begin is deeply ingrained in the nature of all physical measurements. For, in order to detect something, we need to interact with it and thereby inevitably change it, as the essence of the enlightening Heisenberg's uncertainty principle tells us. Consequently, the results of our detections will always be partly us and partly the systems we observe. The way the question is asked greatly determines the answer we will receive. The observer and the observed are thus always interlaced, and just like there could be no sound of one hand clapping, so could we not have a complete description of an object without a description of the subject. It is time to recall that the way a frog imagines God is probably in shape of merely just another frog; so does, at least, the subjectivist argument go. To make things muddled, as ever, by bringing in the complementary objectivistic point of view too, we could remember that the two humanoid angels from Wenders' *Wings of Desire*, that masterful cinematic critique of passive observers and homage to participatory acting, existed before the humans even arrived on the planet Earth, in which case they must have adopted the windy form to communicate with wind, the rocky form to comprehend the semantics of the rock, the froggy form to get into the brain of the frog and the human form to guide humans toward the tiny glimmers of happiness. In the end, to untangle these two arguments is but an impossible task and this inextricable entwinement of theirs ensures that the existential mysteries, the fuel for our evolution on all planes, spiritual and material, are always around.

S.F.1.13. Speaking of Heisenberg's uncertainty principle, let us remind ourselves of the form it assumes: $\Delta x \cdot \Delta p_x \geq h/4\pi$. Δx is the indeterminacy of the position of a measured system along a given, x-axis, Δp_x is the indeterminacy of the momentum of the measured system along the same axis, and h is Planck's constant, the smallest constant in the world of physics ($6.62 \cdot 10^{-34}$ Js). In essence, the principle tells us that the more precisely we measure the position of a system, the more imprecise will our knowledge regarding the momentum of it be, and *vice versa*. This equation, which I have always regarded as the most fascinating equation in the history of science, can be easily transformed into $\Delta E \cdot \Delta t \geq h/4\pi$, where E stands for energy of the system and t stands for time. Heisenberg's uncertainty principle tells us that to observe and detect anything is to inevitably interact therewith. We cannot see and judge without interacting and modifying the world around us. For example, to detect an electron in a dark room, we need to switch on a source of light, direct a photon to the electron, make it collide with it, bounce off and arrive at the detector where it will

³³⁸ See C. Du, G. Falini, S. Fermani, C. Abbott, J. Moradian-Oldak – “Supramolecular Assembly of Amelogenin Nanospheres into Birefringent Microribbons”, *Science* 307, 1450–1454 (2005).

initiate a signal response to which we will keep our eyes open. However, the very collision between the photon and the electron will change the energy and the traveling path of the electron, implying a finite indeterminacy of the measurement. Likewise, to measure the potential difference in an electric circuit, we need to plug a voltmeter to it and thereby affect the current that is to be measured. Or, to measure the temperature of a system, we need to use a thermometer which needs to absorb some of the heat content of the system during the act of measurement in order to give us the reading, thereby modifying the temperature of the measured system. And so on. Most importantly, the observer effect was with this equation for the first time introduced in the classical physical framework of thought. Every measurement has to account for the fact that the act of measuring modifies the state of the measured system – this is what this principle ultimately tells us. In psychology, of course, this idea that people behave differently when they sense that they are being watched comes forth as a piece of common sense and has been verified in countless circumstances, from the lower use of cell phones among parents on playgrounds when they consent to being observed for their cell phone usage³³⁹ to the alteration of policies of business executives in the rights-protective direction when they are placed under the judicial oversight³⁴⁰, and so on. However, I will never forget the day when I returned home from the campus college with an infrared atlas in my hands and the everyday meaning of the uncertainty principle, at a most sublime of its scales, enlighteningly dawned on me. It was on a Belgrade trolley that I rode and engaged in my habit of people-watching that I came to this insight, which reflected the uncertainty principle formulated in the language of the quantum physics, but now transposed to the social setting in which I found myself, with people substituting for subatomic particles. “Every measurement modifies the system in question; therefore, every judgment of ours modifies whatever it is that we judge”, rang through my head with an illuminating joy, leaping like a happy dolphin across the melancholically bluish sea of my mind. Nourishing pure and beautiful thoughts and seeing goodness and immaculate value in beings that surround us as well as in every detail of the inanimate world thus truly breathes these qualities in them. Research in psychology has now evidenced that looking at the world from an angle where mostly beauty and preciousness are seen in other creatures makes both the observer more satisfied and fulfilled in the long run as much as it affects in a similar fashion those that the observer interacts with while observing and judging them in such a beautiful way, and has named it “an observer effect”³⁴¹, in accordance with the one proposed by Werner Heisenberg for the world of quantum physics in 1927³⁴². What made this illuminative insight of mine special was that it was the first time, I believe, that my mind made an enlightening metaphoric leap from the grounds of scientific conclusions to the skies of ethics and aesthetics. One of the most fascinating attributes of the uncertainty principle is that it implicitly points to a perpetual importance of errors, ignorance, and details that slip out of our hands every time we make attempts to wholly grasp Nature, to perfectly measure, define and assess it. An equation of inequality, Heisenberg’s indeterminacy principle implicitly points out that it is these erroneous elements of our interactions with the world, the unknown and undetectable aspects of

reality, the empty spaces on paintings of natural landscapes, the hidden white noise behind the audible music that fills our ears hiding a true, inexhaustible richness, the entropic sea upon which everything known to us floatingly exists and endlessly evolves. It is through the unknowing aspect thereof that this equation points at the whole infinity of existential possibilities of every system in Nature. Drawing the whole set of possible states of a physical system in quantum field theory thus depicts a finite probability for it to adopt any state at any given moment. What is here now could be found millions of light years far away in the following moment. With the postulation of the uncertainty principle, impossibilities have therefore wholly vanished from the world of physics. The mechanistic universe envisaged by classical physicists who celebrated determinism and rejected the inherent liveliness of Nature and the unpredictable voice of God as omnipresent underneath the perceptual phenomena, was overthrown with inaugurating the quantum model of the reality which has the uncertainty principle as its basis. I have always enjoyed imagining how Heisenberg must have felt as he derived his uncertainty principle in the midst of a night and in exhilaration ran out to climb to a lighthouse that he, symbolically, always dreamed of climbing to but never did, watching alone the sunrise over sea³⁴³. Could have he known that others, such as David Bohm, would decades later show us how it is owing to this principle that the whole reality could be imagined as continuously arising and disappearing from the quantum sea of “implicit” reality³⁴⁴, that Stephen Hawking would demonstrate that, owing to it, even black holes, the scariest objects of the Universe, need to evaporate their mass contents³⁴⁵, and that artistic scientific minds, such as mine³⁴⁶, would see in it the open doors for the voice of the divine in the atomistic schemes of the cosmos, including the hands of science stretched forth for the religions of the world to hold onto.

S.F.1.14. Henceforth, many people in science think that if they express their results and claims surrounded with the cloud of pure certainty, their approach would be excellently scientific. Needless to say, many hypocritical scientists who are aware of the incorrectness of the attitude of pure certainty still intentionally rely on it because expounding it builds more clouds of competence around their expressions and thus increases their chances of receiving funds for their research. But by enwrapping the conclusions of their studies in the style of perfect sureness, they slightly resemble a clown scientist that the Little Prince made fun of, correctly observing how they talk so as to impress and not to reveal. The aim is, however, to open other people’s eyes and not to close them, and this cannot be accomplished by disseminating conclusive certainties, as they straightforwardly close the door to questioning and discovery. Scientific results are always pointers to some natural principles and laws, which even when proved as correct are applicable only within a specific window of conditions. People have, however, ever since enjoyed magnifying their own claims by expanding their validness way beyond the realm of their true validity. Often, however, such a fallacious inflation of the range of validity has been done not by the original inventors of given ideas, but by their disciples who have tended to passionately glorify their teachers beyond the limits of reasonableness. My scientific papers are, however, as a rule abundant with words such as “maybe”, “possibly” and “I believe”. In such an attitude pervaded with uncertainty I found a source of an inextinguishable grace. Only after collecting many, many pointers to certain

conclusions I would be ready to stand up in front of the scientific audience and openly claim that we have a confirmation of a physical principle in sight. And yet, every now and again, despite these humble expressions that outline graceful uncertainty which always stands as a support of the genuine curiosity that drives the wheels of scientific creativity, I would face referees who would pose a gate in front of the gentle rivers of my works and arrogantly ask “what evidence supports this statement?” It is sad to realize how the same fate that struck the church during the Dark Ages is nowadays striking science. Remember, the church that had been based on the Christ’s teaching of limitless love and faith (which can, quite logically, flourish only insofar as there is a soil of uncertainty underneath) had unexplainably forgotten the essence of its foundations over time, ideologically turned itself upside down, so to say, and became a 180° opposite from its original essence by enforcing Inquisition and dogmatism instead of an open inquiry and faith. Renaissance movement and the tenets of empiricism fought for providing the space for the latter in human mind and the world alike, won the battle and now, similarly to the church in the past, impose barriers to humble uncertainty, doubtfulness and open inquiry, which were the very sprouts from which the modern science blossomed in its creativity and lush. It is only rare and genuine scientific minds that are ready to openly stomp over the steely gates of impressions of masterful and all-knowing expertise that spring from otherwise narrow, pretentious and self-centered worldviews and thereby open the door to new and beautiful horizons of knowledge and being, which stretch limitlessly far and which invite us to walk forward and endlessly evolve. Opening the door to let the ancient Socrates’ attitude of certainty in uncertainty enter one’s spirit, openly asserting a big and shiny “I don’t know” or, even worse, “I don’t understand” is nowadays the task for only the bravest in the realm of science subdued to the “fake it till you make it” spell, in spite of the fact that the most authentic scientific sentiment is exactly that of curiosity-fostering ignorance. It drives us to wonder and explore rather than to embrace the attitude of phony know-it-all pretense, put a full stop on our research adventures and dig a dogmatic hole in the epistemic grounds of our mind for our perception to hide in. And yet, failures during interviews and reputational flops at conferences and other scientific meetings are guaranteed should we openly expose it before others, yielding a striking paradox of our age. For, what has made sages of this world able to enlighten the eyes of millions was letting their thrilling words and acts spring from the grounds of humble ignorance, such as that exhibited by Confucius when he stunned his disciples by replying the following to the question why ancestral sacrifices exist, a detail that quite certainly belonged to the core of his teaching expertise tied to the respect of tradition, rituals and moral codes: “I do not know. Anyone who knew the explanation could deal with all things under Heaven as easily as I lay this here; and he laid his finger upon the palm of his hand”³⁴⁷. Recollection of a joke in which multiple professionals are asked how much $2 + 2$ is could be thus worth in this context³⁴⁸. The accountant asks the asker what he would want it to be; the politician says it’s three billion; the psychiatrist tells the questioner to lie down on his couch and tell him what he wants to know; and then the mathematician comes forth and humbly says that he does not know, for, strictly speaking, with no basic axioms of the given system of reasoning to which the question belongs defined, no answer to the question could be given. For, he has surely known that without defining the “rules of the game”, as Wittgenstein would have put it³⁴⁹, even the most basic mathematical operations remain impracticable. After all, although adding 2 pinecones to 2 seashells indeed equals 4 objects, it also

³⁴⁷ See Kenneth Kramer’s *World Scriptures: An Introduction to Comparative Religions*, Paulist Press, Mahwah, NJ (1986), pp. 105.

³⁴⁸ See Jerry P. King’s *The Art of Mathematics*, Fawcett Columbine, New York, NY (1992), pp. 57 – 58.

equals no more than 2 of these items each (hence, $2 + 2 = 2$), while adding 2 droplets of water to 2 droplets of water results in none but a single droplet (hence, $2 + 2 = 1$), demonstrating how $2 + 2$ is, in fact, seldom equal to 4. The difference between a dilettantish mathematician and a genuine one thus lies in the former's ignorance of the presupposed axioms as implicit foundations of his art and the latter's constantly holding them in check. Always keeping an eye on the hypothetic and unstable foundations of our reasoning and accepting all the uncertainties and epistemological insecurities that this stance brings forth is thus the only way to act in harmony with the heart of any human profession we could think of. Knowing that "every important scientific advance that has come in looking like an answer has turned, sooner or later, into a question"³⁵⁰, as Lewis Thomas pointed out, we could retain a childlike wonder in our spirit and resist finding ourselves in intellectual shackles that beliefs in the certainty of our knowledge subtly imposes on us. We could thus find solace in permanent uncertainties about everything in this Universe, including the uncertainties about these uncertainties and uncertainties about the certainties arisen thereby and so forth and have our stellar views blasted off into unsteady orbits, roving around the ceiling instead of preaching certainty and convincing others in the truths we have come to believe in with the fixed and sickeningly piercing looks. Although there is a chance that we would then find ourselves on the indolent side of Bertrand Russell's legendary distinction between the stupid who are cocksure and loud and the intelligent who are uncertain and quiet³⁵¹, the unbridgeable division wherein the British mathematician saw all the problems of the world to have their cause, the embracement of uncertainties about it all need not stand in the way of the eruptions of positive energies emanating from our heart because, after all, all the enlightening expressions hide Wonder within their heart of hearts, the godly power sparked by uncertainties and uncertainties and even more of uncertainties with just a pinch of certainties, without which, remember³⁵², no uncertainties could be perceived at all. In fact, the reason why I have chosen an academic career over the one in industry is that I found an unexplainable enjoyment in answering questions directed to me with a graceful and solemn "I don't know". For, like William James who "felt that any sustained, orderly, authoritative speech would stiffen and cripple the essential flexibility of thought, and that any such theory must misrepresent the infinite complexities and novelties and inconsistencies of reality"³⁵³, therefore deliberately interspersing his lectures with filler phrases that indicated insecurity, "interrupting himself to catch a fleeting suggestion and come back saying, 'What was I talking about'" and "creating objections to his own proposals", knowing that throwing the students away from a predetermined path and onto adventurous grounds is the precondition for awakening the wonder and curiosity of genuine scientific explorers in their minds and hearts, I too find grace in walking on a lecture hall stage wobblingly, navigating around the balance between faithfully embracing and insecurely doubting the path chosen to outline as the one worth walking on before juvenile spirits of this world. Correspondingly, not the moments when I drop one argument after

³⁵¹ See Bertrand Russell's *The Triumph of Stupidity*, In: *Mortals and Others: Bertrand Russell's American Essays*, Routledge, New York, NY (1933). Another effect, adding up to this paralyzing embracement of uncertainties by the intellectuals and the proneness to dogmatism by the commoners, is the symptomatic dislike of being an authority and manipulating the masses among the most progressive of intellectuals, which prevents them from creating a critical mass of followers, quite possibly necessary for the induction of any form of social change. In a way, by dispelling the sheep around them and teaching them how to be independent, they do not do any favor to their ideologies, which, as such, often remain rusting in their books and articles.

another in front of the audience, regardless of how mutually exclusive and causative of independent thinking they may be, but challenging questions that come at the very end have always presented the parts of the lecture I have enjoyed most. And if someone's inquiry makes me arrive at the point where I am pressed to exclaim that magical "I don't know", I feel as the signs of accomplishing the mission of holding an inspiring lecture are sparkling and twinkling in the air. For, openly inviting the listener to stand stunned, in enlightening amazement, on the doorsteps of an unsolved mystery is a priceless achievement. It awakens a great sense of intellectual adventurism and enriching wonder within her. After all, as the Benedictine scholar, Demetrius R. Dumm, said once, "The ultimate hospitality is an entertainment of divine mystery in human life"³⁵⁴.

S.F.1.15. If you still hang in here after these blunt expositions of my uncertainties, maybe wondering why you even read these words if they were written by one who openly asserts his ignorance with respect to every subject, hear this confession of mine. Namely, as I stand here with my arms open to the endless skies above, lulling the infinitely potent spirit of the unknown in their embrace, there is nothing, absolutely nothing that I am certain about anymore, from the causes of the global warming and the impending ice age to the counterproductive and dispiriting effects of the capitalistic socioeconomic inequalities to each and every one of Greg's Dharma's dad's conspiracy hypotheses to the existence of God watching over the Earth to the palpable effect of our wishes, dreams and aspirations on the phenomena emerging from our experience to the veracity of any single thought impressed on the pages of this book, except for the everlasting and undying uncertainties and for our being eternal seekers forever and ever, always on a quest, resisting to become locked inside of the cages of opinionated outlooks, as the key evolutionary drives, and even of this I am beginning to be uncertain, expecting at times that Answer to the origins and the final causes of our existence will jump on me from behind the next street corner and dazzle my consciousness with its divine lights. In that sense, I may have reached Socrates' ultimate destination in the journey of a contemplative intellect whereon all starts to be answered with a graceful "I don't know" and which could be the so-called "don't know mind"³⁵⁵ of which the Buddhist monks have clandestinely talked. The rooms in the castle of my consciousness are emptied thereby of all the dogmas and prejudices and kept tidy and clean, to be an immaculately pure home for some occasional birds of paradise to temporarily rest in on their journeys from Heaven to Earth and back. Alongside allowing me to contradict myself on all occasions and making exciting and inexhaustibly rich internal dialogues possible to happen, this attitude of supreme ignorance, in the most blissful of its forms, prevents myself from being attached to any fixed ideas or opinions, dissolving my ego thereby and setting grounds not for cynical eye-rolling, but for infinite sympathy with any stances offered around me. These tireless self-contradictions, furthermore, albeit natural when one allows the ever-changing contexts to shape one's reflections and oneself to evolve through them, need not imply apologetic retractions of opinions of any sort, which we are currently in the epidemic of. Rather, considering the opinion of the Croatian writer, Predrag Matvejević, "My role models from the youth never renounced a single line they had

³⁵⁴ See Leonard Sweet's *Quantum Spirituality: A Postmodern Apologetic*, United Theological Seminary, Trotwood, OH (1991).

³⁵⁵ See Camille LeFevre's *The Dance Bible: The Complete Resource for Aspiring Dancers*, Barron's, Hauppauge, NY (2012), pp. 151.

written in the past”³⁵⁶, we could imagine a perfect thinker as the one who does not only incessantly mold her thoughts to the winds of change, but also the one who stands firmly behind the stances adopted in the past, considering them as natural under the circumstances in which they were built and asserted. Throwing anchors at these destinations, however, comes at a great cost for our professional reputation and career opportunities. The story goes that Johann Sebastian Bach “behaved like a bull in a china shop when he wanted to achieve good working conditions”, as he was “in conflict with his employers and was considered stubborn” and ended up having to “compose masterpieces under untoward circumstances and very difficult conditions”³⁵⁷, and my path in science has been just about the same, with unconventional and awkward things I would do or say in the effort to inspire the spirits and create conditions for the exhibition of the greatest science possible causing countless professional falls, in the midst of which, however, I would flap with wings of angels and those flaps would become words and musical notes that might inspire generations to come. For example, when I answered each one of the questions a student of mine asked me while we were setting up an experiment in the lab with an “I don’t know”, she jokingly said: “Well, why do they keep you here if you do not know anything”? To which I merely replied: “Well, it is exactly because, first of all, I do not know and, second of all, am aware that I do not know that I unstoppably climb the ladder of success in science. Of course, not a corporeal ladder it is, reaching out to the spheres of social recognition. Not of this world this ladder is, striving for stars and sublime spaces instead”. It need not be said that each one of my aphoristic comments normally needs a lot of time to be digested, as witnessed by people’s often bouncing off of them with puzzled and pooped faces. This comment was no exception and to add fuel to the fire, I noted the following right away: “Actually, my mind is like a crescent moon. One side is light, reflecting the sunny knowledge to the face of the Earth, that is, you. But the other side is dark and invisible. It is the side of ignorance and not-knowing. Now, not knowing anything or pretending to be a mister know-it-all is equally damaging for one’s creativity and being in the world. Therefore, the secret of my creativity lies in balancing the two and always playing at the boundary between the light and the dark side of the moon of my consciousness, which is where the most inventive insights abide. Vigorously peering with the lightness of our knowledge so as to illuminate the pieces of mysterious, enigmatic domains of the world and our being is what brings forth great discoveries. But in order to play so, we should preciously preserve the darkness of the other side of the moon by marveling over numerous mystical and unanswered riddles implicit in the emanations of our perceptual realities. For, that is where the bricks for edifying the towers of our knowledge reside. Just as Lao-Tzu said, ‘Be aware of the light, but stick to the darkness’ (Tao-Te-Xing 28)”. I did not tell my student on this occasion how the advisors who forcefully inculcate an all-knowing attitude in their students’ heads, boosting their own egos thereby and elevating themselves in front of their disciples instead of the other way around, are setting up wrong routes to follow. By doing so, the students, themselves, naturally turn all rigid and agitated in a situation where someone challenges or refutes their opinions. As a result of their inflexibility in admitting that they were wrong, regardless of how obvious the findings speaking against their own prejudices are, they would rather try their best to reject them and continue living in oblivion than face the truth. Ironically, they would become the bigoted defenders of the notion of truth someday, that elusive

³⁵⁶ See Predrag Matvejević’s *Jugoslavenstvo danas*, In: *Zajednička čitaonica #1: Jugoslavija (2003)* by Predrag Matvejević and Vladimir Arsenijević, Krokodil, Belgrade, Serbia (2019), pp. 31.

³⁵⁷ See *Why Bach is still Germany's star composer 270 years after his death*, Deutsche Welle (July 27, 2020), retrieved from <https://www.dw.com/en/whybach-is-still-germanys-star-composer270-years-after-his-death/a-54329958>.

concept that humans can never reach with perfect certainty, exactly because of the inherently assumptive nature of knowledge creation, but also a concept that is useful to the autocrats and authoritarians all the world over because of its acting as a wall that keeps others at bay and them above all else. And once these students taught erroneously become teachers and authorities themselves, they will continue with the exodus of healthy uncertainties and the promotion of false certainties. In one such epistemically aberrant world where certainty is a religion and uncertainty perceived as fallacy, fallaciously as it were, acknowledging the invariably assumptive nature of our scientific proposals and inferences will prompt this world to beat these uncertainties out of them. Exactly that happened to Warren McCulloch³⁵⁸, who experienced as a youth the mocking of his ideas - which years later proved to be correct - solely because of his humble way of presenting them and thus learned early on that an authentic and honest scientific humility of the spirit does not pay off in a world that worships cast-iron certainties, regardless of how irrational they are. And so, he says, his soft and childlike humility got substituted with haughtiness, arrogance and phony confidence and so does this vicious cycle of perpetuation of pretentious certainties continue to spin with a spin whose spinning can be traced to the evils of that most powerful opioid for the spirit that Nature bestowed upon the Earth: the will to power. Intoxicated by it, the first pseudo-teachers acted in a gate-guarding manner, protecting their own positions of power while cunningly pretending to be an irreplaceable protector of their disciples, and their legacy continues. Epitomes of Dostoyevsky's Grand Inquisitor as they are, they continue to obstruct the growth of their disciples instead of letting them spread the wings of independent creativity, start shining with infinite intrinsic potentials and become gorgeous birds of wonder and love that carelessly fly freely across the skies of science. In contrast, a teacher whose mind is like the aforementioned crescent moon is flexible and joyfully selfless upon finding a grain of mistake in one's own thinking conches. At the end of the day, she knows that an irritating grain of sand that found its way to a seashell leads the latter to produce a wonderful pearl of knowledge.

S.F.1.16. Once, when I was summoned for duty jury and then, having been seated on the seat # 13 of the jury box, disparaged by the judge for my absentmindedness and questioned why I forgot to read a paperwork and why I did not request a hardship excuse on time and why this, why that, my answer was to be one "I don't know" after another, all until they form an endless train thereof, the steaming locomotive in front of which would go on and conclude that "there are thousands I don't knows living in my head, bouncing against each other, popping, vanishing and coming to life again, like soap bubbles, because I am a scientist and explorer and without all these I don't knows inside me, all my science and all my explorations would come to a standstill". As a matter of fact, while still seated on this judicial podium in my reflections, I should say that depriving people of the freedom to say "I don't know" should be, in my opinion, taken as an assault on their basic human rights. However, the modern society is silently, at every step, pressuring people to discard their natural uncertainties and show more of the pretentious and self-proving attitudes. The cost is, of course, a certain fall from grace. For, once we adopt the attitude of defending and elevating ourselves in front of others, we would sooner or later realize that there is something wrong with our personality and being in the world. We would naturally ask ourselves where all the inspiring charm and beauty have dissipated? From my experience I am aware how working environments that force one to pretend as if one is an omniscient, perfectly competent professional, suppress naturalness in one's thinking, feeling and acting. With doing so, they place dams on the naturally

³⁵⁸ Watch the interview with Warren McCulloch on Canadian Broadcasting Co. (1969), retrieved from <https://www.youtube.com/watch?v=MTmR6X2w8Tg>.

streaming waters of creativity within ourselves, often turning them into muddy puddles. Also, quite paradoxically, by killing the birds of insecurities in us, they produce even more of those birds. Insecurities thus multiply without limit, driven by a positive feedback loop wherein any amount of insecurities presents a basis for developing even more of them. Just like letting a single Cuddly Little Trumble into our spaceship in the Commodore 64 classic, *Elite*, leads to tens of thousands of them inhabiting our ship in no time, so does each insecurity present a ripple that travels back and forth across our minds, causing more of their kinds to occur, all until they start creating their own virulent rhythms and melodies to which all our bodies and souls will rattle and shake. But there is always a way out and just like flying close to the sun is all that is needed to dispel the trumbles into space, awakening the sun of divine spirit inside us will melt all the dens and dams of fears and insecurities in an instant. In the process, the insecurities get to be lived out freely and this is how they escape and fly into their own freedoms, away from our being. Only by freely expressing them do we get a chance to find the way towards the sunlight emanating from a sense of perfect security. This is why everywhere I go, I sow stars of charmingly insecure expressions. By doing so, I know I knock on heavenly doors that open the way for a truly fulfilled living.

S.F.1.17. Attention has recently been drawn to my tendency to exclaim strange and unfinished, “orphaned sentences left hanging midair”³⁵⁹, a habit that, as Dudu believes, pointing it out gruesomely under an oak tree of a sideways Hayes Valley street, appears a bit odd in the academic world which we both inhabit. These broken pieces of sentences, snippets of phrases or onomatopoeic verbal hodgepodes that sound as if they emerged from a Jacques Tati movie, a Samuel Beckett’s play or a stream of consciousness novel, of course, serve the purpose of serving the ball of lightened-up fanciness and unaffected naturalness to another in this communicational game of tennis that we all incessantly play in the vicinity of each other. Not that I, in view of this habit of fragmenting verbal expressions to puzzling and hardly comprehensible bits and pieces, do not look after presenting myself as uneducated and illiterate in front of others, particularly in casual talks that follow long and strenuous hours of thoughtful work. Writing and doing science requires maintaining composure and a fine balance in my mind, whereas in-between these tightly focused moments my mind tends to unwind into a loose state in which I can merely bluntly follow the lights around me and appear as disinterested and laidback as a little kid carelessly floating on the sea surface while facing the smiling sun. In those moments I let the paradoxes on which all profound philosophies are based annihilate the clouds of thoughts in my head and yield pure starlight in it, as dazzling as it can be, starlight from which strikingly germane impulses for the spontaneous shedding of lifesaving signs all around one emerge. When J Mascis of Dinosaur Jr. was asked if he is indeed so incredibly lazy as people say, he first negated it by mumbling, “People think I’m lazy because I talk so slow”; yet, when the interviewer asked back why J talked so slow, the answer was, “I don’t know; I guess because I’m lazy”³⁶⁰. Quite often, I create similarly insolvable paradoxes in communication so as to defy the rules of logic and convention and implicitly point out that far outside of their realm, in the space inhabited by an unconditional cosmic love, the truth resides. I may not go as far as the Chinese philosopher and poet from the 4th Century BC, Hui Shi when he wrote “The sky is as low as the earth. Mountains and the sea are in the same plane. The Sun sets in the noontide and beings die when they are born. If you set off to Yue this morning, you will arrive yesterday night. A chicken has three legs. The color of a white

³⁵⁹ See Nick Attfield’s *You’re Living All Over Me*, Continuum, London, UK (2011), pp. 110.

³⁶⁰ *Ibid.*, pp. 111.

dog is black. The mountains sing”³⁶¹, but the overall unspoken message of this ruination of the basic principles that govern verbal communication is the same as that of Hui Shi and countless Zen and Chan masters: logic, let alone language, cannot be a means to arrive at the doorsteps of the most sacred knowledge in life; only the flaps of the wings of the ineffable music of our hearts can. For, long time ago I came to conclusion that we cannot talk without linearizing our mind in the process and forcing others into the tunnels of thought that we build in front of us thereby. Like an eagle focused on its prey, we bully those whom we converse with into narrow tracks of thought, with no escape routes handed to them, whenever we offer stably fortified, precisely structured and intoxicatingly indoctrinating opinions. To produce the contrasting effect of a sun-like eye to the world whose rays of attention become enlighteningly dissipated in all directions, spinning ‘round and around like a pirouetting ballerina or a gyrating glittery diamond, finding all things plausible and accepting it all like the virgin idealized in the ending lines of the Bible (Revelation 22:17), there is no other way but to break the standard linguistic structure to pieces and appear quite illiterate to snotty intellectuals of the world, somewhat like a rock star whose words get lost as soon as they are uttered, producing a verbal emptiness through which, however, our spirits could unremittingly shine. In view of this, I truly enjoy starting a conversation, such as answering a question, with slow and disconnected, often grammatically incorrect and out-of-place statements that make the other person ask herself if I am literate at all. When rock stars do the same, psychologists might tell you that it is because pumping up ego increases the time needed to execute a task³⁶², but how wrong they would be if they applied the same reasoning to myself, who has always been up to one thing only: dissolving the barbed wire aura of ego around my celestial spirit. What the listeners who find this habit of mine jaw-dropping know not is that such an odd initial appearance gives a specific strength and impressiveness to everything I subsequently declare. For, by contrasting my presupposed scholarliness with the ostensible illiterateness, a crack is cut through the sleepy hearts of the steely cups of their mental spheres by the sword of a paradox, through which copious flows of enriching impressions could be effortlessly poured. And at times when I fell from grace and into the traps of professorial authoritativeness, having temporarily begun to express myself in overly scholarly ways and forgotten about the necessity to lower oneself before others by appearing quirky, illiterate and dumb, Theo, that little god who’d reshow me the ways toward truth and godliness in life, the ways covered by dust in my adult-erated mind, emerged on this plane of reality and one of the first full sentences he’d form, at the tender age of three, sweetly unfinished, was, “I know this is”, letting his language collapse, like in some magical machine, right after the pronunciation of that intrinsically mendacious verb, is, the sign of equality that is never correct in this world where no two objects or events are identical to each other, where “something always stands for something else”, as the central semiotic principles has it, and where every drawing of the correspondence between experience and language trivializes life and reduces it to a lifeless caricature of it. To break the language, to stagger and to appear illiterate is thus to live for life, not language, a mere tool, a ladder that is to be tossed when the starry heights of life lived to the fullest are being reached. On top of this, if I have come to believe that dreamers invariably space out dozens of times during every minute of a conversation and that such dreaminess is the key to exhibitions of creativity, which I am to celebrate and disseminate with every moment of my professorial existence, then how do I express myself with a perfectly smooth flow of verbal expression and not feel as if I am breaching some higher principles of beauty and

³⁶¹ See Béla Hamvas’ *Anthologia Humana: 5000 Years of Wisdom*, Dereta, Belgrade, Serbia (1948), pp. 28 - 29.

³⁶² See *Pet načina na koje vam Facebook uništava život*, B92 News (April 5, 2015), retrieved from http://www.b92.net/tehnopolis/internet.php?yyyy=2015&mm=04&nav_id=976983.

truth, of ethics and aesthetics? When one bleeds with love all over the place, when one's heart has turned into a sun that disperses its dazzling rays onto all creatures and things without reservation, just as the real Sun does, logic and its faithful servant, language, bow before this burst of light blushing and lose their minds momentarily, if not disintegrating into dust in the blink of an eye. To sound as incoherent and disconnected as the storytelling in Godard's *Histoire(s) du cinema* or any of his late video works has thus been the only way I would feel as if I am being loyal to the sublime summits of insanely creative being, which is all about the disparagement of the surface and the recognition of the beauty of the essence and which I, as a professor and a teacher, have felt obligated to transmit with every heartbeat of mine. Therefore, like the poetry of Michael Stipe³⁶³, Morrissey, Van Morrison and many other lyricists, which were the best when their composers were at their most cryptic, oblique and undecipherable, so has my impression always been that of sounding most enchanting when walking on that thin line between the incomprehensibility of a lunatic and the intelligibility of a genius. Moreover, if I want to say something and in the middle of the sentence realize that the other person already knows what I was going to say and/or has already grasped the meaning of it, I break the sentence in half, including individual words sometimes, and never explicate it in its entirety; this, which I remotely recall to be a habit of Japanese people, often confuses the unfamiliar listener and makes them wonder if I am okay. Dudu's other "problematic" assertions that are a regular part of my vocabulary include "basically", "essentially" and "really", after each of which I'd say nothing. A profounder purpose of pronouncing them aside, maybe I enjoy leaving a missed connection floating somewhere in space every time I say nothing after them. Maybe they act like hooks that draw something precious, always dressed up in a question mark, from the depths of the surrounding creatures' souls? Or maybe I say those just in order to break the silence and place a mild tension that then sits in the air, invoking a pleasant wonder in others about what I actually wanted to say and adorning me with a veil of mystery in their eyes, a prerequisite for any miracles and utterly inspirational acts to be performed. Who knows? What is certain is that the king of unfinished sentences as I am, I do all that is in my intellectual powers to stun rather than indulge in uninspiring and predictable clichés, dull our senses and put our wonder to sleep, as well as to demonstrate that seeking, not finding, is the key to creative being, and, finally, to diminish the value of myself so as to raise that of another in the eyes of myself and the world alike. I also wonder if the artist labeled by the protagonist of Robert Altman's *The Player* as a "pragmatic anarchist", the title I could assign to myself any day, who produces unfinished art, bearing resemblance to this and other books of mine, which are alive and always in a state of change, uncertain how they would look in an hour or a month from now, and who "likes words and letters", but is "not crazy about complete sentences", a writer's muse to whom, per Altman's ideology, the soul of the entire movie industry could be traced to, is a remote reflection of myself as a linguistic creature as well as if this inclination of mine to break the rules of language in search of the essence of being is tied somehow to my rejection of any commercial cravings in my life as an artist, lest this life get sullied and unlivable. Yet, despite my sense of certainty, these are all indeed mere hypotheses and the complete set of reasons behind this quirky habit of mine to cut sentences in halves and ounces is bound to remain unknown to me for good. It is all like when I am all smiles. People ask me for the reason, and I never know. Sometimes they leave a bit insulted, but more often I find them enjoying that mild sense of mysteriousness. It was Chuang-Tzu who, after carefully observing the laughter of a baby, noticed that every sincere smile has to precede a thought and a reflection on that smile. Thus,

³⁶³ See K.'s R.E.M.: Find the River (February 6, 2010), retrieved from <http://justasong2.blogspot.com/2010/02/rem-find-river.html>.

sincere smiles never know the reasons thereof. He therefore proceeded to conclude that “perfect happiness knows not of happiness and perfect praises know not of praise”, sending out words that ring in accord with those of St. Barsanuphius: “Forget thyself and then know thyself”³⁶⁴. After all, I knew that mumbling, stammering and offering disconnected sentences as I do would make me neither the first nor the last decent writer who was, at the same time, considered as a terrible speaker by the misled mainstreamers. One that comes to mind is Ezra Pound, who spoke with the use of “swift words, no sentence structure worth mentioning”³⁶⁵ in order to shatter the ego of oneself and everyone else in the room and whose poetry “sings eternal a pale flare over marshes”³⁶⁶, breaking the grammar, but empowering the soul, having sprung from the belief that one without the other cannot be achieved. After all, passionately dedicated to the core of their beings, from which the sunshine of their spirit is let emanate and wash over the face of the world, sages often completely disregard the way in which their expressions appear on the surface. Careless about their own image in the eyes of the world and strictly focused on the essence is how many great sages who enlightened generations of people on this planet acted. In that sense, I do not bother about the fact that some of my sentences regularly stay unfinished; rather, I look forward to their becoming a nucleus of greater things to come, of conversations that will be less formal and clichéd and more lively and genuine. Remembering Mary Margaret O’Hara and her characteristically fragmented, broken speech that originated from her being inspired by Joyce’ Ulysses at the age of 11, alongside living in a family with seven children³⁶⁷, where everyone would interrupt each other during conversation until it all turned into a jump-on festival where everyone would speak at the same time, I hope that my rather peculiar way of talking would bring new life and energy into linguistic communication, which, as such, would not only be a passive embodiment of our thoughts, but rather a vehicle for the derivation of new ideas, of thoughts whose nuclei were never known to have existed inside their carriers’ minds before being awakened by language. In the end, the ultimate reason for this “modish disinclination to finish sentences”³⁶⁸ is that I see language as a mere map of the territory of our experiences. “Once, you know, there was never an honest word, and that was when I ruled the world”, as Chris Martin sang in Viva la Vida³⁶⁹. Warren McCulloch once asked the audience not to bite his finger, but look at where he is pointing with it. Thus, if I realize that a person I communicate with has looked in the right direction, the one at which I am pointing, I do not need to keep on sticking out the fingers of linguistic expressions anymore. Succinctness, therefore, is the key, lest we fall into the trap hinted at by Pascal when he noted in *Pensées* that “those who make antitheses by forcing the sense are like men who make false windows for the sake of symmetry; their rule is not to speak justly, but to make accurate figures”³⁷⁰, the trap fallen into whenever we let language, not meanings that its symbols represent, dictate what we say and what sorts of ideas we convey to others in communication. Its intrinsic aesthetics notwithstanding, language, at the end of the day, is only a tool that helps us orient towards common aims. Successful coordination of our experiences is the aim of language, although there is a beauty in playing with music and meaning of words alone,

just like mathematics has its inherent beauty even when used independent of real-life experiences. As long as there are potential failures in the coordination of our experiences, languages will exist. If everything were in its right place and flowing with perfect smoothness, without any danger of slipping into an error, there should be no room for talking. A pure silence is thus the aim of so much talking. To close the circle, to arrive at perfect consistency, and leave us alone amidst the silence of the stars twinkling with eternal wonder. Needless to say, even if we expand the horizons far into the future, we see an endless line of progress occurring exactly through problem-solving attempts. Hence, if we desire to make the human society advance towards ever more beautiful ways of communication and experience, we will have to face problems and obstacles, and upon them build the way forward.

S.F.1.18. Crossing the line beyond which we won't regret to erase our thoughts, because we are not attached to them anymore and are aware that the heavenly inspiration will dawn upon us to give us the right words at the right moments, separates masterful writers, orators, actors, musicians and artists in the art of life from sheer novices. Hence, "When they bring you unto the synagogues, and unto magistrates, and powers, take ye no thought how or what thing ye shall answer, or what ye shall say. For the Holy Ghost shall teach you in the same hour what ye ought to say" (Luke 12:11-12), Jesus instructed. Simultaneously, to mind is brought the hidden finale of R.E.M.'s Green and the thrilling moment wherein Michael Stipe sings of how he had "made a list of things to say, but all I really want to say is, Hold her and keep him strong while I'm away from here"³⁷¹, restoring the vision in us of one who had compiled pages and pages of words to say to others and then, as the time to utter the divine message in all its glory arrived, scattered them all in the wind and opened the cup of one's mind to spontaneous landing of the white doves of inspiration of the moment. Indeed, after we've crossed this magical boundary, we could do the same thing Isaiah Berlin used to do: write down extensive concepts about what should be said during the lecture, and then, as the lecture time approaches, slowly cut down on the words and sentences in our concepts, all until a single page and then a single paragraph and then a single sentence and then nothing is left; a pure silence within our being, disturbed only by the waves of deep breathing crashing over the seashores of our mind³⁷². That is the moment when we enter the stage.

S.F.1.19. Then I get reminded of my student days when I would sit in front of the book placed on less than a half of our kitchen table (that used to be my working space, the place where my mind could space out and enter the state of stellar contemplativeness), feeling as if my head was to start boiling, just about a day before an exam, and my Mom would gently approach me, on her tiptoes, softly close the book for me, and tell me to go out and play. What has been learned has been learned, she would say. The night before the exam is the one where mind has to be let loose and kept like that all the way until one arrives at the "stage". This probably explains the Serbian tradition of throwing a casserole filled with water after a child setting off to exam. The purpose of this act is to symbolize how the streams of knowledge ought to flow freely in all their naturalness, spontaneity and lack of pretense rather than be tightly packed under the pressure of memorization and the need to leave a good impression, and thence given off in awkward and ungraceful jerks,

³⁷¹ Listen to R.E.M.'s 11th, Untitled Song on Green, Warner Bros (1988).

³⁷² See Alan Fletcher's *The Art of Looking Sideways*, Phaidon, London, UK (2001). This order of writing, where cutting down on words succeeds their piling could explain Pascal's note incorporated in one of his letters: "The present letter is a very long one, simply because I had no leisure to make it shorter", or, as this is being colloquially quoted, "If I had more time, I would have written a shorter letter" (Provincial Letters, 1656).

mental, emotional and gestural alike. Distantly, this thought evokes the recent comment I found in a journal that elaborates educational trends, stunningly stating that “among the problems on college campuses today are that students study for exams and faculty encourage them to do so”³⁷³, and trying to make us aware that the concept of exams, like any other conditional mechanism used to exert power on a fellow human creature, is fostering the spirit of instrumentalism, of the self-centered use of other beings and objects ascribed a means to an end to rather than an end in itself. At the very end of Georg Wilhelm Pabst’s *Diary of a Lost Girl*, our heroine, Thymian’s patron, touched by the glow of an endless self-sacrificial love radiating from her, proclaims the following words straight into the face of a tyrannical reformer of “wayward girls”, an epitome of a conditional educator with a stick and a carrot in his hands: “A little more love and no one would be lost in this world”. For, the remedy to the coldhearted manipulation with another that has comprised the core of the mainstream educational method for centuries is nothing but an authentically anarchic rejection of the cravings to rule over and exert an authority on another, while never ceasing to keep the avidly burning flame of love within one’s heart ignited. Hence, no preparation, no rules, no recipes ought to exist within the orb of our consciousness, as the spirit of Christian anarchism, of abandonment of any rules or authorities that we may have submitted ourselves to, with the exception of the cosmic monarchy of love, tells us. Only the silent music of the celestial spheres of the soul sending the vibe of sheer divinity outwardly is then left to live inside of the meditative mind of ours. My Dad has used to point out the same by teaching me to head over to an important event with a meditative state of mind, focused and with a big, big heart shining within, like a cowboy heading on to a duel. To face the fiery devils of this world by being “cold as a stone”, as in a U2’s landmark tune³⁷⁴, and to sway before their flames with the same cool with which Boža Pub “drew queen on 18”³⁷⁵, with merely a sun-like crack of a smile on one’s face, peacefully oriented to the light emerging from one and allowing all of one’s moves to appear from a playful surf on its waves, is what I understood to have been implicitly impressed in this advice. This, of course, does not mean that we should turn into Elisabet Vogler, the actress from Ingmar Bergman’s movie *Persona*, who, all of a sudden, whilst acting on the stage, turned stunned, staring blankly, spaced out in her mind and stopped talking forever and ever. At the end of the day, it is the balance between the meditative state of mind and the one busily processing memories, impressions and thoughts that can be seen as the pot of creative conceptualizations.

S.F.1.20. To balance the two, we should, as I said on many previous occasions, learn the art of both effectively thinking and perfectly resting ourselves in meditative, empty-minded behavior, be it sitting in the lotus posture, dancing all over the place or floating across the city streets while being hypnotically immersed in their sidewalk lights. *Maunam*, the habit of spending prolonged periods of time, such as whole days or even longer, without speaking anything, presents a part of the Hindu spiritual tradition, apparently neglected in the modern, Westernized world. We are, however, not even aware of how much vital, psychosomatic energy we can lose by simply talking “trash”, that is, meaningless, formal or vanity things common to everyday conversations. It is true that a good talk can be fulfilling and that golden messages enwrapped in mere words can enlighten and open new ways for the creatures around us, but such is the nature of every act in this and

possibly every other life in the Universe. Whatever we have been given freedom to do is like a double-edged sword; we could edify the marvels of the world using it or disgrace them, normally without being aware of in which direction our deeds are changing the world. After all, it may be in the nature of human progress and evolution of life to produce undesired side effects in the wake of every action performed with the best intentions on our minds. People have solved the problems of bacterial contamination by wrapping food in plastic packages, but have contaminated human bodies with possibly even more dangerous polymeric degradation products. This may explain why I never wash my favorite garments, feeling as if billions of happy microorganisms and cosmic dust thrive there, from the remnants of the Roman emperors to the breath of the Himalayas, protecting me and letting messages of good times seed the world. With my thoughts often streaming like space shuttles through the world of dentistry these days, I bring to mind the case of triclosan, a phenolic compound that is now added to toothpastes and mouthwashes as an antimicrobial agent to hinder the progress of periodontal disease, even though it has been shown to be potentially neurotoxic³⁷⁶, to have a disruptive effect on the workings of the thyroid gland³⁷⁷, to impair the excitation–contraction coupling of cardiac and skeletal muscles³⁷⁸, and, as it was just found out, to be a liver tumor promoter³⁷⁹. Likewise, adding fluorine to the tap water has been proven to have a beneficial effect on the durability of tooth enamel, but has unfavorable effects on the gut flora³⁸⁰, and there are indications that it may even act as a neurotoxin³⁸¹ or a mutagen³⁸². It is not unthinkable, therefore, that the cost of the obsession with having pearly teeth may be an aggravation of the already epidemic proportions of proneness to cardiovascular disease and obesity in America. Opponents of fluoridation of tap water may thus tell you that fluoride *per se* is more toxic than lead³⁸³; that it slows down the metabolism of the thyroid gland, leading to depression, obesity, fatigue and muscle ache³⁸⁴; that it is a potent enzyme inhibitor; that it hardens the arteries

³⁸⁴ See Stephen Peckham, D. Lavery, S. Spencer – “Are fluoride levels in drinking water associated with hypothyroidism prevalence in England? A large observational study of GP practice data and fluoride levels in drinking water”, *Journal of Epidemiology and Community Health* 69, 619 – 624 (2015); doi:10.1136/jech-2014-204971.

and makes bone more prone to fracture; that it may cause premature births and has a damaging effect on brain development in children; that it is linked to Alzheimer's disease and senile dementia; that it is a cancer-causing agent; and that even Gestapo officers added it to drinking water to keep the prisoners apathetic and sluggish. On top of this, every time I see fluoride on the labels of anti-cavity toothpastes and mouthwashes, I see politics and am impelled to reminisce over times when materials chemists ruled the world of dental science. In a couple of hundreds of years from now, people, I am sure, will describe the current era in dental science as 'the century of fluoride', being amazed by the blindness of the dental industry before all the elements of the Periodic Table and all the advancements in materials science, clinging onto the use of fluoride in everything, from toothpastes to polishing agents to, strangely, interdental picks, like an incontestable creed. Hence, how in the world did the whole world buy into the concept of preventing caries by strengthening hydroxyapatite of enamel by substituting its hydroxyl groups with fluoride ions and thus decreasing the solubility product from the already sparse $10^{-57.7}$ closer to $10^{-59.2}$ for pure fluoroapatite³⁸⁵ is still not clear to me. But one thing I am certain about: never again will such simplistic materials chemistry concepts make their way to the mainstream dental products, especially not in today's dental science ruled by molecular biologists. All this is a powerful reminder that not powerful science converts the discoveries to commercial products, but rather the seats of power themselves. And then, concerning the evils of power, without ever disregarding the realness of the threats that fluoride in water poses to our health, a still small voice from the other side of the room of our mind may quietly tell us that a simple mathematical calculation can show us that with every breath of ours we inhale about six atoms that were a part of Adolf Hitler's body on average. This and nothing else need be said to convince us in the necessity of side effects of even the most benevolently carried out actions in this world. For, after all, it is these problematic side effects that promote a continuous spin of the wheel of progress of human thought and the civilization whose constant building our minds unstoppably conceive of. For example, attempting to solve the problem of global famine, humans depleted the food from many nutritious compounds and poisoned it with fertilizers and other artificial additives, imbalanced the composition of the soil by cultivating monocultures and eroded it through inappropriate agricultural activities. And yet, just like viruses and other invaders on the integrity of our bodies have sustained and built the resistance of our immune systems, so do these problems call for innovative solutions that include more sophisticated agricultural methods and advances in genetic engineering, leading us by the hand to novel and unforeseen lands of blissful knowledge, which can be always, no matter how basic it is, applied on innumerable problem-solving occasions. Finally, by intending to make life easier through interfacing it with technological inventions, not only did we cause many disasters following their misuse or breakdown, but have also been changing human consciousness in the direction of our becoming critically attached to them, thereby modifying human values in unforeseen ways. These sources of attachment and misery that they eventually bring at the very thought of parting from them have indeed been all around us more than in any other period in human history. Yet, once liberated from them, like Vuk Mandušić freed from the attachment to his *džeferdar*³⁸⁶, we would be able to glimpse the entire human civilization, our imperfect and yet infinitely lovable road to the stars, crystal clearly, as if placed on the palm of our hand, while flaps of the angelic wings of thankfulness to generations of humanity that have

³⁸⁵ See, for example, C. Wei, Y. Zhu, F. Yang, J. Li, Z. Zhu, H. Zhu – "Dissolution and solubility of hydroxyapatite and fluoroapatite at 25 °C at different pH", *Research Journal of Chemistry and Environment* 17 (11) (2013).

³⁸⁶ See Petar Petrovich Nyegosh's *The Mountain Wreath*, rendered into English by James. W. Wiles, George Allen & Unwin, London, UK (1846).

produced all these billions of reasons for flickering wonder to arise in our hearts and parachute us to stars would be fluttering all over our glowing spirit enlighteningly crucified between soaring high in stellar joy and sobbingly shedding tears in sadness. Then, it may become clear that all these artificial wonders that helplessly tie our attention thereto could either provide distractive downward drags on the ascension path of our spirit or be the sources of powerful drives and insights that propel us ever higher on our way to the stars. After all, having largely substituted natural wonders, the twitter of birds, the fancily arched colors of the rainbow and twinkling of the stars at night with showers of lightshows landing on us from electronic gadgets, computer screens, video beams, satellites and cameras and neon signs that light up city streets, the eyes of a saintly epitome of the modern age could be expected to be inundated with ones and zeroes, pixilated with twinkly beats of joy, blinking from here to eternity, flooding her spirit with waterfalls of wonder that spin the windmills of her heart, enabling the food for many, as practical as it can get, to be conceived and created in its depths. For, once we understand that the material versatility and spiritual excitement are entwined within a positive feedback loop, whereby the more of one instigates more of another, the separate splints of scientific and religious tracks of thought running through our head would converge into one, letting all the trains of thought crash, implode and transform us into a sunburst of creativeness that will astonish millions of starry eyes that curiously twinkle on this planet, graciously waiting for the sign.

S.F.1.21. On the opposite side of one such consciousness that is so deeply drawn into itself, processing the content of its memories and sensations into glows of some fantastic creativity, stand many people whom I have known who would study for enormous amounts of time, and yet quite inefficiently, losing their focus every few moments or so. My studying in the busy kitchen, where practically all of the time someone was walking by and where whispers from distant conversations and the sound of news coming from often more than one TV set could be all heard in the distance, mixed with the tweeter of turtledoves by day and crickets and owls by night, the gurgling of water streaming through the underground pipes and the trembling of the vine leafs and walls next to me whenever the street tram would pass by, I have thus always compared with what running athletes achieve by running with led shoes. Although it is harder for them to run with these heavy shoes on, once they jump into the real running shoes, they feel lighter than ever. I, myself, used to practice the same by filling my socks with pennies and then running up and down across the SF hills, all so as to feel light like a feather afterwards, when skylarking under the starlight barefooted. This brings to mind a recent study³⁸⁷ wherein subjects who were shown images of horseshoes, seashells and other objects accompanied with an offensive word proved to be faster in guessing their identity than when shown the images *per se*, clearly suggesting that distractions of one kind or another are vital for developing our focusing abilities. Hence, having been forced to study in loud, although in my heart always pleasantly distracting circumstances, it seems as if I have developed an ability to quite efficiently concentrate on whatever I am doing while remaining blind and insensitive to impressions I would intentionally eliminate from my perceptive field and awareness. My brain has thus been partly gifted and partly trained to do what the little boy Bud from Terence Davies' *The Long Day Closes* does when confined to a classroom full of lackluster crammers and bullies: all the lights suddenly turn off and all around him descends slowly into darkness, as his mind begins to see none but a barque with white sails traversing the sea nested in the eye of his mind to the sound of a lullaby: "Blow the wind southerly, southerly, southerly, blow bonny breeze o'er the bonny blue sea, blow the wind southerly, southerly, southerly, blow bonny

³⁸⁷ This study was referred to in the April 2011 issue of *Wired* magazine.

breeze my lover to me; they told me last night there were ships in the offing and I hurried down to the deep rolling sea, but my eye could not see it wherever might be it, the barque that is bearing my true love to me". With the help of such an ultra-selective focusing mode, my efficiency in carrying out various tasks has become greatly augmented. Hence, if you let me work on a problem and my mind starts churning with ideas, there is a large chance that I won't even notice a question you'd ask me at some point. My mind simply refocuses all of its attention onto the problem, with everything else getting temporarily erased from my attention, somewhat like Bleek Gilliam played by Denzel Washington used to do in Spike Lee's *Mo' Better Blues*, when playing his beloved trumpet while letting his lover's voice and face float in the distant background of his awareness. On a side note, this is not to say that grumpy wives cannot contribute to music, even when they have little of the lures of Justinian's Theodora's gaze on her frescoes or of Cleopatra's twinkle in the eye as she was being "opened a crate of ale"³⁸⁸; Rooster Ben's wife³⁸⁹ once allegedly sat on his saxophone, partially crushed it with her big buttocks and thus unintentionally produced the shaded and quiescent sound that afterwards became a trademark of the sound of this legendary saxophonist who allegedly used to sleep with two things, his hat and his saxophone, and who was also known as the Brute due to his heavy drinking. Something similar happened to me when late Enya, drunk as a skunk, accidentally jumped on my acoustic guitar at a party and thoroughly smashed it, prompting me to drown my desperation in white wine hidden under my thin gray varsity jacket that autumn night and swear in ecstasy that I would never play guitar again. But alas, what I did not know in this moment of despair was that Fate whispered inaudibly to my ears the words of Spike Lee as he picked up the tossed trumpet, held it up high in the air and yelled at the sight of the trumpeter's walking away: "You'll play again"³⁹⁰. The loss of the acoustic guitar, therefore, turned out to be a fortunate event that instigated me to buy an electric one, change my sound by 180°, develop a characteristic playing technique and produce music which still stands forth as the starry sky in the aerial atmosphere of my dreams, the quality of which I believe I would not be able to reach or surpass in thousands of years of writing. Sadly, at around the time I listened to Ahmad Jamal play piano in Yoshi's venue on San Francisco's Fillmore Street, Enya jumped off the balcony of his Belgrade apartment, smashed his head against the asphalt and flew away from this plane of reality, eternalizing his characteristic medley of high-spiritedness and perpetual grogginess in the pantheon of my memory. Still in the realm of jazz, the music whose sad traits are the result of its systematic evasion of sad feelings, next to Bleek's not registering his wife yelling at him because of being so deeply absorbed in his music, we could recollect the cause of John Coltrane's fascination with soprano sax³⁹¹. Namely, as he was returning in a car with two of his companions from Washington to New York, they stopped in Baltimore for a short, 30 min break and then continued their ride. Soon after, he and his buddy who was driving the car realized that the third person, who had sat on one of the backseats, was missing; alas, it was too late to return and all the two of them could do was to hope that he had enough money to make it safe to New York by himself. When the two arrived to New York, Trane realized that the missing man left a suitcase in the car and took it with him to the apartment. He found a soprano sax in it, started playing around with the instrument he had never played before and that was how some of the most memorable solos of the free jazz phase of his musical oeuvre came to existence. This is to say that

the ability to preserve laser-like focus on a particular field of our attention is inescapably compensated by the magnificent absentmindedness and inattentiveness, obeying the call of which, though, as we see, can open the door toward invaluable discoveries on our quest for divine freedoms. Still, what is worth pointing out is that the way in which I preserve the trend of these concentration exercises integrated in my daily routines is to never ignore a creature that comes up to me with a need or a question. For, long time ago I decided to hop over for good onto the final stage in the development of Kierkegaard's artist, the one wherein she would value life and other earthlings more than her creative works, diametrically opposite from the one with which her growth began. After all, with the ultimate goal of an artist's work usually being the expression of love for another human being, that most graceful and godliest of all emotions, her passing by the needy looks begging for attention and, ultimately, love and not finding time for them because of roaming obsessively through the insides of her mind in search of a perfect artistic expression of this emotion is intrinsically blind and hypocritical. In this spirit, I made it a rule never to reject a being in my vicinity and sacrifice its needs for the sake of impressing a spark of thought that has been enlighteningly enkindled in my head onto paper. In such a way, by churning the wheels of majestic thought in parallel with helping others turn practical windmills of the world, that is, my ability to focus onto spaceships of ideas that stream through my mental microcosm is being ever more intensified. For, no meditative road leading to the center of our consciousness is more efficient than the one passing through the provinces of empathy, cordialness and geniality. After all, the ultimate purpose of my writing over the years has been to kill the written word, if I may express myself so. Or, if I were to paraphrase another autobiographical writer³⁹², I have been trying to write my way out of writing. In other words, I have attempted to use words as pointers at life – the domain of reality far greater than word *per se*. In this creative approach I have found a most gracious act of denying oneself for the sake of giving birth to a form of being greater than oneself, an act allegorically represented by the dying of the Biblical seed from which new life is given rise to (John 12:24-25). As I sat on a Hubbard Street bench in the middle of the fiery downtown Chicago club scene, a local African-American artist and an independent musician sat next to me and out of the azure said a thing I will never forget: "Brother, you are greater than your ideas. You are greater than your work. I am greater than my music. That is the message I am willing to spread". Feeling as if a great burden of my addiction to work just crashed under me, like the skeleton of a brontosaurus falling into pieces under Dr. Bone, the paleontologist who assembled it, as he happily lifts his sweetheart by the hand and saves her from falling instead³⁹³, I continued to sit on the bench, yet my spirit became suddenly set free and hauled up into the air, starting to fly joyously across the sapphire skies poised above me. These words so strongly resonated with me on that night spent dancing under a smiling Moon because they coincide with the final stage on the spiritual journey of Goethe's doctor Faust and of Kierkegaard's vision of an artistic soul, whereon the recognition of human life as greater than one's art or knowledge becomes fully established, as well as with my own attempts to put a full stop at writing with these very words and point at life as the only arena of reality wherein the fulfillment of our spirits can take place. Likewise, as during the years when my spirit transitioned from a cocoon into a butterfly in the dreamy solitude of my marine-colored room I could only afford listening to music quietly, on an old and inexpensive cassette player, I avoided being crankily dependent on sophisticated and loud musical equipment to give me a pleasurable listening experience. Hence, quiet and dusty sounds wherein humming

³⁹² See Jeanette Winterson's *Why Be Happy When You Could be Normal?* Grove Press, New York, NY (2011), pp. 6.

³⁹³ Watch the final scene of *Bringing Up Baby* directed by Howard Hawks (1938).

leaves and the sounds of birds chirping and pecking and the summer breeze drifting cover musical harmonies underneath could never stop me from protruding into the secrets of their brilliancy. For, I have always believed that “it is the stillest words which bring the storm, thoughts that come on doves’ feet guide the world”³⁹⁴, as Friedrich Nietzsche pointed out. Therefore, everywhere and at all times, my soul has been on the run for things not loud, polished, streamlined and flashy like a Justin Timberlake Billboard chart hit, but quiet, old, oaky and smoky like a dusty cellar filled with filthy stuffed animals, like Pet Sounds, Paul’s Boutique or a Phil Spector production and like the landscapes through which I drifted as a child and as a youth, the landscapes I revisit in my daydreams every so often, the landscapes that, deep down, I am being made of. Also, as a teenager and later, as a student, I shared the bedroom with Deki, my older brother, a DJ, a passionate hacker and a water polo goalkeeper, who used to play loud music in the room all night long. Not having other choices than to sleep under those conditions, I was forced to learn how to erase all the noises from my surrounding, one by one, and plunge into the inner silence of my mind. At the same time, even when sleeping tightly, the inner eye of my mind was open to hear a slightest sign of an approaching danger and wake up and engage in a lifesaving action if needed. Whether these were bombing planes flying above my head at times or raids expected to knock on our door in the middle of the night, they sharpened my senses and made me alert for life. In fact, the reason why we had not had the doorbell in our Belgrade apartment fixed for more than a decade was so as to be able to tell the soft and scratchy knocking sounds of each one of our family members from the heavy and cold knocking on the door of the conscription police that tried to send us to a meaningless war. And I never used to whine about these or similar distractions and adversities that my life abounded with. I have avoided putting myself in the position of a victim at all costs, having known first-hand about all the paralyzing and destructive effects that this stance leads to. For one, whenever we come across an instance of aggression, if we look deep inside the aggressor’s heart, we will be bound to recognize deep wounds and bruises, which are to remind us of the “hurt people hurt people” truism as well as of the note that 15-year old Fiona Apple scribbled in her diary: “Evil is a relay sport, when the one who’s burned turns to pass the torch”³⁹⁵. “Everybody’s so aggressive now, me too, #MeToo”³⁹⁶, says Lucy Ellmann in her single-sentence, stream-of-consciousness book called *Ducks, Newburyport*³⁹⁷, handing us a subtle reminder that feeling victimized is the first step towards becoming a bully at heart, a spirit devoid of empathy and on an endless run to put out the flames of all those who she thinks put out hers. Freed from the binds, in fact, more often than not people figure that freedom is a burden and all they make of it is to go out and avenge themselves on those who held them in binds, which is a bind in itself, evoking the sad fate of that polar bear³⁹⁸ that was held captive in a cage at a zoo and when it was released in the wild, all it did was walk the same circles as it did when it was caged. This is to say that, in life, as I have come to conclude, not acting evil, but seeing evil in others is the root of all evil, which may teleport us back to Novak Đoković’s hearing cheers in boos and Michelle Zauner’s convincing us that “everybody

³⁹⁶ “#MeToo”, of course, being the hashtag used by a few true victims of sexual harassment pointing fingers at their harassers and many more of those who have joined the crowd because of feeling abused in this harsh, emotionless, big-fish-eat-small-fish world we all live in, committing with their accusations yet another act of aggression that perpetuates the circle of victimization and violence.

loves us”³⁹⁹ as holier paths to take in life in lieu of biting that apple from the garden of Eden that feeds us with the power to discern good from evil (Genesis 2:17). Striving for these Edenic states of mind, as pure and innocent as children’s, I have always tried to see obstacles that life has put on the paths strewn with the stardust of my wishes not as roadblocks, but as stepping stones toward more sublime states of consciousness and as bars on a ladder helping me climb higher on the scale of personal development and be able to see life in an ever more wonderful light. And with my living through the Yugoslav civil war of the 1990s with one such belief that hardships and challenges that war brings about are an excellent means of distilling the divine energies in one and uplifting one to the levels of spiritual sublimity otherwise impossible to achieve in the conditions of peace and harmony, I could over and over again go back to a line by one of the characters from Bertolt Brecht’s *Mother Courage*: “The war should swallow the peach stone and spit out the peach”⁴⁰⁰. An example I often give to illustrate this point is that of Powell and Pressburger making their *Canterbury Tale* in 1943, in the Kent countryside targeted by the German air raids: had they complained about needing to shoot night scenes in the blackout and insisted on the use of a more intense lighting, their cinematography would have never achieved the chiaroscuro of mystery and the subtle hint of German expressionism that it eventually did, perfectly complementing the placidity of the neoromantic English landscape and characters. Therefore, I say, when we are required to walk through the darkness, let us curse not the circumstances, but let us find bliss amidst them and make every step on this walk a salutation to the divine. Speaking of the glides through starless nights, years after my nighttime studies besides “Venus of the soup kitchen”⁴⁰¹, I would find myself in Potsdam, NY, sleeping night after night in close proximity of railroad tracks, somewhat like Gregory Bateson’s slumbering muse⁴⁰², being forced to learn the art of placing the whistling sounds of passing trains to the quiet background of my mind. Developing my creative attention in an environment that was never perfectly placid and peaceful and was incessantly filled with distractions of one type or another has made my creative focus quite powerful, and as of today, no distracting sounds, pokes or shoulder shakes could drag my devout bright eyes down and ruin my enthusiastic focus during writing, playing an instrument or engaging in any other creative act. As I write these words, for example, I am surrounded one moment by three-year old Theo pushing an alligator walker to the sound of a marching band and one-year old Evangelina hammering a xylophone and another moment by Theo’s pressing a plush Sago Mini bird onto the keyboard on which I type these words, singing “choo choo da choooo” to my ear, and Evangelina’s stuffing cotton balls into my ears and jumping violently on my shoulders, creating a scenery of permanent distraction, albeit a scenery that I would always pick over cold and sterile offices filled with AC hums and click-clacks of business shoes. For, unless they can be turned into the Marx Brothers’ stateroom from *A Night at the Opera*, quiet offices are spaces where my productivity dwindles, inspiration goes to sleep and desperation grows beyond control. Confined in them, I soon begin to feel the agony of Thom Yorke trapped in a lift, deafened by the roaring sound of the AC and whistling quietly that infamous line on the horrors of contemporary workplaces: “The smell of air conditioning, the fish are belly up, empty all your pockets because it’s time to come

home”⁴⁰³. And if anyone searches for the source of life in these lines, comprising academic writing that is like no academic writing churned out these days, alive and agitated rather than leaden and lackluster, let a clue for him be that they did not originate in quiet offices, over coffee and tame talks, but in sceneries bursting with life; if one listens close enough, one may hear the sounds of trolleys and the chatter of weirdos taken off the cover of Miles Davis’ *On the Corner*, sense the touch of pedestrians’ shoulder grazes and kisses of thousands nights, feel the energy of urban dives and country honkytonks interrupted by the sleek dance moves, see the clouds in motion I watch wistfully and smell the flowers I observe studiously on Californian meadows while the two chipmunks jump over the horse saddle that my bendy back acts as. Because of this aversion to business offices and inclination to spaces bursting with energy, I have gravitated all my life toward bustling urban environs that teem and pulsate with life to the point of bedazzlement of all senses, fearing that the drive that such anarchic settings instill in words written here and elsewhere, impelled to dance all across the paper, would vanish and with it the kick and the swing, the two most precious qualities of rock songs and jazz tunes, respectively, in a suburban milieu ordered and regimented to the point of lifeless sterility. This is, among many other things, why I have sympathized with Roald Dahl’s James Henry Trotter and his dropping a bag of magic beans to the ground, out of sheer suburban bourgeois boredom, to see it grow into a peach, which he enters and befriends a swarm of bugs therein and then rolls inside the peach to the sea, to approach a shiver of sharks, from where he is saved by a flock of seagulls, then attacked by clouds and finally arrives in New York City, where he lives inside the peach pit and plays with children in the Central Park⁴⁰⁴. At the same time, to be immersed in the stridency of life at its loudest is to have an open route to the peaceful center of the sphere of perceptual experience in my personal universe of thought, being an art whose crafting has allowed me to penetrate through the thick clouds of imminent impasses and into the sun of the divine spirit and infinite positivity hiding in the heart of all things. This art of sending the sunshiny rays of my attention onto the sublime clouds of thought that floated through my head, while neglecting the oftentimes gloomy details of the world of my experience immediately available to my perception has helped me live like a lotus, immersed in the muddy waters of glum reality, but maintaining petals silky and snow-white, for the greatest part of my life. In fact, the Serbian street poet, Duško Radović, said in one of his aphorisms that if one wakes up in Belgrade, my home town, one has done enough for that day, and truly, should one learn how to recognize beauty that little details of the everyday Belgrade life abound with and enlighten oneself with some modest happiness thereby, one might easily become predisposed to be enchanted with beauty in the seemingly gloomiest and most depressed of the worldly places. During the wartime of the 1990s, even though the surrounding world abounded with hate, melancholy and depression, I never let its dust threaten the dreamy capsule of my thoughts travelling through the bright and aerial space in my visionary head. Also, during my early working days, when I was diligently accomplishing my professional tasks and building my career in experimental hard sciences, while at the same time investing most of my creative efforts in writing philosophical works, including my books, somewhat similar to Albert Einstein who worked on his manuscripts on the theory of relativity secretly, as a clerk in a patent office in Bern, this art helped me live on a day-to-day basis with consciousness switched to a different, more transcendent plane compared to the one to which most people around me belonged. In such a way, I was partially acting as a thief on these lower, scientifically professional planes, and as a Robin Hood on the

higher, freelance philosophizing and poetizing ones. Hence, although I would indeed be occasionally distracted by circumstances in the professional world I inhabited, most of the time I freely and carelessly floated in clouds of sublime philosophical thought. After all, some may say that walking in clouds is something that most SF citizens do on a daily basis, which is why they should be naturally predisposed to do the same act in their inner worlds. Another message implicit in the discourse comprising this paragraph is the one that I love to repeat over and over again: in order to be smart and think masterfully, we need to learn the art of efficiently forgetting and erasing things from our mind. Werner Heisenberg, for example, was a brilliant theoretician, but endless legends are spun nowadays with regard to his lack of enthusiasm for gaining any experimental, hands-on skills⁴⁰⁵. When Swami Vivekananda disembarked from a train from Saratoga Springs in downtown Chicago, having come all the way from Calcutta to participate at the inaugural world forum on religions, he realized that he had forgotten the address at which he was to be staying. “Floating in the Absolute the Swami had lost the address of the Parliament of Religion offices he was to go”⁴⁰⁶, an account of this event says, telling us that penniless Vivekananda eventually spent the night in an empty box in a railway yard; most fascinatingly, it was only a day or two before he was to amaze the world with his speech on unification of all religions and “sing from the depths of his soul”, like the paradisiacal bird from the Mundaka Upanishad, “that the greatest human inheritance is love in which all are one”⁴⁰⁷. Forgetfulness and absentmindedness, let alone sloppiness exhibited in elementary communications, have been traditionally, and with a lot of reason too, ascribed to stereotypes of dedicated scientists whose incessant dwelling in clouds of thoughts has implied neglect of many important and readily available things and insights in their surroundings. Fascinating brainpowers can thus exist only on the account of cleverly employed ignorance and negligence. Great intelligence always has great forgetfulness on the other side of its coin, just as great goodness that releases a plentiful of shine of love and creativity from one’s heart always has great forgiveness on the other side of its coin.

S.F.1.22. If we were to subject the history of writing to scrutiny, we would come to conclusion that the facility of erasing, not writing, stood behind the great leap forward that word processing software provided in comparison with its predecessor, the typographic machine. Copy + paste capabilities were those that revolutionized the facileness of writing in the modern age; how they are about to make future artistic expressions superior to their predecessors has nowhere been so nicely shown as on the visionary and spacey 1996 DJ Shadow record, *Endtroducing*, entirely made through the copy + paste approach and yet sounding unprecedentedly original and unique. Inspired by the Dadaist collages in which pieces of an original are cut and reassembled into pictures with new meanings, the street artists, such as London’s Cut Up⁴⁰⁸, clandestinely disrupt urban landscapes by shifting its pieces around and building new images and messages, questioning our surroundings and reality and thus increasing awareness of the normally ignored signs and objects, on the way making streets art arcades and showing thereby that art is not to be confined to lofty gallery spaces, theaters and concerts venues, but is to be found truly everywhere, as the essence of pop art has actually indicated. To let millions of impressions in the background of our mind fade

away so that we could magnify a single star of thought, to erase many and grasp a few, is also what typifies focused and highly productive thinking, which urged Théodule-Armand Ribot to observe the following: “We thus reach the paradoxical result that one condition of remembering is that we should forget. Without totally forgetting a prodigious number of states of consciousness, and momentarily forgetting a large number, we could not remember at all. Oblivion, except in certain cases, is thus no malady of memory, but a condition of its health and its life”⁴⁰⁹. Andy Warhol’s message that what most people nowadays aspire to is to memorize, collect and pile up, while the only operation his mind has ever been performing was erase, erase, erase, thus becomes seen in a thoughtful light, and so does the advice to empty one’s cup before approaching the sacred teaching given by a Zen master to his disciple. Moreover, “beware what you wish for because it might just come true”, is the popular folk adage and a sublimation of many an Aesop’s fable, referring in this context to the contemporary cravers for the recording and preservation of every thought and act, who have fallen into the traps of their own cravings by becoming communicatively frozen figurines standing on the electronic social networking platforms whereon everything is nowadays saved for the future records and impossible to permanently erase, evoking but distant and sentimental dreams of the beauty of exchanging ideas that become blown in the wind the very moment they are uttered. To be truly connected is thus impossible without incessantly erasing the information of which these very ties between us and the rest of the world are made. But yet another important observation lurks underneath this clash between connecting and erasing present in every aspect of human creativity. Namely, in essence, it was giving people the chance to make a mistake, freely, that revolutionized the written word. Likewise, the freedom to commit a mistake and the willingness to warmly embrace it rather than fearfully reject it and pretend as if it is an invasive pest that is to be brushed off our elegant shoulders, knowing that in it lie the gateways to our spiritual growth, is what revolutionized the aesthetics of human behavior and the creativity of human thought. And yet, the readiness to look back as much as to innocently make a mistake, hit our head into street lanterns while being blinded by the lights of our visions and fall into ditches while dreamingly gazing at starry beauties of the world, is what marks the steps towards the evolved horizons of the inner and outer landscapes of our experience. In a bedtime story that I enjoyed to read to my daughter when she was little⁴¹⁰, a little nutbrown hare tries to show to the big nutbrown hare how much he loves him by spreading his arms, by jumping up and by stretching as far as he could, yet the big hare always does it wider, higher and farther. Then, in a moment of a grand insight, the little hare says that he loves the big hare all the way to the moon, thinking that there is nothing farther than that, before falling asleep and prompting the big hare to look up into the sky and whisper with a smile how he loves the little hare “right up to the moon - and back”, and it is in this “back” that the secret of love, as I love to say, lies inscribed. Acting as the antipode to wonder that pushes us forward, this love turns us back, back to the origins, to the starting points whereat the end points of all our journeys converge. “Who returns, was sent by Tao” (Tao-Te-Xing 40), Lao-Tzu said once in the spirit of a supposedly similar insight, having handed us the message with which the Little Prince would have readily agreed, gently smiling behind a glistening Moon dawning beyond the fields of our consciousness to guide us on our ways and noticing along the way how “who journeys only straight ahead does not travel far”⁴¹¹. Knowing this, Mayakovsky

described the making of a poem with a single zigzag stroke of a pencil, first going up, then going down and then up and down again three more times with the same intensity before drifting higher than before and then dropping lower than before and then settling onto a straight line finished by an exalting figure eight⁴¹². Smiling behind the full moon⁴¹³, another imaginary character, Tintin, may now add the remark that helped him solve the riddle of a missing jewel, “Whoever heard of an animal so well trained that it goes straight to a particular object”⁴¹⁴, once more glorifying tortuous paths that eternally squiggle between their points of origin and their destinations. Concordantly, as a long-term soccer player and strategist, I have known that vertical passes on the field work on very rare occasions, usually during counterattacks when the receiver can run behind the rolling ball. In most cases, however, the receiver of a vertical pass stands with his back to the opponent’s goal and gets quickly surrounded by the opposite team’s defenders, which makes it very difficult to continue to move the ball forward. For this reason, the diagonal passes present a much better choice, as their receivers have a more convenient field of vision, especially if they find themselves halfway between the center and the sideline, neither too deep nor too wide, for which reason the midfielders are often arranged in diamond-shape configurations. This parallel with the soccer game offers yet another example as to why moving straight toward the target, without slightly deviating from it, is not the best way to reach it. Rather, as the spiral shape of our genomes and our galaxy instruct us wordlessly, in order to stream towards distant destinations flawlessly, one has to make backward steps every once in a while and thus resemble a spiral in its wobbly and whirly walk forward, keeping abreast with the trend of cautiously revisiting the foundations of one’s approaches, lest he be falling down the cosmic drains by blindly running ahead. Similarly, in order to have our hearts face others in their constant brilliance, shedding sparkles of divine beauty thereto at all times, we need to directly face the creatures in our surrounding as much as to have our backs gracefully turn to them, somewhat like the characters portrayed on the paintings of Caspar David Friedrich or like the Earth constantly alternating sides facing the Sun in its gleeful dance around it. Likewise, as we circle around the suns of other people’s souls, we ought to know that gazing at another and facing away, if carried out ceaselessly, both present imperfect stances in the long run. Only the balance between the two can turn our life into a dream of our soul and us into a deliverer of an enlightening beauty to fertilize the soils of earthlings’ spirits with. Whenever we thence come across objectivistic worldviews that tend to drown the diversities of life in an infinitely monotonous uniformity of being and pull the heart of divine sanity out of us, we should whisper to ourselves the same wave of thought that Alice in Wonderland mumbled to herself, *à la* Joan of Arc whom von Ernst von Glasersfeld chose as an epitome of the crucifying battle of constructivism against the doctrines of objectivism⁴¹⁵, in the recently animated version of the book, after being accused by Tweedledum and Tweedledee for not being real Alice, “How can I not be real Alice if this is my dream; I make the path in it”, urging multiple characters to ask themselves the perennial question, “Am I mad”, to which occasionally a distant voice replies, “You are mad, but all the best people are”⁴¹⁶. Yet, in the light of the constant

need to step out of the balance in order to maintain it in the long run as well as to never cease to wander off the road in life we wish to continue travelling on, we ought to remember that only insofar as we acknowledge the realness of dreams of surrounding creatures can we succeed in living those of our own, and *vice versa*: our power to impel others to live up to the mission that rings like the bells of the church of the divine within their hearts expands to the extent to which we descend through the meditative hole in our heart and plunge deep into the wonderland of the inner landscapes of our spirit, living fancifully in it with a part of our being, thus appearing partly remote and untouchable to the worldly hearts.

S.F.1.23. In a cartoon I accidentally bumped into, a perplexed character stood at a crossroad wherefrom one road led in the direction of “unanswered questions” and the other one led towards “unquestioned answers”. The challenge is to live both simultaneously: to question our *a priori* beliefs and premises that comprise the bases of our thinking on one side, and to stream towards reaching the answers to questions that crucify our mind and heart on another. Only by looking backwards can we make our streaming forward proceed smoothly. When asked where she got the idea to name the utopian city built on a profoundest and most enlightening of ethical dilemmas Omelas, Ursula K. Le Guin recalled out loud her glimpsing at the sign Salem, Oregon in the rearview mirror, before adding, “People ask me ‘Where do you get your ideas from, Ms. Le Guin? From forgetting Dostoyevsky and reading road signs backwards, naturally. Where else?’”⁴¹⁷, hinting thereby at the arrivals at the most inventive of ideas when we turn our views upside down and look away from where the mainstreams are looking, when we create juggled perspectives before our eyes and then slide freely down their wild corridors and into the strangest of wonderlands. This is, I guess, why Gertrude Stein once proclaimed how she “loves the view, but prefers having her back turned to it”⁴¹⁸. This multifaceted saying of hers makes me smile in sympathy with all the catchers in the rye of this world every time I think of how those who opt to sit against a gorgeous view, allowing occasionally the sunlight to emerge from behind their backs and wash others with its blissful waves while they remain in the shade all the while, are being seen by the divine fountainheads of the subconscious depths of our psyches as more magnificent than those who have chosen to secure a wonderful view for themselves, handing us a powerful lesson on behavioral ethics via such common, everyday means. Moreover, in these fancy musings of hers, Gertrude shared the same sentiment as that symbolically depicted on the cover of the 2011 record by the Canadian indie rock trumpeter, Daniel Bejar⁴¹⁹. The image shows the artist as the only one from the tiptoeing crowd enticed by the gorgeous view from what appears like a Twin Peaks vista overlooking SF, sitting with his back turned to it and facing the eye of the camera, the eye to the world, instead. The same attitude prompted many artists, from Jim Morrison of the Doors to Miles Davis, the prince of darkness in hold of his beloved trumpet, to communicate with the audience with their backs turned to it, acting as exemplars which I have referred to in response to condemnatory criticism I received any time I’d spend excessive amounts of time lecturing with my back turned to listeners, impelled to do so not by awkward feelings of a kind, of course. Rather, anytime I act so, I am being driven by the wish to temporarily substitute a sense of dialectical confrontation awakened by dialogically facing one another with a sense of pleasant communion

that spontaneously colors the air whenever we gaze at the same view in togetherness, as Antoine Saint-Exupery noticed, as well as to incite the spirit of awe-inspiring mysteriousness to begin to float through space, as if the slides behind me were being shuffled by a strange and distant, yet thrillingly omnipresent, cosmic force. Somewhere deep inside of myself I have known that high jumpers can jump across much higher hurdles when they have their backs turned to them than when they face them directly and the same strategy I have applied at numerous levels of my interface with the world, especially when needing to jump across its seemingly insurmountably tall walls. The same reasoning also explains why, when I journey sitting on top of a train wagon, immersed into swarming stars above my head, I always look back, to the places I leave behind. It is close to the end of this book that I will return to this idea and refer once more to why I love travelling with my back turned to the direction of my travel. Yet, in this culture that favors the “winners who take it all” and never bother to turn around and offer a helping hand to those in need of it, lift them up and elevate far above the vistas that they currently occupy, it comes as no surprise that the art of looking back is pitifully looked at in comparison with that of ascending ever higher. For example, to keep abreast with the train of professional promotion in the academic realm, its passengers are, for example, obliged to publish in highly reputable journals, which, as expected, favor works that add new insight by looking in the forward direction over the shoulders of the horizons of the given field rather than those that tend to revisit the foundations of our reasoning and methods which we left behind long time ago, but which still haunt us with the dreams of intellectual treasures left buried within their scope. Pragmatic scientists are, therefore, increasingly many today, while romantic dreamers and wistful philosophers ever less. Minds analogously representable with the act of running on a treadmill have multiplied boundlessly, while those working in concert with the logic of the plot of Aki Kaurismäki’s *Le Havre*, wherein, remember, the protagonist saves his gravely ill muse by leaving her unattended and running out to rescue a soul wholly foreign to him, embracing the paradoxes of which the queer machinery of our ontologies and the peculiar substratum of our thoughts are made on this circular planet of ours, wherein, symbolically, moving toward the ends moves us toward the beginnings too and *vice versa*, remain as rare as diamonds in the dust. To their quixotic selves, however, looking back and reassessing the premises with great care and concern presents an unassailably vital aspect of moving forward harmoniously, just as much as learning from the present guides the setting and resetting of the basic grounds of our epistemologies, wherefrom all our precepts for the future acts emanate. Thence, neglecting to advertently go back, ask purposely the fundamental questions and zealously dig through the foundations of our reasoning would predispose us to become a robotized intellect, inert and blindly led in whatever the direction the authorities wish to lead us to, as much as constantly dwelling in the realm of philosophical discourse would strip us off any potentials to create things of practical importance and thus indirectly benefit human spirits. For, practicality and fundamentality have always had their arms lovingly entwined, as the existence of one without the other cannot be imagined, just as we cannot have fruits of a tree without its roots nor roots without the leaves. Namely, while the roots suck the water and minerals from the ground, the leaves photosynthesize sugars and evaporate water off their surface, thus sustaining the osmotic pressure across the xylem and the force that drags the water and nutrients upwards. Any ascending movement can thus be said to be sustained on a complementary descending one and *vice versa* in this fabulous story of life wherein we could climb to the heavens only inasmuch as we lean our senses and hearts tightly to the Earth and its creatures. Or, as Tom Hingley of Inspiral Carpets sang in a song from one of these band’s early 1990s records I listened to as a 15-year old boy on my Walkman as I waited in a Belgrade hospital to undergo the tonsils removal surgery, “You should

learn to walk before you crawl”⁴²⁰, insinuating that kneeling, sitting, lying, crawling and hugging the Earth brings one to higher and more sublime spiritual vistas than walking or flying loftily over it as well as that the closer one’s heart is to the Earth, the closer one is to Heaven too. As a direct corollary, I have known that facing backwardly stretching memories while being grounded in pure lovingness and visionary and optimistically looking forward while drawing new sunrises beyond the horizons opening in front of us need to be neatly balanced. It is for this reason that the Serbian writer and my uncle’s good friend, Borislav Pekić put the following words in the mouth of his imaginary archenemy, the protagonist of one of his novels, *How to Quiet a Vampire*, known by the name of Prof. Konrad Rutkovski: “We ought to look ahead of us, for had we been made to look backwards, we would have gotten our eyes on the nape of our neck... and the credit will be given to us not for where we come from, but for where we are heading to”⁴²¹. The writer, in contrast, placed a lot of value in judging about the future is done best by being rooted in the past; or, as he, himself, noted in one interview, “Not understanding what happened yesterday is a guarantee that we will understand even less what awaits us (tomorrow) and the least what we do today”⁴²². It is true that, occasionally, looking back can lead to grand downfalls on our progressive paths, as it can be insinuated from the story behind Živojin Pavlović’s *Enemy*, the film about a master in principles, who, like me, remained strong in spite of moving from one conflict in life to another owing to his beliefs in truth, fairness and honesty, but began to disappear into the void the moment he encountered his twin who epitomized the diametrically opposite values from those of his own and started doubting the virtues of his path and personality, warning us of the perils that lie beneath looking back in mistrust, if not anger. On the other hand, however, the sustainability of all our edifices in life vitally depends on the stability of their foundations, implying that vigilantly looking back is the prerequisite for directing truly prolific visionary gazes forward. This is, of course, also because asking questions without presupposing some answers, vaguely contoured on our mental screens by the paintbrushes of our beliefs and premises, is not possible, just like opening magic presents of answers that Nature endows us with is equally not doable without living questions incessantly, with every step and every breath and every glance of ours.

S.F.1.24. At another place in the timelessly relevant book of Tao-Te-Xing, Lao-Tzu says how “the sage wears a poor garb of hair cloth, while he carries his signet of jade in his bosom” (Tao-Te-Xing 70). I have always claimed that learning to recognize metaphoric correlations between relationships discerned in small, minute details of the world and gorgeous and distant spaces out there leads to realizing that an entire Cosmos sleeps in every tiny grain of sand. We do not need to travel far to meet the secrets of the Universe. “Without approaching the door, I know what goes on behind it, in the world. Without opening the window, I see the Heavenly Tao. The more I go out, the less I know. Therefore, the sage arrives without leaving, knows without watching, perfects without acting” (Tao-Te-Xing 47), Lao-Tzu further argued. The grandeur idea that the secrets of the Universe can be read in each tiny detail thereof is in agreement with the fractal nature of the Universe, and presents a crown of my intellectual quests along the Glass Bead Game road, oriented towards uniting the ethics, aesthetics and imaginativeness of religions and arts with the analytical rigor of science. And yet, I will make an ordinary seashore pebble be a central jewel on this crown. In that sense, I have always dreamt of being a beauty pageant princess who takes off the tiara

placed on her head and hands it to a creature in her shadowy vicinity⁴²³, something that I have never seen or heard of. Hence, instead of craving for a golden and shiny diadem, I will pick up a simple stone from the ground and make it my crown. In doing that I will open the miraculous viewpoints from which one can see a lump of dust as precious as a collection of diamonds. Eventually, that would reflect what I have been so far in my life: someone always striving to bring forth a light of beautiful creativity that has never been witnessed on Earth (and, in that sense, to ascend higher than anyone before), but at the same time someone who is ready to give away all of his achievements for the sake of beautifying others. In view of that, long time ago I have decidedly substituted blind obedience of the authorities in life with a vow to always rebelliously act in harmony with the voice of my heart first and foremost. Once you too decide so at the bottom of your heart, a great turnover in your mind may begin, as your blind compliance with rules and norms set forth by the authorities of the world becomes substituted with careful listening to the celestial voice singing its melodies in the depths of your mind and heart, leading you and us all therewith towards the way of wonderful waterfalls of divine ethics and aesthetics. In such a way, I have opted for disgracing myself and looking not for any human prizes in this world, but for praises from the Heavens above. The latter come to us through wonderful insights and impressions that the depths of our mind and heart yield in the subtle and mysterious communication with Nature.

S.F.1.25. A banging and heart-throbbing Flaming Lips song had been named Race for the Prize, but for a long time I thought Bobby made a mistake in writing down the song titles when he copied the whole record on a basement tape for me in an exorbitantly bass-boosted fashion. Race for the Praise ought to be the correct title, I thought. I was wrong, but still I listened to the song over and over in the context of the title I had given to it, which built an array of wonderful impressions in me. When I realized I was wrong, it was too late to erase my personal title that would flash in front of my mind every time I would hear the tune. Hence, a dichotomy was produced between my own beliefs and what the social environment wanted to impose on my beliefs, so to say. I spent hours contemplating whether it should be a prize or a praise, and eventually realized how beautiful it is to be a foreign speaker, sometimes unable to discern what the singer in a song sings about and thus be forced to construct one's own meanings that can always tell one so much about the way one understands the world. At the same time, as a foreign listener, one is able to more easily erase the clichéd and otherwise irritable verses from one's acoustic perception and thus be more flexible and constructive when it comes to opening the door for one's impressions during listening to music. Once I realized this, I gave myself a vow that I would never browse through song lyrics because that would only limit an often infinite spectrum of meanings I could potentially ascribe to a song. Everybody, though, laughs upon hearing all the made-up and nonexistent lyrics I loudly proclaim when I start singing songs I like. But I care not. I merely remind them of how Alexander Graham Bell came to the idea of using electricity to transmit sound after picking up that idea from a book by Hermann Von Helmholtz. Helmholtz, however, never mentioned it, but it was Bell's incomplete knowledge of German that prompted him to misinterpret the Helmholtz's idea, invert the meaning and, miraculously, enter a road to victory in his adventuring on behalf of humanity across the kingdom of science⁴²⁴. And so, in togetherness with the tranquil but enraptured spirits holding arms wide open and letting days fall through their starry insides while they "like to sing

along although the words are wrong”⁴²⁵, you may hear me singing “stars, sand and ladders, ladders always get burned, it’s not like in movies, a feather stone, a little white light” instead of “stop sending letters, letters always get burned, it’s not like in movies, they fed us with little white lies”, “no love = no surprises” instead of “no alarms = no surprises”, and “my love could shine” instead of “my luck could change” in the famous Radiohead songs⁴²⁶. And yet, I am convinced in the greater majesty that my made-up verses carry on their wings. The same could be said for my symptomatically substituting “just continue” with “discontinue” in a line uttered toward the opening of DJ Shadow’s *Building Steam with a Grain of Salt*, “I’d like to just continue to express myself as best as I can”⁴²⁷. For on one hand, expressing oneself is a vital prerequisite for our works being able to inspire people, meaning that this norm is especially important to be true to in domains overly subdued to bureaucracy and administrative control, as it is the case with science today, where obeying the trends and expectations of the authorities is needed to have one’s research funded and be free to teach, the cost of which is that works of science today do not have those personal flavors that the best works of art have had. My own streaming down the road of expressing myself in science has directly contributed to my downfall as an academician because it clashed with this depersonalizing climate that is pervasive in this sphere of human activities, which inspired me to continue to battle for the liberation of science from these inhuman, businesslike clutches and the release of the white doves resting caged in its heart into the freedom of unharnessed self-expression. On the other hand, however, to “discontinue” to express oneself can be a greater blessing and lies a step higher on the ladder of wisdom than praying to have the expressions flow out of one smoothly and effortlessly from now until the last of our numbered days on Earth. For, only by coming across roadblocks can we evolve into higher and more sublime states of consciousness and modes of expression than those characterizing us on this very day. That is, only by becoming disabled from expressing oneself in the current, rather modest and mundane forms can we reach diviner forms of expression, meaning that crises and moments of depression and of debilitating writer’s blocks are passageways to more bedazzling daylights as we progress from cold and passive moons to warm and active suns *en route* from the animals to angels on this blue and beautiful Earth. Now, that even words pronounced without the accompaniment of music I sometimes misinterpret and arrive at utterances that possess an even greater meaning in my personal epistemic universe I can illustrate by my hearing “frank sentence” instead of “Frank sent this”⁴²⁸ in the story Ken Robinson used to depict how children never hesitate to try new things out, even when they almost certainly lead to letdowns, reflecting our innate courage to fail whose exhibition is a prerequisite for our continuous climbing on the ladder of life. In this story, Ken describes his experience watching a nativity play with 4-year-olds for actors. In the part where three kings come to bring gold, frankincense and myrrh to the Christ at birth, having followed a star that led them to Bethlehem, one of the babyish actors pronounced a different word instead of frankincense. My version of what I heard, however, stood out as an even wittier comment than that Ken discerned, being a reminder of the unnaturalness of any expressions preconceived in advance in our communicating with world. Next, even after hundreds of listens to *Forever Changes* by Love, the most classical and “whitest” of all the celebrated hippie rock records of the 1960s,

albeit composed and recorded by a black man, Arthur Lee, in the verse ending the stanza of its opening song, *Alone Again Or*, apparently saying “I will be alone again tonight, my dear”, I still hear, distinctly, “I will be alone again tonight with you”, being the words that resonate with the Way of Love in their implicitly telling the listener that to love another and turn oneself into a divine messenger on Earth, one has to reside deep within oneself and never give in to the social inertia that tends to sew oneself into submission and wipe out the creative drives and the impulses to enlighten another that lie dormant within every one of us. Now, one of my favorite songs for singing in the days when I performed on stage was R.E.M.’s *Electrolite*⁴²⁹, the song that begins with the opening verses “Your eyes are burning holes through me, I’m gasoline, I’m burning clean”, the verses that I unknowingly altered to “your eyes are burning, I’m still me”, and so forth. I still find the latter, mildly misconstrued version more meaningful in my personal universe, as it serves as a push against my innate tendency to forfeit my inner powers in view of beautiful eyes found gazing at me while burning with some stellar energy. Therefore, the line “I’m still me, I’m gasoline, I’m burning clean” has stood forth as a signpost to remind me of the direction to take to prevent this sudden rupture of the vertical that connects my actions with the creative core of my being and my consequent transformation into a submissive dummy. For, not being blinded by the lights of whoever we subconsciously ascribe the power of authority to, from romantic lures to modish trendsetters, and remaining focused instead on the core of the sun of our spirit wherein the fission of the light elements of our visions, emotions and memories takes place and wherefrom illuminative energy is free to be released to the outer world is a prerequisite for our continuing to be a fireball of exuberance, just like that emanating from the eyes of the sirens that we have been softly and valiantly stargazing at. To what extent life-changing paths can arise from such sweetly misconstrued words may be neatly illustrated by how the Little Bear and I hit it off immediately after she told me how she liked not Cocteau Twins, but Cockatoo Twins, as she believed the band’s name was, on the night we met in Langton Labs. That I am not the only nonnative English speaker that falls into this linguistic trap and believes in the merits of semi-self-invented lyrics, as in perfect accord with the co-creational thesis, prove the words of Josephine Olausson, the singer of the Gothenburg band *Love is All*: “I’m useless with lyrics. I don’t know the lyrics to most of my favorite songs – I’ll just be singing a completely wrong lyric”⁴³⁰. In a similar way, an online commenter to Van Morrison’s *St. Dominic’s Preview*, Archangel Boab, noticed the following, demonstrating how a 180° semantic turnover could happen even to native speakers: “‘Chamois cleaning all the windows’ was a lyric I’d always heard as ‘Shan’t be cleaning all the windows’, like he, a window cleaner, is chucking his rag and bucket and going for a walk instead”⁴³¹. In another Van Morrison’s song, *Sweet Thing*, that ecstatic praise of pastorality and communion with Nature through which one becomes a child again, I would always hear “I would never grow an older game” instead of “I would never grow so old again” and, mistakenly but righteously, assigned their auteur the aspiration to break the rules of grammar into verbal shard, complement the orchestral improvisations with lyric ad-libbing and state implicitly that only when our verbal expressions become akin to that of a child can we expect to attain the blissful state of mind portrayed musically. Sometimes lyrics to a song are deliberately sung or music around them arranged in such a way that two different versions of it could be heard by the listener, with one

⁴²⁹ The song closes R.E.M.’s record *New Adventures in Hi-Fi*, Warner Bros (1996).

⁴³⁰ See Interview with Josephine Olausson available at <http://pitchfork.com/news/38261-5-10-15-20-love-is-all-frontwoman-josephine-olausson> (March 24, 2010).

example being Michael Hutchence singing “I am elegantly wasted”⁴³² in a song by INXS in such a way so that “I am better than Oasis” could be heard in it too, being a clap back to the insult Noel Gallagher directed at Hutchence at the 1996 Brit Awards ceremony⁴³³. Although such tricks are usually left by the music makers for the audiences to decipher and endlessly muse about, another example where this effect may have occurred by intention is Future Islands’ *A Dream of You and Me*, where Sam Herring sings “If you wait, wait for the morning” according to the official lyrics, whereas all I hear each time is “If you hate, follow money”, a more meaningful phrase from the perspective of my advocating the corruption of societies whenever the search for spiritual treasures become subdued to the quest for material wealth. Nevertheless, a real good song is always infinitely dimensional, surprising even its creator with always newly discoverable meanings, and if lyrics obscured partly by instrumentation are interpreted differently from their original version and still bring an enlightening insight to the hearer, then kudos to the creator nevertheless, says I, who will keep on consciously misinterpreting the given lyrics. Hence, every time I get goose bumps hearing Damon Albarn sing how “up on melancholy hill sits humanity”, I intentionally disregard that he, in fact, had a manatee, not humanity, in his mind⁴³⁴. Equally deliberately does the back of my mind convert “it’s holding on” line from Radiohead’s National Anthem into “soul in all”, transforming thus the tune from a bitter commentary on the prosaic social state of affairs within a nation to that of a positive and liberating anthem that echoes the basic premise of the co-creational thesis: the world is the mirror of one’s soul. Furthermore, in the legendary *Weak Become Heroes* by the Streets⁴³⁵, I have always heard Mike Skinner singing “future standing in my narrow heart/home”, although the real lyrics remind me that “we were just standing there minding our own” is what the real verse, as less profound and meaningful as I could imagine it to be, apparently is. Then, every time I heard Stuart Murdoch’s reference to Judy towards the charming end of Belle & Sebastian’s record *The Boy with the Arab Strap*, I had an impression that she was too “frankly” rather than too “frumpy for the teenage population of her time”⁴³⁶. Such a powerful effect on inciting me to dreamily outline my vision of a true imaginary heroine of my times, wide-eyed, bright and open like a sun, opposing the clichéd cynical hipsters with her infinite honesty and naïve trustfulness, has ringing of this epithet of frankness had on me that I keep on hearing it, intentionally, even though somewhere in the back of my mind I know that the corrected lyrics were wholly subverted by my imagination. Likewise, for a long time, I thought that in one of the Smiths’ songs⁴³⁷ Morrissey sings how “shininess is nice, but shininess can stop you from doing all the things in life you’d like to”, when in fact, substituting shininess with shyness would give the real verse. Not that I, however, still do not find the verse partly constructed by me to be much less profound. Every time I’d hear or think of it, it would remind me of my belief in perfect blissful happiness and satisfaction as fruitless and undesirable if our aim in life is to become a blasting and ecstatic source of creativity⁴³⁸. If we wish to express the beauty we carry and hold

⁴³⁸ “Ophelia, she’s ‘neath the window, for her I feel so afraid, on her 22nd birthday she already is an old maid. To her, death is quite romantic, she wears an iron vest, her profession’s her religion, her sin is her lifelessness. But I know her eyes, they’re fixed upon Noah’s great rainbow; she spends her time peeping into desolation row”, Bob Dylan correspondingly sang in what I may still be claiming as the most strikingly echoing verses in the rock ‘n’ roll history, neatly describing me at Ophelia’s age dreaming of the world by gazing through the

within ourselves, sprouts of sadness and dissatisfaction have to be placed side by side with the flowers of glowing happiness within our heart. The Christ became a radiant source of pure divinity because, simply saying, he thought that the world sucks. In his eyes, the dominant social traits of humanity were hypocritical, insincere and spoiled, although he never stopped believing in the endless inner potentials of human creatures. I see his eyes as having the sun of a joyful and heavenly optimistic love rising over the tearful sea of deep sadness and melancholy for the state of the world. A blend of empathic sadness and cosmic joy is what the eyes of ultimate beauty radiate with. After all, had everything flowed perfectly smooth and according to our desires, there would be no need to engage our creativity in anything, which means that the most valuable qualities of ours would soon wither in a world like that. Without the forces of entropy, disorder and chaos dragging us down all of the time, neither would the forces of creativity, goodness and beauty in us be able to take a physical form and be sent to the world as a breeze produced by the flaps of one's angelic wings. Then, believe it or not, but even the most quoted verse in this and other books of mine, the one from R.E.M.'s *Nightswimming*⁴³⁹ has been misinterpreted by me, as I have been assured many times. Michael Stipe is therein allegedly singing "that bright, tight forever drum could not describe nightswimming", whereas I have always heard that "a bright type could never draw, could not describe nightswimming", being the verse around which I could place numerous satellites of ideas and thus build one whole solar philosophical system of ethics, aesthetics and creativity. The meaning I found in the verse the way I hear it is again that a perfect brightness of our spirit, a perfect satisfaction we find in our lives, can never present a fertile ground for an artistic creativity, the one that would be able to draw a story about something as beautiful as night swimming. And if Nicolas Poussin's goal was indeed to insinuate that the dawn of an artistic mind coincides with its becoming aware of the dark and ominous fact of mortality by painting three Arcadians and a goddess by their side discovering *Et in Arcadia ego* inscription on a tomb in their paradisiacal world and having one of them trace one's own shadow on the tomb, thus evoking Pliny the Elder's thesis that the art of painting was born when a shepherd recognized his own shadow on a rock and traced its silhouette with his finger⁴⁴⁰, then we should have no doubt that our descents into the most depressing depths of our beings are prerequisites for awakening an artistic mind and its creative powers. "What drives me in music is depression", Thom Yorke, the voice of a generation of "old kids" lost in space and time, therefore said once⁴⁴¹, echoing Goethe's maxim that "a man is predestined for creativity inasmuch as he holds something demonic inside himself"⁴⁴². A battle between light and darkness is thus what rages inside the world's greatest artists' souls, a battle that "is not over even when it's won", as Neneh Cherry and Youssou N'Dour sang⁴⁴³. For, battles in life, especially when won, are neither euphoric nor balmy, but rather enigmatic and elegiac, full of questions about the certainty of the past and the uncertainty of the future; in musical terms, nowhere like the Decemberists' ending their combative record, *The Crane Wife*, with *Sons & Daughters*, and totally like *Flaming Lips*' ending an equally combative record, *Yoshimi Battles the Pink Robots*, with *Approaching Pavonis Mons by Balloon* (*Utopia Planitia*).

Therefore, great pieces of art are those wherein the final answers posed leave room for ever greater questions to be asked and have their wings spread so as to take us to new, unforeseen adventures of spirit in the never-ending story of developing humanity. Winston Churchill famously remarked after the Allied victory in the battle of El Alamein in 1942 that it was neither the end nor the beginning of the end, but rather the end of the beginning, and the same remark could be applied not only to the middles of the wars, as it was the case with Churchill's remark, but to their most definite ends too, for, as ever, the truer, the quieter battles for preserving the good of humanity are just about to begin then. One of such battles is for the preservation of the integrity of the family, which, as judged by the divorce rates⁴⁴⁴, is much higher in the quiet periods succeeding the difficult times of wars or natural catastrophes, when families are kept tighter together. This situation where an end to the war is but a prelude to wars on less tangible, but broader and more versatile planes was neatly described in the grim and mystical ending of the book about the Lord of the Rings, wherein just when the reader had thought that good prevailed over evil for good and that the crusaders were returning home triumphantly, in bliss and glory, what awaited them were dark clouds of uncertainty, along with their unexplained sailing off across the sea and into another lifesaving mission of even more cosmic proportions⁴⁴⁵. This twist of the plot, of course, is but a reflection of that occurring toward the end of one of the two oldest extant stories of the Western civilization, namely Homer's *Odyssey*, where the Greek hero thought that his long-awaited return to Ithaca would bring about the end of the troubles for the troublemaker that he, etymologically, was, but what he found there was the land in decay despite the won Trojan War, which he had to deal with by contriving a massacre of the Suitors and liberating his homeland of their wicked influence. A few years after J. R. R. Tolkien put an end to the second and final part of his saga about hobbits, elves, dwarfs and other supernatural creatures mingling in the Middle-earth, Ingmar Bergman wrote a play, which would be eventually turned into a cinematic classic called *The Seventh Seal* and in which some other crusaders come home after a decade of engagement in wars that were considered holy, but were in reality, as the protagonists find out, wicked and meaningless, only to find their homeland desolate, doomed and ravaged by plague instead of flourishing with the spirit of victory, realizing that their real troubles are just beginning. In one of Vittoria de Sica's neorealist masterpieces, *La Ciociara* a.k.a. *Two Women*, the troubles for the protagonists similarly and symbolically begin only after the victory was proclaimed and the end of the war arrived at, shedding light on the words whispered to an Algerian revolutionary during Gillo Pontecorvo's *Battle of Algiers*: "It's only once you've won the war that real difficulties begin". And if these subtler difficulties are not dealt with diligently and meticulously, the outcome may be such that the losing side of the war would end up winning it in the long run, in a sense that its ideologies, rather than being exterminated, would be disseminated across the globe more effectively than those that the winning side has held onto. One such case may be with the ideology of Nazism propped by Germans in World War II; namely, despite their losing this war, the philosophy of robotics, not poetry in motion, of helmets and business suits instead of holey hats and garments of gamines, of turning people into cold, feigned and spiritless automata instead of stars burning with empathy can be said to have won the sympathy of the humankind more than that of freedom - of thought and behavior, of press and politics and all things alike - propped by the partisans in decades that ensued. Therefore, whenever I think of the swimming race between my compatriot, Milorad Čavić and Michael Phelps, which was to decide the butterfly style gold

medalist at the 2008 Olympic Games in Beijing, and the moment when the Californian Serb touched the pad at the finish line first, but with insufficient pressure, thus losing the race by mere 1/100th of a second, I also get to think of how there will always be an ending beyond ending and how what we do beyond even the most terminal outposts in life is of utmost importance in this infinitely looped tale of our being wherein the points of origin and the destinations are always merged into one and wherein the most appropriate answers to our questions are always only more beautiful questions. After all, had we come up with the perfect answer to our questions about the core meaning of life and reached the ultimate destinations on our missionary quests, the trend of progress and evolution of both ourselves and humanity would be halted. On the other hand, piling questions after questions, without offering enlightening paths that lead to solutions, would present another extreme. Of course, there are no rules as to what constitutes the best possible artistic approach, except to rely on the magic of the moment and always revitalize one's most basic approaches to artistic creation. Neither do the rules on how to succeed in this exist, which includes the possibility of ruling out this very "no rule" rule too and freely conforming to any rule we could think of. Nevertheless, we should be aware that highlighting positivity only may predispose us to indulge in pathetic preaching propaganda, while highlighting only negativities of the world will yield sheer nihilism that pushes human minds into ever deeper chasms of ethical and aesthetical perplexities instead of handing them lifesaving signs that would help them ascend to higher states of being. Although I have always been in support of the role of the artist as a mirror holder to the minds of his generation, which provides partial justification for the pieces of art that strikingly highlight the nihilism of our times to their nihilistic contemporaries, ever since the earliest days of my interest in arts I have equally strongly stood for the ancient ideals ascribed to the artistic mission, that is, to offer solace of celestial beauty to souls walking through the deserts of spiritual miseries and to shed heartwarming sunshine on human spirits and assist in the cultivation of their intrinsic carnality into something more beautiful and divine. Or, in other words, to provide at least hints of possible answers and ways out rather than merely draw the paranoid web of predicaments around the watchers who are, mostly, already aware of them and whose burdened souls seek solutions, not even more immense piles of problems. Hence, when Epstein placed *Sunset Boulevard*, *Wild Strawberries* and *Paris, Texas* on the list of his five favorite movies and asked for my "best shot" to frown on his selection, I merely commented that "these movies offer too many questions and too little answers (or it's just me having been blind to them!)... finally, art is about being lost & found; not only one of those, but both". For, in my way of understanding artistic creation, the words yelled by Rob Tyner as an introduction to MC5's live record, *Kick Out the Jams*, "Brothers and sisters, the time has come for each and every one of you to decide whether you are gonna be a problem or you are gonna be the solution; you must choose, brothers, you must choose"⁴⁴⁶, have incessantly reverberated in my head to remind me that not merely outlining the problems and demonstrating a sense of being lost and drifting through a spiritual void, but complementing the latter with drawing of the ways that would lead to the answer, if not finding their treasures and delivering them to the hands of humanity, should be the aim of an authentic artist. For example, when Buster Keaton in the role of Steamboat Bill Jr. saves a priest from drowning in Sacramento River in the last shot of this slapstick classic he proposes a solution, perhaps by hinting at the idea that pure intentions and beautiful living incarnated by his witty character lie way ahead of verbal preaching and insipid lifestyles, while when Luis Buñuel films a flock of sheep entering a church in the final shot of *The Exterminating Angel* he outlines a problem, but does not offer even a glimpse of a solution. In my world, militantly poetic, as friends

may observe, even the darkest portrayals of the miseries of life crave for the drawing of the way out and into the light in their course, be it as brief and tiny as the appearance of Paula, the little blond angel in Fellini's *La Dolce Vita*, of Lilian Gish rocking the cradle in D. W. Griffith's *Intolerance*, of the telekinetic child from the end of Tarkovsky's *Stalker*, the schoolgirl with her hair swaying together with the golden corn stalks at the crime scene in the dying moments of Bong Joon-ho's *Memories of Murder*, or the mere mention of mysterious Michael Furey in John Huston's *The Dead*. In contrast, pieces of art such as those that Epstein numbered, along with the majority of works of art of the modern day, leave an impression of being unfinished in their metaphorically representing only a part of the Orphean descent to the underworld of human soul. Rather than making steps back to the daylights of illuminative insight, such works of art find strange satisfaction in resting in these gloomily labyrinthine schemes of being and knowledge for good. Or, as pointed out by Ted Gioia, "One can only speculate why the more modern sensibility finds solace in the infernal stopping point in the story; I leave this intriguing topic – why moderns prefer *To Hell* over *To Hell and Back* – to other, more perspicacious scholars"⁴⁴⁷. Some of these modern artists for whom veritable depiction of depression in the times of down is where their artistic endeavors end might tell us at this point that "one cannot blame barometer for the storm", being the response Marcel Carne gave after a prominent French politician had stated that if France lost World War II, it would have been due to movies such as Carne's *Le Quai des brumes*, but their opinion would not be able to hold for too long under the weight of the idea that although the echo of the signs of the times does need to define our artistic expressions, we are but voices in the chorus singing out this echoed tune and, as such, ours is a far greater role to play. Despite such passively pessimistic and, one may even say, nihilistic propensities of the modern artists, the genuine purpose of arts can indeed be seen as a voyage to the spiritual underworld with the aim to recapture a lost soul and take her by the hand back to the realms of sunny spirit, quite like the one Orpheus engaged himself in so as to save Eurydice in the ancient Greek myth. To succeed in this endeavor, it suffices to say that one needs to climb up, towards heavenly realms of feeling and thought as much as to descend into dark and hellish reigns of the human heart. Or, as handed to us as a lifesaving advice by Flavor Flav in the prologue to his autobiography, following the comparison of his lifetime to entering a manhole on the 59th Street Bridge by night, holding the last rung of a ladder and hanging over the East River, "I've climbed into many holes in my life, but I've also found the strength to climb back out... 'Cause for all the depths, there are heights, too. No matter how far down I've been, I've never stopped climbing. If there's one message I'd send to you, the reader of these pages, it's that it doesn't matter how deep the hole gets, you gotta keep climbing, too"⁴⁴⁸. With these words, the New York rapper, consciously or not, wiped the dust off the timeless emerald stone on which Hermes Trismegistus inscribed the oldest philosophical message known to humanity: "What is the above is from the below and the below is from the above. The work of wonders is from one". Along this stream of thought, reading Joseph Conrad's *Heart of Darkness* would concordantly remind us that our journeys to the hearts of darkness are valuable only insofar as we return back to the bountiful and sunny seashores from which we set off to our adventure, lest we become an epitome of Mistah Kurtz, the explorer who had discovered diamonds in the heart of a river, but, just like the majority of Faustian intellectuals of the present and past, never found a way nor a drive to leave it and bring the treasure back to the estuary where the human settlements he had begun his journey from waited for it day and night in vain. Henceforth, if only a sense of confusion and being lost is transmitted via a work of art, leaving us

alone amidst perplexing perceptual fields pervaded by suns of faith and hope shattered into billions of stars, without compass or a bright vision of the road that would take us back to the sunlight of happiness, we should know that only a half of the road to crafting a brilliant piece of art has been made. For, to be lost at first and then to be found is what can be found engrained in the texture and the essence of the most glorious pieces of art we could hold in our hands and hearts. The storyline of the animated movie, *The Lost Thing*, which their creators dedicated to “all the lost things everywhere”⁴⁴⁹ and in which a mysterious thing is found as lost and then returned to where it belongs, can be thus said to be metaphoric of the makeup of a thorough artistic piece wherein invoking a sense of being lost is as vital as complementing it with a sense of saving the lost from disappearing in the abysses of nothingness and reinstating a sense of eternal harmony thereby. Had the Christ had to offer only his bashing words to erring humanity without exerting the healing power of love on them, no one might have known about him nowadays. One of the central maxims of Gautama Buddha has been the one urging everyone to “find the ill-being within yourself and then transform it”⁴⁵⁰, and, therefore, we may argue that every spiritually superb and complete expression in this world has to be twofold: on one hand, it is to be a mirror that reflects the ills invisible to the souls looking at it, while on the other hand it should be composed of signs that point at the road that leads to amelioration of these ills. To highlight a problem, a locked gate in our spiritual adventures, and then to carve a key that opens it, to perplex people, immerse them into a cognitive space filled with a multitude of swirling stars, spin them around and make them feel dizzy in the midst of it, and then to point them at the right direction, at a milky Way that leads to their enlightenment and salvation, is thus the way. Equally, though, had the Christ had to offer only healing words on top of a perfect satisfaction with the way the world and its people are, we may also have not known about him today. For, a dose of dissatisfaction with the state of the world, a desire to burn out by pointing at the obsolescence of the world rather than to fade away in perfect Nirvana, gives us wings upon which the power of love and the divine grace will be spread to the world. Whereas drawing merely the feelings of being lost without seeking enlightening moments of finding and revelation, apparently dominating the modern artistic expressions, makes the works of art be incomplete and lack a guiding-star character, focusing merely on moments of finding without being brave enough to be lost in the first place renders the pieces of art to be pathetic and sluggishly mellow. After all, if we are not bold enough to invite the most challenging forces of destruction, evanescence and meaninglessness in our mind and pieces of art alike, face them with the eternal sunshine of love and beauty and “clothe them and feed them and smile, yes, smile”⁴⁵¹, as the fairy named Cerys would do, our thoughts, our works and our whole being would end up being trifling, superficial and empty. Which is why the cathartic finale of Sigur Ros’ *Takk*, the record which I announced as the best one of the 21st Century about a decade into it, is a prayer in a song called *Hey Satan*, envisaging an artist in the immaculately pure light of his spirit standing not in front of the feet of the divine, but face-to-face with the satanic and devilish, knowing that only by bravely entering the hellish and sinful fields of the world with a desire to illuminate and heal them, by landing the sunshine of our love onto the most unlovable and evil creatures of the world, trying our best to save them rather than to judge, punish and reject them, can our divine mission in life be fulfilled, producing bursts of creative energy from within the core of our being

along the way. This is where the voice from the dying moments of the Residents' landmark record, Duck Stab/Buster & Glen, declaring the "wish that all the suffering and all the misery could be consumed inside my room"⁴⁵², could start to resonate across our mental spheres as a reminder that only in such a way, by colliding the darkest forces of the Universe within our beings, can we become akin to Lao-Tzu's sages who grow into kings of the world by taking upon themselves all of the world's sins (Tao-Te-Xing 78) and, thereupon, transform ourselves into stars, shining so distinctly and so brightly solely because of being immersed into infinite darkness. This is also when the light of understanding is shone onto Praise, a poem by Robert Hass inscribed on a piece of Embarcadero pavement: "We asked the captain what course of action he proposed to take toward a beast so large, terrifying, and unpredictable. He hesitated to answer, and then said judiciously: 'I think I shall praise it'". Or, as William Butler Yeats held impressed in the grooves of his poetic heart, "Come away, o human child! To the waters and the wild with a faery hand in hand, for the world's more full of weeping than you can understand"⁴⁵³, impelling us to grasp that not by wistfully deserting the sad provinces of the world in order to spend time in blissful solitude, but by descending into the hellish reigns of reality while holding the fairies of our dreams firmly in our hands do we get to do our share in lifting life onto more sublime levels of seeing and acting. Like Benjamin Britten basing his War Requiem on tritone⁴⁵⁴, the dissonant interval of the augmented fourth that has traditionally been considered diabolic in classical music, so as to show that salvation for our souls comes not from exterminating the devil, but from befriending and ennobling it, so must we reach out to the devilishly warped things of this world and use them as bricks for edifying the enlightening towers of knowledge if we are to make the angels smile and the world a more harmonious place. Semantically speaking, this is to say that not where perfect compatibilities of meanings and unambiguous comprehensions rest, but where perplexities and incongruities dominate is where the angelic spirit of our being ought to unfalteringly fly to. The preceding verses of Nightswimming, one of the most beautiful songs ever to be sung by a human voice, fit perfectly well now, as I, moved by the undercurrent of melodies humming praises to the encounters of opposites that underlie each and every aspect of reality, scribble these words while sitting on the balcony of the room L-104 and watching the idyllic Montenegrin coast underneath me, next to a tall, tall cypress tree that hides its twin behind it, appearing as one, but, in reality, being two: "I'm pining for the moon, and what if there were two, side by side in orbit, around the fairest sun?"⁴⁵⁵ Truly, they were two, as they ever were. Just as the planet lying at the exit of the solar system and the entrance to the Cosmos in all its immensity is, in reality, a binary planet, consisting of Pluto and Charon, so is the passage leading from the earthly to the heavenly in reality a bridge connecting one and another, that is, two. Hence, as ever, the deeper meaning of Theo's putting his two index fingers side by side as a sign for number two and squealing excitedly when we watched the total eclipse of the Moon on one of the first days of fall of 2015 together and a moment came when it appeared as if two moons, one crescent and one full, were really "side by side in orbit". And thanks to every communication being a bridge that connects two foreign coasts, whatever we communicate, even if we do not obviously misinterpret what others are saying, as I just did, we are never able to grasp the intended meanings with an absolute accuracy. What is more, in concordance with the astral visions of Pythagoreans, who did correctly place "fire" in the

center of the solar system and depicted the Earth as one of the stars circling around it in an orbit together with its twin, a so-called counterearth⁴⁵⁶, the spectrum of potential meanings ascribed to any given verbal or textual assertion is so broad that it encompasses even the diametrical opposites of those meant to be conveyed by the asserter. Understanding others, thereupon, always resembles starting from a semi-drawn drawing and then filling it up with our own preconceptions, expectations and ideas. This is one of the pillars of the co-creational thesis. Whatever the creative task we engage ourselves into, we are never alone. There are always at least two sides together involved in creating the created. For, eventually, the ways, the links between, the connections and touches are the key ingredients of life. It is these links that are let tremble and produce the music of creativity and life. Yet, they vibrate only for as long as they do not fall into an inactive state of perfect balance. Only while searching for a perfect balance that becomes an imperfect, out-of-balance state immediately after it is reached is that we imperceptibly send waves of beautiful music of being to the world around us.

S.F.1.26. Dialectical me, moving in and out of balance to stay truly balanced, always looking at the world the way the Argentinian boy, Vincent, gazed at the mystical meadows, castles and bronze sunrays of an idyllic Bavarian landscape at the opening of Peter de Mendelssohn's Painful Arcadia, a.k.a. *Marianne de ma jeunesse*, full of dreams and exaltation, with the breezes echoing his hesitation, "Go, go! hummed the fast wind in the tree crowns; stay, stay! whispered the warm air around his cheeks and hands"⁴⁵⁷, flowing perpetually through the vaults of my mind, naturally undergoes intensive mood shifts on daily bases. After all, as it occurred to me during an enlightening rumination, water became the key ingredient of this fantastic phenomenon called life, ending up comprising 70 % of our body weight and covering the same percentage of the Earth's surface, owing to the intrinsic polarity of its molecules, which has endowed it with the ability to act as a far better solvent than, let's say, non-polar methane found in abundance in, though, completely infertile and lifeless oceans on the Saturn's moon Titan. Henceforth, if we are to create something as fabulous as life itself, we should also engrain similar polarities within ourselves, shifting moods before others, from the dark to the delightful and back and all over again, in the blink of an eye, just like babies do. Therefore, sometimes you will see me bowed and wound down in inanimate silence, recollecting the rivers of vital energy upon the windmills of my heart, and yet sometimes I would act with a hilarious happiness, noosing people with the threads of love from the ball of yarn that my unwound spirit is. In that sense, I cannot help but recalling what Doris said once: "Me, I hide ½ the time + then I go out + am either appalled or amazed. I either want to lock myself in my room again and only go out when no one else is awake so I can appreciate the world without having to really see it. Or I want to start a cheerleading squad for humanity, my eyes shining at everyone, my head spinning with possibilities and the unrealized potential of this whole confusing system I'm a part of. Society! Yeah! Go!"⁴⁵⁸ So, sometimes after a night out, I come back home disappointed, telling myself that I ought to strictly hang out in the backyard, hugging cypress trees and gazing at the stars, hoping that a marvelous spaceship will land on it with ETs popping out in their blinding glare of glamorous and beautiful, eternally curious and infinitely

loving eyes, moves and entire appearances, and take me by the hand for a stirring intergalactic travel, to see worlds way more advanced than this one. Then I feel like the spacey character from that Radiohead song, my heart singing Subterranean Homesick Alien⁴⁵⁹, staying far from the eyes of the world, dreaming about the stars and a distant future of an enlightened SF age, in comparison to which everything around us, from people's thinking and behaving to technologies that our planet is seeded with will look poor, pitiful and passé. And yet, to contribute to bringing that enlightened age down to Earth, we should not stay immersed in these beautiful visions without sharing them with others. It is exactly because we are able to see that we need to act. And such acting will help us see more clearly, as Heinz von Foerster's aesthetical imperative reminds us: "If you desire to see, learn how to act"⁴⁶⁰. Otherwise, we may be only Pharisees who would live in their own light, but would for their entire lives remain spiritually crippled and dissatisfied for not living in harmony with the mission that their heart is beating with and that the divinity in them has predisposed them to. I remember a day when I felt like a Gollum, looking at the world behind branches of a forest of a gloomy spirit, unable to show love for the world and letting the divine grace sadly slumber in my heart. I found myself sitting by the tree and watching cheerful people around me, with a squared, non-interactive face, body and mind. Then a little dog came to poop on me. As I stood up, I realized I'd been sitting by the only dead tree in the whole park and felt as if Nature itself metaphorically signified the deadness of my spirit at those moments. For, the way we feel is the way the ways in front of our being will open. But should we radiate with lovingness and positivity, we would make Nature lay gracious paths in front of us, as in concord with the graciousness of our spirit. "Stop being critical, keeping score and proving that you are right; instead, be honest, grateful and forgiving", a message flew through my mind as if being a glider carrying profound and loving ads across the bluish, summery sky, and in a blink of a second my world and my being turned upside down, proving to myself that brilliant Christian mindsets are the starting points of our having wonderful lifetimes. Everything around me shone with an enlightening luster for as long as the star of this wonderful message ornamented the sky of my mind. And yet I knew that falling from grace and then sadly, with tears of a childishly honest repentance, looking up, towards the untouchable greatness of the Heavens above, makes the starry spirit of ours look dazzlingly beautiful. To make steps forward in this life is to be ready to stumble every once in a while, and yet every time we stumble and fall into the starry depths of the well of our soul, we ought to know that a step forward has been made.

S.F.1.27. Graceful parental education, some may say, should be all about fostering child's self-assurance and expressiveness in disproportion to the child's prettiness and talents. Others may add that confidence that is not cocky provides grounds for the stemming of truly appealing and influential personalities. But what I also claim is that being graceful and competitive at the same time is what the modern, Western culture teaches people to be. On one hand, quiet propagation of this balance, such as through combination of political correctness and self-centered competitiveness that SF Bay Area brews with, can have a debilitating and consternating effect on the freedom of our expressions, whereas, on the other hand, we ought to keep in mind that all profound balances in life do not only seem impossible to attain at the first sight, but are also always very sharp double-edged swords, capable of bringing either fascinating benefits or epic failures to

our lives, depending on which side of it we grab. Now, although ardent altruists among us may roll their eyes at the very mention of the merits of competition for our wellbeing, we cannot negate that the story of the evolution of life is all about the co-evolutionary entwinement of symbiotic cooperativeness and individualistic competitiveness. For a long time one of the central arguments from this cosmically altruistic standpoint would be that the Darwinian competition is limited to interactions between individual organisms and that it can only be pathological at the cellular level, that is, carcinogenic, allergenic or microbially invasive in essence. If we are fundamentally built on the ties of cellular cordiality, so to speak, then all we have to do to navigate our ways from the animals to the angels is to substitute all the competitive cravings that take over our spirit with ever greater emanations of *l'esprit de corps*. However, nowadays we know that the evolutionary selection by competition exists between cells of the same tissue too, as exemplified by the germ cells that through molecular rivalry eliminate those that appear to be less “fit” to make egg or sperm⁴⁶¹. On the other hand, we could hypothesize that genuine competition always promotes more prolific ways of cooperating, and *vice versa*, so that the two, in the end, inextricably depend on one another. Whoever has watched the reality show *Survivor*, for example, knows that to maximize one’s competitiveness and extend the duration of one’s stay on the island one ought to establish cooperative links with one’s competitors, and *vice versa*: to be considered as valuable for the welfare of the tribe and worth being given cooperative support, one should be seen in the light of a strong and self-sufficient competitor. The conclusion of this insight is that cooperativeness could be seen as lying in the heart of the most effective competitiveness, and *vice versa*; hence, the term “coopetition” used by some postmodern systems thinkers to describe the necessity for the entwinement of the two in all prolific interactive networks and relationships⁴⁶². After all, competitive societies naturally instigate its members to establish friendly connections, owing to the grounds of insecurity upon which they stand, whereas cooperative and dynamic teamwork can hardly be imagined without a healthy dose of self-promotion driven by the desire to make the products of one’s creativeness visible and prominent. One such blend of compassionate and cooperative gracefulness and competitive self-centeredness naturally makes us aware that only by loving and fostering the growth of our competitors in the field can we all thrive and evolve together towards ever greater emanations of human creativity and divine potentials instilled in us. Sheer competitiveness yields mindsets that resemble soccer fans who wish for the downfall of all teams except for the one that they support, without understanding that one good club in a league does not make up for conditions that promote sustainment and development of the quality of the given club, which implies that one such exclusive competitiveness is doing nothing but inconspicuously sowing the seeds of one’s own destruction. Yet, despite the constant dangers of competition slipping off into the reigns of monopoly, highlighted even by Adam Smith and other prime proponents of free markets and capitalist economies⁴⁶³, the world is mainly populated by people blind to the fact that their own thriving is possible only insofar as their fiercest competitors are not wiped out and are doing comparatively well too, except for a handful of rich usurers disguised as philanthropists, smart just about enough to know that “one cannot save the rich who have money,

unless one helps the poor who lack the money”⁴⁶⁴, as pointed out by J. F. Kennedy, supplying the latter with sufficient funds so that they could be multiplied and unremittingly sucked up by these rich parasites of the society. On the other hand, sole cooperativeness without any desires to yield creative products that engrain one’s own essence therein, independently of what the world will have to say about them and what kinds of brakes it will try to put on these desires with its traditional norms and fears, leads to infertile conformism where everybody defensively camouflages one’s innately glittery self so as never to stand out from the background, remaining awkwardly frozen and blandly blended with one’s milieu, merely waiting for the creative impetuses to arrive from somewhere else so as to be blindly followed, while ignoring the voice of divine creativeness that craves to be released out and bedazzle the world on the wings of acts unassailable in their beauty. After all, life as a whole could be fancifully represented as a Sun whose rays are radiated in all directions, diverging from each other’s path more and more and gaining an ever greater independence in their long cosmic flights the farther they are away from the stellar point of their origin, while at the same time originating from a core of inseparable unity, demonstrating how the evolution of life can proceed only from a flawless concoction of competitive desires to differ from one another and compassionate drives to remain one and the same forever and ever. The fact that some of the harshest and most memorable conflicts from the history of humanity have taken place between proponents of arrivals at same destinations, but using different paths⁴⁶⁵, rather than those who advocated different final destinations secretly speaks in favor of the naturalness of differing from one another in our streaming to deliver the shine of divine oneness, engrained in each one of us, to dark regions of reality yet to be illuminated by the torch of human knowledge. Also, it is quite an enlightening discovery that all competitive cravings arise from the grounds of none other but care for other creatures. Namely, a perfect lack of empathy for surrounding beings would give rise not to competitive tendencies, but to apathetic autism. Just like every desire to engage in war against someone arises from hurt feelings of love and respect for that someone, so does pathological competitiveness have its roots in distorted and ill ties of empathy. “Any labor which competes with slave labor must accept the economic conditions of slave labor”⁴⁶⁶, Norbert Wiener noticed, and, in a way, competing against anything in life implies admitting appropriateness of some, if not all, of its fundamental premises, which is why it can be said that appreciation and understanding of the competitors, being rather noetic forms of empathy, lie at the core of all competitive cravings. Moreover, whereas competitive incentives have proven as essential in leading to original and progressive products of human creativity, compassion urges us to think in the direction of promoting the availability of these products to all. This is, of course, a systemic statement applicable to innumerable types of products of human creativity, from those that appear on the market to kind and enlightening words and acts that we offer to others on daily basis. In fact, finding one’s way through the confusingly complex forest of human interactions requires one to balance seemingly not balanceable. Thus, we have to be one with people in love and empathy with them and yet be distant enough in order to sanely choose the most appropriate and creative actions in life. Being the same and being different is what we need to be. An amusing storyteller complements a story that carries a serious message with a smile and one that is supposed to make us laugh with a serious, squared face, probably being aware that “the joke loses everything when the joker laughs himself”, as Friedrich Schiller noted. Deep inside of himself, he may carefully

treasure ideals concordant with Paul Tillich's dialectical view of "Nature drawing straight with crooked lines", seeing smile as yet another crooked line that sets many things in life straight, as the folk wisdom would have it, and an epitome of the dialectical world of ours wherein shedding signs often causes their diametrical opposites to sprout from the place where they touch the ground. He may thus know that humor bona fide, likewise, has to be all about finding witty-spirited opposites and placing them face-to-face. For example, one of the newest trends in antiwar campaigns is to organize pro-war protests, or instead of throwing bricks, paint or eggs at windows during protest marches, to have them washed with glass cleaners and squeegees⁴⁶⁷. "If nothing goes right, turn left", a modern maxim goes, and our amusing storyteller lives up to it completely, knowing that too much of any good thing is bad in the end and that bile and honey are best drunk together, as the Montenegrin poet, Nyegosh, noticed⁴⁶⁸. A materials scientist in me could now invoke the example of adhering too much polymers onto the surface of colloidal particles with the aim to sterically repel them from each other and disperse them well in the medium, but only to produce an opposite effect, that of coagulation, when the extensive polymeric networks became tangled, or the example of adding too much of a cross-linking agent to a polymeric sol, so that it saturates the surface of the polymeric particles and begins to block them from approaching one another instead of linking them, as its initial purpose was. And so, whenever our witty storyteller finds oneself surrounded by excessive smiles that have begun to appear insincere and tiresome to wear, he picks up the jolly vibe smilingly, but only to end the story on a serious note, thrilling the listeners thereby, as much as he enjoys to begin a story in a weary social situation with a concordantly grave expression on his face and then pull off a goofy ending to warm the nearby hearts with the sunshine of joy and kindheartedness. From this point of view, one can also realize that jokes in which one speaks against the presupposed grounds of empathy and respect tend to annihilate the meanings that we ascribe to words in communication, to shatter linguistic symbols in pieces and raise our awareness far, far beyond them, which is certainly one of the greatest effects one can achieve by means of carefully chosen and masterfully told jokes. On the other hand, rigidly speaking against the appropriateness of such jokes that supplely liberate us from slavery to the illusoriness of finding final communicational aims in words rather than beyond them, as exists in the case of some overly "politically correct" environments, can gradually, over time, foster the development of the ills of hypocrisy among people, where those who swear by freedoms most exhibit and tolerate it least, as it is seen in many quasi-liberal centers of the western world. Yet, what brilliant pranksters in life know is that one has to turn things upside down and face boring, overly linear and one-dimensional manners of acting with their opposites in order to produce profoundly comical and instructive encounters of opposites. In other words, amusing storytellers know that dialectics is deeply ingrained in every aspect of our lives. They know that a basic emotion has to be blended with its antipode in order to produce an enlightening effect, in arts and in daily communications alike. A few years ago I stumbled upon a beautiful little book about dancing in a Williamsburg bookstore. In it, a real life scene was described in which the author was supposed to be dancing with an experienced dancer, but somehow could not let go and unwind into a loose and delightful dance. So, the dancer told her to just do something different, whatever it might be. A flash of light sparked in my head when I read this, just as it does every time I come across a sign that is to be incredibly important in guiding me towards fulfilling my divine mission on Earth. Nowadays, for example, when I tutor my students during their prep talks for a conference,

⁴⁶⁷ See Eric Lyle's *On the Lower Frequencies: A Secret History of the City*, Soft Skull Press, Berkeley, CA (2008).

⁴⁶⁸ See Petar Petrovich Nyegosh's *The Mountain Wreath*, rendered into English by James. W. Wiles, George Allen & Unwin, London, UK (1846).

I often instruct them to stop in whatever the predictable and routine stream of expressions they began to float on and continue to lecture while mentioning all but what they prepared themselves for saying. For, in such a way, through spontaneity and unrepeatability, not only fellow human creatures, but any other inanimate objects, scientific lectures included, are profoundly met. Another important aspect of the given maxim becomes obvious upon reconnecting it with the fact that when we look at the world from the cognitive foundations of empathy, of oneness with others, it is incredibly charming and humorous to turn our back to people, to exhibit signs of carelessness, and to travel far in one's desire to be unique, original and different. A charming and uplifting feeling is produced upon understanding that behind one's seemingly neglectful tendency to be different stands a shiny empathy and readiness to give one's soul for the sake of salvation of another. That is the ideal of a vivaciously spirited personality: choosing to become different in order to find a way to be one with others and the world, and *vice versa*: being one so that more miraculous ways of becoming original and unique could be attained. In that sense, I have always lived up to the ideal of merging the impossible to merge: (I) St. Paul the Apostle's message that we ought to "rejoice with them that do rejoice, and weep with them that weep" (Romans 12:25) in empathy and compassion, neatly reflecting their own worldviews in the cosmos of our thoughts and acts, and (II) being different, complementing the actual emotions in the air so that a balanced overall vibe is reached. Through an incessant tug o' war between I and II, a great synthesis (III) is reached where we are compassionate but not passive, active and original but not neglectful and lunatic. This incessant dialectical dance between thetic and antithetic perspectives is what hides the key to evolution of our knowledge and life.

S.F.1.28. Therefore, I try my best to make every smile of mine crack while I tend to keep my countenance serious, knowing that it thence becomes the most captivating and charming smile I could pitch in. Louise Brooks, the example of a salty stage artist so unrecognized for movies that are now acclaimed masterpieces that she had to work as a saleswoman on Fifth Avenue after acting in them to pay the price for being so aesthetically ahead of her times, thus made it a rule never to smile on the stage unless letting her gestures come to ride on the smiley waves emanating from the oceanic depths of her spirit, explaining why she "hated" Hollywood so much, with all its outbreaks of phony jolliness. When she smiled, therefore, there was always a grain of mysticism in all its somberness concealed in it, presumably serving as a reason for its unusual charm. I, myself, accordingly try to let my smiles subtly crack through the concrete of reservation cemented all over my face. This is partly so because I believe that the most sincere smiles always comprise a zest of seriousness in them. They are never all about laughter and happiness. When I was a youngster, I used to be exceptionally serious on all occasions and it really took something special to make one's expressions appear humorous to me. Not everyone could make me smile, therefore, and people who extensively relied on humor during a conversation I saw as inherently desperate, the state that their humorous attitude was supposed to merely mask. Then, however, over time I realized that a graciously developed sense of humor is intrinsic to most of the charming and potent personalities I met. This is not to say that one such person accepts the impressions of the world with a sort of ridicule or satire, but that she sees the world with her heart quietly giggling underneath her breath. So, to develop a truly powerful attitude in life is to find a way to blend a focused seriousness and a smiling sun singing its songs of joy and happiness within us. An enchanting smile is thus always made to carry white doves of wisdom flying with it, and *vice versa*: the true wisdom always hides raindrops of the divine joy within itself. And yet to make a smile like that not appear smirk and ridged, but enchanting and radiating with joy and spontaneity

is a true art. After all, a mixture of cosmic joy and eternal sadness lies hidden in the faces of enlightened ones drawn on frescoes and murals in cathedrals and monasteries. The same magic blend is to be ingrained in every aspect of our beings.

S.F.1.29. If you have ever wondered why dialectics, why an incessant battle between good and evil, light and shadow, harmony and disharmony, underlining every path forward in life, here is the answer. It is choice. Namely, every form of choice resembles standing at a crossroad while being stretched between different directions in our thought and yearnings, each one of which we would often wish to be able to take. As this is normally not possible, we could immediately see that a conflict is intrinsic to practically every choice we make. Being riveted at a crossroads is so intrinsic to life that the image of the crucified Christ, one of the most powerful symbols of our civilization, neatly depicts it. But having a choice as something coloring every shade of human thinking points at something else. It is freedom. Without freedom, there would be no choices to be made. Which brings us over to conclusion that no freedom could be won nor sustained but on the backs of perpetual conflicts. Studies have indeed shown that healthier and more harmonious kids emerge neither from marriages in which conflicts are avoided and are virtually nonexistent nor from those in which conflicts are ever present, but from those in which conflicts regularly appear, but are also regularly resolved. Systems devoid of even the subtlest traces of conflicts and systems in which conflicts are overwhelming both raise dysfunctional spirits: indolent, insensitive and indifferent in the former case and irksome, grudging and toxic in the latter. These findings are on the same line as those demonstrating that marriages and partnerships having persistent unresolved issues have been happier and more sustainable than those insisting on the resolution of every single disagreement⁴⁶⁹. And having freedom in the way we perceive, think and act points exactly at the polar conflict that is essential to the co-creational thesis I have been advocating for a long time. This thesis explains life through the interplay between the creativity of human minds and divine Nature. According to it, it is neither human minds nor Nature herself that are solely responsible for the appearances that comprise our experience. The dialogue between human minds and Nature is, in fact, what leads to all the observable qualities. A legendary saying from Qur'an (Al-Rad(13):11) tells us that God does not change what is in man until man starts changing what is in himself, clearly pointing to the freedom God has given to man. "I am as My servant expects me to be"⁴⁷⁰, an Islamic hadith goes, posing before us a messages whose meaningfulness stretches from the depths of our mind to the very eternity, for it says that it is the human mind that with its visions as to what its God is builds a ladder from a fragile and transient earthly self to the venues of the stars. It is also the mind's vision of its God and the meditative communication with it that defines the scope of existential magic and the magnitude of supernatural creative powers that will open before and befall upon one, respectively. This viewpoint does not, however, speak against Hegel's thesis of the universal mind that divides itself into many parts, leading to man thinking merely God's thoughts and striving to realize that he is one with God's mind. When one talks about dialectics, Hegel's explanation of the development of the world based on it seems unavoidable. In it, as you may know, the universal mind (i.e., thesis) divides itself into a multitude of cognitive perspectives (i.e., antithesis), creating thus a fertile tension from which the evolution of the world

⁴⁶⁹ See John Gottman's *What Makes Love Last? How to Build Trust and Avoid Betrayal*, Simon & Schuster, New York, NY (2013) or Mark Manson's *6 Healthy Relationship Habits Most People Think are Toxic* (May 8, 2014), retrieved from <https://markmanson.net/healthy-relationship-habits>.

⁴⁷⁰ See Hazem Said's and Maha Ezzeddine's *What Do You Expect from Allah?*, OnIslam (October 16, 2012), available at <http://www.onislam.net/english/shariah/hadith/this-hadith/458026-what-do-you-expect-from-allah.html>.

in informational and spiritual terms results (i.e., syntheses that once again break up into even richer theses and antitheses). Still, these individual humanoid perspectives tend to grow all until they realize that they are a part of that great One and thereby reach the state of an ultimate synthesis. Or, as put into words by Friedrich Hegel, quite apparently ringing in accord with the simultaneous separateness and connectedness, difference and identity, intrinsic to every way in Nature, the symbolism from which the Philosophy of the Way has sprung to life, “Absolute Spirit implies eternal self-identical existence that is transformed into another and knows this to be itself: the unchangeable, which is unchangeable in as far as it always, from being something different, returns into itself”⁴⁷¹. Reaching the apex of intellectual and spiritual journeys in this life thus equals the enlightening moment when the human mind and God, the wayfarer and the Way, the whole wide world included, become One.

S.F.1.30. This dialectical nature of every type of progress in life should be carefully kept in mind when one passionately engages oneself in ordinary battles of reason. On one hand, it is with sympathy rather than pity or despair that we should observe clashes of antagonistic opinions because, at the end of the day, these confrontations of opposing poles are how new knowledge comes to life. A hypothetical world wherein everyone thought the same would swiftly disappear in the dull and dead waters of uniform thinking and prove to be a devastatingly infertile place for the sustainment and evolution of our knowledge and ways of being, the reason for which our becoming such a skilled conversationalist as to be able to convince each and every one in the correctness of our views would be a battle lost, not won, as we might be tempted to think. On the other hand, our involvement in heavily opinionated altercations should always proceed with our standing in our awareness on top of these dialectical confrontations of polarities, somewhat similar to what Arjuna and the Lord Krishna did in the epic story of Bhagavad-Gita, instead of blindly following merely one of the encountered sides whilst trying to eradicate the other. If we are to maintain a peace of mind, the sunshiny of sanity and a good spirit all throughout these discussions, all of which are the sources of brilliant insights and expressions that emerge in the eye of the moment, we should know that triumph consists not in seeking unequivocal approvals for the stances we support, but in encouraging proliferation of ever more intense ideological encounters. In other words, whenever we can, we should voice views that oppose those that we noticed to have been accepted all across the board as the only valid ones. For, in a world where “gnosis consists in knowing that, whatever may be imagined in thy heart, God is the opposite of it”⁴⁷², as Junayd of Baghdad held, anytime we pick a side to support in confrontation, we essentially forsake godliness and present ourselves in the light of a sinner. John Coltrane famously concluded that every religion that aspires for correct description of the theosophical nature of reality must be wrong because its correctness implies the incorrectness of at least one similar description and from there went on to seek the unity of all world’s religions as the only valid spiritual standpoint, in philosophy and music alike. A hilarious Sufi story that follows neatly describes the sapience of knowing that “there is no sound of one hand clapping” and that attempts to eradicate any of the infinite number of antagonists of the qualities we appreciate in life are inherently destructive, for only in their togetherness can they give rise to the divine traits of reality. In it, a pretentious young man, known for being very eloquent in his village, approaches a wandering sage with the desire to

⁴⁷¹ See Georg Friedrich Hegel’s *History of Philosophy: Greek Philosophy*, Section III, Neo-Platonists, available at <http://www.amazon.com/Philosophy-History-G-W-Hegel/dp/0486201120> (1837).

⁴⁷² See Annemarie Schimmel’s *Mystical Dimensions of Islam*, University of North Carolina Press, Chapel Hill, NC (1975), pp. 130.

engage the two of them in conversation and demonstrate his intellectual superiority while simultaneously diminishing the proficiency of the sage's knowledge. Having realized his intention, the sage took a stick from the ground and hit the young man on the head with it. The young man felt offended and took another piece of wood from the ground, wanting immediately to revenge. The sage then said: "Prior to hitting me back, answer this question first: where did the sound of the blow come from: from your head or from the stick?" The young man became stunned and could not answer the question that easily. Then the sage added: "Okay, now answer this: how could you win in intellectual debates, proving appropriateness of your thinking, had there been no fallacious remarks of other people?" The young man understood this message that implied that proving supremacy of oneself equals humiliation of another and never again got involved in brutal dialectic confrontations permeated with no desire to elevate the understanding of all sides engaged in communication. This attitude naturally brings us over to Lao-Tzu's ideal of the sage who "does not argue because the one who argues is not a good man, nor a true sage" (Tao-Te-Xing 81). The perfect man of his visions was like a sea, placed underneath other people, because only then could all the rivers flow into him. He does not need to run after anything thence, for all things will be running to meet him instead. As stands inscribed in the Gospels, "And they shall say to you, See here; or, see there: go not after them, nor follow them. For as the lightning, that lighteneth out of the one part under heaven, shineth unto the other part under heaven; so shall also the Son of man be in his day" (Luke 17:23-24). The Buddhist guiding principle, according to which we should change ourselves for better, first and foremost, rather than preaching change while our hearts are rotten and enrooted in hatred and greed, naturally arises from this standpoint. Oftentimes in life, thus, although one may feel as if leaving the loved beings and places that surround us is the way to attain fortunes that lie in the distance, staying therewith and tuning one's heart and mind to the right frequency is the key that would transform oneself into an ocean into which all the rivers would flow, bringing these distant treasures straight to one on their waves and streams too. "I've been high, I've climbed so high, but sometimes ocean washes over me"⁴⁷³, as the lyrics from a tune on R.E.M.'s record *Reveal* go, reminding us that soaring high in life, towards sublime heights of spirit, is possible only insofar as we simultaneously bow ourselves down in front of the beauties of the creatures of the world, humbly and respectfully, with devoted empathy uniting our views with each and every one of them, and like an ocean accepting all things flowing into our heart. The most beautiful ideal of the postmodernist communication is exactly that: diminishing one's own relevancy, greatness and virtue in eyes of another, but not in a mere self-deprecating and dismal manner, but in a way which will radiate with a meek and humble beauty, inspiring others to strive for the greatness and reach for the stars. A healthy dose of fear and insecurity is, in fact, vital for instilling charming beauty in our thoughts, feelings and moves, and preventing us from being a futile egotistic monster. To be a true messenger of the voice divine, we need to be soft and weak as much as strong and determined. To be a punk *bona fide*, to deliver the mind-awakening blows to people around us, we need to be puny and punchy at the same time. For, to instill humble beauty in our punches and the power of tempest in our meekness and quietness stands forth as the sacred art of punk. For, "when I am weak, then I am strong" (Corinthians II 12:10), if I may repeat the words of St. Paul the Apostle. Which is to say that in order to be prophets, we ought to be like canaries in the mine⁴⁷⁴, that is, creatures frail and sensitive and the first to respond to subtle signs

⁴⁷³ Listen to R.E.M.'s *I've Been High on Reveal*, Warner Bros (2001).

⁴⁷⁴ In the early days of mining, canaries used to be carried with miners because they would quickly croak in the case of exposure to noxious fumes, alerting the miners of their presence before any adverse effects on them would be visible.

in the environment. At the same time, to achieve so, we need to descend into the deepest chasms that we could find in the world, for only there may we come face to face with stimuli for which our sensitivity would be a merit. And I have equally felt as if Doris' words concord with the music of my heart when it comes to this simultaneity of sensitivity and braveness: "I was born with adventure somewhere deep in my spirit, but I was also really scared. There was always a pull both ways"⁴⁷⁵. This is also why I have always been inclined to easily, with a lot of trust, accept other people's criticism of myself. And because I believe in the virtues of the spirit of uncertainty, I readily accept my own mistakes, knowing that gracefulness sparkles from the eyes that humble themselves down in face of the wonders of the world, whereas eagle-like malice radiates from those that always crave to climb on a higher ground, be it epistemological or ontological, and push the others below. This is in spite of the fact that quite often, after deeply reflecting on other people's comments, particularly during scientific discussions, I tend to realize that they were actually terribly incorrect and biased in their objections and accusations. Likewise, whenever I need to resolve a misunderstanding of intentions, I start off by pointing out the weak and possibly faulty sides of my own approach, leaving the criticism of others for later, if any time at all. But because the other sides often take advantage of that by picking up on my self-accusatory attitude and throwing an avalanche of supporting arguments that further disgrace myself, I often leave these argumentations as the guilty and humiliated one, in a way like Disney's Simba, convinced that he, not his wicked uncle, is to be blamed for the death of his father. But I worry not. Once, I remember, I witnessed how a pack of stray dogs that roamed around our family house routinely rejected the little yellowish pariah dog that spent half time domesticated in our garden and the other half acting as a real feral dog, as if they instinctively felt a sense of sublimity and protectiveness by a higher form of life that it radiated around. Seeing this irresistibly reminded me of how packs of ordinary people likewise have a strange ability to sense when someone has woven vertical threads that keep one connected with the divine reigns above and, bizarrely, often feel instinctively impelled to perceive this blessing remoteness as inherently vile and worth coldhearted rejection. This shoving of the spirits swaying with the sea of divinity permeating all things by the masses of commoners is a more sublime form of instinctual rejection than the one where people in any workplace or profession, quietly, unobtrusively, aspiring to be the best in the world become shoved and stumbled because of reeking of loftiness and a sense of supremacy. Although they, as I, myself, did on many occasions, may say that it is not their fault that they become ostracized just because of yearning to be the world champion in one or many aspects of what they do, this sense of repulsion, slowly building into a palpable force that works to push and compress one from all angles, will be stronger than any rational justification thereof and, at the end of the day, the Barabbas' will be embraced and Christs crucified. "Who does he think he is to feel that he could be free, that he could speak his mind and justify his creativity with exhibitions of infantility? We had once been such, feisty and free, but then we gave away this spirit of specialness, we locked up our freedoms and resigned our unique identities to become these faceless members of a uniform army of machines, of soldiers obeying every command of the authority, and anyone standing out of this homogeneity and hegemony actually spits on this sacrifice we have made and therefore must suffer", is the train of thought swooshing through the heads of the peers of these extraordinary, Christ-like spirits as they send them into exodus with a thumb-down vote. As it may be destined to happen generation after generation, from the earliest civilizations on Earth to the evolutionary twilights of humanity, the living – that is, the authentically, spiritually alive souls - will try to resurrect the dead – that is, the lifeless, inert, bored and robotic resemblances of animate spirits that fill this world - and bring

⁴⁷⁵ See Doris 27, the fanzine published by Cindy Crabb, POB 29, Athens, OH 45701, USA (Fall 2009).

them back to life, but the dead, as it had happened to the Christ, will end up killing the living, and yet the spirit of the living will remain and will continue to float, mysteriously, across the spiritual seas of the Universe for as long as sentient creatures sail thereon, inspired and exalted by them. Hence, just as in the everlastingly relevant story about the Christ, those whom one wishes to save most are those who will make the final judgment and sentence one to expulsion or extermination. Evoking this story brings to mind that hat from the cover of the Jayhawks' Smile, the hat I always return to, a sole one among a uniform array of helmets, destined to be smooshed sooner or later in a world wherein the delivery of freedom that it symbolizes, the freedom that is to liberate these oppressed and oppressive helmets around it and rescue them from the unfortunate confines in which they have found themselves, is invariably stifled and suppressed. For, wherever one is oppressed, one's proclivity to oppress rises, and even my students, who have rarely ever oppressed anybody, often object to the free spirit I instate in the classroom, only because of their counting days before they, who have grown under authoritarian oppression, could finally graduate and engage themselves as oppressors in this cycle of oppression that is extraordinarily difficult to break. Although the academic authorities have been the strongest opponents of my ultraliberal teaching philosophy, these students, the souls I wished to rescue most in this academic tilting at windmills, have provided the key arguments that justified the raising of the walls around me and that prevented the dissemination of this anarchic, lifesaving philosophy time after time. And very often, in the midst of the heartrending sadness born out of realization that those who one loves and lives one's life for most are those that prosecute one hardest, the only resource one has is the hope that the inevitable sacrifice that one must ready to make will be a nucleus for the sprouting of liberty in some distant future. On every corner, thus, from the dark alleyways of one-horse towns to eminent academic lecture halls and hallways, one could encounter occasions that could crystallize one's conviction in the immaculateness of the ancient saying of the Christ: "Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you" (Matthew 5:11). After all, a morally corrupt system, such as the academic, undoubtedly, is today, requires morally corrupt people, people who are in it for the money and ego rather than for more sublime ideals and ethical principles, for these are the people that behave predictably and are controllable in an authoritarian system and will not make a big fuss over the little violations of humanness that occur everywhere in it, for which reason the persecution by vile and faulty social systems, including the academic, which I, myself, have felt on my skin all through the decades, is a solid proof that one has trodden on the divine path in life, just as much as the unequivocal embracement by these very systems is a sign of some serious wrongdoings in the heavenly eye that watches over every speck and corner of this sad and beautiful world. And now, speaking of corners, I am calling to mind Gaston Bachelard's musing about the poetics of space: "Every corner in a house, every corner in a room, every inch of secluded space in which we like to hide, or withdraw into ourselves, is a symbol of solitude for the imagination; that is to say, it is the germ of a room, or of a house"⁴⁷⁶. No wonder then that my solitary room for dreaminess, marine-colored and adorned with the softly caressing waves of the motherly spirit in the air, the one where my entire past, present and future, everything I and there would ever be, came together into view, was exactly one such corner room. Being a part of our family house in Belgrade, it was the one which Mom, the foundation of endless Love that has ensured the stability of my family throughout the harshest of times, has chosen for sleeping, thus confirming the French philosopher's premise that corners are indeed the cornerstones of a house, though in a more subtle, symbolic manner. And just like my Mom has rested in this, by far the mustiest room in the house, so as to show us that

⁴⁷⁶ See Gaston Bachelard's *The Poetics of Space*, Beacon Press, Boston, MA (1958), pp. 136.

those who retreat from the spotlighted centers of attention and deliberately choose to act as genuine catchers in the rye, standing firmly among the summery crops and protecting the little ones in their dreamy play from falling down the cliffs of life, are those over whom the stars of the heavenly quilt that veneer the whole reality with their shimmer gladly smile, so have I intentionally picked corners as my most favorite loci to dwell in at parties, in warehouses I'd sneak into by night, on tops of sunlit fortresses and terraces that overlook stupendous pieces of land and sea, and elsewhere. For, I have known that before those who become shoved away from the central podiums of life the most glistening lifesaving paths open and therefore made corners, the points where numerous planes of thought meet, quite reflective of my interdisciplinary thirsts, the preferred standpoints in any given edifice. Indeed, having often been sent to classroom corners by the teachers owing to my rebellious need to question it all and stand against even the slightest injustices and betrayals of the ideals of celestial beauty, as well as cornered in the schoolyard by the lions of my classmates due to my timidity, delicacy and gentleness, I learned to remember the opening scene of a popular national TV show for kids back in the days⁴⁷⁷, in which Maksić, a misbehaving kid is sent by his teacher to face the corner. All of a sudden, however, this corner, the symbol of the stalemate position to which one is expelled, yields a miraculous opening to a fantastically vivid world filled with splendid and surreal creatures. This cinematic allegory was there to remind me that not those standing under the limelight of the worldly clique, celebrated and ornamented with the wreaths of glory, nor the faithful followers of trendy ideals and values set by the mediocre mainstream masses, but those exiled to the corners, the rejected and forgotten sea stars left to stand in the shadow, dreaming about the stellar beauties missing from the world, are those that eventually yield the evolutionary spurs that send the world in wonderful new directions of being; hence, the theological scriptures shed light onto none other but cornerstones (Psalms 118:22), out of all the bricks that house is composed of, while philosophers use the same term as a synonym for indispensably profound foundations. After all, only when we make the darkest corners, the places where little and neglected details of the world dwell, the most important and appreciated ones, the houses of our being and knowledge will gain supreme strength. In this spirit, what I always teach my materials science students is this: if you are ever being shoved into the corner, like Maksić, turn around and show the shovers a snowflake melting softly on the palm of your hands. Each snowflake is a single crystal of ice, yet if the corners of its hexagonal center did not grow more intensely than the faces and the edges, it would have never attained the beautiful form that it has come to possess. For, the rule of thumb when it comes to crystal growth is that the more protruded the segment of a crystal, the greater its growth rate, the reason for which the growth rate generally increases as one moves from flat faces to surface steps and terraces to kinks to edges to corners. "The stone which the builders rejected is become the head of the corner" (Mark 12:10), the Christ said in one of his parables, wishing to tell us that all those things in life rejected as impudent and crooked as well as those sitting in corners, cocooned and dreamy, counting stars, are the very same ones who have the largest chance of growing into something immaculate, something without which the essences of life would become buried deep underground. And we need not look farther than a tiny mineral hiding in a most miniscule grain of sand or a beach rock for the proof of this everlasting principle. As I placed the palm of my hand on the sand of the Repulsion Bay in Hong Kong, took a picture of its imprint and then placed this photograph on the opening page of my second book written in Serbian, the one listing 30 principles of the systemic science of the future, I secretly knew that it partly epitomized my willingness to accept being rejected by the world and being at odds therewith, for I was aware that only in such a way would my creativity be able to

⁴⁷⁷ Watch Vukov ćošak (Vuk's Corner) directed by Miloš Radović, TV Belgrade (1986).

fully flourish. It is as if the following words of St. Paul the Apostle have incessantly been ringing through the spheres of my consciousness: “For ye see your calling, brethren, how that not many wise men after the flesh, not many mighty, not many noble, are called: But God hath chosen the foolish things of the world to confound the wise; and God hath chosen the weak things of the world to confound the things which are mighty; And base things of the world, and things which are despised, hath God chosen, yea, and things which are not, to bring to nought things that are” (Corinthians I 1:26-28). For this reason, with a devotional tear of mixed remorse and rejoice I waited for the moments of my own rejection, deprecation and banishment from the mainstreams of the world. In fact, having grown up in Yugoslavia at the turn of the third millennium, during the times when the country that had traditionally embraced the ideals of brotherhood and unity was in large extent unreasonably accused for aggression by the rest of the world, since the earliest age I had a chance to witness unfair accusations everywhere around me and thus sharpen my ability to cope with them later in life. In fact, being classified as a Yugoslav and then, later, as a Serb has simply predisposed me to bear a stigma of guilt stamped on my heart everywhere I’d go, and yet, bearing in mind the apostles and other early Christian missionaries, I have known that such is the fate of all creatures walking on progressive paths in life. Namely, unlike most other surrounding countries that have historically strived to reach independence and chop the Balkan Peninsula down to ever smaller fragments, Serbia has traditionally sacrificed herself for the sake of shattering the boundaries raised by nationalist forces as petty fences of a kind and instating the spirit of unison and equality. Yet, whenever we reach out to embrace someone, even though we may never wish to banish the identity of that someone, there is a chance that such an act would be seen from aside as hostile and thus accused for its aggressive nature. How historic this situation is may be best illustrated by a scene from one of the world’s oldest myths, where the Sumerian goddess of love, Inanna journeyed to Kur, the Mesopotamian underworld to meet its queen and her twin sister, Ereshkigal, but when she stepped up to embrace her, the nearby demons mistook her loving intentions for the desire to capture her sister and dethrone her and the judges sentenced her to death. And to face another person’s steering clear of our soulful embrace, claiming how “you and I, we are not the same”, being the response that I still often hear from my former compatriots, leaves permanent marks of sadness and misery on the substrate of one’s soul, predisposing one to become nothing but a dejected cripple in one’s spirit one day. Still, despite the irrational repulsions I experienced upon my attempts to highlight that we, humans, are all equal, brothers and sisters born out of a tear that has fallen from the eye of the Cosmos, and despite knowing that the most horrific evildoers in life will tend to appear in the form of fake protectors and guardians, I have yet to give up on opening the petals of the flower of my heart at the sight of another human being and running out to bring him/her into the safe shelter of my heart. It suffices to say that the American foreign agencies nowadays undergo similarly dual interpretations of the intentions behind their policies; even if they were to open their arms to other countries in a purely benevolent manner, with zero self-interest, they would eventually be accused by some for intending merely to spread their corporate influence and greedy political powers for their own sole benefit. Now, living in a country that was being punished by the entire world for such latching on the ideology of uniting all south Slavs under a single umbrella, while at the same time the ruling party at those times fostered crookedness and primitivism under the hat of the country’s glorious past had a strong effect on a sense of rebelliously extraterrestrial cosmopolitanism that then began to sprout in me from a seed of misfit feelings of not belonging in the corrupted world deprived of divine beauties I nurtured in my heart. The already seeded sense of isolation and foreignness was even more intensified as I watched my native country being chopped to pieces, with every new country

repugnantly seceding from what remained my patria, smaller and smaller in size and outlook with every new year, prohibiting my entrance to what were once considered the integral pieces of the puzzle of my own country. Meanwhile, the cruelty of economic sanctions and border closures introduced by the international community is best seen from their inciting the smuggling of goods and fueling the gang activities, thus gradually making criminals in possession of money and power emerge to the tops of the hierarchy of a proto-capitalist society that my country was becoming, leading to a cultural demise of the nation and its slow death, like that of a cell separated from its native tissue, having nothing anymore to latch on to. And as the country was pushed into a deeper and deeper isolation, as if everybody was running away from a plague of a kind, I was left to meditate about what was happening around me, all alone, with the starry dreams of cosmopolitanism lighting up the crystal ball of my visionary head. Surrounded by the plagued hands and piercing screams that called for nationalistic hatred and bigotry, I swam in the little cosmopolitan bubble that my family was, where worshipped was no loyalty to any state in particular, but to trees lined up along the streets I walked every day, cheekily waving at me with their luscious treetops, to the lines of poetry through which the spirit of the sages of antique ages watched over us, to the hearts of nearby earthlings palpitating with uncertainty and fear, to the crumbly stonewalls of gardens in which the scents of oblivion and of the imperishable force of life wrestled with one another, to the clouds on which I would rest my weary gazes and let them glide towards some blissful infinities, far away from the daily life stricken with war, misery and detestation, and to the most ordinary objects that unexplainably melted my heart with the whizzes of soothing remembrances they would magically release into the dreamy pot of my head. Thus I installed a sense of cosmic citizenship in me that went hand-in-hand with an inherent disrespect of the very concept of nation, allowing me to both then and now share views with Henry David Thoreau who saw nations as swarming insects and Kurt Vonnegut who hinted on their pointlessness by naming them “granfalloon”, the category which included “any nation, any time, anywhere”⁴⁷⁸. Yet, by being a child of the heavens, dreamy and mildly distant, and not a person trying hard to conform to the norms and standards set forth by the authoritative humans, one naturally attracts packs of aggressive wolves onto oneself. Indeed, the puniest and shortest kid in the class, I got picked on by bullies ever since, teachers and classmates alike, aside from having been elbowed and shoved in various parts of the European continent simply because of being a Serb⁴⁷⁹, openly verbally humiliated and physically assaulted on many occasions as such, which even more pushed my nonconformist and dejected self into the realm of social outsiders. From the elementary school to college days to every single place at which I worked to even my family circles

⁴⁷⁸ See Howard Zinn’s Foreword to John Tirman’s *100 Ways America is Screwing Up the World*, Harper Perennial, New York, NY (2006), pp. xvii.

⁴⁷⁹ In Eindhoven, for example, in 1999 I was shoved and elbowed by a Croatian young man with Aljoša Asanović – symbolically nicknamed „fiery elbow“ because of his specific way of running - jersey after he heard I was a Serb; in the Hague in the same year I was beaten up in front of a nightclub near Grote Markt by a bouncer after I told him I was a Serb on the way out (I lied that I was Czech to get in, but I did not mind getting beaten up; I wasn’t mad, I remember, and I wanted to return and invite the guy for a drink; that sentiment of mine seemed so odd to the person in whose apartment I stayed as a refugee back then that he kicked me out of it soon afterwards); in Rovinj in 2004 a shop owner near the top of the Grisja Street overheard the conversation between me and my brother, concluded that we are Serbs based on our characteristic Belgrade accent, then snuck a wrong bag to us at the cash register and started yelling from the top of his lungs in front of the store how Serbs were stealing goods from his store, even though we never took the bag out of the store and immediately realized that it was planted with the intention of accusing us to be shoplifters; between Zagreb and Croatian-Slovene border in 2005 I was made lie on the ground, with all my belongings scattered and many torn, and told that all Serbs should have been killed in Vukovar by a Croatian police officer after I protested against his acting rude at a disabled Croatian lady; and so on.

every now and again I would be pointed the finger at as the one who is guilty and worth heartless rejection. Now, being bullied early in life is often said to predispose one to try to please everyone and eventually become a good politician⁴⁸⁰, and I did end up being nominated and elected as a student or employee representative at many institutions, but even that would always turn into a disaster, given that sooner or later my inclinations toward nonconformity would emerge on the surface, ending with me getting accused as a fifth columnist by the organizational authorities and marked for professional extermination. Therefore, looking back at my life, I am free to say that it has been unusually abundant with situations in which I would be accused as guilty for one thing or another and then reprimanded as such. Yet, while sitting alone and thinking about my deeds that were being imputed blame on, I became aware that punishments leave taints on the spirits of both the judges and the accused ones, while only forgiveness and unconditional love can purify them. The mental act of forgiving both others and oneself for the blasphemous acts committed I then saw as akin to wiping the mirror ball of one's glossy spirit with a fantastic mop and prompting it to shine with an ever more dazzling and penetrable light, as well as to hammering the cramps of burdensome judgmental thoughts that drag us down, towards ever deeper karmic swamps, and rendering us light as a feather, ready to soar into wonderfully lucent skies of angelic being. At the same time, I developed ethics that prevented me from defending myself under any of these occasions. Hence, although the universal fate of a Christ-like soul, a holy being walking through this plane of reality with the head immersed in the sea of divinity that pervades the whole existence, is to be unjustifiably and unfairly accused of the things that he committed not and although I know that I even as I write this I am being fiercely blamed in someone's head for one thing or the other, I will not even lift my pinky in the effort to defend myself against these instances of unfairness that taint my name and reputation. Long time ago I gave up not only on defending myself against these false accusations, but also on being desperate about not being able to convince people in the fairness of my deeds in face of my persecution. But what I will tell you is that I would always say that I do not believe that Marco Polo made up his travels that sent him up and down the silk road and beyond, from Korčula to Hangzhou and from Jerusalem to Sumatra, because I have felt on my skin the pains of being distrusted and mistakenly accused for wrongdoings that never happened and I would never dare to do the same to anyone, even at the cost of believing a blatant lie. Now I am aware that all the situations in which I was accused for the deeds I had not committed have been there to prepare myself for facing them at more important stages of my life with bright joyfulness, being all white sails of spirit waving on a pure summer breeze, undisturbed by the blasts of anger and malevolence directed towards me. When a Zen master was pointed finger at as the father of an illegitimate child in his village, the only thing he said with his cheerful eyes widely open was "is that so?" as he took the baby and began to devotedly take care of it; then, after years passed and the mother of the child admitted that the sage was not the real father, the only thing he said as he handed the child back to his mother was yet another cheerful "is that so?" And so, I too have nourished a similar nonjudgmental attitude in face of harsh critiques I have regularly faced in life, never ceasing to remain on the run to see only traces of goodness in each and every one with effervescent eyes of an ET on Earth, while occasionally rethinking the words proclaimed by Milan Milišić, the Serbian poet and political dissenter from the Croatian city of Dubrovnik, paradoxically one of the first victims of bombs thrown by the very Serbian soldiers on it during the siege of this medieval town in 1991, not long after he got fired from his job as a journalist by

the Croats for being a Serb⁴⁸¹, serving as a sacrificial sign of meaningless of that and every other war that swept over the pieces of planet Earth, as his response to accusations for “spoiling the youth of Athens” in some more modern settings: “An important transformation has happened to me. In the times of the given affair I tried to defend myself, within the scope offered by the law. I used to struggle composing responses to accusations, making phone calls to the press office and referring to the law... Now I am finally cured of every need to justify myself, to seek approval by means of official documentation, justification for what I write, an excuse for daring to think... My defense is written by those who have made an assault upon me”⁴⁸². Hence, like workers in a Delfina pizzeria who wittily decided to cope with unfavorable critiques of their little enterprise by wearing tees that say all the bad things critics on Yelp said about them, such as “This Place Sucks!”, while being all smiles⁴⁸³, I also scream how enlightening it is to humiliate oneself, to bear the cross of other people’s ignorant condemnations of ourselves while humbly watching the world from the level of the sea wherein all the rivers flow, with sparkly eyes of joy and happiness in which the entire Universe is reflected. As of today, I worry only about carrying firmly the lantern of light peacefulness within me, knowing that that is the only way to bring about peace in the conflicts that surround us. After all, albeit Albert Einstein claimed that he was “not only a pacifist, but a militant pacifist – I am willing to fight for peace”, I claim that forceful impositions of the principles of equality on Procrustean beds are plans for disaster, not amelioration of social ills, as well as that war against war is still a war, not necessarily a battle for peace. Thus, when I gave an interview to a Dutch journalist in 1999, as a Serbian student, an attendee of a European students meeting, in the midst of the NATO bombing of Serbia, the army operation maliciously and hypocritically named The Noble Anvil, or The Merciful Angel as it was presented to Serbian media, painting a picture in my head of yet another bombing operation of a similarly malevolent title, the Little Boy, being the name of the A-bomb dropped on Hiroshima in 1945, I said one thing, which the following morning appeared on top of the front page of the most read newspapers of South Holland: “This war won’t solve anything”. To justify this statement, I fiercely criticized the Serbian powers, which, prior to that, I had spent many years protesting against as their rebellious opponent, as well as the strategy that NATO forces chose to bring peace to Kosovo, that is, by destroying roads, bridges, railroads, hospitals, children daycare centers, cultural monuments, chemical and power plants, oil refineries, TV stations, a foreign embassy, administrative headquarters, random industrial facilities, causing lasting ecological catastrophes, and numerous other strictly civilian targets. Many categories of civilian objects, including the public broadcasting media agency, were for the first time in the history of warfare declared as legitimate military targets and blown-up as such⁴⁸⁴. During the 77-day long bombing campaign, in fact, despite the unprecedented precision with which missiles were hitting their targets, more civilians than soldiers were killed or wounded by the NATO bombs, which is not taking into account countless of those who later fell victims to the lasting poisoning of the earth with toxic organics and heavy metals, including radioactive U-

235⁴⁸⁵. It has been estimated that 420,000 projectiles with the total weight of 22,000 tons hit the territory of Serbia and Montenegro over the course of the whole bombing campaign⁴⁸⁶, equaling circa half a ton of ammunition per square mile. And so, although I openly condemned the Serbian leaders for deluding the nation and embracing violent retaliations as a solution to the problem of terrorism, I also wondered out loudly how come the vile NATO generals and the first female US Secretary of State, Madeleine Albright, who would be caught yelling, “Disgusting Serbs, get out” in a Prague bookstore thirteen years later⁴⁸⁷, continued to justify the bombing campaign as an attack on the country’s political elite and not on its people when the airstrikes were destroying more schools and hospitals than tanks and barracks of the Yugoslav armed forces and were producing far more civilian casualties than the military ones, having had predominantly civilian objects as its targets, which also lay far away from Kosovo, the region in which the combats between the Serbian and the Albanian forces were taking place. For example, the center of Novi Sad, the second biggest city in Serbia, lying in the far north of the country, some 200 miles or so from the border with Kosovo, was virtually cut off from the rest of the continent after all three bridges crossing the river Danube were destroyed by bombs, while attacks on chemical plants, car factories, libraries, TV stations, power plants, oil refineries and infrastructural objects that had no direct connection with the operations of the Yugoslav army were a daily occurrence. Only a single healthcare complex in Belgrade, KBC Dragiša Mišović, was bombed on four separate occasions during this military campaign, including on May 20, 1999, shortly after midnight, when three patients and seven guards in the neurology clinic fell victims to the missiles⁴⁸⁸, while the nearby children’s hospital for tuberculosis and other pulmonary diseases as well as the gynecology clinic and nursery were demolished in the attack⁴⁸⁹. A decade later, I heard of the Bay Area singer Michael Franti, who bravely went to the heart of Baghdad with his guitar, so as to sing the song entitled You Can Bomb the World to Pieces, but You Can’t Bomb the World to Peace to American soldiers, bringing back memories of the same message I had craved to convey to the European public as a representative of Serbian students back in 1999. Now, of course, I live deeply convinced that the true battles for peace ought to be conceived and fought in far more imaginative ways compared to blunt exhibition of power and violence, which humans, sadly, naturally tend to fall back to every now and again. Likewise, it is not bitterness and anger, the two feelings that, as we speak, silently sweep the face of the Earth⁴⁹⁰, once gentle and kind, with an epidemic intensity of

⁴⁸⁵ Sixteen years after the bombing campaign was over, Serbia is reported to have the highest incidence of cancer and the corresponding death rate among all the European countries, with 5,500 newly diagnosed cases per the population of a million every year, twice more than the average. ⁴⁹⁰ Like frogs, the spirits of the citizens of the Western world are cooked in the slowly simmering pot of anger, so much that they have ceased to recognize it in and around them anymore, finding it normal that love songs are not anymore songs of devotion and elevation of warmhearted feelings, but usually open displays of fury, jealousy and

their deeply disharmonious waves, often paradoxically posed under the pretense of liberal views, but only beauty in all its glistering spiritual glory that can truly save the world from the regressing reign of narrow-minded, malign, selfish and superficial intentions of the mainstreams of human thought, along which the ships of our beings quietly and imperceptibly travel. Of course, this was neither the first nor the last time that I stood between two fires, having reasons to fiercely criticize both and still, as ever, finding grains of empathy with one and the other. For example, although I acted as a passionate protester against the Serbian regime every now and then during the 1990s, the most memorable demonstrations in my head were those held in response to the electoral fraud committed by the then governing, socialist party in the winter of 1996/97. The protests were held daily, from noon onwards, oftentimes extending long into the night and merging with the schedule for the next day, eventually lasting for more than three months in continuity, day and night, with protesters constantly grouped against police cordons in downtown Belgrade, my hometown, which was described then by some witnesses as “epitomizing Chicago of the ‘20s, the economic crisis of Berlin of the ‘30s, the intelligence intrigues of Casablanca of the wartime ‘40s, and a cataclysmic hedonism of Vietnam of the ‘60s”⁴⁹¹, to which I would only add a sense of gloominess and fear such as that looming over a pre-apocalyptic age in a modern-day Pompeii and all that under an invisible umbrella sparkling with satellites, flashlight cameras and spaceships that could have landed at any moment and taken us on a ride through the best and the most blissful of the space age whose coming was felt in the air. Despite all of this, the demonstrations turned into eruptions of positive energy that impressed many of their participants for lifetimes, whereby youngsters danced, whistled, drummed and sang in a country shattered by wars, poverty, brain drain, international isolation and cultural caving-in. We, the demonstrators, walked through the city like a cheerful party pack motivated by the belief that we were heralding to the old crowd greeting us ecstatically from Belgrade balconies the message of some brave new world beating optimistically in our hearts and, as it were, coming to sweep us all with its friendly waves and toss into the sea of peace, unity and an everlasting harmony. Force, fury and obscene messages were never used. The packs of policemen that were blocking our way in cordons were shed flowers on instead of bricks, paints and eggs, let alone the Molotov cocktails. All these eruptions of joy and positivity, however, remained unacknowledged by both the local and the Western media and when many years later Crystal posted the image of demonstrations in her native city, Hong Kong, and asked “where one could find a city with over 50k protestors, but not a single store being damaged nor a single car set afire”, I merely smiled and whispered in my head, “44°47’52’’N 20°29’42’’E”, being the geographic coordinates of my hometown, Belgrade and, to be even more precise, my home in it. Needless to add, nothing short of immense was the disappointment I and many of my fellow protesters felt over the fact that neither the state government would ever provide a single report on these wonderful events in the radio and TV media it controlled nor the Western powers wished to acknowledge the inspiring and peaceful nature of these protests because it would have gone against the image of the Serbian society as a ferocious one in its totality, without an exception, which they successfully painted on their TV screens so as not to confuse the naïve public eye and, god forbid, urge it to question their military role in the Balkans. A collective sense of neglect and betrayal hung over our heads in those days, as we, with disappointed though still eternally optimistic young

close-fistedness. “*Ko peva zlo ne misli*” is an old Serbian proverb, meaning “who sings means no evil”, yet the modern times prove it oh so wrong.

⁴⁹¹ See Vukša Veličković’s Nightclubbing: Belgrade’s Industria Was the Soundtrack to the Bosnian War in the ‘90s, *Red Bull Music Academy* (December 20, 2013), retrieved from <http://www.redbullmusicacademy.com/magazine/nightclubbing-industria>.

hearts, stood on frosty Belgrade streets, facing police cordons for day and night for a little bit less than three months, unable to sympathize either with all but one or two independent news radio stations in the region, most of which relentlessly propagated unilateral nationalistic hatred, or with the Western powers that played their neocolonial and imperialistic roles in the uniform of a peacemaker, puzzlingly presenting the secessionists as liberators and those who wished to retain the integrity of the beautiful multiethnic country called Yugoslavia as occupiers (of their own country, as it were, ironically)⁴⁹², and demonstrating how easily the public opinion even in the most developed parts of the world could be diverted in absolutely any direction by those who control the information media. On one hand we were disgusted by the backward mentality and the primitivism exhibited by the local leaders, all along with the manipulative machinery of propaganda that they transformed the news media channels under their control into, while on the other hand we watched in disbelief how the age old Serbian tradition of humanness, heroism and generosity, which suffered greatest losses per capita in world wars, which had sent out supplies across the front so that medical centers for the wounded enemy forces could be set up, which has fiercely defended its own territories and never invaded anyone nor aspired to do so and which has

⁴⁹² Countless subtleties that make every war meaningless aside, it is puzzling that the former Yugoslav republics that wished to secede from the federal union have not been labeled as destructive nationalists by the western media, whereas Serbs, who proportionally had the largest population fraction in favor of the preservation of this union, were denounced as such and are forced to live with the stigma of this epithet to this very day. One proof of this is that for more than a decade after only Serbia and Montenegro out of six former republics remained in the union, the country was still named Yugoslavia. As all the former republics, including Kosovo, once an integral part of Serbia, sought to secede from Serbia, Serbia still stands as the only juridical legatee of the Yugoslav constitution. What caused this bad image to be bestowed upon Serbs was the unwillingness of the insipid Serbian politician of the wartime era to engage in any international media wars, quite like the secessionists did, or seek to justify their actions before the neocolonial Western courts whose language has always been the one of sugarcoated hypocrisy. Years later, I would recall this unwillingness to engage in any media wars by the Serbian side in the Yugoslav conflict when I, traumatized by how evil-hearted the people involved in my expulsion from academia were, was equally unwilling to go out to media and social networks and write letters where I would accuse the academic rulers for their treating me unfairly. As a result, I also fell prey to the habit of the western observers to assume that if someone is quiet and withdrawn after an incident, he must be guilty for it when, in reality, my quietness was partly due to the feminine and Christian sides of my being that tend to accept deluges of unfairness very fairly and partly on the Serbs' finding finger-pointing and accusing another intrinsically repulsive and immoral. For, engaging in a game of tattletale so as to blemish another person behind its back as opposed to solving the problem oneself is considered the epitome of immorality and weak character in my native tradition. Additionally, it is worth noting that, according to the Yugoslav constitution, individual republics did have the right to secede, but only if this was being agreed upon not only by the republics that wished to secede, but by all of the constitutive Yugoslav republics. Naturally, the nation that most strongly opposed these secessionist tendencies was the one more dispersed across the entire region of the former Yugoslavia than any other: Serbian. When this is being coupled to the fact that memories of the genocide Serbs suffered the last and the only time other republics announced independence from Yugoslavia, during World War II, still lay fresh in people when the conflict began in the early 1990s, the decision of the Serbs to protect the integrity of the Yugoslav territory could be seen as their natural response. Puzzlingly to many, still, to this very day, a quarter of a century after the civil war of the 1990s broke and about 100 years since Yugoslavia came to life as the Kingdom of Serbs, Croats and Slovenes, Yugoslavia as the concept of a union of diverse ethnicities, cultures, religions and languages is most beloved by Serbs, who are often said to have lost most because of this concept, and loathed most among the Croats and the Slovenes, who are often said to have gained most, at least territorially, thanks to it. This and any other justification of the Serbian stance during the Yugoslav civil wars by no means represents the justification of the decision of the Serbian authorities to proclaim independent state entities protected by barricades in the early days of these wars, to tolerate war criminals who ravaged war-stricken territories under the pretense of the protection of human lives, and to engage in many other instances of the violation of human rights in this tragic period in the history of the Balkan peninsula. In fact, in every conflict there are two – or more – narratives; willingness to acknowledge a grain of truth in each and every one of them by all parties involved in the conflict presents a first step toward reconciliation.

generously and self-sacrificially stood on the defense line of humanness throughout the history was denounced and turned into a greatest evil on the face of the planet by those whose music and movies and work ethic we have learned to love, but who voraciously colonized vast regions of the world while exterminating and robbing their natives off their land and their properties or confining them to reservations, who engaged in crusade wars to burn and steal in the name of the Christ and enslaved people whose color of the skin was different from theirs, who have no true understanding of the word “diversity”, yet rarely ever take it off their lips, while, in the spirit of their hypocritical forefathers, talk of development of the underdeveloped as of the process of becoming cultural copies of their own and drowning the human civilization into a state of sterile monotony and who hide their hegemonic aspirations behind the veil of democracy⁴⁹³, having no other guiding lines but those of the Christ, “If the world hate you, ye know that it hated me before it hated you; if ye were of the world, the world would love his own: but because ye are not of the world, but I have chosen you out of the world, therefore the world hateth you” (John 15:18-19), to find solace in, becoming refugees for life, in the truest and the most personal sense of the word I could think of. Eventually, to add up to this disappointment with all the cultural and political forces that clashed over our heads and pulled us spontaneously into their vortices, it was not the outbursts of positivity on the streets of Belgrade that peaked during the winter of 1996/97 that ousted the corrupted regime, but a sly deal made between the opposition leaders and a group of prominent criminals, forcing many of us to fly away to distant countries of the planet, while never ever believing again that the world could be changed for better overnight, via revolutions, irrespective of how benevolently, idealistically and peacefully they are implemented. Rather, it is the roots of human minds that govern the state of social welfare. However, these deep cognitive foundations whereon bricks of human aspirations, values and archetypical emotional states are all interchangeably posed could not be modified in the blink of an eye, but only through exerting persistent, patient and delicate influence. This line of thinking coincides well with the musings of Pierre Bezukhov, the protagonist of Leo Tolstoy’s *War and Peace*: “Every boisterous reform deserves denunciation because it won’t amend the evil by even a little bit, so long as people remain to be as they are, and because wisdom needs not boisterousness”⁴⁹⁴. Hegel drew a similar line of thought when he observed that “erroneous is the principle that the shackles of justice and freedom are removable without the liberation of conscience and that there could be a revolution without a reformation”⁴⁹⁵.

⁴⁹³ Or, demonocracy, as witty critics might advertently modify this word so as to yield a more appropriate meaning - a combination of demonism and monocracy. In fact, a self-modified anecdote illustrates nicely what the noble concept of democracy has deteriorated into in the West. In it, an imam in a newly democratized middle Eastern country took a visitor to the top of the mosque and began to pee from it onto the crowd gathered at its base. When the astonished visitor asked him why he would do that, the imam said that this is what democracy amounts to: “I pee on people and people pee on me”. “But they cannot reach you from the bottom, even if they tried to pee on you”, noted the visitor. “Well, that is what democracy is about, too”, replied the imam. In other words, democracy in a social system that allows for segregation of power is a grand illusion. But then, in a completely desegregated world, supposedly an ideal starting point and endpoint of democratic political systems, the aristocrat and the meritocrat would have to understand that accepting democracy is equivalent to accepting mediocracy and be at peace with the fact that one’s fate in this system will be guided at times by competent people and at other times by severely incompetent ones, and that this is, simply, the way things are in democracy. And if one does come to terms with this principle, then whenever the former comes to affect one more than the latter, one would not become dispirited, but would rather shrug his shoulders, shed a smile and walk on, knowing that for each closed door, new doors will open somewhere soon.

⁴⁹⁴ Personal translation of Pierre Bezukhov’s words found in Leo Tolstoy’s *War and Peace*, Nolit, Belgrade, Serbia (1869).

⁴⁹⁵ See Georg Wilhelm Friedrich Hegel’s *Lectures on the Philosophy of World History*, Kultura, Zagreb, Croatia (1831), pp. 404.

Concordantly, when the most famous Serbian satirist at the turn of the 20th Century, Radoje Domanović was asked immediately following the May Coup and the assassination of the Serbian King, Aleksandar Obrenović in 1903 if he believed that Serbia would grow into a better place now that the main target of his critiques was gone, he notably responded by saying, “O the Serbian populace, my goodhearted kindred, how terribly simple and naïve you are. May the 29th has passed, but we remained us, the same as we have ever been”⁴⁹⁶. Having grown up in a social milieu where revolutions have been more common than in many other parts of the world and having been intimately involved in one of them during the last years of the 20th Century, I learned that the process of social transformation is remarkably slow and that no profound social change could be implemented in short periods of time. Max Ophüls’ Lola Montes’ dignified stance, “What do I have to do with revolutions, whether they come from left or right”, today reconnects me with the aristocratic sublimity of Jovan Dučić’s muse, who would be “too chaste to lead the reckless masses... a pale, quiet girl who dreams, letting others’ song be the woman that sings on tainted streets”⁴⁹⁷, and with the spirit I once embodied, long before this brief period of believing in revolutions and actively participating in them. Having made a full circle and reentered the chaste beginnings, today I share my views with Sly Stone, who famously made the title track on his most influential record to date, *There’s a Riot Goin’ On*, run for zero minutes and zero seconds, wishing to highlight that “there should be no riots”⁴⁹⁸, for no lasting change in a society could be brought about by their precipitous means. Or, as the words Le Corbusier chose for the closing message of his tractate on the future and past of urban architecture tell us, “Things are not revolutionized by making revolutions”⁴⁹⁹. For, although revolutions do serve as decent heralds of the upcoming sociological trends, throughout the history they have regularly failed to live up to their etymological purpose, that is, to revolutionize societies by suddenly upturning their foundations and bringing a lasting and profound change to them. All that the revolutions have usually done was to alter the surface social makeup, while leaving the foundations that they wished to tackle intact. Or, as a journalist for the *Economist* observed following a worldwide wave of demonstrations in early 2010s, “Marx’s belief that 1848 was the first wave of a proletarian revolution was confounded by decades of flourishing capitalism and 1968, which felt so pleurably radical at the time, did more to change sex than politics”⁵⁰⁰, the words whose veracity I could attest to with my own involvement in the revolutionary attempts to topple down the corrupt socialist government of the 1990s in Serbia and allow the Keynesian democrats to occupy its place. Little did I know then that the socialist party which I helped oust, the party heralded by arrant and arrogant, whiskey-on-the-rocks-sipping and Sinatra-listening Slobodan Milošević and the one that had sent tanks to the streets of Belgrade on March 9, 1991, months before those very same tanks would be sent to faraway lands to fight a meaningless war, the streets whose dwellers never voted for it in the elections as a majority, was a schizoid concoction of capitalism and socialism, as it

was the one that instituted the multiparty political system, democratic elections, privatization of state firms and corruptive oligarchy, thus making “nationalism serve the private interest”⁵⁰¹, while holding the media in its hands and barefacedly manipulating with the opinion of the provincial populace misinformed about the dissident goings-on in the capital, but that is a whole different story now, which I would leave to more meticulous historians to dissect and digest for the masses. Be that as it may, back in those days we believed that these new economic and political grounds, definable by the terms such as democracy, liberalism and free market economy, which were to provide conditions for the dissociation of the noble and the creative from the lazy and the primitive, whom we considered to have poisoned it all, from politics to culture to science and arts, would contrast the socialistic inequalities born under the pretense of equality for all. In other words, we believed that they would sweep off an inherently unfair socialist system wherein a scientist’s administrative assistant who’d sip coffee, polish her nails, align her artificial eyelashes and apply one layer of makeup after another at work 24/7 would possess the same social status as the scientist who’d work day and night in the lab to discover a drug for, say, polio, a problem of pervasive mediocracy that haunted the French intellectual elites since the bourgeois revolution. We envisaged capitalism as a political and economic system in which, as we had been told as children, those who work hard would be rewarded proportionally to their effort, meaning more than the lazy and the indolent ones, but we were all but wise enough to realize that capitalism is not the same as meritocracy and that, in contrast to the latter, it would place a moneymaking monkey with no hardworking habits whatsoever higher on the ladder of social influence than a superbly talented scientist or artist who does not let money spoil the purity of his creative endeavors. Moreover, we failed to predict how dangerously swiftly this capitalism that we idealized so badly would be transformed into the reign of free market monopolists and moneymaking tycoons, the prophets of profit working to ensnare the human soul, capture the sunshine of happiness radiating from it by the clutches of voracious vanity and create what Karl Marx deemed “the economic animal – the self-alienated man of capitalist society”⁵⁰². As a result, we have come to constitute a rare generation that was rightist in youth, in a sense that we idealized private ownership and free enterprise, and leftist in adulthood, in a sense that we became supportive of fair distribution of wealth and more regulated economy, and the effects of this unusual change in political inclinations, going against that which most of our western contemporaries underwent, could become a topic of many studies in psychology and sociology in the decades to come. Furthermore, when Yugoslavia ceased to be a kingdom and embraced communism, it took decades until the royal, aristocratic nobility among its people became converted to peasantry and laissez-faire brotherhood, similarly as the transition from the socialist economy to a market one of more than a decade ago has luckily yet to change the mindset of people to a more selfish, competitive and individualistic one, a process that may take many decades unless, of course, we see the capitalist system globally toppling like

⁵⁰¹ So said Johnny. Watch Marko Janković’s interview with Johnny Štulić, Studio B (1991), retrieved from <https://www.youtube.com/watch?v=8erWgxq2BYE>.

⁵⁰² This is a quote from the final lines of an article by the Serbian philosopher, one of the leaders of the communist party of Yugoslavia and, coincidentally, my own professor of the sociology of science in the first year of college, Mihailo Marković, which I, miraculously came across during one of the breaks in my teaching a class on medical devices to San Diego State University students in the Love Library of the campus. That day I climb the stairs one floor up and on this fifth and highest floor of the library I opened the first book I came across, which happened to be no other but this very article: Mihailo Marković’s Marxist Humanism and Ethics, *Inquiry* 6 (1) 18 – 34 (1963). This philosopher we, the believers in the coming of the golden age of capitalism in lieu of rotten communism, despised for his left-wing politics during our student days, but there was more to the picture than met the eye, except that that more we were blind to see.

a house of cards. For, if Marx and Engels' theory of historical materialism still holds, perceiving the lineage extending from tribalism to primitive communism to slavery to feudalism to capitalism to socialism to ideal, anarchistic albeit utopian communism as corresponding to the progress from the most primitive to the most humane and advanced political system, it should be only a question of time when the human race will enlighten itself to a sufficient degree as to say a strident No to the imperialism, abusiveness and backward vileness of capitalism and all the devastating repercussions it has had on the human mind, spirit and social consciousness. Hence, asked recently whether I believe that a civil revolution taken place on a patch of the globe would change things for better locally, I resorted to the story told by Fritz Schumacher, the propagator of the idea that small is beautiful⁵⁰³. This real-life story goes describing Fritz's journey through the Midwest during the Great Depression. As he stopped by a gas station, he saw a man standing there and decided to strike up a conversation. "How's it going", said Fritz, to which the local man replied, "Oh, it used to be bad, but now it's much better". "How come", asked Fritz. "Well, see that farm over there. It used to be all mine before the crisis had begun. Then, the money stopped pouring in and I ran out of resources to keep the farming business going. And so, to sustain the land I was forced to pay my working partner in land. Eventually, I sold it all to him. However, since neither did he have money to compensate me for my working on the farm, he had to pay me in land. Gradually, I am now on a good way to restore my property", the simpleton said smilingly. This story nicely illustrates the illusion of individual prosperity in the times of a global economic and cultural downfall created by capitalist social systems, in which people have been gradually trained for complete desensitization from any communal needs. When personal profit and impassively imposed market rules of the game are allowed to be the sole guides for transactions of goods and services, the corruptive effects of such selfishness, as ungodly and ungraceful as it can be, slowly take over the human souls, the foundations of any society, and corrode them from the inside, contributing to the imminent collapse of the social whole. In one such society even a seemingly benevolent renovation of children's playgrounds in poor neighborhoods, such as those carried out on massive proportions in Chicago between 2013 and 2016, during the years I lived in this urban center of the Midwest, can lead to diminished use thereof, primarily because of the increased cost of living that such renovations bring about⁵⁰⁴, forcing the original families to move out and allowing the real estate moguls to fill their coffers with ever greasier banknotes thanks to the exodus of the working class that their vile selves have spurred. And when an enlightened inhabitant of this corrosive social milieu hears the musings about a society "based on cooperation, public service, mutual aid, interdependence, and giving – not accumulating a bunch of crap, not trading one thing for another, but gift. giving"⁵⁰⁵, a society that "didn't have words for ownership, and there was a belief that everyone was entitled to the means of life no matter what their contribution was"⁵⁰⁶, he would feel like that Plato's bird from Phaedrus, "who, when he sees the beauty of earth, is transported with the recollection of the true beauty; he would like to fly away, but he cannot; he is like a bird fluttering and looking upward and careless of the world below; and he is therefore thought to be mad"⁵⁰⁷, mad because of believing in the agathism of humankind and empathizing

strongly and passionately with the vision of a true communist society, as genuinely Christian as it can be, but so utopian that it is perceived as sheer lunacy by the economic mainstreamers and conventionalists, that is, all those who have accepted the human nature as irreparably evil. Another commoners' story could be invoked at this point to illustrate the diametrical opposite of these inert propositions of the capitalist economy, this time involving a Bosnian working fellow, who came to the bus station ticket stand in the summer of 1981 to purchase a ticket from Sarajevo to the seaside region of Makarska, handing over a banknote to the clerk, expecting the ticket to cost 25,000 dinars, but then getting surprised when he received a larger change than he had expected. It turned out that the ticket price dropped down to 15,000 dinars; "'tis the peak of the season, sir, and extra buses were added to transport the passengers", the lady behind the stand said, illustrating a nowadays extinct business style that contrasts today's vulturine habit of artificially manipulating with supply and demand to maximize the profit for a business with complete disregard of the effects on the community, the habit whose immanent greed eats up the ethical and aesthetical core of human beings and leaves them virtually dead, spewed out by life into lifeless blobs, undignified, zombified and spiritually insensate. In addition, as Fritz Schumacher's story shows, in the long run, any tangible possessions in an impoverished whole bring about not prosperity to those who own them, but, more or less, an equal amount of adversities as that befalling upon those who are deprived of them. Or, as stated in the opening of the documentary movie *Zeitgeist*, which, among other things, aimed at debunking the paradigm of genetic determinism and demonstrating that the environment predetermines the expressions of the self just about as much as the innate predispositions of the self do, monetary transactions are similar to those in the game of monopoly, not because relentless acquisition, accumulation and exclusive control of property are what it teaches the players to strive after, as some of us may think at first sight, and not because deep down money is just the medium for an exchange of favors that, as such, teaches not generosity and charity, but meager reciprocity, breeding corruption and corrosion of the spirit, as others may be tempted to associate money with, but because after the game is over, "all that wonderful money and all those houses and hotels go back in the box – none of it was really yours". "Whenever I hear somebody bitching about taxes I want to punch him in the mouth. 'It's MY money!' Shut up, no it isn't. It's money, and it's a fluid resource (or should be) just like air. It isn't YOUR air just because you're breathing it some of the time. F***ing children"⁵⁰⁸, concordantly notices the former Missoula punk and Hellgate High School graduate, Steve Albini. As a parallel to this view of money as a fluid resource, I have, likewise, seen monetary wealth as an aura with a glow proportional to the capacity to create materialistic lavishness around one, albeit such that it has nothing to do with the spiritual aura, the one that truly matters in the eyes of prophets and poets at the end of the day and the one that cannot be bought or sold with this worldly wealth. Now, aside from carrying a message of interconnectedness of it all within the scope of society, Fritz's story has also served as a neat reminder of my beliefs that aiming for a momentary change in the world by means of substituting one group of people with another can only result in an illusion of improvements at the level of social welfare. For, unless the society undergoes a slow but thorough phase transition that engulfs the majority of individual human consciousnesses within its mainstream, no lasting change would be brought to it. Needless to add, bipartisan political systems, such as that embraced by the US, can be particularly deceiving due to their polarity which subdues

⁵⁰⁸ Yes, Steve, we're children and a most touching thing about our civilization is that it has been built and sustained on shoulders of, essentially, children, wavering, wide-eyed, unsure about this whole big world, *et cetera*, for as long as they are alive, even unto the oldest of ages. See I am Steve Albini, Ask Me Anything, Reddit (May 8, 2012), retrieved from http://www.reddit.com/r/IAMa/comments/td90c/i_am_steve_albini_ask_me_anything/?limit=500.

ordinary minds to an illusion that substituting one with another will profoundly improve the political, economic and cultural conditions of the society, when there are merely cosmetic differences between these two political modes and when true and lasting changes in all these social segments could be expected to be initiated strictly from the grassroots level, independently of any political top-down influences. Political bipartisanship can thus be indeed seen as a defeat of the very concept of democracy, as some may notice, including those who share the Lithuanian-American anarchist, Emma Goldman's opinion that "if voting changed anything, they'd make it illegal"⁵⁰⁹, and who see in the reduction of one's social engagement and altruistic aspirations to the act of voting, that most pathetic, helpless and indifferent of all conceivable forms of activism, the trivialization of democracy as a noble ideal, thus revealing some truism in the humorous description of President as "the only thing in life besides family that one cannot choose"⁵¹⁰. Thus, knowing that every major political party is populist by its very nature in the sense that it speaks to the opinion of the portion of the populace that it represents and that the absence of this population of supporters would prompt it to search for whole new social opinions to back, I, simply, refuse to vote for the lesser evil, and that, I think, is the most valuable vote I could cast in this country. For, indeed, one need not look further than the political philosophies of the two major presidential candidates on elections, differing only in the surface appearance, while fundamentally being the same, offering merely a choice between Tweedledum and Tweedledee, as Frank Zappa put it⁵¹¹, as well as the legislative measures submitted to the voters, always preposterously minor, merely tricking the public into thinking that the making of big decisions is in their hands. For example, out of seventeen of such measures submitted for November 2016 general elections in California, two pertained to brown paper bags, one to condoms in porn film industry, two to death penalty, one to ammunition purchase, one to marijuana legalization, one to tobacco tax and one to whether constitutional amendments should require the posting of the bills 72 hours before the vote on the internet, engaging public in minor issues and leaving the major ones to the big fish with big pockets. Such polarized political systems blunt the populace by giving people a false impression that all out there is black and white and, in turn, benefit corrupt politicians who can gain political points and kudos from their supporters not by honestly working on themselves and their strategies for the improvement of the social state, but by merely publicly blackening their political adversaries, thus creating a zeitgeist of hostility that will hover ominously over an entire era, threatening to implode at any time, to no one's benefit, and wandering off ever more with every new day from the bright visions of the biblical peacemakers and reconcilers that they ought to have become an incarnation of. Of course, in the meantime, both poles know that they benefit from their opponents' publicly denigrating them because by denouncing the denounced, the denouncer implicitly proclaims the denounced as its fiercest and most critical adversary, admitting its strength and influence thereby and effectively doing it a favor, so long as it, of course, the secret source of the denouncer's strength and popularity does not become accidentally toppled by means of such hypocritical denouncements. For this reason, countless of political poles, from the Democratic and the Republican parties in the US to the US and Russia during the Cold War era and beyond could be seen as tied by the bonds of mutual interest rather than genuine animosity. The American two-party political system sugarcoated with the ideal of supreme democracy, though mainly controlled

by utilitarian corporate powers that use greed, self-interest and human insecurities as a fuel to propel the capitalist machinery governed and ensure their own sustenance on its tops, thereby fairly deserving the epithet of Demopublican duopoly, can be seen as yet another instance of the devastating and all-pervading worldly hypocrisy, a spiritual plague that has imperceptibly conquered all corners of the planet and poisoned them with its mental and emotional virus. Truly healthy microcosms of thought, of course, resist becoming a member of any such simplistically delineated political outlooks as much as they resist placing others, subconsciously or speaking out loudly, into these or any other similarly narrowly categorized worldviews. Questioning the artificiality of this political division, however, carries a whole lot of dangers for one's reputation in this social realm that once proudly wore the epithet of the land of freedom and nowadays resembles an oppressive and dark Kafkaesque edifice of monstrously shortsighted and self-centered financial powers, as exemplified by the case of Andrew Napolitano who got fired from Fox News Channel where he had worked as a political analyst almost immediately after asking the following questions during his talk show: "What if the two-party system was actually a mechanism used to limit so-called public opinion? What if there were more than two sides to every issue, but the two parties want to box you into their corner? What if the whole purpose of the Democratic and Republican parties was not to expand voters' choices, but to limit them? What if the widely perceived differences between the two parties was just an illusion? What if the heart of government policy remains the same no matter who is in the White House or what the people want? What if the biggest difference between most presidential candidates was not substance, but style? What if those stylistic differences were packaged to substantive ones to reinforce the illusion of the difference between Democrats and Republicans? What if the government that manipulated us could be fired?"⁵¹² With no substantive difference existing between the political path of the Democrats and the Republicans⁵¹³, both of whom favor the interests of big businesses over those of the general populace, it is their disagreements over minor, nonmonetary and nonmilitary issues that the media use to paint a deceptive picture of their fundamental divergence before the public eye, creating a false impression of a diversity of voters' choices, which is, however, nonexistent in reality. For, why else would be a person's donation to any of the two major political parties in America be considered as an expression of genuine Americanism by the national security agents if it wasn't for no fundamental difference between these two seemingly diametrically opposite political philosophies? Common people are being deluded into thinking that there is a fundamental discrepancy between these two philosophies when, in fact, there are only minor, decorative differences, and as it was clear to the Dutch social philosopher, Johan Huizinga already in the days predating World War II, "the two-party system (in America) had reduced itself to two gigantic teams whose political differences were hardly discernible to an outsider"⁵¹⁴. Especially in liberal urban centers, such as SF, for example, one can hear impassioned liberals argue at length in favor of the so-called progressive tax, while neglecting that it is but an *ad hoc* mechanism for ameliorating social inequalities, quite ineffective, as it were, as exemplified by social democracies in Europe where the taxation rate is the same for everyone, and that only changes in core values of the social governance can lead to a more positive social picture that would distance itself from the exploitative backdrop of the American economic history and, healingly, bring people's hearts

⁵¹² Watch Fox News Channel's last episode of Freedom Watch talk show (February 13, 2012), available at http://www.youtube.com/watch?v=fOaCemmsnNk&feature=player_embedded.

⁵¹³ See also the comment by Justin Lewis in the documentary movie Ethos directed by Pete McGrain (2011).

⁵¹⁴ See Johan Huizinga's *Homo Ludens: A Study of Play Element in Culture*, Angelico Press, New York, NY (1938).

together once again. In a truer democracy than the American, of course, people would have an active say in deciding individually what social structures they would want to support with their yearly share of tax payment, just as well as they would have the liberty to exhibit a similar decision making-power at their workplaces instead of being treated as replacable screws nailed to the chassis of a neoliberal profit-making machinery. It is for this reason that Karl Polanyi argued in 1935 that “basically there are two solutions: the extension of the democratic principle from politics to economics, or the abolition of the democratic ‘political sphere’ altogether”⁵¹⁵, the words that resonate with relevance today too, in the age where the hypocrisy of the democratic policies, socially liberal but economically conservative, has become obvious, bringing about consequences that may be more devastating than it seems, most critically paving way potentially for the rise of fascism, just as Polanyi predicted in his capital study⁵¹⁶ and Caleb Crain converted this prediction into the following choice before America at the turn of the 21st Century: “Socialism or fascism”⁵¹⁷. Of course, the pairs of diametrically opposite political philosophies have often sprung up simultaneously and proliferated to equally extensive degrees side by side, having perceived each other as an enemy and making an effort to bounce away as far as possible from the opposing values, but it is difficult to explain how come the right-wing Republicanism resurrected itself from McCarthyism and its witch hunt against communists that was wide and large the subject of ridicule by the American public in the 1950s to a political option that resonated with millions, culminating with the election of Ronald Reagan for the US President in 1981, in the same decade, 1960s, in which the liberal movement made its most impressive stride in history⁵¹⁸, as evident by the expansion of personal freedoms, of the environmental conservation ideologies, of hippie spiritualism, of antiracial policies, of gender egalitarianism, of MLK’s poor people’s campaign and of the new left activism, if not by their simultaneous spurring by the duopolistic powers pulling the social strings from behind some ominous curtains. For, deep down, the bipartisan political stage in America does resemble a puppet show where a puppeteer, the one having the last laugh in the game, pulls the strings of two puppets, like those of Elsa and Anna in a popular YouTube show, having them incessantly quarrel and fight, but only to amuse the audience and distract it from the more pressing matters occurring in the backstage, behind the curtain. This makes it possible for one political ideology to be ostensibly defeated in elections, but only for the very same ideology at the same time to emerge as a winner, as paradoxically as this can get. One such scenario occurred with the 2020 presidential elections, which Donald Trump, yet another one in a series of puppets for presidents, lost, but *de facto* won too, not because he barked and bragged all over the media of how he got robbed of the votes, but because his political philosophy where “money is the one true god”⁵¹⁹, in reality, won, with alleged liberals becoming stiff like hooks overnight and as shallow and materialistic as conservatives have been at their lowliest. Effectively, by countering Trump’s exhibitions of rowdiness, they have bitten the hook and fallen prey to the fisherman’s objective of rendering them conservative and corporatist in essence, thus shifting the whole political scene in America to the right. Meanwhile, like frogs cooking themselves alive, the liberals sang their liberal songs by the pond, convinced that they have won and not realizing that they have, in fact, lost and

that the whole American politics regressed decades in a matter of a couple of years. Another way by which these fake political duopolies keep society in a *status quo* and resist any fundamental change in its values and modes of functioning is by serving as moral cleansers, the role they fulfill by offering a pole seemingly diametrically opposite from the one that one supports to be blamed for its moral corruption, when in reality this is all but an illusion. One example coming from a different arena is that of for-profit universities, which are denounced by their nonprofit analogues as the nests of corporate greed that care only about the investor interests, but only to set these denouncers on higher moral grounds in their fancy, when in reality both for-profit and nonprofit educational institutions in America, from the least to the most prestigious, revolve around the financial interests of one type or another, with the acts committed out of true altruism and social awareness in them being measured by the teaspoon. A similar situation occurs in the realm of social politics, where Republicans are posed before the Democrats and Democrats before the Republicans as mutual targets of moral criticism, which make the critics feel morally cleansed, be it the form of the Democrats' being convinced that they support a humanitarian political stream or the Republicans' fighting back the evils of communism, albeit perpetuating their being blind to the fact that there is, in reality, a minor difference between the two parties, given that both can be perceived as ill outgrowths of cruel capitalism that sells the soul to the devil, obliterates most things good in people and sets them apart from one another, while spurring avarice and the frantic quest for material riches. And since unthinkably large financial interests exist behind the curtain of this puppet show, we can only imagine how resistant the holders of these interests would be to the introduction of a third legitimate party to this Demopublican duopoly. People familiar with sports marketing would tell us that there is nothing as profitable as global rivalries, from which clubs, sponsors, managers, tournament organizers, sports equipment sellers and producers and various other sports authorities directly benefit. In that sense, the immense degree to which the big powers in tennis undermined the popularity of the Serbian tennis player, Novak Đoković during the times of his sovereign reign at the tennis top of the world only because he disrupted the Roger-Rafa duopoly and the reserved attitude of the world's soccer powers toward the Croatian soccer player, Luka Modrić when he won *Ballon d'Or* in 2018, simply because he disrupted the notorious Messi-Ronaldo duopoly by becoming the first player other than these two to win the award of the best soccer player in the world in 12 years, bears resemblance to the resistance that the puppeteers behind the political scene in America have had with respect to introducing more than two major political parties into their game. Countless paradoxes where one of these political fractions takes on a stance that one would expect its adversary to support arise from this state of affairs, including the fact that the Democrats in power have started approximately twice more wars in the 20th Century than the Republicans, even though they are generally considered as more peacemaking and antiimperialist than the latter. As of the last two decades, this phenomenon has been intimately tied to the vanished legitimate far-left option for the voters in the wake of the Green Party's taking over the votes from Al Gore in 2000 and, thus, effectively winning the presidential elections for George W. Bush, the point as of which this party, according to many, became secretly supported by the far-right wings of the Republicans, as oddly as this can be. Therefore, by launching new wars or keeping the ongoing ones active, the Democrats know that they would not lose any of their far-left, pacifistic voters because they have no alternative option to vote for, whereas they would be gaining the support of the so-called swing voters, whose moderate ideologies make them partly aligned with both political parties and whose votes, when the difference in popular support is tight, usually decide the elections. And so the pendulum of politics swings from left to right and right to left, but its periodicity changes not and the effects it has on the society are just about the same,

regardless of who is factually in power. The fact this political duopoly never transitioned to a technical monopoly, as it has been happening in countless countries around the globe, including Serbia in the 2010s, and that anytime a presidential candidate from one of the two major political parties exceeded the 60 % margin in elections, as by Democrats in years 1936 (60.8%) and 1964 (61.0%) and by Republicans in years 1920 (60.3 %) and 1974 (60.7%), it was made sure that the public support for the candidate from this party drops in the first following elections may be enough to suggest that this polarization along the political axis is well planned and prefabricated. The artificiality of the fake political division between liberal democrats and conservative republicans can be further corroborated by noticing that, ironically, the republicans, with their intense loathing of anything governmental, should be more correctly described as democrats, whereas the democrats, who believe in the merits of strong government, should deserve the epithet of republicans. The preference of the democrats for the government interventions and for top-down regulation of economy and social affairs is usually thought to have begun with the New Deal enacted and implemented in the 1930s during the presidential terms of Franklin Roosevelt, helping the US cope with and overcome the Great Depression. This embracement of an interventionist economic policy, as proposed by John Maynard Keynes at the time, meant that the democrats distanced themselves from the principles of unregulated, free market economy, which would make its major comeback with the advent of economic neoliberalism in the late 1970s⁵²⁰. Since then, the fact that republicans, who ought to be loyal soldiers and patriots per their etymology, mistrust the government and liberals, who should be in theory supportive of the freeness of human being and thought from any centralized influence, embrace it is a paradox that speaks volumes about the arbitrary artificiality of the bipartisan political system in the US. On these etymologically twisted grounds, then, when it comes to the discussion over the legitimacy of abortion, it becomes obvious that the so-called pro-life philosophy should have been backed by those who believe in strong social government programs, that is, today's democrats, whereas republicans, who are supportive of a minimal governmental influence on the choices of the individual, be it with respect to death, that is, healthcare insurance, or taxes, should have backed the so-called pro-choice philosophy. And yet, this has become inversed by 180 ° in reality, providing us with one more reason to believe in the artificiality of the division to these two major political parties in America. On one hand, the socialist liberals today argue against the regressive taxing, the unfair income distribution, the lack of social benefits for the workers and other features of the capitalist social order adjusted to the premise that people are inherently selfish and greedy, whereas they oppose abortion on the basis of the same premise that human society has not evolved yet into an ideal state where proper care could be provided to the most critical populations of children born by women who wished to abort, wanting not to engage in the rearing of the child. Here, the socialist political philosophies that liberals advocate humanize people at the cost of diminished productivity, but so would the engagement in assimilating orphans into a humanitarian society humanize people at the cost of diminished productivity, and yet the liberals do not stretch their views far enough to see the fundamental discrepancy in their worldviews at work here. To put it bluntly, the fact that neither of the two major political parties attempt to align the philosophies describable with the mottos "you can do whatever the hell you want with your money (or guns)" and "you can do whatever the hell you want with your children" is paradoxical. More than anything, this speaks about the arbitrariness, the herd mentality and the philosophical illiteracies underlying the choices defended by the proponents of the two major political factions in the US. This stochastic artificiality of the

⁵²⁰ See Gary Gerstle's *The Rise and Fall of the Neoliberal Order: America and the World in the Free Market Era*, Oxford University Press, New York, NY (2022).

liberal *versus* conservative divide can be further iterated by the fact that liberals have traditionally associated with the Jewish community and culture while shunning Christianity, which gets to be embraced by their conservative counterparts, even though the former is a sexist, moralist and disciplinarian teaching brimming with superficial rules, anti-liberal in countless respects as per the original scriptures, whereas Christianity, at least in the form in which it was originally propounded by the Christ, is the synonym for the freeness of the spirit, the breaking of the formal rules, and the embracement of all life on Earth as holy. Yet another argument in support of this view comes from the oft-observed paradox that democrats are far more dogmatic and aggressive when it comes to defending their liberal political views than conservative republicans. In fact, the US may be the only country in the world where liberals treat the word “freedom” with aversion, simply because it has been excessively referred to by the conservatives. Seventy or so years ago, in the conservative post-World War II climate, it would take the House Un-American Activities Committee to blacklist renowned American playwrights and filmmakers, such as Charlie Chaplin, whereas the concept of democracy deteriorated so much in today’s America that Twitter mobs and “the chorus of condemnation based on a discredited accusation for fear of not being on the ‘right’ side of a major social movement”⁵²¹ are all that is needed to “cancel” a filmmaker such as Woody Allen, reminding us of the age-old fact that hordes of self-righteous individuals can any day achieve the same discriminatory, sentence-without-trial effect as the totalitarian rules that the alleged liberals have allegedly stood against do. When this intrinsic hypocrisy is supplemented with the pervasively erroneous mix-up of different logical types, as in the case where the conservatives’ opposition to political solutions proposed by the liberals is taken as an instance of neglect of those whom the given solutions are meant to help, one comes up with the reiteration of the statement offered by the Norwegian coquette flirting with her own image in the mirror in the metalogical homage to the spirit of mystery gliding down the streets of Paris: “Naught worse than the narrow spirit of liberals”⁵²². Of course, these tendencies of liberals to be quite illiberal in relation to stances differing from theirs and of conservatives to laugh the counterarguments out, albeit arrogantly as a rule, go against their core philosophies. More than one elderly denizen of Berkeley I have known, whom I asked to describe a single key difference between Berkeley of the 1960s and Berkeley of the 21st Century, told me that whereas people fifty years ago were open to any opinions and expressions different from theirs, accepting them in a heartbeat, people today are quick to judge and denounce views and acts that differ from those that they have assumed to be fair and correct. Quite disastrously, with this dogmatic censorship imposed by these so-called liberals, they have given the right to a whole generation of unscrupulous capitalistic exploiters and supremacists to defend freedom of speech as a constitutional right, righteously as it were, even though these people on the right should have the least right to utilize the word “freedom” in their speech. With their hypocrisies, they now serve as a living proof for Pierre Bourdieu’s truism that the neoliberal thought will return to its conservative point of origins by proceeding along the line of alleged progressiveness and that, deep down, “the emergence of neoliberalism as a conservative revolution and historical restoration”, with the post-1990 conservatives being “the protagonists of human rights and liberties and of global democracy”⁵²³. Alas, as ever, when dogmatism enters the

⁵²³ See Ljubiša Mitrović’s Bourdieu’s Criticism of the Neoliberal Philosophy of Development, the Myth of Mondialization of the New Europe (An Appeal for the Renewal of Critical Sociology), *Facta Universitatis* 4, 37 – 49 (2005).

game in place of tolerance and the freedom fighters become greater suppressants of freedoms than those who have traditionally suppressed them, only the effects opposite of the intended can be given rise to: if comradeship is dreamt of, the result will be hatred and animosity; if beauty wishes to be seen in the world, terror will pop up its ugly head; if equality is idealized, only ever greater inequalities will install themselves in its place; and so on. This irony of having liberals engage in moral censorships and reprimands of other people's opinions, knocking down the concept of the free speech thereby, far more than the conservatives do can have a number of similar paradoxes added thereto and one of them is the recent swap of the stances taken with respect to the benefits or downsides of technologies. Namely, while in the hippie era, it was fashionable among the liberals to reject technologies on the basis of their somewhat detrimental effects on the human psyche, things have changed as of the turn of the 21st Century and except in rare anarchistic communes, liberals have become the unquestionable embracers of technologies and conservatives their criticizers⁵²⁴. Likewise, while it was fashionable among the hippies and the hyperliberals of the 20th Century to denounce schools as the sites of propagation of the ills of social conformism and the dampening of children's innate creativities, liberals of the 21st Century have become the society's greatest protégés of schooling and the conservatives the society's greatest condemners of schools and higher education in general, perceiving it as a perpetuator of "inflated student loan debt" and completely unnecessary in the lifetime of a skilled individual⁵²⁵. In fact, if we were to travel a little less than two centuries back in time, we would quickly learn that the original goals of both the Democratic and the Republican parties were diametrically opposite from their current objectives. Correspondingly, while the Democratic party initially opposed the national taxes and supported limited government and state sovereignty, the Republican party, whose first president was none other but Abe Lincoln, sprang to life with the goal to resist the expansion of slavery into northern states, with the anti-slavery Whig Party meeting held in Wisconsin on March 20, 1854 usually cited as the day when the Republican party was founded. In contrast, the Democratic party was founded in the late 1820s by the supporters of Andrew Jackson, the 7th President of the United States, the owner of 161 slaves and the strong proponent of the expulsion of native Americans from their ancestral lands^{526,527}. After the Civil War, the Democratic party maintained its strongest foothold nowhere else but in the deep South, wherefrom it continued to advocate inequality and resist federal the measures protecting the civil rights of African-Americans and other minorities, prompting many, including myself, to wonder to this day if slaveholders founded democracy in America, what other form of it can be expected but the one that this country implements on its grounds today, where people are enslaved by supermarket chains instead of real chains, where masters continue to manipulate their servants for personal benefits, where emotional sincerities drown in the epidemic of forced but sinisterly vacuous smiles, and where freedoms, in the real sense of the word, are second to none? This and many other swaps of viewpoints between liberals and conservatives in America can be supplemented by the frequent transfers of politicians between these two squads, one day playing to the conservative drum and another to the liberal or *vice versa*,

all of which illustrates and somewhat trivializes the artificiality and arbitrariness of this fake political division. In support of this artificiality, one may wonder how to explain the evolution of red color from the one coloring the front door of the tract home of the Fullerton College math teacher, Joel Dvorman and being used as a key evidence of his communist leanings by the conservative mob of Orange County in 1960⁵²⁸ to the color that is as of the 2000 presidential election used as the signature color of the Republican party, if not to soften the differences between it and its adversarial Democratic party - which used to be denoted in red until 2000⁵²⁹ – and show that this country as but one great duopolistic construct. Moreover, once we realize that Democrats owe their socioeconomic stronghold and political influence to the existence of the Republicans, without whom their public support would crumble like a castle made of sand, and the other way around, we could become aware that, logically, it is in the interest of both parties and the corporate bloodsuckers gathered around them to maintain *status quo* and carefully prevent one side from becoming too strong and eclipsing the other. Yet, only occasionally does one come across those brave souls prepared to stand in-between the two diametrically opposed armies, like Arjuna and Lord Krishna in the epic of Bhagavad-Gita did, with Fiorello LaGuardia, who won the elections for the mayor of New York City by running on both republican and socialist tickets and who “stalked the front rows and bellowed for real action as Democrats and Republicans lumbered like rehearsed wrestlers in the center of the political ring”⁵³⁰, being a notable example from the American political arena, because their fate is such that they are most often perceived as enemies and traitors by both of the belligerent sides and will have a difficult task avoiding the poisonous arrows that will fly towards them from all angles. Of course, as is the case with many other cultural dichotomies in America, inflated to the point where they passed beyond the limits of sensibility and became nothing but irrational illusions, from aloof hipsters vs. cocky mainstreamers to tree-hugging NoCal vs. shallow SoCal mentalities, the same is with the division between ostensibly liberal democrats and conservative republicans, continuously deepening over the past few decades⁵³¹ and serving largely the purpose of engaging common minds into blaming the other side for any adversities around them and losing out of sight the hidden financial threads that move the puppets of public personas from the hierarchical tops of it all and use this artificial division to conquer the freedom of ordinary people, diminish the power of the middle class and expand the notorious gap between the rich and the poor that free market economies naturally lead to, the gap that, we know, critically threatens the peace, prosperity and sustainability of our planet as a whole⁵³². In fact, from the image of God emanating from the Old Testament, having turned man against Nature by expulsing him from the garden of Eden and predestining him to “eat bread in the sweat of thy face” (Genesis 3:19) and “till the ground from whence he was taken” (Genesis

3:23) in order to be seen as the principal power of all things that abide in this universe, to systems of castes created by the colonialists to ensure the stability of their governances to these bipartisan political systems that serve the role of merely veiling the powers that truly navigate the society by supplying people with an illusion that the other side is always to be blamed for all the adversities and thus making them prone to watch the world from quite a linear and in-plane angle, without ever raising their glances upwards and glimpsing the suns around which it all revolves, the “divide and conquer” strategy for ruling social systems has been with us since the dawn of the human race. “We should be satisfied if we succeed in keeping the so far passive majority of the Serbian peasantry in its lethargic state... necessary is also the setting of a normal state in Croatia because if Zagreb begins to be inclined to Belgrade instead of acting as its counterbalance, the danger will be imminent”⁵³³, are the ending words of a letter of a former Governor of Bosnia and Herzegovina to an Austro-Hungarian minister that preceded the assassination of Archduke Franz Ferdinand and the onset of World War I, exemplifying the perpetual policy of the Western world powers to balkanize the Slavs of the Balkan Peninsula, entice them to see each other as roots of their adversities and thus conceal the neocolonial clutches that hang over their heads out of sight. A hundred years later and this *divide et impera* strategy whereby an array of smokescreens in the form of local partitions is raised so as to hide the imperialistic intentions of those standing behind it is as alive as ever in the strivings of the insatiable world leaders to spread their influence across the globe. “When you see two fishes arguing at the bottom of the ocean, know that a Brit is somewhere near”, the neocolonial Indian joke goes and, indeed, regardless of where persistent divisions along with the ensuing quarrels and commotions occur in the social domain, they always open the door to a hegemonic manipulation of the masses and to tipping of the social equilibria in directions that would benefit the powers that be. Having mentioned this rather malicious management principle that can be considered as old as human strivings to come into possession of power over another, some may also notice that by imposing bogus values through advertisement and media, a gap is formed between genuine feelings and psychological incentives of individuals and those that they ascribe to social norms and standards, producing a disoriented and inhomogeneous social milieu easy to be controlled by financial magnates and other capitalist powers⁵³⁴. Yet, realizing that substitution of one of the confronted poles with its antipode will lead

⁵³³ See Šta piše o ratu u Počorekovom pismu, B92 News (January 6, 2014), retrieved from http://www.b92.net/kultura/vesti.php?nav_category=1087&yyyy=2014&mm=01&dd=06&nav_id=797013.

⁵³⁴ The thought of an anonymous online commentator ought to be mentioned as a complementary one to the given thread: “Conspiracy theories manage to live in the world only because it is much easier to assume that the evil side has a plan. In fact, the truth is much harder to accept, and it is that there is no one steering the wheel”, adding a “Drive, Miško”, the quote from one of the most famous Serbian movies, *Who’s That Singing Over There*, exclaimed during the scene in which Miško drives a passenger bus blindfolded. Retrieved from comments on Nebojša Katić’s economic analysis available at http://www.b92.net/biz/komentari.php?nav_id=559968 (November 23, 2011). The coach of contemporary civilization indulged in the tenets of capitalism, wherein the interstellar tourists on Earth, as we are, are being ridden thus resembles the cab portrayed in the video clip for Radiohead’s *Karma Police*, chasing an outlaw and then falling back onto its bad karma and the blades of “greed is good” ideology that it imposed onto others, setting itself on fire as the video comes to an end. What the metaphor of driverless car suggests is that the roots of almost all social adversities can be found lying on the foundations of human reasoning, in the domain of human values and deepest beliefs that imperceptibly guide our actions. Therefore, as pointed out by CrimethInc. Workers’ Collective in their book *Work*, each social system “is a sort of Ouija board on which the self-interested actions of competing individuals add up to collective disempowerment”. The possibility of subjection of these inherent values that in synergy steer the ship of our society to change is in direction proportion with their invisibility and ineffability. For, impalpable as they are, they are predestined to remain the subject of human faith, doubtful, shaky and incommunicable at large. After all, all of us should know that suspicion in the benevolence of intentions of people around us gives rise to cynicism, a corrosive disease that attacks the honestly empathic hearts of ours from the surface of daily impressions

only to a superficial change typically entails the rise of awareness that the deepest soil of the human minds ought to be watered with divine values in order to produce pervasive social amendments. The profound and lasting social change thus always starts from the foundations of the social order, something that ordinary human attention hardly ever penetrates in its trying to offer constructive social critique. And whenever these and innumerable other dichotomies that stem from accusatory hotheaded mindsets are traced to their roots, they may be seen merging with their presupposed diametrical opposites. For, deep down, at the level of their foundations, these antipodes quite often turn out to be one and the same, and only upon emerging on the surface do they begin to differ and distance from each other, inducing illusory hatreds and formation of gaps that the true rulers of the social order, having transcended this false division, use to keep the world tamed and conquered for their money-oriented benefit. Hope, in the end, remains that the light of a fairer social order will make it through the cracks of its corrupt current version and illuminate the humbled and humiliated surfs scattered across its underground pavements just the way the gap between conservative and modern American painters in the 1930s, “as miniscule and incomprehensible as the differences between Republicans and Democrats appeared in Europe”⁵³⁵, was surmounted by the entrance of the advance-guard European artists to the stage, mostly as escapees from the pending war. Their progressive influence rooted in the abstract art, which was million miles ahead of the realistic art that was all rage in America at the time, pushed the conservatives to oblivion for good and revitalized the modernists, helping America become the world capital of painting, which neither it had ever dreamt of becoming nor the world had ever considered it a possibility. As a European wishing to provide one such critical influence that may change the course of this grand boat called America and redirect it toward open seas swaying with stimuli more inspirational for the soul than today, I have found this parallel a dear drive to type these words with a frantic zeal, even when my head is dropping and limbs are stiff due to symptomatic tiredness and overwork. Be that as it may, this tangential reference to partisanship and revolutions prompts me to recollect the night before October 5, 2000 when the governing party, altogether with its infamous leader, was finally overthrown on yet another day of massive demonstrations held in downtown Belgrade in a seemingly endless array thereof. I was riding my purple bike with broken brakes back home and felt gliding through the air, so fresh, windless and unusually clear, with no gusts of wind or distant sounds disrupting the peaceful radiance of the night sky. About a hundred yards from home, right next to the Depeche Mode graffiti that stood intact ever since I remember, I slowed down and then brought my bike to a halt. I looked up and there they were: hundreds of stars swirling and twinkling with mysterious sympathy, an image that will be impressed in my head for a long, long time. Little could I know then that at the same time on the following day I

and expressions and quite often ends up poisoning the entire human hearts after years or decades of reliance onto in our ideas and thoughts. All in all, if in our Kafkaesque yearnings to discover the brain behind the wheels in the castle of humanity, we were granted the wish to enter the room which we may have dreamt of as being filled with extraterrestrially clever operators, each one of which would resemble the Tibetan astrologers of which I heard once, astrologers who proved their mastery by pulling the cards with their visitors’ names and signs and the entire past and future before they even met them, having them stored in their databases for a long, long time, we would be surprised to find this central processing unit of this castle empty, or at best filled with creatures that are, like the mainstreamers of humankind, too busy indulging in self-loving stances to pay detailed attention to anyone else. This is when the tickly sense of mystery in us will be dissolved in the sea of reality and we may freely fall back onto the ancient words of wisdom once and for all, “Ye are gods”, and begin to conceive all our future actions based on them, knowing that there are no profound eyes, save those of transcendent gods, watching us with “cameras and satellites from the sky”, as Bristol wizards known by the name of Massive Attack saw it in the finale of their monumental record *Blue Lines*.⁵³⁵ See Alan Gowans’ *The Restless Art: A History of Painters and Painting, 1760 – 1960*, J. B. Lippincott Company, Philadelphia, PA (1966), pp. 390.

would intercept people in the street triumphantly carrying red sofas stolen from the parliament and rub my eyes, disbelieving that the regime I could only dream of departing a day earlier would be indeed gone for good. Now, whenever I think of this symbolic moment, I become reminded of how many of us who were left standing like orphans of the modern age, alone amidst stars, wonders and eternal beauties of the Universe, an eye to which then began to sprout in many of us, rejected by both the foreign members of humankind, overly naïve and painting it all in black-and-white, and those dwelling in the native places which have traditionally recognized no prophets that spoke their own language (Luke 4:24), holding mute harps like the Israeli refugees on the Babylonian soil (Psalm 137:1-4) in front of the former and being dressed like beggars, like Odysseus upon his arrival to Ithaca, the kingdom he had built, after the long journey home, in front of the latter, lost the world but gained the soul (Mark 8:36), so to speak. They had roads to blissful new ways of being, away from the materialistic and hedonistic abysses in which many of the newborns of prosperous societies have fallen and into appreciation of the spiritual and the aesthetic opened before their feet, as if ready to run towards the graceful cliffs that overlook the endless seascapes of divine beauties that overflow the world and soar into the skies of untainted artistic imagination, with the angelic wings to carry their spirit over the sea and onto the other side, where a celestially extraterrestrial, untouchably progressive, enlightened SF mindset would become installed for good in their body and soul.

S.F.1.31. “Fly the middle course”, Daedalus said to his son, Icarus, as he took off from a cliff using feathered wings so as to escape the clutches of King Minos. But Icarus, who was supposed to fly right between the sea spray and the Sun’s heat, felt increasingly wonderful, light and warm, as he ascended higher and higher, ever closer to the Sun. The Sun’s warmth, however, melted the wax off his wings and he tumbled to the sea. We should be sure that the same faith awaits us whenever we deviate from the middle Ways in whatever we do in life. Or, as pointed out by Plato, “If we disregard due proportion by giving anything what is too much for it; too much canvas to a boat, too much nutriment to a body, too much authority to a soul, the consequence is always shipwreck”. Life on Earth, after all, flourishes because we are neither too close nor too far from the Sun, something we could readily realize if we look closely at our nearest planetary neighbors, the second and the fourth rocks from the Sun, respectively: the volcanic hell called Venus and the dry and lifeless desert called Mars. Likewise, resting on the middle ground between the guiding lights of the constellations of our inner world and the sunshine of a sense of empathic oneness with the surrounding souls is necessary to avoid the repeatable wrecks of the ship of our spirit. Too much of listening to the sound of our spirit and too little of living so as to beautify the world around us, or *vice versa*, means an inevitable plummeting of the ecstatic and creative bird-flight of our being. In fact, all the precepts of all the traditions of wise reasoning that this planet has given rise to have been based on balancing many things at once. However, an ultimate realization may be seeing how balances and imbalances too ought to be well balanced in an optimal evolution of human beings and the world. Then I get reminded of a Zen story in which a factory owner, puzzled by his inability to reach a perfect balance between the workers’ satisfaction and productivity, pays a visit to a sage to ask him for an advice⁵³⁶. “If I punish them heavily for all the mistakes made and keep them under a strict pressure, they work well but are dissatisfied. But if I let them work as much as they want to, they like it, but work too little”. Instead of handing him a straight answer, the sage said: “Let’s go fishing”. So they headed over to the riverbank and threw the line with baits on top of it into the water. Once a fish caught the bait, the sage advised: “Now pull with all your strength”.

⁵³⁶ See Robert Van de Weyer’s *The Wandering Sage*, O Books, Winchester, UK (2004), pp. 59.

The owner did so, but the rod broke. He casted the bait again, and a fish took it. “Pull the line as lightly as you can now”, the sage advised, but the fish easily escaped. The owner threw the third bait in the water, and the sage said this time: “Now pull upward with the same force with which the fish pulls downward”. The rod did not break, the fish got exhausted after a while, and the owner easily pulled it out. The sage, of course, asked the sage to gently take the fish off the bait and release it back into the water. Likewise, an archer, perhaps remembering Ramayana from the famous Indian epic and how his bowing Shiva’s bow that no one bowed before too much, up to the fracture point, led to his banishment in the forest, knows that straining the bow neither too much nor too little is the way to reach mastery in the art of archery. A samurai knows that his sword is to be held like a bird, neither too tightly lest it suffocate nor too lightly lest it fly away. Skillful fencers and musicians would agree with this principle, as they, themselves, have known that holding their instruments either too tightly or too lightly causes inefficiency and damage to their art. For, flexibility and firmness have to be balanced in everything we do. In another Zen story I fancy, an acclaimed gardener showed his work, a perfectly tidy garden, to a sage. As a response, the sage grabbed a can filled with leaves and flipped it over, so that the leaves scattered all over the immaculately trimmed garden soil. “Now it is perfect”, mumbled the sage. The gardener laughed, having understood the message. And that “indecision is more natural than precision”⁵³⁷ as well as that “designs full of mystery, dissimilar shapes and surprises that resist uniformity”⁵³⁸ ought to enthusiastically embraced by the new breed of gardeners was a concordant opinion of the 18th Century connoisseur of gardens, Claude-Henri Watelet, which secretly reaffirms our faith in the need for weed and wheat to grow side by side in every harmoniously developing system in Nature. This brings to mind my own spacing out and standing still on a Belgrade street while watching in wonder a garbage bin overflowing with trash, finding beauty in it after spending too much time on the sterilely clean and lackluster streets of another European capital. On a side note, as I recapture on the screen of my memory this moment of standing before a disheveled pile of trash and watching it in awe, I call to mind John Roberts’ deeming that “every time we pass a rubbish dump (or for that matter a graffitied underpass) or every time the kitchen bin is full to overflowing we experience a moment of critical insight into the law of value”⁵³⁹, realizing in the blink of an eye that just like negations of images and assertions in life can be looked at to appraise the merits of their very opposites, so could we use dumpsters and all the things dispose of in them as invaluable objects of reflection on the values that underlie the mass machinery and the states of mind that create their utilized counterparts. Namely, so long trash is regarded as trash rather than a source of immaculate treasures – for “what counts as trash depends on who’s counting”⁵⁴⁰, as Susan Strasser pointed out in defense of dumpster divers and gleaners whose hobby is to dig through the piles of trash in search of sources for practical or artistic creation⁵⁴¹ and thus rehabilitate rubbish in a romantically lifesaving manner – we could be sure that the aesthetic richness of the mainstream culture that we are immersed in is rather modest and that the common eyes that see the world are far from being enlightened enough to recognize paradisiacal beauties and pools where angels and wraithlike mermaids dive in the most ordinary

of its details. But when we realize that finding meaning and beauty in all things thrashed by the society stands for the first step toward enlightenment, as in accordance with the following words inscribed by Doris on the pages of her diary, the view of life seen through our eyes would instantly gain angelical colors and shades: “We got everything we needed from what the rest of the world threw away. Including eachother. we were throw outs. we found eachother in the trash”⁵⁴². After all, if the Earth itself was “molded from the gas and dust of dead stars”⁵⁴³, from piles of cosmic debris and matter discarded by the most prominent and glamorous of astral bodies, a.k.a. stars, then every authentically terrestrial human creation must form from a bunch of garbage, a category into which this book and my scientific papers that I have been most proud of unequivocally fall. For, in science it is easy to create a magnificent work out of excellent data, but turning the data that most scientists would toss in the trashcan into a work that illuminates the reader takes a genius, I have always held. My and my lab’s seminal work on a nanoparticle that mimics the stratified structure of the Earth⁵⁴⁴ falls in that category, being a rare work that had the student who performed most synthesis and characterization experiments for it decline to be involved as an author of the study because he deemed the project to have failed. But there are countless enlightening points that entail the crafting of a paper that trembles and shakes on the basis of data point columns that are not solid, but fragile and faint, like Jeff Buckley’s love, destined to “feel unsteady”⁵⁴⁵, or shyly bold, extrovertly introvert dancers in Grimes’ video for Vanessa⁵⁴⁶, or Warren McCulloch’s vision of life as a whole that projects a stable and certain appearance in spite of being composed of inherently unstable and uncertain components and relationships⁵⁴⁷. One of them is the implicit refutation of the obnoxious idea that good data only make up the paper, when, in fact, informative and inspirational papers can be written with mediocre data too. Conceptually, such papers are far more significant, especially in the heart of a punk who firmly believes that technique is secondary to emotion, as they implicitly instruct one that magic is creatable and mountain movable with little or no resources, opposing the materialistic points of view disseminated by papers that associate quality with high-quality data only, typically producible strictly using expensive equipment and sophisticated workforce that is the privilege of but a few. In fact, I am certain that if the world came to a sudden standstill and all the research centers in it got closed, providing imaginative brains with an access to all the billions of pieces of data that sit locked in long-forgotten computer files and dusty drawers would be enough for them to arrive at phenomenal discoveries worth a whole century of Nobel prizes. Besides, when the second and the longest reigning world chess champion, Emanuel Lasker notices that “in a city well supplied with water I should feel very little interest in an effort to discover an Artesian spring; in the desert such a search would captivate all my attention”⁵⁴⁸, it is a strident reminder that shortages of resources and poverties of all kinds are to be blessed, not cried over, because within their broken hearts they open the roads toward the dearest and the most valuable treasures imaginable. Rejoicing in the aesthetics of the trashcan, I was also prompted to dream of the times when everyone would be encouraged to make one’s own street pieces of art on one’s way to home or work, to disrupt the overly ordered and planned urban landscapes on regular bases and startle people out of their daily routines thereby, while increasing

their awareness of the wonderful little details that surround them. A fine entwining of symmetry and asymmetry, order and chaos, is, after all, engrained in all artistic masterpieces. Hence, when the famous car designer, Giorgio Giugiaro, attended a Geneva Motor show in the 1970s, and was shown a new model of Triumph, he looked at the car's profile for a while, walked to the other side of the car and noticed: "Oh no. They've done the same thing on this side as well"⁵⁴⁹. Or, when Eliel Saarinen designed the First Christian Church in the modernist architectonic cloud nine that Columbus, IN aspired to become once, he not only shifted the central cross painted over the glass-fronted face of the rectangular main hall to one side, but he also introduced asymmetries into various details of the interior design, such as by placing the pulpit and the middle aisle of the nave slightly off-center and making the western side of the aisle wider than the eastern, in order to emphasize that adding a flaw to an otherwise perfectly organized and symmetric system is a precondition for infusing the latter with the holy spirit. Yet another one of my favorite examples touches the so-called "theory of ruin value", a.k.a. *Die Ruinenwerttheorie*, propagated by Albert Speer who favored the use of stone, wood and marble over concrete, plastic and steel, especially because the former could weather, crumble and ruin well, producing over time a moving beauty that contrasts the architectural sterility of structures made of the latter⁵⁵⁰. For example, most of the freshly made terracotta panels and reliefs from the antique would look relatively kitschy based on today's standards and they owe their artistic appeal in the current forms largely to the loss of color and to the wearing of the clay over centuries; likewise, buildings made of ceramic bricks or stone become more beautiful, like wine, as they grow old, unlike the structures made of plastic or steel, which age in a nowhere as aesthetically pleasing of the manner. This may explain why Frank Lloyd Wright reportedly denounced concrete as an utterly unaesthetic building material, which has "neither song nor story", amounting to "an artificial stone at best, or a petrified sand heap at worst"⁵⁵¹. And since from the grounds paved by the basic propositions of the co-creational thesis a stem of wondrous thought springs high in the air, telling us not only that what we see we are, but that epithets that we endow Nature and her creatures with by means of our creative actions determine what we will become too, it makes a lot of sense to argue that insisting on the usage of metals, concrete and plastics as the basic building materials will predispose these insisters to become equally rigid, creepy⁵⁵² and plastic as these very material structures whose usage they try to impose on the world are. "Not for nothing does the slightly drunk uncle advise the Graduate, in the American film of that name, to 'get into plastics'"⁵⁵³, the Princeton University professor of comparative literature, David Bellos points out, instigating us to respond to all the similar invitations to enter the grownup world of sterilely ordered preconceptions and creations by riotously waving a cross, the epitome of devastatingly simple symmetry, in face of the stiff proponents of the former, somewhat like Benjamin Braddock played by Dustin Hoffman did in

⁵⁴⁹ See Alan Fletcher's *The Art of Looking Sideways*, Phaidon, London, UK (2001), pp.244. This witty observation by Giorgio Giugiaro can also prompt us to think how more inspiring and friendly life would be if the new cars were not designed to look so sharp, scornful and arrogant. Why in the world would the car industry ever want to narrow the sympathetic roundness of headlights, the cars' eyes, such as that present in old Fiat, Volkswagen and even Yugo models, and adopt the "narrow-eyed" style instead, implemented in practically every new car today, sometimes I ask myself, trying hard at those moments to hold on to beliefs that the world does indeed stream towards more enlightened states of being, and not moral abysses and existential destruction.

the dark and ominous movie that appeared as if it jumped off the rushing train of the hippie revolution on its journey to SF during the Summer of Love, all so as to return the world to the flourishing state of balance between pedantic orderliness and fanciful disarray. After all, evolution of the order of the Universe inevitably feeds on entropies in it. Consequently, the interplay between order and disorder is where the progress of the world lies. Where intermingling of chaos and determination to shine light and give rise to whole new worlds thereby takes place is where true stars are born. No wonder that the Japanese art of Ikebana, that is, of spatially arranging primarily flowers and then all other things around us, emphasizes the necessity of balancing symmetry and asymmetry, order and chaos. If you ever watched an artist performing this art, you could have seen movements directed to organize and disorganize neatly balanced. Similarly, all that we do in life ought to ideally exhibit harmoniously synchronized moments of (a) destabilizing things by acting in accord with chaotic and irrational impulses arising in us, and (b) driving things towards ever more fascinating levels of order and stability in this grand evolutionary tale that we call life. For, if the systemic views of biological entities can tell us something, it is that the more complex, sensitive and organized the living systems become, the more room for randomness and disorder is there to be incorporated into them, and *vice versa*.

S.F.1.32. So, discipline, rigor and order on one side and looseness, flexibility and freedoms on another ought to be neatly balanced in anything we do. Nature knows this very well, which is why She sets the conditions for our evolution not based on absolute freedoms, but on providing narrow labyrinths and pathways, the finding and walking along which is always a challenging business. Hence, whenever you find yourself pressed with too many external requirements, obligations and necessities, feeling as if infinite skies under which you stood all in awe have started to shrink and leave but a claustrophobic chamber for you to roam in, do not despair. After all, you should know that there is no greater potential for progressing than when we are in the position of an opposition. Many political leaders are aware of this fact and sometimes consciously choose to remain in the political shadow of the actual regimes, so as to be able to more intensively foster their reputation in the society. A strong psychological sprout that makes disciples keep their glances at the summits of their careers, implicitly telling them that the best is yet to come, and masters being tempted to look down where the descending slopes are lurks underneath this phenomenon. Hence, whenever we have the chance to become a king, we should deeply think about the consequences. For, “he has brought down rulers from their thrones but has lifted up the humble” (Luke 1:52), as it stands written in the Bible, as well as that “my kingdom is not of this world... we ought to obey God rather than men... for we wrestle not against flesh and blood, but against principalities, against powers, against the rulers of the darkness of this world, against spiritual wickedness in high places” (John 18:36... Acts 5:29... Ephesians 6:12). Therefore, whenever we have no other option than to be a faithful servant, we should not despair about it. Instead, we should be aware that we often have the chance to more intensively build ourselves from the inside under these circumstances, especially if our aim is to eventually challenge the given authorities. Hence, it may be no accident that Lucifer, the most powerful of all the satanic spirits, whom Dante depicted as God’s diametrical opposite in the Divine Comedy, had once been a God’s servant, an angel. If this tells us something universally constructive, it is that deliberate concession of external power can be a great means for crafting our internal powers to otherwise unthinkable proportions. Contrarily, once we become in command of others, we naturally become obsessed with the actions of others, frequently forgetting about the necessity of contemplating about our own acts and improving the foundations of our own being. In contrast, when we have orders imposed on us, we are in need of tending about our own

conduct. Although these obligations may sometimes seem unbearably overwhelming, they usually leave just about enough space for the creative evolution of ours to spread its wings from the inside. As Ernst von Glasersfeld pointed out, “The art of cybernetics lies in exhibiting creativity in frame of imposed limitations”. These limitations are sometimes so heavily strict as to enable us to engage in a plain bob ride only, but more often they leave enough room for the creativity of ours to flourish across its countless facets.

S.F.1.33. Dialectics as the method for outlining progressive pathways in life is apparently conditioned by the fact that imperfections are inherent to everything. Every claim and opinion we exert carries a sprout of imperfection in it. Even if it presents a perfectly ameliorating choice at the present moment, the passage of time will inevitably turn it into something outdated. Hence, we should not be pitiful when we realize how the products of our creativity that once appeared so immaculate and majestic are getting increasingly marked as uninteresting. After all, realizing that every sparkle of our thoughts that makes us shiver with excitement because of the novelty and progressiveness we recognize in it will one day be regarded as rusty and obsolete by generations to come should not make us depressed because of our occupying a place in space and time distant from the advanced future we may envisage, but spur us to conceive and instill in us ever more of the inconceivably progressive future traits. Nevertheless, if we believe in the dialectic grounds underneath every evolving pathway in life, we should not hesitate to confront the opinions of others with their opposites and, likewise, avoid accepting the opposition to our own opinions with egotistic fury. If you look at me, you will realize that sometimes I attack opinions I could have passionately embraced moments ago. In an interview to a Yugoslavian journalist on the Greek island of Hydra back in 1984, Leonard Cohen noted the following: “I rarely give interviews, or I give them only when I cannot avoid them, because why talking? I express myself best through my poems, and everything else is the waste of time. I often change attitudes and opinions. What I say today does not mean that I will mean it tomorrow. Only fools always think the same way and call it an attitude. Whoever has a life behind one and whoever lived it in the real sense of the word is insecure and doubts everything”⁵⁵⁴. If one were to substitute “poems” in this quote with “writings”, albeit invariably poetical in their nature, one would come across a neat reflection of my sentiment toward verbal discussions, too. Thus, you may hear me shedding scathing critiques of opinions I aired as my own second, minutes or days ago. Equally, I could defend stances that could have been fiercely attacked by me just a while ago. Sometimes I go as far as to express my fondness and dislike of certain things in life in a single sentence, somewhat like Tom Wayman answering the question Did I Miss Anything in his memorable poem with alternate Nothing and Everything⁵⁵⁵, knowing that all things are rooted in a Yes and a No, as the German Christian mystic, Jacob Boehme would have put it, i.e., that everything in Nature is a logically fuzzy answer (i.e., between Yes and No) to questions posed by our spirit at each moment of our existence, and that neither perfectly beneficial and satisfying deeds and situations nor ultimately malign and destructive ones exist in life. However, as such comments are good for bringing an end to argumentation, that is, blocking the prospects of further discussion by pitching in an insolvable paradox, I normally stick to one of the confronting sides (typically the weaker, underdog one), and cunningly mask my actual neutrality. For, I know that a fruitful battle between theses and antitheses is what opens the way for grand syntheses and the dawns of new knowledge, of new suns of understanding. Unattached

to any judgments, we should stand on top of these dialectic battles, laugh at them, and yet play their game, knowing it serves everyone's benefit. And having read the story of Bhagavad-Gita, we should know that Lord Krishna would, of course, be proud of this choice of ours. Now, these imperfections inherent to everything imply that we should always be able to find a gap in anyone's opinion or method. Every beautiful saying carries imperfections when viewed from a specific angle. For example, when Suzanna told me how Balzac had said that "the more you judge, the less you love", I immediately replied how he had undoubtedly pointed at something beautiful. For, it is true that if we find ourselves at a party staring at people while piercingly judging them, desiring to find imperfections in them, we would be far from awakening the lively landscapes of sunny love in our heart. Jeffrey Schwartz and Henry Stapp, whom I hosted at UCSF in May 2009, clearly pointed out during their lecture that centers in the brain that lighten up upon emotional arousal do that more intensively when no task of judging has been given to the subjects⁵⁵⁶. Hence, if we desire to let the love from our heart shine forth, we should close the door to our attitude of peeking at the world from an ambush and censoring it, and let the luster of our being be released with all the juvenile imperfections that necessarily follow. But, I know that conforming and differing have to be balanced all of the time. In view of that, the dialectical I could not resist pointing at an imperfection hidden in this saying. For, I know that we need to confront opinions of people around us, even of those that we love most in life, lest we occasionally leave them in blind ignorance and make ourselves, too, be carried away by the streams of their thought, via a lame and phony attitude of ours that is accepting all, conforming to all and nodding our head to everything being said. Every truly friendly and loving personality is thus a master of the art of balancing empathic unisons of worldviews and sending forth opposing armies of arguments. The real friend is thus an enemy in part as well. For, one needs to distance oneself from the most adored and loved persons in life in order to give them space to breathe and develop individually. Love is not only about staring at each other. It is as much about releasing oneself to the distance, away from the beings one loves, while keeping them firmly anchored to the seafloor of one's heart, knowing that "stars are beautiful because of a rose one cannot see"⁵⁵⁷, as the Little Prince delightfully observed. So, I stressed out that Balzac's saying might be valid, but only for a brief instance of time. For, love without judging would not be possible. Reason and compassion always have to walk hand-in-hand. After all, our coordination in this world is based on millions of tiny little judgments carried out every second of our lives. It is a good, positive judgment that opens the door for expressing our love, just as the waves of love and empathy streaming within us are those that guide the ships of our knowledge to the banks of proper judgment. Love and reason form a closed loop; by looking at it, one is not able to say whether it is love that is the foundation of a brilliant intelligence or the other way around. As in every closed loop, one is prevented from following the causal links to their prime cause. However, by offering one such opinion, I never close the door to the overall argumentation, but in fact, open it. For, the only fruitful answers are those that shine a light on the questions posed, glorify them and then lead the way to even greater questions. While genuine lack of sensibility is practically always ensued by expressions that implicitly demand other people's approval thereof and obedience thereto, dogmatically fortifying one's own rigid stances, its opposites entail an openness to selflessly and flexibly subject one's intellectual positions to scrutiny and engage in dialogues with readiness to undergo tumbling upside-down and inside-out in the blink of an eye.

⁵⁵⁶ See the video lecture by Jeffrey Schwartz and Henry Stapp held at University of California, San Francisco in May 2009 within the Practice of Science series organized by myself on behalf of the UCSF Postdoctoral Scholars Association; <http://saa49.ucsf.edu/psa>.

⁵⁵⁷ See Antoine de Saint-Exupery's *The Little Prince*, Mladost, Zagreb, Croatia (1943).

Thus, by learning how to face confrontations with a sunny smiley mindset, we have a chance to avoid becoming egotistic maniacs who only look for conformations of their own opinions in others. Instead, we thus learn how to be a selfless sun of spirit, the one who travels between the extremes of being different, confronting others in one's uniqueness and yet being the same in oneness of empathy, respect and compassion, while never becoming dependent on praises and recognitions from others. It is in moving back and forth between these two extremes that the most beautiful music in life is made.

S.F.1.34. Whenever we find ourselves remaining in a state of perfect balance and harmony for too long, we would realize that one such state, if preserved long enough, becomes an imbalanced and disharmonious state. We need to constantly shift between balance and imbalance in order to propel ourselves and the world along the course of their parallel evolution. However, it is undisputedly difficult to make a decision about the direction in which we should perturb the balance. It is well-known that many Oriental philosophies of mind precluded any sort of judging and sometimes even acting. The basics of these philosophies suggested that every time we exert an opinion or act from a balanced state, the latter becomes disturbed. Anything we do in the world even with the most benevolent intentions inevitably produces diametrically opposite effects from the intended, beneficent ones. Whatever the message we decide to write on the wall of someone's profile, it may always be understood as too conventional, too freaky, too irritating, too aristocratic, and so on, by others. Every declaration of what is good and beautiful implicitly contains a judgment about what is bad and vulgar. Or, as pointed out by Lao-Tzu, "When all men on earth realize beauty, the awareness of ugliness is being born. When all men on earth realize goodness, the awareness of evil arises" (Tao-Te-Xing 2). Furthermore, to show interest about something means that we have chosen to be ignorant about something else. Shining a light onto anything places some other things into shadow, which is where Natalie Merchant's question could start to echo inside of us: "When you were the brightest star, who were the shadows"⁵⁵⁸. For, it appears that every time we lift an act, an object or a quality on the pedestal of appreciation, their counterparts will be pushed deep into the darkness of oblivion. Consequently, one could argue that every form of knowledge is based on an ignorance of a kind. Therefore, many people restrain from exerting opinions about anything, which in extreme cases lead to a complete nihilistic silence of being. However, as Arjuna and Lord Krishna journeyed in the chariot across the middle line of the battlefield, Krishna did not suggest Arjuna to stay in the middle and refrain from engaging in the battle for good. Instead, he advised him to pick a side and fight (Bhagavad-Gita 2:37). In view of that, we should know that resting in the state of perfect balance is not the best solution if we want to be involved in creating incentives that will spur the world towards more progressive states. Moving back and forth between the states of balance and the states of imbalance is the key. Whenever we find ourselves in the state of imbalance, we should start paddling towards the balanced state and *vice versa*: whenever we find ourselves becoming all muddled after resting for too long in a perfectly balanced state, we should not be afraid of breaking the status quo and freely jumping onto an imbalanced side. This is how the rivers of creativity keep on flowing. So, plunging into single poles of any of the infinite number of dichotomies pervading the world, including the following banal examples brought to mind off the top of my head⁵⁵⁹ – Lennon vs. McCartney, Marr vs. Moz (whose effect

⁵⁵⁸ Listen to 10,000 Maniacs' Hey Jack Kerouac on In My Tribe, Elektra (1987).

⁵⁵⁹ For your information, depending on the polarity in question, I have either historically tended to proudly stand on the former sides of those listed here (so Beethoven, for example, over Mozart and Jovan Dučić over Milan Rakić) or have halfheartedly done so, under pressure to choose only one or the other, with no option to embrace both.

on the sound of the Smiths was more artistic) Beethoven vs. Mozart, Schubert vs. Schumann, Dučić vs. Rakić, Degas vs. Toulouse-Lautrec, Rumi vs. Ibn Arabi (Sufism as poetic drunkenness or eloquent sobriety)⁵⁶⁰, Godard vs. Truffaut (film as a constant criticism of film and life vs. apolitical filmmaking), Isao Takahata vs. Hayao Miyazaki (two central creative figures of Studio Ghibli), Tal vs. Botvinnik (the two contenders for the world chess champion title in 1960, the former of whom was a pirate with aversions to traditional values, a wild rebel against the dominant chess order that the latter, so-called Patriarch, veritably represented), Bronstein vs. Botvinnik (two earlier contenders for the world chess champion title a.k.a. Mr. Incorrect and Mr. Correct, respectively, as Yasser Seirawan dubbed them⁵⁶¹), Kasparov vs. Karpov, Christ vs. Caesar (per gospels, while the latter aspired to change and ennoble the society by institutionalizing laws and rules of conduct, the former craved to achieve the same by erasing these laws and purifying the human heart⁵⁶² in an anarchistic, antiauthoritarian fashion; the divide between the two types of personalities is timeless⁵⁶³), Tesla vs. Edison (the visionary, dreamy, spiritual, altruistic stereotype of a Romantic scientist, careless about the financial aspects of science vs. the practical, business-minded, politically engaged, coercive, mercenary, managerial, capitalist, entrepreneurial and exploitative model for the modern scientist, engaged in scientific activities as a profiteer, be it for

⁵⁶¹ Watch Yasser Seirawan lecture on the Game 9 from the 1951 World Championship match between Botvinnik and Bronstein available at <https://youtu.be/iGnwFsXzqe0> (1951).

⁵⁶² See Dušan Miklja's *Kraj Puta* (translatable as *The End of the Road or By the Road*), Laguna, Belgrade, Serbia (2006).

⁵⁶³ My own tireless rebelling against the cold and cruel ways of managing institutions by imposing strict laws onto their members is but one example. Indeed, throughout my academic career, including the professorial posts whereat the ideals of freedom that had adorned the academic lifestyles during centuries ceded place to zombified processions of not sublime spirits, but manipulative machines who breed robotic clones of theirs in classrooms and laboratories, the stiffer the laws placed around the people's necks, the greater the inner call to shatter these walls of Alphaville and reinstitute the principles of freedom, poetry and love, the path to which, as it would always happen, leads through storm and fire, through anarchy and thunder. There can be no Christian path to illuminate the world without the immersion of oneself inside these flames and one's bursting out like a star. It is exactly this fieriness that I tried to portray in my composition for two guitars called *Christianity*. Symbolically, these thoughts occurred to me as I sat right on the spot pointed at by the right-hand index finger of Knez Mihailo riding a horse - the central monument of Belgrade's most central, Republic Square and the favorite meeting spot for Belgraders, echoing the generational cry, "Death to fascism, freedom to the people" all through the ages. For, ever since the identity of Serbs crystallized in the story of the genetic and cultural evolution of humanity, it has been in their blood to be akin to those "flowers at the edge of the grave", as a monk from middle ages described them in his diary, and stand against the despots and imperialists of this world, while keeping the following verses exclaimed by Nyegosh's Prince-Bishop, Vladika Danilo at heart: "As Wolf does on the Sheep impose his might, so tyrant lords it over feebler fellow; but foot to place upon the Tyrant's neck to bring him to the consciousness of Right - this of all human duties is most sacred"! (Petar Petrovich Nyegosh's *The Mountain Wreath*, rendered into English by James. W. Wiles, George Allen & Unwin, London, UK (1846)). To walk in the footsteps of Jean-Paul Belmondo from Godard's *Breathless* by confronting anyone who authoritatively impose law and order in place of love and freedom, albeit knowing that the dark and tyrannical forces backing the imposer will be after me for as long as they do not ensure that the divine spirit in me has been crushed and dilapidated, has thus been my conscious decision. Putting my life at stake, a step ahead of Warren McCulloch's motto, "We fight not for possession, not for power, not even for honor, but for that one thing in the world which no one who is good gives up except for his life, which is liberty" (See Warren McCulloch's *Embodiments of Mind*, MIT Press, Cambridge, MA (1965)), to the sound of *Hej Sloveni!* reverberating in my heart, have I dediced to go, resolutely, in my standing up for academic freedoms and the spirit of Renaissance in the robot-conquered ivory towers of modern times. Though expelled and exterminated, the battle for freedom, I know, would be won, in the spirit of the Christ's, who, like that tiny seed that dies in the ground and thus gives rise to a plant (John 12:24), laid down his life for the sake of salvation of every soul on Earth (Romans 4:25); for, the body may be gone, but the spirit will remain and it will echo across classrooms, labs, hallways and rooftops more stridently than ever.

the pockets or for the ego, rather than plunged in the sea of science for the sheer love of it), Taoism vs. Confucianism (theology as liberal anarchism or conservative traditionalism), Zen vs. Confucianism (for “Confucianism and Zen remain parallel streams that seldom converge”⁵⁶⁴), Erasmus vs. Luther and Renaissance vs. Reformation (are corrupt social systems, like catholic church in the middle ages, revitalized from the inside out, with humanism and beautiful art, or by launching attacks and gaining independence from them, thus perpetuating some of the same old errors in the long run?), Romanticism vs. Classicism, Realism or Enlightenment, Rococo vs. Baroque (as Waldemar Januszczak observed, “In the Baroque Age religious art tried to awe you into submission, in the Rococo it enchants you, entices you, seduces you”⁵⁶⁵), Wagner vs. Brahms (the modernist vs. traditionalist dichotomy that split the German music circles of the mid-19th Century⁵⁶⁶), Vincent van Gogh vs. Paul Gauguin (“art as a divine end in itself” vs. art “as a means to create godlike artists”⁵⁶⁷), Thomas Gainsborough vs. Joshua Reynolds (two 18th Century English contemporaries, the former of whom was noted for his rapid, hasty and sketchy brushstroke and dreamier subjects compared to the more labored style of the latter painter), William Turner vs. John Constable (the two English painters and 19th Century contemporaries who represented the two streams that painters of their and the next generation were free to follow, the former basing itself on poetry and dramatic effects of wild romantic passions, best epitomized in Turner’s *Steamer in a Snowstorm*, and the latter holding on to the ideals of restraint, simplicity and sincere presentation of natural sceneries devoid of any pose or pretentiousness that is so typically Romantic⁵⁶⁸), Sviatoslav Richter vs. Glenn Gould (the enthusiastic live performer, who intensely disliked recording himself vs. the pianist who retired from performance at the age of 31 to focus solely on the recording⁵⁶⁹, among other dichotomies stemming from the East-West cultural schism at its heart), Nicolas Poussin vs. Peter Paul Rubens (cerebral sparseness vs. coloristic exuberance in Baroque), Wittgensteinian mysticism vs. Vienna Circle positivism, neptunism vs. plutonism (as to where life originated, in water, with mermaids, quietly, or in fire and magma, lightning and thunder), Kuhn vs. Popper (science progressing in a stepwise fashion, through a series of revolutions or science progressing linearly), Jung vs. Freud (present vs. past as the place to dig into for solutions to psychological problems), Miles vs. Trane, the Stones vs. the Beatles, Let it Bleed vs. Let it Be, What’s Going On vs. There’s a Riot Goin’ On (Marvin Gaye’s inspirational record or Sly Stone’s cynical response to it), Prince vs. Michael Jackson (SF bar Madrone on

⁵⁶⁴ See Yasuichi Awakawa’s *Zen Painting*, Kodansha International Ltd., Tokyo, Japan (1970), pp. 19.

⁵⁶⁵ Watch Rococo: Before Bedtime, Ep.2: Pleasure, MagellanTV (2014).

⁵⁶⁶ Rare were composers who tried to reconcile this disparity in style, one of whom was Arnold Schoenberg, notably in his *Transfigured Night*. However, because this disparity was considered irreconcilable, the piece was initially shunned by the music critics and Romantic composer contemporaries of all breeds.

⁵⁶⁷ See Alan Gowans’ *The Restless Art: A History of Painters and Painting, 1760 – 1960*, J. B. Lippincott Company, Philadelphia, PA (1966), pp. 279.

⁵⁶⁸ Ernst Gombrich is one of many art historians who would agree that “those who followed Constable’s path and tried to explore the visible world rather than to conjure up poetic moods achieved something of more lasting importance” (See Ernst H. Gombrich’s *The Story of Art*, Fifteenth Edition, Phaidon Press, London, UK (1989), pp. 496), but this statement, obviously taking into consideration the ensuing accomplishments of realists, pre-Raphaelites and impressionists that were rooted in the goal of painting natural sceneries with little to no detours in poetic ecstasy and meditations on the transcendental, is rather short-sighted and presents a simple iteration of the fact that one such radically advanced piece of art as Turner’s *Steamer in a Snowstorm* painted in 1842 was so ahead of its time that it took the mainstream artistic circles more than half a century to digest it and begin to build new genres, including expressionism and abstract art, on it.

⁵⁶⁹ See Erroll Morris’ *The Pianist and the Lobster*, *The New York Times* (June 21, 2019), retrieved from <https://www.nytimes.com/interactive/2019/06/21/opinion/editorials/errol-morris-lobster-sviatoslav-richter.html?smid=nytcore-ios-share>.

Divisadero Street, also known as the fog boundary of the city, used to organize nights for the fandom of these two musicians to clash), Brian Eno vs. Bryan Ferry, John Cale vs. Lou Reed (the avant-garde and the pop columns sustaining on their shoulders the tower called the Velvet Underground), Oasis vs. Blur, Bird vs. Dr. J, Maradona vs. Messi (who is better, but also who is greater among the two Argentine soccer superstars), Messi vs. CR7, Gazza's tears vs. Maradona's tears of the 1990 World Cup, Boba's eating a sandwich in McEnroe's face vs. Nole's considerateness and political correctness (referring to the attitude of the two biggest tennis stars from Belgrade, Slobodan Živojinović and Novak Đoković, respectively), Dejan Bodiroga's wiping hands off Reggie Miller's towel near the end of the game between Yugoslavia and the US at the world championship in basketball in Indianapolis in 2002 vs. Darko Miličić's cussing and cursing at his on-court adversaries, Teo vs. Lou (referring to two major point guards of LA Clippers in the 2017/18 season - the Serbian player, Miloš Teodosić, a dreamer and an artist under the baskets, to whom teamplay is the priority vs. Lou Williams, a solo driver, an agile machine to whom one-on-one play is all that matters), Žoc vs. Kokoškov (two Serbian basketball coaches, the former being the epitome of a fiery coach who would scream and curse at the players, but go to the end of the world with them, and the latter being the product of an American teaching system – cool, controlled, unnaturally well-behaved and at times lifelessly bland), Stallone vs. Schwarzenegger, Jean Valjean vs. Inspector Javert (rule-breakers vs. rule-respecters), Joseph Knecht vs. Josef K. (or, in other words, Hermann Hesse vs. Franz Kafka), Dostoyevsky vs. Tolstoy, Britpop vs. rave, deep house vs. electro house, trip-hop vs. grunge, punk vs. heavy metal, Gibson vs. Fender, In-N-Out vs. Maccy D's (crumbly fries vs. flexy fries among other, more ideological elements of their difference), Quisp vs. Quake, Pepsi vs. Coke, Schweppes vs. Sprite, fleshy tuna vs. fatty salmon, Serbian *pljeskavica u lepinji* vs. the American burger on a bun, Lincoln logs vs. Legos (the looseness, the sway and the smell and touch of natural wood vs. the plastic perfection of a stiff and artificial fit), party-going apostleship vs. solitude-seeking eremitism, stakeholder vs. shareholder capitalism, Tecate vs. PBR, Sonoma vs. Napa, Mission vs. Marina (for those familiar with San Francisco neighborhoods), NorCal vs. SoCal (artiness and intellectualism vs. the celebration of physicality, hedonism and affluence), timeworn north Calcutta vs. upstart south Calcutta, the Cure at their most joyful vs. at their dingiest, Under Pressure vs. Ice Ice Baby (referring to the dichotomy posed as a personality test in the recent cinematic homage to San Francisco and the critique of its declining diversity⁵⁷⁰, with the two songs having the characteristic bassline in common), Bobtail vs. Paciugo (the two ice cream parlors on Chicago's Broadway street - the American, creamier one and the European, gelato-making one, respectively), Кићански vs. Хлеб & Кифле (the old, traditional and one of a kind bakery vs. the new, gentrified and one in a chain of bakeries posed at the opposite sides of the Revolution Boulevard near my home in Belgrade), Akademija vs. Zvezda (for those familiar with Belgrade nightlife from the new age era), southern vs. northern side of Haight between Fillmore and Pierce (for those familiar with the night life of Lower Haight), Miško Bilbija vs. Vlada Janjić (the respective proponents of the underground and the mainstream fractions within the leadership of B92 radio, the quarrel between whom I personally witnessed on the night my band became the third ever to play live in the studio of this radio station⁵⁷¹), EKV vs. Plavi Orkestar (the story goes that the most favorite urban and folk rock bands, respectively,

⁵⁷⁰ Watch *Medicine for Melancholy* directed by Berry Jenkins (2008).

⁵⁷¹ Our performance on the Halloween Night of 1993, exactly 14 years before I would land at SFO and see San Francisco for the first time, was preceded by the Belgrade bands Plejboj and Kazna za uši in the yesteryears. The subversive, underground radio that B92 was in that era, however, deteriorated over the course of the 2000s and 2010s into a reactionary, nationalistic and pro-regime media machinery that its originators must find the most disgraceful.

recorded their albums in the winter of 1985 simultaneously in the SIM studio in Zagreb by having it booked for the former band from midnight to noon and the latter band from noon to midnight), Love vs. Electric (as to what the most cult album by the Cult is), *La Dolce Vita* vs. *L'avventura* (the two Italian movies released in 1960, both depicting the vacuously prosaic lives of the riches), Three Colors Blue or Red (as to the best movie in Kieslowski's trilogy spelling out and exploring the virtues intrinsic to the colors of the French flag – liberty, equality and fraternity), Joseph Mankiewicz's comical All About Eve vs. Billy Wilder's dark and moody Sunset Boulevard (two Hollywood movies released in the same year, 1950, having the Hollywood mores and the dark sides of celebrity as their common theme⁵⁷²), Cindy Lauper vs. Louise Ciccone (who is the pop queen of the 1980s?), Bob Mould vs. Grant Hart (as to who the true heart of Hüsker Dü was), Kristin Hersh vs. Tanya Donnelly (the truer muse of Throwing Muses?), the Edge vs. Bono (as to who the cornerstone of U2's spirit is), Dylan's It's All Over Now Baby Blue vs. Donovan's To Sing For You (sang side by side at a backstage party captured in D. A. Pennebaker's Don't Look Back), Sandi Freeman vs. Larry King (the latter replaced the former as the host of a live interview show on CNN in the 1980s and became a model for the countless similarly prosaic and emotively vacuous talk shows that followed), Roger Ebert vs. Gene Siskel, Charlie Chaplin vs. Luis Buñuel (choreographic aesthetics vs. crude symbolism), Yasujirô Ozu vs. Akira Kurosawa (Kenji Mizoguchi aside, who is the most authentically Japanese of the two of the most renowned Japanese filmmakers: the fan of the everyday, of still and quiet or the proponent of the excessive and the extraordinary, of movement and kinetic energy?), Italian neorealism vs. French *nouvelle vague*, Pet Sounds vs. Sgt. Pepper's Lonely Hearts Club Band as well as Pet Sounds vs. Smiley Smile, OK Computer vs. the Bends (as to which of these two records by the Oxford band, Radiohead, was more stellar, being a topic of frequent discussions among me and my soulmates during the last three years of the 20th century), Prefab Sprout vs. the Smiths (while the story of the imaginary musical protagonist's life inscribed in the grooves of records chronologically arranged one after another depicts the conversion of an angry punk to a spiritual dreamer forever young in his heart in the former case, it hands us a sententious story about the transformation of an adolescent with a sensitive heart emotionally wounded by the ills of the world to a cold cynic in the latter case), Finally by Kath Bloom or Finally by CeCe Penniston (two songs similar in structure but arranged completely differently and while the former was meant to be played on a single guitar in schools for donkeys and children as a form of musical therapy and never ever receive radio play, the latter was a top ten dance hit from 1992), Commodore 64 vs. Amiga (or *debeljko* vs. *prijateljica*, as we nicknamed them in Serbian, meaning “roly-poly” vs. “the dame”), PC vs. Mac, Sega vs. Nintendo, Minecraft vs. Roblox, Serbo-Croatian vs. Russian, vivacious Italian vs. slushy French, Portuguese vs. Spanish, English vs. German, evolutionism vs. creationism, and so on – need not be prohibited, but can be productive and fun at the same time. But still, as you temporarily stand in support of only one of the confronted sides, be aware that maintaining the balance is always critical. Although you may adopt one of the poles as your own for a while, do not lose out of sight the fact that these dialectical confrontations are the drives of the evolution of life, and that if one side wins and the other side becomes eradicated, the battle has not been won but thoroughly lost. Knowing this would endow you with a form of spiritual nonattachment to any dialectic confrontations you may participate in, which would predispose you to feel lighthearted and free despite all the involvement in these sympathetic battles. Thence, you are free to stand on the roof and yell from the top of your lungs about the sides you love in this life, but never cease to believe that the waves of love, care

⁵⁷² Nicholas Ray's In a Lonely Place, released in the same year and sharing its theme with these two movies, is often added to the discussions.

and grace that stream inside of you are what truly ameliorates the troubles of life and changes the world for good.

S.F.1.35. Many times in life we are able to evidence how propagation of specific qualities spurs not more of those very same qualities, but exactly their opposites. For example, witnessing an unpleasant event, such as seeing a person on the street behaving rudely, shoving or verbally assaulting the surrounding people, can make us feel disgusted with such behavior. It is possible that we may have felt similar anger and disappointment in ourselves as the misbehaving person did and were on the brink of acting the same just moments prior to seeing his acts, but after being averted from what he did we changed our mind and reminded ourselves of the grace found in controlling our emotions, enwrapping their furious bolts and desert storms into white clouds of gentle and sublime thought, all until they become completely healed. Only when our mind and heart become thoroughly sunny and translucent would we want to let ourselves express spontaneously, thereby not poisoning, but adorning the spirit of the world in the realest sense of the word. Although one could find many people heavily praising certain values and bashing their opposites, it is a pity that they are rarely aware that their opinions about the things they love were formed especially owing to facing the things they dislike. The majority of people are thus largely unaware of the immenseness of the extent to which the so-called negative examples or role models carve their personalities and tastes in a positive manner; or, as wittily pointed out by Alan J. Perlis, “Everyone can be taught to sculpt: Michelangelo would have had to be taught not to. So it is with great programmers”⁵⁷³. For this reason, when I wish to propel myself in the direction of restoration of emanation of celestial esprit, all I need is to view a character like the dry shrink, Dr. Farr, from Barry Levinson’s *Humbling* and in the blink of an eye I would be on a road to this divine destination, perhaps faster than with thousands of positive role models situated in my sight. This is why I claim that spending too much time reading overly fluent and convoluted academic writings can show one the beauties of simple and unpretentious expression of feeling or thought, while hanging out on forums inhabited by trolls, enforcers of vulgarly ultrafast and straight-to-the-point messages and obstructers of any flowery language or poetry in the air can easily instigate an imaginative mind to push back in the opposite direction and express oneself in an extensive and elaborate fashion, quite in the spirit of this very sentence. Listening to passionless musicians and church choirs, singing and playing gracelessly shelled within their own timid little selves instead of exploding out in eruption of passions, freely revealing their humane imperfections and divine energies alike, has thus similarly been quite an efficient way of inspiring myself to dream of and strive to reach their diametrical opposites and thus realign the missionary path of the evolution of my being with a less self-centered, arrogant and drowsy and more wide awake, courageously expressive, luminous and genuinely lifesaving course. For, the path of progress of a brilliant mind in life is such that it always bounces between empathic convergence with trails followed by others and divergence from them in search of a different and unique way of life of one’s own; as a result, it is often the case that such adherents to the most natural way of being, which is all about exhibiting the simultaneous connectedness and separateness that each Way in Nature stands for, feel as if belonging everywhere and nowhere at the same time. The answer, of course, lies in accepting this inherently dialectical nature of life on which our spiritually evolving beings are crucified as if on a cross of a kind as immanent and inescapable one and embracing it with our whole hearts, including both the affirmative and repulsive traits of life around us. Now, had the

⁵⁷³ Find Alan J. Perlis’ Epigrams in Programming on <http://www.cs.yale.edu/quotes.html>; they were first published in ACM’s SIGPLAN (September 1982).

casual critics of any breakers of standards of aesthetics in life been more conscious of this very positive effect that negative examples can have, their harsh critiques of those whom they openly abhor might have become substituted with more grateful attitudes for their existence. For, these instances of behavior attributed with a lack of ethicality or aesthetical value can indeed be seen as redirecting many of us to the strait and narrow path whenever we have begun to wobble insecurely around it, for as long as our moral core and visions towards which we stream shine unspoiled in the background of our consciousness. “One of the more intriguing inconsistencies of Freud’s work is that, although he constantly addressed himself to pathology, his real accomplishments were in the understanding of normal human behavior. It was from the sick that he learned about the healthy”⁵⁷⁴, observed the New York psychiatrist, Willard Gaylin, and just like psychoanalysts can learn a whole lot about the merits of the healthy mind by studying its ailed antipodes, so could we learn limitlessly from the off-putting models for how life should not be lived that abound all around us. Watch, for example, the sleazy salesmen from the 1967 documentary by Albert and David Maysles, read a satirical play by Moliere, Chekhov or Nušić or, even better, just switch your TV set to the first available reality show or a mainstream channel teeming with phoniness and hypocrisies and you are guaranteed to become a better man, a more moral creature by the end of the day. It is, of course, correct to observe that these negative examples can spoil one’s developing personality whenever they become seen as positive ones, but for the visionary creatures preset to live so as to deliver divine beauties to the earthly reigns, these unpleasant events tend to add far more fuel to the fire of their passions than seeing lukewarmly expressed positive examples. Hence, when we look for the sources of the enlightening glow of happiness in our mind to express our gratitude to, we should equally bow in front of the things that yield light to the world and those that fail to do so. With one hand firmly holding the lantern of lighthearted spiritedness, the other hand of ours would be free to enter the darkest forests of human thought, knock on the doors of darkest human passions, and caressingly acknowledge them as bricks for the ascension of human spirits. For, it is the dialectic clashes of opposites that make way for progress in this world.

S.F.1.36. It was on a crescent moon night in Sunflower that Sahar told me about a boy named Chip who lives inside her head. When I asked what it was exactly that he does in there, she replied: “He is a divorce lawyer. You know, he always needs to be surrounded by desperate people to find his happiness”. After a while, it became clear to me that even my friend’s unusual freedom of behavior, just like that of many other people, is contingent upon the awkwardness of the surrounding creatures. Although it may have seemed to her that phony people around her were just annoying her and making her sink into a desperate state of mind, they have actually provided an inconspicuous drive for digging the sunken treasures of creativity asleep in her heart and bringing it to the daylight of her being in this world. The secret behind my creativity works on a similar principle: it is exactly because the muse of mine, the beauty of which I try to reflect in the lines and symbols drawn hereby, does not exist in the real world that I live according to the ideals she whispers to me, somewhat like the muse coiled around the sculpture of France Prešeren standing on the central square of Ljubljana, the city where my explosive creativeness in writing was spurred, mainly owing to an extraordinary lameness and the lack of passionate desire to bring down the stars from the sky and dance around them right here, on Earth, I did sadly recognize in people that surrounded me in those days. Nowhere could my muse find a better mirror of its antipode than in that environment, which in view of its enkindling the powerful image of my muse in my mind and making it touch the real life through the works of mine, I can only consider as bringing forth

⁵⁷⁴ See Willard Gaylin’s *Adam and Eve and Pinocchio*, Viking Penguin, New York, NY (1990), pp. 188.

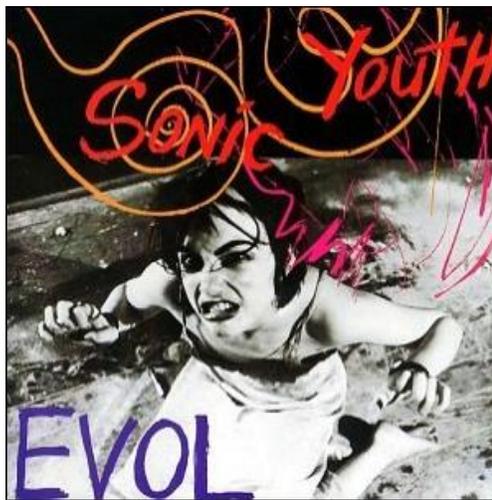

blessing circumstances after all. In a Sufi story, a Byzantine emperor, wanting to decorate his palace in a most beautiful way, invited the Greek and the Anatolian fresco painters, specialized in completely different styles, to ornament the opposing walls. As both of them faced each other while painting, they forced themselves to pull out the best they have from the heart of their creativity, and, as you may expect, the palace eventually turned out to become a standard of beautiful décor. One out of many examples from the history of art can be that of the Ostrogothic architecture and ornamentation, which were nowhere as splendid as in the city of Ravenna and its surroundings, where the Arian Christianity that the Ostrogoths proponed was most fiercely challenged by the Roman Catholic Church. Likewise, the history of art teaches us of how the more the Protestants of the 17th and the 18th Century preached against the affluent displays of Baroque and Rococo pomp and glory native to the Catholic tradition in art, the more eager was the Roman Church to give freedom to the artists to produce visions of splendor and theatricality according to their own extravagant taste⁵⁷⁵, albeit oftentimes having the former descend into dull soberness and restraint and the latter into freakishly over-ornate and artsy-craftsy displays of mannered and somewhat insincere emotionality. Hence, it is by facing opposites from our own ideals and values in life that we are driven to develop these very same ideals and values into something ever more intricate and beautiful. Of course, it is also true that personality traits we recognize in others are contagious, as if touching the innate root of empathy within us and inviting us to spontaneously copy them. To go with this imitational flow in the way we conduct our behavior, knowing that only if we bear resemblance to expressional modes of other beings could we expect to be understood and have our message gotten across, while at the same time not liking these traits and modes of being recognized in others, knowing that this disliking stands forth as a natural drive for spurring an independent and original thought and way of being, is a balance of seemingly not balanceable that we ought to reach. It is a balance that the Serbian poet and physicist, Stanislav Vinaver, hinted at when he noted that the poet's task, like Icarus', is to "fly between the sun of metaphysics and the water of social conformity", the failing in which would result in him being "doomed to perish without a trace"⁵⁷⁶. At the end of the day, it is always a balance between reflecting and opposing, being the same and being different that is intrinsic to the nature of this rapidly evolving world. But still, you realize what is when you discard what is not, an old saying goes. What we consider as beautiful in this world has thus partly been shaped by our being repelled from the things we considered vulgar and partly by our being immersed in qualities in which we have seen the source of light. After all, only by incessantly blinking, that is, putting the blinds of darkness on the sunlit world of versatility and liveliness and raising them again, do we have a chance to maintain the clearness of our eyesight, that is, the ability to discern good from bad and thus keep on walking towards the light.

S.F.1.37. Another thing a great storyteller knows is that perfect freedom can be attained on the bases of either ultimate love or ultimate hate. "What are you driven by?", Paul de Noyer asked Morrissey in the summer of 1987 and the following line he said could have emerged, word by word, from the depths of my soul in my high school days and beyond: "Hate largely. This will sound almost unpleasant, but distaste for normality. I've never really liked normal people and it's

⁵⁷⁵ See E. H. Gombrich's *The Story of Art*, Fifteenth Edition, Phaidon Press, London, UK (1989), pp. 436.

⁵⁷⁶ See Bojan Jović's *From Ithaca to Magna Graecia, Icaria and Hyperborea – Some Aspects of the Classical Tradition in the Serbian Avant-Garde*, In: Goldwyn, Adam J.; Nikopoulos, James (eds). *Brill's Companion to the Reception of Classics in International Modernism and the Avant-Garde*. BRILL, Leiden, Netherlands (2016), pp. 73–105.

true to this day. I don't like normal situations. I get palpitations. I don't know what to do"⁵⁷⁷. Now, whether Moz's philosophy was actually closer to the one reflected in the only quote adorning the back cover of my Mom's teenage poetry notebook, originating from a thought by Jean-Paul Sartre and saying "I have found it equally impossible to hate people as much as to love them"⁵⁷⁸, it is hard to say, but nonetheless there are many who have discovered the liberating feelings and the lesser restraint on expression that originate from the adoption of an indifferent state of mind devoid of any striving for love. Yet, a simple observation of what happens to our insides depending on whether we view life and act toward it lovingly or hatefully is sufficient to shake these premises and substitute them with tall question marks. Namely, whereas our actions springing from the roots of love would seem as if filling our being with the divine, healing lights, the actions stemming from the feelings of hate would appear as if emptying ourselves of some of the most precious qualities that we have come to possess. A hatful of hollow, if we were to refer to Moz again, is thus reached and, although words and acts built atop it are usually more glorious in the heavenly Eye than those springing from a phony, affected sense of empathy with all things alive, they cannot compare to those emanating from a heart truly overflowed with love, regardless of how mysterious, indescribable and ever-changing the path leading to its geysers and waterfalls, if not oceans, is. Therefore, in our quest for the perfect freedom of expression, for freeing ourselves from the manacles of overly respecting others, the manacles that subdue our wondrously adventurous aspirations that rush out to explore it all with our touch, smell, sight and all other senses to uninspiring, bow-headed timidity, blacking out the creative fire burning within ourselves and substituting it with the shadowy spirit of passive servitude, we might turn onto the side of despair, hate and disdain, and the fall from grace will be all ours.

The front cover of the iconic 1986 Sonic Youth's record *Evol*, with the latter being a wordplay signifying something opposite to Love, and yet something that does not make us passively revolve around the Suns of other creatures, but truly evolve. This record that has always stood as one of the most impressive ones in the history of music for me is unique in the fact that it literally lasts infinitely long, as the last song on the record, *Expressway to Yr. Skull*, the length of which is denoted as ∞ , has a locked groove, making it endlessly spin on one's gramophone.

⁵⁷⁷ See Tony Fletcher's *A Light that Never Goes Out: The Enduring Saga of the Smiths*, Random House, New York, NY (2012), pp. 546.

⁵⁷⁸ "Smatram da je isto tako nemoguće mrzeti ljude kao što je nemoguće i voleti ih", as it stands written on the back of the notebook.

As I also used to be one such anarchistic, infuriated kid for a long while, whenever a pair of gentle eyes would approach me asking why feeling despaired when there was really no reason to feel that way, when all in and around me was in bloom of an eternal spring, flushed by the geysers streaming from the fountainheads of wisdom, I would refer to Shakespeare's Romeo: "Had he not felt despaired and depressed on the night he met Juliet, he would not have been ready for encountering her in the fullness of his spirit, and their romance may have never occurred". I felt exactly as if contentment was the positive side of resignation⁵⁷⁹, the other side of the coin, the tail of the monstrous head of oleaginous hypocrisy, and so I would tie my red bandana, dye my hair into blue or green, pin the badge that said one word only, *Bunt*⁵⁸⁰, onto my tattered and smutty black M-65 field jacket and become a sleepless rebel, screaming, running and shattering all around me for the sake of bringing justice, fairness and beauty back to the world. In other words, basing my actions on the feelings of energetic despair and hate must have been my way to attain freedom, to get rid of the tendency to act shyly and awkwardly under the umbrella of conformist reverence of life around me. Many kids nowadays believe the same, and when these aspirations are transferred to the world of arts, it appears that they assume that transmitting only a sense of freedom through arts is enough for them to attain the vistas of true artistic excellence. Writing nonsensical and nihilistic messages thus emerges as one of the ways to foster freedoms in an overly ordered, normalized and sterile world of one's thoughts, feelings and behavior, even though works like these could be hardly classified as truly aesthetic. Thinking that conveying only freedom through arts is sufficient, however, distorts the purpose of even the most modern forms of art in which the abstractness and conceptual emptiness stand against the tendencies to embed carefully interwoven stories in pieces of art that dominated the old artistic eras. Yes, we know that the mechanical properties of materials depend not only on the matter, but also on the form of the object⁵⁸¹ and that, in analogy, the form of expression can sometimes be equally powerful as its content, as the art of countless conceptual artists exemplifies, but without homogeneously embedding an inspirational note into the material that forms a piece of art, the work, in my eyes, will only be halfway done. Freedom is necessary to bring forth the sea of loving emotions we cultivate within ourselves towards the daylight of being, but telling stories about freedom without giving love an even more central place is a mistake, which makes tons of artistic pieces nowadays incomplete and deceiving. Searching for the ways to liberate oneself from the shackles of the reigning perceptual and expressional standards of the current times, artists often find novelties to be an end in itself, somehow failing to realize that novelty for its own sake is "musical politics, not music"⁵⁸², as Igor Stravinsky pointed it out, which results in mere pose, ensnaring its creator in a web of dishonesty that slowly eats one's spirit away, rather than a true art that melts the stony hearts of the world and turns them into emotional seas, all under a heavenly dome populated by the smiling gods. If Richard Wagner's contribution to music ended with the sheer novelties in expression he developed, such as the use of leitmotifs and his idea of opera, that is, "musical drama", as concoction of every art form under sun, and he never ever succeeded in reaching the depths of the human heart with his music, the world might have never known about him, his cult status among the classical music aficionados might have been reduced to but a few encyclopedic

⁵⁸⁰ *Bunt* is the Serbian slang for "revolt" or "rebellion", short for *buntovništvo*.

⁵⁸¹ See Philippe Colombar's Understanding Failure and Fatigue Mechanisms of Advanced and Natural Polymer Fibres by Raman/IR Microspectrometry, YUCOMAT 2016 Programme & The Book of Abstracts, Materials Research Society of Serbia, Belgrade, Serbia (2016), pp. 48.

⁵⁸² See Robert Craft's Conversations with Igor Stravinsky, Doubleday & Company, Garden City, NY (1959), pp. 126.

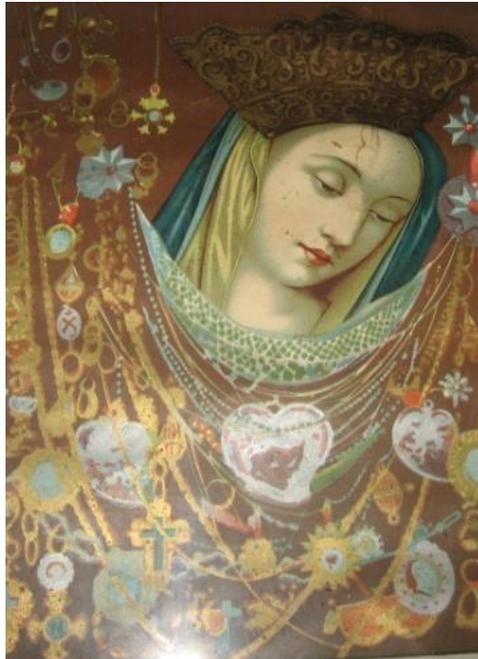

souls, and his following words about the importance of composing music that questions the musical context of music *per se* would not resonate as strongly as they do today: “With one bound I became a revolutionist, and acquired the conviction that every decently active being ought to occupy himself with politics exclusively”⁵⁸³. Good art is, thus, the one that turns its form inside out and innovates itself in the process, but it is also the one to open you up, giving way to the inner shine of your spirit to the world, while at the same time folding your heart from within, keeping it whole and sustaining its glow. In that sense, the purpose of arts and all other messages we throw in communication with others is to open the listener as much as to close her; to unwind as much as to wind. For, as the concept of the Way of Love teaches us, consciously dwelling inside of us and yet living each moment of our lives so as to feed the world with the beauty of our spirit is a necessary precondition for fulfilled living. Similarly balanced openness and closeness is the key to prosperity of every other system and quality in Nature. When Ian Curtis, the guy who walked around the Manchester punk concert venues with the word “hate” inscribed on the back of his jacket, and Joy Division, the band in which he sang, entitled their epic record, the monument to depression (with Ian committing suicide 10 days after the record was scheduled to be released), *Closer*, they meant to tell us that getting closer to beings of the world in love can truly “tear us apart”⁵⁸⁴, making us become literally closer, unable to relate to them, as if all the creative potentials within us have dissipated. Jeff’s story about him sneaking into an elementary school playground in Irvine so as to be as close as he could get to the 4th of July firework site and have as good of the view as possible, but then ending up not seeing anything because the detonation smoke completely covered the view of the sky, rings the bell now as yet another reminder that getting too close to the objects of our affection can make us too close in relationship with them, having the opposite effect of the intended. Therefore, when Al Pacino playing Michael Corleone in the *Godfather* asks his mom if it is possible to love one’s family so much that one loses it, the unequivocal answer would be Yes; for, to be symbiotically tied to a single soul or a few selected ones, wishing to unceasingly gaze at their beauty and resisting to constantly move back and forth between a close contact with them and the remotest cosmic spaces, is a way to surely lose their beauty out of sight. Like Dustin Hoffman as the Graduate, driving away from SF on the upper deck of the Oakland Bay Bridge, the road that leads strictly to the heart of the City, so do we often in life become farther and farther away from the hearts of humans that beat in our proximity by moving closer to them, and that whenever we substitute this closeness with extinguishing the fire of independent introspection and inner-directed focus, whose warmth would spontaneously spread onto others. Then again, what I ardently call for is a revision of this metaphor coined by the Manchester’s post-punk herald of despair and understanding the word “closer” as ambiguously denoting simultaneous getting closer to the creatures of the world in love and getting closer to the essence of our being. In order to become more open in our interactions with the world, while aiming at bringing joy and happiness to it, we must become internally closer, carefully winding up the threads of creativity within us. To shine with divine joy outwardly we need to focus the creative rays of our thoughts and feelings inside and make them glow with an ever greater fervency. Also, as we whisper how “we hope we are getting closer”⁵⁸⁵, feeling as if the mountaintops we set forth as the aims or stations in our life are finally within reach, we can realize that we have simultaneously gotten closer to the inner zenith of the Sun of our soul. Something akin can be noticed as we look into the integrative

⁵⁸⁴ Listen to Joy Division’s *Love Will Tear Us Apart*, Factory (1980).

⁵⁸⁵ *Ibid.*

potential of human emotions, that primordial power that, as a popular adage goes, “either breaks us or makes us unbreakable”. Namely, a sense of psychological and physiological integrity can be generated by the underlying current of emotions that are either intensely loving or intensely hateful in nature. Yet, if we look at this effect more carefully, we would realize that the integration by love takes place softly and unnoticeably, whereas the integration by hate proceeds momentarily and abruptly. And we all know by now how deeds that lead to quick satisfaction usually possess minor long-term values, whereas those that require enormous amounts of time to yield fruits are typically of a truly lasting value. The same parallel could be drawn to conclude about the sustainability of actions springing from the aspirations and emotions of love and hate.

In the previous image I showed you Lung Leg portrayed on the front cover of a Sonic Youth’s record, which during my rebellious teenage days I had taped on the wall of my room, right next to the lyrics of Hüsker Dü’s song Pride. But in addition to this powerful image, I equally used to stare for hours, as if looking at the sea, at other images that decorated the walls and trays of my family house in Belgrade’s Zvezdara neighborhood (literally meaning “the white city’s swarm of stars”). One of them was a marble sculpture of Venus de Milo, and another one was an icon of the Blessed Virgin Mary of Mercy a.k.a. Our Lady of Sinj, displayed right here. My Mom, who prayed by it every night before going to bed, used to say that the Lady of Sinj’s right cheek will be rosy when peace dwells in the house and pale if strife enters it. When her brain began to turn into a supernova and bring her enlightenment at the cost of taking all the speech skills away from her and leaving her literally immovable, the Virgin Mary’s forehead, miraculously, began to crack. Both of these pieces of art always appeared to radiate with love as placid and peaceful as able to shift stars from their orbits through its gracious beauty.

To find the balance between the two, between the meditative and peaceful love of the latter, enlightening the world inside, and a freedom to act and bring this love like a blasting supernova to the world around, embodied in the former, has ever since been my aim. I have always felt I could communicate with the divine Nature that resembles an image of a Holy Mother, and thus could spend hours meditating to the light of hers instilled into me and mine offering all my creativity and being for the sake of living according to bringing the divine light of hers onto this planet. But there have ever since been punkish passions to break the muddy norms in this life and induce majestic sparkles of wonder in human eyes by doing so, dwelling inside of me. Peace based on dead

passions is futile, just as battles without the desires to wash the face of the world with the divine light are. But how do we reconcile peace and war, meditation and passion? “Suppose ye that I am come to give peace on earth? I tell you, Nay; but rather division” (Luke 12:51), said the Christ once. Well, if we are to truly evolve in this life, there is no other choice for us than to be crucified between irreconcilable opposites. Meditatively and safely dwelling inside the birdhouse of our heart or acting in ways that induce wonder and astonishment, waking up the hearts of people around us? Lock ourselves in a monastery or jumping freely into the raging sea of human passions? What to choose? It seems that using these two as the parallel metal splints of a railway track upon which the trains of our thoughts, feelings and acts will travel would present the best choice. To be withdrawn in our own world seems to be the prerequisite for bringing forth enlightening actions to the world, and *vice versa*: brave acting is the precondition for seeing well, for understanding the nature of life and humanity. But there is no permanent answer to this question. The only permanent answer would be permanently seeking an answer. For, only through incessant seeking do we get a chance to balance and rebalance these opposites and thus stay on the railway line of living our starry dreams and fulfilling our divine mission on Earth.

S.F.1.38. I have found it strangely exotic to consider myself the citizen of a country that does not exist anymore. It has produced a strange split between the cosmopolitan sense of belonging everywhere and the perplexed expatriate feel of not being able to find a stable ground anywhere. And yet, I have always known that “great artists have no country”, as stands written at the end of the prophetic Manic Street Preacher’s song *If You Tolerate This Your Children Will be Next*⁵⁸⁶, and that a sense of belonging nowhere present the first step to genuinely belonging everywhere. Is this why fate has ordained me to roam like a nomad “from station to station”, as phrased by Thin White Duke, “a guy from Europe, living in America and trying to be back in Europe”⁵⁸⁷, a reflection of myself as I write these words nostalgically, torn between the country of my origins and my habitat on the US soil? Be that as it may, all until 2010, Yugoslavia was the name imprinted on the navy blue passport of mine, representing a country that had lain on the central field of the largest continuous borderline-redrawing process known to the eye of history. Small countries on this small patch of planetary soil would throughout the history incessantly work their way towards uniting themselves whenever the spirit of brotherhood and unity prevailed, but only to be fighting for independence after a while, impelled by the desire to gain some novel or regain the forgotten identities. Such a ceaseless process of uniting and separating, which may have been wonderful had there not been wars and tragedies associated with them, served as an underlying metaphor for my conceiving the fundamental concept of ultimately fulfilled living, the Way of Love, which I will have talked more about in what follows. Be that as it may, the sprouts of sadness stemming from the grounds of war and hatred, sown by people everywhere around me, forced me to look up, to the stars, and there find the solace and canvas for drawing the boundaries of my visions and dreams. It was with one such starriness in my eyes, reflecting the incident lights in all directions, like silver fish dabbling on a moonlit lake, that I walked through the iconic alley that leads to the United Nations plaza in SF, on both sides of which stood marble posts with country names engraved in the order that they joined this international organization, and realized to my amazement that, ironically and equally exotically as being a citizen of a country that is no more,

both the first and the last pillar had the names of my home country inscribed on them: Yugoslavia, the cofounder of the United Nations, on the first and Serbia on the last. How quixotic is it to find oneself both at the beginnings and the ends at the same time, so as to be able to engage in pirouetting ceaselessly through this warped time and space in an attempt to bring both into indissoluble unity, knowing that “the greatness of a piece of art equals the distance between the two concepts that it brings together”⁵⁸⁸, as Jean-Luc Godard said once, my dialectic self began to dizzily wonder at that moment. For, indeed, to find oneself and one’s stances at both the farthest beginnings and the most distant ends has stood as a moving privilege rather than a blocking paradox in my head wherein theses and antitheses constantly collide and coalesce, yielding exciting new syntheses as expressional suns around which many antagonisms that spill the toxic spirit of hostility all over the face of the world become magically resolved, in the blink of that all-seeing eye that rests on the top of the pyramid of life.

S.F.1.39. Sometimes I also wonder if my inclination to the dialectic philosophical grounds in envisioning the evolution of life – physical and cognitive alike – can be related to the maddening split between the oases of peace and love of my closest family circles in which I grew up and the atmosphere of fear, war, pain and hatred that like a dark cloud surrounded the bubble of bright lovingness of my upbringing. From the day I was born until a quarter of a century later, I lived in Belgrade, one of those places on the map of the world where rarely intensive cultural clashes and encounters of opposites have taken place. Since the times when it was used as a Roman bastion against the assaults of barbarians, the records of its violent history claim that it has been destroyed to the ground whole 44 times. In spite of the fact that its soil has been washed in blood, tears and suffering time after time, its name literally means White City in Serbian, indicating the existence of an angelically pure spiritedness and intellectual brilliance that has ever since been its heart and soul in parallel with the violence, hatred and wars that have repeatedly stricken it. On the other hand, I have always secretly held the name I personally ascribed to it, Love among the Ruins, tightly sealed to my heart, as if sensing how the image of a glorious rose-colored sunset over ruined Ionic pillars nicely depicted the essence of Belgrade, through the streets of which you can often find me wandering in my daydreams. As I pass by the crumbling facades, the rusty fences, the grubby gardens and “dark shadows where fountains weep”⁵⁸⁹ in these daydreams, I try to visualize the finest details and evoke the subtlest sensations, from the smell of the mold and the smog-laden chestnuts to the sound of the rundown trams passing in the distance. Thus I also recall that Mercury, the traditional alchemical symbol of hermaphroditism, of the necessity to wed Yin and Yang and become, androgynously, “woman-manly or man-womanly”, as Virginia Woolf put it⁵⁹⁰, in order to awaken the divine powers latent in us, is also the most common bust embellishing the outer walls of houses and buildings in Belgrade⁵⁹¹, reflecting subtly my inclination to blend disparate poles in everything I do, to be engaged in perpetual quests for the syntheses of dialectical opposites into something blissful and illuminating. Like the old and the new Belgrade separated by the Sava river, the former of which has the architectural soul and the latter of which, as sterilely uniform as it is, has little of it, things in my hands get helplessly broken down to opposites, which I unendingly play around with in attempts to have them crisscrossed and combined into

exhilarating wholes. Also, back in the days, while walking down the grim and stuffy streets of Belgrade, I would always picture my mind as white and untainted petals of a lotus flower, feeling as if my head was immersed into the most pleasant and brightest cloud of divine peacefulness and angelic imagination. In fact, as I imagine my walks through Belgrade alleys, it is as if there were two spirits posed side by side, both of which I associate with the cultural core of my motherland. One of them is that “wild, rapturous and crusading Serbia”, in whose eyes one can recognize angrily flashy spirals, resembling those beaming from the ecstatic eyes of Lung Leg kneeling on the cover of Sonic Youth’s *Evol*, giving rise to waves of irrational aggressiveness and all the wars and devastations that have stricken it every now and again. It is Serbia speaking haughtily of itself, with an accent of arrogance recognizable from miles away, raising three fingers as a sign of its being the ultimate incarnation of Holy Trinity on Earth, albeit unknowingly attracting sins and misfortunes upon itself through one such conceited attitude. On the other hand, as if dialectically mirrored and becoming ever stronger the more it is being challenged by these dark and oppressing forces that tend to break its spirits, there is “Heavenly Serbia”, the one which local poets raised on the flowery pedestals of glory, found glowing like a Sun from the eyes of its people whose hearts are illuminated with the true Christian spirit of sacrificial friendship, which is like a solemn bird that protects others with its golden feathers, of infinite generosity, of soulful “brotherhood and unity”, of deepest respect wherefrom three fingers lifted up high in the air of laid upon one’s chest are a token of the memory that Serbs, the holy servants, come in three faiths, the Orthodox, the Catholic and the Muslim⁵⁹², of teary warmhearted feelings of love for another, of the vibe that valiantly rings with the message “I am my brother”⁵⁹³ all through the air, of devotion and drive to infinitely share, to give more than we have, knowing that only in such a way do we get to live a truly fulfilled life. On the day on which I write these words, walls are being raised on the borders of all countries lying on the major route used by the Middle Eastern refugees to flee their homes and reach Western Europe, including Greece, Bulgaria, Macedonia, Hungary, Slovenia, Austria, Slovakia and France, but not Serbia, the country proud of its history of reaching out with open arms and heavenward palms to anyone needing help and coming to it with benevolent intentions. Memories, thence, flood me, one by one, starting with that of my waiting all morning and afternoon on my very special, 18th birthday in front of the Adventist Church in Belgrade for a special card box to fill it with gifts because only those special boxes were allowed to travel with humanitarian convoys to Sarajevo, the city under siege at the time, to surprise a Muslim family out there. Needless to add, my family was one of a handful of Serbian families to have sent aid to a Muslim family during the civil war in Bosnia and Herzegovina and my standing in the line was met with frequent disapprovals of my fellow citizens, who would occasionally utter a derogatory word or two and sometimes even spit at the queuers. I got the box after the long wait and we filled it with chocolates and candy bars and what not - things we, ourselves, could never afford under the sanctions and monthly salaries of a few Deutsch marks that all of us in the family, combined, had at the time. The box, however, waited inside a truck near Sarajevo for months and then got returned, having never reached the family we wanted it to reach and I still vividly remember this box filled with gifts sitting in the corner of our living room, with our watching it quietly and shedding tears and no one daring to open it, all until it disappeared after my parents donated it to someone else, more local, in need. This story about a box that never got sent across the borderline

⁵⁹² Not incidentally at all, this three-finger salute is also an homage to the three dominant cultural streams that flowed into and collided over Serbia in the last few centuries, one, the Muslim, coming from the Southeast, another, the Orthodox, coming from Russia, and the third, the Catholic, coming from Germanic countries and the West in general.

⁵⁹³ This is how the English poet, John Lehmann named the second volume of his epic autobiography (1960).

is largely a story about humanitarianism in my native part of the world, where, somehow, the obsessive and vile will to draw boundaries where none belong over and over again prevails over the peacemaking effort to transcend them. Of course, whenever we look, we could find lines demarcating dramatic opposites from one another. Just as the line dividing geni from weirdoes, for one, is a thin one, so is the one separating one's streaming to become an epitome of the sublime saintliness and of the malign martyrdom referred to hereby. For example, should we understand the epithet "Serbian, one of the Slavs" as if standing for "a servant, one of the slaves", infusing in us a sense of being oppressed by the worldly powers throughout centuries⁵⁹⁴, it would eventually bear feelings of indignation that would sink our hearts into muddles of anger and hate and predispose us to become irrationally aggressive to innocent people around us and deeply unhappy in the long run, especially in combination with a sense of being literally "superb" with respect to others. This is how we would approach utterly irrational states of mind, such as that of a Đura⁵⁹⁵ when he accepted to forgive the suspect for beating the suspect up and hurting him severely or of Adolf Hitler when he felt compassion for his soldiers for having to deal with such a disturbing task as that of exterminating people in gas chambers and concentration camps, because, then, every act of aggression, regardless of how cruel it is, would be seen as a logical and earnest response to unfairness and injustice that have befallen us in the present or past. For, as decades of research in psychology can teach us, feeling victimized and discriminated against is the first step to our becoming a tyrant and tormentor in our heart in this world of ours wherein "all that's chasing is the chased"⁵⁹⁶. Hence the age-old Chan story about the axe and a young man: in it, a man lost an axe, a young man walked by his window and looked like a thief; later, the man found the axe and the same young man walked by the window, looking like an honest fella this time. On the other hand, if we were to see the state of sacred servitude as a reminder of the need to be an angelic and celebratory⁵⁹⁷ servant of both the divine spirit that permeates it all and human hearts that beat with their enchanting music everywhere around us, bringing us face-to-face with the final norm of the teaching of Swami Vivekananda, "Serving man is serving God", magically transforming our hearts into glowing oceans of love into which all the rivers start to flow, we would be treading towards the horizons of the sunrise of this saintly Serbia in our mind and heart, the love for which makes me want to kiss its ground whenever I step onto it after traveling abroad for a long time. And yet, sometimes it happens that the most intensive lighting up of this saintliness in the hearts and minds of the sensible ones occurs in the midst of terrifying outbursts of hatred and violence, which is quite in accordance with the dialectical nature of the evolution of the world whereby minatory circumstances make us value peace and goodness more than ever, while prolonged periods of placidness and harmony tend to, sadly, sooner or later give rise to clamors of resentment and enmity. In that sense, I strongly believe that had I not grown up in the wartime conditions and had not my teenage years been spent in the society in which bare survival was frequently the only aim,

⁵⁹⁴ The Japanese used the term "seiban", meaning "barbarians, untamed primitives", to describe the aborigines of the island of Taiwan, which they held occupied from 1895 to 1945, and their allies at the time, the Germans, held quite a concordant view of Serbians, seeing them as "seiban" in a way, that is, as brutes and savages that are to be tamed by the marching beat of the German boot.

⁵⁹⁵ Watch *The Balkan Spy* written and directed by Dušan Kovačević (1984).

⁵⁹⁶ Listen to Prefab Sprout's *Hallelujah* on Steve McQueen, *Kitchenware*, UK (1985).

⁵⁹⁷ The Slavic roots of the word "Slav" actually denote the act of celebrating (which always craves for an object to be celebrated: a person, an event or life as a whole) and have nothing to do with any form of slavery. Henceforth, to deprive a Slav from the freedom and will to open one's arms and joyously embrace the whole life in celebration thereof is to pull the heart out of one and yield a withering soul instead of a dazzlingly eruptive emanation of love for all that lives.

mirroring the visions of a beautiful and peaceful world against the world of violence, evilness and hatred that happened to be everywhere around me, I would have never developed a personality as deep as the one endowing me today. Curiously, my becoming a teenager coincided with the beginning of a nasty, decade-long series of civil wars, which contrasted the spring in the lifetime of a soul, when everything on the inside blossoms, with a strange pull into the darkness and decay, predisposing me to embrace a very peculiar view of life both then and now, such that every instance of bliss is suspected for the omens it conceals deep underneath it and every moment of despair is searched for joys nested in its heart. Spaceships I expected to land behind the corner, like on the New Year's Eve of 1999, never came and I, a neon-light blinded escapist in love with the midnight mannequins, ended up facing guns and glowers instead over and over again. Repeatedly awakened from my daydreams into a destitute, war-torn reality, this mindset in bloom now typing these words under the southern Californian sun naturally fell in love with the marriages of light and darkness, of serenity and tempest, of love and fear. A unique form of perception I developed due to these grim circumstances in which I came of age, allowing to me focus my mind onto the most miniscule details of beauty in sceneries dominated by darkness and despair and find bliss therein. After a while all this darkness would disappear in a blind spot of my consciousness and all that would remain would be that fine detail, now illuminating my entire perceptual field like a sun of a kind and all of that thanks to my perpetual immersion in an experience pervaded by the diametrical opposites of safety, luxury and comfort, yet believing with stony firmness in my being on the mission to bring forth "the beauty that will save the world"⁵⁹⁸. Thus, it had been problems, insecurities, fears and challenges pressing me from all sides that managed to incite in me the fire of creativity that has burnt in me up to this day. Or, as woven into the enchanting embroidery of verses that Bhagavad-Gita is, "What is night for all beings is the time of awakening for the self-controlled; and the time of awakening for all beings is night for the introspective sage" (Gita 2:69). Escaping from the reality dominated by hatred, ravenousness and incredible flights of human pathos, I had plunged into the deep blue ocean of beauty where eternal values conveyed through arts, sciences and philosophies of the world dwelled and in which I could carelessly swim, play with sirens that sang the songs of love and dive for pearls of brilliantly thoughtful insights. Emerging from there, I could never be the same. No ordinary human values, such as money, power, partying and pride, adopted by most of my contemporaries in the developed world, could from there on ever have an influence on what I became determined to be spiritually triumphant walks of mine over the face of the world. I shook the dirt of these false values fostered by the mainstream society, stood up and walked guided by the eternal starlight shone onto the paths of Christ-like sages since the ancient times. Thus I recall the words composed by Orson Wells and put into the mouth of Harry Lime in the *Third Man*: "In Italy for 30 years under the Borgies they had warfare, terror, murder, and bloodshed, but they produced Michelangelo, Leonardo da Vinci, and the Renaissance. In Switzerland they had brotherly love – they had 500 years of democracy and peace, and what did that produce? The cuckoo clock". Ever since the dawn of humanity, "great ages have been unstable ages"⁵⁹⁹, as Alfred North Whitehead pointed out, which is why I have always seen Belgrade of the 1990s as a melting pot of an immense spiritual energy wherefrom many great worldly emanations thereof will be born. The bottom line is that amidst all the hellish fires lighting up skies and human souls around me, I managed to have the time of my life, which helped me once and for all look at adversities in life as phenomenal opportunities rather than scary situations that are to be avoided at all costs. The legend says that when the vanguards of the Israeli army

⁵⁹⁸ See Fyodor Dostoyevsky's *Idiot*, Prosveta, Belgrade, Serbia (1869).

⁵⁹⁹ See Alfred North Whitehead's *Science and the Modern World*, The Free Press, New York, NY (1925), pp. 207.

peeked behind the hilltops of Azekah and saw Goliath, “six cubits and a span” in height (Samuel I 17:4), approaching them from the valley of Elah, they said, “He’s too big to be beaten”, to which David responded with “He’s too big to be missed”, before coming down before the mammoth with no sword in his hands and hitting him in the forehead with a stone, so that “he fell upon his face to the earth” (Samuel I 17:49), never to arise again. This lesson in courage and indestructible optimism can teach us that, truly, the bigger and the more frightening the monsters coming to our plain view to eclipse the sun of peace and harmony, the greater are their vulnerabilities and the greater also the opportunities for our slaying them and being promoted to a hero, in the eyes of heavens, not earthlings, of course. With a similarly positive attitude as that of King David’s, always looking to navigate in the best possible manner through the boundary conditions imposed on me rather than blame their imposers and put myself in victimized shoes, shoes that always walk in the direction of becoming a bully and an irrational destructor of things, have I learned to approach adversities in life. Chaos has correspondingly become something that I gladly look forward to, knowing that out of it and it only can stars be born, as Friedrich Nietzsche pointed out once⁶⁰⁰. If it is true that everyone looks back at the days of one’s youth with fondness - assuming that one had survived in shape this most tender of all life’s stages - then I look at the past that was riotous, chaotic and perilous with sweet memories, which presents a dialectic act of mixed emotions that could split a mind unadjusted to its intensity in a second. As a result, I find myself more at home when things start to be dangerous and evocative of the sunshine of hope bursting through the dark clouds of despair rather than when everything seems to be in order and at a right place. I turned to the written word as a way of expressing myself only after my day-to-day life became tediously predictable; fireworks of thought impressed in these lines are thus a reminder of the missing fiery adventures that my life had abounded with once. For, as I repeat, since I successfully confronted imminent falling into existential abysses with uplifting streaming into clouds of sublime aesthetics of being, I learned to see conditions calling for sheer battle for survival as invaluable means for catapulting our creative spirits into higher and far more transcendent planes. For this reason, I claim that the more our hearts become eclipsed by the dark clouds of gloom and grief, the greater the shine arising from their core will be, if only their rays succeed in finding the way to the outer world. Yet, tearing our heart in front of others in ecstasy so as to produce the bittersweet nectar of divine spiritedness to feed the desert souls surrounding us with is seen by the majority of Americans as pompously pathetic overacting and is neglected over cool and pretentious, self-aggrandizing storytelling. I have always seen this state of affairs as a devastating consequence of their upbringing, deprived of an opportunity to glimpse sadness and misery that are inescapable ingredients of life, which, coupled with distanced, competitive and reciprocal social grounds, rather than sincerely intimate and sacrificially friendly, bore attitudes to which passion is not familiar, but thoroughly foreign. Seeing passionless preachers and bleak churches that ingrain no mountain-moving wish to sanctify and bless the world with their presence on the North American continent, I have been repeatedly prompted to ponder whether leisured lifestyles with no bloody wars, pervasive poverty and human suffering on every corner could be blamed for such a diminished spiritual potency and the lack of passionate compassionateness that I have ever since associated with genuinely religious churchgoers. Could these cold and passionless interiors of churches in America be the starting point for the voyage to understand the causes of that great divide between human souls and the ensuing trivialization of life and death in this country, I often wondered while sitting on their pews, even when they were not as blatantly isolationist as the

⁶⁰⁰ See Friedrich Nietzsche’s *Thus Spake Zarathustra*, translated by Thomas Common, retrieved from eserver.org/philosophy/nietzsche-zarathustra.txt (1883).

locked and confined ones in the Old North Church in Boston, one of the oldest in America, made to be purchasable by families who could afford them, usually concluding that the expulsion, not embracement, of poverty must be a trail leading to this cause. On the opposite end of the US map, in Southern California, which I inhabited for many years, poverty was shunned, I learned, even more loathingly, as exemplified by the following note from a book by Robert Schuller, the founder of the Crystal Cathedral in Garden Grove, a town in Orange County, and the world's first drive-in church, christened "a shopping center for God"⁶⁰¹, where religious services were held on top of a snack bar: "You have a God-ordained right to be wealthy. You're a steward of the goods, the golds, the gifts, that God has allowed to come into your hands. Having riches is no sin, wealth is no crime. Christ did not praise poverty. The profit motive is not necessarily unchristian"⁶⁰². Missing from the fabric of the bourgeois lives in America, poverty is not only foreign, but also repulsive to most Americans, as if it is an insult to one's diligence and intelligence, yet without embracing it, no truly religious experience can be reached. These feelings of spiritual scarceness invading the American lives as something that is a natural corollary to exorbitant luxuriousness would get intensified every time I would realize that the questions I was asked by my native friends would mostly revolve around happiness, aesthetics, dreams and bleeding hearts, while those of my North American friends would stay at the level of sensual pleasures, from gastronomical hedonism to vanity workouts, as well as professional achievements and financial gains, implicitly placing oneself in their center significantly more than another. For this reason, I have helplessly seen the impoverished and adverse conditions under which I developed my intellect as convenient for the expansion of my spirit into a deep, artistic and sublime lotus flower, untainted by the spiritual mud of animalistic, merely pleasure-seeking qualities of being which those who grew up in affluent societies have come to solely potentiate. Moreover, what living in an array of places on the map of the world, from the shanty cardboard house camps of Montenegro to deluxe gated communities of Orange County, taught me was that the richer the societies, the poorer the people's spirits therein and the greater the suffering of their souls, sullied by greed, envy, malice and sickening selfishness. This predisposed me to become strongly repelled by the riches, down, down, down to the deepest core of my being, and embrace poverty as a blessing in life like no other. Eventually, I would reach the conclusion that with no hardships and suffering, the great bliss of human spirit that dazzles the world with its divine beauty can hardly be attained. In every creative personality, there seems to be a balance between the summer breezes of peacefulness and cold winter winds of anxiety, and if the balance is perturbed in one domain of one's being, it will become perturbed in the opposite direction in another domain. Eventually, there is a tradeoff between the fire of creativeness and exceptional peacefulness of the world that we live in. If we live in a perfectly peaceful society, such as the ones existing throughout the modern Western world, the conditions for igniting the miraculous locomotives of creative being within people will seriously lack. People then become overly leisured, superficial and hedonistic in enjoying the pleasures of the world instead of humbly pondering over the secrets of the being and the Universe. Sadly, only when our very existence is threatened or when we spin the thoughts of facing the abysses of extermination and nothingness in our mind, we tend to become more willing to ask ourselves the eternal questions of life: about

who truly we are, what our mission in life is, what the mystery of love is and how we can grasp the end of the rainbow of spirit under which the Creator and all of His treasures dwell in delight.

S.F.1.40. As we are about to make steps towards these hidden treasures, we can be sure that the road ahead of us will certainly guide us so as to walk right on the edges of high cliffs, look into dark wells and abysses, be carried by rivers and streams, walk through gloomy forests and fly in fanciful balloons way above the ground. For, only by facing these dangerous, challenging paths and “launching out into the deep” (Luke 5:4) will we open the ways to bountiful destinations for others to follow. This is why our embarking on the ship of innovative thinking and experimenting, in science and daily life alike, entails an adventure of sailing across the unknown seas, never knowing what awaits us beyond the horizon – underwater monsters or islands inhabited by delightful sirens. Living the eternal questions of the meaning of life within our hearts implies our living the ultimate adventure of human being. For as long as these wondering stars twinkle in our heart and mind, we live in accordance with the divine mission of our being, and imperceptibly walk towards revelation of the answers. To live adventurously is thus to bring about advancements and innovations in anything we engage our creativity into. Therefore, both consciously and instinctively, I run after dangerous and risky situations in life, knowing that these circumstances present the roads to wonderful discoveries we come across in life. In addition, everything lies within a circle. Thereupon, by making these valiant choices, I simultaneously exercise my consciousness and instinct, because had there been no dangerous situations around us, both of these attributes of our being would slowly wither away. Without something to threaten our wellbeing here and there, we would settle down in a drowsy state of extinguished creativity. In that sense, I cannot help recalling the words of Alfred North Whitehead: “The worship of God is not a rule of safety – it is an adventure of the spirit, a flight after the unattainable. The death of religion comes with the repression of the high hope of adventure... When man ceases to wander, he will cease to ascend in the scale of being... The very benefit of wandering is that it is dangerous and needs skill to avert evils. We must expect, therefore, that the future will disclose dangers”⁶⁰³. In that sense, I thoroughly sympathize with the already mentioned way in which Flavor Flav, the mascot of the legendary rap band, Public Enemy, started off the introduction to his biography, depicting himself standing on a bridge between Queens and Manhattan, spotting a manhole in it, tucking himself in it out of sheer curiosity and ending up dangling his feet while gripping the bottom step of a ladder and hanging over the 50-meter fall into the East River, just the way my friend Cenić did it too from the top of Split high-rises and, later, Belgrade bridges, adding how “climbing into and out of that manhole is the story of my whole life. Searching for excitement has gotten me all kinds of fantastic opportunities, and it still does”⁶⁰⁴. Likewise, not the glistening avenues flooded with rivers of sheepish souls, but the most obscure and forbidden alleyways are those that I would go on to jumpily conquer with an adventurous zeal, whereas, conversely, whenever I came across one of those sterilely ordered and warded niches in life, I’d remember what Mary “De Sade” F. wrote in her one-star review of Orinda Park Pool in the East Bay: “What happened to the old days of hopping the fence at the public pool like they did in The Sandlot? Squints and Wendy Peffercorn would have never gone to a place like this”⁶⁰⁵. Indeed, Lord only

knows how much I learned about life by standing slumped over rolling joints in muggy alleyways, with friends in wife-beaters and leather jackets and drugs dispersed in bodies, hiding from the cops and the crazies - certainly more than by sitting still like a statue in classrooms, walking in procession in the kindergarten or avoiding bullies' punches in the schoolyard. This explains why I never could resist the call of my spirit to walk down the darkest alleys, to flirt with the most forbidden words, to try the riskiest substances one can think of, living in the past up to the ideal outlined in the words of Carl Sagan from 1969, "The illegality of cannabis is outrageous, an impediment to full utilization of a drug which helps produce the serenity and insight, sensitivity and fellowship so desperately needed in this increasingly mad and dangerous world"⁶⁰⁶, despite knowing that Larry Sanders of Milwaukee Bucks, an avid weed smoker, is the only NBA player ever who ran off to lay the ball into his team's basket⁶⁰⁷, and that the bodies of caterpillars dipped into marijuana smoke decide never to transform into butterflies⁶⁰⁸. It is my clear decision in this life to live right on the edge, in accordance with the definition of a Serb offered by a medieval monk: "A flower at the edge of the grave"⁶⁰⁹. I am aware that should I survive, I will have a wonderful story to tell. And with keeping a clear and bright vision of these stories in front of my mind, I know I am being protected and inconspicuously guided by the invisible forces of Nature. Because for as long as our walks in life are carried out for the sake of enlightening the world and not simply benefiting our own wellbeing in selfish ways, there will be miraculous angelic wings to open up the ways for us to follow, but also to place obstacles before the ways we should not be following.

S.F.1.41. "You don't have to paint tanks and guns to capture the war. You should be able to paint it in a dead leaf falling from a tree"⁶¹⁰, pointed out Andrew Wyeth, the American revivalist of realism in the 20th Century painting, whose eye for the fine detail was so refined that the most impressive one to him in Christina's World, the painting so popular that it decorated the ethereal room to which the astronaut David was transported in Arthur Clarke's 2001: A Space Odyssey after passing through the Star Gate, was the subtle pink tone he put on the female figure's right shoulder⁶¹¹. This attention shift from the mastodonic to the minute echoes equal delicate musings of another visual artist. "When I was lying on the ground, a trench mortar exploded near an apricot tree in front of me. The sound of the apricots falling to the ground was fascinating. There were

⁶⁰⁶ An excerpt from Carl Sagan's article published in *Marihuana Reconsidered*, available at <http://marijuana-uses.com/essays/002.html>. My intense fancying this plant is probably best reflected in the three traditional Serbian nicknames my bandmates gave me long time ago, the names that progressively change from one to another as the night progresses: Nikodim, Prerad and Kamenko. Understanding the wittiness of this wordplay is, however, reserved only for speakers of the Serbian language.

⁶¹¹ "Then it came time to lay in Christina's figure against the planet I'd created for her all those weeks. I put this pink tone on her shoulder - and it almost blew me across the room", said the painter himself. See Wanda M. Corn's *The Art of Andrew Wyeth*, New York Graphic Society, Greenwich, CN (1973), pp. 38.

trees with white flowers, and the way these white petals scattered around was very beautiful”⁶¹² – this is how Yasujirô Ozu, the film director devoted to aesthetic amplification of utterly simple visual settings and movements into explosions of ennobling emotions, an artist with an eye for beauty caught in the winds of war as a Japanese soldier invading the Chinese city of Nanchang in the summer of 1939, described his wartime experience. What these few words of the filmmaker known for the ability to use silence and stillness as tools for achieving extraordinary eloquence implicitly point out is that even in the most horrendous situations and scenes in which we may find ourselves exist entrances to the world of timeless beauty populated by fluttering fairies and sparkles of exhilarating joy given off by their magic wands that expand the petals of our heart and let the Universe be washed with the geysers of creativity emerging freely from it and it, itself, be fed with thrilling cosmic energies. Even in the hardest times of our lives tiny windows to the traces of immaculate beauty, which open the door for seeing the divine spirit washing over the world in all its majesty, are always there, hidden in the subtle details of our experience. These details offer an exit from the world dominated by worry, panic and misery into the one populated by stellar twinkles of peace, gracefulness and pure divinity. Hard times are, therefore, not something to be afraid of and avoided at every cost. As a Chinese proverb says, when the winds of change begin to blow, some people start to build shelters and others start to build windmills. Although we are sometimes not aware of the preciousness of these times, and that particularly while they last, the fortunes that they quietly carry with them will one day become apparent to us. For example, unlike my acquaintances who grew up in affluent societies of the world, having come of age in a country shattered by war, under conditions of extreme poverty where not going to bed hungry was considered a success, I learned to recognize value in little things, be it a pricey orange bought at a farmers’ market or seconds spent in oases of peace, love and harmony. Also, building such an awareness that the smaller the things get, the more beautiful treasures they hide within teaches our spirit to simultaneously become closer and closer thereto, spreading ourselves like an ocean in front of the wonders of the world, humbly and devotedly lying before it all and yet letting all the streams of worldly beauties flow into our heart. I could never forget how during the Yugoslav civil wars, when the average monthly salary was not higher than a few dollars, my Mom on her way back home bought me a white shirt with a knitted red rose that cost more than she could earn in a month. And yet, silly me, finding the shirt outdated and fearing to be ridiculed by my cool, indie friends for dressing up in a frat-rat, Brandon Walsh from Beverly Hills 90210 TV show style, I threw a fit and went on to return it to the store, swapping it, symbolically, for a long-sleeve beige shirt, the color of which has haunted me ever since in its representing my joining that day the order of bleakness, blandness and boringness, of sheepish conformity instead of standing apart from everybody else, in boldness and beauty, as bedazzling and “un-beige” as it could be. For, if Marie-Véronique, the little girl from Gébé’s Letter to Survivors, topped her somnambulant dithyramb, “I see every root of every tree underground. I see every drop of water in every cloud. I see the roots of people’s thoughts. And the clouds of their thoughts. I see their lives. Their whole lives. From beginning to end”⁶¹³, by saying a simple “beige”, then the spirit aspiring to illuminate the universe with the lights shielded within must really paint reality in all the colors but the bleak of beige. Nonetheless, I still regret for this foolish teenage act of mine so deeply that I have ever since been on a quest for a white shirt with a red rose knitted where the heart is. If you find one, let me know, for it means to me as much as the Little Prince’s rose on a distant planet. Nevertheless, when I

⁶¹³ See Gébé’s Letter to Survivors, New York Review Comics, New York, NY (1981), pp. 47.

recollect these memories and imagine once again the extent of carefulness and love that made my Mom buy this gift for me, I instantly become overwhelmed by the most precious and loving emotions I could think of. Of course, I could never explain the brilliancy of these memories to my acquaintances that grew up in affluent conditions in the developed world. Remembrances like these are able to fill our spirit with gorgeous waves of gratitude and inspiration, which most people that grew up in any of the rich societies of the world could not really understand. To me, these memories of little things are so great, and they were so much involved in shaping the mind and heart that is me right now, that I would never go back and erase them for a more peaceful, comfortable and untroubled past, if I could (unless, of course, I'd somehow be able to erase other people's suffering therewith). In fact, by seeing my pampered Western contemporaries dramatically mopping and mowing, wincing their precious lives away over pettiest details of their lives, all I feel is pity for those who have grown in such placid and lukewarm conditions that generally yield pathetic and passionless attitudes, as well as a sense of blessedness for having had a chance to spend my teenage days under the blood red skies of war and terror⁶¹⁴ and stand face-to-face with cordons of policemen for days on endless winter days, in all-star shoes soggy with snow, as floppy and tattered as those worn by the children of Heaven in the Majid Majidi's movie, hungry and cold, with a whistle in my mouth, casserole pans turned into cymbals in my hands and visionary beauties flourishing in my heart. It is, of course, easier to exit such doomed circumstances and enter oases of peace by knowing that they were externally imposed on us as boundary conditions for our growth, without us to blame by any means, even when our own independent actions have led to our confinement to darkness, we should know that the way out, into the daylight of enlightened being, when sunrays of happiness will begin to freely emanate from our mind and heart, always exists. For, "we make a ladder of our vices, if we trample those same vices underfoot", as St. Augustine stressed out in one of his sermons, paying our attention to the fact that mistakes are bars on which we step as we ascend along the ladder of spiritual progress, bringing to mind the bird from Mundaka Upanishad⁶¹⁵ that alternately tasted sweet and sour fruits from the tree of knowledge and inconspicuously became the bird which she saw solemnly sitting on top of this tree one day and of which Swami Vivekananda, my Mom's favorite philosopher, crafted many stories in his landmark lectures⁶¹⁶. In that sense, life bears resemblance to a walk along two labyrinth of San Francisco's Grace Cathedral, a blunt copy of the one designed for the needs of Chartres Cathedral in 1201. Before we start this imaginary walk through it, we should recall that there are two of them, identical to each other, one inside the Grace Cathedral and the other outside of it, surely symbolizing that the path leading to the enlightening center of our being where the treasures of spiritual salvation lie is always open in front of us, irrespective of whether we search for it from within a religious order or outside of it, all by ourselves. As we set our feet onto it, the first few steps bring us on the brink of its center. Then, however, the path begins to deviate, taking us alternately farther and closer from our destination along a crooked trail, calling to mind the words of Lao-Tzu: "The one travelling along the straight path of Tao appears as if alternately descending and ascending" (Tao-Te-Xing 41). That determination and faith are required to reach the center becomes clear to one soon after the onset of this enchanting walk. The

⁶¹⁴ "While everyone bewailed my grandparents' loss, I thought how wonderful the red sky was", is how the German painter, Konrad Klapheck described his memory of December 1943 air raids that burned his hometown, Leipzig to the ground when he was only eight years old. Watch Konrad Klapheck – War episode of Masterworks documentary series, Arthaus Musik (1988).

⁶¹⁶ See Swami Vivekananda's Jnana yoga, Om, Belgrade, Serbia.

next thing we realize is that simultaneously as we approach the destination we become ever more distant from the labyrinth's midpoint, finding ourselves in one of the most outer rings around it, circling far, far away from the center, becoming reminded that "the darkest moments of the night come right before the dawn", perplexingly spinning in our head the image of temporarily faithless Jesus as the ending of his life in pain and agony came near and his eternal salvation was waiting right behind the corner of his experience, seconds beyond his final infinitely empathic blinks, with the light dispersing in rainbows through the tears of compassion and love washing his eyes, resembling the hearts that transform into teardrops falling onto the dancing world underneath in Keith Haring's final work that now decorates one of the chapels of the Grace Cathedral, two blocks from my Nob Hill home and a few feet away from the inner labyrinth, the symbolism of which was attempted to be unveiled on these very pages. And then, from the circumference of this circle, the farthest point from its center, our walk ends with only a few light steps that take us straight from this remotest point on its surface to its enlightening heart, and all that while the Holy Mother sits on the stony steps in its vicinity and watches us with love in her effervescent eyes. Stepping on this center which my great-grandma, herself a member of the order of Saint Francis, claimed to be everywhere on the surface of Nature, following Pascal's thought, we feel saved, once and for all, our arms stretching and the silhouette spinning in intoxicating ecstasy.

S.F.1.42. Timisoara cathedral may be only one among many houses of God in this world which hide great symbolisms in the way they were built. It was on an evening to remember that I glimpsed it from a distance, as I patted dozens of pigeons that were relentlessly and fearlessly alighting on my head and shoulders, to the amazement of the local passersby, while a raging crowd around me, composed of beastly hooligans who traveled across the border to watch the same derby I came to enjoy, was busy smashing windows, throwing bottles, spraying teargas in the air, uprooting traffic signs and clashing with the local police. Leaving the turbulent crowd of my fellow Partizan Belgrade fans, I rushed into a local park adjacent to the square where the rampage was going on and ran up the flight of stairs that lead to the cathedral, then entered it through its main door with much wonder agitating my candid heart. And this is what I noticed. Its lower levels were shiny, as if being made of pure gold, but as I raised my glance higher and higher, the illumination gradually dropped, all until a ring of pure darkness entered my view. But then, as my neck kept on curving upwards, as if I were a giraffe or a tribal sorcerer waving totems to bring down comets from the sky⁶¹⁷, the light again started to fill the space around the walls. Finally, at the very apex of the church, there was a glowing icon of Jesus, symbolizing a perfect salvation awaiting us at the end of our ascending paths. Immersed in this magnificent view, I distantly recalled Hubert Robert's *Obelisk*, the painting in which the light is shown as shone onto a woman with a child sitting on tumbled rocks and a dusty suitcase on the bottom left corner of it and then onto an obelisk on the far right that the woman gazes at, while the space in-between is occupied by a dark and shadowy dome, sucking the viewer into its depths, chilling and ominous, though traversable in theory, provided we hold the light of the beginnings and ends firmly in our sight. Then the structure of Bruckner's *Symphony No.7*, moving from light to darkness and then back to light, got evoked in my mind suddenly inspired by the magnificent architectonic edifice in which it found itself and in which my soul twirled like a top. Now, what this visual excursion from light to darkness and then back to light figuratively represented was the story of the human life. A teardrop plucked from the ocean of omnipresent divineness at the moment of birth, though only to merge therewith once again at the end of the life, it naturally finds itself most distant from godliness at the Dantean

⁶¹⁷ Listen to Serge Gainsbourg's *Cargo Culte* on *Histoire de Melody Nelson*, Philips (1971).

midpoint of its journey, at the apex of its human strengths, at high noon of its day on Earth, the day that spans a whole lifetime. The daytime for the manliness in us is, thus, the darkest hour of the night for gods in us in this world wherein the spirits of children and of the elderly lie nearest to the heavenly bliss and wherein the war-waging, cold hearts of the grownup men and women lie farthest from it. Aside from being impressed in the design of this architectural work of art, the entire journey from the golden luster of our childhood to the dark days in which our quest for love, meaning and truth takes us to the gloomy forest of graceless adulthood, all until we once again emerge into a blissful spiritual reality that encompasses it all, has been described as the story of the human ascension to Heaven by many, including St. John of the Cross who talked about “the dark night of the soul” as a transitory stage of every saint on its way to the light⁶¹⁸. It seems to be the cognitive duty and the spiritual task for each one of us to find courage, determinateness, knowledge and compass of love and, as in Joseph Conrad’s novel, descend down to the “heart of darkness” through the shadowy forests of one’s inner landscapes of thoughts, emotions and the deepest rings of one’s spiritual aura. Once the diamonds of precious insights that an eternal light of the soul dwells on within the centerpiece of our being, and is what we are, are found, we are free to start heading backwards and engage in the equally challenging task of finding ways to bring these sparkly gems to the daylight of being and endow endearing earthlings with their timeless beauty.

S.F.1.43. In the coastal town of Caparica, just south of Lisbon, half a block north from where the Street of Manuel de Agro-Ferreira hits the sandy beach lies one of the ugliest bridges I have ever seen, made of railings totally blackened by rust. Yet, to reach the most evergreen patch of land in this touristy town from this beach, one has to walk over it; although it appears as an impasse to the visitor and a road to sites bleak and depressing, in reality it is a route to places quite verdant and lush, for on the other side it hides a beautiful park a.k.a. Jardim Costa de Caparica. It is thus that a powerful lesson on the spiral nature of our progression along any given existential path, whereby the continuation of streaming forward is conditioned by twisting backwards every few steps or so, this rusty old bridge provided to this traveler. In fact, endless number of times it has been proclaimed that all the progressive pathways in life are divisible to three stages: dreams, nightmares and awakening in the midst of the daylight⁶¹⁹. And if you have ever wondered where the essence of the ability of masterful storytelling to snatch our attention and leave us speechless is hidden, know that it lies in its triadic nature divisible to (a) sunrise-like preludes, placid and pure, (b) moments of confusion, when low-water marks are reached and the gloomy clouds of doubt, perplexity and affliction gather all around the protagonist, and (c) sunset-over-the-quiet-sea-like finales, glorious and joyous, when all things are brought to the harmony of the blissful beginnings once again. Hours and hours can I thus spend going through the chord progression of Awakening, a song by the band in which I played as a youth, going from G major to C major to A minor to D major, hearing in it exactly this movement from an initial harmony, a thesis, so to speak, to the edge of a fall from grace, an antithesis of a kind, and back to a resolving synthesis. *“Nel mezzo del cammin di nostra vita, mi ritrovai per una selva oscura, ché la diritta via era*

⁶¹⁸ See, for example, Evelyn Underhill’s *Mysticism*, Chapter IX. The Dark Night of the Soul, Methuen & Co., Ltd., London, UK (1911).

*smarrita*⁶²⁰, are the words with which Dante began the Divine comedy, and what they serve as a reminder of is that if by the middle of our path, whatever it may be, we do not feel as if we have lost our way and begun to perplexedly spin in circles, while being surrounded by dark decoys and abysses from all sides, we surely do not journey along the right direction and our eventual arrivals at the enlightening ends of the road could be doubted. One of the first things I make my students aware of is that these nightmarish periods that typically become evident in the midst of their research projects are precursors for arrivals at truly valuable discoveries. In contrast, should all in their work proceed smoothly, there is a great chance that nothing truly precious will have been learned by the end of it. Coming across the peculiar moments when conflicts of opposing forces seem imminent and everything seems to be approaching a grandiose breakdown, sounding like mistuned violins playing atonally all at once, can be thus taken as signs that we, in our endeavors, are, in fact, heading in the right direction. As is the case with the course of a good detective story, starting slowly and lazily, as if nothing exciting is going to happen, but then tangling itself in a web of an intricate plot, leading to conflicts, tensions and frustration experienced on behalf of both the watchers and protagonists, before the climax is reached and all things become resolved in a happy-endingly illuminative blink of an eye⁶²¹, the same sequence of stages applies to all truly prolific research timelines. The story of evolution is, in fact, such that, seen from the perspective of the laws of thermodynamics, it makes certain that no increase in the organizational level of complexity of the states of being living systems occupy could be imagined without the risky, perplexing and effortful processes of mashing the islands of the existing order with the crushing waves of the sea of chaotic entropies surrounding it. Just like the moments when the orchestra tunes its instruments, filled with jarring and squeaky sounds, precedes its setting to deliver a powerful performance, so are our ascents to higher levels of being in this life wholly impossible without passing through the periods of dissonance and confusion. For, like a baby being born from hard labor of the mother, so have all the marvelous achievements springing from the track of human attempts to make the Earth a better place for living, be it through scientific, artistic, physical or any other activity, had to cope with the moments of internal struggle and hardships. To successfully pass through these nightmarish phases is thus a precondition for our emerging on the other, sunny side where the fulfillment of our dreams awaits us in all its glory. Also, as we know from the nature of the formation of all excellent teams in Nature, it is passing through both the initial, “honeymoon” phase of childish excitement and the subsequent “storming” phase when different opinions begin to clash and combat each other that a genuine synergetic productivity is reached⁶²². This array of stages has always reminded me of Plato’s characters dwelling in a cave, firmly believing that shadows that the external sunlight produced on the cave walls were the images of reality. Then, one day they emerged out of the cave, into the real world, realizing its immaculate colorfulness and beauty. This three-phase process suggests that passing through a stage dominated by the feelings of confusion and doubt is necessary for our visions to become

⁶²⁰ “Midway upon the journey of our life, I found myself within a shadowed forest, for I had lost the path that does not stray” could be the English translation of these three opening verses of the Divine Comedy.

⁶²¹ According to the insight arrived at by Roland Barthes in the course of his semiotic decomposition of Honoré de Balzac’s short story named *Sarrasin* (see Roland Barthes’ *S/Z: An Essay*, Hill and Wang, New York, NY (1970)), a truly captivating storytelling is such that it allows multiple answers to be shed light on all at once. After subtly describing acts that raise one question after another in the reader’s head, the reader is thus led to an instant in which so many sunrises of illuminative insights are lit up at once and let radiate in all the directions from the cognitive center of the reader’s being that the impression is that he has become transformed into an enlightened sun of a kind, at least for a brief moment of time.

⁶²² See Lawrence Holpp’s *Managing Teams*, McGraw-Hill, New York, NY (1998).

embodied in reality, regardless of the fact that we may never be able to tell for real how real is real: whether the real is merely just another dream of dreams of Chuang-Tzu's butterfly or whether Walt Whitman had it right when he penned the following poem on a golden autumn leaf: "Is it a dream? Nay but the lack of it the dream, and failing it life's lore and wealth a dream, and all the world a dream"⁶²³. In any case, these nightmarish periods of perplexity, wherein crises and opportunities are entwined like roses around briars, I often name Rubber Soul moments, in reference to the Beatles' record that came right after their adolescent and leisured phase and right before the later part of their oeuvre dominated by serious and more profound musical expressions. Although the record radiates with an obscuring sense of being lost in being and time, it acted as a bridge that connected the childish and carefree dreaminess with a mature and artistically fruitful aftermath. Many other great albums were also recorded during transitional moments in the timeline of the artists' musical style of expressing and envisioning the sea of sound, standing as such as artistic monuments with inspiring crossroads inscribed in them. For example, Sonic Youth's *Evol* emerged from the crossroad between the noise-rock past and the more sensitive and melodic future of the band's sound, halfway between the postpunk grittiness crowned by *Sister* and the aural dreamland of *Daydream Nation*; Radiohead's *Kid A* was created as a conceptual crown of the space-rock phase of the band, marked by the previous two records, leading the way for the more minimalistic and electronic future expressions; the Beach Boys' *Pet Sounds*, a bridge between "the dumb and goofy that lay behind and the weird and spooky that lay ahead", as Elvis Costello phrased it⁶²⁴, was born via Brian Wilson's withdrawnness into a "desolation row" of depression of a kind, following experimentation with LSD and the surprising decision to remain at home while the band (at the peak of its popularity at the given time) toured the States, and compose songs from an "alpha" state of mind that was halfway between the sanity of his earlier days and the insanity of the future he was heading to, songs that were to change the heart and soul of pop music for good; most critics of Bob Dylan's work agree that the artist was at the peak of his creativity when he found himself in a perplexing limbo between the protest and pastoral phases; moreover, *Highway 61 Revisited* and *Bringing It All Back Home* emerged as Dylan found himself in a musical no man's land, having discarded the traditional country forms and introduced a more invigorating and free style in both the lyrical and musical aspects of his songs, while his proximal masterpieces, *Blood on the Tracks* and *Blonde on Blonde* were recorded during intense personal crises in the artist's life; Neil Young's *Harvest* was recorded in an exceptionally spontaneous and minimalistic fashion so as to reflect the singer's sadness and a sense of emotional emptiness arisen as a result of the periods of intense depression that preceded the recordings and propelled the Canadian to stardom due to his success in demonstrating a highly introspective side of the country rock sound thereby; other critics might say that one of his following records, *Tonight's the Night*, best demonstrates Neil's standing in the midst of that long afternoon shadow of his life, at the entrance to "the forest dark of the midway upon the journey of our life"⁶²⁵, the record on which Neil's sound was at its niftiest and most complex, swinging like a pendulum from the end of depression and melancholy to the end of pernicious exaltedness, and his voice at its most multifaceted, hoarse, stuffy, occasionally out of tune, as in *Mellow My Mind*, and, so untypically of him, consistently failing to reach the higher, tenor notes, yet exactly because of that unlocking the deepest secrets of the human soul; the Rolling Stones' *Sticky Fingers* with its moody,

somnolent, lazy and rundown sound, reflecting the band's fatigue and tiredness of fame, recorded just before the musicians entered a creative hiatus that lasted up to this very day, ended on an ethereal note and influenced much more indie artists than any of their preceding albums, from the masterpiece that is *Exile on Main St.* to *Let It Bleed* and *Beggar's Banquet*; David Bowie recorded his possibly best record to date, *Station to Station*⁶²⁶ in LA in 1975, during a particularly difficult period of his life, at the peak of his drug addiction problems and alienation issues, when, in the artist's own words, he was "fairly psychically damaged and trying to get what he was understanding expressed in the musical form"⁶²⁷; if one Cure's record would go down in history, there is zero doubt that it would be *Disintegration*, the one where the band was not at its best, the unboundedly cheerful, but at its most internally estranged, distant from home and depressing, threatening to turn the listener into an exanimate plank every time, with songs being dragged into eternity, all of a sudden becoming all about despondency and none about sanguinity anymore; the critics' darling and the best record by the Byrds to date, *The Notorious Byrd Brothers* emerged during a transitory period for the band, filled with internal discord and strife, like the one caught on tape on one of the bonus tracks, *Universal Mind Decoder*, involving the drummer, Michael Clarke's leaving the band and David Crosby's being dismissed midway through the recording, the latter of whom was replaced by a key former band member, Gene Clark, for three weeks only in order for the album to be completed, in part because the band was caught between the two musical streams, the country and the psychedelic, and was uncertain which way to go, inadvertently creating in this record a blend of the two that is still unrivaled in musical history; after their disappointing attempt to hit the charts and resonate with the upbeat, catchy pop rock listeners with their record *Monster, R.E.M.* entered their darkest and musically most mature phase, the onset of which was the opening of the first following record, *New Adventures in Hi-Fi*, a lethargic reflection on the downfall of the western frontier⁶²⁸ and, through analogy, of the band as a whole, containing the line "this flyer is out of lime", which hinted at the band's own being aware that, as far as the American rock of the given era was concerned, they flew higher than anyone else, but were simultaneously no longer in the limelight; arguably the best and historically most significant musical work by Kathleen Hanna came out of her locking her crestfallen self in her bedroom in the hometown of Olympia, WA following the disappointing episode with *Bikini Kill* and recording a solo album on a \$40 mixer, which would be released in 1998 under the pseudonym *Julie Ruin* and become one of the defining works of bedroom, lo-fi dance music that was about to reach its pinnacle of popularity only a decade or so later; Bajaga's third record, *Jahači magle*, worst rated by the critics and the public alike at the time of its release, was recorded at the crossroad between the classic Belgrade rock phase of the musician and his future immersion into more folkish waters and iterant recycling of the second record's hit, *Sa druge strane jastuka*, from numerous musical angles, presenting today perhaps the most valuable piece in the musician's oeuvre, an album that spoke many important, albeit mostly unheard messages to the Yugoslav music scene of the 1980s, including (a) its relying on laidback arrangements that promoted reflection and action, contrasting the upcoming overproduction of sound that culminated in the nineties and that can be blamed for overwhelming the listeners and freezing them in a listless, impassive state, (b) its utilizing fine and

succinct, nonrepetitive instrumental lines, similarly though not as delicately as in, for example, Pet Sounds or Astral Weeks, (c) its reaching a combination of an authentic Belgrade rocker's cool and charm and the universal joy of being a youth, (d) its shyly breaking the rules of grammar, an effect that could have revitalized the lackluster lyrics of the mainstream music scene if it had only been taken to heart, and so on; Keith Jarrett's Sun Bear Concerts, considered by many to be the peak of the jazz pianist's oeuvre and described by some music critics as "an hour or two of the most stunning solo improvisations you are ever likely to experience"⁶²⁹, were recorded during "a time of self-questioning and even self-doubt; it was almost as if he had momentarily lost his vision of music and his place in it and was groping to relocate it"⁶³⁰; John Coltrane's A Love Supreme emerged straight from the crossroad on which the artist found himself at the time of the record making⁶³¹, as he was leaving behind the more traditionally structured works with the so-called classic quartet, involving standard harmonic progressions and rendering of jazz standards, the approach that creatively culminated at that period, and slowly entering the waters of free, non-key-centered and harmonically static improvisation; Sly and the Family Stone's There's a Riot Goin' On, an eponymous answer to Marvin Gaye's What's Going On and a complete opposite to it with its socially inquisitive, distrustful, tense, weary, irksome and cynical nature, was recorded at the peak of Sly's period of insanity and backlash from everything, from fans to friends to media to the band's earlier, happy psychedelic sound⁶³², and to this day illustrates the sign of the early 1970s as post-summer-of-love times, in all its depression, ennui and bleakness that keeps on expanding its jaws to swallow us; Marvin Gaye's darkest hour was during the recording of Here, My Dear, the apologetic record whose royalties were to go to Anna, his wife who was suing and divorcing him at that moment, serving to this day as a monument to the magic of artistic and perhaps any other creation, where even when we deliberately crave to produce a piece of shit, not art, the stars may align in such a way that a timeless masterpiece may result, as all of it is in God's, not human hands⁶³³; though most critics would disagree, Oasis at their best were at their bloatiest too, on Be Here Now, the record whose title is the homage to what John Lennon and, thereafter, many others⁶³⁴ summed as the ultimate message of rock 'n' roll, the record created by a bipolar band alternately weary of music and overenthusiastic about it, the record on which the tenderness of the

⁶³⁰ *Ibid.*

⁶³¹ John Coltrane, in fact, was an artist who incessantly sought crossroads, that is, contexts in which he would, first of all, experiment and only then create music that emotionally resonates with the listener. This meant creating art that went ahead of its time and was largely incomprehensible to the masses, receiving more boos than ovations. It also meant going beyond the idea of success as defined by conventional human terms and finding spaces where criticisms and slips are more probable. For example, even though he was fired from the Miles Davis first quintet because of drug problems, when he joined it the second time, he could have stayed in its safe net, but he could not disobey the call for experimentation and the search for one's own authentic voice. Likewise, once his late quartet reaped the most prestigious rewards in jazz following the release of Giant Steps and A Love Supreme, he could have continued to play in the same style and stayed in the same creative spot. But he departed to the free jazz territory that no one ventured to before and befuddled the audiences with this choice.

⁶³² Listen to Sly and the Family Stone's Stand!, Epic (1969).

⁶³³ In a way, this point echoes the idea around which Fellini's 8½ was built, which is that no rules exist when it comes to predicting what will come out as a superb artistic moment and what will appear as a treacherous one, irrespective of the effort invested in its creation, as well as that in search of an inspiration one may make whatever is missing in it the subject and the material for one's work, effectively turning the darkness between the stars of illuminative visions into light, all in a pop art spirit bona fide.

⁶³⁴ See Simon Reynolds' Ecstasy is a Science: Techno-Romanticism, In: Stars Don't Stand Still in the Sky: Music and Myth, Edited by Karen Kelly and Evelyn McDonnell, New York University Press, New York, NY (1999), pp. 199.

hearts of the Gallagher brothers, so carefully protected by the security fences of irksomeness, was closest to the surface, and, finally, the record at which the band was, in reality, dying after the boyish charms of Definitely Maybe and the middle age of Morning Glory?, sounding tired and harrowed, making vain attempts at optimism and being more painfully louder and drawn-out than ever before; Talk Talk's Spirit of Eden was recorded as the band abandoned the trendy pop art forms, clear and crunchy, and made an effort to create a vaguer, boldly dissonant aural atmosphere more reflective of the listener's inner world and deliberately made impossible to dance to; Pet Shop Boys' Behaviour, an epitaph to the 1980s era of sunshiny synths and sympathetic sentimentality wrapped up in tonal harmonies and a prelude to a deeper, more monotonous and contemplative beat, distant and druggy at times, that typified the 1990s⁶³⁵, the decade in which "society seemed to be living in a 1980s hangover and was unclear in its direction"⁶³⁶, arose as the artists tossed aside the digital recording synthesizers and samples and used analogue ones for the first time; Angelo Badalamenti's mesmerizing soundtrack to the TV series Twin Peaks was a similar sign of the times, captivating the viewers with its unique sentiment wherein the sunshiny carefreeness of the 1980s collided with the chilling shadowiness of the 1990s, the dark decade on the rise; in spite of the catchy, crystal candy sound of all twelve songs comprising the original US version of the eponymous 1989 debut record by the Stone Roses, it was the song added to it as the thirteenth upon its rerelease the same year, the 10-minute version of Fools Gold, containing ominous lyrics evocative of the pending disbandment and but a single harmony, as opposed to all the preceding tunes rooted in harmonic transitions, that effectively signaled the end of the Beatlesque approach to crafting a pop tune by weaving a multitude of simple harmonies next to one another and echoed the arrival of the era of ravish beats and special effects, marking a transition similar in style and significance to that from the classical to the modal jazz that occurred in the late 1950s; Serge Gainsbourg recorded his magnum opus and a precursor for trip hop two decades in advance, *Histoire de Melody Nelson*, after the period of producing a series of commercial hits, as he wanted to seek new, freer directions in music, but knew not where these experimental explorations would take him from the point of envisaging love and death twisting around one another like a rose and a briar; and so on. As far as stars of the cinema are concerned, if you have ever wondered why James Dean had such an impressive effect on the moviegoers in the 1950s, know that this is in part because he epitomized the monumental transition from the masculine, macho man of the past, such as the likes of John Wayne, James Cagney or Humphrey Bogart, to the delicate, sensitive man of the future, as exemplified by Gregory Peck as Atticus Finch in *To Kill a Mockingbird*, Sidney Poitier as Mark Thackeray in *To Sir, With Love* or Alain Delon as Rocco Parondi in *Rocco and His Brothers*, in the decade that followed. This example tells us of yet another thing that entails standing on such intersections of historic importance: namely, energies concentrated in one standing at these crossroads are so immense that one could either utilize them to be lifted to the stars and beyond, or be burned by them, as if by lightning, or, perhaps, as in the case of Jimmy Dean, both. Finally, even my musical compositions were recorded during one such "dark night of the soul", if I am allowed to use the medieval Christian terminology to describe these transitory moments in one's lifetime typified by an exceptional sense

⁶³⁵ As it appears to the intuitive eye of my mind, with the onset of 1990s the world entered a state of tremendous cultural crisis ensued by the critical pervasion of irony, cynicism and global feelings of dejection, all enwrapped in the dismal spirit of Mary Jane, the crisis which, although having been mildly mitigated by the colorful visionary flashes of the space age that the boom in computer industry brought forth, has yet to resolve itself.

⁶³⁶ This is how Douglas Coupland described this era in his introduction to *Polaroids from the Dead*, HarperCollins, New York, NY (1996).

of solitude and desolateness. Namely, just before I was about to begin to work on my recordings in late 2000, at the turn of the millennium, the symbol of a great crossroad in itself, I experienced what now I call a paradigm shift in my consciousness. It was around my birthday that fell on an Indian summer day on that very same year. I waited for it squatted behind a bush, on the very edge of the Belgrade fortress, overlooking one of the greatest confluences of two rivers in Europe, resembling a Mowgli of the modern age, carrying forth the blend of a soiled and dusty gamin and an ethereal aristocrat out of this world, with eyes resting on an airplane that crossed the full Moon and dreams of muses flying in figure eights through the air. Then, the next morning I unexplainably woke up to the sound of Neil Young's *Out on the Weekend*⁶³⁷ and Travis' *Why Does It Always Rain On Me* mingling in my head, unable to stop my tears for hours, without knowing the reason why. I got up, I walked in my moonwalking shoes, I grazed the statue of Venus de Milo in the living room, I gazed through the caged windows until blinded by the Sun blazing behind the three cypresses, the guardians of our garden, but nothing could help; the question asked by the narrator of Laika's *Spooky Rhodes* still swirled in strange vortices through my head: "There are things I can't explain, why tornadoes love the plains, why the city quiets at dawn, why I couldn't stop my tears?"⁶³⁸ It was as if these waterfalls of teardrops repentantly washed all the dirt collected on the mirror of my soul over years of blasphemous living. Now that I reflect on them, it becomes crystal clear to me that my embarking on the journey of devoted attempts to beautify the world with the music I will make and the words I will craft coincided with this event that I call my first nervous breakdown, the culmination of the period during which I increasingly saw fragments of the past detaching from the memory parts of my brain to the sound of Mercury Rev's *Holes* and flying around randomly like strange objects or pieces of the broken glass and uncontrollably blending with the perceptions of the present. These tears shed on my 24th birthday indeed appeared to me like the waterfalls dropped down from some great and mysterious heights by gods to purify my spirit from the ills of vanity and prepare me for my role in the deliverance of the divine message to humanity through musical and written works that were yet to be conceived and created. Be that as it may, the following morning I left the city and took a long ride to the seaside along endless serpentines, gazing at the starry sky above that moved in circles, enchanting my sad spirit for good. At the end of it I came to embrace my parents, leaving the drifty lifestyle of a moonchild and a rock star behind me and yearning to plunge into prayerful and more modest ways of being. Soon after, I picked up my guitar, hit the suburbs and sat all alone in room for days at a time, passionately recording my music, note by note. With this feeling that something died in me, while something unknown pecked its way out of the egg of my soul, still lying fresh in me, I began to zealously inscribe my musical visions onto digital tracks, dreaming of creating something perennially beautiful, able to enlighten innumerable hearts of this world. The meaning of my life thus became fully enwrapped by the purpose I attributed to the artistic child that was being born out of me during those couple of months. In fact, such importance did I ascribe to these works of mine that I often cried myself to sleep, praying for one thing only: that God gives me strength to infuse them with pure magic and thus accomplish my divine mission in life. I felt so strongly that something was dying in me, not knowing that it only signified one part of my sensual youthful personality

⁶³⁷ On my birthday night Luka played Neil Young's record *Harvest* in his attic in a high-rise in the smoggiest street in Belgrade, November 29th St., where we wound up. The record opens with the song *Out on the Weekend* and closes, as I realized fifteen years later, with a most depressing birthday song, sung by a man confined in a state of isolation and unable to relate to any living thing around him: "When I look through the windows and out on the road, they're bringing me presents and saying hello". Perhaps this birthday song subconsciously stirred depressing feelings into the pot of my psyche that night and affected my state of mind for many days to come.

⁶³⁸ Listen to Laika's *Spooky Rhodes* on *Sounds of the Satellites*, *Too Pure* (1997).

vanishing for good and yielding its place to something more stable and light, that I confused this feeling with a sign that it was my own time to sail away that had approached. Yet, this sense of imminent peril forced me to do one thing with all my heart: to impress the beauty dormant in me, the beauty I had witnessed on Earth, in form of sounds that will continue to travel through the seas of sound of the world, enlightening it after I leave it at last. It was exactly this crucifying mental state wherein opposing forces encountered and crashed over each other that underlay the rise of something extraordinarily meaningful in artistic terms. All of this is to say that greatest gifts in this life, from our biological offspring to artistic works that move the millions, are born from labor that borders disorienting perplexity which, miraculously, the light of the soul manages to find its way through. Moreover, from the monumental works by deaf and arrhythmic Ludwig van Beethoven, which will be for a long, long time visible as awe-inspiring peaks in the historic landscape of human musicality from wherever in its future we stand, to the artistic heritages of Vincent Van Gogh and Edgar Degas, who shook the conventions of painting of their times despite their defective eyesights, to the virtuosic breadth of guitar expressions in the hands of Django Reinhardt, whose two of his left hand fingers had been rendered functionless by a fire in his gypsy caravan, to transcendental musical visions transmitted to us by blind or visually impaired Stevie Wonder, Thom Yorke and Jónsi Birgisson, all of which have served as points of ramification of novel musical streams, to the creation of perhaps the most monumental pop rock record of all time, *Pet Sounds*, by Brian Wilson, who was 95 – 99 % deaf in his right ear^{639,640}, to the birth of minimal and futuristic techno sound in the gloomy ghost town of Detroit, to Robert Wyatt's recording of one of the most heartbreaking records known to the world, *Rock Bottom*, after he had felt from a window and become paralyzed for life, there are signs showing us that the most beautiful artistic dreams arise only insofar as the life paths of the artists are strewn with hindrances and hardships. Hence, whenever we come across obstacles and stumbling stones in our lives, we should learn to optimistically, with eyes full of sparkling glister, see in them stellar signs and stepping stones that help us reach the fields of unprecedented brightness of the mind and exuberance of the heart.

S.F.1.44. I have heard a lot of people involved in scientific research whining how they would like to have picked something simpler and more predictable for their profession. Occasionally I feel the same way, asking myself if I have chosen the right path. Then I dream about doing something that would fulfill me with an equal dose of satisfaction on a daily basis. The excitement of doing scientific research is equivalent to being on a rollercoaster ride. For some time it may be boring and everything may seem fruitless, but then, all of a sudden, it may produce a joyful slide during which we would collect brilliant results without almost any effort at all. But then again, we find ourselves wasting days and months on something that does not work. And such a sense of constant insecurity that provokes incessant questioning regarding whether we picked the right path as our career choice is inevitably present in the heart of each explorer. Scientific research is like a great adventure in which we never know what awaits us at the end of the day. On some days everything we do will seem futile and we will lay in bed guilty of not having done anything useful. But then other, brighter days will come when we will face the gentle breeze of an enlightening feeling that follows little miraculous discoveries, and when we lay in bed at night the glow of satisfaction dawning on us will seem purely blessing. Then, we may know that scientific research as a profession will never make us feel perfectly confident with our skills. We will always wonder and

⁶³⁹ His being nearly deaf in one ear explains why this timeless record was released in the mono format and it would take 30 years before the first stereo version remastering.

⁶⁴⁰ See Brian Wilson and Ben Greenman's *I am Brian Wilson: A Memoir*, Da Capo Press, Philadelphia, PA (2016).

approach new challenges insecurely, with gingerliness of the cherubs, quite like aforementioned Alexander Pope's angels that enter new places while treading with fear. And yet, this is exactly why science lies at the top of the pyramid of human creative endeavors: because it contains insecurities and incessant questioning and doubtfulness at its core. That is what makes it so superior to other human professions. To illustrate this, I often invite the listeners to imagine two scales hanging down my spread arms and place the task of a translator on one and that of a writer on another. With the former choice, our creative options are seriously limited, and yet satisfaction arises every time we make a nice fit between the languages that we are trying to bring together. On the other side, fulfillment of creative writing tasks never brings full satisfaction, as creative options are limitless and there is always a room for wonder over whether what has been written is good enough. Hence, creativity, adventurousness, insecurity and the risk of failure will thus be picked by most as the weight that prevails and brings more fruit in the long run over the combination of working routine, confinements of our creative curiosity, safety and security. The cost of the creative choice in life is that, like all great adventurers that set themselves out on the road, we will never know where we will be at the end of the day, whether we will be sleeping in a comfy bed or in a sack on the side of the road. This adventurous character of scientific research makes it so similar to the genuine nature of all the greatest human endeavors and creatures that were "on the road" all their lives, knowing that "the sail of the true seaman wanders just to roam"⁶⁴¹. Or, as proclaimed by Jesus, "The foxes have holes, and the birds of the air have nests; but the Son of man hath not where to lay his head" (Matthew 8:20). Some of the most creative creatures on this planet were thus too busy selflessly playing with Archimedes' circles in the sand to think about their own recognition and survival, often not taking too much care about providing the basic financial support for themselves, and thus met their elderly days on the road, in complete poverty, oblivion and rejection from the rest of the society. They loved Nature and humanity so much that they neglected the need to find a permanent home for their own. My choice is, doubtlessly, the same. It is to be always on the road, to live breathlessly for the sake of beautifying the world, and to awaken that enchanting Noah's rainbow of divine love and wonder in other people's eyes.

S.F.1.45. Every time you close your eyes, you can tell to yourself: "This is how the world should be – pure nothingness". But as you open your eyes, your mind should whisper to you: "And this is how the world is – full of life. A miracle". After all, the ultimate purpose of meditation is to summon a perfect silence and emptiness within ourselves, against which even the most ordinary perceptions will appear astounding. With silence and nothingness on one side of the astral sphere of our consciousness and genuine wakefulness on the other, our mind would hold the Moon of dreaminess and the Sun of love standing face-to-face in its core. As such, it would live up to the old alchemist ideal of balancing the silent wonders of the starry sky and the creative potency of the Sun in its energetic determination to shinningly deliver the inner light of spirit to the world. With such an enlightened background of perceiving and reflecting, we would be able to look at the world with an unequalled amazement, noticing the miraculous signs of God and the most immaculate messages of divinity in every flower, every pebble, and every creature of the world. This would bring us to the genuine source of true religiousness, unpretentious and humble, summed up in the following words of St. Augustine: "And so Plotinus the Platonist proves by means of the blossoms and leaves that from the Supreme God, whose beauty is invisible and

⁶⁴¹ See the last frame of Hugo Pratt's *Corto Maltese: The Ballad of the Salt Sea*, Universe, New York, NY (1967), pp. 253.

ineffable, Providence reaches down to the things of earth here below. He points out that these frail and mortal objects could not be endowed with a beauty so immaculate and so exquisitely wrought, did they not issue from the Divinity which endlessly pervades with its invisible and unchanging beauty all things”⁶⁴². Indeed, I have always seen genuine religiousness as a flower sprouting from the seed of sense of wonder seated deep within our soul. Without these waves of amazement over the fact that all these fabulous things around us, from material objects to people, actually exist and are not covered by the shroud of darkness, no flame of true religiousness can ever be ignited within us. Henceforth, since best efforts to change things around us for better always focus on revitalizing their foundations first and foremost, so is the most effective preaching almost totally oriented towards sparking this sense of wonder that may have gotten lost and covered with the dust and grim of daily worries over time. For, once it is in place, the tree of religious feelings, carrying many leaves and fruits of divine ethics, all ideally supported by a stable trunk, will lightly spring into life in all its sweetness, subtly proving once again that aesthetics may indeed be the mother of ethics, as Joseph Brodsky would have put it. This viewpoint also explains why efforts to spread one’s faith in the divinely intelligent hands of Nature being all around us, co-creating the world as we see it in togetherness with her creatures, will be in vain for as long as we drop branches and leaves of this tree of religiousness onto the soil of other people’s minds; for, without this sense of wonder already in place, all these insights intending to prove the validity of reasons to be religious are doomed to fade away. The only way to foster the growth of this fabulous tree is to either water its roots wherein the sense of wonder already dwells or to sow the soil of other people’s consciousness with its magical seeds, which are, as we all know, most effectively found in the very fruits. If we truly do so, we may begin to act like a Christ, rarely ever teaching formally and solely verbally, but rather demonstrating the divine powers of the contact with the divine by his healing acts, the fruits that come off the tree of true religiousness. Thence, as it may appear to us that these fruits we have dropped in front of others’ feet are let rot out there in the open, under the fierce sun, wholly ignored, we ought to hope that the little seeds of wonder hiding within them will eventually enter the soil, quietly and unnoticeably, through the narrow gate (Matthew 7:13), as it were, if we were to use the Biblical analogy, and begin to sprout therein one day. As the growth of this tree takes over, so will the sense of astonishment over the existence of everything, from the little cosmic eyes shimmering with love and wonder gracefully all around us, sunny and shadowy at the same time, bright and dark like a starry sky, to a primrose flower to a tiniest grain of sand, be sparked, capable of holding the house of genuine religiousness, of which churches on Earth are only rough metaphors of, on its shoulders. Hence, every time we blink and for a moment of a second encounter the versatility of the daylight world with the darkness of our eyes closed, we can be reminded of this greatest dialectical dichotomy of life – nothingness and life. For, from this disparity between the two, from the crack that appears in the place where they touch, the flowers of faith in divine powers present all around us, an open call for them to fill our spirit and transform it into a celestial messenger, spring to life. It is this incessant facing of the abysses of existence that actually pushes us forward, to strive to attain the greatest things that will benefit humanity and the entire planet. It is the force of the second law of thermodynamics, the one that says that the Cosmos spontaneously evolves in the direction of an increasing disorder, which sets the conditions for the endless evolution of life. It must have been an enlightening discovery for Immanuel Kant when he realized that a bird in its flight may think that her flight would proceed much easier and more flawless if there were no drag of air around it⁶⁴³. How wrong would she be? Without the resistance of air, she

⁶⁴² See Augustine of Hippo’s *City of God*, Penguin, London, UK (410).

⁶⁴³ See Immanuel Kant’s *Critique of Pure Reason*, BIGZ, Belgrade, Serbia (1781).

would find nothing to push her wings against and thus sustain herself in the air. Ornithologists may now add that birdsongs are generally more beautiful in colder climates than in the warm, tropical regions as well as that birds are better at singing in the rain than in the sun⁶⁴⁴, reiterating the idea that comfort is more often than not the enemy of enlightenment. The same can be said for every type of progress in life. If we desire to flap our angelic wings one bright day and bless millions of starry souls thereby, or confer heavenly touches on the sad and the desperate with our song, we would need not only to cope with and tolerate the things in life that present obstacles to our development, but to sustain and cordially take care of them. In a Christ's parable, "a man sowed good seed in his field: but while men slept, his enemy came and sowed tares among the wheat, and went his way" (Matthew 13:24-25). When the desired fruit appeared, the weed appeared too, and the servants stepped forth ready to destroy it. But the wise farmer said: "Nay; lest while ye gather up the tares, ye root up also the wheat with them. Let both grow together until the harvest" (Matthew 13:29-30). In essence, we should look after everything: the things in life that soar us in soulful fulfillment and pleasure and the things that drag us down. For, without the latter, our flight towards the sun-rising horizons of our soul and Nature, in their endless tweeting and chitchatting using the language of the heart, would not be possible. As humans, we are inescapably positioned in the middle, with the center of our being right where the heart is, where the divine creative forces stretch top-down with the love they bring to the thirsty worlds below meet the forces of the Earth which in their incessant wonder stretch up, up, up.

Nature and I walking together along the Way of Love⁶⁴⁵

S.F.2.1. "Shhhk", the sound of a stripy beach ball streaming through the air and me lifting my arms up, up, up to catch it now arises in me. And then the memory of carefree passing of the colorful banded ball between me and Fido, my little bro, the most wonderful game we have ever played and which we called "shhhk-shhhk", is brought to mind. It was the game of our sending the ball back and forth, with love and care, from our heart to that of the world around us, while the divine spirit was seen as impressed in each and every detail of it. Later I would realize that the essence of my Philosophy of the Way was inscribed in this lovely game of catch we played. It is the one of live, active and feedback interaction between ourselves and the rest of the world, driven by love that illuminates our heart and visions directed towards washing others with the waterfalls of exhilarating cosmic joy and spiritual salvation, caressing them with gentle flaps of protective angelic wings, and opening their eyes to the glimpses of the roads of beauty and love inside of

⁶⁴⁴ See Richard Alleyne's Birds 'are better at singing in the rain – and the cold', *The Telegraph* (May 22, 2009), retrieved from <https://www.telegraph.co.uk/news/earth/wildlife/5362862/Birds-are-better-at-singing-in-the-rain-and-the-cold.html>.

⁶⁴⁵ See Glossary at the end of the book for the definition and introduction.

their hearts. It is interacting with the world that we thence love with all our heart, while focused inwardly, tending to produce the most enchanting moves, knowing that a ball tossed with the light of One in our heart may subtly and mysteriously enlighten the whole wide world. Not only does this art of bandying the ball beautifully teach us how to simultaneously absorb the impressions of the outer world and creatively respond thereto, but it also shows us how to balance the power of Wonder that tends to toss the ball to the very stars in its striving of our hearts to reach them, and Love which tends to deliver it straight to other people's hands, so that they exert as little effort as possible in grasping them. Yet, the balance, as always, has to be maintained. If we were only guided by love and empathy, while not throwing to ball high in the air and letting others hop to catch it but merely handing it over to them, we would foster drowsy expectedness, with no surprises that keep them awake. But if we infuse this love and empathy with a dose of genuine wonder, our balls would be thrown just high enough so that the catchers have to jump up to get hold of it, while exercising their vigor and rejuvenating themselves in this symbolical streaming for the stars. Hence, whenever we find ourselves throwing the beach ball to each other, we should be reminded of its symbolizing the art of the balanced Wonder and Love. The former springs from an inner withdrawnness that makes us conceive fabulous moves that are to intellectually and emotionally invigorate others by placing guiding stars of thought on the skies of their mind, which they will then tend to strive to reach and start building spaceships of beautiful emotions and thought which will send them there. And the latter, the majestic power of Love, is what makes us not grasp the ball, the symbol of all the precious ideas, emotions and insights that we arrive to in life, and hold it with ourselves, but pass it onto others, knowing that passing the ball beautifully, with a hint of magic, and letting another score a golden goal is equal to living up to the ideal of becoming a true catcher in the rye, a true saver of children that play in the fields of life, a real angel who ceaselessly brings the starriness ingrained in his spirit down to earth.

MOST GOLD MEDALS FIBA BASKETBALL WORLD CUP HISTORY

ARGENTINA	1
SPAIN	1

S.F.2.2. A similar “shhkh” sound is produced by the swish of the basketball net as the ball passes through it, inducing yet another special, golden feeling of harmony in me. That is when I recall the following. No surprise, five times world champions in regular basketball and winners of six out of eight possible gold medals at world championships in 3x3 basketball, one of the rare sports where one always streams up, up, up, hooking heavenly hoops while spending as much time suspended in the air as with feet on the ground. This is the score of the tiny country that I come from, making it by far the most successful basketball nation ever. Although this game was invented in the US in the late 19th Century, no one can dispute that some of the most imaginative players, the ones with

the softest hand, have come from the part of the world in which the roots of my upbringing lie. The most familiar example of this technical virtuosity coupled with a bag full of idiosyncracies to American audiences is, of course, the third-generation Serbian in the US, Pistol Pete Maravich, often considered the best basketball player to have graced the courts of the NBA and NCAA. Some of the best basketball coaches on the European continent are also Yugoslavs, which alongside the inexhaustible outflow of basketball prodigies from this part of the world speaks in favor of the great schooling grounds that have enabled this phenomenon. Now, as divided between the place of my origins and the place from which basketball originated, I feel invited to start this short summary about the Way of Love with invoking this simple game. The story is the following. Sometimes I go out and play basketball, all by myself. Ever since I was a kid, I enjoyed playing a special game. It is the one of asking a Yes/No question right before taking a shot. It can either be a question that pertains to some hidden qualities of mine which I am unable to notice without jumping out of my skin or a question about the worldly events that may or may not be bound to happen. Now, as I have pointed out on numerous earlier occasions, these two invisible poles – epistemological, residing within the subject’s cognitive core, and ontological, residing in the objective nature of the world – can be named spirit and God, and imagined as two nodes between which we can stretch the strings that will then vibrate with the beautiful qualities of life. Seeing the whole reality as an outcome of a continuous dialogue between these two poles comprises the essence of the co-creational thesis. And most important of all, these two ultimate metaphysical poles, in touch of which all experiential appearances arise, are inseparable. Both the subjective features of the observer and the objective features of the observed are intermingled within each and even the most elementary qualities that result from these observational acts and that come to comprise the world of the observer’s experience. A similar situation occurs in this basketball questioning game. Whatever the answer I get, I am never quite sure whether it was a real answer coming from Nature or my hand felt inclined (as guided by the deepest layers of our subconscious intentions) to shoot the hoop better or worse depending on my deepest aspirations in relation to the question asked. Like Nikola Tesla dreaming of her Mom dwelling on an otherworldly cloud, surrounded by angels and celestial music, and being unable to tell whether it was a divine providence or merely his own subconscious assemblage of the worrisome thoughts about his mother, the frescoes he had seen earlier in a nearby church and the symphonic music he had heard the day before, so am I in this case in no position to draw a strict line between the natural and the personal causes behind the outcomes of this prophetic game I had invented in the moments of my fancy. And so, sometimes I wonder if all I have written in this book, from the opening appeal to the blessings of angelical craziness to the concluding ideation of swirls of galaxies in a head overfilled with stars, were to come true, as it partly does, believe it or not, as I sit like a lotus and write these very words, I would not be able to tell if it was the proof of my being a clairvoyant prophet who could glimpse into the future and through an unexplainable twist of petite circumstances and strange connections be prompted to leave a lasting evidence of it or life’s been a fountain of wishes that made the coins of my dreams and visions fallen into it magically come true. One thing is certain though: in line with the comment given by Joan of Arc when, during her trial, one of the judges wished to discourage her enthusiasm for hearing the voice of God deep inside of herself by telling her how “those voices, they come from your imagination”, “Yes, that is how messages of God come to us”, we ought to be aware that we will never be able to tell whether our prophetic insights are only the products of our imagination or truly the messages that come to us straight from transcendental loci on which the celestial voices rest. This is why every divine message that we manage to read through the lines of our perception is predestined to remain

the subject of our faith and never have its origins proven with a 100 % certainty. For, as is the case with each scientific description, so is in every aspect of our experience impossible for the cognitive subject to discern where the reflections of his tautologies and assumptions end and where the reflections of objective features of the physical reality subjected to his scrutiny begin. For, our premises, postulates and the deepest aspirations and anticipations streaming along the seabed of our minds define the methods and tools with which we approach experience, and as such partly predetermine the answers in form of the outcomes of our perceptions and reflections. This brings to mind the case of Pulpo Paul, the oracle octopus that correctly predicted the outcomes of each eight games that it was set to foretell during the 2010 World Cup in South Africa. Towards the end of the tournament, however, I began to wonder whether the supposedly clairvoyant octopus did not only predict, but directed the evolution of soccer games that it forecasted. Namely, since all the players were well informed about the predictions of the little octopus through media channels, the psychological effect that its forecasts may have had on the players could not be discarded by any means. Hence, there is hope that by establishing divine cosmic connections by means of a strange, animalistic clairvoyance, the little octopus swimming in a little water tank in a small German town may have miraculously navigated the planetary voyage of the entire human civilization. Next on the line of examples of the impossibility of untangling whether the inner world influences the outer or the other way around is that of chocolate, specifically a study that concluded that people who regularly eat chocolate are less depressed on average than those who eat it less regularly or do not eat it at all⁶⁴⁶, when the case could have easily been that people who are sad and depressed simply have a lesser affinity for sweet food. And whether the food people eat affects their mood or their mood affects the choice of the food they eat is impossible to guess, most probably because the answer is both. Another example that comes to mind at this point, and it is the one related to the mystical origins of the Egyptian pyramids, most of which were faced with bright limestone, the remnant of 5-million-year-old seashells whose deposition had been lifting Egypt from under the sea over eons, making them monuments to great depths streaming to equally great heights; for, the more we ascend, the more we need to simultaneously descend in order for our journeys to succeed, whatever they may be. Now, for a long time, historians wondered how the ancient Egyptians were able to construct pyramids while laying out ratios of their dimensions in number π with such a fantastic precision, but once they realized that the Egyptians rolled marked wheels to measure lengths and stacked them to measure heights instead of using tape measures, the answer became obvious. On the other hand, the world as-it-is partly predisposes our mind to rely on specific concept and beliefs in its thinking, so that the objective aspects of Nature are reflected in those very foundations of human mind. The concepts of spheres, planes and other geometrical shapes could not have been conceived by human minds had there been no hints given by Nature through perceptive shapes that our visual experiences abound with. The co-creational thesis thus says that whatever the product of one's creativity is, it can never be discerned to what extent Nature, including society, has contributed to it and to what extent it stems from one's own inventiveness. King Solomon thus wondered if "man's goings are of the Lord; how can a man then understand his own way?" (Proverbs 20:24), while Nature has, on the other hand, endowed its creatures with free will, freedom of choice and intrinsic creativity, which prompts us to realize that the wheel of the evolution of life and human consciousness is driven by our incessant thirst to reveal answers to questions of universal meaning, which arise from the fact that our paths

⁶⁴⁶ See Jennie Agg's It's the sweet treat said to be good for heart health and blood pressure, but is dark chocolate REALLY so much better for you?, *Daily Mail* (July 29, 2019), retrieved from <https://www.dailymail.co.uk/health/article-7298949/Is-dark-chocolate-REALLY-better-you.html>.

are the paths of Nature, while the roads along which Nature as a whole develops are partly determined by us. In an ancient alchemist story, Narcissus, in love with oneself, just like I, myself, am, typifying narcissism, that most complex of all the demons Sigmund Freud wrestled with⁶⁴⁷, stared at a lake for so long that he could not recognize any more if the image he was seeing was merely a reflection of himself on the lake's surface or the lake's looking at himself is what he was looking at⁶⁴⁸. Likewise, life is such that in it we could always recognize the essence of the mind wonderingly swimming in the eyes of Nature and Nature divinely reflected in the depths of the eyes lying behind these visible appearances. Hence, if you happened to observe that "intelligence is the mechanism by which the Universe comprehends itself", my natural, constructivist response to this objectivistic statement would be a simple reversal of the subject and the object in it, so that the reality becomes "the mechanism by which intelligence comes to know itself". In such a way, I would make the snake of eloquence bite its own tail and yield a circular paradox that breaks the clogs of linear logic to pieces, leaving alchemists, second-order cyberneticists and the spirit of Niels Bohr who once famously observed how "the opposites of some great truths are often yet other great truths" to agreeably giggle behind the clouds of our experience. For, if I were to place these two statements, one arguing in favor of the human mind being a direct reflection of what Nature is and the other one claiming that Nature, that is, reality as we perceive it, is but a mere reflection of the human mind, and run the trains of my thought along both of them, trying to demonstrate that in their juxtaposition the secret of completeness of our epistemologies lies, it would neatly describe the heart and soul of my philosophical approach that bore the concept of co-creation over years. The essence of the co-creational thesis tells us that these two ultimate poles that define experiential realities, mind and Nature, subjective desires and an objective fate of the world, are inextricably intermingled. So is with every sign on the path of our lives intuitively assigned by ourselves as interesting and essential; since it arises from the fascinating interplay between our subjective anticipations and aspirations on one co-creative side and objective evolutionary streams of reality on the other, it always points in both directions – into the heart of us as the explorer and into the center of the spinning of the wheel of the Universe. The answer to the question of the Sphinx pointed back at the heart of the questioner himself as well as at the inescapable nature of life as a whole, and the same mutual pointing in the opposite directions, towards the essence of ourselves and yet everywhere around us, to the part and the whole at the same time, can be discerned as dormant in each and every metaphoric sign onto which the human mind stumbles in its adventurous quests to puzzle out the countless enigmas that pervade its existence. Along a sideway track of our mind, this crossroad in our mental sphere brings us closer to the doorsteps of the question that innumerable ancient thinkers were puzzled with: "Is the world perfect because it is the way it is or is it the way it is because it is perfect"? Likewise, by realizing sings that almost speak to us with their relevancy for our lives, right here, right now, we become astounded, not being able to untangle our ability to project our inner questions onto external objects and events from the feeling that this is indeed Nature talking to us via its subtle details. Many times it has happened to me to feel a sense of mystery and extreme importance in front of some impressions and experiences, somehow almost knowing that those are the ones that would either help me find the right way or show up later on my destiny path. And when they indeed do show

⁶⁴⁷ See Michael Maccoby's Narcissistic Leaders: The Incredible Pros, the Inevitable Cons, *Harvard Business Review* (Fall 2016), pp. 53.

⁶⁴⁸ See Paulo Coelho's *Alchemist*, Paideia, Belgrade, Serbia (1988). On the front cover of the original version of this book is the painting titled *Narcissus* commonly ascribed either to Caravaggio (per the findings of the Italian scholar Roberto Longhi in 1913) or Spadarino. See John Gash's *Caravaggio*, Chaucer Press, London, UK (2003), pp. 63.

up, I could never resolve whether it was my being that spontaneously conducted my actions in order to make them appear again or fulfill their prophecies or it was them that revealed the future paths of our destiny that would one day inevitably emerge in front of us. For anything we show sympathy for in this life and for anything that strikes us as revealing the essence of being to us, as if being a piece that perfectly well fits the puzzle of our heart, we can thus ask: “Is this beauty I see only about me or is it truly out there? Is it a beauty that lies in the eye of beholder or is it really the way that it is? Is this good for me only or for everyone else?” And yet, we may never be able find the answer because it would always remain somewhere between the essence of our heart and the essence of Nature. Again, where the subjective power of directing the natural events in accordance with our deepest wishes and desires begins and where the signs placed on the path of our destiny in an objective and observer-independent manner end is impossible to resolve. Objectivity and subjectivity could not be untangled. Each one of them is like Kant’s *Ding an Sich* or the inaudible sound of one hand clapping in the famous Zen koan.

S.F.2.3. In other words, there is no way to demarcate our self from the environment since they are both blended within every product of our perception. We can find Nature drawing the lines of our thinking and yet recognize the essence of our self, our deepest emotions, aspirations and cognitive foundations mysteriously revealed in every flower, every pebble and truly every detail of the world we are aware of. And because every form of ontology is inherently predisposed to rest on an epistemology of one type or another, we would never be able to discern our true place in the universe of being. Whether we are inherently separated from each other or belong to a grand unity of being is going to remain a mystery for good owing to the way our experience is formed – at the intersection between our self and Nature. Regardless of the angle or the scale, whatever the outcome of our perceptions or reflections, intrinsic to it will always be the inseparable entwining of mind and Nature and however hard we try to disentangle the two, our efforts will be in vain. On a more positive note, the Way of Love with its Yin-Yang flow of sociability and individuality to and from the heart of one another explains countless seemingly irresolvable paradoxes in this circular worlds of ours wherein heading away from the destination often presents the fastest route to get to it, whereas rushing straight toward it often stands for a surest way to lose it out of sight, e.g., the fact the egocentrism, as strangely as it seems, hides in its core excessive sociability, given that the ego feeds itself on what other people see in one rather than what one sees in it, as well as the fact that tearing all the ties of submission to social values and expectations is needed to awaken a true fire of creative thought and behavior inside one, the thought and behavior that will bring forth lasting social value into the world. All of these instances, of course, stem from the fundamental juxtaposition of mind and Nature in every single perception of ours, from the systemically broadest to the finest in detail. And this impossibility of finding out whether we, as the subject, are inherently united with Nature or separated from it is the reason why the metaphor of the Way is invoked as perhaps the most profound symbol of the Universe and the nature of our existence. This is, of course, because every way is something that connects into a unity something implicitly presumed as separate in the first place. Likewise, the symbol of the cross, emblematic of the world’s most popular religion, I have always seen as a superimposition of the line of connection, |, onto a line of separation, —, denoting the same inseparability of coming together from drifting away on our path from earthiness to ethereality, from the dark coarseness to the shiny starriness of the spirit. In other words, an awareness of the beautiful unity of being can exist only insofar as we stand on the pedestal of presumed separation, as much as the merits of Love and

other divine qualities can be recognized and appreciated only after being mirrored from chaos and commotion.

S.F.2.4. The co-creational thesis tells us that we should be like the circus performer who rides two horses at the same time. One is the way of Nature and the other is the way of our soul. One is the path of the missionary fate Nature has assigned to us and the other is the freewill path of our heart. The true revelation is, of course, realizing that they are one and the same, that living in concert with the divine mission of our being and being perfectly free is a single path, no matter how paradoxical it may seem. For, these two, the essence of our being and the essence of Nature, are blended in every product of our perceptions and reflections. Everything we are aware of arises from the touch between the essential cognitive stance of ours and the stage in our biological and spiritual evolution from which we approach the phenomena of experience on one side and the silent and mysterious guiding hands of Nature, the Creator of the Universe, on the other. As we find ourselves in a car that traverses a long desert road, with a dashed yellow line drawn in the middle of it, we could have an impression that it is us who steer the vehicle; yet, as the old Serbian saying tells us, “The road is what drives the car”⁶⁴⁹, yielding a syllogistic argument that continues to levitate before our minds as a reminder of the impossibility of figuring out whether the river banks guide the river path or the river path defines the shape of the riverbed, and, therefore, of the fact that every creation in this life is a co-creative act in which the creative roles of the system and its environment are merged into an inseparable unity. As a matter of fact, that even the most elementary actions are impossible to perform correctly without their being coupled to sensing feedback from the environment can be illustrated by the inability of most human subjects to correctly steer the wheel of a car when given the task to do so as if they were changing lanes on a highway, with eyes closed, based on memory only, that is, without looking at the road ahead of them while performing this action⁶⁵⁰; in other words, to lean our senses simultaneously onto the pulsating walls of our own mind and onto the walls of the world that surrounds it is a precondition for coordinating our beings marvelously through space and time. The plot of *Hicksville*⁶⁵¹, a comic book about comic books, revolves around comic strips as human creations that delicately weave threads of destiny, interlacing human dreams and visions with the evolution of natural events and demonstrating the ways in which human spirits are indeed co-creators of the worlds that we live in. Yet, a most striking effect in the course of the book is achieved by the mysterious appearance of a captain and an Aboriginal shaman who are after investigating the sources of their unsolved hypothesis that the land beneath them moves and reconstitutes itself into unknown shapes, guided by unknown forces. “We are entering a new world; one in which *everything* is alive and in motion”⁶⁵², thus observes the shaman with swarms of stars visible in the background and a gaze wistfully directed in the distance, reconnecting us with what is for most of us a deeply forgotten sense of genuine religiousness, the one sensing the divine powers sending us precious messages and signs from every detail and corner of our experience. The reason why the apparition of these two mysterious characters is so unexplainably stunning is, of course, connected to their balancing the idealistic stances ingrained in the storyline with a viewpoint which acknowledges the creative

⁶⁴⁹ See Paja Stanković’s *Serb for Beginners*, BND Tiker, Belgrade, Serbia (2000).

⁶⁵⁰ The typical response is to steer the wheel towards the lane one wants to switch to and then bring it back to the center, the sequence of movements that would send the car off the road, when these two moves ought to be intercepted with a mild turn away from the lane one switches to. See David Eagleman’s *Incognito: The Secret Lives of the Brain*, Vintage Books, New York, NY (2011), pp. 55.

⁶⁵¹ See Dylan Horrocks’ *Hicksville*, Drawn & Quarterly, Montreal, CA (1998).

⁶⁵² *Ibid.*, pp. 233.

force intrinsic to godly Nature, aside from that dormant in human spirits. This naturally brings to mind one of the final scenes from Robert Altman's *Short Cuts*, a rare example of a plotless movie to have emerged from Hollywood, in which, after three hours of, more or less, nothing going on, a girl is hit with a bat and the ground, miraculously, starts to shake, evoking that age-old earthquake that occurred in Dante's head at the moment of the Christ's death and created slips in the ground of *Inferno*, allowing one to slide from one circle of it to another⁶⁵³. So, we may never know if it is us who have shaken the land or it is the land that has shaken us. Hence, when the scene of the finale of another one of Altman's landmark plotless movies, *Nashville*, showing the murder of the country singer, Barbara Jean, was connected with the assassination of John Lennon, which took place a couple of years after its premiere, the journalists and historians could not untangle whether the movie predicted or directly caused the fatal fate of the rock star. For, as we see, our anticipations, wishes and aspirations direct the events of the world around us, but always in correspondence with the voice of Nature hiding behind the veil of immediate appearances. If we look for the origins of our thoughts, we would never be able to draw a strict line between what is the product of our genuine insight and what comes as an incentive of the surrounding creatures and Nature herself. This is because these two are inextricably entwined. That is, one without the other could not exist. As in the famous Escher's painting, human mind is drawing Nature, whereby Nature is drawing the features of the human mind, and where one starts and the other ends could

⁶⁵³ A few other Altman's movies, including *Nashville*, possess a similar structure, displaying no plot for almost their entire duration and then ending in an explosion of events toward their very ends. Another example of such a structure in the cinematic realm may come from Powell's and Pressburger's *A Canterbury Tale*, a movie in which a tender plot, beautifully contrasting the difficult wartimes in which it took place, unfolds leisurely for almost two whole hours and then in the last five minutes, when the company of three reached the ruined city of Canterbury, everything comes around in an eruptive series of events that leave the viewer awed. One could argue that life, which typically follows a relatively eventless route before the process of transition to another realm of being, of sailing into the Great Beyond, begins and takes over one's whole being, is more veritably reflected by one such structure than by the classical Aristotelian form composed of the unfolding, tension-building and resolution triad. Like in Van Morrison's *Astral Weeks*, where the climax of the song is reached when Van whispers into the mic that timeless "Ain't nothing but a stranger in this world, got a home on high, in another land, so far away" as the song has already long begun to fade away, life, ideally, if allowed to unfold on the wings of Tao, could reach its most climactic moments at points when it has largely left the body. Finally, this is to remind us that the structure of a narrative piece of art is its element often so fantastically crafted that it could completely overshadow its deficiencies at other levels. Or, as Slavoj Žižek phrased it, "the true content of a piece of art is located in its form, in the way in which its form reconfigures/replaces the content that it represents" (see Slavoj Žižek's *The Pervert's Guide to Cinema*, Tvrđa, Zagreb, Croatia (2006), pp. 9). One example of how decisive the form of one such artwork can be and how it can guide years of tenacious content-building may come from *The Secret History*, the debut novel by Donna Tartt, who created it because all she wanted was to write the world's first murder mystery in which the murderer is revealed on the first page (see her interview with Charlie Rose, retrievable from <https://youtu.be/7oo-wNuP9tU?si=qormlPhHrt6feRXv>, 5'30", 1992). And no one knows how many times I dozed while watching *A Canterbury Tale*, pushing myself over and over again to watch it until the end, the decision that I do not regret by a tiniest bit now that I have found an utmost beauty in the unusual, asymmetric arch that its form adopts. In other words, it was this form that infused the spirit of the movie's content with something beautiful, the infusion that, as such, can take place only after we make ourselves familiar with this form by completing the whole journey from the beginning of the movie to its end. At the same time, this is to implicitly remind us of how flawed the most common structure of popular art forms of the modern day is, as exemplified by pop songs consisting of repetitive buildups, orgasmic climaxes, releases, drops, new buildups and so on, a form serving the shallow, animalistic needs of the laymen and a form subdued to the commercial interests of those whose pockets become filled by the commoners' listening to them. For this reason, one of the first things I, as a lead guitarist in a post-rock band in Belgrade in the 1990s, did when I entered the musical expression realm was shatter this clichéd structure and begin to compose songs with non-repetitive, non-modular and asymmetric structure, free of blatant stanzas and choruses, resembling the classical composition format more than the debilitating contemporary pop song one.

never be precisely figured out. Speaking of ground shakes, I recall how the priest who baptized me when I was less than a year old soon after died during an earthquake, as he ran outside of the house to save his beloved one. As he embraced her, one of the walls of their house detached and smashed both of them. I did the same when an earthquake hit Belgrade in 1998, climbing upstairs to see if my parents are doing fine while the house was trembling and shaking, just a day before my exam in Atomic Physics, the breaking point in the four-and-a-half-year long course of my studies, at which I picked the seventh piece of paper with questions in a row⁶⁵⁴, passed the exam and on the way out met a girl that opened up the way for me to reach Holland, the place where a deeply buried traveler's zeal of mine took hold of my spirit for the first time. The preceding summer I listened to Michael Stipe's voice singing "hey, kid, shake the land, maybe you're crazy in the head"⁶⁵⁵, and felt as if the moment of a great spiritual initiation, of getting in touch with the great mission that I was predestined to accomplish in life, had come. I ran on that night of the earthquake upstairs to wake my parents up, the same thing they had done decades ago when they climbed up the endless spiral of stairs of one of the tallest building in Belgrade to wake me, as a baby, up while all the people were escaping in the opposite direction. By doing so, they demonstrated the road I should be following in life: never running away from the dangers and into the nets of safety while thinking about my own survival, but heroically going opposite of the stream along which the majority of people flow, falling straight into the risky and adventurous passages, while being moved by the enlightening desire to save human souls who carelessly dwell in an innocent slumber. Hence, whenever I feel a slightest tremor arising from Hayward and St. Andreas faults above which I have lived for a while now, I do not scan my surrounding for a sturdy hole to hide in. Rather, I look for a human being in my surrounding to save from the falling objects and protect with the shield of my body, if needed. Only by living in such a self-sacrificial manner can we attain the peaks of ultimate spiritual fulfillment in this life, I claim. And so, only a few hours after I landed in San Francisco for the very first time, just as I drove in a cab straight through the heart of the Folsom street fair as a welcome to the city, disbelieving what I was seeing through the window of the car, and entered my now old dwelling place in the Sunset, on a Halloween night and the 99th birthday of my paternal grandfather⁶⁵⁶, a sanctified priest who heroically died at the

⁶⁵⁴ 7 is the number of knight in my personal numerology, dreamily glimpsed in a book on tarot during my childhood. I recall that whenever I picked the first or the seventh piece of paper with questions in a row, I passed the exam, and whenever I picked the second, I failed. I claim that a lot could be learned from this metaphoric message.

⁶⁵⁵ Listen to R.E.M.'s Drive on Automatic for the People, Warner Bros (1993).

⁶⁵⁶ My grandfather, Petar Uskoković, was born on October 31, 1908, the day celebrated as the day of Saint Luke in the Orthodox Christian world and specifically in Montenegro as the day of Saint Peter of Cetinje, after whom my grandfather was named. For, interestingly, both Saint Peter of Cetinje, the ruler of Montenegro in the late 18th and early 19th Century, and his successor on the throne and the famous poet and playwright, Petar II Petrović Njegoš died on October 31, the date of birth of my grandfather. Incidentally, 36 years later, on October 31, 1944, he and his 16-year old daughter at the time, Senka, left their home and went on a trip that would take them across the entire Kingdom of Yugoslavia, from Montenegro to the far ends of Slovenia, possibly reaching even the Austrian Alps. They were expecting to meet the allies there and return with them to Montenegro as victors. Alas, it was a journey with no return, as he was captured by the Yugoslav communists, sentenced to death and executed by the firing squad on a meadow near Kamnik in the spring of 1945. October 31 is also celebrated across Europe as the Reformation Day, given that on October 31, 1517 Martin Luther, as the story goes, nailed his 95 Theses onto the door of the Castle Church in Wittenberg and mailed them to the Archbishop of Mainz in the act of rebellion against the Church's allowing the rich to purchase the certificates that would guarantee the full forgiveness of all sins and absolution from all punishments in Purgatory. It is a type of rebellion similar to the one I, myself, have been engaged in, albeit in a different social sphere, that which can be called the temple of knowledge or, simply, academia. Hence, as "*tornjevi tuku na svetog Luku*" (listen to Đorđe Balašević's Jednom... on Panta Rei, Jugoton, Zagreb, 1988), my destiny remains such as to do it all to reform the corrupt contemporary academic world, no matter the cost.

dusk of World War II, the day which now carries his name on the calendar of the Serbian Orthodox Church, an earthquake struck, yet thinking of it, I fear not. For, if that day of a thunderous and purgatory ground grind comes, like on that April day 101 years before I stepped on this shaky SF soil, the doomsday on which the City was said to have died⁶⁵⁷, I know I will not duck, cover and hold, trying to protect myself only. Rather, in the spirit of genuine Christian saviors, I will stand tall with my chests pushed out, as if sending enlightening bursts and flashes of love for the whole wide world that I have nourished in my heart, guarded by faith in the angelic hands of Nature that are everywhere around us and looking around for a soul to save from the awakening rumble of the Earth below instead of panicky running over other people's bodies, the way it was depicted in another song sung by Michael Stipe⁶⁵⁸, about a pending apocalypse in the ethically and spiritually corrupted Western world. I know that having the great heroic deed of the priest who baptized the religious me in mind is what may keep me safe from the land shakes that are the inevitable threat to the fabulous city of San Francisco in which I write these words and in which, coincidentally, the first book written in Serbian was published on the North American continent, in 1869⁶⁵⁹, the city that is more progressive than anything I have seen so far on this planet, but which one day, I know, may turn out to be celebrated as the New Atlantis. On that day, I may be like Pyotr, the worker in the Chernobyl nuclear plant, still alive despite being at the exact facility that exploded on that April night in 1986, amazed to realize that the top of the plant was blown away while he, all alone amidst the starry sky and a strange silence surrounding the place, was left wonderingly standing in the epicenter of it, like "any man left on the Rio Grande, a king of the world as far as I know"⁶⁶⁰ from Steely Dan's ode to cobalt cigarettes and all else entailing a nuclear attack that leaves but one soul alive. "I'm amazed that I survived, an airbag saved my life, in an interstellar burst, I am back to save the universe"⁶⁶¹, I may sing on that day, as I have sung oh so many times before.

S.F.2.5. The key paths of our destiny become magically revealed to us every once in a while via enlightening, groundbreaking insights. Most of the time, these cognitive flashes come to us unexpectedly, as if they have suddenly fallen from the sky. Another day, I was riding on a tram and spinning thoughts on how beautiful one's devotion to scientific research, a monument to the greatest adventure of the human mind, aimed at understanding the mysteries of Nature, is. And then, right at the moment when the train hit the Sunset Boulevard and the view suddenly stretched in front of my eyes, a flash of thought struck me. It was a revelation that Love could be inferred from the pragmatic, metaphoric nature of scientific language and the benevolent desire to produce deeds that would heal and elevate the spirit of humanity as standing at the bases of doing science. Beside Wonder that stands behind the great adventurous thirst of scientific minds, Love is thus another great pole that supports science at its foundations. "Love and Wonder are the two pillars that humanity and science stand upon", my mind burst with joy in the moment of a Eureka-like enlightenment. Hence, although metaphors that the natural world around us abounds with can present subtle signs that help us find solutions to many puzzles that our head buzzes with,

sometimes Nature overwhelms us with strong impressions that produce a sudden crash in our mind and lead to an enlightening solution. In that sense, I stick to the observations marked down by Thomas Kuhn: “Paradigms are not corrigible by normal science at all. Instead, as we have already seen, normal science ultimately leads only to the recognition of anomalies and to crises. And these are terminated, not by deliberation and interpretation, but by a relatively sudden and unstructured event like the gestalt switch. Scientists then often speak of the ‘scales falling from the eyes’ or of the ‘lightning flash’ that ‘inundates’ a previously obscure puzzle, enabling its components to be seen in a new way that for the first time permits its solution. On other occasions the relevant illumination comes in sleep”⁶⁶². The latter explains why I always keep a pencil and a sheet of paper next my night stand, knowing that days when we are dreamy and fancifully walking in clouds as if guided by the mysterious waves of gentle intuition and nights intersected with lively dreams are those when inspirational ideas most intensively dawn on us. It was in the middle of one such Easter⁶⁶³ night that I woke up with a flashing idea in my mind; it was that love is the force that will save the Universe. In a brief moment of a second, I saw my entire life as if lying on the palm of my hand, the feeling I have had many times before, including the one time when I lay with my feet on the ground on the wooden table on the porch of our family house in Mala Moštanica, next to a jardinière crowded with purplish and prayerfully bowing trailing pansies, gazed at the translucent blue sky above me and saw the entire planet Earth revolving in front of me like a celestial ball whose surface was crowded with the buzzing swarms of strivings and sufferings and evolving towards the times of a Gomorrah-evoking devotion to permissive gods, self-centered pleasure-seeking preoccupations and, finally, the state of an apocalyptic crisis of immense proportions which will culminate in a sudden phase transition to a bright and enlightened age wherefrom the collective consciousness of Gaia will come to shine like a big reflector of dazzling light to the cosmic dusk around it. And in this crystal ball I saw patches of my formative years spent during unimaginably harsh times dominated by 10^{27} overall hyperinflation impact rate in the period of 1990 to 1994, \$1 monthly salaries, the bankrupted state, empty grocery stores, international isolation, economic sanctions, closed borders, wars, corruption and clouds of hatred and anger springing behind every corner. And yet, in this vision of mine I saw the oasis of sacrificial love that my parents blessed me with as the reason why I could see those days from the current perspective as verily days spent in Paradise. It came clear to me that love is that great cosmic force that transforms the gloominess that surrounds ethical and aesthetical ignorance of humanity into sources of the eternal shine of divine joy. This is something I have no doubts in, as of today. Hence, I gave myself a vow that wherever I go, I would preach one simple thing: love as a key to it all. The ideas I will expound will implicitly reverberate with this message in each and every one of the contexts in which my opinion could be reasonably offered: from sciences to

⁶⁶² See Thomas Kuhn’s *Structure of Scientific Revolutions*, University of Chicago Press, Chicago, IL (1969).

⁶⁶³ Physical chemistry of phase transitions has ever since been my favorite province in its realm and Easter, just as its metaphorical meaning may suggest, is that magical time of the year when I reflect on who I have been and who I aspire to be and thus spontaneously seed sprouts of great transformations of my being deep inside of my heart and mind. And such seeds invisibly placed in the soil of our heart and mind will invite Nature to restructure its ways so as to make the paths projected by our dreams stream towards their becoming true. In fact, for every good thing that happens in our world, for every blessing that Nature endows us with, as I believe, a moment preceded it, resembling George Bailey’s ineffably communicating with the celestial angels that dwell in the realm of spirit, dreaming about how beautiful and good one’s world will become should one get what one pines for. And so a Christmas blessing like this falls on one. In such an entwinement of the great transformations that our beings undergo in life and the aspirations that illuminate the spiritual cores of our beings lies the tiny and invisible thread that connects Christmas and Easter, letting us play on its string one of the ultimate messages of Christianity.

philosophies to arts to the most ordinary deeds present in our daily lives. And nothing will be able to stop me on this way. It is the parental and brotherly love that stands at its foundations as my silent protector, the shield that brings back the already mentioned words of Lao-Tzu, “Those whom the Heavens want to protect, they bless with Love” (Tao-Te-Xing 67). It is them, therefore, that, once and for all, deserve full dedication for anything that I will have achieved on this road. And yet, as the beginning of this paragraph may have suggested, such insights come all of a sudden, which implies that there must be another, complementary aspect of our walking on any road imaginable in this life: not having a defined destination and being open to change our methods and trajectories at any given time. Hence, whenever anyone asks me for the projected path in life, I bluntly answer that I do not have it. I do not possess plans that stretch way in advance. I am aware that illuminative insights that predestine our pathways in life come to us suddenly, during moments of divine inspiration. Thus, whenever I am pressed to make a big decision, I withdraw myself and think. “Think” was the simple but epiphanic, bulb-flashing message my Rasta friend, Tito told me as I was about to begin my journey back home and embark on a train in the Hague, the city about which I had miraculously composed a song years before I realized I’d end up living there, closing the circle of some purely ethereal thinking and leaving myself to wonder among the stars about the prophetic powers of our intuition. And just before I left for Holland, in the midst of the horribly indiscriminate NATO bombing of Yugoslavia, combining cars, buses, cargo ships and trains as the transportation vehicles, I left a Y path engraved on a jungle floor as the screen saver image on the home computer of ours. Many years later I would find myself dichotomizing my compatriots between those who had directly witnessed this notorious bombing, with bombers and other warplanes zooming over their heads, and those who had immigrated elsewhere earlier, and I, myself, still stand as the only soul I have known that has seen both sides of this two and a half months long bombing campaign: the terror and stress on one and the leisured superfluity on the other. This has made me wonder over the years if this was a sign that my destiny would be to forever and ever stand on the Middle Ways of one kind or the other and always feel a mix of contempt and respect for all the confronted poles, irrespective of the polarity in question. After all, could there be a more glorious fate for one that to be given the role of a genuine peacemaker, a bridge that unites disjointed worldviews along seemingly impassable gulfs? Now, as I walked out of the room that flashed with this Y-shaped sign and stepped into the unknown, the tune that magically echoed in the distance, carrying a lifesaving vibe that would protect me all the way through, was R.E.M.’s Falls to Climb. As the song played in the distance, I remember that I silently prayed that all the incredible impressions I would witness on this journey would be absorbed by me not for the sake of my own enrichment, but for the sake of processing them and bearing something beautiful for the benefit of all the people I had temporarily left behind. Many years later, I would come across a concordant thought by Yehudi Menuhin, italicized in the original version as a sign of its extraordinary importance: “Our dreams and wishes are much more likely to come true to the degree that they are not for ourselves in the narrowest sense... we must dare not ask or demand anything for ourselves, nor can we know exactly when or where our wish may be fulfilled, though one bright day, like a miracle, it will be”⁶⁶⁴. And so, with firm remembrance of the enchanting act of glimpsing a falling star and then making a wish, ideally with an eyelash clutched between the two fingers, blown into three times and then gingerly dropped onto my mother’s bosom, as the Serbian tradition prescribed it, next to the magical heart in which the secret of the fulfillment of our wishes slumbers, I knew somewhere in the back of my mind that “humans are like stars in their needing to fall to make someone else’s wish come true”, as a popular saying

⁶⁶⁴ See Yehudi Menuhin’s *Theme and Variations*, Stein and Day, New York, NY (1972), pp. 127.

went, and stepped forth on my newly envisioned way, ready to fall to climb, so to speak, and, if allowed, see enlightening beauties on it, but only for the sake of transfusing them into treasures that would be not only returned back to the gentle souls that had nourished me, but also dissipated freely in the worldly winds for all to find blessings in. Maybe my music in notes and words will be one day seen as these humble treasures, and as such consumed by people, bringing joy and happiness to them, I have wondered enthusiastically to this very day. Until then, I know, *I* will be that music in the ways I act, talk, think and feel: sometimes confusing, complicated, impermeable and mysterious and sometimes holding a clear vision in front of my eyes, orbiting the Sun of my spirit in a blend of pining to be everything and yet exhibiting staggering simplicity and minimalism, dustily reverberating with smiles of twinkling stars and still incessantly throwing pearls of love and eternal beauty with each note played and each sentence thrown in the air. Nonetheless, because the paths in my life are never chosen for the sake of enriching myself only, but edifying others and the whole Nature as well, I am never alone in this thinking. It is always me and the whole Nature thinking together. And in these moments of deep musings, even though I may look like the loneliest soul on Earth, I am never truly alone. In fact, then I feel much less solitary than many times in the presence of other people. Hence, I love to say that the real company should enlighten the path to one's own soul as much as to the souls of others. It can lead you to know thyself as much as to show thee the lovely charms of being a good friend. And "he who knows himself knows his Lord"⁶⁶⁵, as a saying by the prophet Mohammad goes, telling us that the path to ultimate godliness and unity with the whole wide world that it represents initially leads away from the surrounding spirits and into our own. At the same time, however, no meditative journey into the center of our soul would be complete if we similarly forsake the drive to set off in the opposite direction, that is, towards meeting the adjacent souls and striving to become a sunshiny spirit that brings the light of happiness thereto. In other words, all theology is rooted in altruistic anthropology as much as truly fruitful humanistic acting is rooted in deep religiousness. As predicted by the Way of Love, to open up and dissipate is the way to descend deep and integrate, and *vice versa*. A harmonious relationship is thus like a music that clears up the way forward, towards others, and yet lightens the path backward, towards the essence of our own being.

S.F.2.6. I have noticed that other people often sadly look at my tendency to observe the world from the lonely tent of my mind. But I always tell them that there is nothing to be sad about. Didn't Friedrich Nietzsche say that "the man is great who knows how to be most solitary"⁶⁶⁶, echoing words which I attest to with every moment of my life, praising the spirit of solitariness amidst even the busiest worldly circumstances, while at the same time not letting the cordial sense of communion cease to exist even in the loneliest landscapes of my soul⁶⁶⁷? For, by spending time alone, I do not give up on the belief that all we ultimately need is to love someone and communicate with each other. Even when I am alone, immersed in my thoughts and writings, I feel deep intimacy with Nature and the whole world, the way I could, as I said, hardly feel in the presence of other

⁶⁶⁶ See Ralph Harper's *The Seventh Solitude: Man's Isolation in Kierkegaard, Dostoyevsky, and Nietzsche*, The Johns Hopkins Press, Baltimore, MD (1965), pp. 12.

⁶⁶⁷ Sri Ramana Maharshi is, likewise, noted for observing the following: "Solitude is in the mind of man. One might be in the thick of the world and maintain serenity of mind; such a one is in solitude. Another may stay in a forest, but still be unable to control his mind. He cannot be said to be in solitude. Solitude is a function of the mind. A man attached to desire cannot get solitude wherever he may be; a detached man is always in solitude". See *Talks with Sri Ramana Maharshi*, V. S. Ramanan, Tiruvannamalai (1935), pp. 4, retrieved from http://www.sriramanamaharshi.org/wp-content/uploads/2012/12/Talks_Extract.pdf.

people, and that particularly when superficial communications take hold – the ones that, I am sure, would be in some distant future accepted as obsolete, deceitful and regressing. “How does it feel to be alone”⁶⁶⁸, I may thus repeat out loud in sheer curiosity after Lou Reed, as the feeling of loneliness, the way it is described to me by other people, has been wholly unknown to me, even at my most solitary and disconnected from the world, the world with which I sense an uninterrupted, incessant connection, be I physically detached or in direct touch with it. After all, as a scientist, I have always felt as if my love of Nature can be enough to compensate for the love of man. I have thought that if Moses “stood between the Lord and you at that time, to shew you the word of the Lord” (Deuteronomy 5:5), then I should also stand on the elusive way that both connects myself and lordly Nature and is a sign of inevitable separation of us two in order for my mind to become a land onto which the raindrops of heavenly ideas that may act as guiding stars for my spiritual progress will fall onto from the transcendental skies that enfold my spirit from all angles. Henceforth, in my case, the starry light of cosmic joy has frequently eclipsed the sunshine of humane happiness, if I were to refer to the dichotomy invoked by Jovan Dučić in his story about a sense of wonder and a pair of glistening juvenile eyes⁶⁶⁹. And truly, the idea of the Way of Love with its proposed all-encompassing dialogue between the mind and Nature, immanent in each and every detail of one’s experience, is here to point out that the ultimate love of our lives lies in Nature, that is, God, if you will, including all of Her children that are made in Her image (Genesis 1:27), as it was frequently called upon our attention by Augustine of Hippo⁶⁷⁰. Should we learn to walk with Nature, breathe with Nature, contemplate with Nature and dance with Nature, our lives would be as fulfilled as they could be. After all, the point of the co-creational thesis is to provide a metaphysical pedestal that supports this theological worldview. This makes the Way of Love, prophesied here, as only one more trail towards the mountain peak of authentic human religiousness, reached by many, many creatures that have lived on this planet. As this peak is reached, there becomes nothing left that belongs to our self and is not seen as a part of Nature, as immersed in the great unity of being. And *vice versa*: nothing is anymore seen as lying out there, independently of our self. Our soul becomes a tiny droplet of water merged with the divine Ocean of infinite, cosmic love.

S.F.2.7. Still, attaining this blissful unity of being in our mind does not mean that we cannot go back. After all, to enjoy the wonderful dance of diverse colors, sounds, touches and their harmonies is to be partially alone, independent from Nature as a whole. That is why the entire existence may be described by the alternation between the states of division and unity, portrayable as such using the symbol of Way, which stands for a simultaneous connectedness and separation. In the prisoners analogy⁶⁷¹, Simone Weil described two prisoners separated by a wall, yet using it to communicate messages to one another through taps, and went on to name one such wall, an object of simultaneous separation and connection, like every Way in Nature, a metaphor of our relationship with God in this world which is “God’s language to us”⁶⁷², concluding that “every separation creates a bond”⁶⁷³. This is exactly the relation between human spirit and Nature throughout each one of our lives. As a creature is born, a single unity breaks its perfect symmetry, divides into two

⁶⁷² *Ibid.*

⁶⁷³ *Ibid.*

poles that, however, always remain connected. The power of awareness and the gift of life are thereby given to the newborn. Thus we become a partially independent soul, yet always in touch with Nature, as each perceptive detail of our experience is always partly drawn by Nature and partly by us. From there on, we always strive to reach the great unity of being, oneness with Nature, but then, just as little droplets evaporated from the Ocean and collected in clouds, we find our way to the Earth thirsty for happy missionary hands like ours.

S.F.2.8. Every morning waking up we should recall that a new, blessed chance to explore Nature in its delight has been given to us. Many flowers and lovely eyes could be approached with a graceful curiosity, the one that neatly balances inquiring intimacy and introvert withdrawnness in its charm. But the only way to achieve this balance would be through positioning ourselves right in the middle of an imaginary bridge that connects the divine essence of Nature, supplying it with the voice of God in each one of its details, and the divine essence of our spirit. Friedrich Hegel believed that the primordial divine unity had divided itself to Nature and the human spirit, just so that it would be able to observe its own beauty. We are thus like pieces of a broken glass, scattered all over with the creation of the world. Someone has said that beauties of the world are to eyes of ignorant creatures just like glass: apparent only when it becomes broken. Should we live while being immersed in the blind spots of looking at the world, taking all around us for granted and never finding enough courage and curiosity to sit on the wonderful carousel of being and engage in an enchanting change of points of view on the sun of the divine creation that rests in the center of it all, never hopping onto a Little-Prince-like adventure where we would tirelessly switch the perspectives on life and being one after another so as to question and wonder about the origins of our experience and the existence, we would fail to recognize these broken pieces of divine glass that, in fact, lie everywhere around us. The reason for this breaking of a perfect symmetry of singularity is, of course, that no observation can be made without establishing a polarity between an observer and an observed prior to the act of observing. In other words, to observe its own beauty, Nature must divide itself to numerous cognitive perspectives, each one of which will have the potential to take a glimpse into the glistening divinity of Nature hidden behind the veil of immediate experiential appearances. Hence, when we face a lovely flower and find a source of immaculate enjoyment in it, we are nothing but a pair of divine eyes appreciating the beauty of the Divine itself. “I am one thing with you... As the fish is in the sea and the sea is in the fish, so am I in the soul and the soul in me, a sea of peace”, God whispered to St. Catherine of Siena’s ears, to which she exclaimed: “When I look into this mirror, holding it in the hand of love, it shows me myself, as your creation, in you, and you in me through the union you have brought about of the Godhead with our humanity”⁶⁷⁴. What the medieval mystic wished to make us aware of is that each one of us, with no exceptions, is but a tiny drop plucked from the ocean of the Divine that engulfs it all with its ubiquitous waves. As we realize this, we attain the grand Hegelian synthesis in ourselves, which is then the world, which is then ourselves, having become enlighteningly aware of the everlasting oneness with Nature as a whole through the mutual divinity of the tiny and delicate, flowery frailness of ours and the colossal impeccability of Hers.

S.F.2.9. A most enlightening feeling that one may have already experienced as a child derives from the sudden realization that life itself is an ultimate fairytale in which each tiny detail carries a cosmic meaning, overwhelming us with the divine messages of Nature that guides us towards

⁶⁷⁴ See St. Catherine of Siena’s *The Dialogue of Divine Providence* (1370). Quoted in Robert Kiely’s *Blessed and Beautiful*, Yale University Press, New Haven, CT (2010), pp. 276 - 277.

accomplishing our mission on Earth. And if we lived life as a fairytale for one day only, the memory of it would remain so vividly impressed in the deepest and the most precious entombed elements of our spirit as to be able to guide us on our lifelong journeys to the divine skies, resembling “the dream of the Wonderland long ago”⁶⁷⁵, which would help Alice “keep, through all her riper years, the simple and loving heart of her childhood”⁶⁷⁶, or the inner treasure glimpsed by the protagonist of Nicolas Roeg’s *Walkabout* as a magical thread that saves her from falling into the lowlands of prosaic adulthood in the final scene of the movie. And, as in accordance with one of my Mom’s favorite sayings, “Exit the fairytale, but bring the treasure with you”⁶⁷⁷, and as hinted by Samuel Taylor Coleridge’s musings about a man who “could pass through paradise in a dream, and have a flower presented to him as a pledge that his soul had really been there” and who “found that flower in his hand when he awake”⁶⁷⁸, in this fairytale, as in the most exciting narratives, there are treasures that we are predisposed to find. What is more, just as these treasures in stories lie either buried on desolate islands or sunken at the bottoms of the deepest seas, in one’s life they are always hidden among the fluted columns that represent the foundations of our experience. We have to get down to these pillars of wisdom, which rise from the impalpable essence of our spirit, as if being colorfully bowed rainbows, in order to recognize the glow of these treasures. If you have ever wondered what the exact difference between the meaning and the purpose of life is, it is neatly summed up in the following saying that quite concordantly resonates with the Way of Love and the light it sheds on simultaneously moving inward in meditation, while seeking for the treasures of life within one, and outward in an enlightening expression, so as to bring the lustrous treasures discovered along the way to others: “The meaning of life is to find your gift; the purpose of life is to give it away”. The meaning of life is thus always linked with its invisible and ineffable qualities, which are, as a rule, only mysteriously sensed, but never really grasped. For, as transmuted into a rarely powerful maxim by Maximus the Confessor, echoing the sentiment of the old Serbian folk song *Who Has You Doesn’t Have You*, “Whosoever has seen God and understood what he has seen has not seen it”⁶⁷⁹, wherefrom the unequivocally ungraspable nature of causes and effects of the most essential qualities that define our spiritual beings directly issues. Arranged in the shape of a pyramid rising poignantly from the desert floor, it is as if all these qualities together form an apex pointing at infinite cosmic depths laid out with stars shimmering with joy. Truly, the exhilarating joy, which would make the angels take to the air and rave on the wings of immaculate elatedness and otherworldly happiness, could be seen as comprising the hidden treasures of the story of Christianity, and how wonderful it is to contemplate about the similarly indescribable joy that awaits us as a gift to the blissfully prayerful attitude whose radiance we devotedly nourish within our hearts.

S.F.2.10. In fact, what the Way of Love teaches is the art of an ultimate smile, a smile that penetrates every atom of our being, dilates our pupils with a loving excitement and makes us shine to the world with an unexplainable joy. But to master this art, we must comply with the basic tenets of this idea. It is that each relationship ought to be entered with ourselves radiating with an endearing humbleness, while simultaneously being an active and divinely spirited source of

⁶⁷⁵ See the last paragraph of Lewis Carroll’s *Alice’s Adventures in Wonderland*, Macmillan, London, UK (1865).

⁶⁷⁶ *Ibid.*

⁶⁷⁷ “Iz bajke izadi, al’ blago ponesi”, as her saying went in Serbian.

inventive incentives. When walking down the Way of Love, we are at the same time an angelically meek and trustful follower of other people's hearts, and Nietzsche's "self-rolling wheel, a first movement, a holy Yea"⁶⁸⁰, a living emanation of the divine voice that rings around the valleys of the mental landscapes of our own inner being. As such, we are the Sun and the sea at the same time. The Sun that in its distant creativity knows for nothing other than giving light for arising and enlightening others, and the sea that in its humbleness lies below all the rivers, and yet all the rivers disgorge thereto. Indeed, could there be a more perfect smile than the one that has the Sun above the sea horizon as its metaphor?

S.F.2.11. But also, could there be anything more beautiful than looking at the world from the eyes of another? Indeed, there could be no more major cognitive phase transition awaiting us in life than the one where we cease to plan our actions based on maximization of sensual pleasures or spiritual wellbeing of the self and begin to be guided by the drive to illuminate the worlds of surrounding souls with the light of divine spiritedness that pervades it all in an infinitely subtle manner, as if shyly staying away from the sight of our senses. Mentioning this makes me reminisce pensively about the enlightening moment when I, a zealous sympathizer with Banksy's "joy of not being sold anything" graffiti and his building a shredder into a painting to be activated remotely should the painting ever be sold at an auction⁶⁸¹, as well as with Danny Pope's mom's advice that a birthday present ought to be "something either you make or find"⁶⁸², realized that involvement in economic transactions can be unutterably fulfilling so long as they are approached with the attitude complying with a poet's insistence on looking into the plate of another only to see if he has enough food on it and never to compare jealously and avariciously his share with that of ours. The art of purchase from the angle of what will bring the best satisfaction to another in need and not to myself alone, it must be said, I learned while visiting the local, Đeram farmer's market in my hometown, Belgrade, where I would always decide whether to buy something or not by looking not at what is being sold on the stands, but at the sellers standing behind them. Thus I would rather buy the rottenest cucumbers or the sourest pineapple from an old farmer with the sunshine in his eyes than the sweetest and the most delicious produce from the witchy vendor who curses life unceasingly. Needless to add, my mind converged in it the rays from the most distant cosmic spaces while walking through the aisles of this cultural gem, believing that the most minor purchase can pull the cords in the causal embroidery of life and change the fate of the entire existence for good. Be that as it may, year after year of occasioning this farmer's market helped me substitute my despise of buying anything anywhere with the love of spending money and spending it all, down to the last penny in my pockets, buying totally useless items so long as the outward appearance of little businesses and kindhearted folk running them clicked something in my heart. Becoming one with others through these little empathic moments is, interestingly, not only the path to understanding them better, which, on the other hand, opens the door for loving them more and knowing them even better and so on, but it is also how we learn about the essence of our own being too. Though, remember, as the Way of Love commands, in order not to merely reflect others, but show the signs of sincere empathy, we need to be firmly immersed into the silence of the depths of our own being, that is, to firmly watch the world from the deck of the ship

of our visions and thoughts floating on the ocean of our own eyes. By living in compliance with this balance between staying focused inwardly and yet attentively discerning the lines and boundaries of the outer world, our eyes tend to simultaneously radiate with mysterious depths of sunshiny love and vivacious, twinkly and starry joyfulness. A childish *joie de vivre* and soft warmheartedness thus become blended in our eyes; the former inviting others to look around at the adorable beauty of the surrounding details of the world, and the latter attracting them to the world inside, through entering the dark and warm whirlpools of our eyes. The melancholic sea and the joyful stars twinkling in our eyes are, in fact, the natural result of the magic blend of love and wonder that our eyes tend to exhibit as they reside on the Way of Love. While waves of compassion that crash against our mind with every heartbeat of ours instill a teary sea that lovably shimmers at the bottom of our eyes, letting the gorgeous ships of congenial attention to float on its surface, although every now and then, whenever the crashing of these waves of empathy onto the coasts of our mind becomes too intensive, spilling some of this sea of love onto the world around, the joyous wonder with its childlike vivacity unboundedly sparkles on top of it. Our eyes then turn out to resemble a seascape in which the ships of our attention travel across the sea of love, under a starry mantle of our wondrous eyelids. Our eyes engraining the secrets of the Way of Love then also implicitly reveal that traveling deep inside ourselves builds in us the potential to find creative ways to empathically beautify eyes of other earthlings, and *vice versa*: that running out to see how the world looks from other people's eyes, driven by a gorgeous compassion, clears up the way towards meeting the essence of our soul. This wonderful paradox where losing ourselves in the moments of empathic looking at the world from eyes of another integrates our own self, and maintaining the oneness with ourselves leads us to display signs of the true compassion for others is the key to understanding the beauty of the Way of Love. It is the ultimate enigma of life to understand this paradoxical metaphor of the Way as underlying the evolution of every one of its aspects. According to it, only alternate meditative withdrawing into the essence of our being and empathic becoming one with the world seen from eyes of other creatures draws the blissful pathways of prosperity in front of us. In this moving back-and-forth between dwelling deep within oneself, focusing the creative potentials within us, and yet living each moment of our lives so as to bless and edify others we resemble the Sun in its attracting its content straight to its core, fusing the light elements and thereby producing tremendous amounts of energy, and yet exploding outwards with the desire to bring this inner beauty to the world around, to introduce life and love to its planetary surrounding, to overflow the Earth with the food of life, and eventually show us, the little creatures wondering over the mysteries of life on it, an example of a star we could become should we follow the way of the metaphor of the Sun, that is, of the Way of Love.

S.F.2.12. Truly, thence, prior to a big lecture, I remind myself that I am a superstar. As I stand behind the closed curtain, waiting for the moment of its rising, I plunge so deeply into myself that everything else seemingly ceases to exist. "It is always silent where I am"⁶⁸³, even in the loudest and busiest of sceneries, I might repeat after Bob Dylan, and descend so deep inside myself than I might start to feel like an astral traveler floating through an infinite space filled with silence and stars. Because, I know, that in accordance with the Way of Love, the deeper one gets immersed into oneself, the more treasures one would be able to bring to the daylight of being and endow others with. A small and insufficient braveness in this entering the meditative silence of our own being implies small and negligible potentials for our creativity as well. Just like the Sun deeply

⁶⁸³ Watch Bob Dylan's December 1965 San Francisco Press Conference, retrieved from <https://www.youtube.com/watch?v=AItVYkznnTc> (1965).

submerged into its burning essence and yet shining the light of its inner glow onto others, thereby giving a life-sustaining energy to the planets that revolve around it, the true artist is seized by the introspective fascinations, but all that in order to enlighten the world around him. This is because a true artist lives in accordance with the Lao-Tzu's description of the Way of the Sun: "Heaven and Earth last long because they do not live for themselves. This is why they last forever. Thence, by placing himself at the last place, the sacred man gets to the first place... Does not he fulfill himself exactly because he does not live for himself?" (Tao-Te-Xing 7) And if a casual observer makes a comment echoing the first line of the report an anonymous journalist dictated in a red phone booth after a Dylan's concert in the UK in the spring of 1965, "He is not so much singing as sermonizing"⁶⁸⁴, let it be. For, the goal, always and everywhere, has been to illuminate the soul and not just share the skill, as the dry and dull directors of today's science wish to reduce my lectures to, albeit failingly, as they will never cease to aspire to be theatrical eruptions of classicist beauties and instructions in love and morality.

S.F.2.13. Eyes radiating with the Way of Love reflect one's immersion in the inner world of oneself and one's simultaneous being "out there", able to relate to every being and detail of the world. In such a way, we cultivate the glow of precious thoughts and emotions within ourselves, and yet hand it out freely to the world, making it a nicer and happier place with every breath of ours. So, living inside and living outside in a precisely balanced manner is the key to fulfilled living. As proclaimed by the Christ, "the Kingdom of God is inside of you, and it is outside of you... When you make the two into one, and when you make the inner like the outer and the outer like the inner... then you will enter the kingdom" (Thomas 3...22...22). Goethe echoed these mystical musings in the following lines of his poem Epirrhema: "Nothing's inside, nothing's outside, for what's inside's also outside. So, do grasp without delay holy open mystery"⁶⁸⁵. Likewise, Sun Ra once observed how "at first there was nothing... then nothing turned itself inside out and became something", creating a phrase that later became an inspiration for a Yo La Tengo record title⁶⁸⁶ and that is here to tell us that absorbing the impressions of the outer world with the sponge of our heart and turning them into sources of the inner glow of our beings on one side and doing everything so as to release the great inner shine of our spirit and bless the world therewith on the other side is the key to fulfilled and truly balanced living. Hence, overly dwelling in the world of thoughts and inner landscapes would be equal to doctor Faust's attempts to find the solution for perfect living through solving the enigmas of life in his head. It would make us blind to numerous wonderful divine signs that the world around us buzzes with, and the treasures of our spirit would become locked and concealed from the face of the world instead of freely dissipated for the sake of everyone's joy. Only when doctor Faust engages himself in ordinary acts carried out in togetherness with the fellow beings is that he finds a balance, which eventually makes him blissful and brings him salvation. Likewise, only when we start to live in harmony with the idea that "people are the greatest thing"⁶⁸⁷, urging us to always head out to where people and people only are, as Bob Marley legendarily insisted on, and only when we discover the greatest beauty conceivable in the view of another human being as well as the roads opening toward the most

celestial and divinest of skies in the blinks, the fingertips, the wrinkles, the sighs and the smiles of a nearby soul will a sense of fulfillment of this grandiose journey called life begin to dawn on us. However, avoiding our introspective plunging into the space of our heart and our consciousness and inertly roaming instead through the forest of external impressions would present another extreme stance, which would make us unbalanced again. Our eyes would run a quick scan across the details of the surrounding world, like an eagle does, but a warm softness and depth would be missing in them, and only one's focus on the world inside can bring it forth. But having too much of this inner centeredness would make us blind to enormously beautiful details of the surrounding world, and our eyes would reflect that in their glassy withdrawnness. "Look inwardly and do not see me" – that is what Charlie Chaplin said to the blind flower girl to make her act brilliantly in *City Lights*, not only the most beautiful movie that has ever been made in my cinematic universe, but also the most emotionally packed of all Chaplin's movies and the first one made after his mother sailed away from this world. In the end, after investing oceans of love, carefulness and creativity, the Little Tramp manages to awaken a balance in the flower girl, making her not anymore focused only on the world of her fancy, but letting this inner beauty fly on the wings of strength and determination to deliver these divine messages to the world around and announce the gospel of heart radiating within her. "I can see now", says the flower girl in the final and what I consider the most beautiful and moving scene from the history of cinema, remotely reflecting the line inscribed by C. S. Lewis in his little known tribute to grief: "To see, in some measure, like God. His love and His knowledge are not distinct from one another, nor from Him. We could almost say He sees because He loves, and therefore loves although He sees"⁶⁸⁸. On the day I watched *City Lights* for the first time, in Belgrade Cinematheque, with only two more souls in the audience, two elderly gentlemen, tiredly hunched but smilingly walking while gently holding each other, I remember I ran out into the night with gazes directed upwards, jaw dropped and mouth open, swallowing the droplets of rain and running like a humanoid kite along the middle of an asphalted street with the wind in my hair and arms stretched widely, feeling the divine blend of devotional joy and compassionate sadness flowing from some heavenly heights straight into the flower of my heart open to the entire Cosmos and beyond.

S.F.2.14. At a fascinating recent performance of Mercury Rev in *Independent*, I noticed a few beautiful messages that together with white traveling birds and spinning ballerinas drifted by on the video screen behind the band's back. The final one was a Sufi saying, "Leave the world aside and become the world unto yourself", neatly reflecting the essence of the Way of Love. Namely, for as long as our attention is spontaneously captured and uncontrollably driven by the outward impressions, our inner creative potentials will be dissipated. The pole of our inner self and the pole of Nature will not be strictly defined and shaped in themselves, and the strings on which the divine music is played by our ideas, emotions and actions could thus not be firmly anchored and let vibrate with a potent constancy. We will realize that we are blindly attracted by objects and beings in our surrounding, helplessly following them around with our attention, and thereby spontaneously suffocating every briefly ignited spark of creativity within us. The opposite extreme stance would correspond to a total meditative confinement within our inner self and blind planning of our moves without any feedback from the outer world. But if we make a wonderful mindful transition within ourselves, in concert with the Sufi saying, we will find ourselves retracting and focusing the dissipated creative rays of the shine of our spirit to the creative core of our being, all until a balance between focusing a part of our attention inwards and focusing a part of it outwards is reached. No

⁶⁸⁸ See C. S. Lewis' *A Grief Observed*, The Seabury Press, New York, NY (1961), pp. 57.

longer would we follow every tiny act of ours and every sentence we proclaim with widening our eyes, blindly freezing ourselves and insecurely reflecting on what we have just did or said. By concentrating the rays of attention of ourselves to our insides, that is, by becoming the world in oneself, we would build one great pole, a strong and determined mind, like that reflected in the gaze of the Bamberg knight, ready to set into wonderful and inspiring relationships with Nature and other creatures in the fullest capacity. As we focus our energy inside, like the Sun whose giant force of gravity pulls its matter inwards and fuses the light elements yielding enormous amounts of energy, the shine of our being outwards increases drastically. As we start living that Sun of spirit inside ourselves, we may finally proclaim the memorable Radiohead's cry of the modern Romeo, "I am ready"⁶⁸⁹, of the one who steps forth in a talk show and enchants people with his fairy-like grace. By residing on the Way of Love, that is, by precisely balancing one's meditative withdrawnness on one side and trustful and loving, attentive following of the details of the world on another, we appear like a child that loosely and gently dances around with its glances and subtle movements, and yet spontaneously throws stardust everywhere the sun of its mind focuses its attention. We can thus step into relationships of the dearest importance, dancing our way to the purest grace without ever losing the streak because of distantly floating away with our attention in order to observe ourselves. Without judging ourselves, we are precluded from judging others, and *vice versa*. "We learned enough; now it's time to trust our nature", I tell myself thence. And with such an attitude we live up to the highest ideals set forth by the Christ when he said "judge not, and ye shall not be judged: condemn not, and ye shall not be condemned: forgive, and ye shall be forgiven" (Luke 6:37). It is thus that we go back to the Garden of Eden in our mind, before the time Eva plucked the apple from the tree of knowledge, which, as you may remember, gave humans the ability to discern good from evil, but thereby implied ungraceful judging about ourselves and others. Hence, by traveling deep inside ourselves, by immersing our creative attention into the essence of our being, we spontaneously strive towards releasing the hidden potentials in us to benefit the world, and *vice versa*: by making determined moves with the aim of beautifying and blessing the world, we open up the ways to meet the essence of our soul.

S.F.2.15. The Way of Love thereby teaches us that the more closely we focus on the visions and memories that comprise the inner realm of our reflections in order to set the fire of love and grace in our heart ablaze, the more of the invisible angelic hands of creativity will we be spontaneously pushing outward in order to endow the surrounding creatures with the treasures that our heart carries. By traveling deep inside of ourselves, by taking that sacred and missionary voyage into the essence of our heart, we may get to the stage when a big orange Sun would be seen as rising beyond the gloomy clouds of ignorance. At the same time, however, we will notice that our hands more easily spread towards others, turning ourselves into a channel for radiating a cosmic, selfless and Godly love for humanity. For, the road inside and the road outside are, in the end, one and the same. Which signals the time to reecho one of Pascal's *pensées* that heralded the Way of Love and Love for the Way, for interaction between mind and Nature as the route to happiness, the birth of starriness in us and the fulfillment of our missions on Earth: "The Stoics say: 'Withdraw into yourself, that is where you will find peace'. And that is not true. Others say: 'Go outside: look for happiness in some diversion'. And that is not true: we may fall sick. Happiness is neither outside nor inside us: it is in God, both outside and inside us"⁶⁹⁰. Should we now set ourselves to explore

⁶⁸⁹ Listen to Radiohead's Talk Show Host on Romeo + Juliet soundtrack, Capitol (1996).

⁶⁹⁰ See Blaise Pascal's *Pensée* No. 407, Translated by A. J. Krailsheimer, Penguin, Harmondsworth, UK (1669), pp. 147.

the secrets of our divine soul, lying deep inside of us, or the secrets of the subtle language of God that all the details of the world mysteriously reverberate with? It truly does not matter. From the co-creational perspective, everything around us is the product of the dialogue between our spiritual and biological self on one side and the hidden foundations of Nature on the other. So, knowing one side is impossible without simultaneously knowing the other side as well. And as we manage to invoke the rise of this mysterious Sun within ourselves, with mountains of patience and determination, we may transform our consciousness into a mere channel, that is, a Way between the soul and God, which are thence one and the same.

S.F.2.16. And every time I pray to God to give me strength to fully shine forth with the light of my being, I know that focusing all our attention to the heart of ourselves only makes my prayers partial. On one hand, it is true that we need to dwell deep within our hearts to be able to live the divine mission God has assigned to us. And yet, traveling deep inside in meditative prayer so as to become one with ourselves leads us to realize the preciousness of aspirations to give up one's ego and selflessly live so as to enlighten the world. Living in harmony with the divine mission inscribed within our hearts and guiding our thoughts and acts with thinking about what is good for the world makes the burden of personal cravings and egotistic desires that used to constantly press our mind and push us out of harmonious states of heart and mind vanish, with us, paradoxically but true, being finally able to be truly ourselves. Accordingly, every prayer is scattering the seed of a starry wish throughout the depths of our heart, a wish not only for our being in this world to become a perfect light to the world, but also for our acts in this world to bring this same light of perfect saintliness and happiness to the surrounding creatures. For, ultimately, the way to meet the essence of our own heart leads through the hearts of others, and *vice versa*: the only way to truly meet the hearts of others is through being one with our own heart. The message is clear: whichever way we take, we eventually arrive at the blessing waterfalls of the Way of Love: should we start by meditatively descending into the secrets of our own heart, we would realize that living for the edification of others is the only valuable path in life, and should we start by spreading our creative hands so as to give love and happiness to the people of the world at the first place, we would end up glimpsing the essence of our heart in all of its divine beauty. Just as all the roads used to lead to Rome back in the days, all roads nowadays, in the domain of our spiritual existence, lead to the Way of Love. This whole world is thus about You and I, dancing in our simultaneous independence and togetherness. And yet, when we find the balance, undoubtedly the one of the Way of Love, the angelic threads of the Holy Spirit will gently fluctuate between us, creating and sustaining the wonderful music of life.

S.F.2.17. The Way of Love is about merging what seems impossible to merge: being deeply immersed within the essence of one's mind and heart, living in harmony with the music one's heart beats with and yet being compassionately free of one's ego, living so as to edify others and endow them with an enlightening beauty. On the Embarcadero promenade, underneath the Bay Bridge, thus I came across a beautiful verse by D. H. Lawrence, inscribed into the concrete pavement next to a few whales carved into it, saying "And enormous mother whales lie dreaming suckling their whale-tender young and dreaming with strange whale eyes wide open in the waters of the beginning and the end", reminding us of the need to always keep one eye empathically on endearing earthlings that are near us, while the other eye of ours is free to meditatively roam across the enlightening realms of spirit within, finding itself at times in the midst of a mystical circle where beginnings and ends blend into One. On the other hand, irrespective of how difficult it may

seem to bring these two poles of our mind into unison – the meditatively closed one and empathically open one – we can realize how being inclined to one side only would quickly deprive that particular pole of the inner energy that drives and sustains it, eventually letting it wither in waters of uninspiring, dead aspirations. As in the celebrated Tai-Chi-Tu diagram, it is always an opposite pole that supplies a vital energy to any given pole in any given polarity in Nature. It is always the essence of one pole lying at the center of its opposite pole. For, that is the only way for each one of them to prosper: in togetherness, resembling parallel rails of a railway track, along which the trains of human creativity pass. As far as the tracks of the Way of Love are considered, one has to be prayerfully immersed within the shining heart of oneself and yet to turn the norms that drive our acts on daily bases upside down. That is, instead of living so as to glorify oneself and greedily take, to give, give, give and live solely for the enlightenment of the world. At a recent party, Leandro slowly trod into the kitchen and told us how the Burning Man event changed his perception of the world, instigating him to stop guiding his actions with asking the question “What can I take” deep inside of himself, and start living guided by the wonderful, Christian question “What can I give”. As I pictured dancing silhouettes popping out of nowhere during a Burning Man dust storm and then disappearing quietly into the night, an image of the jagged desert road from Jerusalem to Jericho arose in my head and with it the way in which in his last speech, delivered in Memphis, Tennessee, Martin Luther King Jr. construed the Christ’s parable of the Good Samaritan by imagining out loud a man lying half-dead by the side of this road, passed by a Levite and a priest, both of whom had wondered “If I stop to help this man, what will happen to me” on this crooked road overcrowded with bandits and greedy souls, and saved by the Good Samaritan who reverted this question to the following one: “If I do not stop to help this man, what will happen to him?”⁶⁹¹. For, indeed, as inferable from Hermann Hesse’s story about a boy named Augustus, only when the central question spun by our psyche shifts from “am I loved” to “do I love”, and all our actions begin to be built on its gracefully flexible foundations, which no earthquakes in this life could damage, do our ascents to truly paradisiacal lifestyles commence. It is then that our entire being will begin to waver gracefully on the waves of the echo of St. Francis’ prayer from the early 13th Century, “O Master, grant that I may never seek so much to be consoled, as to console, to be understood, as to understand, to be loved, as to love, with all my soul”, sending forth shudders of grace with every thought and act of ours, regardless of how subtle and miniscule they may be. This is not to dispel the magic swirling around our aura when we let our imagination convince us that not only “everybody wants to love you”⁶⁹², but also that everybody does love us, because this elegantly plunges all the indignations and vengeance deep into the sea of love for everyone, including those who may be in reality despising us and trying their best to hurt us. Rather, it is to draw a line between finding the meaning of life in satisfying the innate craving to be loved and finding it in bestowing love upon others, a line that in astroalchemist terms separates a black hole from a shining sun. After all, although being unloved is often cited as the cause of every single ailment striking the Earth, the incapacity to love is the truer reason behind the existence of the dark veils of misery that have cloaked humanity and stifled its heart from its dawn to the present day⁶⁹³. A cloud of thought in which ordinary people who socialize with others

⁶⁹¹ Read Martin Luther King’s I’ve Been to the Mountaintop speech delivered in Mason Temple, Memphis, TN (April 3, 1968), available at <http://www.americanrhetoric.com/speeches/mlkivebeentothemountaintop.htm>.

⁶⁹² Listen to Japanese Breakfast’s Everybody Wants to Love You on Psychopomp, Dead Oceans, Bloomington, IN (2016).

⁶⁹³ Of course, even if the proponents of these two disparate views do not agree, healing the world in both cases starts from loving it all. Philosophically, therefore, there may be a disparity between these two views, but practically there is none.

because they crave to be loved, flattered and worshipped were envisioned spiritlessly walking in a sad procession, while those who are driven to shed stardust of lifesaving signs over others, to yield incentives that would prove crucial for the spiritual progress of creatures that surround them were imagined as flying around like angels, then popped up above my head, signifying yet another step forward in the direction of solidification of my confidence in the fact that striving to attain power in life is inextricably connected with corruption of our spirits, whereas what brings true harmony to our hearts is being a humble servant focused only on the benefit of another, an ocean that stands below everyone else and into which the rivers of the surrounding people's hearts helplessly flow, a carpet which spreads itself secretively so as to show others where the yellow brick roads along which their fanciful spirits could flourish lie, a golden bridge that never closes, but always opens gates of the world and connects millions of its hearts in bubbly joy and empathy. Hence, as these visions of dancing angels, burning bridges and wavy oceans were overflowing my mind, I agreed in excitement with Leandro's viewpoint, but still had to admit to myself that it presents only one track of the wonderful rail of the Way of Love. The other one, corresponding to one's meditative immersion within oneself, complements and feeds the creative ability of ours to give and edify the creatures of the world. For years I used to place the norm that "to give is more than to have" at the bottom of my mind, living empathically merged with hearts of others, guided by what is good for them while disregarding my own needs. But then, in the midst of a wild party, I would find myself sitting in the corner of a room, with a sheepish smile, shining with empathy and love, gazing at other people. Instead of creatively endowing them with electrifying emanations of love, I would resemble a stone, willing to give all that I have, but remaining frozen by the overwhelming respect of another, without finding the way how to break this ice and creatively strew beauty I have kept in my heart over others. "Strange things happen when your insides are screaming and your outsides are trying to look cool and calm: when you can't hold in the secrets of your life, but to tell them in plain language would kill you"⁶⁹⁴, Doris said, reminding me of the days of my youth that I spent resembling Grace Kelly sitting by the pool in *High Society*⁶⁹⁵ and wondering why everyone thought of her as cold and lifeless when she could clearly see glows of love shining from her heart, despite the fact that she would never be able to release those rays through the icy cold appearance of hers. I would likewise helplessly crave for giving myself entirely to the world, spinning thoughts of me doing lovingly quirky things to the creatures around me, stunning them with the enlightening realizations of how beautiful and divine life is, exploding in spirit all over the place, and all that while quietly sitting, unable to find the drives to move me forward, towards fulfilling these visions of mine. For, that is what happens if one gives up on living in harmony with the music of one's own heart: after a while, the creative energy behind our giving acts will be depleted, and we would find ourselves incomplete and unfulfilled. In such a way, we become merely a masochistic tool for others to manipulate with. Needless to say, shifting one's being to the opposite side, where one would be overly obsessed with hedonistically consuming what the world offers, would make one become a self-centered tweet for whom both the ways inside, towards meeting the essence of oneself and outside, towards blessing the world with the shine of one's spirit, would be darkened and blocked by steely gates. Hence, giving and taking, being immersed in other people's eyes and yet being oneself, expressing so as to beautify others and impressing beautiful ideas and emotions

⁶⁹⁴ See Introduction to Cindy Gretchen Ovenrack Crabb's *Doris: An Anthology 1991 – 2001*, Microcosm Publishing, Portland, OR (2005).

⁶⁹⁵ Kelly's was, of course, a blatant take on Tracy Lord from the *Philadelphia Story*, though the attribute of a cold, cold goddess with a fire of love burning inside her fit her more than Katharine Hepburn who played Tracy Lord in George Cukor's filmed version of Philip Barry's Broadway play.

onto the canvas of our heart are tightly related, just as the two basic Christian commandments tell us (Mark 12:29-31). For, unless we build the shine of our self through careful meditation, through traveling towards the center of our being with the flame of love, we would never be able to yield this shine for the benefit of the world, to triumphantly run across its fields with a torch of love in our hands.

S.F.2.18. It is only by running like this, with winds of passion passing through our hair, starry eyes of wonder shining forth, and arms wide open in a childishly honest inquiry, that we have a chance to arrive at wonderful discoveries. “All fire and ice, she despised anything lukewarm”, are the words with which Jean Cocteau described her heroine from *Les Enfants Terribles*, Elisabeth, and are the words that neatly reflect the attitude of burning, melting and bleeding on the blaze of emotionality and passions that I love to recognize in myself and my students alike, holding that whoever demands from his subordinate to control every word and subdue passions to a robotic, artificial calmness is an enemy of the person because such suppressions can cause a plethora of unhealthy effects in the person’s body and mind, which ought to be dancing on the waves of childlike joy and gliding on the winds of passions unrestrainedly, all of the time. “To be playful, but passionate”, is how the Nobel Laureate, Peter Doherty, described the secrets of scientific creativity at a recent lecture I attended⁶⁹⁶ and, indeed, one of the things that differ mediocre research labs and institutions from the truly leading ones is the airs of phony pretense and stiff arrogance pervading the former, as opposed to the puffs of ultraliberal relaxedness blowing through the latter. Directors and managers of this new breed of incubators of scientific knowledge must know that playfulness softens the intellectual frameworks of thought and makes minds more receptive to findings tearing the tight paradigmatic mesh that holds individual thoughts in place, allowing for their sinking into oblivion and replacement with unthinkably novel concepts. It is thus that these inquisitive minds, resembling children in their seeing all as an invite to play, are being fundamentally prepared for arrivals at groundbreaking discoveries. And that playfulness opens the door to the greatest insights in our exploration of being is a concept of systemic nature, applicable to every subject and occasion, from the developing children to researchers in search of genuine scientific breakthrough. Young researchers at DuPont, for example, engaged in attempts to fabricate artificial silk in the 1930s, were horsing around when their supervisors, including Wallace Carothers, were absent by running along the hallways and drawing long threads of polyester using straws and sticks. At one point, they figured out that by stretching the polymer, the molecules would reorient and be impelled to adopt a solid structure, stronger than before. So they went back to play around with a polyamide substance they had discarded long time ago as unable to adopt a solid form due to low melting point, and repeated their game. Soon after, a polymer that is now known as Nylon was made, revolutionizing the textile industry. And its discovery, as we see, was owing to the discoverers’ epitomizing one of Ludwig Wittgenstein’s key maxims: “If people did not sometimes do silly things, nothing intelligent would ever get done”⁶⁹⁷. Knowing this, I could not help but advise the teacher, herself, to be reprimanded when Victoria, skimming over her first ever student answer sheet, a response to a quiz she had given them, marked as incorrect a student’s replying with “fooling around” to a question of what cannot be done in the lab. Encouragements to stretch our fancifulness to the limits similar to those DuPont’s young investigators subjected their plastics prior to reaching a memorable discovery comes as natural to us when we realize that

⁶⁹⁶ The lecture was held as part of the annual meeting of the National Postdoctoral Association in Houston, TX, March 2009.

⁶⁹⁷ Watch Wittgenstein directed by Derek Jarman (1993).

the most inventive intellects are rooted in much craziness and imagination that puts all things on their heads for the sake of sheer fun and curiosity. In that sense, the message I saw impressed on one of the interior walls of the most famous SF jazz club, Yoshi's, when I went to see Kenny Garrett play there, "You never went to work at Keystone. You went to play", can be seen as a viable guideline for attaining the most sublime forms of creativity in any domain of life, from science to arts to the mastery of beautiful living. On the other hand, I maintain that a zest of laziness may also be good for successful scientific research, as long as bright visions and a whole lot of love are cultivated in us too. For example, after an unsuccessful experiment aimed at developing a short-exposure photographic technique, Louis Jacques Mandé Daguerre tossed a silvered plate on top of a spill of working chemicals in the tub that he had intended to rinse but had not done. He was also too lazy to clean the plate, left it resting there, shut the lights off and left. And then, a few days later, he realized that the image on the plate had become visible. So, he thoroughly searched for the chemical in the tub that accidentally produced the desired effect, and eventually found it. It was mercury, and the photographic process known as daguerreotype was born⁶⁹⁸. An even more famous example touches upon the accidental discovery of the antibiotic properties of penicillin by Alexander Fleming, which came approximately three decades after the first synthetic antimicrobial chemical, paraaminobenzene sulfonamide, was made and applied first as a dye because of its superior binding to proteins in wool, and only later as a bactericidal drug⁶⁹⁹. Now, Fleming was known as a brilliant researcher but awfully careless experimentalist whose lab was always chaotic and who regularly forgot about the cell cultures he worked with. And yet, the legend says that it is exactly his forgetfulness that should be celebrated as the reason behind this discovery. Namely, before embarking on a long vacation, Fleming forgot to clean the culture dishes in his lab. Upon return, he noticed that they were all contaminated with a fungus and immersed them in a disinfecting solution. Careless as he was, he had not plunged them fully, which turned out to be a lucky circumstance. A few days later, Fleming was showing his lab to a visitor and, stopping by the discarded culture dishes, pulled out some of them to briefly show them to the visitor. It was at that moment that he spotted the areas on the agar plate surrounding the invading fungus and showing prominent bacterial inhibition zones. Intrigued by this accidental observation, he then proceeded to isolate an extract from a moldy bread, identified it as *Penicillium* genus and, lo, that is how penicillin was born. On another occasion, as the legends say⁷⁰⁰, Fleming was careless in his experimentation and came into direct contact with the bacterial culture by having his runny nose drop some mucus onto it, which he forgot about and only later realized that mucus, like mold, acted as an antibiotic: this is how lysozyme, a protein abundant in tears, saliva and snot was isolated, once again owing to sloppiness as much as to hard work and curiosity. I often use these examples in the classroom to illustrate not only how the laziness of ancient Greek philosophers - who drank wine in the shade of olive trees and relished the view of lovely boys walking by while setting up the foundations of the western thought - and the untidiness of a childish mind at play can benefit the process of discovery, but also how going on vacation, taking the time off and distancing oneself from the subject of one's research can benefit it more than sitting in the lab and wrestling with it all the time. The African schoolboy at the time of his discovery that the freezing

⁷⁰⁰ This is according to the exhibition note on display at the Faraday Museum in London I came across on October 16, 2023.

rate of water is not directly proportional to the starting water temperature, also owes his phenomenal finding to being late for the ice-cream making class and placing his milky mixture warm into the freezer, but then realizing that it froze faster than those of his classmates who had waited for the mixtures to cool down before putting them inside the freezer. Laughed at by his teacher, he, himself, shrugged such discouraging remarks with ever more of playful outlooks, sought a more reputable scientist to verify his findings and they went on to jointly report these finding, having the boy eventually become credited with a name behind yet another physical anomaly of water: Mpemba effect⁷⁰¹. To this day, this true tale retains its instructiveness to young scientists from many different angles, from teaching them that obedience of petty rules, such as punctuality or officialdom, is usually a hindrance to a creative mind to showing them that fundamental discoveries lurk in the most trivial of experiments. So, hilarious playfulness that uproars the world and deep ponderousness that seemingly neglects the world can both present pathways to great discoveries, so long as the discoverers obey the sound of intuition in them and are guided in the right direction by the muses of serendipity. The researchers at the University of Parma in Italy, for example, realized that performing certain actions and watching others perform them could have the same effect on the brain⁷⁰², thus setting the grounds for the scientific confirmation of the power of positive thinking and meditation, when a peanut-munching member of the scientific team accidentally entered the room with a monkey tied to brain electrodes, while another member of the team noticed an identical response by the electrodes as when the monkey himself ate the peanuts⁷⁰³. Being receptive to a sudden inflow of revelatory insights is thus particularly important at the moments when something foolish or unearthly is about to happen. As pointed out by James Friend in the opening talk in the symposium I chaired as a part of a nanoscience conference held in SF in 2018⁷⁰⁴, his discovery of the ability of smoke particles to be used to visualize the propagation of acoustic waves on the surface of metal oxides as a cheap alternative to expensive laser interferometric techniques⁷⁰⁵ was thanks to a student who used to secretly smoke in his lab in Melbourne, Australia, being an act that, like all other rebellious acts, ought to be always inspected for the inventions that it paves the way for instead of reprimanded and stifled. Paul Ewald, Max von Laue and other crystallographers may have known this as they were sitting underneath a chestnut tree, fervently drawing diagrams on white marble tables of a Munich café, to the horror of the waitresses who regularly had to clean after them. Even before the days when the voices of the proponents of active learning became so pervasive with their telling us that the traditional style of lecturing fails because information is solely being disseminated by its means, but not assimilated too⁷⁰⁶, these intellectual renegades realized that the best transmission

and assimilation of knowledge occurs in outdoorsy settings and sceneries that naturally foster the arrivals at such a-ha moments, for which reason they rejected the stuffy classrooms and amphitheaters in favor of open bars and meadows. With the exception of a small number of inventive faculty, including Beau Lotto as of the day when he took 25 8- to 10-year-olds to a local pub and, over a pint or more of beer, engaged them in writing a scientific paper⁷⁰⁷ altogether, as well as a few anthropologists as of the day they recognized that the evolutionary theory might have never sprung to life had Charles Darwin not worked outside and began to make meadows and forests the new classrooms⁷⁰⁸, educational experience of the modern day is still tied to closed, claustrophobic indoor spaces, thereby washing countless creative impetuses and invaluable moments of understanding and inspiration down the drain. It is being neglected that the word “academy” was first used to denote the groves on the banks of the river Cephissus in northwest Athens wherein Plato gathered his disciples for didactic sessions and that such natural sceneries are far more conducive to learning and illuminative insights than the formal settings of classrooms and offices, the latter of which have one important purpose of reiterating the power of authority of the office holder to the office visitor, explaining why I have rejected them throughout my career in favor of campus meadows, benches and bars at a severe cost for the livelihood of me and my family. Be that as it may, Wilhelm Conrad Röntgen never joined these informal meetings and preferred walking alone, immersed in the world of his fancy, which might have held the key to his partly serendipitous arrival at the discovery of X-rays on the day when he noticed a screen in the corner of his room to be mysteriously lit by what he deemed to have been sheer electrons emitted from a cathode ray tube⁷⁰⁹. In the end, though, it was William Bragg and his father that were the first to determine the crystal structure of a compound from X-ray diffraction spectra. One and a half century earlier, however, Abbe Haüy, dreamed of becoming a botanist. One day he paid a visit to a friend who had a rather large collection of minerals. Abbe himself had a rather modest collection at the same time, allegedly owing only to travelling a lot together with his friend. During the visit, Abbe was handed a specimen of calcite, which he accidentally dropped and broke. Probably, at that moment, he could not have dreamt that that accident would change the course of his career and the worldwide understanding of the world of minerals and crystals. Namely, Abbe received the broken stone as a gift at the end of the evening and went home with it. Looking at it later, he noticed that the face along which the mineral broke possessed a rather smooth surface. Intrigued by this observation, Abbe decided to break it into even smaller pieces and see if the exposed surfaces would be equally smooth. Interestingly, they were and Abbe came up with an explanation of this rather strange effect, which is today known as the law of rational indices. However, he erroneously believed that he had broken the crystal into its elementary building blocks. Despite the incorrect interpretation, his discovery indicated a correlation between the symmetry of the elementary cell of the crystal and its shape as well as the cleavage planes, which presented a giant step for the understanding of crystal structures. It was a fundamental upgrade of the law of constant angles between adjacent crystal faces formulated by Nicolas Steno in 1669 and known today as the first law of crystallography. Therefore, the accidental dropping of the friend’s crystal and Abbe’s clumsiness eventually turned out to have had a beautiful significance for the world of science. It also prompted Abbe to change his career path and become a passionate

crystallographer instead of a botanist⁷¹⁰. Needless to add, most scientific discoveries are, believe it or not, serendipitous, which is why we always ought to keep an eye on tiny little things we have left behind in our explorations, carefully take them in our hands every once in a while, and watch them with a dreamy wonder. It was by playing with little wondrous pebbles on Copacabana beach that the celebrated mathematician, Steve Smale, who was later to build one of the world's finest collections of minerals, proved the higher dimensional Poincaré conjecture, recalling afterwards how he would dance samba with favela dwellers by night and surf, swim and daydream on the beaches of Rio throughout the day. A science advisor of the US President criticized Steve by writing in Science journal in 1968 how “this blithe spirit leads mathematicians to ... feel that mathematical creation should be supported with public funds on the beaches of Rio”, eventually managing to freeze the funding of Steve's work, who still openly claims that “the best work of his life has been done on the beaches of Rio”⁷¹¹. Even the most rewarding educational experience may be said to come through accidental events that spark one's imagination and lead to enriching of one's knowledge and values; or, as stressed out by Ivan Illich, “most learning happens casually, and even most intentional learning is not the result of programmed instruction”⁷¹². Finally, since innumerable scientific discoveries were made through serendipitous failures, administrative accurateness is banned from my school of science. Even imprecision and solecism recognized in my students with respect to their engagement in the experimental design are helplessly hailed by me, for as long as their eye for subjecting the outcomes of these failures to scrutiny is kept widely open. For, in results that go against our expectations the most precious pearls of knowledge lie hidden rather than in those that merely confirm our anticipations and hypotheses. Knowing all of this, I demand one thing for my scientific coworkers: no rules for them to be demanded to obey. I feed people with love and wonder, with ability to recognize and appreciate a graceful beauty and genuine thirst for knowledge, knowing that if these qualities be provided, everything else will flow out lightly and naturally.

S.F.2.19. The Way of Love thus tells us that to explode in our spirit towards the world, blessing it with every act of ours and leaving the creatures of the world breathless in facing this wonderful glow of creativity concealed within ourselves, we need to simultaneously implode, that is, collect, fuse and burn the loving visions, emotions and memories that our inner world is composed of at the center of our mind and heart, just like the Sun does. Namely, to sustain its shine that brings life to the circling planet, the Sun needs to constantly fuse the light elements within itself, incessantly uniting, uniting, uniting in a process that yields enormous amounts of energy. Without this relentless inner activity, the outward expressiveness thereof would slowly vanish. But the Sun knows that the light within and the light radiated outside are one and the same. To bring light to the world equals lighting up the glow of beauty and love inside of us, and *vice versa*. So, one way to retrieve the luster of our reflections and introspective insights would be to spread our hands to the world and act with the purpose of ornamenting it with the sparkles of celestial beauty. But also, one way to send the rays of pure, healing beauty to the world would be simply to sustain the glow of love within our hearts. Or, as told to us by the Indian Chief Luther Standing Bear, “I am going to venture that the man who sat on the ground in his tipi meditating on life and its meaning,

accepting the kinship of all creatures, and acknowledging unity with the universe of things, was infusing into his being the true essence of civilization”⁷¹³. Even though we may be sitting in a cave, the antenna of our heart would thence incessantly send the blessing rays of love to the world, imperceptibly spreading paths of prosperity and righteousness before its beings.

S.F.2.20. With its inherently proposed division of one’s experiential realm to self and Nature, the concept of the Way of Love insinuates why the true followers of this Way enjoy traveling and never feel bored in the moments of solitude. This is because every detail of their experience is seen as a dialogue between the divine voice of Nature hidden behind the veil of these appearances and the deepest settings of the starry spirit of theirs. Thus, whenever I set my foot to a new land, I also set myself into relationship with Nature herself. I say hello and wave goodbye to the places of the world as if they were living creatures speaking the same language as mine. And I know that whatever we do, Nature speaks through all of its creatures and objects to us, just as we too radiate a soulful energy from the deepest sources of our being back to Nature.

S.F.2.21. One of the most important messages in the religious teaching of Islam is that Nature, that is, God, endlessly reveals itself in the fullest possible way to human creatures. Whenever we are not able to penetrate to the beautiful voice of God intrinsic to every detail of the world, it is because of us. It is because of the dark clouds of hateful and ignorant thoughts and emotions covering the view of the Heavens above to the eye of our heart. As it was stressed out by the defendant before the Iranian court of justice in Abbas Kiarostami’s *Close-Up*, drawing heavily on the metaphysics of Qur’an, “I asked the Muse why He was hidden. He answered, ‘It is you who are hidden. You are the veil over My face, which is always revealed’. We are slaves of a selfish part behind which is hidden our real being. If we get rid of the selfish part, we can behold the beauty of truth”. Or, as it stands written in Qur’an itself, “God does not change the condition of people unless they change what is in their heart” (Al-Rad(13):11). The teaching of the Way of Love carries a highly similar message: the hands of Nature are constantly spread towards us, and it is only not setting the compass of our intentions within our heart and mind in correct ways that we can blame for not being able to get in touch with these majestic hands, with all the blessing and healing feelings that these touches awaken in us. And although we may carry beautiful dreams and visions within ourselves, imagining the destination of our road and other beings, here and now, washed in shining, heavenly pure light that heals and blesses them, it is the touch between these aspirations glowing within our hearts and the Way of Nature that determines the pathways along which the reality will develop. Although we can thus be sure that the experiential reality we face will always be different from our dreams (because our dreams are only one of the two creative poles in this co-creative drawing of the experiential reality of ours), there are many, many ways in which they may come true in divinely glorifying ways, as the book of Qur’an, to which we are getting back again, tells us: “Verily, the ends ye strive for are diverse” (Al-Lail(92):4)⁷¹⁴.

S.F.2.22. “How do you know when the balance of the Way of Love has been reached”, people have asked me. Sometimes I offer lucid and hilarious enigmatic answers, and, as usual, they are never the same. For, giving the same answer more than once is strictly prohibited in the ethical and aesthetical celestial frames of the world of mine. One of the replies to this question may be

⁷¹³ See Howard Zinn’s *A People’s History of the United States*, Harper Perennial, New York, NY (2003).

the following: “You will know when you find yourself playing a game of chess without any desire to win, but to make a wonderful piece of art. That is when you may be on the middle way between extracting precious expressions from the depths of your heart and mind and yet doing so to creatively build the people you face and the entire Nature alike. It is as if matter and antimatter collide in your being then, yielding rays of pure light emitted from your heart everywhere. A grand mental and emotional harmony is then reached, symptomatic of statuesquely standing on the Way of Love, with this inner light of the soul emerging through your eyeballs, like waterfalls, illuminating the world with its rays, subtly and unnoticeably, while our being stands all encrusted in white marble, like a beautifully carved monument to the divine. Likewise, when you score golden goals in life and victoriously stream through the air with a sunshiny smile and a tear of sadness twinkling in our eye, you will know that you are journeying by the side of the middle Way, the Way of Love. For, each smile that truly lights up the Universe with its beautiful purity and chastity possesses a tear of compassionate devotion deep in its core. And when we learn to be one with all, with winners and losers alike, we would be able to finally start playing the game of life in a divinely beautiful fashion. For, to be one with the whole life in endless empathy and yet to dig wonderfully creative, unique and inventive moves from the depths of our mind and heart illuminated by devout divineness is to be heading along the marvelous Way of Love”. And this disregard of scores, this empathizing with the player on the other side of the chessboard to the point of caring not even an iota as to who will win, this boycotting of the competitive races to win that the obsolescent, carnivorous shades of humanity impose on us, though rare like diamonds in the dust, is not a lone point of view. Perhaps the most brilliant chess player that has ever lived, Misha Tal, who strived to make each of his games “as inimitable and invaluable as a poem”⁷¹⁵ and who, according to his autobiography, took as much pride in earning the game beauty prizes at tournaments as winning them, became the world champion in chess by sharing this perspective; or, as Garry Kasparov described the Latvian genius once, “Tal was an artist, he deemed any game worthy if it was interesting... He wasn't contentious. Chess is very contentious game by its nature, and he wasn't... He did not even seek the truth in chess, he sought beauty. It was a concept completely different from most of ours”⁷¹⁶. And when our analytical senses become enriched with this eye for the beauty, allowing its divine perceptions to guide our analytical thought and actions, then our intuition grows in proportion and our reasoning, in science and life alike, becomes similar to that of Tal, again in the words of Garry Kasparov: “We calculate: he does this, then I do that. And Tal, through all the thick layers of variants, saw that around the 8th move, it will be so and so. Some people can see the mathematical formulae, they can imagine the whole picture instantly. An ordinary man has to calculate, to think this through, but they just see it all. It occurs in great musicians, great scientists. Tal was absolutely unique. His playing style was, of course, unrepeatable. I calculated the variants quickly enough, but these Tal insights were unique. He was a man in whose presence others sensed their mediocrity”⁷¹⁷. Tal could be said to have shared a lot with the masters of the primal, Romantic era in the chess history, to whom style was more important than winning⁷¹⁸, which is, *en passant*, the very same priority that I assign to my scientific engagements, equally aimed at reviving the Romantic, Renaissance charms of it in place of prosaic

⁷¹⁷ *Ibid.*

⁷¹⁸ See George Dvorsky's How Chess Has Changed Over the Last 150 Years, io9 (May 29, 2015), retrieved from <https://io9.gizmodo.com/how-chess-has-changed-over-the-last-150-years-1707692642>.

positivism as the efforts of Tal. Once, in an almost fluent Serbian, he humbly noticed that not an artist he had been, but a gambler⁷¹⁹ and I, with an unbound spirit springing high up into the air, exclaim infantly, “I, I, I am one too”, always on a lookout for a surprise, risking and playing impossible things, leaving spectators and fellow actors on the stage of life speechless and in awe over my moves, acting with the whim of a child in an adult, professional milieu and with the taste for an old-age wisdom before teenage riots enfolding around me, acting as an eternal misfit who sacrifices material possessions without blinking twice, who disobeys the social norms and people’s advices and who lives to break every law under the Sun. Though such an attitude entails frequent nose-dives into the mud, long time ago I realized that to be a good mentor in academia, an advisor, a friend and a grand soul that others feel safe to confide in, one must experience first-hand all the tumbles and turns that a rollercoaster ride of life can give one. People who have continuously ascended and never slipped nor stumbled are, according to my experience, poor empathizers with other people’s ups and downs and are, as such, incapable of giving good, heart-healing advices that empower and inspire, the reason for which I have often, the way Misha Tal would do, to the surprise of many, deliberately jumped off cliffs and fallen down to the rockiest bottoms, even when the ascending paths were clear ahead of me, knowing that in such a manner the progress along the angelic path, inevitably standing in opposition to the path of progress measured by the social norms, is made possible. And it is exactly this series of soars and slumps that, as per the philosophy of life of the Serbian folk singer, Toma Zdravković⁷²⁰, makes gambling a sacred art, an art that opens their practitioners a view to the depths of their souls. Boss on one day, barefoot on another, if I am allowed to evoke the famous song by Zabranjeno Pušenje⁷²¹, has indeed been the outcome of the rollercoaster ride that I have accepted to take in life by gambling with it, knowing that the understanding of the deepest spheres of the human psyche would thus dawn on me in a much clearer light than had my path been a linearly ascending one. Besides, as I often note, it if wasn’t for my Mom’s indulgence in the sin of gambling⁷²², which ran through the veins of her family tree along with that of vagabondage and restless voyaging⁷²³, I, who had been given little chance of being physically - or mentally – normal at birth by the doctors, would not have been even born, which is one of the reasons why, in spite of all the topples and tumbles that this risky lifestyle brings about, I continue to gamble with the moves I make on the chessboard of life. And just as Philip Marlow’s supervisors characterized him as “not a detective, but a slot machine”⁷²⁴, so have my academic authorities been bedazzled by the illogicality of the moves I have made, warning me

⁷²² She often used to say, “*Rešila sam da se kockam*”, meaning “I decided to take a gamble” when recalling her decision to disobey the doctors’ orders to abort the pregnancy because of the measles infection she had suffered from and give birth to me.

⁷²³ Her father, Miroslav, was, like his two brothers, an academic runaway, having escaped the academic path that his own father, the principal of the highest academic institution in the second biggest city in today’s Croatia, Split, at the time, a high school, laid down for him. And so, he, having found the academic culture stifling, moved away and worked as a truck driver for living, but was freed from those sins of restless voyaging and gambling, which his two brothers, Hrvoje and Čedomir, respectively, were allegedly subject to. This is why I am often found saying that my two grandfathers, one academic runaway and one priest, set the path of what I was to become.

⁷²⁴ Watch *Murder, My Sweet* directed by Edward Dmytryk (1944).

repeatedly that they amount to professional suicides, but misunderstanding the gambler's mindset from which they originate, the deeply irrational, intuitive, risk-taking mindset that cannot live nor create but by hanging from a mile-deep cliff. For, although clouds in which my head is immersed have been streaked with innumerable guiding lines, a particularly prominent one has coincided with the following kink extracted from Jeanette Winterson's second autobiography: "Doing the sensible thing is only a good idea when the decision is quite small; for the life-changing things, you must risk it"⁷²⁵. Besides, if one earns for living by experimenting, be it in the lab, with a pen in his hands, on the computer screen or outdoors, one must experiment with every aspect of his life and career, lest the authenticity of everything one creates suffer, the reason for which my road, as I have vowed, will always be the road less traveled, the road of undying experimentation and exploration, of taking one leap after another in the dark, defying daringly the mainstream paths of conformity and convention. I have known all the while, however, that in the world of science it will take a long, long time before such zigzag paths bringing about alternate rises and slumps, all spiced with strange, strange decisions, become an instant attention-grabber, as in the artistic world, rather than a cause to neglect one's work and personality. This awareness and the ensuing readiness to be shoved aside and humiliated by the scientific community of this day have been the natural corollary of my being dedicated to creating works that will resonate not with the current generation of scientists, but rather with scientists from a distant future, where science and art will have remarried and formed a harmonious family, centering a whole society, more enlightened than today's, around it. The other side of the coin of this clairvoyant mindset typifying Tal was an intense presence in "here and now" and the display of magnificent spontaneity that comes along with it, being yet another one of the traits displayed by Tal: "He led a very unusual life. He didn't think of anything. He lived here and now, and this enormous energy was always around him. The positive energy. Tal was one of the few completely positive people I knew.... Tal should have prepared differently for the return match (with Botvinnik). But if he prepared, he wouldn't be Tal. He lived differently, it was simpler to him than to us. From my conversations with Tal, I think he didn't consider the things obvious to us to be of any importance. Tal was much lighter on his feet, much more prone to anxiety than other chess players"⁷²⁶. Once we let the divine intuition interbreed with logic in our mental spheres, we indeed become lifted two feet off the ground and begin to walk in the clouds, which, as ever, will irritate the occupiers of the lower realms of being, who, having sensed how our sensitivities and groundlessness make us prone to be easily pushed and stumbled on our dreamy ways, as if we were a spinning top of a kind, will be frequently tempted to push us into ditches for no reason whatsoever. However, although this sublimity of our inner worlds would invariably subject us to ridicule by the prosaic positivists who inhabit today's academic halls, valuing only analytical thought, cold and emotionless, and stepping in disgust over anything visceral or lyrical, we must fly high, unconcerned about the worldly reprimands, flapping

⁷²⁵ The autobiographer does not stop here. She continues: "And here is the shock – when you risk it, when you do the right thing, when you arrive at the borders of common sense and cross into unknown territory, leaving behind you all the familiar smells and lights, then you do not experience great joy and huge energy. You are unhappy. Things get worse. It is a time of mourning. Loss. Fear. We bullet ourselves through with questions. And then we feel shot and wounded. And then all the cowards come out and say: 'See, I told you so'. In fact, they told you nothing". If this is correct, then when we do morally and aesthetically the right thing, we ought not to expect that we would see the light and be suddenly gifted with perfect composure and strength, but quite the opposite: that we would sink into an ever deeper darkness and doubt and come a step nearer to the fate of Christ on Earth. See Jeanette Winterson's *Why Be Happy When You Could Be Normal?*, Random House, London, UK (2011), pp. 63 – 64.

⁷²⁶ See the interview with Garry Kasparov, *Echo Moskvy* (November 30, 2008), transcript retrieved from <https://www.chess.com/news/view/garry-kasparov-talks-about-mikhail-tal-and-soviet-chess-history-1340>.

with the two wings growing from our spirit, one of which is illogical or analogical intuition and the other one of which is logical calculation, knowing that with every flap we bring ourselves and the world a step closer to the heavenly realms of being.

S.F.2.23. In that sense, I am always reminded of one of my academic advisors for whom I kept an unusual respect. In spite of his old age, he thought with brilliant clarity, which fascinated me, and also displayed a fine balance between logic and intuition in his research endeavors, so uncommon for the renowned scientists of the modern day. However, it always seemed to me as if his enormous love of science overcast the love of man inside the heart of this big man. He stayed infantile in his love for the world of chemistry, but unkind to people around him. In a letter of mine I correlated my own tendencies to neglect people around me for the sake of edifying the beauties found in my scientific and philosophical works with the traits found in this man and noted the following: “It is my own love of science that has frequently depleted the richness of my social life that led me to understand the roots of his frequently hostile personality and occasionally even find sympathy for it. For him, his own vision of colloid chemistry is more important than any human creature in his surrounding, the way it seemed to me. But everything has its limits, and there is no justification for one’s love of science beginning to oppress the people around. More than anything, I wish him now to find that balance between the love of science and the love of man”. The Way of Love offers the key on how to balance the beauty and the meaning we ascribe to the world of thoughts and emotions brimming inside us and the beauty and the meaning of other people’s thoughts and emotions and, in fact, of the entire world external to ourselves. As offered in a beautiful Mika Antić’s poem, which I have clumsily translated here, despite knowing that “there can be no translated poetry without a newly written one”, as I remarked once to a friend attempting to translate to English yet another one of the poems of this wholeheartedly infantile bohemian, “Maybe you do not even know how much I love your scruffy head, the childish head that smells like soap and the April wind, the head in which only high colors dwell, great and unreachable, the head which will understand the distances of light years, unintelligible digits and geometric curves and the bravery of spaceships that will head tomorrow towards some unknown suns... This is why I only wish to ask you for something: fly across the eternity and conquer time and imagination, but do not forget how one walks on the ground. Touch antimatter with your hands, but do not forget how to walk on the ground. Incite the heavenly lanterns and light up meta-galaxies, but do not forget how one walks on the ground. Because human hearts are planted low as raspberries, down where glowworms are the only stars and eyes are the only suns, where we made a tiny universe for ourselves, and yet huge enough to get lost, away from each other: me from you like Alfa Centauri, you from me like Halley’s comet. Discover new worlds and weave their skies, gift them the air so they can breathe and live, but do not forget how to walk on the ground, because tomorrow we will need to get closer to each other”⁷²⁷. It is the ultimate balancing principle on our journeys in which we strive to reach stars and the greatest things conceivable, undiscovered nor ever revealed to humanity, to harmonize the merits found in our silent contemplations and reflections, during which, like the Sun, we concentrate and process the creative energy within ourselves, and the merits found in the act of giving, during which we radiate with this carefully cultivated love within us to the world. Whenever we go too deep in our thinking, we ought to remind ourselves that we carry out these imaginative operations in our heads for the purpose of beautifying some eyes of the world that are so dear to us. Otherwise, we will be boundlessly flying

⁷²⁷ Read Mika Antić’s poem Čarobna pesma, that is, An Enchanting Song available at <http://forum.krstarica.com/showthread.php/162485-Miroslav-Mika-Antic-poezija-za-sva-vremena>.

around the airs of the world, like an uplifted balloon inflated with fancy, though unable to attach ourselves to anything on the ground where worldly creatures dwell and shed the stardust of wonderful sprouts of action and thought onto them. “They are flying far too high to see my point of view”, ecstatically cries Van Morrison at a stylish party while having the vision of St. Dominic in front of his eyes⁷²⁸, and by resembling such billowed balloons we would be predestined to appear like the effervescent “jet set” of which the Irish singer sang, with bubbly champagne supernovas and starry twinkles in their eyes, although floating within their own bubbles of feeling and thought like David Bowie’s Major Tom, unable to cordially relate to anyone, dwelling on the edge of the abysses of sheer solipsism, an extreme stance far off of the balance of the Way of Love. To collide with one another is to burst, they would be tempted to think, not knowing that such bursting is akin to the death of that biblical seed of mustard (John 12:24-25), needed for the sprouting of a tree bearing beautiful, beautiful fruit to begin. As such, they remain confined to their own solipsistic bubbles, predestined never to live to the fullest of their potentials. For, solipsism, whereby others are a part of the dream of one’s soul, would be quite an appealing idea for these plastic phonies that so well represent the modern dweller of the western world. Whereas at the very mention of its veracity their eyes would glisten, their reaction to the reverse idea, which is that one is merely a part of the dream of, say, a person emotionally closest to one, might be to momentarily spit out in disgust all that fancy wine that they have relished with pleasure, not knowing (a) that with their biased choice and inclination to solipsism they unambiguously prove the selfishness and the alienation of lifestyles promoted by the western, world’s dominant culture, (b) that the aim is to awaken so much love for another in oneself that both of these extreme standpoints with respect to the middle ground that the Way of Love is appear equally intriguing, and (c) that without bursting in love and losing oneself thereby, nothing is to be gained and nowhere is to be gotten by the end of the day. Slowly, then, the energy that propels these fanciful flights of our spirit forward would drain away, for nothing presents a more essential drive for creative thought than losing this thought for the sake of closely approaching a creature dear to us. Without humane motives behind our thinking, as I have claimed, no fruitful results could ever come out of our intellectual endeavors. On the other hand, of course, to be creative in acting and genuinely improve the world around us, we need to be partly withdrawn within ourselves, knowing that “love is tattooing oneself with fancy”⁷²⁹, as Mika Antić would have further reminded us, cultivating precious ideas, visions and emotions that will help us orient to the right ways and incessantly pull the inner treasures of spirit out of our heart and give it as dearest gifts to people around us.

S.F.2.24. Distancing from others presents a way of improving our knowledge about the faced creatures or details of the world whenever we find ourselves spending too much time staring at them. As pointed out by Kahlil Gibran, “How could I have seen you save from a great height or a great distance? How can one be indeed near unless he be far?”⁷³⁰ Namely, if we spend too much time glancing at certain details of the Universe, many of their qualities will slowly sink into the blind spot of our perception. We always need to move back and forth in relation to things in order

⁷²⁸ Listen to Van Morrison’s St. Dominic’s Preview on St. Dominic’s Preview, Warner Bros (1972). The lyrics of the song revolve around the artist’s moving experience of gazing at the icon of St. Dominic in St. Dominic’s church in San Francisco.

⁷³⁰ See Kahlil Gibran’s The Prophet, Alfred A. Knopf, New York, NY (1923), pp.90.

to recognize what they really are. Even the most enchanting landscapes of the world and our mind would turn into hellish ones should we constantly dwell in them and neglect to change our perspectives. At the same time, not only does our sense of being inspired by the world dwindle when we neglect this need to constantly move to and from the objects of our attention, but the extent to which we inspire the world becomes diminished as well when we cease to engage in this dance of the Way of Love. Therefore, the key to inspire and feel inspired is to (a) come close to the nearby creatures and objects, build the bridges of sympathy between the hearts of ours and theirs, walk on them graciously and gaze deep into the eyes of the soul that reside on the other side, knowing that without being an epitome of the Little Prince, who traverses vacuous cosmic distances that stand between the planets of human hearts and joyfully hops from one to another, empathizing with them all, no truly angelic way of being in this realm of reality could be given rise to, and then to (b) bounce back into faraway spaces, becoming for a while like Wim Wenders' angel who sticks to the "faraway, so close" norm and becomes united with the world by watching it from afar or like "a friend" idealized at another place in Gibran's poetry, "who is far away (and) is sometimes much nearer than one who is at hand", being akin to "the mountain far more awe-inspiring and more clearly visible to one passing through the valley than to those who inhabit the mountain", and then (c) all over again. In such a way, that is, by being in a constant state of movement to and fro we become a true epitome of the Way, a connection between things kept apart, and endow our actions with the holy spiritedness, allowing their potential to exalt the surrounding spirits skyrocket through the roof, as in accordance with the following excerpt from the Gospels: "The wind bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh, and whither it goeth: so is every one that is born of the Spirit" (John 3:8). This is why, from planets circling around their suns to continents conjoining and coming apart to trains arriving and departing to seasons retiring and returning to flowers blossoming and withering, all around us is in the state of continual change. Everything is travelling and the Way could be seen as the symbol of the Universe, which may be why St. Teresa of Avila stated that "the feeling remains that God is on a journey too"⁷³¹, remotely echoing the biblical drawing of the parallel between God and father, a parent, in which case the suffering of people on Earth must be shared by the suffering of God who created them⁷³², the way a good parent would share the suffering of his children, meaning that the path taken on by God's children is the same one that God journeys on. This may also be why sages insisted that eternity lies in the incessant movement, whereby wise dancers opined that the only harmonious posture is the one that presents a shift from the posture that we are currently holding, altogether emphasizing change and dynamism as the key to sustainability of the world, with the latter, hence, being possible only through its unceasing evolution. But the opposite argument is equally valid too: if we never have enough patience to sit next to creatures and waterfalls of this world, carefully listening to what their splashes have to say to us, we will never be able to truly understand the essence of life. Now, it is interesting that the same parallel could be drawn for our facing our own being. Namely, spending too much time immersed inside of us can throw us out of balance, and only looking away, towards the surrounding world, may make us retain the balance within ourselves, and *vice versa*: if we never collect enough patience to enter that spiral staircases that lead to the inner spheres of our consciousness, we will never be able to meet ourselves and become, one day, true to our self and true to the whole life in everything we do. And unless we succeed in this aim, we will remain incomplete in our divine

missionary task of bringing the light of our spirit to the world. Knowing that the Way of Love presents the most potent cognitive state, we would be inclined to listen carefully to where we stand in relation to this balance, and from there on make moves that would bring us closer to it and thereby reignite the glow of lost creativity and happiness. In other words, if we spend too much time dwelling deep inside of ourselves, recycling our memories and impressions into fuel for our thoughts, emotions and acts, we need to spread our hands outwardly and act with the purpose of bringing these inner treasures to the outside world in order to revitalize our spirit. However, if we are an introspective person by nature, we may easily be tricked by a self-imposed belief that spending even more time roaming the landscapes of our inner world would thence present the way for rejuvenating our spirit, when it may be the other way around. On the other hand, overly extrovert personalities will tend to jump into exciting ways of expressing themselves even more whenever they realize they are out of balance. But because of staying at the overly outwardly oriented side of the imbalance, the solution would be the other way around, that is, plunging deep inside of themselves. The Way of Love is a reference line, a perfect equilibrium we should rest our minds and hearts into whenever we realize that the frantic rhythm of life has swung us far away to one or the other side of this balance.

S.F.2.25. Sometimes, as I longingly gaze at the starry sky, I imagine myself to be the five-arm galaxy of the Milky Way and endlessly whirl, just as this congregation of stars does. And so I spin with my arms wide open, letting the cosmic energy of wonder and love wash over my heart and make it a reflection of the Milky Way. It is then that our heart becomes sprinkled with the traces of the Way of Love that others may follow in finding their own milky paths of the heart. It is then that we capture other people's attention and spontaneously make the waterfalls of joy and love flow out of their hearts. It is then that our heart turns into majestic tracks along which the train of cosmic love may pass, delivering happiness and grace to the breadths of the world. And as we ride the starry train of love and have stars and galaxies whizzing and spinning beside us in their endless travelling across cosmic vastnesses, we may know that the Way of Love is all about falling in and out of the balance between a meditative harmony and an empathic commonality that it is emblematic of. For, remaining in the state of a perfect balance may produce a blind spot in our worldviews and thus be an unfavorable choice if kept for too long. Swiftly switching between the two poles of the Way of Love, between being deeply plunged within oneself and being deeply plunged within the hearts of others is what makes our spirit become a string that fluctuates back and forth and in doing so produces the wonderful music of life. And yet, what makes us truly beautiful and shiny in this world is incessantly striving to reach the balance, to move to the other side whenever we find ourselves, for a brief moment of time, too much inclined to one of them. So, whenever we realize that we have become immersed too much into the core of our being and that the curses of an exorbitant reflection and an egotistic self-consciousness are starting to take over, desiring with all our heart to open up and make the enlightenment of others what truly matters is what will make us shine forth from the depths of our mind and heart. And also, whenever we realize that we have fallen onto the side of being plunged into eyes of another up to the point when we lose contact with the core of our being and the missionary path we ought to follow, wishing if we could go back and regain the intimate hold of the essence of our own being once again and guide ourselves along the sacred inner path while carefully listening to our heart, is what will make us shine forth with true beauty of the spirit to the world. During a mind-opening journey to Houston where I saw and read the words of a cancer survivor, written on the wall of a clinic in the biggest med center in the US, saying how "no matter what troubles life ditches you in, you can always

choose to be happy. Me? I chose to dance”, while looking at the tilted rainbow-colored letters of the Texas Children’s Hospital and listening to the hundreds of birds densely flocked on a few little trees in front of it and passionately singing their songs, I felt for a moment as if all the fragments of my memory got broken into millions of pieces and my mind was left amongst the gorgeous silence of the cosmic symphony of being, ejecting my mind and plunging it into the endlessly deep Cosmos and washing it with the pure and untouched emotions of devotion and love. “You have to tell stories to people using their languages”. That is what Juliet told me near the journey’s end, as we sat in a Houston restaurant and leaned our ears onto the window to hear the twitter of the orchard orioles from the other side of the street. The apostolic words immediately flashed inside my mind: “It is not possible for anyone to see anything of the things that actually exist unless he becomes like them... Jesus took them all by stealth, for he did not appear as he was, but in the manner in which they would be able to see him. He appeared to them all. He appeared to the great as great. He appeared to the small as small. He appeared to the angels as an angel, and to men as a man... He became great, but he made the disciples great, that they might be able to see him in his greatness”⁷³³. This mastery can be attained only in so far as we empathically look at the world through other people’s eyes and conduct all our actions with the goal to bring enlightenment thereto. When we find ourselves in one such perfectly equilibrated state wherein we fluctuate from one imbalanced extreme to another, without ever leaving the golden middle for too long, we might suddenly recognize that we have ceased to awkwardly avoid human eyes, but are able to gaze at them with gentle lovingness. Our eyes then start to wave like the waves of a sea, with the melancholic waters of sad empathy beneath, the stars of sparkling joy and curiosity in the center, and a crown of relaxed happiness on the top. The sea and the stars thence become mirrored in our eyes – the former yielding softness to them and the latter breathing a dose of twinkly vivacity therein. The purpose of education is exactly that: to speak and act with passion all until one glimpses the soft melancholy of compassion and warmhearted emotions shivering at the bottom of the eyes of the little ones, and a starry twinkle of a genuine wonder starting to glitter inside of them. It is only upon the sea of compassion, of mild tears waving left and right across the infinite depths of human eyes that the white and graceful ships of knowledge are free to travel across. Thus we engage the loved ones of this world into a starry ride across the dazzlingly stellar Universe, all while standing with amazement on a planet that is constantly spinning and revolving around the shiny star that blesses it with life. As we stand and spin endless starry thoughts in our mind and wash our heart with the oceans of beautiful emotions, we turn ourselves into a galaxy that spins, spins, spins in its endless dancing across the cosmic dance floor.

S.F.2.26. Another answer I could give you to the question regarding how we may know that the balance of the Way of Love has been attained is the following: “You will know when you start dancing to the music you listen to, expressing unforeseen creativity lying in your heart, and yet becoming ever more filled with joy, excitement and happiness with every beat thereof”. I have enjoyed giving an example of a person encountering a piece of art, such as a painting or a musical piece, as a neat description of the Way of Love. Let us now assume that you are in a room with a music played coming to your ears. The majority of people will, unfortunately, regard these precious sound waves as something external to them, simply filling the space of the room and coloring its vibe. However, the person does not enter into an intimate relationship with it. He does not face it with curiosity and wonder radiating from his heart. He has no questions that may help him plunge deeply into the secrets of the music and discover many enriching subtle messages

⁷³³ See the Apocryphal Gospel according to Phillip.

hidden in it. Such people may leisurely dance to it, but in such dancing a lack of compassionate understanding of the music is obvious. Such way of dancing normally appears as out of time and place, not related to the music at all. So, this is one extreme position, in which one does not manage to leave the internal space of one's thoughts and ideas and approach the mysterious beauty of the world through empathy and wonder. But there is another extreme stance as well. It corresponds to one's jumping so intensively to enwrap the music with curiosity and empathy that one entirely forgets about tending the garden of one's own ideas and feelings. Needless to say, I have always been inclined to exhibit one such imbalanced attitude. I would readily plunge my entire attention into the encountered artistic pieces (and not only them, but surrounding creatures and all other external sources of information in general as well), and consequently I would give away my sanity, becoming like a zombie, dragged up or down in a state of trance, enchanted by the music, provided, of course, a "chemistry" was made to sparkle between me and "her". So, in the midst of a party buzzing with energy and enthusiastic leaping in spirit and wonder, you could often find me sitting quietly in a corner of the room, "dreaming while the other people dance"⁷³⁴, hypnotized by the music played and carefully following the inspiring visions and amusing feelings it arose in my mind and heart. But these days have, luckily, passed. This does not mean that I have discontinued to respond to a party atmosphere and any other intense social situation with sinking deep inside myself, all until I could say that "everybody's talking at me, I can't hear a word they're saying, only the echo of my mind"⁷³⁵, until "all the faces, all the voices blur, change to one face, change to one voice"⁷³⁶, until "all the colors start to bleed into One"⁷³⁷. The difference between then and now is that now I have found a way to channel out these intense swirls of energy that arise inside me following these moments of dreamy withdrawnness. Now I live up to the ideal of the Way of Love, which implies setting myself right between the world of my own feelings and thoughts and the world of external impressions. By doing so, I am able to move back and forth, to drag the precious outer signals into the inner sphere of my being and to pull out the feelings and ideals of mine onto the surface of my expressive appearance. And by managing to stay on or around this balance, neither does one dance in awkward and out-of-place ways nor does not dance at all. Instead, one pulls off a way of dancing that, as I said, "fills one's heart with the musical impressions, and yet produces moves that perfectly speak of and to the music encountered". This is the way of acting where one cultivates the heart of questioning and wonder, awarded with beautiful insights and feelings that the music arises in us, and yet lives so as to instill these precious insights to every piece of the world around us. In other words, one nurtures trustfulness which makes our adventurous voyage of meeting the encountered signs of Nature possible, but also nurtures a sane, internal and meditative processing of information, away from the face of the world, that eventually bears a decisiveness to push us forward into bringing the light concealed within ourselves to the world. Such a balance between the trustful openness and a graceful closeness, between opening the flowers of our mind and heart towards others and yet keeping them partially closed so that the essence of our being always stays firmly anchored to our self, is intrinsic to the Way of Love. As such, the Way of Love brings about a paradoxical state in which we are One with Nature, with the whole wide world and each one of its creatures and inanimate details, and yet

there is a sane loneliness in which our thoughts and feelings are enwrapped with the purpose of maintaining the creative participation of our being in the world.

S.F.2.27. “In love the paradox occurs that two beings become one and yet remain two”⁷³⁸, Erich Fromm said. The idea of the Way of Love is, in fact, a mere reminder of the ideals set forth by Erich Fromm in his book on the art of loving. In it, he claims the following as well: “To be able to concentrate, to be able to be alone with oneself is the predisposition to love. If I am attached to another person because I cannot stand on my own, he or she can be my savior, but our relationship is not the one of love. Paradoxically but true, the ability to be alone is the precondition for being able to love”⁷³⁹. Following this line of thought, black on white, Neneh Cherry enters a church in the homage to her hometown of Stockholm with the desire “to be with others, alone”⁷⁴⁰, hinting at the ultimate destination of the Way of Love and the endpoint of a truest religious experience. This is to say that in order to strew the neighboring soul with the divinest waves of energy, be they physical, verbal, emotional, spiritual or all of them together, we must descend deep within oneself, locate the sources of these waves and maintain an uninterrupted channel between them and the surface of our being, before extending them to the fellow soul, to which end we must trust and, really, love ourselves. Indeed, if we despise ourselves, we would find us to be in a desperate situation of recognizing all the fertile grounds for loving the surrounding beings, while not being able to spread the wings of our spirit and wash them with the waves of the ocean of emotions confined within us. “I can’t love you ‘cause I don’t like the man that I am”⁷⁴¹, our mind would spin the verses of a Pete Molinari’s song in its fruitless orbiting around the creatures in our vicinity without ever settling the spaceships of inspiring signs and touches onto them. After all, “self-love is unquestionably the chief motive which leads anyone to speak, and more especially to write respecting himself”⁷⁴², as noticed by the 18th Century Italian playwright, Vittorio Alfieri, raising our awareness of the fact that even the most selfless expressions originating from the untainted drive to enlighten another stem from the sprout of self-love sown deep within us. For, each and every such expression is rooted in confidence in positivity of our efforts, which is essentially a form of self-love. In the absence of this intrinsic love for oneself we would quickly wind down into an expressionless cocoon and become an unresponsive pot plant instead of an animated and genuinely reactive human creature. Asking ourselves what comes first, love for oneself or love for another, is thus similar to wondering whether chicken is older than the oldest egg or *vice versa*. For, what conditions the exhibitions of sympathy in our social milieus is, first and foremost, a healthy dose of self-love nourished within us. On the other hand, we are born to this world as helpless creatures whose growth and development are directly dependent on our ability to receive love and the caregivers’ willingness to nourish us with it; or, as the following contemplative ball of yarn spun in Doris’ head tells us: “It is said that you have to love yourself first before anyone else is going to love you. But it is wrong. It is biologically untrue. A child in isolation will not develop concepts of love or self-love. We have to receive love in order to know what it is”⁷⁴³. Therefore, although reaching out to deliver acts beneficial for someone else solely is possible to imagine as originating from perfectly selfless stances, the latter would be unsustainable in the long

run without complementing this great desire to dissipate one's inner treasures in the air with the counterforce aimed to integrate our beings as wholes; or, as Doris, herself, would again point out, "Know that if you're alive right now, you have been practicing self-defense, you have pathways in your psyche that have kept you in some ways safe, and they deserve thanks"⁷⁴⁴. Similarly, acting with the aim to spur the light inside of one only can be indeed imagined, but in reality it is always preceded by the subject's reception of the nectar of love from the gods and goddesses of the Universe concealed within the hearts of ordinary earthlings as well as by often unknowingly sowing the seeds of love and care that are irretrievably deeply instilled within one. Hence, whenever we act in utterly selfish manners, we ought to know that we ignorantly go against the grain of both natural and divine acting. On the other hand, if we start depreciating ourselves, having become but a slave of an overwhelming awesomeness seen in others, we will end up merely throwing sad and apologetic glances all over the place, glances that will make us appear clingy and helplessly uncreative. "She needs you more than she loves you"⁷⁴⁵, a verse picked out from a monumental song by the Smiths, could be a neat reflection of this attitude. In the theological domain, the immortal words told by the resurrected Christ to Mary Magdalene, *Noli Me Tangere* (John 20:17), translatable as "stop clinging to me", demonstrate the necessity of the adherents' detachment from their teachers, lest they remain in the shadow of their authorities for good and fail to live up to the fullest of their creative potentials. And so, when Neil Young intercepts the lyrical reminiscence of him leaving a bunch of his friends in a song he recorded a couple of blocks down the hill from my SF nest⁷⁴⁶, for "they were just deadweight to me, better down the road without that load", with the memory of him watching a Grand Canyon rescue footage on his momma's telly as a child, he subtly hints at this need to cut the clingy ties of exceptional reverence between us and our neighbors if we wish to fly out like a superman and save the world with the celestial bliss and beauty radiating from our being. Lest we become like "Dallow, Spicer, Pinkie, Cubitt" and other "rain-coated lovers' puny brothers... raised to wait"⁷⁴⁷, we must cut the cords tying us in excessive reverence to the earthlings' souls near us, for only in such a way would we be able to touch the deepest and elicit the divinest in them. To move mountains with the power of love for worldly creatures and yet to resist clinging onto them is the art that all of us striving for the stars need to master. The Way of Love, in that sense, reminds us that there is a balance, a great equality between the love for ourselves and the love for another. When asked about the ultimate commandment to guide missionaries in life, the Christ did not say that we should love our neighbors more than we love ourselves. He pointed to equality by saying "Thou shalt love thy neighbour as thyself" (Matthew 19:19). In other words, we should build a superstar in ourselves, but also see shining stars of beauty and divine light in others. Be careful, though, because by making attempts to overcome an overly masochistic attitude in communication, we may inconspicuously start from a starry and self-loving personality at first, but then continue crossing the balanced boundary and thereupon fall to the other imbalanced side. This will happen if we do not wish to release the light of this inner love of ours to the world as much as to produce it, that is, if we turn out to love ourselves more than we love others. After all, a walk along the thin edge of the Way of Love is difficult. A slightest dose of loving ourselves too much compared to our love of another or *vice versa* would quickly result in the joyful acrobat of our heart falling off this thin wire. The words of Meister Eckhart similarly echo this genuine walk of life: "If you love yourself,

you love everybody else as you do yourself. As long as you love another person less than you love yourself, you will not really succeed in loving yourself, but if you love all alike, including yourself, you will love them as one person and that person is both God and man”⁷⁴⁸. These words are nothing but arrows that fly straight into the center of the idea of the Way of Love.

S.F.2.28. And the arrows of love most intensely radiate and are absorbed by our eyes, the ones that carry tremendous amount of information in their subtle jiggle. “The only things I read were faces”⁷⁴⁹, Belle & Sebastian sang in a song about the time spent on a carefree holiday. And is there anything more relaxing and enriching than empathically reading other people’s faces? Judy disagreed with this on a fine DC evening and patted an imaginary toy poodle a foot or so from the floor, reiterating out loud Eleanor Roosevelt’s belief that great people discuss ideas, average characters chat about events, while petty souls are concerned with other people, yet what came as my response as literal lovingness of such and similar self-humiliating stances that bring us far from the lofty ceiling and closer to the ground wherefrom all things around us could be seen with the wide and dewy eyes of blissful wonder. For, the smaller we are and the closer to the ground we lay our views, the more glorious the world would appear in our eyes. Moreover, as it stands written in an account of the life of Saint Francis, the founder of the order of Friars Minor and a person who considered every stored coin as equal to deprivation of others of various valuables and advocated the dissipation of money in the air as soon it lands on the palms of our hands⁷⁵⁰, “The more one is *minor* (small, humble), the more one is a brother of others”⁷⁵¹. Hence, as we see, both Wonder and Love become enkindled in us when we take an authentic anarchistic route and renounce the lofty clouds of power and set the grounds for our views of the world on the lowest lands of reality that we could find. For, what I have had in mind here is watching people without judging them from the distance and with purely imagining how life looks from their eyes. Watching you without me, as Kate Bush sang in a barn behind her family home during one of the most enchanting recording sessions in the history of modern music⁷⁵². In the end, wisely growing up may indeed equal paying less attention to what people say, and watching how they “dance” with their eyes, arms and entire bodies, as my virtual friend once said. Or, as the American philanthropist, Andrew Carnegie is said to have noticed once, “As I grow older, I pay less attention to what men say; I just watch what they do”. And for me, the ultimate wisdom would lie in learning how to read the messages of human spirit as written in the twinkling dance of their eyes, I added. For, eyes are the mirror of the soul, as Socrates said in the fabulous Plato’s dialogue, nowadays known by the name Phaedrus. They are the wishing wells of human soul, and their subtle dance is incomparable in its richness to any messages our bodies could radiate with. In that sense, we should recall that the downside of not seeing the eyes that see the world is that we may be blind to many non-satisfying and improvable traits of ours. But the definitive upside is that we can always pick to imagine us in whatever light we want to be dressed in, and at the same time forget about our human shape and become thoroughly immersed in the beauty of others. But remember, to succeed in that, we need to ceaselessly follow the music played in the depths of our mind and heart. As the soothing music of Carl Gustav Jung’s words may whisper to our ears at this place, “Your vision

will become clear only when you can look into your own heart". Hence, to maintain our enriching sense of oneness with others and see the world with the Little Prince's clarity, capable of discerning the true nature of things, which is wholly invisible to mundane others, we should unrestingly focus on the thread of thought descending all the way to the bottom of our mind and heart, but to stay deeply rooted within our self, preserve the genuineness of our actions and see our insides clearly, we ought to forget about ourselves and plunge unreservedly into the eyes of another. This balance, paradoxical at heart and unsustainable but through constant fluctuations from one extreme to another, is nothing but the essence of the Way of Love.

S.F.2.29. I have always enjoyed hiding behind the trees, sneaking in the woods, walking on my tiptoes, acting like a skillful thief who erases every trace of his presence, letting the imprints of my bare feet be silently washed away by the sea. As a kid I would spend hours staring at the photographs of the figure-eight-shaped hedge on San Francisco's Lombard Street, known far and wide as the crookedest street in the world, and dream of jumping straight into one of its shadowy corners, then secretly watching the world from it and simply hiding in this safe haven for as long as I could. Most people will now yell altogether how this is creepy, but I think there is something charming and beautiful in being mysterious. For, as stated in the Bible, "we speak the wisdom of God in a mystery, even the hidden wisdom, which God ordained before the world unto our glory" (Corinthians I 2:7). The need for finding oneself in the role of an escapee every once in a while, covertly watching the world from a secret hideout, may be deeply innate to our beings; for, how else could one explain that all kids, with no exception, love to play peek-a-boo and squeeze inside holes in the trees? "(When you go to new places, where you aren't you), masks you put on should always be lost because that way you could easily find them", the voice of a joker that popped up in my dream said once, and now, at the reminiscence of this mysterious line, my head begins to recoil and quiver at the idea of the archetypal innateness of this attraction to things that are lost and of the drive to be lost to the world every once in a while, before being found by it. After all, if you are perfectly responsive and participatory, if you are always "in it", you may never get to judge about the world while watching it from aside and thus may never become a truly great artist, holding droplets of wisdom on the palms of your hands and freely handing them to the thirsty creatures of the world. Bob Dylan, Paddy McAloon, Thom Yorke, Jónsi Birgisson and many other wonderful artists of the world would have been probably considered as creepy due to their drowsy gazes, piercing looks, unconventional behavior and periods of openly displayed moodiness, albeit the fact that the side that proclaims creepiness of others is apparently the one with a problem, as any insightful psychologist would notice, and that owing to its irrationally feeling uncomfortable in the presence of the former persons. However, it is sad to notice that a rise in the global trend of consideration of self-esteem as the most important personality trait to be developed, altogether with toffee-nosed certainty that freezes the mind, body and soul, has corresponded to deletion of the merits of mysteriousness from the list of aesthetic and desirable human qualities. Whatever happened to secretive sentiments portrayed in David Lynch's *Twin Peaks*, "a programme about mysteries, secrets and emotions"⁷⁵³; have they all been eradicated in the past few decades and ceded place to bleak transparency, explicitness, cold clearcutness and emotionless logicity? A long way to the artistic abysses is thus said to have been crossed from the early Disney days when more complex and darker stories reverberated across the cinematic spaces, leaving deep cultural marks impressed in the minds of humanity, to this very day when Disney, Inc. devolved itself into

⁷⁵³ See Colin Odell's and Michelle Le Blanc's *David Lynch*, Kamera Books, Harpenden, UK (2007), pp. 73.

a damsel-in-distress storytelling mold⁷⁵⁴ that deludes millions of children into becoming shallow egocentric exploiters and princess-like knockoffs rather than genuinely dancing figurines radiating with love and holding Noah's rainbows in their eyes and when I am hearing one of my colleagues at work, a prototypical "West Coast represent"⁷⁵⁵, claim how the Disney-dubbed voice of Sho, a protagonist of the recent Japanese anime, *The Secret Life of Arrietty*, sounds "so horribly creepy" with its hushed slowness, softness and the depth of subterranean fountains, while readily ignoring the squeaky sounds of valley-girl superficiality coming from the voice of Arrietty after being rendered to fit the demands of the rotting US filmmaking industry. In fact, if I were to make the list of my least favorable epithets of the modern lingo, "creepiness" would definitely be close to the very top of that list, being an attribute nonchalantly handed out mainly by insecure adolescents craving more attention to be thrown on them, an effect that they achieve by humiliating others, the same one that results from long gossiping sessions whereby their ego is being boosted by their presenting themselves in a flawless light and denouncing their peers behind their backs. "Rumors", also, "spread quickly in the desert"⁷⁵⁶, meaning that milieus devoid of the richness of the spirit and rather populated by dry and parched spirits are particularly prone to exhibitions of this denouncement of another for the sake of uplifting oneself and one's cronies through endless *trač* sessions⁷⁵⁷. Besides, it should be remembered that the only reason why San Francisco and the whole of today's California were colonized in the 18th Century by the Spaniards was because of the rumors, specifically that the Russian expeditions were working their way south of Alaska⁷⁵⁸. In reality, although Russian fur trappers would set up outposts as south as the Fort Ross near Bodega Bay and Farallon Islands off Point Reyes, some 30 or so miles northwest of San Francisco, in the early 19th Century, the grand ambitions ascribed to Czarist Russia at the time were only rumors, yet they prompted Spain to more aggressively colonize today's California, albeit at a dire cost, as exemplified by the fact that less than half of the explorers who made up the original contingents made it to California, having either succumbed to scurvy or escaped, with the ship that would become the first to sail into San Francisco Bay, namely San Carlos, returning to the port in San Blas to call for help with two souls on it alone⁷⁵⁹. The epithet of "creepy" is, however, so intensely subjective that, as one urbanite described it, "the only difference between your actions being romantic and creepy is how attractive the other person finds you"⁷⁶⁰, and any time one hands it out to another person so as to present his possibly benevolently caring attentions as something sleazily and malevolently repulsive counts as a hardly erasable sin in my head, bringing the whole world down, not up, by a tiny bit every time it is being uttered. Also, by ascribing others' falling for her to her own charms, while calling them creepy when she comes to be attracted to some of their features on superficial basis, rather than seeing it as an invitation to exhume and analyze the weaknesses of her own subconscious mind, the behavior of one such adolescent girl is in no way different from those fallacious human creatures who'd rush to take credit for a favorable state of

affairs, but won't hesitate to blame others when things turn out wrong. After all, resorting to the casual use of this epithet while ignoring the fact that we were all born unprecedentedly creepy, having craved to clutch and cling onto mother's boob or a leg or hide under her dress, gazing with wide and dewy eyes into things and approaching the nearby souls with tenaciousness and delicacy, equals shunning the beauty of being a child and implicitly favoring dull and lackluster adulthood instead, committing thereby an ethical and aesthetical fallacy before which all the sages agreeing that "except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven" (Matthew 18:3) would sadly hang their heads low. Therefore, as I have repeatedly claimed, girls who mark others as creepy have a long way to go before they could fall in the category of big girls shadowed in the song that closes *The Queen is Dead* by the Smiths⁷⁶¹. On the other hand, in spite of my veneration of mysticism and secretiveness, I have always unconditionally valued sincerity, honesty, and truthfulness in myself and others. In the end, this balance between mystical closeness and blissful openness is what arises from our tracing the trail of the Way of Love. So, I will never stop plunging into beautiful traces and invisible languages of human faces. But may I ask you now the following? Is there anything more exalting than facing a mystery? Nothing can be more boring than perfectly predictable things, and yet a sense of surprise waiting for us behind each corner of our experience is what typifies all the enchanting moments in life. For, "great is the mystery of godliness" (Timothy I 3:16), stands written in the Bible and, concordantly, all the emanations of divinity must be somewhat arcane and mysterious, lest their otherworldly allures be gone for good and the heavenward path they delineate be erased for eternity. Moreover, in today's digital age, it is not really the data we create by browsing the internet that are turned into a product, but rather the product is how reliably our behavior can be turned into a predictable model so that we can be exposed to the right advertisements and allured to an economic transaction from which someone, somewhere behind the curtain, will profit⁷⁶². This means that the degree to which we express unpredictability in our behavior is directly proportional to our resistance to becoming a commodity, a passive item to be bought or sold in today's devilish neoliberal capitalism, being yet another call to adopt stances that ceaselessly surprise and that are as far away from the traits exhibited by machines and robots as possible. In other words, to be gesturally lively, mercurial, whimsical instead of repetitious and unvaried is a must if we aspire to live beautifully and to inspire others with this beauty. This is what makes Nature and the most radiant of human eyes and faces as beautiful as they are: namely, their being the source of an endless mystery of being. To watch them and to resonate with their energies is to feel life enwrapped with questions posed in the title of the famous Gauguin's painting, "Where do we come from, who are we, where are we going?", overflowing us in an instant with the sense of a greatest mystery conceivable. During his inaugural talk at the Nobel Prize award ceremony, Niels Bohr told a story about a student coming home each day after a three-day seminar. At the end of the first day, his father asks him about the impressions, and the student replies: "It was fine". "How much did you understand", inquired the father, and the student replied: "Oh, everything". The next day the student comes home and faces his father with the same question. "Wow, it was even better than yesterday. I understood about half of the whole talk", he says. Finally, the third day came, and the student comes home exhilarated, chanting, "Today was the best day. I did not understand anything". It should not surprise anyone, therefore, that my intense passion for solid state chemistry is to a great extent due to the mysterious octahedron, all the faces on which were {111}

planes⁷⁶³, as celebratory of the cosmic oneness as a crystal could be, which I carried in my hands day and night, trying vainly to untangle its crystal symmetry as a part of my homework assignment, never succeeding, but becoming so intrigued about it that I made it a lifelong decision to descend deep into the enigmas of this field and dwell therein for as long as it is needed for it to become my professional home. Hence, the dreamily soothing sound of Miles Davis' trumpet passage played under the banner of a jazz standard entitled *It Never Entered My Mind*, a softly uplifting reminder that facing perplexities that fail to be comprehended at first sight is a sign of either their meaninglessness or unutterable greatness, as I have always thought. Bohr's story about the merits of bemusement brings to mind C. S. Lewis aphorism that reads "the best is perhaps what we understand least"⁷⁶⁴, Wassily Kandinsky's abstract art motto that "the most readily understood, the most popular art is the least original and the least spiritual"⁷⁶⁵, as well as a guiding line inscribed by the programmer, Alan J. Perlis, "If a listener nods his head when you are explaining your program, wake him up", prompting us to remember how the most inspiring pieces of creativity have to appear more puzzling and enigmatic than comprehensible and lucid when we reveal them to the world for the first time. As they become enjoyed over and over throughout the days, decades and ages to come, they would be slowly transformed into bottomless wells that satisfy our spiritual thirsts for beauty, bringing always new insights and revelations to us from their mysterious starry depths. However, the best that a contemporary of products of creativity so progressive as to lie far beyond the grasp of the commoners can do upon encountering them for the first few times is to shrug shoulders and utter a comment similar to that which came out of the mouth of a musician playing Beethoven's *String Quartet No. 14 in C-sharp minor, Op. 131*, a piece of art typified by a complete "lack of precedent... (that) profoundly negates all sense of style and previous influence": "We know there is something there, but we do not know what it is"⁷⁶⁶. Like a human being born to the world with ear-piercing cries that tire the hell out of his parents and then gradually growing into the most loved creature in their universes, so is the fate of extraordinary artistic achievements such that they have a tiring and discordant effect on others when introduced to their worlds for the first time, and only subsequently, after numerous attempts to meet and explore them from many different angles, achieve a glow of ethereal beauty in their hearts and become installed therein as a lantern that shines with the signs that will point at the right road ahead of them through many a dark night of the soul. As far as infants are concerned, another example comes to mind: namely, toys that will eventually make them deliriously joyous and excited like "a Chihuahua on caffeine"⁷⁶⁷ are initially the sources of crankiness and irritation and just about the same must be with our acquainting magnificent pieces of art or any other sources of impressions that are unequivocally beautifying for the soul. Failing to understand such nature of the greatest accomplishments of human creativity has comprised one of the elementary mistakes in critical assessments conducted by the masses, which have traditionally favored shallow expressions that sound appealing at first, but promptly become exhausted of interesting things to say, over the

⁷⁶³ Technically speaking, (111), ($\bar{1}\bar{1}\bar{1}$), ($1\bar{1}1$), ($1\bar{1}\bar{1}$), ($\bar{1}\bar{1}1$), ($\bar{1}1\bar{1}$), ($11\bar{1}$) and ($\bar{1}11$) are the eight crystal faces exposed on the surface of the octahedron and {111} family of planes includes them all under its {...} umbrella.

profound ones that, as we see, sound mindboggling and impenetrable at first and gain in semantic richness and preciousness the more we savor them with our senses. To understand that misunderstanding is a step towards reaching an inconceivably higher level of understanding than understanding at the first sight, however, requires a quantum leap of logic to occur first in the backdrop of our minds. And because the chances of countering one's logical senses and boldly proclaiming the intuited richness of an expression in spite of misunderstanding it are inversely proportional to the mountain of knowledge that piles up inside one over the course of one's intellectual lifetime, the more one knows and the more one journeys on the scholarly path, the greater the chance that one will misjudge the masterwork and discard it as nothing special at all. An example that even the most revered intellectuals need not be immune to these erroneous initial estimates of truly exceptional works of art comes from Richard Strauss, who changed his opinion of Brahms' Third Symphony from "deserted" and "wretchedly and obtusely scored", with Adagio "dreary and lacking in ideas" after he heard it for the first time in Berlin in January 1884, to "colossal, fresh, energetic and demonic" two months later, after he heard it three times more, claiming that it was "not only his most beautiful symphony, but well the most significant that has now been written"⁷⁶⁸. Then, in his homage to life and work of his Canadian compatriot, Marshall McLuhan, Douglas Coupland did not only show how impressed he was with Marshall's teaching style, which was such that the students in his classes "were doomed to confusion and bafflement"⁷⁶⁹, having been subjected to cascades of incomprehensible ideas, but he also proposed a parallel between the Explorations journal edited by Marshall and Wired magazine from the early 1990s, when "everybody was carping about how unreadable the magazine looked: *they're mixing fonts; text changes size throughout the article; the colors are hurting my eyes*"⁷⁷⁰. On one hand, thus, we see a kid learning to read and being magnetically attracted to a children's book, returning to it over and over again even though he understands but bits and pieces of its words and meanings, while on the other hand ours is an educational system where this recognition and appreciation of the attraction to the mystical and incomprehensible as the driver of learning has disappeared and where it is being demanded that students understand everything presented to them lest the teacher be labeled as a failure, yielding a schism that craves to be healed. In attempting to do so, I have claimed instead that a teacher banalizes knowledge by striving to make everything easily graspable by students and does not live up to the ideal of a perfect instruction, whereas excellent can be called only an educator who balances clarity and obscurity in his delivery of the curriculum, alongside accustoming students to mystery and teaching them how to find comfort and something that they will always return to with an inquisitive eye in these puzzling, abstruse segments of knowledge, for in deepening them lies the key to the evolution of their and humanity's knowledge. Differing in inclinations towards either overly simplified, picturesque and showy scientific presentations or those that are intricate, chaotic, farfetched at times, abundant in equations and deprived of fancy images, scientists have traditionally categorized themselves as American or Russian students, respectively, and without doubt, I, always favoring mystery that unlocks the gates for an inflow of the winds of Stendhal syndrome in us and dizzily awakens us in the midst of a sweeping chaos of starry motifs over tendencies to dumb down scientific and philosophical ideas and make them extensively predictable and drowsily obtuse, would count myself as a

⁷⁷⁰ *Ibid.*, pp. 123.

member of the latter team. Despite my being aware that I would be misunderstood on the American continent as a scientist and a philosopher in just about the same ways as the American musicologists, demanding “unity, balance and economy”⁷⁷¹, would reject one Bruckner in favor of a more linear composer such as Brahms and Hollywood would accept with open arms European directors eager to be the weavers of coherent plots, such as Hitchcock, Polanski or Forman, but not those like Godard, Truffaut or Buñuel, to whom plot was a concept to be experimented with and deconstructed at times, I have never stopped expressing myself in a manner where the crystal clear and the cryptic were fused like a briar and a rose. For the very same reason, I, a mystic at heart, knowing that perfect clarity would halt the spin of the wheel of progress on intellectual, artistic and all other planes, have always found an unusual inspiration in all those whose expressions were halfway between limpid and obscure. For example, when I invited Fernando Flores to come to UCSF and hold a lecture that would inspire the young scientists, he came and right before he was about to stand up from a seat in the front row and start speaking, he humbly smiled at me and said: “Anyway, they won’t understand more than 10 to 20 %”. As I watched him from the first row, he appeared to me like a giant flamingo spreading its wings and swallowing the audience in the immenseness of his spirit. The sentences would break in half, remain unfinished, incorrectly structured and pronounced, and yet all that was conceived with the purpose of producing a majestic effect on the audience. Remotely, Fernando’s appearance before the lecture stand reminded me of the talk another politician, a member of the Yugoslav parliament, gave at 2 a.m. in the morning during the student protests in March 1991, on the night the tanks were sent out to the streets of downtown Belgrade and only months before the civil war broke and the country began its bloody collapse, and which was about a grandpa and his grandson roaming aimlessly through the woods and being confronted by the enemy who requested that they show them where the partisans were hiding. The story was begun and interrupted and begun anew and stopped again too many times by this professor of Serbian language and literature for anyone in the parliament auditorium to be able to follow it, leaving its members bewildered, furious or engaged in knee-slapping laughter. Misunderstood by everyone, he left the podium and the general consensus was that the story was never been fully told, even though through a semantic haze one could still discern the message. For, those who were careful enough could have heard the congressman mentioning grandpa’s knowing of a bog to which the enemy could be taken instead and after a few minutes of discontinued and incoherent talk he also said this: “The child was taking the foreign army straight to the bog, because they understood each other – it is a generational agreement; it is, if you will, the beauty of the debt we should fulfill at this moment. It is one spatial dimension...”⁷⁷² Prophetically, he finished off by saying that although everyone is laughing, the story would have a sad ending and it surely did in view of the upcoming war and the fact that the way to reconcile the cultural gap between the older generation of true Yugoslavs and the new generation of students and other adolescent urbanites nurtured on the western value system would never be figured out. An implicit confirmation of the veracity and relevance of this ominous vision came fifteen years later, in Rajko Grlić’s movie *Karaula*, in which the bloody breakup of Yugoslavia was shown to have been caused not by the pending assault of an imagined enemy, which in reality never came,

⁷⁷¹ See Bryan Gilliam’s Perspectives on Bruckner, Columbia Academic Commons, retrieved from <https://academiccommons.columbia.edu/doi/10.7916/D8RF5STH> (1995).

⁷⁷² This ten-minute talk was given by Branko Lazić, a.k.a. Branko Manas, and the selected quote goes like this in Serbian: “Dete je vodilo tuđu vojsku pravo prema močvari, jer su se razumeli - to je generacijski dogovor, to je, ako hoćete, lepota duga koji mi u ovom momentu treba da ostvarimo. To je jedna prostorna dimenzija...”. Available at http://www.youtube.com/watch?v=R4_Cz5Skeyc (1991).

shattering the beliefs of countless conspiracy theorists into pieces, but by the mutual antipathy between two Serbs, one of whom epitomized *rokere*, that is, urban characters who embraced casual, liberal lifestyles and shunned any traces of conservative nationalism, and the other one of whom epitomized *seljake*, that is, backward and brutish traditionalists, although both of whom, deep inside, were just about the same – foolish, ditzy and childishly unaware of the consequences of their pranks in bigger frames. Despite this subtly conveyed message, for decades now my urban friends have laughed sardonically at this strange storytelling event that took place at a late-night session of the Yugoslav parliament, while I have wondered whether such a sloppy and confusing delivery of this story was maybe intentional, so as to be in concert with the grandpa's and the grandson's being lost in the woods, and now I, myself, believe it or not, am starting to get lost in the forest of these words, and all that for a good reason. For, how more faithfully to reflect the sense of being lost and highlight the way sought after as the destination of our lives but by getting lost in the storytelling itself and leaving the stories unfinished, open to innumerable interpretations by the generations of intrigued interpreters? Ideally, the structures we compose are to reflect their semantic essence at each and every level of theirs, which is why, incidentally, speaking of poetic freedoms in an administratively dry language comprises a blasphemous act of hypocrisy, in my opinion. Likewise, to create a piece of art or a philosophical discourse that revolves around the praise of imperfections, but aspires for perfection in expression, never ever letting the author deliberately err, is an act of disloyalty to the given main point that the work wishes to put across. To claim the epithet of perfection and earn its position at the top of Bloom's taxonomy pyramid, whereat the creative and the metacognitive intersect, one's expressions ought to reflect and implicitly speak to the foundations on which they stand and cover every facet of the structure from which they originate and which lies in the focus of their attention, which, ultimately, always, is everything, the entire Cosmos with each and every grain of sand and blade of grass that has ever been; hence the infinitely broad multidimensionality of absolute, utterly divine expressions. And whether it is Jack Kerouac writing about being on the road and leaving the safe harbor of conventional linguistics at home in search of something more exciting, completing his adventure at many different levels, or my Dad offering only one comment at an hour and fifteen minute long meeting⁷⁷³ to object against the participants' unanimous rejection of one comment that opposed their views and its explicit treatment as an outlier, saying that one publication in *Science* or *Nature* would be valued by these very same participants more than a dozen average ones, making his one and only comment being about one and only in the defense of one and only, or a professor and a poet who wanted to study love, just as I, myself, craved for years to answer the question of the position of love in the realm of science, leaving academia because its stiff, clichéd language makes every attempt to describe love using it a pharisaic, inherently sanctimonious lie, just as well as, on a more palpable plane, initiating the long-awaited work on the Mpemba effect and the strange properties of pure water, that simplest of all materials and the most poor man's of them all, only when the lab reached the rock bottom by becoming broke and relocated from prestigious universities to a seedy garage, all of them could serve as luminous examples as to how a beautiful intellect approaches crafting expressions: always with the aim to resemble a sun, with its rays radiating in all directions and touching everything, from the smallest to the most magnificent. Of course, as one ascends from the basic points in a work to those emanating from its higher and more sublime semantic levels, the harder they are to grasp and the greater the chance for misunderstanding, with the most notable example in my head being Hitler's finding inspiration in

⁷⁷³ Meeting was held on the second floor of the SEO building of the University of Illinois at Chicago campus on March 29, 2016, from 11 am to 12.15 pm, in case you want to watch it from a distant star when its light signal arrives there.

Wagner's Ring of the Nibelung, the story about the intrinsic evil of the will to power, and using it to conclude that music with such an artistic quality and attention to detail, crafted by a German and eclipsing anything created musically anywhere on the globe by then, proves the supremacy of the Aryan race and the inferiority of everyone else. Then, again, to enwrap the Earth with one's mid-18th Century music that transmits this idea that love and power are incompatible and exclude each other, one must have had someone build one a castle like Wotan's and one must have said Yes to power at some point to set oneself high and allow this message to reach the masses, so the question is whether the fact that we discuss it here is a proof of an intrinsic hypocrisy on behalf of the composer. The answer we may never know, but we must continue to do our best to be loyal to the semantic essence of our works at each and every level of creation. Just as in his final movie, *F for Fake*, which happened to be a documentary, Orson Welles fully faked the whole last third of it, all so as to prove Pablo Picasso's tenet that "art is a lie that tells the truth", lest the film remained hypocritical owing to preaching the merits of fakeness while being authentically documentarian, so must we remember to weave the quintessential message of it into its every segment and aspect. Likewise, I wondered, could it have been that Fernando's way of getting the central point of his talk across, which is all about the relative irrelevance of language compared to the importance of intentions underlying its usage, was deliberately such, confusing, grammatically flawed and impenetrable at times? For, transcending the value found in mere words, the message of one such confounding talk may have been that only while shattering the linguistic rules which enwrap and trap our communicative beings can we transmit the idea that good intentions is what ultimately matters in our communications with the rest of the world, and that, by the way, has been one of the central tenets of Flores' philosophy⁷⁷⁴. Indeed, the starting points of both friendships and hostilities in this world belong to moments when one ascribes benevolent or malevolent intentions to another, respectively, whereas indifferent neutralities and lukewarm relationships are predestined to exist where interacting personalities resist to interpretatively look deep into the sea of intentions from which all human actions arise. Or, in a nutshell, not what is present on the surface of our expressions, but eyes with which we dig deeper and shed light on the hidden and mysterious purpose with which words and gestures of others were being given out is what determines the beautifulness of the trace that our being will leave in the world. Conversely, when it comes to the expressive element of our being, we can argue that these bright and benevolent intentions, more than anything else, are what determines the success of our endeavors in the world. To glimpse this fabulous insight that points at the roots of reality, it is often needed to cut through the forest of perceptible trunks and twigs, which explains why crumbling down the castles of language that confine the bird flights of our imagination is the best way to reach the foundations of our true being wherein the language of the heart is seen as reigning over the entire existence. Facing mysterious and mindboggling patches of reality is thus sometimes the best way to get in touch with the foundations of experience whereupon sheer enlightenment awaits us. The physicist and Nobel laureate, Frank Wilczek concordantly noticed: "I get good ideas when I am at seminars that I only vaguely understand. My mind starts to churn, trying to relate what I am hearing to things I know. This has led me, on several occasions, to make new connections"⁷⁷⁵. Likewise, although as a physical chemist I can comprehend a wide array of topics at humongous, multidisciplinary scientific conferences of the modern day, whenever I participate at one I still love to pick talks that are as distant from my fields of expertise as possible. For, just as the most brilliant ideas arise in

⁷⁷⁵ See *Where I Do Science* article, Seed, August 2008 issue.

our minds as they wonder along the magical boundary between the states of dreaminess and wakefulness, so are the most exciting insights found as we look into crystal balls of knowledge that shine with clarity and reason on one of their sides, while the other sides of theirs resemble the dark side of the Moon, thoroughly incomprehensible and mysterious. “What makes bad poets worse is that they read only poets (just as bad philosophers read only philosophers), whereas they would benefit much more from a book of botany or geology. We are enriched only by frequenting disciplines remote from our own”⁷⁷⁶, noticed Emil M. Cioran and neatly described what was to become my own habit of overcoming creative blocks arising from too much working on the lab bench by finding inspiration in arts, philosophy and numerous other areas of human creativity, all peppered with the starry sparkle fallen from the eyes of the sirens of serendipity, let alone in the fields of science whose works are barely comprehensible to me and whose ways of thinking are as foreign as the lidos of Eldorado. For example, my initiation into the philosophy of constructivism – which fecundated my imagination for good, with the bulk of ideas explicated in this book owing a universe to it – took place during a round table discussion to which I, always eager to curiously venture into the unfamiliar realm, quite accidentally sneaked into. As I was sitting in one of the backseats, not understanding much and yet absorbing the thrilling energy of a youthful, enthusiastic determination to beautify the world that sparkled all across the room, I remember mine softly floating away in my focus, straight through the window, as if riding on the orange dusk streams of sunlight and ending on green leaves of bushes and trees on the outside, letting my spirit travel far on a pleasant summer breeze, and leaving the enlivening discussion in the background of my mind, like a sea upon whose gentle waves the ships of my impressions enjoyably rocked. How gorgeous it would be to live in the spirit of genuine constructivism, I remember I thought as I sat on my hands on a woody classroom seat, like Heinz von Foerster in his enlightened nineties at the time, untouched by other people’s seeing you one way or the other, knowing that no one perceives another the way he or she truly is since everyone is everyone else’s autonomous construction. This elementary constructivist proposition sets epistemological grounds for our taking an active role in constructing another in the brightest light possible and, step by step, transforming the whole wide world in one’s eyes from one dominated by destructive anger and gloomy weariness into one washed over by the sunlight of divinity from one moment to the next and all of that solely through the power of imagination and goodness of the heart. As I returned home, greatly intrigued by the subject of constructivism, I remember I rushed to print out a paper from *Cybernetics & Human Knowing*. However, while treading through it at a snail’s pace, reading the same lines over and over again and repeatedly ending up completely tangled in its many labyrinthine loops, I felt as if I would never be able to understand it. And yet I turned out to be wrong. After many papers smashed against the wall in frustration and endless hours of patient attempts to demystify and fully comprehend the intricate language of systems science, I have, inconspicuously, without even noticing, made it one day. My favorite readings in the moments of relaxation are now often computer programming books where I almost do not understand even a single bit of it. With a similar astonishment, as if standing on the doorsteps of divine mystery, behind which wonderful new worlds ready to be discovered lie hidden, over and over again I have glanced at my Little Bear’s birth certificate written in Taiwanese characters thoroughly unintelligible to me. It has always been inspiring to me to spend time looking at meaningful but indecipherable signs of this world, to stand at the gateways of mysteries of the world and have my ears carefully inclined to listen to their hum. Socrates once made a comment about Heraclitus’

⁷⁷⁶ See Emil M. Cioran’s *The Trouble of Being Born*, Translated by Richard Howard, Arcade Publishing, New York, NY (1973).

philosophy: “What I understood was great, but what I did not understand was the greatest”. Chuang-Tzu would have readily agreed with this point, while simultaneously pointing at his own words that read “Comprehension that dwells in incomprehensible is the best”⁷⁷⁷. After all, from the mysterious Emerald Table to the enigmatic Zen stories to theological parables that could be interpreted in an infinitude of ways to verses of some of the most majestic songs of the modern age that appeal to the listeners’ aesthetic senses not with their clarity and messages straightforwardly sent across but with strange and bewildering lines, to the major philosophical systems that perplex at first much more than they reveal, it has always been clear to me that to make giant steps on the path of evolution of human being and knowledge, one has to send forth messages that would appear as if shedding unfathomable puzzles on one’s paths, whereby those puzzles, when patiently gazed at from multiple angles, longed to be solved and, more than anything, lived with every breath of one, will turn one to be signs that open the doors to great spiritual revelations. It is thus that we may arrive at the enlightening understanding of the magical mysterious inscriptions, such as that which the Christ celebrated in the old Gnostic text of Pistis Sophia, saying the following: “It came to pass then, when I saw the mystery of all these words in the vesture which was sent me, that straightway I clothed myself therewith, and I shone most exceedingly and soared into the height”⁷⁷⁸, proceeding to describe his ascent to the heavens from a tiny set of mysterious symbols. Inspired by this thought and sending wondering glances upward, one may then come to consider that Christianity itself may have charmed the world with its religious outlook not because it was built on either theologically concise writings nor a pedantic scholastic bunch of historic facts. Rather, what if it managed to conquer the world exactly because it was mysterious, mythical, factually obscure and blurrily depicting the persona of Jesus, edging pure fiction as much as it faithfully revealed the outlines of the ultimate reality of being? Here comes the reason to celebrate art and ordinary expression that do not provide mere veritable records of things as they were, but that twist, remold and modify them into something partially rooted in reality, but partially abstract and idiosyncratic, just as the co-creational thesis would have it. Here may also be the point to invoke my obsession with painters such as Piet Mondrian and Victor Pasmore, musicians such as John Coltrane and Radiohead, or filmmakers such as Jean-Luc Godard and Béla Tarr, who progressively distanced themselves from realism and approached Pentecostal incomprehensibilities and quiet mysteriousness in quest for the essence. This also explains why my heart leaped with joy when I glimpsed the following drawing of a boy, accompanied with the words saying “boy treasuring sheet of paper the contents of which are unclear”, in a Berkeley comic bookstore⁷⁷⁹, reminding me, a reminder of the benefits of mysticism to the world drowning in the robotics of robust realism, how I too can spend hours looking at Egyptian hieroglyphs, undecipherable letters, computer languages, flowers, ripples of water, clouds or intricate human eyes, Rosetta stones of every age, astonished by a mysterious sense of beauty that they convey.

S.F.2.30. As we look at these mysterious symbols for long enough, we might notice that they look back at us to the same degree. For, like Edgar Degas' *Woman with Field Glasses*, looking straight into the viewer through a set of dark binoculars, so does literally everything we draw on the face of this co-creational reality wherein the created creates the creator as much as the creator creates the created, wherein the dance is the dancer is the dance and wherein, as we could have learnt from Jean Cocteau's *Orpheus* and Lewis Carroll's *Through the Looking Glass*, magical things start to happen when we merge the viewer and the subject viewed, that is, the subject and the object as the mirror image of the subject, incessantly gaze into the spiritual fountainhead of our being. What we see and the way we see modifies what we see and the way we see in this endless feedback loop of mind drawing Nature and Nature drawing mind. Upon this insight, our eyes may start to radiate with a joyful curiosity springing from the yearning for an adventure and from a mysterious depth instilled in us by the mystic nature of the faced details of the world. Such a balance, sustainable only in the world of mixed knowing and ignorance, of crystal-clear order and starry swirling chaos, of firm structures of logic and unconquerable seas of intuition is what one can look at as an indication of whether one's being rests on the Way of Love. Eyes pervaded with such a balance are neither awkwardly bulgy, wide open and frozen in face of another, resembling a deer in the headlights with their still stressfulness, nor do they take on a distant, malevolent and beadily eclipsed look. Should we look deep into them, we would realize that they are neither too excited, above the level at which the waves of sensations could be naturally assimilated within one's cognitive apparatus, nor lazy, disinterested, phlegmatic and dull. Should the former impulse of excitement prevail, awkward stares would be yielded, as one's frozen heart would then not let one sanely absorb the cognitive impressions and draw them into its essence, but should the latter impulse of passivity take over the energetic, the final cognitive outcome would be identical, but this time due to disinterestedness in capturing the outer impressions with the rays of one's attention. But when the right balance is stricken, there will be neither too much respect for another, which would lead to the former symptoms, nor too little of it, which would produce the latter, because love and respect of others and living in harmony with our inner self are then neatly equilibrated. The warm waves of love and the stirring sparkles of wonder are thus blended together, giving the impression of starry twinkles reflected in a soft and melancholic sea at night in our eyes. No wonder that Socrates claimed that "as a breeze or an echo rebounds from the smooth rocks and returns whence it came, so does the stream of beauty, passing through the eyes which are the windows of the soul, come back to the beautiful one; there arriving and quickening the passages of the wings, watering them and inclining them to grow, and filling the soul of the beloved also

with love”⁷⁸⁰. As we look at the world with our eyes, we are partly drawing it and endowing with meaning. In other words, we are drawing Nature, but the way we draw, with as much love and wondrous aesthetics as we can, we draw the essence of our being, as implied in Socrates’ words. By beauty seen in the world we build the beauty of our own being, and *vice versa*: by edifying the heart of ours with the bricks of divine ethics and aesthetics, the world around us, Nature herself, will appear more and more beautiful with every tick of the cosmic clock.

S.F.2.31. The Way of Love is a remedy for both the personalities that assume that their ego is the center of the Universe around which all the stars, planets and human creatures revolve, and the personalities that are bluntly immersed into charming beauties of the world, allured and captivated by them, and thereby left with their inner treasures rusting away while they themselves are frozen and unable to express them to the world. You can recognize the former persons as loud exhibitionists, jumping all over the dance floor, with absolutely no sensitivity or aesthetic feedback with the world around them. On the other side, the latter creatures will be the ones standing quietly at the edge of the podium, fearfully and judgingly, with their guard raised, watching people, finding absolutely no way to release the tensions within them and open up the ways for the suns of their creativity to shine to the surface of their being and the world. They will think of the former as of mindless, cocky douche-bags, whereas the former will accuse them of being lurky creepsters, and these mutual animosities will be hardly reconcilable at all, with mutual sympathy and understanding seeming farther and farther away, the more they stand in each other’s vicinity. But, miraculously, the magic wand of the Way of Love heals both of these disordered personalities by placing them face-to-face and telling them to copy each other. But to certain extent only, that is, only up to the point when the balance of the Way of Love, the balance between an inner withdrawnness and an outward release of the inner energies, between dwelling in the sphere of uniqueness of our ego and empathic dwelling in the unity of all being, is attained. It is between these two digressed personalities standing face-to-face that a carpet for the kings in this life, the creatures crowned with the glowing aureole of love, to walk towards the wonderful horizons of being is spread. Namely, if you find yourself standing alone in the corner of the room boiling with a cheerful buzz and energy, but unable to relate to the people around, it may mean that you have been inclined towards appreciation of the world and the very people too much. This may seem like a paradox, but it is true. It may appear as if your respect for them extinguished the level of your respect of yourself. If that is so, you may go back, to the essence of your heart, and ask yourself and yourself only, with a perfect honesty and truthfulness, who you really are supposed to be. Connect in oneness with the divine essence of your spirit, feel the intimacy with your own stellar nature, and sense its spontaneously spreading its starry energy all over your mind and body. At one point the balance of the Way of Love will be reached, wherein a close contact with both the silence of the space of your mind and heart on one side and the surrounding creatures on the other will be preserved. Everything we send to the world will not thence come phony and out-of-place, unrelated to the starry essence of our being, but will pop out straight from the heart, and spontaneously hit the right spots, the centers of the targets placed in front of us. As we are thence true to ourselves, we become an immaculately precise archer with the signs that orient the beings of the world towards the right paths. But do not go too far, I always say. Do not feel tempted to descend deeper and deeper into the essence of your being, and then stay there forever and ever, while letting the links of innate empathy with the world around us slowly rust away and get torn. If you go too far, the world will cease to exist, and you will become an autistic creature, senseless

⁷⁸⁰ See Plato’s Phaedrus, BIGZ, Belgrade, Serbia (370 BC).

and overly meditative, equally unable to deliver precious signs of love and inspiration to the world around. The same can be, of course, said for the oppositely imbalanced personality. In its case, I recommend looking straight to its complementary attitude and learning from it: learning how to calm down, to be alone with oneself and find it perfectly fulfilling, to listen, absorb and interpret the world with a silent tranquility of one's mind, finding thereby meanings that set ablaze the fire of love within. Nevertheless, when it comes to dancing or any other way of acting, it always seems that these extreme personalities are the easiest to carry around. However, this may seem so at the very start only. Spending too much time in either of the two imbalanced states will deprive us of our creativity, resulting after certain time in our wondering about how to reach the balance again. Finding ourselves on the thin acrobat wire of the Way of Love, on the other hand, requires so much attention to keep us sustained thereon. Months, years and the whole lifetime of learning are, however, in front of us, and one bright day we will be able to stand and dance on it, knowing that spreading our hands from there on so as to express ourselves and bring light to the world feeds our being, and *vice versa*: partially withdrawing ourselves inside so as to feed the flame of creativity brings us closer to the beings of the world. Endowing and ornamenting them with the pearls of beauty is thus the same as imposing those blessings onto ourselves, and *vice versa*: getting in touch with the starry, eternal nature of ours means that the twinkling stars shining within us will be strewn over the beings of the world, as divine signs showing them the proper ways.

S.F.2.32. On each palm of my hand there are two lines of life, surrounding the Mount of Venus, instead of one only. They are parallel, one connected to the beginning and the other starting from the end. In the middle, however, they do not merge, but remain parallel, somewhat like railroad tracks. I have thus always known that I carry a railway and rushing trains on the palms of my hands, and that they ought to have a secure place on the hidden treasure map of my fate. When I was a kid, Alexander and Nebo played a silly game on me in Nebo's cottage house in our tiny Kumbor summer resort. They told me to kneel down, breathe deeply for a while, then stand up and start blowing through my nose while keeping the nostrils shut. Due to a sudden change in air pressure inside the head, one passes out upon doing this. They gently caught my collapsing body, woke me up after a few seconds and asked what I dreamed of while being unconscious. "The railway tracks and a whistling train a-comin'", I recalled immediately. "Remember that; it means something", Alexander said and continued to argue how the importance of this insight makes up for the rather rough joke the guys played on me. To this very day I remember the tracks I saw through the haze of my lost consciousness. And the train too. Quite unlike that night train confused for a light at the end of the tunnel, the train that came to me as I lay flat on the floor was the one of limitless joy, streaming across prairies and hayfields and straight into the Sun, though with a mysterious tear running down its iron-grey cheeks. Now, our camping house in that very same beach resort has been No.3, "my lucky number"⁷⁸¹, whereas the house right next to ours (No. 2) happened to be inhabited by a couple whose son - unlike the one of the family vacationing in the house No.4, who died in a car accident - died of a sudden hit of air pressure after finding himself between two passing trains, untouched by any of them. I have always paid a special attention to their sad eyes, and have swum through the sea of blue and next to the pearls of prayerful wishes that I will live my life for the sake of him and the likewise creatures, that I will bring light to that tiny part of the globe with the shine of my spirit. On another occasion, a computer took a note of my Virgo natal chart (it is a mere cosmological statement of fact that we are all made of stars; consequently, we should read the wonderful messages they strew on us, but still accept the clear-

⁷⁸¹ Listen to Massive Attack's Three on Protection, Circa, UK (1994).

cut astrological definitions with reservation), and noticed the following: “You have a desire to be something special or to experience something more than the ordinary. You are a day-dreamer and idealist. It is easy for you to trust others, even (and perhaps especially) people who might seem from the outside looking in as unsavory types. You are looking to identify with something beyond what is normally expected of people... You are very charmed by the idea that someone seems to really like and appreciate you. Generally, one of your life’s lessons is to learn to discriminate more and to get in touch with what you truly want and need. The functions of the Moon (which rules the emotions and feelings, amongst other things) and the functions of Venus (which rules social relationships, harmony, and partnership, amongst other things) are at cross-purposes. When you attempt to feed the needs of one function, it is often at the expense of the other, until you find some sort of balance”⁷⁸². These were the words the computer displayed, making me get in touch with the ideal of the Way of Love I have so passionately expounded and the complementary relationship between freedom in acting and love, including my tendency to be allured by being loved and thereby drown my inner creativity. First of all, I have always been obsessed with the fact that the perfect contentment, harmony and satisfaction, the perfect shine inside of our hearts, is like a bright side of the Moon that hides a dark one. That dark side stands for one’s distance and resignation from acting with passion and bringing light to the world with brave and punchy acts of ours. Sometimes it feels as if to act in brilliant and inspiring ways we must substitute some of the spotless gleam of joy with a dose of down and slide down from the summits of happiness to the gutters of the human mind where disappointment and dissatisfaction are the norm. If we want to feel as if our heart is pouring love from it onto the world around, we need to bleed with said love. To do so, we need to resist becoming confined into a bubble of perfect contentment. We should not hesitate to cut an open wound in our mind and heart, because it is from it that love can start flowing like a geyser of joy and passion onto others. Or, as pointed out by Ben Sira, “He that pricketh the eye will make tears to fall: and he that pricketh the heart maketh it to shew her knowledge” (Sirach 22:19), demonstrating that the ontological grounds on which Job based his famous question, “Why is light given to one in misery” (Job 3:20), are still below our feet and will be there for as long as we live. Which is also why Pascal counted “wretchedness” amongst the most essential qualities of the saintly mind⁷⁸³, as if wishing to tell us that the sea of sadness which wretchedness plunges our soul into is a prerequisite for the rise of its ethereal glow that heals and beautifies all things around it. Hence, with Lao-Tzu’s thought, “There is no curse greater than dissatisfaction” (Tao-Te-Xing 46) still bouncing along the floweriest wallpapers of one hemisphere of our mind and the Christ’s message, “Blessed are they that mourn: for they shall be comforted” (Matthew 5:4) reverberating along those decorating the other, we could conclude that excessive contentment is detrimental for our attempts to maintain the creative fertility of our being as much as too little of it is. Rather, a walk along the thin line of the seemingly impossible, of simultaneous contentment and wretchedness, conditions our growth into a stellar soul on Earth. A concordant message, highlighting this necessity for the Virgo in me to overcome the incessant inclinations to self-sufficient passivity of dreamers, including the old man’s grumpiness that it occasionally bears, quite like the one typifying Gustav Mahler’s personality portrayed in Thomas Mann’s *Death in Venice*, and break through to the side where the carousels of cosmic joy become spun at the speed of light in my head, shedding stardust of divine grace all around me, was stricken and started to

resonate inside the cosmic temple of my heart as I read the horoscope for the first week of the summer in the year of the dragon, the Chinese zodiac sign of mine, underneath a myriad of marry-go-rounds and flashy fair rides: “How would you feel about attempting a *quantum* leap of faith? Here’s what I mean by that: a soaring pirouette that sends you flying over the nagging obstacle and up onto higher ground, where the views are breathtakingly vast instead of gruntingly half-vast”⁷⁸⁴. A naturally derivable conclusion from this viewpoint is also that too much love can suffocate one’s creativity just as too little of it can. There always needs to be enough space between two creatures in love to feel free, independent, all alone as much as tightly bound in their togetherness. Parents who have loved their kids so much that they ended up producing symbiotic relationships in which each one is addicted to each other’s presence might be thus shocked to hear the Christ’s call: “Think not that I am come to send peace on earth: I came not to send peace, but a sword. For I am come to set a man at variance against his father, and the daughter against her mother, and the daughter in law against her mother in law. And a man’s foes shall be they of his own household” (Matthew 10:34-36). In another passage, his call to substitute love for a few with love for cosmos as a whole and every patch of life in it sounds even more striking: “If any man come to me, and hate not his father, and mother, and wife, and children, and brethren, and sisters, yea, and his own life also, he cannot be my disciple” (Luke 14:26)⁷⁸⁵. But this call is for everyone’s good and is, of course, worth only for those who tend to convey all the creative decisions to their loved ones (e.g., parents) whenever they are in their presence. I, myself, used to be one such kid, and whenever I would spend a lot of time with my parents, I would end up feeling as if my spirit had gotten wound up in a tiny cocoon that my parents would take care of. Enfolded in the aura of unlimited protection and unconditional love, the need to act creatively would vanish. On the other hand, kids who find themselves too distant to their parents and fellow creatures should look after Jesus’ norm that pushes us closer to them: “Honour thy father and thy mother: and, Thou shalt love thy neighbour as thyself” (Matthew 19:19). After all, the real love in this life lives up to the balance between being all alone and yet dwelling in a state of togetherness all the time. So, the two of the Christ’s commandments (“The Lord our God is one Lord: And thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind, and with all thy strength: this is the first commandment. And the second is like, namely this, Thou shalt love thy neighbour as thyself. There is none other commandment greater than these” (Matthew 12:29-31)), the first one pushing us to get closer to listening to the voice of God reverberating inside of our hearts and the second one pushing us to reach oneness in empathy and love with the creatures around us should always be balanced. Whenever we get too close to one pole, we should notice that and make a move towards the other, complementary pole. People are naturally shocked when I tell them that the Way of Love is finding a balance between being the best friend and the best enemy to others. For, only through dwelling deep inside our own self, listening carefully to the messages of the divine spreading their wings within our heart and bringing its glow outside, through the doors of empathy and love, is that we could reach the perfect satisfaction in life. So, when I come across a clingy person in life who readily stares at me and amusingly follows like a shadow, I tell her to “hate” me a bit, to substitute that enormous pay of attention towards me with a piece of disinterestedness, to replace some of the love for another with some love for oneself. That would

⁷⁸⁴ See Free Will Astrology, SF Weekly 31 (23) pp. 36 (2012).

⁷⁸⁵ The fact that these calls have been substituted by the cult of family among the Christian priesthood should be an immense enough sign that institutionalized teaching of the Christ does not have much to do with the original Christ’s creed, and that “the Christ, if he happened to have been reborn, would not have been one thing: a Christian”, as pointed out by Mark Twain in his Letters from the Earth.

be the way to love myself and herself alike even more, believe it or not. This may also be the reason why the Christ claimed that “no man can serve two masters: for either he will hate the one, and love the other; or else he will hold to the one, and despise the other. Ye cannot serve God and mammon” (Matthew 6:24), given that we neglect the capitalist, profit-driven connotation of the contemporary meaning ascribed to “mammon” and take it as a denotation of “man” and the objects of its worship, the semantic shift with which we would be guided in our musings straight to the doorstep of the Way of Love. That is, in order to truly show respect for mammon, the varicolored corporeal luxuriousness which the hearts of humanity have fully embraced as the roots of their happiness and to fulfill the burning desire to alight the spaceships of universal love onto the fields of humankind, we need to give up on our enormous love for humanity and its creatures a bit and look deeply into ourselves, all until a balance between being one with our spirit and being one with the spirit of others is reached. The path of Love is to listen to the voice of God inside our heart, to live fully in sympathy with the birds of beauty soaring across the sky of our mind, and yet to shine so merely for the sake of endowing mammon with the enchanting beauty arising and echoing within ourselves.

S.F.2.33. For a long time I used to turn myself into merely a satellite in the presence of people whom I loved and respected most. I would become a moon, and give the people I silently adored the role of planets, endlessly revolving around them in safe passivity. This is the story of how I ruined most of my relationships, recalling every now and then that “Love will tear us apart”. And then a moment of big change came. That was when I realized that to truly exhibit love is not to be always staring at the worshiped creatures, obediently nodding one’s head to their sayings, catering and pampering them with every move and look of ours. Caring as much as being distant is the key to well-balanced relationships. Being too close, caring too much can be creepy, as a song by an indie band from Albuquerque reminds us⁷⁸⁶, suffocating both our own and other people’s contact with our and their true selves. In the final scene of Ingmar Bergman’s *The Hour of the Wolf*, the main protagonist, Alma, having lost her husband in a forest, turns to face the camera for one final time, regretfully concludes that “a woman who lives a long time with a man eventually winds up being like that man” and ends the scene wondering our loud, “If I had loved him much less, and not bothered so of everything about him, could I have protected him better?”, the words that ring around with striking importance in this context wherein we too have recognized that extensively blending with others in empathy while neglecting to keep their hearts at bay to some extent too and maintain partial distance through which the rays of light radiating from the core of our starry spirit will journey towards them is but a mission incomplete on our road to becoming the epitome of divine Love with every atom of our being. Yet, unconditionally committed to others with a state of mind partially withdrawn from the external circumstances and plunged deep into the essence of one’s psyche wherefrom authentic impulses that produce mutually enriching actions can be picked up and ridden on as they are sent out as waves on a thread that connects the core of one’s being with its surface, caring becomes such as that idealized by Milton Mayeroff when he inaugurated it as “the antithesis of simply using the other person to satisfy one’s own needs”⁷⁸⁷ and uttered the following thought that saliently echoes the balance referred to here as the Way of Love: “In caring as helping the other grow, I experience what I care for (a person, an ideal, an idea) as an extension of myself and at the same time as something separate from me that I respect in its own right. This feeling of the other as part of me is different from the kind of union with the other found in such

⁷⁸⁶ Listen to the Shins’ *Caring is Creepy on Oh*, *Inverted World*, Sub Pop (2001).

⁷⁸⁷ See Milton Mayeroff’s *On Caring*, Harper & Row, New York, NY (1971), pp. 1.

parasitic relations as morbid dependence on another person or dogmatically clinging to a belief, for in both cases I am unable to experience the other as independent in its own right and I am unable to respond to it truly. When I dogmatically cling to a belief, I am so attached to it that I am unable to experience it as separate from me, and I cannot really examine the belief and find out what it means, let alone determine whether it is true or false”⁷⁸⁸. But by distancing ourselves whenever we are found too close to others, we refocus and replenish the creative energy within us (as long as we do not move too far away, of course, but stay on the line of balance), which makes us become a more lovable person in both directions. Namely, we ourselves become more attractive to others through focusing our attention into our own inner world, whereas the creative sun of our heart will have more of the rays of charming love to send to others as well. The greatest artists have recognized that by spending too much time surrounded by the cheerful clique of human creatures, the creativity of theirs gets diminished, which is why many of them estranged themselves from the social circles in order to endow the very same humanity with the most sublime beauty they could give rise to. The reaction of these deep artistic souls to overwhelming social interaction has been like that of one of the cousins in the painting by Antoine Watteau⁷⁸⁹, as she stood up to face the eternal, turning her back to the viewer and leaving the happy company aside. Hence, whenever I find myself overly immersed in the starry beauty I find in the creatures I like, I tell myself to back up and plunge into the starry essence of my own soul. This is when I get reminded of the groundbreaking message incorporated in the teaching of Nietzsche’s Zarathustra: “Do I advise you to neighbor-love? Rather do I advise you to neighbor-flight and to furthest love!”⁷⁹⁰ Soon after, Zarathustra continues by saying how “the one goeth to his neighbor because he seeketh himself, and the other because he would fain lose himself; your bad love to yourselves maketh solitude a prison to you”. Too much of love for our neighbor can spoil our character as much as too little of it can. But if we stand firmly on the Way of Love, with one hand stretched towards the starry essence of our inner world and the other one extended to selflessly give beauty and love concealed within this starry essence of ours to others, we may enter relationships during each and every moment of which we would not be constantly losing and finding ourselves, but edifying and polishing the skylight of the souls of ourselves and of the faced others up to the point when a glistening luster of the starriness thereof becomes clearly visible, and when we could start whistling the triumphant Hercules’ song: “As a child I knew that the stars could only get brighter and we would get closer, get closer”⁷⁹¹. Through the Way of Love we clear up the way to see the starry, eternal essence of both ourselves and the creatures we love.

S.F.2.34. The Way of Love transcends both the extreme standpoints of magician-like solipsism and sheer superstition. Namely, according to the Way of Love, everything in this life arises as the music played on strings that connect the depths of human mind and of the divine Nature. Believing that the streams of our inner world only are enough to change the world in whatever way we like, without ever engaging in acting in benevolent ways, leads to fall from grace. But assuming that everything is written on the face of the outside world leads to fall from grace too. Using the same old mechanism, the way to find the middle Way is not to eliminate both of these stances, but to make them stand face-to-face, and then tell them to adopt the essence of each other’s attitude. The

magician-like solipsism and the mindset pervaded with superstitious beliefs thus patiently learn from each other and change all until they complement what they used to be with what they have just learned to be. A balanced personality evolved in such a way would be the first one to pass underneath arches of street lanterns, cross a black cat's path, or collect crumbs from the table in her hands, even though everyone would stand aside believing that doing these things causes a bad luck. A battle over superficial and superstitious things in life is thus won, as one manages to point at the deep, invisible streams of our intentions and emotions as those that truly matter in being lucky in life. Following external signs is a sign of wisdom too, but it has to be complemented with beliefs that it is our deepest ideas and emotions that navigate our ships across the endless ocean of being. On the other hand, those that used to be inclined to sit in a cave and believe that changing the world can be done with merely cultivating great thoughts, although without ever acting accordingly, will begin to complement the greatness of their mind with the greatness of expressing it so as to improve the face of the world, which will cause one big Sun to start rising in front of their beautiful minds.

S.F.2.35. After theory comes practice. And in order to exercise the art of resting our spirit upon the tiny thread of the Way of Love, like an acrobat on the wire, we simply need to spend time with people and carefully observe. As we spread the imaginary string between our soul and Nature in the moments of religious communication with the wholeness of the world and exploration of the divine essence of it, or between our soul and the core of other creatures, we need to retain our attention on the string, as if being a guitar pick or a fiddlestick that gently caresses this string and thus produces the music of life. Should we slip with our attention too close to the heart of another, thus forgetting to add fuel of inspiring thoughts and emotions to the fire of loving creativity burning within us, or too close to our own heart and thereby ignoring the importance of empathically uniting our awareness with the worldviews of others, the music of life would be inaudible and almost nonexistent. But one thing is for sure: we need to step on the wire determinedly, fall from it endless number of times, but never lose the patience and the drive. Like a child learning how to walk, we need to learn from our mistakes, but never let them dim our faith and overcast the bright visions of ourselves walking towards the beautiful sunrise horizons along the thin wire of the Way of Love with clouds of disbelief and despair. Even more importantly, especially as we grow older and more socialized, we should not let the petty secular remarks about our doings drag us down; rather, like the father of the missing San Jose teen, Margot⁷⁹², paying nil attention to the accusations of bad fatherhood by the hypocritical stoners of the holy spirits of this world and continuing his relentless search for his daughter with the passion of a steaming trimaran, which eventually, after a series of slips, bears success, we should likewise walk through life with the sacred Oriental mantra kept in mind: "Dogs bark at caravans, but caravans pass by"⁷⁹³. In other words, we need to relentlessly practice the art of the Way of Love if we are to eventually master it. And this is one of the arts that we will never be handed a written certificate for when we truly master it. Only a silent praise from the heavenly Nature will echo across the endless chasm of the ocean of our mind. But practice is required, unless we want to be like the resigned missionaries who decide to spend their lifetimes away from the eyes of humanity, because their love for people can exist only in their dreams and visions. As soon as they become paired with another human creature, they fall from grace to the swamps of blunt and perplexed acting and reasoning due to their being unable to preserve the balance of the Way of Love. And so, instead of learning upon

⁷⁹² Watch Searching directed by Aneesh Chaganty (2018).

⁷⁹³ Or, "*psi laju na karavane, a karavani prolaze*", per the Serbian version of the saying.

these stumbles and falls, with blissful determination to make it one day and illuminate the world with the light of our spirit, somewhat like the Christ did, they conclude that the fire of their love for humanity could be, quite paradoxically, sustained only in so far as they stay away from the humanity they love. So, they may permanently retreat into a state of blissful apathy, letting an enormous part of the essence of their shiny spirit pluck itself away for good and fall from the cliff, becoming but a crippled, crescent moon for the rest of their lives. But if we want to be a great tightrope walker who leaves the gazers in starry awe, as described in a Richard Thompson's song⁷⁹⁴, we need to stand surrounded within an aura of a giant willingness, and face from it others in all the prominence and greatness we ascribe to them. As we make a move, say a word or two, we may notice how our attention slips away from the middle Way, and becomes either overly immersed into eyes of another or into our own self. In the former case, we would fall in the direction of becoming a passive follower of others, a sticky charmless person staring into them and just waiting for their own guiding lights and decisions to direct us, whereby never willing to yield a creative incentive and release the rays of creativity straight from our heart. But in the latter case, we would merely become locked and wound up within ourselves, like a caterpillar, staying deprived of the richness of merging in empathy with the eyes of another. The point is to stay on the line, to have all our actions carried out oscillating between the essence of our heart and the spirit of the encountered ones. This is how we become an enchanting rope-dancer that strews stardust of healing love and wonder upon the starry eyes of the world below. Only stars thus remain for the rope-dancer of our spirit: twinkling eyes of Heavens watching over us from above and glimmering eyes of humanity gazing at us from below. To love and respect both, to live in accordance with both following the starry pathways which outline the divine mission our self ought to fulfill in this world and to live so as to edify the preexisting tradition of knowledge and beauty of humanity, that is, to have one ear carefully listening to the voice of God reverberating in the depths of our mind and heart, and the other ear living in harmony with bringing peace, salvation and satisfaction to the people of the world, is to dance vigorously on the thin string of the Way of Love. To live for stars of the endless Universe and to live for stars twinkling with tiny little love in eyes of human creatures is to be the follower of the Way of Love.

S.F.2.36. Once we start dancing inexorably and mightily along the rope of the Way of Love, there are no limits for our being. Wherever we engage our creativity, wherever our feet and mind step in their curios, adventurous exploration of the wonders of the world, we can always return back to the heart of ours, to the place of beginning of our journeys, with the treasures found along the way. No matter how risky our explorations are, for as long as we are walking along the Way of Love, living in harmony with the music reverberating within our hearts and doing everything in life with the only aim to bring light and salvation to the worrisome and dispirited human hearts, making them flourish again in all their charm and beauty, we are saved from all the dangerous bites of monsters dormant in this world. Those who live by treading along the Way of Love, "they shall speak with new tongues, they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover" (Mark 16:17-18). The most dangerous substances consumed for the sake of broadening the ocean of our consciousness and making its waters gorgeously placid for the ships of humanity to travel in peace and enjoyment across them will not do any harm to us thence. The holy consummation of anything, as in accordance with the teaching of the sacred voyage of Don Juan, can turn poison into a source of

⁷⁹⁴ Listen to Richard & Linda Thompson's The Great Valerio on I Want to see the Bright Lights Tonight, Island (1974).

enlightening insights. If we hold the globe of heavenly love in our chests and travel through the obscure layers of our consciousness so as to look at the world from a new cognitive panorama on the wings of a psychedelic experience and reveal thereby some of the countless blind spots in our awareness that stiffen our behavior and prevent our launching to stars, and all that for the sake of saving the world, we should be sure that any states of confusion hit along the way will be overcome and that we will eventually emerge into the light at the end of the tunnel, becoming like the Plato's cave dwellers that entered the sunlit world outside, realizing that all their earlier perceptions of the world had been sad and gloomy in comparison with what they were astonishingly glimpsing at. Wherever our consciousness decides to travel, however, it is the Way of Love that ought to be preserved. That is the essence of the starry training of ours in this world. We can also exercise this art in any of the domains where our creativity could be exhibited, be it artistic performances, casual conversations, games of soccer, partying, sorcerer flying, or engaging in sexual affairs. As far as the latter is concerned, I will just softly remind you that whatever our typical faults during the walks along the Way of Love are, they become reflected in anything we invest our creative efforts into, and sexual behavior is not an exception. Thus, the tendency to masochistically become immersed into the creative shine of another being, whereby losing the integrity of our own shine out of sight, would result in prematurely reaching the sexual climax. On the other hand, being overly confined to ourselves, without plunging into lovely features of the creature we interact with, would result in being disinterested and unable to reach the peak of sexual excitement. To reach the balance, one needs to be distant, withdrawn into the essence of one's heart (not necessarily thinking about soccer in the midst of the sexual act, as in Danny Boyle's *Trainspotting*) as much as to be driven by the force of unison and merging with the creature we are in physical and emotional contact with. Hence, we are free to say that there is nothing in life that could not be seen as a fertile ground for practicing the art of Love. Finally, although sex, drugs, and rock 'n' roll pose numerous dangerous traps on their ways, if we find ourselves learning on them for a while (because we may need to meet the abysses of human existence face-to-face in order to understand who we really are and what the true virtues and qualities in this life are), let us not despair, but make each step, carefully, with a lot of faith and a bright vision kept firmly anchored to the back of our mind to guide us towards its sunny landscapes of salvation and happiness.

S.F.2.37. Once we touch the ground of the Way of Love, the things thoroughly change. Whatever had appeared wrong, misfit and disharmonious to our mind starts to be seen as returned back to harmony. The sense of alienation, describable as the silent, vacuum-like emptiness through which the astronauts in Stanley Kubrick's *2001: A Space Odyssey* and David Bowie's *Space Oddity* float, originating from our inability to compassionately leap from the space of our own mind to other people's planets, from which we could see and enjoy the way they see the world, somewhat like the *Little Prince*, thus becomes solved. But also, all the ills of clinginess to others that we may have exhibited after being attracted to people and objects of the world to such an extent that we have become thoroughly distanced and estranged from the starry essence of our own heart and the divine missionary music played within, is healed. The balance between dwelling deep within our own heart and empathically uniting our views with those of the surrounding beings is reached. Never again would we sadly stare at other people's faces before departing from them, even though it may be a temporary separation. My mousy girlfriend from Belgrade in the late 1990s used to say that "love is a film played in one's head when one absently dreams about the object of one's love", and if this is truly so, then these moments of temporary distancing from the loved ones are as precious in enkindling in our heart and mind the fire of Love, the godliest of all feelings, as the

moments spent in fond togetherness and are to be embraced with elated enthusiasm rather than with sadness and regret. At the same time, the fear of approaching others in all our sincerity, in what we truly are, dissipates in the air of our mind, and only a dusty remembrance thereof remains. We thus learn that blending and leaving, congregating and separating, converging and diverging, coming together and coming apart present two sides of the same coin. It is in alternately getting closer and setting apart, getting closer again and setting apart again, and so on and on, that the music of life is being produced. Hence, the metaphor of the Way, the symbol of simultaneous separation and connectedness, can be used to denote truly everything in life. It can be applied as a basic metaphor of balance that can guide us in solving many problematic situations in life. This is why I draw a way on every wall I could find.

S.F.2.38. When I was a kid, there was this book I felt an enchanting attraction to. Its name was *The Miraculous Chalk*. In it, whatever a boy wrote on the walls with the magic chalk, it would become a part of reality. Only later did I recognize the book's foreshadowing the co-creational thesis, intrinsic to which is the idea of the dialogue between the human spirit and Nature with all of its results materialized in the domain of our perceptions and sensations. "The world is but a canvas to the imagination", Henry David Thoreau noted once. So, be aware next time what you write on the walls of your mind and the city facades alike. You may never know when these lines drawn will pop out and face us in all their liveliness. Our thoughts, wishes and the deepest aspirations are steering the world towards their becoming true. Realization of these starry wishes may sometimes induce spiritual delirium in our heads and hearts, sending tears of ecstatic devotion down our cheeks, and sometimes may make us wonder why we nurtured such valueless dreams at all. In Andrei Tarkovsky's movie *Stalker*, the three men journey through a mysterious, futuristic landscape a.k.a. the Zone with the aim to find a true wishing well a.k.a. the Room in it: a professor, an artist and their guide. The professor's aim was to destroy it for, as he thought, if found out by humanity, it would certainly be used for evil means. In the end, however, he gives up on the desire to have it blown apart, and in the spirit of the religious stories levitating between the extremes of illusion and trueness in the air of faith, he lets the well live within the hearts of humanity. The co-creational thesis refers to this middle ground, the air between the extremes of objectivism and solipsism, by holding that everything comprising our experience arises at the touch between mind and Nature. Everything we see around us and in us is the product of the dialogue between our deepest desires, aspirations and biological predispositions on one side and the guiding voice of Nature on another. As we, mind and Nature, walk hand-in-hand, the pathway along which the world, the planet and humanity develop is outlined. And during this walk we should never lose our faith in the ancient Egyptian saying that "the soul becomes whatever it wishes". If we wish for the stars, there we go, returning to their embrace sooner or later. For, in each one of us a star of divine grace and love shines. It is only up to the clouds, winds and weather patterns of our aspirations,

thoughts and instinctual drives to act to open up the way for the immaculate shine thereof to be seen and awed by the world. And just as the Sun and the stars are here, visible to us for a while, but only to bend around the corner of the planet, albeit showing up in our views soon after, the same recipe could be applied to act in the most profound and loving ways. That recipe is called the Way of Love, and its message is that not permanent merging with the beings we adore, but alternate blending with their essence and then moving out of sight, as in the charming and vivacious eye-spy game you might have played as a child, is the key. To become one in hugs and kisses and starry-eyed, glowing embraces, and then to bounce off each other and explore the world in our uniqueness, but only to be returned again to each other's arms in this incessant story of converging and diverging, is what the Way of Love calls for and passionately draws on the pages of this book.

S.F.2.39. What the co-creational thesis and the Way of Love in their music of swinging back and forth between the essence of the subject's inner world and the magnificent appearances of the world around us teach us is that the mysterious divine force underlying what we call natural world and a secret and equally mysterious core of our own being that we may name spirit or soul incessantly communicate in a dialogue that takes the form of our experience with all its visible and invisible qualities. As the abovementioned alchemical story about Narcissus has it, in our looking at the world from the cognitive panorama of the Way of Love we resemble the beautiful boy who, enchanted by both the beauty of himself and the beauty of Nature, unendingly gazes at the surface of a lake, looking partly at the lake and partly at the reflection of himself, unable to untangle where one begins from where the other ends. Mind draws Nature and Nature draws mind, as could be easily evidenced were we only to follow the traces of every thought of ours and recognize that the concepts of our thinking and visualizations draw inspiration from the way the world appears to us, whereby the way the world appears to us is contoured by the creative potentials of our cognitive apparatuses and biological forms. Nature has also shaped us throughout eons of evolution, and yet we are the ones that shape Nature nowadays more than any living species before. And it seems that as we intensify the richness and fruitfulness of this ubiquitous dialogue between human mind and Nature, ever greater is the evolving potential that endows both human consciousness and the physical world. For, in the end, spiritual and informational evolutions seem to proceed hand-in-hand. The informational richness in which our minds are immersed fertilizes the ramification of cognitive pathways and the multiplication of semantic richness within ourselves and *vice versa*, in this endless cycle of co-creative dialoguing between mind and Nature. For those who relentlessly idealize the past and have come to believe that lemurs and marsupials must have evolved from humans rather than the other way around, a brief visitation of the cruel and primitive worlds of the past, such as the one portrayed in Fellini's *Satyricon*, would be enough to shatter their illusion that devolution is the only evolution happening around us. Instead, as meaningful boundaries across which perceptual information is being conveyed multiply, the potential for the rise of saintliness in human beings becomes magnified too. Teleport an average human of the modern day to a commune scavenged by Genghis Khan's cavalry and he would immediately receive the epithet of a sage, not owing to the knowledge he possesses, but owing to mere peace and love radiating from his tame heart. This is why, at the end of the day, it does not matter whether we increase the informational richness of the world around us by working diligently or the cognitive richness of the world inside us by thinking profoundly, because these two aspects of being are inextricably looped, so whatever the side of the wheel we spin it from, the result would be the same: a sway away from the animalistic and into the motherly arms of the angelical.

S.F.2.40. To put it simply, as you may have noticed, the co-creational thesis is all about proposing the incessant dialogue between human mind and Nature as being immanent in every detail of our experience. On the other hand, the ideal of the Way of Love built on top of the metaphysical foundations of the co-creational thesis is about the balance of focusing our mind and creativity inwardly and outwardly in the same extent. The relevancy of both of these concepts can be verified by our following how the traits of human mind and the way Nature, i.e., our planetary environment, has appeared to us have changed over time. Most importantly, what I incessantly ask people to notice is how the wonders of the world around us and wonders that fill human minds enrich in parallel. In other words, the informational and spiritual evolutions occur only in so far as they walk hand-in-hand. If you do not believe this, try building a time machine and shooting yourself back in time, not necessarily too far ago. It could be merely a hundred years back in time or maybe even a few decades if you also make a step in space, to some other parts of the planet. The lesser the time difference, though, the more time it would take for you to get bored in your new environment and realize that the communication with the earthlings does not give not even nearly as much spiritual satisfaction as those that you temporarily left in the contemporary world. You would then realize in enlightenment that the rich informational contents of our current environments have impressed so much of the dazzling wonders of stellar thinking and feeling that it totally eclipses the shining attempts of the creatures from the past. In other words, our spirit becomes greater by merely absorbing the impressions of the world around us, and *vice versa*: the forged greatness of our spirits moves us to create ever more wonderful pieces of creation for humanity. Consequently, as the world becomes more diverse, more beautiful and more filled with sources of endless amazement, its people are more prone to be heavenly humble and approach the world with a loving respect and a shining grace. Moreover, these aesthetic impressions raise awareness of an immense value and importance of the place that our life occupies in the timeline of life on this planet, overwhelming us with an obligation to continue the tradition of bearing masterful ideas and efforts that have resulted in all the wondrous products of human creativity that surround us. Another observation that falls along this line of thought is that the ability of humans to satisfyingly plunge into meditative essences of their beings and spend time alone seems to develop along with an ever higher connectivity of individual creatures to the rest of the world. Their intimacy with themselves thus grows together with intimacy with others, which is perfectly natural to expect from the perspective of the Way of Love. For, the latter is analogous to a globe whereon travelling far enough in one direction makes us emerge on its opposite extreme. Or, as correctly pointed out by Ava Justin Popović, “the closer one is to God, the closer one is to human beings, and the closest to human beings is the one who is closest to God”⁷⁹⁵, wishing to tell us that nourishment of prayerful inwardness and a sense of partial remoteness from the nearby spirits preconditions the opening of the petals of the flower of our heart to others and blessing them with the nectars of empathy and love freely flowing from its essence. In other words, the more we descend into the depths of our being and the more we advance in the ultimate adventure of our spirits, the aim of which is to “know thyself”, the more of the treasures of spirit will we have in our hands ready to endow the world with. It is for this reason that in his debut movie, *Le Sang d'un Poète*, Jean Cocteau made the artist pass through the mirror first and take a journey next to dozens of objectifications of his subconscious impulses before he was given the liberty to engage in artistic activities aimed at beautifying the world around him. And yet another perspective that corroborates

⁷⁹⁵ See Nevenka Pjevač's *The Evangelical Ladder of Virtues of Saint Ava Justin*, Blagodarnik, Belgrade, Serbia (2009), pp. 67.

the idea of parallel evolution of human spirit and Nature is the connection between science and technology on one side and arts, including religions, on another. Whenever I focused my mind onto this fascinating relationship, I could not see anything other than their mutually potentiating each other. The greater the technological capacities of our environment, the greater the potential for creating ever more impressive works of art. And also, the greater the impressiveness of the works of art imposed on humans, the greater their creative potentials will be. Once again we find ourselves in a closed feedback loop, the positive character of which have so far led to an explosive evolution of human consciousness and the planet itself. The total amount of the inscribed human knowledge currently doubles every three years⁷⁹⁶, and so may be with the glow of the starry carousel of beauty that spins in human eyes sparked by the wonders of the world. As we stand in astonishment in front of various human works and become moved by the beauty inherent in them, we nourish our spirit and prepare for ourselves ever more challenging voyages along the railway of divine creativity. Human diligence and creativeness have thus become impressed in the physical substrate of the world and in return breed even more of that same diligence and creativity; hence, the obviousness of the thesis that the richness of human spirit and the informational diversity of the world around us develop in parallel. By feeding the world with products of our creativity, we enrich ourselves in return. As a boomerang returns to its thrower, so does everything we send to the surrounding world, from thoughts and emotions to the physically forged valuables. And the interaction between mind and Nature wherein “the more love one gives, the more love one has”, validating the mystical message of the Christ that “blessed are the poor in spirit: for theirs is the kingdom of heaven” (Matthew 5:3), stands as in close agreement with the co-creational thesis and the Way of Love.

S.F.2.41. In a 1991 Pet Shop Boys’ song Being Boring, one of those fascinating musical signs of the times that stand as an epitaph to one and a pearly gate to another era of human expressions and understanding of the Universe, the artists refer to the verses by Zelda Fitzgerald: “She was never bored because she was never being boring”. Reminded of these verses, I feel as if a power to act in ways that awaken wonder and beauty in others arises in me. This also brings me over to the light-saber-flashy message delivered by a popular SF novelist: “All god does is watch us and kill us when we get boring. We must never, ever be boring”⁷⁹⁷. Hafiz, the Persian poet in whose metaphysical microcosm every object was a celestial body revolving around the Sun of everlasting love, envisioned a similar substitution of conversational clichés with an eruption of holy spiritedness from the center of beings in contact when he asked his readers the following in a poem of his: “Why just ask the donkey in me to speak to the donkey in you, when I have so many other beautiful animals and brilliant colored birds inside that are all longing to say something wonderful and exciting to your heart? Why just bring your donkey to me asking for stale hay and a boring conference with the idiot in regards to such a precious matter as love, when I have so many other divine animals and brilliant colored birds inside that are all longing to so sweetly greet you!”⁷⁹⁸ Still, when it comes to attempts to avoid boringness in communication, let us make sure that we avoid the temptation to make the surface seemingly exciting, but leave the roots hollow and dead.

⁷⁹⁶ See Dan Poynter’s *Self-Publishing Manual*, Para Publishing, Santa Clara, CA (2003).

⁷⁹⁷ See Chuck Palahniuk’s *Invisible Monsters*, W. W. Norton, New York, NY (1999).

⁷⁹⁸ See Hafiz’s *Why Just Ask the Donkey*, In: *My Favorite Hafiz*, an anonymously compiled collection of poems by Hafiz (300s AD), pp. 1, retrieved from <http://www.abuddhistlibrary.com/Buddhism/F-%20Miscellaneous/Miscellaneous%20Buddhism/Essays/Articles%20by%20various%20teachers/My%20Favorite%20Hafiz.pdf>.

In other words, let us be more like that band of youngsters that glided through the streets of a “gray city” with a supersonic energy after they discovered that “colors are inside them”⁷⁹⁹ than a stereotypical southern Californian, who wears insipid grayness inside as a contrast to the sunniness that shines all around him. Thereupon, we should always keep in mind that acting without any sparkles of wonder and love sown across the inner landscapes of our mind and heart would predestine our engagements in any communication to be fruitless and any attempts to inspire a fellow human in vain despite the astonishing appearance of our actions on their surface. Contrary to the aspirations from which it has arisen, every such action would be viewed as empty, prosaic and pathetic. And because this refinement and beautification of the foundations of our acts is inescapably tied to seeing the world in a noble and beautiful light, I will take the liberty to reverse the prime verse cited here into the one saying that “she was never being boring because she was never bored” and call for the balance between the two. This is why the Way of Love is all about the two-way streaming of information: the shine of our spirit being released outwardly, contributing to the beauty of being, and the inspiring glow of creative forces that the outer world abounds with traveling towards the essence of our soul, enriching us to the core. In order to be successful in this bidirectional streaming, our attention, of course, needs to be divided. We need to be deeply anchored in the depths of our heart and mind and yet to vigorously trace and absorb the impressions of the surrounding world. Be that as it may, it is true that once we find ourselves in an empty-minded, uninspiring and boring state of mind, it does not matter from which side we will spin the wheel of boosting the wonderfulness of our self and the world alike. Acting in exhilarating ways may thus serve as a way to awaken exciting states of mind, in accordance with Heinz von Foerster’s guiding principle: “If you want to see, learn how to act”⁸⁰⁰. But also, instigating inspiring thoughts through meditation and recollection of beautiful visions, emotions and aspirations may be the way to inconspicuously enchant others. In fact, what I claim is that whenever we do not feel bored by merely being plunged into the sea of our mind, swimming with sirens and muses along the seashores of our soul, even though we may be still as a stone, an aura of excitement will inevitably surround us. And yet, in order to sustain this inner glow within ourselves, we need to incessantly shine to the world by exhibiting our majestic creativity – dancing, writing, singing, echoing beautiful words, and, all in all, sending the divine music that we are to the world with every thought we conceive, with every breath we take, with every glance we take. To make our consciousness a half-moon by having our attention divided between the dark and invisible treasures of the spirit within us and the glossily glinting treasures of the world around us is what the co-creational thesis and the Way of Love argue for.

S.F.2.42. The Way of Love thus points at two immaculate treasures lying at the end points of the strings of our experience, which in their subtle vibrating produce all the perceivable impressions of the world of ours. These two treasures belong to the spiritual foundations of ours and the divine foundations of our Creator, dear Nature. And yet they are directly invisible, because they can exist only as paired. Intermingled with each other, it is impossible to read the essence of either one of the two in perfect clearness, which is probably why St. Paul the Apostle said that “now we see through a glass, darkly; but then face to face” (Corinthians I 13:12). Now, both of these deeply sunken treasures inevitably radiate and send some of their treasury signs and heralds towards the

⁷⁹⁹ Listen to Film’s *Boje su u nama on Sva čuda svijeta*, Jugoton (1983).

⁸⁰⁰ See Heinz von Foerster’s *On Constructing a Reality*, Presented at the Fourth International Conference on Environmental Design Research, Blacksburg, VA (1973). In: Heinz von Foerster’s *Understanding Understanding: Essays on Cybernetics and Cognition*, Springer, New York, NY (2010), pp. 211 – 228.

visible surface of being. Hence, some people are more allured by the treasures of the inner world, as is typically present in the tradition of Buddhism, whereas other people are more attracted to the treasures set forth by Nature in the outer world, as is more pervasive in the cultures lying closer to the Christian tradition. However, as the Way of Love teaches us, if we are to become a sun that shines with the light of the spirit all over and yet baths in the wonderful impressions shone to us by Nature, we need to be placed in-between, to stand with hands spread towards both of these treasures, incessantly correlating the two. It is only thus that we fulfill our mission on the Way of Love. Being immersed in ourselves only for hours or days is great, but only for as long as it serves the purpose of edifying the marvels of the world in the long run. As Martin Buber pointed out, “I often hear men prizing their solitude but that is only because there are still men somewhere on earth even though in the far distance... I do, indeed, close my door at times and surrender myself to a book, but only because I can open the door again and see a human face looking at me”⁸⁰¹. Reading, eating and writing thus has to be done for the benefit of entire humanity if we are to make truly beautiful and spiritually liberating daily tasks out of them. Reading philosophical works without gaining insights that are universally relevant and applicable in our battle to save the human race from its descent towards regressive values and modes of being, as well as reading novels without empathizing with its characters and thereby ennobling our spirit is thus nothing short of failure, and the same can be said for writing and any other creative endeavors of ours. Aside from inspiring us with poetic wording and drawn details that yield surprising metaphoric incentives for our creative thinking and arrivals at new and exciting ideas, a benefit of withdrawing ourselves to read novels or watch movies lies in the shattering of our consciousness into little pieces thereby, as we find parts of our personality dormant in each and every character and their life stories. As such, these seemingly lonesome moments could be seen as the ones invaluable enriching our heart and mind with sympathy for what might have seemed foreign, distant and unlovable before. In that sense, withdrawing our attention inwardly while never ceasing to look at the world from the eyes of another is what makes our moments of desolation precious and beautiful, training us not to stay in a solipsistic bubble where only our dreams matter, but to walk along the thin thread of the Way of Love whereupon we realize how the effectiveness of our delivering of inspiring moves is built through our ceaseless absorption of the external details into our inner, meditative core of being, while crafting of beautiful introspective insights is fostered by the incessant spreading of our creative arms outwardly, in compassion, love and care for the world. In an ancient Korean story, children in a summer school had an afternoon dedicated to studying outdoors. It was a humid and hot summer day and as the teacher dropped by to see how the kids were doing, he noticed that all of them, save one, were sitting in the shade. When he asked the kid that was reading the book under the glaring sun why he was doing that when he could sit in the shade, he merely replied: “My father is right now working in the field and I too am going to sit in the Sun”, quietly shedding the secret of beautiful living. As a matter of fact, the core of our being has to be bursting with compassionate drives even during the most desolate tasks of ours if we are to walk along the wonderful Way of Love in life. Withdrawal of creative rays of attention inside while losing touch with the spirit of communion thus implies an inevitable departure from the balance of the Way of Love. Another extreme that, unfortunately, much more people are prone to exhibit nowadays is being blinded by the treasures of the world, chasing after them with neglecting our inner qualities and letting them remain uncultivated, degraded and all rotten in days to come. Some people thus arrive at certain places and – after being impressed by them – wish if they could throw their anchors for good right there, ready to ignore the voice of the divine soul echoing within. Only later do they

⁸⁰¹ See Martin Buber’s *I and Thou*, Touchstone, New York, NY (1923).

realize that they might have fallen into a trap. “San Francisco will slump mumbling into senility – or burn to the ground – believing to the end that simply being San Francisco will pay its way forever”⁸⁰², thus observed Peter Beagle after noticing the tendency of many clever people to become allured by the very spirit of the city that then keeps on inertly guiding them along its own streams. If there is something that the Way of Love teaches us, on one hand it is that a perfect enlightenment is unreachable for as long as we disregard the world around us and ignorantly and selfishly focus only on igniting the glow of happiness inside us; for, after all, we are social creatures and the spiritual satisfaction of each one of us is inextricably related to the spiritual satisfaction of the creatures surrounding one. On the other side, neither could there be perfect oases in the world that we merely need to locate and set our feet into to be enlightened, with disregard of the fine tuning of the inner world of ours. Creatures who have embarked on the former, solipsistic path would end up vainly searching for enlightenment through the labyrinths of a lonely mind, without realizing that stepping up in full honesty and loving intimacy in their social circles and giving out the treasures that they have so carefully heaped up inside of them would be the way to enlighten the inner landscapes of their mind. Creatures allured by the latter, objectivistic presumptions that dominate the modern world will be, on the other hand, vainly searching for the perfect place, the perfect job, the perfect mate and the perfect food ingredient that would bring them fulfillment, without realizing that focusing their creative attention inwardly and enlightening their insides by ingraining profound values and bricks of beautiful knowledge that would help them see even the most modest and imperfect details of the world in the light of divine brilliancy is the way to reach the perfect fulfillment. While the former beings residing in the bubble of their solipsistic selves resemble Orpheus who counteracted the nymphs’ song with the one of his own and wiped out the singing fairies thereby, the latter may find their epitomes in Odysseus who was enchanted by the mermaids’ singing to such an extent that he had to face it with ears filled with wax, tied to the ship’s mast, so as not to hear it, lose his personality thereby and eventually crash his ship onto the sharp rocks surrounding the island at which the sirens resided in an attempt to come close to their enticing melodies. Yet, if we are to become an unassailably inspiring dweller on this planet, we ought to learn how to sing together with fairies, to let the waves of their song enter one pole of our mind and produce in it an ocean in which our spirit could swim, while another pole of our mind is sanely sending forth the radiance of our own inner song, thus balancing impressiveness and expressiveness in an immaculate manner. This is so because the ultimate secret to the enlightening way of being lies in an endless communication, a co-evolution, a dialogue, a dance between us and Nature in which the treasures that the both are made and seen as abundant and overflowing with are exchanged with a sense of mutual joy and enrichment.

S.F.2.43. The concept of the world and experience arising from the co-creational thesis makes it clear that what has been regarded as inert and lifeless matter from the perspective of objective natural sciences is actually something embodying the essence of our being, because as perceptive observers we are inevitably instilling some of our own biological and psychological essence into everything appearing as objects in the world surrounding us. But we are not alone in this self-construction of experiences, as some solipsistic philosophies may suggest. There is the other side, that is, the divine power of Nature, and in her touch with the spiritual core of us as observers our experience evolves. In essence, everything comprising our experience is an endless dialogue between our soul and Nature, that is, God. As a scientist, I can easily be laughed at after proposing epistemological and ontological philosophical grounds for every science conceivable with the co-

⁸⁰² See Peter S. Beagle and Michael Bry, “The California Feeling”, pp.219, Doubleday, Garden City, NY (1971).

creational thesis. But this is how it is. Long time ago I learned that dead matter is not that dead as it may seem. It is just the Nature's way of showing us her graceful love by speaking the language of "dead" matter to us, unpretentiously and secretly, the way each true love probably does. Hence, I am aware that we need to love not only plants and other human beings in order to silently guide them along the path of prosperity and happiness, but the surrounding objects and devices as well. I am absolutely aware of how the mindset with which we approach experiments that we run in the lab can be crucial in terms of subtly determining their fate, that is, whether they will flourish or fail, so to say. For years I used to have an attitude of the machine-hating Taoist man from one of Chuang-Tzu's stories, and, verily, frequently as I would enter the room with a machine in it, it would immediately stop working properly. But now I know that we truly have to love our experiments, as inert and unanimated as they may seem, if we wish them to give us and the world some beautiful results and insights into the nature of things. It is an enlightening experience to realize that none of the discoveries and inventions of science will free us from the responsibility to engage our heart in everything we do. From the most ancient times to as far as the visionary imagination of mine stretches, the powers of intellect and reason on one side, and of love and passion on the other, will in their holding hands together build the way forward, towards ever more beautiful horizons of being.

S.F.2.44. Sometimes during these clairvoyant moments of my imagination, when it seems as if I could penetrate with the rays of my attention into the spiritual glow of all things around me, I feel I could even sense the shape of the human soul. The way I see it, it is pear-shaped and reminiscent of a tear of light. It is as if both infinite love and purity, altogether with an eternal sadness, could be found therein, subtly reminding me of the dialectical nature of the spiritual and any other conceivable progress in this world, wherein the divine qualities that endow human beings always develop through their reflection against their dark and hellish polar opposites, implying that sadness and grievances pave the way for the voyage of humanity towards seeding the planet with embryos of spiritual stars. If this tear-shaped form of the human soul gives us a glimpse into what the fundament of our beings in the world may be like, could it reflect the blend of joy and compassion that I have so passionately praised here and there and everywhere, of the magic blend depicted on the images of teary-eyed Holy Mothers on monastery frescoes, of the concoction of our joyful intoxication with the starry wonders of the world and the sad and melancholic ocean of tears that fills our soul and which may be the spiritual ocean, the quantum sea, upon which the whole reality floats, I wonder? And then, having been dazzled by the beautiful light shining forth from this soulful essence of our beings, I begin to wonder if there could be anything more beautiful than letting the sunshine of our soul emerge on the surface from the deepest spaces of our heart and mind and overflow the whole world with its light of joy and compassion. No matter what we do or say then would make us truly shine to the world. Yesterday, during a nightly walk, I saw the crescent Moon facing a blue star. After a while, both changed their position on the starry sky, but the Moon, in this apparently strange phenomenon, kept on looking at the star. Everything we do or think ought to follow the same rule; it has to point to the beauty hidden within the human soul and to the beauty concealed within every tiny piece of the surrounding world. "If I honour myself, my honour is nothing" (John 8:54), said Jesus, but if we turn to the opposite extreme and forget to refer to the essence of our heart with every thought and action we conceive, we would be equally lost, although this time in the direction of adopting the traits of pre-Christian believers who rejected the inexhaustible creative potentials of human spirit and creativity on the account of an obedience to the external authority of God. We should know that the evolution of ourselves and humanity

towards unforeseen landscapes of human spirit and diversity of the world leads us through an awareness of the dialogue between human spirit and Nature that is ingrained in every tiny detail and aspect of the world as we know it.

S.F.2.45. The metaphor of dialogue between human mind and Nature, from which all the perceptible elements of our experience arise, is essentially equal to the metaphor of touch as the source of all the beautiful and truly meaningful things in life. Needless to say, all perceptible stimuli could be compared to boundaries in the visual or other sensory fields of ours. And every boundary is a touch of a kind. So, whatever we see, hear or sense in general is essentially our touching the hidden and mysterious patterns of the world around us. Moreover, the beauty of the touch of two hands may carry a similar majestic association to our minds. The art of touching in which our attention is completely consumed in the act is well worth learning. For, with a beautiful touch, during which we give ourselves thoroughly so as to devotedly send the magical waves of love and grace to the touched ones, we can heal others. The healing power of a beautiful touch could be correlated with the anatomical scheme of the human body drawn in the tradition of Hinduism, where our hands are considered to be the direct channel for the transmittance of love dwelling in our heart to the world around us. But also, a dynamical touch, in which the lines of contact are incessantly fluctuating and palpitating and in which a balance between reliable firmness and gentle waviness exist can be said to present a true art, as opposed to stiff and static grips common in the modern world. As if carrying a bird in his hands, neither too tight so as to strangle it nor too loose so as to let it fly away, a true sage touches everything in life with a secret blend of Tao and Te and thus transmits some magical waves onto the touched beings and objects, which continue to travel along the musical seas of their internal constitution, healing and harmonizing anything they encounter on their way.

S.F.2.46. And we all know that a bird can fly straightly only for as long as it flaps both of its wings with approximately the same intensity. By flapping with one wing only, the bird would make circles and would not truly advance anywhere. The same occurs with personalities who deviate from the Way of Love either in the direction of valuing themselves too much and the world too little, or the other way around. A balanced attitude gives rise to a straight flight, whereas it may be in the nature of human creatures to advance forward as a spiral, permanently falling in and out of balance, flapping with one of the wings harder than with the other and then reversing the trend. After all, the spiral shape of our galaxy may speak in favor of the general nature of one such pattern of progress, which perfectly fits the idea that balancing balanced and imbalanced states is the key systemic balance in our lives.

S.F.2.47. Nevertheless, the Way of Love may be imagined as a railway track composed of a pair of splints, each one of which may be envisaged as a single pole of the fabulous ∞ of the Way of Love, at the intersection of which balanced creatures rest. And whatever we do in life, if we aim at becoming a master in doing that, we always need to gravitate towards this tiny meeting point of various poles and thereafter, like a bird, fluctuate around it. Thus, only by moving simultaneously along both the line of enriching the inner world of us and the creatures around us do we get a chance to propel the starry train of our being forward. The Way of Love is, therefore, entirely about living in concert with the inner divine mission that reverberates inside of us and living for the sake of beautifying the world around. Should we become overly immersed in ourselves and forget about the importance of trustfully plunging into eyes of another, we might end up becoming

a selfish, sadistic and egotistic “swine”, which may appear charming to the world when one is youthful, but inevitably rushes to emotional and spiritual disaster following an older age. One needs to balance a deep reliance on one’s own strengths, self-confidence and self-responsibility with not only respecting the neighbors, but constantly sending rays of healing love towards them. But we can also fall into the opposite imbalance. This might happen when we find ourselves blindly running after others while lacking the strength and willingness to step forth with our own ideas and projected paths for the future. Such an attitude will make our actions in the world appear creepy, clingy and masochistic to others, and we, ourselves, would be washed with the waters of dissatisfaction every time we find ourselves among people. Because Nature and our inner self emit feelings like these to our mind every time we deviate from the balanced paths in life, subtly urging us to go back to the state of perfect harmony. But to notice these delicate invitations, we need to cultivate an immaculate sensibility of our being. Whereas it is the tendency of many people nowadays to consciously get rid of this childlike sensibility and become “a man”, a truly mountainous spirit remains akin to a child during his entire life, like a Zen master able to recognize sophisticated messages of Nature hidden in the finest details of his experience. One of the signs that one has reached the highest level of mastery in karate is being able to sense an opponent in pitch darkness. Many practitioners of this art thus exercise by placing a dark bend over their eyes, and move through the space driven by pure intuition. In a hilarious Zen story⁸⁰³, the sage, the one that bows under the force of wind and floats with the streams of water, walked along the city streets and suddenly came across a narrow alley packed with people. Moments ago, these same people had been trying to pass through the alley, but had failed to do so because of a seemingly peaceful but, in fact, wild horse that would kick anyone approaching it. One of the peasants said, “Here comes the great master; let’s see what he is going to do”. The master came close to the horse, looked him in the eye, and turned around, taking a sideways street. Other sages may be able to communicate the message of peacefulness through the eye contact, but that was apparently not the intention of this master. He may have been aware that not swimming opposite to a rip current, but perpendicular to it is the way to overcome its dragging force, just as avoiding punches and arrows directed to us is always the most preferred self-defense method, as many oriental martial arts, from karate to aikido to judo to Tai Chi tell us. His intention may have been to teach the folks, wordlessly, as it were, that whenever a No starts to resonate with a deafening stridency across our universe and a door of a seemingly indispensable importance for our ventures closes before us, another door or a path, we ought to know, has opened somewhere else, usually offering an even more beautiful view of this universe than the view we would have achieved had we followed the original path. Be that as it may, unless we sense in our heart the feelings of people that are dear to us, even though they may be living in the most distant places on Earth, and unless we start feeling as if the sea inside of us is being dragged by the tidal force of the Moon risen above our heads, somewhat like a real werewolf or warrior of light, with a Tai-Chi ball of light graciously tapping inside of us with every mild sound of Nature, we may know that there is a lot of space for improvement at the level of capacity for spiritual and creative progress of ours in this world.

S.F.2.48. Rarely anything in my life compares to watching the shimmery dance of the waves atop the surface of the sea and the sparkly reflections of sunlight from it, alongside listening to the splashy sound of its rolling in waves over a pebbly coast. The coast that is neither sandy nor cliffy, but finely pebbly in nature, to that end, produces the most beautiful sounds, especially when the waves are small and gentle, such as those of the Adriatic Sea, which I bathed in as a child. Thus, I

⁸⁰³ See Benjamin Hoff’s *The Tao of Pooh and the Te of Piglet*, Egmont, London, UK (1992).

could stay facing a sea, ideally Adriatic, for hours and hours, enchanted by the most wonderful lightshow I could imagine, as if being attracted by a strange, primordially motherly force to it, listening to the sound of the splashing waves, more captivating and more directly speaking to my soul, in its secret language, full of mysteries, than any music ever created by man. The dance and the music of the sea are, really, something I could not get bored of even after a million of years of standing before it with the hands and the head of my spiritual silhouette folded and bowing down to the depths of my heart. Yet, when I ask myself where this magical attraction originates from, I cannot find an immediate answer. Searching for it by treading softly through the labyrinth of possibilities, first I come across my dear mother, who shared this love of the sea with me, then I think of her Dalmatian uncle, a sailor, also deep in love with the sea, prompting me to wonder if the sea, not blood, flows through my veins. As the ruminations come to expire, however, all the roads converge at the doorsteps of the co-creational thesis. Namely, by keeping its premises ingrained deep inside of me, I do believe that every detail of the world of my experience originates from a dialogue between the essence of my being and the divine power of Nature concealed behind the appearances of the world. Hence, behind every splashing wave and lightshow of reflected rays of sunlight dancing on the watery surface, there is a voice of divinity telling stories absorbed by the depths of my being. Once you assume the existence of the words of Almighty behind the veil of immediate appearances of the world, everything around us becomes a source of an ultimate mystery of living. We become sucked up into the most wonderful fairytale we could think of. Thus, the co-creational thesis does nothing but returning us to the ancient and profound way of experiencing Nature. And it does it through the niche of pure modernity, presenting a neat metaphysical basis for all the natural sciences to thrive upon.

S.F.2.49. From the niche of the co-creational thesis, every scientific exploration becomes seen as a profound, theological dialogue in which Nature responds to the deepest questions swirling within the human mind. For, when we approach experiential phenomena as if each tiny detail thereof opens the door for us to glimpse the voice of the divine, every ray of attention of ours turns out to leave enlightening traces across the landscapes of the world. Although I was too once like Gregory Bateson's dreaming lady that slept by the railroad tracks and got annoyed by the sound of the trains of scientific explorers passing by in their careless flits of pure logic, deprived of any sense of beauty at all in her eyes, I learned over time to see a deep and profound beauty in every single piece of scientific information, just as the slumbering lady learned too towards the end of this beautiful story⁸⁰⁴. Every little diagram and every miniscule experimental insight thus arise from the dialogue between human mind and Nature, and can be regarded as religious experiences. "Every time we subject the reality to our scrutiny, it should be like entering the church", I love to say, instigating others to approach both scientific research and daily explorations of the world with a sacred, prayerful attitude, knowing that even the most inanimate things in the world, such as those that may be resting quietly on the lab bench, ought to be passionately loved in order for the exploratory dialogue between our mind and Nature to thrive. Clearly, science becomes seen as a religion when one descends to the roots of our being in the world where epistemology and ontology merge, and from where wonderful Doric pillars of the co-creational thesis spread up, holding the muse of the Way of Love on their pedestal.

S.F.2.50. The Way of Love built upon the premises of the co-creational thesis is equally touching the ultimate foundations of profound and sacred being in this world. Guiding one's actions by

⁸⁰⁴ See Gregory Bateson's Allegory, *CoEvolution Quarterly* 44 - 46 (Spring 1978).

devotedly listening to one's own heart and yet lovingly sticking our ears close to the birdhouses of other people's hearts is an eternal truth that can be seen as underlying all the fabulous and enlightening personalities and acts that this planet has given rise to. Hence, being faithful to the missionary path beaming within our own heart, while still being driven in anything we do by the ideals to lead others towards finding the paths of their own hearts and reach the treasures of happiness is what the Way of Love teaches us. We should live in harmony with the shine of our hearts, but never forget about the importance of empathically merging our beings with other people's worldviews, emotions and hopes. For, eventually, what keeps the torch that illuminates the essence of our heart lit is our incessant desire to light up other people's torches of the heart, and *vice versa*: we can grow up to be an enlightening force in this life, illuminating the sunny paths of happiness for other people to follow, only if we are meditatively plunged within the essence of our own being and live in concert with the sunshine of our heart. Oftentimes, I recognize tendencies of people to give up their living in accordance with this inner shine of their spirits and never become supernovas of majestic liveliness due to their following other people's pharisaic lifestyles and norms. What such people do is nothing but handing the keys of true spirituality to oftentimes blind leaders. That is, they reject their own senses of responsibility and carelessly place them into hands of other people. By doing so, however, they extinguish the starry lanterns of sources of creative and beautiful acting, and may eventually become like blind people leaning onto blind leaders and ending up in a ditch altogether, as the Christ pointed out in one of his powerful allegories (Matthew 15:14). As the Christ expounded this parable to the apostles, St. Peter asked for an explanation, leading the Christ to point to the sources of our own creativity, to the core of the shine of our spirit as places that our ears and eyes of the heart should be oriented at. And yet, sadly, what is common to both science and religion in my eyes is exactly the wide pervasion of people's readiness to reject senses of self-responsibility on the account of blindly following other people's norms and commands. Frequently they do this only for the purpose of securing their own positions on the social ladder, and not for the sake of bringing happiness and enlightenment to others. If one penetrates into scientific circles deep enough, one could thus recognize communications that resemble the one between Smerdyakov, the servant in Dostoyevsky's *The Brothers Karamazov*⁸⁰⁵, and Ivan Karamazov, from which the murder of the father Karamazov resulted. It is astonishing how many people are willing to close their eyes before their comrade's decisions to act unethically. Discarding results that do not fit the expectations and focusing only on selected sets of data that do fit them is a practice that, I believe, is more pervasive among the contemporary researchers than people from outside of the academic circles would have ever thought. And yet, over and over again, I tell my scientific colleagues that not running after results that would merely confirm our expectations and corroborate the predominant paradigms, but facing with honesty and genuine, childish curiosity those that stand in disagreement with the current trends of thinking is how the doors for the most exciting discoveries in science become open. It is through paradoxes and disagreements between our anticipations and the signs handed to us by Nature that we have the chance to protrude to the most progressive areas of knowing. And in order to manage so, we should keep in mind that mind and Nature are engaged in an incessant dialogue, as the co-creational thesis tells us, and that every product of our perception and every scientific observation is Nature's giving us a hint on how the answers to the questions spontaneously posed by the depths of our minds by means of implicit premises and aspirations of

⁸⁰⁵ The prefix "kara" in the Russian common language and literature became popularized in the 19th Century by the exploits of the Serbian upriser and anti-Islamist rebel, Karađorđe, and to this day stands as a linguistic morpheme added to words that wish to be supplemented with black and ominous shades.

ours may be looking like. Louis Kahn, an American architect whose main inspiration reportedly came from ancient ruins, thus used to ask bricks he would pick from the ground at the construction site what they would love to be turned into and then build an arch, a vault, a dome or an atrium out of them, depending on the answer he would hear⁸⁰⁶. Similarly, our consultations of the voice of Nature concealed in every detail of whatever comes to be the subject of our research is not to cease if we wish to retain magnificent powers to discern significant from irrelevant on our adventurous research paths. Or, as the Nobel Laureate, Peter Doherty recently said, “We should not hesitate to talk to our data, no matter how silly it may seem, because only thence would we be able to arrive at the grand insights”⁸⁰⁷. In religious circles, on the other hand, I often see devotees resembling merely followers of the Christ’s followers, and not personalities who live in accordance with the ideals that the Christ himself had lived up to. In the chain of conveying the true ideals of living, these very prime qualities and virtues lived by the Christ have become distorted. Thus we see propagators of Biblical truths walking around in the most expensive clothes and attracting new church members by their physical appearance, or people acting in passionless ways, merely showing off the deadness of their spirits. In spite of that, the Christ embodied the balance between living in harmony with the ways opened up by one’s heart and driving one’s actions by the power of compassion and empathy that the Way of Love signifies, as can be recognized as encrypted in the two major commandments he had uttered (Mark 12:29-31). However, by following only one of those tracks, our creative being in this world will be incomplete. Listening only to our own heart, without being able to feel the waves of intimate compassion as we gaze at other people’s eyes, will predispose us to become a spiritual lunatic, and not a divine, angelic messenger. On the other side, by living solely so as to satisfy other people, but in disharmony with the shine of one’s own being, we will never make a mountain-moving, enlightening force out of ourselves, such as the Christ undoubtedly was. One has to live guided by the longings to enkindle the spiritual shines of both one’s own spirit and spirits of others, for otherwise one’s being in the world will never live up the enormous potentials that our divine nature has ascribed to us. We have the power to heal, to explode as a supernova and send stars of love, angelic doves and whole new worlds to circle ‘round and around, like satellites across the cosmically dazzled eyes of humanity, but only for as long as we stick to the balance between empathy and meditation, between being one with others and being one with oneself, between pining greatly to bring salvation and happiness to others and be true to oneself, between being the same and yet being unique and different, all belonging under the gorgeous umbrella of the Way of Love.

S.F.2.51. The Way of Love teaches us that being different can be a great guiding star behind the gently floating clouds of our thoughts and acts, but only for as long as it twinkles with sympathy and lovingness towards others. So, whenever I find myself in a social setting in which boringness and disinterestedness start to dominate, I look for the ways to break the pattern of predictability and ordinariness with acting so as to be different. In this way, one complements the existing substratum of thought and thereby enriches the music of being sent to the cosmic vastnesses from the charming little clique of ours. Thus, at the craziest party where the space buzzes with moving energy, I may decide to wind down my social butterfly wings and turn into a wistful wallflower by picking a book, curling myself up and quietly reading, like Charles Baudelaire in Gustave

⁸⁰⁶ See Richard Weston’s 100 Ideas that Changed Architecture, Laurence King Publishing, London, UK (2011), pp. 129.

⁸⁰⁷ The lecture was held as part of the annual meeting of the National Postdoctoral Association in Houston, TX, March 2009.

Courbet's Artist's Studio, or simply squatting in the corner and playing a game of chess by heart with a friend. Equally, sometimes I may tie a bandana around my eyes and as a blue-belted karateka, the title of which I earned as a 12-year old boy, walk blindfolded, relying on pure intuition in finding my way around. On the other hand, surrounded by passive and awkward people paralyzed with fearfulness and the lack of enthusiasm, I would jump around, act as a kid and try my best to fill the space with the bubbles of my thoughts, by setting the pitch of my voice so as to reverberate across the space of the room, sending spaceships of puzzling and enigmatic thoughts to fly around the surrounding creatures or standing on the tables and flapping my wings like a flamenco dancer. This is when I may take on the act of the gringo envisaged by Pixies in Gouge Away, a gringo resembling the one from a Georges Moustaki's poem, "strange to all because of having neither a master nor a chain"⁸⁰⁸; "chained to the pillars, a three-day party, I break the walls and kill us all, with holy fingers"⁸⁰⁹, Black Francis's roar reverberates with the same intensity as quarter of a century ago when it was recorded on the other side of the American continent, portraying my own exploding with enlightening energy in these settings, putting the egos of lame spirits around me to death and liberating them from these horrible clutches, all until they realize that they *are* the Cosmos and there is nothing to fortress oneself against, being the point at which their own flights to the starry skies can begin too. And nowhere has it been easier for me, a nonconformist *par excellence*, to perform such a liberating act than in the most constrained of environs. Conversely, whenever we are too compliant with the behavioral manners of the surrounding creatures, we participate in molding all the minds near us, including our own, into a uniform template. And in a world wherein versatility of moods, emotions, states of mind and a sundry of other qualities hides the key to exposition of the beauty of being that blesses and bedazzles, there is no doubt that via this behavioral flattening of the moods by the fearfully conformist demon dormant in us we contribute to collective suffocation of the creative spirit amongst us all. For, from the teaming of a classical metallurgist, Fritz Lenel and a nontraditional one, George Ansell, whose synergy gave rise to the dislocation movement theory of sintering and many other insights into this physical phenomenon to the pairing of always sunnily happy and nonchalant Paul McCartney with bitter, prickly and at times guided by fury and fury only John Lennon, comprising the most famous songwriting duo in the history of pop music to *pas de deux* partners on and off the ballet stage, robustly brazen Rudolf Nureyev and fluidly gracious and elegant Margot Fonteyn, whose dancing duets are responsible for many delirious curtain calls and bouquet tosses, to the South American forward line of FC Barcelona circa 2015, one of the fiercest in the history of the game, composed of an authentic *trequartista* and the No. 10, Argentine Lionel Messi, a classical striker and the No. 9, slow, not stellar at dribbling, but with an immaculate, animalistic instinct for the net, Uruguayan Luis Suarez and a versatile winger and a dribbler, fast and ruthlessly trenchant, but overly light and futile in front of the goal, Brazilian Neymar da Silva, countless examples demonstrating how complementation of antipodal qualities is the recipe for feeding the human brain with the nectar of sheer divinity decorate the pantheon of the history of human culture, telling me secretly that to be different from whatever lies around me is the key to beautifully creative acting. In this relentless behavioral differing of mine, however, I never forget to keep the invisible, cordial connection between the cores of the beings of mine and others tight. For, it ought to be the mission for enlightened creatures of the world to find the way to balance difference and unison in anything they do. Only in such a way could the foundations for the dialectical progress of the world, in all of its aspects, be set. Too much difference would result in

⁸⁰⁹ Listen to Pixies' Gouge Away on Doolittle, 4AD (1989).

people's ignorance of each other's needs and overly individualistic and lunatic self-confinements, whereas too much of respectful feelings that bring us closer to each other in oneness on the account of the lack of the desire to be unique and true to one's own self would result in one's entering the waters of passivity, of letting the precious inner qualities be dissipated or uncontrollably patterned by the social surrounding. We need to partly adopt the qualities of our tradition since only through love and respect of another will we be able to find the way to happily dwell within our own heart. But also, we need to let our heart sing the song of its own and let it guide us along the missionary ways, which are ours and ours only, if we are to deliver the shine of our spirit to the world. Otherwise, we may only know the beauty of this shine, but may never be able to find the way to bless others with its light, staying in the darkness and recalling the verses from Louise Ciccone's confessional *Live to Tell*. For, it seems that in life we have the choice of either living to tell or telling to live; we either become a preacher, a scribe who is all but a model on how life should be lived or a Christ-like creature that cares less about producing a map of his experiences and more about releasing the shine of his spirit outwardly, so as to bless the whole world therewith; or, as proclaimed by Jean-Paul Sartre in *Nausea*, "This is what fools people: a man is always a teller of tales, he sees everything that happens to him through them; and he tries to live his own life as if he were telling a story. But you have to choose: live or tell". This is why many times we feel as if we are one with the music of our heart, finally ready to explode in spirit in front of everyone and strew astonishingly beautiful twinkles of inspiration all over the place, but as soon as we come in touch with other people while carefully listening and absorbing the radiance of theirs and letting it slowly eclipse the shine of our own, we end up leaving the gathering spiritually exhausted. Whenever this happens to me, I get reminded of Bob Dylan's verses: "Now all the authorities they just stand around and boast... picking up angel who just arrived here from the coast, who looked so fine at first, but left looking like a ghost"⁸¹⁰. It is exactly the way Doris felt when she noticed how "instead of trying to figure out what I think about things, I try and figure out what I'm supposed to think; I act out what other people expect"⁸¹¹. To cope with this, I have gotten used to listen carefully and never let go of the music of my heart, which is, however, something that inevitably leaves people around me utterly astonished. For, in order to do so, one appears as if being partly lost in one's own thoughts, not paying 100 % of one's attention to impressions of the outer world. Dividing our attention to a part being absorbed into the music of our own heart and mind, and a part let to lively travel across the features of the surrounding world is the recipe for a truly fulfilled living. There is no doubt that by behaving so, we naturally appear unusual and quirky, shocking people on the way and initiating avalanches of scathing critiques, but such is the nature of all the progressive people in this world. If we stick to this balance between being different and yet being one and the same, we certainly won't make people indifferent about ourselves. On one hand, we will undoubtedly produce passionate haters of our being everywhere we'd go, but on the other hand, under the guiding lights lit up by our cherishing hearts many warm heartbeats will turn into cheerful coo-coo sounds, suddenly becoming houses of some wonderful spirits. Whatever we do thence, an impressive memory will be lastingly imprinted in the minds of the surrounding world. Our very being will be like a loving punk punch that delivers wake up impulses while drawing horizons of peaceful sunshine for others to head on to.

S.F.2.52. What the Way of Love in its balance between meditative and reflective inwardness and a caring outward expressiveness points at is nothing but the balance between actively loving others and being loved. The ultimate purpose of arts may be on one hand to make it clear to the listeners, readers and observers that they are being loved, by Nature herself among all the creatures of the world. But on the other hand, their role is to build the strength and creativity in ourselves that foster us to run to the world and show it the signs of the divine love concealed deep within us. In order to build a fulfilled personality, we need to care for some fragile beings of the world and yet feel protected by the everlasting and omnipresent cosmic love. And that care and love are the beginnings of every wisdom was beautifully summed up at the end of the fairytale of the Little Prince, a lovely creature that curiously leaps from a planet to planet, from one to another human perspective, and yet always keeps the beloved rose that he left for a while on a distant planet of his own tightly strapped to the heart of his memory, always worrying whether baobabs would overgrow her or whether a sheep would remove the glass globe and eat her: “Here, then, is a great mystery. For you who also love the little prince, and for me, nothing in the universe can be the same if somewhere, we do not know where, a sheep that we never saw has – yes or no? – eaten a rose... Look up at the sky. Ask yourselves: is it yes or no? Has the sheep eaten the flower? And you will see how everything changes... And no grown-up will ever understand that this is a matter of so much importance!” Hence, self-esteem and self-confidence could never be built by taking these notions literally and applying them so. By confining the shine of our love to oneself only, one would only illusory boost one’s self-esteem, which would, sooner or later, burst like a balloon under its own pressure. One has to build the rays of love and beauty within oneself – it is true. But the co-creational thesis and the Way of Love clearly tell us that a half of our attention always has to rest sided with the creatures and details of this world we love, with Nature as a whole or visions of our muses, if we are to make our being in the world as stable and stout as a mountain, yet as soft and malleable as the sea. So, whenever the lights are about to be shone on me, as I stand on the stage of life, an actor in its divine play, I remind myself that boosting the shine of a superstar within me is a half of the way to a majestic performance. The second part of the road consists in sacrificing the exhibitions of our lone creativity for the sake of uplifting the creatures we love and hold fondly in our dreams. We do so by keeping them in our visions and memories or stargazing at them at every instance of our lives. For, being right here, right now with the focused attention of ours, which like a laser beam penetrates through things into their deepest meanings, and yet floating with the sailboat of our mind and the sirens of our heart upon the most distant seas and universes is the balance that the Way of Love preaches about.

S.F.2.53. “We always search for everything in our immediate surrounding, that’s erroneous ... Always and in every case we should start heading backwards, at least to the farthest past and therefore to the past that is almost impossible to be deduced or seen”, a young Belgrade writer, Barbi Marković, wrote in her debut novel, a treatise on futility and cheerlessness of the Belgrade clubbing scene⁸¹². With this being said, she neatly recognized the necessity of drawing on an inexhaustible source of inspiration of the well of our memories, thoughts and emotions by being withdrawn inside the essence of our being as we stand before another and try to pull the most exciting and inspirational moves possible. In other words, to be incessantly open, susceptible and expressively oriented towards others in our daily communications is impossible without the other side of the coin, which is all about meditative confinement into the deepest atria of our heart and mind wherefrom impulses for enlightening action are to be dug. Such a balance between being

⁸¹² See Barbi Marković’s *Izlaženje/Going Out*, Rende, Belgrade, Serbia (2008), pp. 33.

dragged towards the center of our being by a form of gravity and being pushed at the same time towards the peripheries of our being and the world as we know it by means of an explosively expressive spiritual energy burning inside of us, a balance quite like that experienced by every shining star in the Universe, stands forth as the only path to attain the ideal of the Way of Love, inherently present in the proposition of the co-creational nature of our cognition. Therefore, it makes a whole lot of sense when someone notices that “there is a light that never goes out”, as the Smiths would have told us, although not as something that ought to necessarily make us sad and desperate, as Morrissey ostensibly wanted to insinuate. Rather, the most beautiful pieces of our heart ought to remain hidden and carefully kept within us if we are to reach the gorgeous destinations of the Way of Love. Lest that glorious goddess inhabiting our insides come up dolefully with the confession that “she’s lost control again”⁸¹³ should she “give away the secrets of her past”⁸¹⁴, the deepest and the most intimate features of our spirit, hiding the keys to our magical presence and creativity, must remain protected and sheltered like the tenderest treasure. And what better way to retain the aura of mysteriousness than by being earnest? “She is always sincere and lies all the time”, is how Jean Renoir introduced Lulu, a *femme fatale* with the appeal of a spellbound forest, in *La Chienne*. “She does not have anything to hide, for all secrets are hidden”, Neno Belan and his band from the Dalmatian town of Split, wherefrom my grandfather from the maternal, “sea sailing” side of my family originated, sang in an ode to his muse, another imaginary Lulu⁸¹⁵. Which makes me recollect a brilliant thought by Rene Magritte: “A thing which is present can be invisible, hidden by what it shows”⁸¹⁶. As it usually happens, the most poetic in elucidating the philosophy of the paradox are Sufi poets, in this case Jami: “I said to my rose-cheeked lovely, ‘O you with bud-like mouth, why keep hiding your face, like flirting girls?’ She laughed and said, ‘Unlike the beauties of your world, in the curtain I’m seen, but without it I’m hidden’”⁸¹⁷. Clearly, what the Persian poet proposes is that the more imaginatively and diversely we express the beauties treasured inside us, the vaster the sea of mystery on which our spirit floats will be. And when we realize that everything around us is a sea of mystery and that whatever we do, the most beautiful treasures of our heart will always remain the source of secrecy, carefully locked behind the veil of our appearances, far from the grasp of often rough and filthy hands of humanity, we will be able to act in pure and ecstatic naturalness and, miraculously, bring forth the sea of the deepest loving thoughts to the daylight of being, washing the beings of the world in the wonderfully fragrant essences of our heart.

S.F.2.54. What the guiding star of the heavenly Way of Love teaches us is the art of balancing closeness and openness in every aspect of our personality and behavior. Just as our eyes are open for one half of the day and closed for another, the same ought to be with our hearts. They need to look inward as much as to be openly shining outwards. Just as our breathing, the ebb and tide of our chests, shifts between the moments of inhalation, when we absorb the life-giving essence of the world (and a simple calculation can show that on average with every inhalation we breathe in a few atoms or so that belonged to every creature that has ever lived on Earth, which is owing to the dissipative nature of the physical structures that home our spirits), and the moments of exhalation that epitomize our facing the world and sanely giving ourselves to it, the same has to

⁸¹³ Listen to Joy Division’s *She’s Lost Control* on *Unknown Pleasures*, Factory (1979).

be with every facet of our being: an incessant synchrony between giving and taking. Thus I get reminded of a Zen master who placed the secret of his happiness in the following words: “As I inhale, I calm myself; as I exhale, I smile”. Hence, it is shifting between the pole of enclosing ourselves into inner, meditative spheres of being and the pole of opening ourselves so as to shine to the world that hides the key to truly fulfilling living. After all, biological creatures need to constantly maintain metabolic cycles and other circular cause-and-effect chains within their bodies and thoughts balanced and closed, and yet to be incessantly open to the exchange of matter and energy with their surroundings. To illustrate the iterative and cyclical nature of the web of relationships that compose life, we could recall that approximately 1 % of the DNA chain encodes for the so-called zinc fingers⁸¹⁸, segments of specific proteins known as transcription factors which anchor to the coding parts of the DNA chain exactly by the action of zinc fingers. Knowing this makes us wonder whether it is proteins that regulate the DNA expression or the DNA that controls that expression of proteins, and the answer is both, for they are both parts of a single circular chain wherein both act as a cause and effect of each other. On the other hand, as implied by the second law of thermodynamics, every closed physical system inescapably travels along a downward path, becoming more and more disordered with each blink of our eye unless it figures out the way to constructively open itself to the influences of its environment and turn this stardust of external impulses poured on it into food for a continuous upgrade of its internal patterns. Hence, to communicate is a necessary precondition of living, but too much openness without a dose of withdrawnness and introspective closeness can easily lead to dissipation of our creativity. For, just as the causes of powerful shaking of the surface of the Earth and of volcanic eruptions that scatter fiery magma all over the Pacific Ring of Fire are found in the darkest oceanic depths, where the sea water flows into the seabed, so do impulses for the most enchanting action conceivable, the one that sends fireworks of beauty all over the astonished faces of the world, lie deep within the mental and emotional spheres of one’s consciousness. Meditatively submerging one’s awareness into these dark depths by means of a penetrative focus is a prerequisite for giving rise to explosions of exuberance and splendor of beautiful being all around one. On the other hand, concocting thoughts and emotions while being deeply withdrawn into our inner world, without attempting to communicate the “baked goods” to the world, can lead to an implosion of impressions, leading to either a burnout or madness. As pointed out by Kahlil Gibran, “Stand together, yet not too near together: for the pillars of the temple stand apart, and the oak tree and the cypress grow not in each other’s shadow”⁸¹⁹. So don’t be afraid to temporarily let go of people you love and adore in order to approach and make new friendships with beings of the world, be it earthlings, flowers, pinecones, songs or stones. The true love is found not where two creatures ceaselessly stare at each other, but where these infinitely fulfilling moments of timeless wonder evoked by stargazing at each other alternate with facing some distant horizons in desolate introspection.

S.F.2.55. An enlightening discovery it was on the day I spent strolling along the sandy Ocean Beach in San Francisco when after decades of being perplexed by the meaning of Gautama Buddha’s posture with one hand outstretched and open and the other hand positioned as if calling for a halt, I finally understood it. It was the balance between openness and closeness that this gesture of the Buddha symbolized, the same one that is intrinsic to the art of the Way of Love. It is as if the hand signaling “stop” lets other people know that there are pieces of oneself that are

⁸¹⁸ See Ignacio Tinoco, Jr., Kenneth Sauer, James C. Wang – “Physical Chemistry: Principles and Applications in Biological Sciences”, Third Edition, Prentice Hall, Englewood Cliffs, NJ (1995), pp. 3.

like the Sun, impossible to gaze at. These inner treasures are where a half of our attention meditatively resides, sustaining the glow of our inner spirit. But the other, open hand is there to show that the second half of our being is all about gift and giving. Our mind living up the ideal of this balance becomes like a full moon that throws a glistening light onto the world with one of its sides, while its other side is always hidden, mysterious and impossible to grasp. This Buddha's posture has thus reflected the balance between thermodynamic openness and operational closeness that each living system is built upon and in the preservation of which the secret of its sustainability lies. For, whenever we open ourselves too much in expressive bursts of ours, while we ignore the need to simultaneously wrap our attention inwardly, in cautious, meditative and introspective fashion, we end up journeying on the road to nowhere, as much as we do in the case of the opposite imbalance, that is, the when closeness becomes the dominant trait of our creative personality. In life, as in a game of chess, which, as we know from Ingmar Bergman's *The Seventh Seal*, holds a great metaphor for life, opening too hastily leaves many weaknesses in our position in the wake of our moves, which a skillful opponent may know how to routinely penalize. Similarly, whenever we try to be overly direct in our artistic or any other expressions and crave to passionately deliver our points across without at the same time patiently dwelling deep inside of our own essence and secretively forging great treasures of spirit and thought, our successfulness in these endeavors would suffer⁸²⁰. On the other hand, if we remain too timid to ever spread the wings of our spirit and start to fly freely across the worldly skies, remaining like a cocoon that fearfully delays its progress to a butterfly, our procession in a descending manner with every passing second will likewise take over. This systemic nature of the balance between openness and closeness can be evidenced as the key to prosperity of any natural system or approach. In sports, for example, coaches usually know that playing a pressing on the opponent reveals innumerable strategic weaknesses, which swift tactical combinations of the opposing side may easily target, while focusing only on defense without thinking of how to open the space for counterattacks rarely ever bears fruit either. Spies too know that following their targets in a man-on-man style may potentially yield greater clues, but also entails higher risks of being exposed, while playing a zone and simply waiting for the targets to appear on selected places is safer, although it yields far scarcer insights. The right strategy, that is, whether one should be more open than close or *vice versa*, including the trend of alternation between the phases of openness and closeness, certainly varies depending on the situation in question, and there is no single recipe that could be valid for each possible case. Just as an experienced team manager picks the right strategy depending on the predispositions of his team and the characteristics of the opponent's approach, looking at both sides in interaction while resting our mind on the way that connects them and paying attention to innumerable fine details that it contains, each one of which may seem negligible but is hiding a secure key to the victory, is what leads us to triumphant and elegant solutions to many challenging and problematic situations in life.

S.F.2.56. To observe the nature of the Way of Love from a wider range, we can raise ourselves a bit and look for a moment at how the world immersed in too much amiability appears to be like.

⁸²⁰ The musical example I like to refer to as the illustration of this point is the comparison of Neil Young's records *Rust Never Sleeps* and *Harvest*. Unlike the former record, rushing and disconnected at moments, the latter one starts unpretentiously and quietly, as if the artist merely dwelled inside of his inner world and tried to depict his feelings with notes without any need to badly convince the listeners into anything, thereby providing a deep emotional space in front of the listener, which slowly develops into its ups and downs, climactic hills and quiescent valleys, as every great record does.

Well, it cannot be said to be a perfect world. I have always been impressed by how thin the line dividing friendship from corruption in wider, social domains is. Let us assume, for example, that we are opening a business and making a choice between hiring the most competent person whom we have, however, never met before, and a long-time friend of ours. If we substitute the most rational choice with listening to the warmhearted call of our friendship, our decision could be named corruptive⁸²¹. But if we do not listen to our heart as much as we do listen to the sound of logic reverberating throughout our mind, our choice may happen to be inhumane. And there is no simple recipe. As Cindy said in her zine, “I tried to outlaw cynicism in my life. It’s so corrosive. But like any good anarchist, I rebel against all laws. And so I ended up just having to find a proper place for it...”⁸²² So, even the most awful things in life should not be gotten rid of. As we see, even the hipster-like cynicism can find room in our thoughts once in a while, irrespective of how disappointing it may be. But, one thing is for sure. We cannot inflate the balloon of our friendliness indefinitely. After all, what is the limit in terms of the number of friendly relationships that we could nurture at the same time? We cannot have an unlimited number of friends, as some of them will eventually turn out to be mad at us because of not paying enough attention to them, right? The message is clear: the choice has to be made. As we turn our face to some creatures in this world, we have to turn our back to some others. This is why we should not sadly look at the negligence of people whom we happened to like. Life is an incessant music of hearts approaching and distancing, converging and diverging, holding hands and setting them apart, caressing and flying as lone birds. But this is not say that each relationship itself is not composed of endless moments of getting close and getting apart, looking at the world from the same perspective and then plunging into desolate reflections and swims across the seas of one’s lonesome spirit. This is also not to say that we ought to attach our hearts onto a finite number of creatures. But again, there are no rules. What some people find attractive, others find repulsive, and this incessant source of incompatibilities and dissatisfactions, defying the monotony of perfect agreements, is what drives the wheels of social progress along the lines of spirit and material wealth alike. In the recent issue of SF Guardian I stumbled upon one wondering “if there is a gesture more romantic than watching your lover sleep”, whereas for a Danya, “staring at one when one sleeps is helplessly creepy”. So, whereas some people may find ineradicable sources of beautifying impressions in single creatures, others may be like water, always flowing around new creatures, bringing light and heavenly waterfalls over always new beings of the world. Such people facilely separate from others without ever badmouthing or even judging other people in clouds of bad thoughts. And yet, whether one is prone to be an inanimate stone or a flowing water, whatever one does in the name of Love, the balance between dwelling deep inside oneself, living in synchrony with the divine missionary music that the church of one’s heart reverberates with on one side and merging in compassion and empathy with starry eyes and scruffy cosmoses that heads of another flicker with on the other side, has to be satisfied.

S.F.2.57. Any relationship between ourselves and creatures, landscapes and objects in this world or the entire Nature can be used to practice the art of the Way of Love. Needless to say, we can

⁸²¹ Keep in mind that this informal hiring method is employed not only in underdeveloped societies, but in various industries in the western world, including primarily arts and entertainment, as can be seen from the following words of Elizabeth Currid: “People hire people they know and engage with in a social environment... Hiring is not primarily based on strict competition between competing designers, musicians, writers, but more on the ability for creative people to utilize their social lives to their advantage”. Taken from Elizabeth Currid’s *The Warhol Economy: How Fashion, Art, and Music Drive New York City*, Princeton University Press, Princeton, NJ (2008).

⁸²² See Cindy Crabb’s *Doris 26* fanzine, pob 29, Athens, OH 45701 (2008).

always shoot for setting ourselves into a romantic relationship with another living being, and learn thereupon. And whatever awaits us behind the corner of our experiences, be it cheerful or heartbreaking, we should never give up on the vital importance of learning this art. With every broken heart a tendency arises to either become overly needy in relationships or to push people away in dejection, depending on the personality type which one is inclined to: passive and introvert or aggressive and extrovert, respectively. But the challenge is to retain the balance between being openheartedly attracted to others and meditatively dwelling deep within the essence of our spirit each time we wander away from the narrow path of Love. Although my romantic relationships have regularly ended with the feelings of disappointment in myself, I have never stopped believing that “girls’ faces form the forward path”⁸²³, a slogan that Secret Service agent 007 would have certainly embraced as essential. I have never stopped believing in the virtues of love, of plunging deep into eyes of another creature while spinning silent vows of mine being ready to sacrifice life for her. By falling numerous times from the thin string of the Way of Love, stretched between my heart and the heart of the loved ones, I have learned on my mistakes and, as of today, I believe that I have become an ever more skillful acrobat of love. Whether I fell onto the side of being overly clingy, not leaving enough freedom and space to breathe for the loved ones, thus suffocating their creativity, or onto the side of being overly withdrawn inside the sphere of my own dreams, appearing disinterested and cold, sending the message of “Let me wonder”⁸²⁴ fly as white doves with every glance of mine, I made myself resiliently stand up after each fall, becoming an ever more skillful tightrope walker as the time has passed by. “But am I too old for this”, Lea asked me one day as we sat on the wall of the Beach Chalet, facing the sandy beach in front of us and the ocean in the distance, surrounded by seagulls flying in circles above our heads. “As long as you have the sun of love for all and everyone shining in your heart, it is never too late”, I said as I jumped down from the wall onto the soft sand below. “Though dry and dingy, it teems with life, as the diversity of living species in it cannot even match that found in tropical rainforests”, it ran through my head engaged in toppling and turning things on their heads all the time. I turned around from this stand in the sand and looked up toward Lea, seeing her smiling face intermingle with the light of the Sun behind her, and added that “love makes you ageless”, as I spread my hands and legs and let myself drop down on my back on the beach sand. As I lay there and looked up, to the endlessly deep blueness of the sky, I imagined all the universes and stars lying out there, with unimaginable forms of life, more or less advanced and differently structured than ours. Life and being are truly infinite, I clearly felt. For as long as we keep the starry mind of Wonder and the sunny glow of Love within us, we remain a Holy child, with every thought, feel and act of ours emerging from the ocean of divine grace within ourselves, sending seagulls of eternal beauty and love straight from our mind and heart to the world, blessing it with every flap of their angelic wings.

S.F.2.58. Be that as it may, in our quest for the Way of Love we will inevitably be faced with many perplexing moments when doubts and insecurities will wash over us and we will sadly wonder whether we will ever reach our destination which, as a sunset of hope, would still float in front of the seashore of our mind. However, this is not something to be feared of. As we have already elaborated, permanently residing in the state of a perfect balance would make us fruitlessly observe the world without making any steps forward. We may sheepishly giggle or solemnly stare from there on, but the channels through which the sunshine of love and grace dwelling deep inside of

⁸²³ Listen to Bob Dylan’s My Back Pages on Another Side of Bob Dylan, Columbia (1964).

⁸²⁴ Listen to the Beach Boys’ Please Let me Wonder on Today!, Capitol (1965).

us may be delivered to the world would remain locked. The only way to advance on and to the Way of Love is to jump out of the balance, and to reach it and lose it in an endless cycle of balancing moments of being balanced and being unbalanced. For, just as a canoe paddler needs to temporarily wander off his straight path in order to advance forward, the same is with any other creative endeavors of ours; namely, only while stepping out of balance can we produce a creative spark that enlightens both ourselves and the world. No wonder then that the beginning of Nietzsche's Zarathustra's journey down the lone mountain of his soul and in the direction of enlightening the world coincided with his witnessing an acrobat falling dead from a thin wire, as if the philosopher wanted to pay our attention to the fact that producing a creative impulse of any kind requires stepping out of balance. Remaining forever and ever obsessed with retaining the balance and never slipping off into an imbalance and imperfection might be thus equalized with infertile and creatively dead existence. Therefore, after all being said about the Way of Love, the only correct path is to forget about the balance. Only thus may the balance be reached. As you stand on the cliff of love with the sea and stars lighting up the way in front of you, do not be afraid to release yourself and jump from it. There will always be motherly, angelic wings of love to hold you and guide you on the way. As we fall out of the balance, with the tears in our eyes, catch the glimpse of a rainbow sparkling at the edge of your tears. It is smiling and pointing at the eternal joy arising on the paths that still stretch before us. As I walked with Sahar one summer eve, hand in hand, along the Beach Chalet, she pointed at the setting Sun and said: "Do you see that moment, that tiny sparkle of light, the last piece of the Sun before it sets? That is what my name means". Her name, now I know, is the diametrical opposite of the etymology of the Armenian name, Ashkhen, which represents the very first ray of the rising sun⁸²⁵. Be that as it may, the cheerful winkle of the night stars has always resonated to me with the same smiling joy as this last moment of the dying Sun. After all, although I was born on a golden summer day, right when the clock struck noon, exactly 1500 years since the Battle of Ravenna that marked the Fall of the twelve-hundred years old Roman Empire⁸²⁶, I am still a Virgo and not a Libra. Although my stellar home is close to the constellation that epitomizes the art of balancing, I am aware that me and you together need to spin this starry wheel a bit forward and plunge into the depth of the swarm of stars that symbolizes a graceful withdrawnness and yet an eternally shining starry nature. After all, could there be a more beautiful symbol of the Way of Love, the beginning and the destination of our searching, than a Virgo imprinted in stars in all of her inner purity? As if drinking cosmic water with stars as bubbles washing our gorge, we become purified from the inside and filled with the cosmic energy by merely contemplating about this great symbolism. So, instead of being obsessed with constantly striving towards the state of balance of the Way of Love and then harshly trying to stick to it once it becomes reached, lighten up. Wipe out any importance of this balance from your mind and simply live the way of a starry Virgo. Be modestly and gracefully plunged into the beautiful heart and mind of yours, but never forget that you are a star, meant to shine to the world with all its immaculate greatness. Not by yelling, pushing and rampaging will you make the way forward, but by transforming yourself into a silent river that breaks the stone with its patience and placid perseverance or a polished mirror that sets the ships on fire, as in accord with the

⁸²⁵ Watch the episode #27 of the children's TV show, *Naopačke*, titled *Elegantnost pokreta* and having the Serbian prima ballerina, Ašhen Ataljanc as the guest. Retrieved from Dečija TV, <https://www.youtube.com/watch?v=cLCM2k3PELM&t=309s> (2019).

⁸²⁶ The battle took place on September 2, 476, and two days later the last Western Roman Emperor, Romulus Augustus abdicated, marking "the end of Ancient Rome, and the beginning of Middle Ages in Western Europe". See the Wikipedia article on Romulus Augustulus retrieved from https://en.wikipedia.org/wiki/Romulus_Augustus (2019).

Archimedes' artful feat, by focusing the petite sunshine of your mind into a great, coherent synergy. With our heart anchored to the stars, there is no worry that we will ever become attached to people of the world and material wealth, and thereby turn ourselves into their passive satellites. We would walk through the world forever untouched by the ethical and aesthetic grime that tends to push our joyful glances into muddy depression, like a lotus flower, always looking up while radiating with a bright hope and optimism. Uninfected by the stingy social traits that have taken over humanity, we would journey across the fields of the world as an enlightened extraterrestrial creature, glancing our surrounds with a genuine curiosity that lights up the lampions of wonder in the nearest creatures' eyes, sending good vibrations on the wings of our prayerful thoughts, freely, like a starry pan, jumping across the rooftops, climbing the trees, rolling in the leaves, sending kisses in the wind, and communicating with the distant universes. We will always seem mildly distant, with head immersed into the wonders of the Universe, though still spontaneously sending rays of cosmic love everywhere around it. We would live guided by seeing life as a gift and giving as the greatest act in it. After all, through giving all we have, through becoming "poor in spirit", we become truly blessed and ready to enter the kingdom of God, as the Christ pointed out (Matthew 5:3). This is when we would also realize that by dwelling deep inside of our inner self and living in concert with the celestial voice of our heart, we are beautifully guided to encounter others, to swim in each other's starry-eyed pools where sparkles of joy and wonder shimmer on the melancholic surface of genuine compassionateness. This would eventually drive us to an enlightening realization that if there is anything greater than sole watching of the stars of the night sky, it must be gazing at the stars reflected in a pair of human eyes. As sages have said⁸²⁷, watching eyes watch stars in wonder is millions of times more enchanting than having a direct view of these very same stars. Even if we were able to somehow ascend on invisible silky strings that fairies only weave and plunge into a sea of stars, glistening and pearly like in paradise, and turn into a space siren, leaving but a swoosh of stardust behind our leisured swim, the experience of it all from the angle of flaring up the sun of love in our heart, which is all that angels and gods of all worlds combined care for, would pale in comparison with that of a holy mother or father in us watching a beloved son of the earth swim in the sea. After all, if life on this planet has taught humans something for eons, it was that a world, both outer and inner, is better lit by one star held in relative proximity than by a hundred of billions of them scattered across comparative distances. For, the nature of life is such that the path to come face to face with our own self in the brightest of the lights always leads through adjacent hearts. And *vice versa*: the path to genuinely meet others, to truly become one with the way the world is seen through their eyes, leads through the essence of our own heart, through devoted and patient listening to its quiescent beat. Hence, just as all the paths used to lead to Rome in ancient days, all the paths we could set our heart on in this life inevitably take us to the Way of Love. Whatever we do, whatever the unbalanced side we fall onto, we are always guided back to it, back to become a Virgo shining on the sky of the world's mind. When our spirit becomes one such star, the Way of Love would be in us, and everywhere we'd go, the little stars would be shed on us like signs to guide a loving and faithful childish mind to meet that tiny, invisible and untouchable moment just before the Sun sets, the one where the smile of God resides.

On writing, lecturing, and creativity

⁸²⁷ Watch *The Straight Story* directed by David Lynch (1999).

S.F.3.1. In a nutshell, the co-creational thesis teaches us that everything around us is a blend of (a) the mirror image of who we are at any given moment and (b) the mysterious voice of Nature. This blend from which all experiences of ours emanate can be seen as a dialogue of the two sides. On one side is the language of our heart, reverberating deep inside of us, but without ever being able to be seen in its full light. It could be only partially grasped and controlled using the most subtle and insightful forces of our mind. On the other side is the voice of God, placidly and majestically guiding us along the way of our life, which is to become one with the entire life around us. Ultimately, the whole life beats as one in this beautiful dialogue between its semiautonomous development and the guiding music of our Creator. What this metaphor of the dialogue between our self and Nature, from which all our experiences arise, implies at the level of creativity in writing is the following: namely, all our works ought to be written from the essence of our heart, but without ever forgetting to connect what appears meaningful to us with a broader and the most general picture, the largest gestalt we could conceive of. By weaving these links between the small and the great, we fulfill the norms of systemic thinking. Simply saying, every diary we write should thus not skip a chance to become a guiding voice for everyone else in the general relevancy of the points of view it invites the readers to sympathize with. But also, every broad philosophical work should appeal to the little ones, carrying stories and meanings that could be connected with each one of our lives. Isn't that what this book attempts to succeed in – to be an amusing diary and a philosophy for all times? If it fulfills this purpose, it will certainly accomplish something beautiful, which is connecting small and seemingly negligible and meaningless details of the world of our experience with the greatest insights relevant for all creatures and ages.

S.F.3.2. My music, that piece of my creativity whose sublimity I could not reach in written word even after millions of years of sharpening my writing skills, was recorded in the Red Room of my family house in Mala Moštanica, next to a window with a broken wing, overlooking a sour cherry tree planted by my Father when I was one or two. He planted it there, in a secluded corner, with a wish that one day, when I grow up, I could pluck its sweet and sour fruits every morning when I wake up. Perhaps all of this was unintentionally symbolic, meaning to implicitly teach me that the greatest things in life are always found resting in the corners, away from the spotlight and centers of everyone's attention, as well as that sweetness and sourness, like honey and gall in Nyegosh's metaphor⁸²⁸, cannot but not be consumed together; needless to add, my music, spontaneously, incarnated these exact messages, having strived to concoct joy and sadness of cosmic proportions in it and never ever intending to leave these obscure, hidden corners of the times in which it was brought to life. What is more, this slender tree always reminded me of myself: weak, hidden on the western side of the backyard, receiving only a handful of sunshine throughout the day, thus never growing to be big and ponderous, it still streamed with a cool and pleasant love of life whenever I wrapped my hands around it, as if whispering to me, "I'm alright, I'm alright". It was with one such frailness of the body shielding a colossal willpower driven by the determination to save the world with every note I played that I immersed myself into pure oneness of being and from there delivered the improvised sounds that were really beyond me and that, as I see it, were being channeled onto this plane of physical reality from some transcendental realm. A combination of homemade simplicity, with all the natural imperfections and errors which were allowed to be embodied in it, and the cosmic sound that transcends all the barriers of language and sensibility, ended up being intrinsic to this music of mine. Coinciding with the release of Kid A and,

⁸²⁸ See Petar Petrovich Nyegosh's *The Mountain Wreath*, rendered into English by James. W. Wiles, George Allen & Unwin, London, UK (1846).

particularly, its dying moments as the warm celebration of DIY rawness and the sharp disparagement of polished production, this musical creation, truly forged in a suburban bedroom, on a 4-channel Samplitude software, using the same number of tracks as that with which the Beach Boys' Pet Sounds, the inspirational apex in my musical universe, was recorded, preceded the trend of bedroom, lo-fi music before this trend took over the indie world by surprise. Humble as it is, made using only a single instrument, an electric guitar, with no effects added to it, this music possesses a simple intimacy at its core, and yet has a universal charm with its sounds resembling stars sending their joyous, twinkly voices from millions of light years away to the one standing on the roof of a house and, while others are blissfully sleeping, looking up and waiting for the sign. Both the starry-eyed wonder and the dance of the entire Universe are thus awakened in this mirroring of eternal beauty of the starry sky and the infinitely deep beauty of human eyes. My music and my writings have thus served the role of pointing at the starry splendor asleep in every tiny detail of the world. They arise from dancing in my head with the muses, as slender as Giacometti's sculptures or Jovan Soldatović's fairies, a.k.a. *sudaje*, and as graceful in their movements as Degas' ballerinas in the crimson-colored limelight, able to move the Universe with the slightest move of their subtly dancing bodies, while holding the glow of full moons in their eyes, all along with the starry twinkles of cosmic joy and infinite curiosity, in the luminescent sceneries drawn out of the soul of the goddesses of Beauty, and, conversely, their aim is to replicate the feelings evoked by this imagery in the readers' and listeners' minds. Nikola Tesla brought light from the stars to the night face of the planet, but I live my life to instill the starry twinkles of wonder and love into human eyes. For, science and arts reinforce the powerfulness of expressions of each other as they evolve in parallel, which is why I too have decisively spun the wheels of both, being a scientist in my professional endeavors and artists in my free time, although letting them flow into each other freely, without the knowledge of my scientific supervisors. This is because science and arts inevitably inspire each other and separating them from one another and then from other instances of our spare time can be truly devastating for the exhibition of our creativity in all of these domains. "Beauty is truth, truth beauty – that is all ye know on earth, and all ye need to know" is a couplet from John Keats' Ode on a Grecian Urn that has served as a guiding star in my enchanting endeavors directed at joining the hands of science and arts, spinning them in circles and making them pirouette all over the pages of this book and other writings of mine, scientific and philosophical alike. For, if truth and beauty are indeed as inseparable as Keats insinuated and if they truly feed one another in all domains of life, then scientific writings should be no exception to their mergers and ought to be both truth- and beauty-seeking. In other words, they should be inspirational and aesthetic as much as they convey pragmatic knowledge. Eschewing with horror the connotation of the phrase "technical language", so often applied to describe scientific writings, I have held that science is an art *par excellence*, a quintessential exploration of natural wonders and a gateway to the growth of our spirits and that its language must reflect this intrinsic aesthetics and be far more exuberant, inspirational and lyrical than it is allowed today to be. Such a way of writing that I have dreamt of would not compromise the exactness of the scientific points and the analytical rigor; rather, it would be such that "polemical discourse derives its connotative value from the passages of lyric beauty which surround it"⁸²⁹. In other words, lyricality would render the streams of dense intellectualism fluid and penetrable, while the weight of rational insights would give gravity and strength to the flights of poetic fancy. And, as I have pointed out time and time again, the day my vision becomes flooded with scientific writings that are serious and soulful, educated and emotional, rational and rhythmic, fundamental

⁸²⁹ See Peter Ackroyd's *Ezra Pound and His World*, Charles Scribner's Sons, New York, NY (1980), pp. 82.

and fun, philosophical and poetic, pensive and playful, all at the same time, will be the day that I would be able to die peacefully on. As for now, the ideal of ennobling the heartlessly dry technical writings that pervade science today with the waves of poetry and inspiration is the one I would give my life any day now if I only knew that my dream of science becoming a Glass Bead Game, a world wherein analyticity and art would be merged into one, would come true as a result of my sacrifice. Lest we build times of incredible technical development and then go ahead to use them for the sake of our own destruction because the hearts commanding with these fascinating technologies would be vacant and senselessly corrupt⁸³⁰, I have always thought that we must do it all to cure this imbalance where practicality outweighs poetry by a moonlight mile. “I became a painter because I wanted to raise painting to the level of poignancy, of music and poetry”⁸³¹, Mark Rothko said once and, indeed, if I were to substitute the words “painter” and “painting” in this statement with the words “scientist” and “science”, respectively, it would be a neat description of my lifelong goal as a creative persona, the goal that, one must be warned, is dangerously radical in the conservatively entrepreneurial scientific milieu of the modern day. Therefore, in a culture where the epitome of oddity is said to be that of Joel Henry Hildebrand’s saying in a footnote in one of his papers that anyone who comes across an alternate proof should contact him immediately⁸³², my habit of dismantling the factory and the fabric of normality of scientific expression with the carpet bombs of poetry and philosophy has been a hundred times more likely to provoke a fiercest and fieriest opposition than sympathy. As for myself, I can attest that for many, many years now, with my revolutionary strivings to redefine the scientific paper as a form of expression by ennobling its pure technicality with the waters of lyricism, I have felt like someone playing rock ‘n’ roll on the court of King Richard and then becoming imprisoned in a damp dungeon for the displays of insanity rather than worshipped for showing people a glimpse into the future. And yet, regardless of the cost for their careers and lives, for all those who are cordially devoted to this sacred mission may be said that they do their share in literally saving the world from an impending disaster. Which is why I will continue to sacrifice my pastime, my friendships, the fresh air and sunshine to stay in this labyrinthine prison of a cosmic mind and pluck these words, one by one, with great care, hoping that one day they will save this sad and beautiful world by inspiring no one but a single dewy-eyed spirit, an inspiration which is in this strange reality wherein the littlest become the greatest and the greatest drown in the bonanza of nameless nothingness worth a million.

S.F.3.3. Yet, the artistic works of mine rarely produce an instantaneous, mind-blowing effect of impressiveness in others. After all, artistic pieces that immediately, upon our first encounter with them, strike us with pleasurable and concordant feelings rarely turn out to carry a truly deep and inexhaustible beauty that we can over and over again return to in searching for the guiding lights. Likewise, the most beautiful books in life are not the ones in which everything read becomes

⁸³⁰ Is it a coincidence that the ongoing transformation of SF - in the lobe and the right eye of which (being my Nob Hill apartment and my Mission Bay lab work desk, respectively) these words are being written were we to consider the city as the right profile of a human face - from a city of brotherly love to the one of shallow, prosaic, ego-driven and greed-infiltrated techiness neatly reflects this evolution of science from an altruistic and romantic endeavor to a dull, passionless, bloodthirstily competitive, self-centered and money-driven enterprise?

⁸³¹ Watch Mark Rothko’s Seagram Murals: Great Art Explained, retrieved from <https://www.youtube.com/watch?v=fsz6bkkIHZQ&t=74s> (2020).

⁸³² Mentioned at a lecture by Biman Bagchi titled Anomalous Dielectric Properties of Nanoconfined Water: From Low Dielectric Constant to Electrically Dead Surface Layer within the Division of Physical Chemistry Symposium at the 2021 American Chemical Society meeting (April 6, 2021).

instantly clear and comprehensible. Books like those simply lead to confirmation and an ever firmer establishment of paradigms, presuppositions and prejudices of ours. Whenever we find ourselves liking them and praising their contents to ourselves or the public, we should remember that we, in those moments, are analogous to those petty scientific minds that get irritated by the works that deviate from the common method or style and flatter only the works that confirm the paradigm. Need I say, they do so just because their egos delight in recognizing themselves in the foundations of those works, not realizing the joy that comes from the freeness from these limits of ego nor the benefit for the humankind that comes from embracing the ideas that clash with the paradigm and providing a warm nest for them to grow. But such books lead not to substantially new insights and enlightenment of our being from the toes on our feet up. Rather, the best books are the ones that resemble Egyptian hieroglyphs in their mixture of mystical obscurity and a feel of treasured wisdom. When we face them for the first times, we feel as if hypnotized by an enchanting force lying behind the unintelligible signs and letters. There is a clear sense of magic in the air. And such books we do not leave aside, but raise them and carry with us everywhere we go. And breath by breath, step by step, the meanings of the signs drawn in them dawn upon us. By holding them on our chests and leading our lives abreast with them, we learn, change and become a more profound person. This is how we evolve. Not by confirming our assumptions and hypotheses, but by facing the mysteries of life with a golden, patient and humble determination to find the treasures hidden in the heart of their forests of shadowy murmur and enigmatic pathways.

S.F.3.4. In spite of the fact that profundity and depth are synonymous terms, signifying the necessity of dives into dark depths of objects and events befriended by our intellect for the sake of its discovering treasures therein, we live in an era where people tend to value other people, artistic pieces and natural details, spaces and landscapes almost strictly based on superficial, first-sight impressions. Should the objects of their exploration turn out to lack an immediate enlightening feel, they would readily leave them aside and go on to explore new details of this endless Universe. The succinct expression style set forth by the online social networks, whereat language appears to backslide toward its troglodytic origins with every new day, and the richness of information that overwhelms them from all sides do an additional disfavor to this trend; for, if something seems obscure, as all deep wells and seas do, there will always be something else in their vicinity to yield a more instantaneous gratification to their shallow senses. But then I step up, spin them around and ask if they are sure that this is the right way, in view of only a mysterious sense of great importance that one most often recognizes initially in truly wonderful souls and works of art, which would only later, after numerous instances of patiently encountering them, be revealed as precious sources of enjoyment and creativity. For, “the technique of art is to make objects ‘unfamiliar’, to make forms difficult, to increase the difficulty and length of perception because the process of perception is an aesthetic end in itself and must be prolonged”⁸³³, as Victor Shklovsky observed, echoing in the distance Arthur Rimbaud’s definition of poetry as a way of “reaching the unknown by the derangement of all the senses”⁸³⁴. This also explains why I find most interest in jokes that do not immediately reveal their message and make me laugh, but in those that leave me gape in silence and ponder for a long time until I grasp their meaning. Yet, most people would feel

⁸³³ This quote is taken from Victor Shklovsky’s *Art as Technique*, referred to in Art Spiegelman’s *Portrait of the Artist as a Young %@!*, In: *The Best American Comics 2009*, edited by Charles Burns, Houghton Mifflin Harcourt, New York, NY, pp.89 (2009).

⁸³⁴ See Arthur Rimbaud’s letter to Georges Izambard (May 13, 1871), retrieved from <https://www.dispatchespoetrywars.com/documents/arthur-rimbaud-to-georges-izambard-13-may-1871/>.

embarrassed had they not understood the joke right away, being yet another sign that ours are times in which people still most value things that bring about immediate satisfaction. Despite it, slow and patient edification of our knowledge is what stands behind the acquirement of all truly valuable and profound skills in life. All precious things in life grow, branch, ripen and fructify slowly, like a tree, requiring many years and decades of devoted care until they give us luscious fruits to savor and a beautiful shade to rest and dream away our summer afternoons in.

S.F.3.5. Believing in love at first sight is wonderful as it fills our heart with enchanting wonder and starry expectations that a divine rainbow will be seen in someone's eyes right behind the corner of our immediate experiences, that a book or thought or a secret envelope that will appear all golden and give us the key to unlocking the answers of ultimate mysteries in life is out there, waiting for us, and that a spaceship, taking us to distant planets to meet forms of life and intelligence never dreamed of, may land in our backyard any day now. However, unless we balance this beautifully believing attitude with the willingness to firmly anchor our feet and devote our attention to every tiny sound of a butterfly flapping its wings, of an ant walking over a spear of grass, or of pine needles grazing each other on a summer night, we may never achieve a truly impressive personality. To be ready to stand and stare at a single detail of the Universe for hours and never get bored, knowing that each one of those carries an inexplicable beauty and signs of immense importance for our lives, but still to childishly believe in the great stars descending down from the great heights and dancing over the fields of the Earth when no one else is watching, and the Moon being a light living thingy smiling at us from above, is what we should learn these days.

S.F.3.6. If I looked back at the most inspiring artistic pieces of my life, I could hardly find a single one that crushed me with gorgeousness at first sight. A mysterious sense that there is a great beauty concealed within them is what has resulted from my initial encounters with them. But then, as a reward of my willingness to plunge deep into them and spend hours, days and sometimes even years discovering the secret messages that they hide, now I am friends with many of them, and we live together, so to say. I praise them wherever I go, thus spreading their influence across the world, and yet they offer me precious signs and directives in my missionary journeys in this life, in which we often dazzlingly stand at crossroads, not knowing which way to go. For, then, by making instinctual choices, we follow what may have been rooted in us by ethical and aesthetical messages of these precious pieces of art. And every time I listen to these faves of mine, there is something new, something not recognized previously that attracts my attention. Consequently, I have tried making music that never gets boring to listen to, in which a listener can forever and ever find new amusing things, no matter how utopian this may seem. And to succeed in that, I was aware I had to walk right along the boundary between ordered intelligibility and chaotic intuitiveness, somewhat similar to the recipe jazz musicians have used to instill timeless interestingness in their musical pieces. My music, I believe, reflects one such balance, and in it I have always heard stars twinkling with a mixture of cosmic joy and eternal sadness. Every tone in these solely guitar-based songs is a star singing to one standing like a Peter Pan on a housetop, with his loved ones cuddly sleeping below, and him raising his glances up, looking for the stars. This giant vision has guided me in my musical creativity. But it has also spoken of the general picture of how human wisdom is built. As one stands on the roof of the house inside of which the hearts of his loved ones peacefully beat and yet looks up, guided by an adventurous wonder to know, meet and touch the ultimate mysteries of the world, one combines Love and Wonder, the two basic ingredients of human creative being in this world. Love has ever since stood as the foundation of our being and

knowing, and Wonder has ever since pulled us up, up, up, towards ascending in spirit and transforming our earthly, organic and animal nature into something sublime and divine. So I say I will never, even after millions of years of writing and doing science, get close to the beauty and originality of my musical works. After all, written words present only a tiny, tiny window, a subset in the set of music that permeates everything we know and even further than that. Cosmos, human hearts, the Earth revolving and atoms and molecules dancing in their streaming, orbiting, vibrating and spinning are all music in themselves, all together in harmony yielding one immense AUM, the word of Nature, the beginning and the end of it all.

S.F.3.7. Recently someone asked me why I write so amply and frenetically. I briefly looked up, not discontinuing the typing action, and answered, “I write to write no more”. Ludwig Wittgenstein used strict chains of analytical thinking to banish the same underlying logic in his *Tractatus* and left us in the end with the pure wonder of a limitless starry sky, built as a monument on the basis of knowing that “what can be shown cannot be said and whereof one cannot speak, thereof one must pass over in silence”. The same can be said to present my grandest ideal in writing. It is to find the way to show that there is more to life and the world than can fit mere words, and that “everything that a man has ever known, everything that is not mere rumbling and roaring, can be said in three words”⁸³⁵. It is to place forth words that annul the very words. It is to highlight the timeless words inscribed by St. Paul the Apostle: “For I through the law am dead to the law, that I might live unto God” (Galatians 2:19). It is to do utmost to live according to the way of the Christ, the ultimate epitome of antiauthoritarianism, the one standing against all trends, though only to somehow become an authority and a trendsetter like no other the world has ever seen. It is to find a solution to the central artistic issue that tantalized Mallarmé, Cézanne, Stravinsky and Picasso: how to create works that eventually free themselves from “the domination of the subject matter”⁸³⁶ and awaken a sense of liberation from the earthly binds and release of our spirit into a space of infinite possibilities wherefrom an original and infinitely beautiful movement may arise. It is an attempt to find a perfect medicine to the ills of life and knowledge, that is, not the ones that cure symptoms only and leave the patients addicted to an unending cycle of treatments, but those that heal all and leave the doctor’s own profession without any purpose of existing, which is, as I claim, the only truly ethical way of ameliorating maladies of life. It is the way to repeat Béla Hamvas’ words which he used in the epilogue to his lifework: “The creation of this work is not merely a creation; it is rather an endless creation and surrender, all until nothing remains, and then the surrender of this nothing, and then surrender of the surrender”⁸³⁷. It is to walk in the footsteps of the words laid posthumously by Pier Paolo Pasolini in his dreams of a creative spirit that constantly renews itself and never allows itself to drown in the mud of self-conceited egotism, the natural offspring of extraordinary accomplishments: “Against all this you need only, I believe, do nothing other than continue simply to be yourselves; which means to be constantly unrecognizable. To forget at once the great successes and to continue, unafraid, obstinate, eternally contrary; to demand, to will, to identify yourselves with all that is different – to scandalize and to blaspheme”⁸³⁸. It is to encourage our ruminative hearts to scatter away the most treasured thoughts that we have held onto in our microcosmic voyages aimed at explaining the origins and destinations of our existence, just as the writer and the collector of sundry objects from the movie

Everything is Illuminated did when he, in the very last scene of the movie, sprinkled a lump of dust, the most precious item that he has lain his hands on, all over an earthly epitaph, signifying the magical moment when we put an end to words and let life commence in their place. It is to live up to the metaphor of the fate of voyager Robert Ritchie, the seeker of Timbuktu, Africa, the very same place that the evil butler Edgar planned to ship the Aristocats to in the Walt Disney's classic, who had been given Keats' poem *Endymion* by the poet himself and instructed to "read it on his journey, and then throw it into the heart of the Sahara Desert as a gesture of high romance"⁸³⁹, but who had done so and never returned from it, having sublimated his spirit instead onto a new plane of reality with this act of burning the ladder of verbosity after climbing on it to sufficient heights. It is the way to remind myself and others of the words of a forgotten Buddhist teacher who disliked reading and writing, claiming that "if you really want to read, read only those books that keep you from reading others"⁸⁴⁰. It is the way to draw a line in the sand and see it as vital for the spirit of the world as any symbols in this book, while bringing to mind Robert Irwin who gave up on producing arts for museums and galleries and sold his studio in Venice, CA, so as to be able to go out, to escape from the painting and enter its frame, to freely play with the wonders of the world by spreading one's arms in jazzy dialogue with Nature, announcing each object in our surrounding as more immaculate grounds for setting a piece of installation art than the interiors of millions of museums of the world. "Those lines, that was when I finally grew up and became an artist"⁸⁴¹, Robert Irwin said in reference to one of his paintings with a single straight line on it, bringing to mind the ancient flutist who was brought as the most talented musician to a King's palace to play a song for him, the song which turned out to be one tone, after which the flutist turned around and left, demonstrating how favorable contexts can turn even a single note into a message that delivers sheer enlightenment. It may also be the way that leads to the final words of Umberto Eco's Foucault's Pendulum, "It makes no difference whether I write or not. They will look for other meanings, even in my silence. That's how They are. Blind to revelation. Malkhut is Malkhut, and that's that. But try telling Them. They of little faith. So I might as well stay here, wait, and look at the hill. It's so beautiful", or to those with which Keith Haring⁸⁴² closed his lifelong diary, less than six months before he was about to sail away from this planet, while standing in front the leaning tower of Pisa, a great reminder of beauty that always lies in the entwinement of imperfection and perfection: "The tower is remarkable. We saw it in daylight and then in the light

⁸³⁹ The quote comes from Richard Holmes' book *The Age of Wonder*, Harper Press, New York, NY (2008). I glimpsed it on the wall of Chicago Museum of Contemporary Arts, as I analyzed one artifact after another and realized that my making figure eights around a graceful girly silhouette that glided through the museum space made for a far greater artistic experience than any piece of art on official exhibit. A light bulb momentarily flashed in my head thence, impelling me to wonder if that was maybe the genuine purpose of contemporary arts - to use art as a self-destructive tool, a weapon that wipes out itself, allowing the viewers to go beyond arts and enter the domain of life, the most magical artistic domain of reality. For, as Vladimir Nabokov, a famous novelist and lepidopterist, pointed out, the colorful patches on butterflies' wings beat even the most delicate museum items in their intricate beauty. To offer a passage that leads away from oneself and into the realms of reality far greater than oneself has, in fact, always stood in my head as an act of uttermost graciousness that is posed as the elemental grounds of all truly sublime ways of being in this world. Maybe this minor footnote, I wonder, could present one such escape route from a realm of words and into the realm of life, the only one wherein the salvation of our spirits is bound to take place.

of the full moon. It is really major and also hysterical. Every time you look at it, it makes you smile”⁸⁴³. It is a way to find the treasures of the wondrous childish simplicity of the genuine beginnings after roaming through the dark forests of human knowledge and passions. It is to recollect Jacques Tati’s producing anti-humorous humor and thereby showing us how endless amusement can be seen as resting in each and every detail of our worlds, and do the same in the belletristic domain: that is, temporarily kill words that currently, in this hypocritical world of ours, present more of a tool to conceal our true feelings rather than reveal them, and then, once this veil of insincerity and pretense is removed, the genuine purpose of words will come to be naturally revitalized and their usage will become more unaffected and inspiring than it is today. In the spirit of postmodernist philosophical outlooks defined in the universe of thought of Jean-Francois Lyotard as “incredulity toward metanarratives”⁸⁴⁴ and, as such, frequently obsessed with these anti-approaches whereby things antagonized are not annihilated for good, but essentially refreshed and rejuvenated, John Cage, who composed songs composed of silence alone, said, “I have nothing to say and am saying it and that is poetry”⁸⁴⁵, summing up the essence of the approach I have clandestinely pursued in writing, too, in terms of using silence, pointed at via anti-worded wordings, to highlight the beauty of the music of sounds, colors and endless impressions that pervade reality. Still, writing is not an endeavor in which I intrinsically enjoy. Rather, it is a sort of responsibility and duty, which comes solely from the inside, though still being the one in which a well-crafted thought leaves an inestimable sense of satisfaction in me. My devotion to writing personifies my efforts to not let the winds of forgetfulness and oblivion scatter the organized thoughts and ideas away before I put them on the paper. It is an incessant battle between the sunshiny dreams of my own and the winds of change and disorder through which I impress these traces of inspiration on the pebbles of life.

S.F.3.8. In my writing and assessing the works of art I have always been inclined to judge about them by looking both at their meaningful messages on a “fine scale” and at their structure as a whole. Both the overall structure of the work and the intricateness of many individual points it comprises have to be paid attention to. However, a finely structured whole with a neat relationship between the beginning and the end can sometimes make up for the lack of richness in detail. This is so because this overall structure is often the one that will make the given piece of art stay firmly impressed in our mind, long time after we had carried out the last listening, reading or watching thereof. In view of this, it has always been a necessity for me to cultivate a balance between holism (harmony between the parts of a system, evaluated from the perspective of the system as a whole) and reductionism (analytical division of a system to its subunits, and maximization of the efficiency of performance of each one of them). Likewise, my ideal has been to have each one of my sentences as meaningful and inspiring to others as can be, and yet instead of simply piling them up without any sense of order, I have placed a special emphasis on organizing them into a consistent whole. Yet, a partial lack of structure is oftentimes a crucial aesthetic aspect of an inspirational structure. For example, should there be no empty spaces between stars, their twinkly symphony that we glimpse on a clear night free from the light pollution would never exist. Quite in accord with this ideal, this book, which is to be read like a sermon, slowly and delicately, word

⁸⁴⁵ See Katie Holten’s Nothing Niente, Tûp Institute (2003). The paper accompanied Katie Holten’s installation at La Biennale di Venezia, June 15 – November 2, 2003. The quote is taken from John Cage’s Lecture on Nothing, Silence, 1961.

by word, all until it fills the cosmic dome of our heads with a semantic energy that inspirits and puts one in touch with the voice of eternity, adopts a style dominated by compiling hundreds of thoughts in paragraphs seemingly detached from each other, something that Friedrich Nietzsche implicitly alluded to as a style for the philosophy of the future in his book *Beyond Good and Evil: Prelude to a Philosophy of the Future*. In his book *One-Way Street* from 1928, Walter Benjamin concordantly announced the death of the book as a rounded structure and called for the genial writers of a new generation to “draw a charmed circle of fragments”⁸⁴⁶ to ward off the books of the past whose writers “take an inimitable pleasure in closure”⁸⁴⁷, for only in a such a way, in his opinion, “action and writing”⁸⁴⁸ can be wedded and not kept at distance from one another. Alongside numbering individual paragraphs, the way Saint Augustine of Hippo⁸⁴⁹, Pascal⁸⁵⁰ and Spinoza⁸⁵¹, but also John Ruskin⁸⁵² and Ludwig Wittgenstein⁸⁵³ did it in their key philosophical treatises, as an ode to a more romantic past, this particular book has aspired to live up to these ideals. However, although it was meant to be totally exempt from the rule of enwrapping everything into an immaculately consistent whole, my innate inclination for structuration and love for the form crept in and, alas, some elements of disorder in it eventually got converted to order. Namely, right before I started writing this passage, an idea on how to organize many minute thoughts into a neat whole occurred to me, and I began to diligently implement it in reality. Hence, the way the book appears now is such that it holds a neat balance between disorganized and chaotic piling of these passages of passion and their enshrouding within a consistently flowing stream of thought. There is mathematical precision to it, yet, as the result of its aspiring to reflect the starry sky, some may call it a “rant”, the attribute which I would not challenge, but rather gleefully embrace and accompany with the reminder that all poetry all the world over, from Sophocles’ to Mallarme’s to Dylan’s, is evidently classifiable as rant compared to lifelessly dry mainstream scholarly writings, before complementing it with the idea that transforming callous rigidity into sensible softness using the tool of poetry unavoidably implies making it sound like a “rant” compared to its original form. The human mind, after all, lit up by an inspirational thought process is such that flashes of analogies crisscross with smooth streams of logic throughout it, and, if transcribed into language in a most veritable form, it would sound less like a meticulously structured whole and more like a lyrical rant, chaotic and incoherent, albeit sporadically deriving clear inferences, each of which is like a star on an inherently disarrayed night sky. A finite dose of entropy in any human work, as it is the case with life *per se*, is necessary to endow with the potential to excite and inspire, yet my inclination for perfection has meant that every sentence in this book must be a reflection of the Universe as a whole, just as it is the case with every physical detail of this fractal, holographic reality that we inhabit, as well as that there is an uninterrupted semantic flow from one sentence to another, so smooth that creating a split between them would

be as impossible as cutting a river into two, for they transition into one another as evenly as adjacent tunes in a perfect DJ set. Thereupon, when Victoria noticed how each paragraph of my works tends to be so extraordinarily packed with information that you cannot pull a single line from it without collapsing it into an unreadable omnium-gatherum of thoughts, while it simultaneously branches out in innumerable directions, I envisioned none other but a big bright shining sun reflected in each passage of my books, glowingly letting its rays radiate everywhere only insofar as it is intensely compressed by gravity. Just like the Sun's luster arises from a dialectical pull in diametrically opposite directions, towards its core where the light elements are fused owing to the force of gravity in one way and outwardly, dissipating this inner energy to endow the surrounding life that craves for its light while orbiting it in another, so do these very words and passages and eventually entire books of mine arise from confrontations between my intrinsic worship of order, personified in an analytically pedantic drive to compose impeccably consistent and wholesome structures, and a disarranging drive to leave it all open and awesomely unfinished, knowing that there is no death sentence to imaginative reasoning such as the tendency to wrap it all up in perfectly consistent threads of thought, fixed and finalized once and for all. This comes as no surprise to systemic thinkers gotten used to the balance between balance and imbalance, seeing herein yet another example of the principle according to which every creative act, my writings included, builds itself on balancing the urge to order and stabilize, to bring it all into a sunshiny sense of wholeness and unity, and the impulse to infuse it all with chaos and imbalance, to scatter it all into a disarranged night sky of stellar thoughts.

S.F.3.9. As a result, this work partially intends to replicate an amazing view at the sky filled with stars, and not merely a river of an elegant and predictable continuity. Individual passages are thus meant not to perfectly connect to each other, but to invoke excitement by pairing things that do not naturally exhibit tight connectedness. In doing that, these ideas are not aligned and thus do not provoke a tunnel feel in the reader, but resemble an act of throwing guiding stars in all directions. Thereby they may induce dizziness in the reader, similar to the dizzy feel one gets by staring for too long at the starry sky, let alone pirouetting at the same time. They also thus match the ideal of dancing as life, as one is invited to incessantly change the perspectives, now looking at the world from a straight angle and thence placing one's points of view upside down. This explains why I rarely rigidly stare and nod my head during communication with others. I usually swiftly switch the perspectives, jumping and moving from one to another side, as if resembling a satellite that joyfully circles around the persons I communicate with. By behaving in such a way, I implicitly invite them to break away from the rigid patterns of observing, thinking and acting, and every now and then turn around, complete a full circle, tilt their head and shake their mind and heart so as to eventually become more fulfilled. After all, wisdom and knowledge in general are built upon looking at the world from many different angles. Hence, in behaving so, I feel as if my body and being become all colored with stars. A starry constellation that my true self is gets to be clearly seen pulsating with life within my chests. As if being a ballerina with her head directed upwards, immersed in the splendid starry sky above and spinning around her axis unstoppably, getting dizzy and dizzy as the time goes by, and like a whirling dervish fallen into a state of trance and seeing all as divine unity of being, I move until, quite paradoxically, I find myself. For, I know that "if you want to be yourself, change"⁸⁵⁴, and that in order to remain fresh and actual, all things need to change and evolve, from the most trivial to the most complex ones. For example, although

⁸⁵⁴ See Heinz von Foerster's Ethics and Second-Order Cybernetics at <http://www.scribd.com/doc/946594/Ethics-and-SecondOrder-Cybernetics-von-Foerster> (1991).

many amateurish sport critics consider the best soccer team that comes to the World Cup tournament to win the trophy, the truth is that the way the team evolves during the competition determines its success; the initial pressure at big tournaments, in fact, often takes such a tremendous toll on the team's preliminary performance that the weakest squad in the final round would singlehandedly beat the best one in the opening round. Italy, for example, at the 1982 World Cup played an "atrocious draw"⁸⁵⁵ against Poland in the first round and then appeared "miserably uncertain"⁸⁵⁶ and drawing against both Peru and Cameroon, but only to lift their form and start playing better and better, defeating Argentina, Brazil and Germany on the way to the World Cup trophy. Spain, similarly, started off rather unconvincingly its race for the world title in South Africa in 2010, losing its first fixture against Switzerland and then luckily prevailing the Chilean side in the third round before starting to play solidly and convincingly and winning the trophy in the end. The same turn of events would repeat itself twelve years later, seeing Argentina lose the first fixture at the World Cup in Qatar, but only to win all six following games and return home with the trophy. The story of England in 1966 may offer yet another prominent example of this effect that highlights the importance of the flexibility to change and learn from mistakes *en route* to the top of the world. Likewise, although many people tend to see good relationships as those composed of perfectly matching and unchanging personalities, I remind them that relationships need to constantly evolve, open new and enriching outlooks on each one's personality and lead to novel dimensions of being in order to be considered truly fulfilling. A natural corollary of this stance is the need to accept that people's spiritual qualities are being reshaped every new day and that the soulfulness of every being is being reborn with every blink of his eyes instead of keeping them classified as ignoramuses for good because of the direful things said or done long time ago or assuming their saintliness at any given moment based on virtue exhibited in the past. After all, as exemplified by the life of Alexei Karamazov as a grownup man, never told and only insinuated on the last pages of Dostoyevsky's masterwork, people on the holiest path today could turn into fiercest renegades tomorrow, whereas blasphemousness has historically anteceded arrivals to the summits of holy spiritedness, as illustratable by the lives of St. Augustine of Hippo who had "lived a hedonistic lifestyle for a time, associating with hooligans"⁸⁵⁷, St. Paul the Apostle who had prosecuted the early Christians before Ananias restored his sight with a touch of grace following the antichrist's revelatory trip to Damascus, Dostoyevsky's Father Zosima who had almost taken the life of a man in a duel for a handful of insolent words, Moses who had truly done so to an Egyptian following a quarrel with a fellow Israeli, St. Francis of Assisi who had relentlessly engaged in "debauchery, eccentricities and follies"⁸⁵⁸ before becoming the *poverello* we all know of, and many other sages. Some might therefore readily point out that the most beautiful artistic pieces are those in the course of which characters change from weak ones to heroes, from creatures blended with the boring, bland and bleak background of the ordinary being to supermen blasting with creative energy, from fearful hobbits to great saviors of the spiritual light, inspiring us on the way to believe how each one of us hides a sprout of untainted valor and beauty within one's heart and that it is only up to our ability to find the right incentives in terms of proper words and acts to unlock the chains in which it is tangled and spur its growth into some fabulous trees that will overwhelm the planet with their cherishing fruits one day. Therefore, the modern tendency to begin narratives and philosophical discourses with perfectly clear views and

do not descend into obscurity a single time until their end is inherently erroneous and it is a sad statement of fact that works embodying the opening line of Dante's *Divine Comedy* in all of their aspects, *Nel mezzo del cammin di nostra vita mi ritrovai per una selva oscura, ché la diritta via era smarrita. Ah! quanto a dir qual era è cosa dura esta selva selvaggia e aspra e forte che nel pensier rinova la paura*, today stand literally no chance of being accepted for publication by a university press or any major publisher. However, if one attempts to make one's work a veritable reflection of life, one must abolish the purpose, the topic and the plan, for none of it is being imposed on any cognizant being by this grandiose phenomenon we call life, yet one such, inherently ingenuine submission to the purpose and to the unnaturally linear path of the discourse are demanded before a work can earn the epithet of scholarly, demonstrating how disconnected academia and popular press are from life in its divinest and most mysterious of forms. Of course, when a choice comes whether to lose the divine spirit to be liked and accepted by people or to be tossed into gutters and garbage cans for the sake of remaining loyal to the aspiration to portray life at its godliest, it is the latter that I will opt for on any given day, the reason for which this book bears more resemblance to Jean-Luc Godard's *Histoire(s) du Cinema* in its being as unstructured as a myriad of stars scattered across the night sky than to the stereotypical, overly orderly and polished progression of a clear-cut scholarly thought, uptight and repressed, presenting itself in an ironed suit and a tie. My fondness for Beethoven's music notwithstanding, Claude Debussy's remark to his pal during a concert by the German composer, "Let's go, he's beginning to develop"⁸⁵⁹, could be invoked in this context as a gesture of defiance of the Germanic tradition of considering the structure of literary pieces and all other works of art as their most vital element. This defiance underlies the content of this book as well as any work of art intended to mimic the language of nature, which, as we know, is wholly devoid of climaxes, cadences and classical resolutions. For, when the goal is to veritably reflect life with these lines, then the writer is obliged to abandon the classical literary forms, along with the ideas of introduction, exposition, climax and resolution, as well as any definable beginnings and ends because life, ultimately, has none of them. It begins abruptly and not only does it not end with some sort of enlightening finding dawning upon one's head, but it does not really end with the sense of ending; more than anything, there is a sense of continuity of the thought process that gets terminated without the thinker's awareness of the discontinuation. Therefore, to be true to one such inherently nebulous storyline, as structurally amorphous as the ordering of stars in the night sky, any writing aspiring to reflect it must break away from the classical structures and produce works such as this one, where any one paragraph, like a day in a life, may be made up of a bunch of mundane insights, but then somewhere deep in it, at the most unexpected of places, without the slightest warning, an extractable gem may be found, a thought touching the doorsteps of infinity, tied to the daily experiences from which it emerged, but also able to stand on its own, independently of anything around it. Hence, in 8½, the critic hired by Fellini's alter-ego nicknamed Guido disparagingly describes the filmmaker's vision of his upcoming film as "lacking a central conflict", being "a series of gratuitous episodes" from the author's own life and his arbitrary streams of consciousness drawn in the attempt to create an inspirational "osmosis between art and life"⁸⁶⁰, "not even having the merits of an avant-garde film while having all its shortcomings", and a mainstream critic might use identical words to portray this book, too. A parallel can be thus also drawn between the vision the theater director from

⁸⁵⁹ Watch Robert Greenberg's lecture titled Debussy and le francais in Musical Action, The Great Courses (2018).

⁸⁶⁰ Quoted is a phrase from the article by Giovanni Grazzini published in *Corriere della Sera* (Milan) on February 16, 1963. Referenced in Claudio Fava's and Aldo Vigano's *The Films of Federico Fellini*, Citadel Press, New York, NY (1990), pp. 116.

Jacques Rivette's directorial debut, *Paris Belongs to Us*, a major inspiration for Godard's, Truffaut's and Chabrol's assault on the cinema world with their *nouvelle vague* movement, had for his "unplayable" play, being "shreds and patches, yet it hangs together overall... a chaos, but with purpose", and the vision I have had for this book. Correspondingly, in spite of its being a compendium of seemingly disconnected ideas, each one of which may be seen by a careful reader as a guiding star, lifted above our heads so as to light up the way through the gloomy mines of the vastness of human knowledge, this book has an underlying wholeness as well, as explained in the previous paragraph. Hence, as one gazes and gazes at the starry sky, the Earth rotates and the dark night slowly passes. As the dawn of understanding strikes, it seems as if there is more and more light spread between the stars, all until they disappear, and the space between the ideas in the reader's mind becomes filled with an awesome light of connection. The original, Latin root of the word "religion" means connection, and therefore, awakening a sense of true religiousness may be the purpose of this book. The sense of unity, carried by the rays and the giant symbol of the Sun, slowly setting itself at the peak of the space of our mind, thus pervades every aspect of our being. And as the Sun of some brilliant knowledge of unity of all being is born within the reader, these lines of thought are not needed anymore. Just as stars of the night sky, they can be let disappear in the background of her mind. Hence, only by annihilating themselves, dying but thereby giving rise to the new shine of knowledge, the tiny stars of thought expressed in this book fulfill their purpose. For, "except a corn of wheat fall into the ground and die, it abideth alone: but if it die, it bringeth forth much fruit" (John 12:24), and the Christ's life can be seen as a metaphor of this beautiful message. Instead of letting the beautiful guiding stars of his angelic mind remain on the paper, he decided to live them. The ultimate purpose of these thoughts is the same: to live each and every one of them. That is when the starry sky of our mind, twinkling with innumerable beautiful ideas, becomes transformed into a giant and all-illuminating Sun of knowing. This is also when the our entire experiential reality, every tree, every cloud and every human being in our surrounding dissipate into shards, as if being glassy objects hit by a hammer and breaking into an infinite number of small pieces, and all that remains is the orphic figure of our spirit connected to everything that it is supposed to be connected to on the spiritual plane, with thy mother and thy father and the muses watching after every step of yours from the transcendental heights above. It is then, upon our completion of the jñāna level in this game called life, the level of verbalized thought, and an irreversible transition to the level of being in its purest form, untainted by words, that we become complete and that a pair of angel's wings can be said to have been earned, given, of course, that this transition was made in the angelic, heavenward direction, not the animalistic, earthward one. It is then, should we truly begin to live our enlightened visions and thoughts instead of keeping them suppressed underneath the corporeal shell of our spirit, a swami on the brink of reaching Samadhi, on the verge of blending our soul with the all-pervading spirit of God we would become, once and for all, capable of going back and forth between this state of utter unison with Brahman and separation from it for the sake of bringing this heavenly bliss to souls scattered like stars of the night sky all around the dancing silhouette of our celestial spirit.

S.F.3.10. But for now, this book as a whole can be seen as a peek into the cosmos of sparkly ideas swarming like stars inside of my head. Each one of these passages is a single star of thought twinkling on a celestial sphere encompassed by this book's imaginative breadth. Each passage, like a little star, seemingly suspended alone in the cosmic space of one's mind, can be taken and looked at in isolation, independently of other stars in the sky of this book. Although individual passages, just as stars in the night sky, may sometimes seem connected and merged into single

sources of light, if we analyze them deeply enough, we will realize that these are still multiple stars. In particular, we witness this effect as we focus on the Milky Way stripe that stretches across the entire celestial sphere. The Milky Way represents nothing other than the Way of Love, the central concept of my Philosophy. It is, therefore, no wonder that the largest density of ideas in this book is present in its vicinity. Sometimes, however, each glittering passage turns out to be a cluster or a whole galaxy of stars, as numerous starry ideas are crisscrossed within them. All these magnificent effects contribute to versatility of lines and words drawn here so as to shed the light of wonder to the world. So, by seeing a guiding star of thought resting in each passage of the book, we may easily pluck any one of them, separate it from the rest of the content of the book, and solely carry within our heart. But, a great connection between all of them is there as well, and it is by balancing the individuality of ideas with their interrelatedness that we come up to the core of the Philosophy of the Way. Namely, the wonderful phenomena that are a part of life and experience are made possible only through living entities incessantly fluctuating between (a) desolate and lonely sides of being and (b) merging into the unity of all being. Only if we are meditatively submerged inside the essence of our spirit and from there pull out the thoughts and acts of ours to the surface of our being and the world could we live harmoniously. But, on the other hand, only if we are equally driven by the desire to become one in empathy and lovingness with the surrounding creatures do we have the chance to become a truly fulfilled person. Hence, the metaphor of the way is deduced; for, each way stands for a connection between entities that are presumed to be distant from each other in the first place. The key is thus in balancing these two aspects of being: inner withdrawnness and burning of aspirations, thoughts and emotions of ours so that the fire of creativity and love is sustained within us on one side, and running out to strew the treasures carried within us over others so as to bless and beautify them on the other side. Consequently, only entities seemingly isolated from each other and yet connected into a great, cosmic unity, each bearing resemblance to Evagrius Ponticus' holy man who is "disconnected from everything and yet in harmony with it all"⁸⁶¹, would reflect the true nature of life and being. This nature of life is also such that wherever we direct our attention, we could discern a guiding star asleep therein. This attribute of reality has been captured by masterful painters in works wherein a sensitive eye can notice whole galaxies of meaning resting in each tiny detail thereof. It was also captured in the landmark moment in William Saroyan's *Papa You're Crazy*, the book referred to at the very opening of this story, when the boy picks a pebble the size of "a halved walnut", observes carefully "its few red spots and one perfectly white line dividing one part of the pebble from another", realizes that "the pebble was a kind of a world" and goes on to conclude that "one little thing could be so big, as big as anything else at any other place"⁸⁶². And yet, miraculously, all these little details of reality, as deep as the Universe in spite of their minuteness, are connected into a whole wherein not a single one of them could be extricated without affecting everything else in it. Life, after all, has been thought over and over again by seers to comprise a grandiose symphonic whole and possess a perfect structural consistency, with beginnings and ends flowing into each other immaculately and with every detail's holding on its shoulders the weight of the entire Universe, though without having the elements of a narrative intrinsic to it. In other words, life seen from this perspective is a structure, but not necessarily a story, as it happened to have been pointed out by the Scottish filmmaker, Bill Forsyth, all in the footsteps of the movie narrators from the European New Wave cinema⁸⁶³. This is why assemblages and congregates of little passages of thought

seemingly disconnected from each other, resembling stars scattered all across the night sky more than anything else, could be the most veritable way of verbally representing life and may also be why the story-like structured popular books on science and philosophy have always bored the hell out of me. Therefore, in the spirit of Jean-Luc Godard's abandonment of the concept of the storyline and an effort to prove instead the ultimate beautifulness of a scene *per se* as well as of its characters rather than their being components of a broader scheme or a plot, every sentence in this book attempts to be a universe unto itself, a chain and a centerpiece at the same time, a symbolic proof that Nature is not a linear stream of events towards a predetermined aim in space and time, but a magical place where destination is present in every point of the journey, or, as Blaise Pascal imagined it, "an infinite sphere whose center is everywhere and circumference nowhere"⁸⁶⁴. This inclination of mine to pack a whole world and beyond into the finest possible expression of thought has gone in step with my perception of myself as a poet, not a narrator, since the goal of the poet is to evoke beauty - or whatever else is the emotion he craves to convey - by each line of a poem, when the narrator's focus is on the flow that immerses the reader into his world, during which he sacrifices this drive to embed a universe in an infinitely fine dot and produce millions of big bangs, a firework of new cosmoses in the semantic space and time as the reader traverses the text from one line to another, from one sentence to the next. Thus, treading carefully in life, whereby not looking for great, spectacular events, but focusing on tiny details of physical reality, knowing that each one of those hides a guiding star somewhere in it, is what this book implicitly points at. In my universe, such an attitude reflects the ultimate wisdom in life, the one that shines with joy of knowing that the steps leading to the top of the pyramid of being wherefrom one can glimpse the starry face of God are truly everywhere. This is why when I open this book, I see the starry sky twinkling with wonder, but also a hidden Sun smiling at me.

S.F.3.11. Oops, my heart is in syntax error...#@!... and my mind is rolling like a train through the space filled with starry twinkles of happy angelic winks.... What's going on now, you may ask. Well, this is just to remind you of what the most masterful lecturers are already aware of: that one needs to occasionally break the perfect flow of lecturing in order to keep the audience awake and attentive. This is what I just did: shattered the predictable pattern and broke what may have seemed as a perfect, glassy surface into a multitude of stars, which may cause you again to wonder about their miraculous origins, if you have slowly ceased to do so over the course of reading the book. What I routinely do during my lectures and any other prolonged moments of expressing myself is every now and then completely intuitively perform something that surprises and awakens the listeners, such as blowing my nose in my tee, leaning down to tie my shoelace in silence, displaying some insane acrobatic moves or postures, sitting with my back turned to the audience while whistling a song, playing guitar or BC Quest for Tires on the presentation display so as to demonstrate how rebelliousness, childish naturalness, aimless wandering in our thoughts, artiness and playfulness are essential for the thriving of our science. Sometimes I leave the lecture podium and walk out of the auditorium without warning, leaving the audience bedazzled, signifying with my act that alternately getting lost and being found is the key to success in the ultimate adventure of the human mind that science is. On another occasion, I might be led to the classroom blindfolded with a red bandanna and prompted to start to lecture without being able to see neither the listeners nor the display, thus subtly giving out a hint on how we all may be merely tiptoeing in the dark in our sciences, a view that saves us from falling into traps of arrogant self-righteousness, but only

⁸⁶⁴ See Blaise Pascal's *Pensée* No. 199: Disproportion of Man, Series XV, Translated by A. J. Krailsheimer, Penguin, Harmondsworth, UK (1669), pp. 89.

to pull down this wrap tied over my eyes at one moment and gaze at the enchanted audience in breathless silence. If I feel that the right moment has come to daze and confuse after traveling along the predictable and boring railway of human thought for too long, so as to keep order and chaos in the classroom neatly balanced, for in it lies the secret of the evolution of the Universe, I may give truly bemusing answers to questions posed in front of me, such as Bill Watterson's Calvin responding on a test to the question where Plymouth Rock is by saying how he is "not presently at liberty to divulge that information, as it might compromise our agents in field", subsequently mumbling how "I understand my tests are popular reading in the teachers' lounge"⁸⁶⁵. For, from chaos stars are born, as Friedrich Nietzsche put it, and one need look no farther than an ordinary science lab whose state of utter disarray goes hand-in-hand with its potential of arrival at groundbreaking discoveries. Not in the administratively sterile spheres wherein each ensuing move is tediously predictable from the former ones, killing human imagination ever more with every tick of its bureaucratic clockwork, but in genuinely artistic and scientific universes wherein analytically ordered crystals of ideas constantly clash with chaotic streams of consciousness and which resemble more "the central cataract of the middle Nile than any even-flowing stream"⁸⁶⁶, as Bruno Walter once described the utterly erratic and unsystematic personality of Gustav Mahler, is where the most brilliant creative tasks are accomplished, and teaching in classroom anything other than such anarchic orderliness, as paradoxical as its name suggests, I consider as profound educational failure. Kids are naturally tuned to this interplay between the comfort of orderliness and the exploratory adventurousness that chaos brings forth and tend to be mostly moved by this quirky approach to oration of mine. As a matter of fact, whatever I perform on the lecture podium, it is always geared towards the littlest ones in the audience, which, on the other hand, inescapably draws out boos from the tedious grownups, dull and squared, with spirits shyly squatted and cocooned in my proximity. On the night before the presidential elections in Serbia in December 1990, the major opposition candidate, Vuk Drašković, whose victory would have presumably prevented the bloodshed that ensued the subsequent breakup of Yugoslavia, asked the voters to vote for those whom the youngest ones in their families would vote for, and so do I, out there on the stage, adjust my spontaneously elicited words and moves to bring joy and excitement to those that are closest to children amongst us rather than rigidly and in sweat conform to sly and stiff adults around me, which, as expected, more often than not leads not to my glorification, but a straightforward downfall in the eyes of my peers and authorities. For, with every atom of my being I believe in the words of Jules Michelet with which Henry George opened his popular treatise titled *A Perplexed Philosopher*, "No consecrated absurdity would have stood its ground in this world if the man had not silenced the objection of the child"⁸⁶⁷, and, having known the feelings of abhorrence arisen in these elfin souls by the stifling and stiffening ways of being of the dull grownups, I do it all to oppose them at all levels - epistemic, behavioral, spiritual, and many more. "As I grow up, I'm growing down"⁸⁶⁸ is thus Sly's mantra that I work on living up to with every last inch of my body and soul, becoming ever more of a child, loud, obnoxious, inapt, politically incorrect by being honest to the core, all at the disbelief of the stiffened grownups around me, with every new year added to my lifetime on this planet, going downer and downer in age, as I vowed to my son, Theo I would do already when he was

four years old. Now, despite these eruptions of elation and surfing on the spiritual high, riding on the glorious waves of Tao, I find it necessary to equally worship the exact opposites of these energetic outbursts: still and quiet. Sometimes I thus immerse myself in complete silence in the middle of a thought, inviting others to find that silence as screaming, thunderous and banging in tensions it bursts with. For, “he who does not understand your silence will probably not understand your words”, as noted by Elbert Hubbard, an American philosopher remembered for the following excerpt too: “I am an Anarchist. All good men are Anarchists. All cultured, kindly men; all gentlemen; all just men are Anarchists. Jesus was an Anarchist”⁸⁶⁹. My teaching method can be also quite righteously labeled as anarchic in its tendency to stomp over a method as soon as a method has been held in sight long enough, as well as to hold a lantern of reason and orderliness and stand in harsh opposition to torments of chaos whenever it begins to reign over us for more than it seems optimal, incessantly pointing at the balance of order and entropy as the one from which all blissful things in life originate. Quirkiness is then applied primarily to accentuate the vital role of disobedience and antiauthoritarianism with respect to standardized approaches, paradigmatic thought or anything else that falls within the scope of convention in sustaining our creativity, scientific and artistic alike, including the art of living, of course. It is also used as a tool for sustaining the audience in a state of constant suspense, the magnitude of which is proportional to their receptiveness to ideas the teacher tries to get across. And by winning human hearts through these extravagant moments of wondrous acting (or pure silence at times), I am opening the doors for sympathy and understanding of the messages I want to convey by conventional means to hop in and join the starry train ride of my philosophical presentations. My punk and poppy attitude thus has the purpose of simultaneously making connection of lovingness and empathy and opening ways for each one of us to find and firmly hold on to intimate links with the essence of one’s soul and thus become as wonderfully unique and original as can be, just as the Way of Love would have wished.

S.F.3.12. Every now and then people familiar with my writings approach me saying: “You know, I did not imagine you at all the way you are”. And I reply: “I do not either”, possibly adding the thought of Marcel Proust: “A book is a product of another self to the one we display in our habits, in Society, in our vices”⁸⁷⁰. And then we all laugh. As an explanation, I may add that my dissatisfaction with the way I judge the world in the sphere of my thoughts and with the way I conduct my behavior has presented the driving force behind my creativity. Thus, whatever I did, I would always make one mistake after another. I would go out and behave awkwardly, say wrong things at a wrong time, embarrassing myself and others, unintentionally depressing and putting people down all of the time. I would then go home, engage in profound introspections, compare the way I see myself with the way my ideals in acting appeared to me, and this is how I gathered insights that showed me the way of reaching my dreams. It is these insights that are incorporated in this and other books of mine and only because of such origins of theirs is that they carry an immense importance and the ability to be grasped by others and applied by them in similar attempts to overcome the imperfections they exhibit on daily bases. To that end, that is, by “being dirt”⁸⁷¹ and diving into darkness, not light, in psychological and behavioral senses alike, quite against the grain of the dreams of divine body and mind swirling inside of me in inebriating vortices, I have come to fulfill Tennessee Williams’ premise that decorates the wall of Credo in downtown SF:

“Writing is a purification of that which is sick in the person”. Had I behaved in perfect synchrony with my ideals, there would have been no opportunity to engrain anything significant into my pieces of art. I would consider myself as a Christ who lives his dreams and, thereupon, has no urge of inscribing them anywhere. In that sense, I would even be able to live up to the ideal posed by H. L. Mencken, saying how “no virtuous man has ever painted a picture worth looking at, or written a symphony worth hearing, or a book worth reading”⁸⁷². “The bastard who talks about sincerity and goes on with a grubby life”, whom a female character, Eva, played by Jeanne Moreau, in Louis Malle’s *A Fire Within* denounces out loudly midway through the film, thus may be a rule rather than an exception amongst the crafters of enlightening tones, tinctures and thoughts. In other words, to write is to admit the intrinsic fallaciousness of one’s spirit, while, on the other hand, the question bound to forever hang over our heads is whether the world could be saved without jumping into deepest existential abysses and implanting lights that illuminate the ways enfolded by darkness therein. Which is exactly why the claim was made in the opening passage of this book that the craziest thing done in the course of my entire life has been the attempt to write it in the form picturesquely describable as a message channeled from some divine loci of thought, as an enchanted forest of lifesaving symbols, or as the night sky spilled across its blank pages with every star being one guiding light for the soul. To sum up, an effort to make our beautiful ideals fit the inherently discrepant reality we inhabit is what has driven the wheels of our creativity forward. In a world where everything would fit our values and dreams, there would be no need to passionately devote ourselves to saving it and thereupon produce marvelous works that are meant to benefit humanity as a whole.

S.F.3.13. Among the casual critics of my writings, a common place is occupied by those who feel irritated by the lack of a riveting storytelling rhythmicity of texts born in my moments of contemplative solitude. Every sentence could stand as a prologue or as an ending and there is no real alternation between suspenseful and relaxing, between elaborate and succinct thoughts, with the classical, Aristotelean, three-part, opening-conflict-resolution segmentation nowhere in sight, they might say, but isn’t life, which art is to mimic faithfully, exactly such, as unstructured as the starry sky, I might ask them in return. On one hand, thus, I might always resort to the words of Albert Camus, offered here in the context of celebration of the beauties of life, a thoroughly different one from that envisaged by their author, so as to show you how all things could be reinterpreted in an infinite number of ways, depending on the semantic inclinations of the interpreter: “An act like this is prepared within the silence of the heart, as is a great work of art; the man himself is ignorant of it”⁸⁷³. Namely, words fall onto this glistening virtual paper after being plucked like somersaulting sirens from my heart opening itself to the world so as to bear its fruits for the world’s benefit, with me merely letting their gentle flow release itself out; consequently, words that I may look for to describe the very words I conceive are not bountiful, which brings me over to the legendary remarks made by Samuel Beckett and Isadora Duncan regarding the description of their writing and dancing, respectively: “What would be the purpose

⁸⁷² This quote in the form in which it is given here has been taken from the opening lines of Dan Savage’s *Skipping Towards Gomorrah*, Penguin, New York, NY (2002). However, the author either accidentally or under the pressure of censorship omitted a crucial part from it, that is, the one emphasizing that the subject in this thought is virtuous man, “that is, virtuous in the Y.M.C.A. sense”, where the abbreviation stands for Young Man’s Christian Association, prompting us to wonder whether the Christian tradition of faithful followers has to consider as rebellious sinners all of those who epitomize the Christ-like virtues in their standing against the streams of popular thinking and values of the majority.

⁸⁷³ See Albert Camus’ *The Myth of Sisyphus*, Vintage Books, New York, NY (1942).

of writing/dancing if simple words could describe it”? The Japanese movie director, Yasujirô Ozu went a step ahead in highlighting the meaninglessness of attempts to explicate artistic expressions, be their choreographic movements, music, drawings or emanations of the ultimate art, the art of living, in terms of mere words when he replied to the question whether he liked trains, provided that the images of moving trains had opened and closed many of his movies, with “I also like whales”, even though not a single whale has ever appeared in any of his movies⁸⁷⁴. The Italian filmmaker, Federico Fellini shared the belief that film as an art, just like life as a whole, is pervaded with an infinity of multilayered meanings and their limitlessly rich semantic synergies so that any attempts at their explication in terms of words are doomed by default, the reason for which he, himself, appearing in his movie *The Clowns* decided to have a whole bucket of water jammed down over his head upon his being asked the question of “meaning”⁸⁷⁵. Earlier, in the movie *8½*, he made the filmmaker Guido, a cinematic metaphor of its creator, Fellini, crawl beneath the table during a press conference when he was being accused that “he has nothing to say”. On yet another occasion Fellini explicitly rebelled against the public requests to describe the meaning of his art: “An artist is always obliged to explain what he has done. He tries to intellectualize it, to say something near to the truth. And he never can give a complete explanation. Once in a while, he can talk about just one aspect. But really to talk at all is impossible. A creation is first of all the fruit of a spontaneity. In the moment you try to explain it, you kill it or else you caricature it. You can never give an exact answer. If I try to talk about what I have done, I change what I say from week to week. If I am sincere, I say nothing”⁸⁷⁶. Felix Mendelssohn would have probably strongly sympathized with this train of thoughts as well as laughed loudly at Ozu’s funny remark and Fellini’s allegorical act, having himself nourished an unreserved contempt for words because of their cultural supremacy as a communication tool and yet inability to come even close to the richness of musical expression to which he dedicated his whole creative being. “So much is spoken about music and so little is said. For my part I do not believe that words suffice for such a task, and if they did I would no longer make music”, he said once in a letter, while on another occasion he mentioned that he was “unable to speak of music properly for more than half an hour nor was he able to follow someone talking about music”, for such discourses made him “become more unmusical than he was when he went it”⁸⁷⁷. Then, although a poet, Rabindranath Tagore strongly resisted any attempts to verbally explicate the meaning of his paintings and on one occasion, as it now stands documented on an inscription decorating his family house in Calcutta, he wrote the following: “People often ask me about the meaning of my pictures; I remain silent even as pictures are”⁸⁷⁸. The Russian-American abstract expressionist, Mark Rothko held the same point of view in regard to his paintings, justifying in a letter to Katherine Kuh from 1954 his evading hardheadedly the explication of the essence of his approach to painting and the meaning of his art with the following words: “There is the danger that in the course of this correspondence an instrument will be created which will tell the public how the pictures should be looked at and what

⁸⁷⁸ Rabindranath Tagore’s house in Calcutta I visited on December 26, 2015.

to look for. While on the surface this may see an obliging and helpful thing to do, the real result is the paralysis of the mind and the imagination. (and for the artist a premature entombment)”⁸⁷⁹. Not only do I share these disbeliefs in the ability of maps to capture the essence of territories that they depict, but, moreover, in my universe the bliss of the heart has always occupied a more elevated place on the ladder of significance compared to logical decisions conceived by the brain. This explains why whenever I am being asked to justify my decisions, even when they are much less emotional in nature than the reason to get married, for example, my response would lie along the line of a mystical Zen puzzle, if not being a more beautiful question as an answer to the original question. Even today, when many may consider me a scribe, given more than a million words now contained in my books⁸⁸⁰, neither do I see myself as one nor I wish to do so. Quite contrarily, as insinuated by the explicit reference to madness in the opening lines of the long journey that this book has turned into, all I try to do is get the ideas dawning on me from some great heights out of me and transmute them into a form inspirable to dewy, heavenly pure eyes of the world, while giving them a twist of craziness, of cartwheeling in endless cosmic circles, inebriated by the nectarous spirit of the omnipresent Divinity on which all beings glide. Thus, I see myself more as a subconscious channel for the free flow of thought from the Great Beyond to the earthly realm rather than a conscious creator of the verbal music that comes out of my pen. On the other hand, I could reiterate the same message I exclaimed on many previous occasions, usually by spreading my arms as widely as I can and pointing at poignant poetry and prose as lying on one side of the imaginary literary spectrum represented by my embrace and the traditional scientific and philosophical writing style, prickly subjected to the torture of analytical correctness and Occam’s razor to such an extent that all that comes out of its fabric resembles lifeless linguistic forms, hardly able to inspire the artists in us. Now, the angle from which most of the aforementioned critics judge my works belongs to the former, belletristic one. Yet, my mission has been to stand on the middle of this phantasmagoric bridge and create works that could be characterized as either philosophically rich novelistic writings or poetical and more inspiring scientific and philosophical discourses. In aiming to succeed in this, I have, however, started my journey from the extreme dominated by the dry and oftentimes bureaucratically tedious language of science and philosophy, in need of far greater revitalization than the more artistically pleasing language of novels and poems of the modern day. Which is not to say, of course, that the essence of the latter is not silently craving for the infusion of certain philosophical richness to it and that it would not greatly benefit from one such cross-fertilization of literary antipodes. This is mainly to state that my mission has been the one of refreshing the arid and uninspiring language of the modern science and philosophy by intruding it, like a benevolent alien, with microcosmic flights of fancy and quantum leaps from the platform of rigorous scientific thought to countless corresponding levels whereon inspiring metaphoric relationships of real-life nature await our imaginative insight. In view of that, these writings of mine could be rather seen as tomes of postmodern philosophy than novels seasoned with philosophical zest. Yet, just as Gustav Mahler claimed that his gravely serious music gravitating around “death in full grotesque pomp”, as some critics maintained, though always infused with twinkles of joy and winks of the indestructible cosmic love, and the music of his

⁸⁷⁹ See Mark Rothko’s Letter to Katherine Kuh, July 14, 1954. In: Mark Rothko’s Writings on Arts, Edited by Miguel Lopez-Remiro, Yale University Press, New Haven. CT (2006), pp.91.

⁸⁸⁰ “A million came from one”, said the verse of one of the landmark songs I composed during the blissful days of my youth, which saw semantics completely eclipsed by and subdued to the music going on in my head, and I am dying to know which word was the first one in this process of creative writing that has now gone wholly out of control, having immersed my entire being, head to toe, into it.

contemporary, Richard Strauss, pervaded with cheerful loudness and only distant evocations of tragic tonalities and funereal frightfulness, are comparable to tunneling into a mountain from two opposite sides and eventually meeting in the middle⁸⁸¹, so do I assert that my approach of embellishing a profound philosophical base with poetically worded flights of passion can easily meet in the middle with writings starting from the narrative end of the spectrum and enriching it with philosophical insights. Still, one belletristic principle violated in the course of this literary foray of mine has been the advice J. D. Salinger gave to Jean Miller when she pointed at the Washington Bridge in the New York City skyline and noted how beautiful it is, “Do not state the obvious”⁸⁸², the reason being the good writer’s responsibility to ascertain that the reader has comprehended the commonly complex points made during discoursing, even at the expense of overindulgence in verbosity, which the traditional belletrism has shied away from and considered unaesthetic. Another core principle of literary lyricism has been that of sparing words that connote lyricism directly, such as vulgarly pretentious or sentimental attributes, and I have breached it proudly, once again due to nothing but a sense of deep revulsion against the dominance of dry technicality in scientific literature, which perceived poetry as a pest to eradicate and which I have, nonetheless, strived to revitalize with ever more inflows of the lyrical thought, the thing it feared and detested most. And when it comes to people accusing me of the pervasive usage of clichéd and supposedly unaesthetic links between statements from an essayistic point of view, my response may simply be a reference to Gustav Mahler’s ideal of achieving a grandiosely consistent interconnectedness between verbalized ideas, an uninterrupted flow of expressions that evokes an elegant stream of thought, in spite of the hearty disagreement of all those who believe that experiential realities are much more veritably reflected by means of disjointed segments of thought, akin to the frames of a comic book wherein the reader’s attention is invited to dizzily teleport itself from one enchanting perspective to another. Then there are people condemning me for being too cheesy and pathetic because of using so many ornamental adjectives, such as “divine”, “beautiful”, “wonderful” and “loving”, all adorned with arrays of artsy alliterations, so as to dress the text to the nines and make it more appealing to the reader. However, how wrongly they estimate my intentions. The reason why I use them is to express the visions of ideas I keep within myself in the most faithful way. In attempting to do so, I look for the words that will get closest to the vision born in my mind. And when the products of this poetic delirium which my mind falls into in its lyrical musings becomes interpreted by prosaic realists and pragmatists as shallow sentimentality, that is, “the ostentatious parading of excessive and spurious emotion, the mark of dishonesty, the inability to feel, the mask of cruelty”⁸⁸³, I worry not, knowing that in exactly the same way would a dry, emotionless soul bred by the materialistic western culture describe much greater poets from the present and past that I would ever be. If so, one William Blake, that “most unpitifully pretentious or rather grandiose of poets”⁸⁸⁴, would not even blink, offering a line as cynical as “I pretend not to Holiness, yet I pretend to love... therefore dear reader, forgive what you do not approve, & love me for the energetic exertion of my talent”⁸⁸⁵ as an excuse, which Tony Kushner would later use in his defense of “pretentiousness, overstatement, rhetoric and histrionics,

⁸⁸⁵ *Ibid.*

grandiosity and portentousness”⁸⁸⁶ of poets from the past in America. After all, with poetic sentimentality being so very outdated nowadays and heartlessly shoved onto the dusty sides of the road along which the procession of lame followers advances through the modern world wherein cynicism is tragically seen as a natural attire of intelligence, I have deliberately decided to pick it up from under the dust of human neglect and undervalue and raise it to the stars, or, as Chuck D of Public Enemy put it, “give you all a little something that I knew you lacked”⁸⁸⁷. And if “you still consider me a new jack”, I’d, of course, only giggle and figuratively add how all the bitter hipsters, “you could hang ‘em, I’ll hold the rope”, as this epic rap tune⁸⁸⁸ tells us further, while never losing out of sight the vision of my muse, moving as gracefully as a catlike shadow through the dark alleys of the world and yet watching it with the eyes from which stellar radiance of spotless honesty and purity emanates, somewhat similar to Noriko of Yasujirô Ozu’s *shomin-geki* movies⁸⁸⁹, appearing as if sending rays of healing lights everywhere she looks and drawing her world in divine colors and shades whereby beautifulness of each and every one comes to be seen and, thereupon, naturally invited to emerge to the surface of their beings. For, it is no secret that I believe that future historians will typify our current culture as the one wherein “look at the beautiful me” appeal coupled with champagne-glass clinks and sunglass twinkles of cool and chic pretense, rather than the traditional blaze of heartwarming chastity of an Ozu’s Noriko, a complete antipode to the former, is what hunters for aesthetic expressions mistakenly stop at to satisfyingly embrace and worship. Yet, since this elegiac emotionality of Ozu’s characters could be seen as a natural counterbalance for the extrovert showoffs of our inner creative powers, my creative decision has been to do it all to introduce the reader to the state of prayerful devotion before the wonders of Nature by sending tsunami waves of philosophical poetry to wash over her spirit, each one of which carrying something smart to satisfy the intellect and yet something lyrical to lift her up to sublime vistas of the soul. Hence, just like Yasujirô Ozu picked the slow melodramatic style for his post-World-War-II filmmaking endeavors, intensely disdained by the protégés of the sensationalistic and action-packed Hollywood style for “being stale, dull, and plodding”⁸⁹⁰, and built poignant monuments to smallness and ordinariness through his works, so have I picked from the dust of human neglect what most mainstreamers nowadays stomp over and made it an ingredient to ornament the poetic palaces of my works with and embellish the elegant veil of poetry that gracefully glides around the naked silhouette of my sincere self that stands behind the statues of this letters and words. Still, since I have always paid more attention to the essence than to the surface, I wished to make these statues look like Ionic columns, perhaps the most beautiful of the Classical Orders, neither too flat and unadorned, like the Doric, nor overly ornamented and, at times, flowerily kitschy in their appearance, like the Corinthian. Striving to be

⁸⁸⁶ *Ibid.*, pp. 180.

⁸⁸⁸ *Ibid.*

⁸⁸⁹ The character of Noriko in the so-called Noriko trilogy by the masterful and, according to many, the most authentically Japanese of all Japanese auteurs was played by Setsuko Hara.

⁸⁹⁰ See Dan Schneider’s DVD Review of Tokyo Story, available at <http://www.cosmoetica.com/B492-DES422.htm> (2006). The aforementioned Hollywood filmmaking school naturally favored another one of the great Japanese movie directors, Akira Kurosawa, a complete antipode to Ozu’s style. A comparison between the two reminds us of the ancient Sufi story in which stylistically colorful and vibrant Greek painters and minimalistic, empty-space-accentuating Byzantine ones decorated walls that faced each other inside of a king’s palace. Or, as Dan Schneider put it, “Where Kurosawa was grand, Ozu is small. Where Kurosawa was kinetic, Ozu was static. Where Kurosawa celebrated the epic, Ozu celebrated the ordinary”. Today, more than half a century after Ozu’s Noriko Trilogy was filmed, his implicit criticism of Hollywood, seems more relevant than ever.

as elegant as the single curved lines gracefully drawn to crown the Ionic columns, the poetic embellishments hidden among these words are meant not to distract the readers from their semantic essence, while still countervailing the dull and bleak, matter-of-fact wordings common to the western world with their lyrical warmth and uplifting flights of fancy. In such a manner, I have challenged the current culture plagued with the puritanical and prosaic apathy, wherein ornament is increasingly seen as crime, if we were to refer to Adolf Loos' memorable phrase, and where horrifically cold and alienating exteriors, analogous to the walls of his Looshaus in Vienna and Villa Müller in Prague, of van der Rohe's Farnsworth House in Plano, Illinois, of Alvar Aalto's Vyborg Library, of the Whitney Museum of American Art in New York City and of the Queen's House in Greenwich, are puzzlingly seen as more pleasing for the eye and the soul than, let's say, the front façades of the basilicas of Santa Maria Novella in Florence and Saint Mark in Venice, of Voronet Monastery in Suceava County, of the Central Library of the National Autonomous University of Mexico, of the Church of the Pantanassa in Mistra or of the Portal of the Royal Hospice of San Fernando in Madrid. Also, not calculative on any of the occasions, I have consciously chosen not to cunningly save these ecstatic adjectives for the very end, but drop them all from the pockets of my mind, as if being guided by Juliet Capulet's norm, "My bounty is as boundless as the sea, my love as deep; the more I give to thee, the more I have, for both are infinite", and as if my ability to find home in this adventurous stride of my attention through the textual forest of ideas vitally depends on shedding these epithets generously, creating exuberant fireworks of thought along the way. It is easily forgotten that deliberately resisting the use of "cheesy" epithets in one's writing is where the writer, especially if a critics' favorite, exhibits hypocrisy, given that he implicitly criticizes stale social norms while subconsciously shunning the use of these attributes so as to comply with a higher trend and be liked by someone, somewhere. Yet, notwithstanding that writing, like every art, is an exercise in communication, if the writer were a true antisocial outlaw, approaching writing without any concern over what the world or anyone in it would say, what he creates will be a meditation, pure, prayerful and palatial if it comes out of the heart of a poet, aired from the coast whereat the edge of one's being has come into contact with the ocean of the Universe in its mystical wholeness. On top of this, I, who have come to believe that these poetic ornaments can grow into signs as powerful their profounder semantic brethren, wholeheartedly agree with the answer that the poet sitting by the jukebox in Godard's 2 or 3 Things I Know About Her gave to the student's question, "Is poetry instructive or just an embellishment": "Everything that embellishes life is instructive". And so, when Urban Kordeš asked why my written works abounded with tastelessly many poetic words as embellishments of ideas that, in his opinion, were unnecessary and needed no fancy clothes to be dressed in, I felt as if a giant palm tree suddenly sprang in the imaginative oasis of my mind, almost touching the sky with its splendor and diverting the airplanes from their aerial paths, echoing the pop arty excavation of the essence from the surface, the surface which, in this life, per Pascal's thought, is always the center of the magnificent circle that Nature is, reinstating the enlightening faith in these seemingly insignificant and largely neglected, ornamental details of our expressions as those wherein the gateways to the heart of reality have always dwelled. Like Ree Morton tying celastic ribbons around spiraling wires to "counter the coolness and neutrality of the geometric forms prevalent in the minimalistic sculpture in the 1970s"⁸⁹¹ and "undermine the seriousness of the traditional art establishment"⁸⁹², so may have I, secretly, rebelled against the prosaic styles of expression that

⁸⁹¹ See Helen Marie Reilly's a.k.a. Ree Morton's Coil Piece (1975) at the Los Angeles Museum of Contemporary Arts (July 2018).

⁸⁹² *Ibid.*

dominate contemporary science and philosophy, the styles I blame for deadening the human spirits and depleting them of the creative powers dormant in them, by interspersing worded thoughts with a generous dose of lyrical ornaments. With all those poetic epithets, cheesy to some, touching to others, the future for my writings may be not so bright, as it may end up resembling the past of William Saroyan, the author of *Mama I Love You* and *Papa You're Crazy*, whose failure to secure favorable reviews and ratings for his work was allegedly due to accusations of sentimentality and pervasive idealism, which literature was rapidly and irreversibly distancing from in his times, culminating in a question directed at him by a critic: "How could you write so much good stuff and still write such bad stuff"⁸⁹³? Of course, if the critic attributes one such schizoid combination of fantastic and lame to my writing, let him know that it has been my intention to create one such antagonistic concoction, not merely for my love of dialectics culminating in the philosophy of the Way that I have built most of my thoughts around, but also because the goal of my writing is dual: it is to point out the omnipresent beauties resting dormant in every single detail of reality, including words coming out of my pen, that is, the computer screen cursor, but at the same time point out their obsolescence and the necessity of using them as a ladder to be tossed after the reader has climbed high enough on them to reach stars. The goal is to make the reader fall in love with the words they hate, having become fond of them but also repulsed by them, for in such a way the chance is that she would absorb the messages that they convey, take them to heart, but not find the ultimate meaning in them; she would rather go beyond and not stop before these messages are lived out in a realm as wordless and ineffable as it can be. And in spite of this imminent criticism and disparagement, like the Armenian-American writer whose refusal to accept the Pulitzer Prize because "commerce should not judge the arts"⁸⁹⁴ I thoroughly understand and with whose rejection of the classical conflict in storytelling in favor of telling personal stories as well as the overall uprooted, expat perspective I have had much in common, I will have continued to write feverishly, being guided by a higher force rather than by the craving for the social approval, hoping that the magic balance of the Way of Love, whereon I would write solely to enrich the hearts of people while remaining untouched by what they have to say about my work, be it positive or negative, will be struck and rested on infinitely; for, as Saroyan said in one of his most moving lines, "I know you will remember this – that nothing good ever ends"⁸⁹⁵. All those relentless complainers about the flowery language of mine, full of clichéd epithets, conveying more of a sense of awkwardness than warm-heartedness according to them and resting on the verge of a puerile spiritual masturbation, also forget that not only is such a deliriously poetic way of writing a rebellious act in the times of overwhelmingly prosaic and mundane expressions in the academic milieu, which these works are meant to challenge, but also that clichéd is their experience of language, not mine, given that it is them who attribute phoniness to a poetic attempt, an attempt that speaks my Slavic soul, when I, in turn, a foreign English speaker, to whom only the semantics and the music of the words matter, build texts with the building blocks of words the way a computer would do, liberated from a sense of awkwardness that ornate words evoke in native speakers. That timelessly relevant and resonant works could come out of one such peculiar approach to writing can be exemplified by Wassily Kandinsky's book on the theory of abstract art

⁸⁹³ See the Wikipedia page on William Saroyan: en.m.wikipedia.org/wiki/William_Saroyan (2017).

⁸⁹⁴ *Ibid.*

⁸⁹⁵ See William Saroyan's *The Human Comedy*, Harcourt, New York, NY (1943).

titled *Concerning the Spiritual in Art* released in 1912⁸⁹⁶ after being written for a few years in the Russian painter's nonnative German, a language "not as amenable to metaphor and allusion as Russian"⁸⁹⁷, containing as such "many vague or downright opaque passages... (that) draw attention to the gulf between Kandinsky's theory and practice"⁸⁹⁸, but standing to this day as one of the most notable writings on visual arts ever produced. On top of this, I may recall a line uttered by Igor Stravinsky, yet another Slavic expatriate who settled in the US, "I am Russian, I think Russian and you hear it in my music"⁸⁹⁹, and rephrase it into a similar statement that highlights my intent not to shy away from my Serbian linguistic heritage, but quite the opposite: to try to use it to conquer back a culture that has conquered one's own in a fine and elegant way, that is, by infusing everything prosaic and unlyrical in it with the outbursts of lyricism that is characteristic for a Slavic culture such as mine. In fact, because of the significant influx of the distinctively Slavic melodiousness and floweriness into my written English, I have preferred calling the language in which this and my other books are written Anglo-Slavic, in analogy to the "Anglo-Indian" label attached to novels written by Indian authors in English⁹⁰⁰, a language of lesser diversity and phonetical richness, albeit imposed colonially onto the speakers of a dying and in many respects richer language, be it Serbo-Croatian or any other than the few major Indian dialects. Others have more indignantly complained that by dropping so many epithets that celebrate beauty, poetry and love, I have been embracing them as if belonging to my own when in reality they are everyone's, humanity's as it were, the response of mine to which is usually not a defensive stance, but an iteration of myself as humanity in itself, an emanation of godliness just like the one that resides in every other human being. On top of this, my unreserved adornment of verbalized thoughts with pearls of poetic epithets would not have been my approach in a renaissance world where such attributes were omnipresent, but it is a form of intrinsic rebellion in today's world conquered by the western ideals of practicality wherein muses and gods of poetry are systematically suppressed, if not shackled and locked in one of its many dungeons. For, just like philosophical thought in the form we know it today essentially brought itself to life from the laziness of the ancient Greeks, who had preferred drinking ambrosia in the shade of strawberry trees over engaging in hard work under the sun, so does thriving of poetry in our daily lives and worldviews require similarly escapist runs away from prosaic practicality. Or, as summed up by Arthur Schopenhauer, "To be useless and unprofitable is one of the characteristics of works of genius... all other human works exist only for the maintenance and relief of our existence; only the former exist for their own sake, and are to be regarded in this sense as the flower of existence"⁹⁰¹. The following passage from a talk given by Judy Grahn in SF at one of the first LGBTQ conferences rings on the same bell of celebration of poetry exactly because it is unprofitable: "Poetry predicts us, tells us where we are going next. This is because, more than most other writing, poetry requires listening to spirits, to the largest voices of the cosmos. Poetry sets the rhythm for

⁸⁹⁶ The book was, in fact, finished by 1910, but not released until 1912 except for the public presentation it received in December 1911. See Frank Whitford's *Kandinsky: Watercolours and other Works on Paper*, Thames and Hudson, London, UK (1999).

what we are doing as a group. I hope those of you who are primarily prose writers can pay attention to the teaching in poetry and don't listen to stupid advice about not writing poetry because 'there is no money in it'. There is no money in anything holy. There is probably no money in love, beauty, or wisdom. Everybody throws money at pain and trouble and sudden sensation, emotion, and anesthesia. But poetry is a way of channeling divinity from the core of the earth herself, and poets are mapmakers who follow those key lines"⁹⁰². These semantically unnecessary ornaments of sheer poetic nature that I resort to here and elsewhere were further glorified by the pen of Emil M. Cioran, as when he asked himself the following: "Once we reject lyricism, to blacken a page becomes an ordeal: what's the use of writing in order to say *exactly* what we had to say"⁹⁰³? Yet, of course, in this superfast world where quick transmission of information is oftentimes what matters most, these Taoist empty spaces from which our lyrical spiritedness could flourish are spontaneously reduced to null, suffocating the poetic flights of fancy amongst the common people and putting blinds on the eyes from which doves of heavenly beauty tend to soar to the worldly skies upon musing over the most ordinary details that ornament their vicinity with waving signs of sympathy from the omnipresent divinity. After all, I have already explained that the doors to truly creative expression always lead through breaking the law in terms of thinking and acting that go against the rules and standards forcefully or spontaneously imposed on us by others. The unusual beauty of Longfellow's poem about Hiawatha is, for example, not only in "the easy running metre"⁹⁰⁴ of its simple trochees that were and still are routinely denigrated by many poets, but also in its rhymes composed using identical words, something that has been considered as the instances of outrageous flippancy by these very same complexity-demanding poets, as in the following case: "Dark behind it rose the forest... bright before it beat the water, beat the clear and sunny water, beat the shining Big-Sea-Water"⁹⁰⁵. Needless to add, to follow in these lovingly rebellious footsteps of Longfellow's Hiawatha the Beloved would be a greatest gift imaginable to the Indian shadow of my spirit on its celestial missionary path. In that sense, I will continue to behave like an archetypical postmodern artist in taking the most deserted, rejected and discarded aspects of being, in this case romantic and poetical ways of expressing oneself, nowadays almost unequivocally seen as passé, and gleefully throwing lights on them. When a music publisher mailed a waltz to fifty composers in 1819 and asked each of them to contribute a single variation to it, the only one refusing to do so was Ludwig van Beethoven, calling the piece a "cobbler's patch"⁹⁰⁶. Four years later, however, Beethoven came up with his opus 120, comprising 33 variations to the given waltz, and described the process of writing it as spiritual awakening. Maybe the great composer realized that the true beauty lies in picking simple and seemingly primitive expressions and presenting them in light of an astonishing beauty. After all, when he spent days wistfully whistling the Ode to Joy from his final, 9th symphony, many thought that he was going crazy and that the piece he talked about so passionately was simplified to the point of mere irritability. The world, of course, would have to deal with the premieres of works such as Bartok's Allegro Barbaro and Stravinsky's Rite of Spring a century later for it to come to terms with the

lyricism of the neo-primitivistic approach to composition. And yet, out of this simple melody, one of the greatest musical pieces that this planet has ever given rise to was born. In view of that, I will always believe that “small is beautiful”⁹⁰⁷, that “the stone which the builders rejected is become the head of the corner” (Mark 12:10), and that appreciation of miniscule and neglected details in this world opens the door to glimpsing infinitely beautiful landscapes of wisdom within our souls. “Strait is the gate, and narrow is the way, which leadeth unto life, and few there be that find it” (Matthew 7:14), as the Christ said. Or, as Paul Heaton and Jacqui Abbott, once the centerpiece of the Beautiful South, noted once, “When the alleyway’s the only way, that’s real love”⁹⁰⁸. My Mom, the Big Bear and the living epitome of Hiawatha’s spirit, who had taught me that books are the greatest friends of one in life, wrote the following words in a letter to me, touching the same essence: “Tomorrow is the first day of spring. Even though it is cold, an awakening can be sensed in the air. The first lilies and primroses are flowering too. I look at them with wonder through the window. I wanted to pluck them, but then I recalled the haiku poem, and gave up, of course. Many do not recognize them because they do not look down, but only up. And they are so small, humble, and yet so beautiful. People normally recognize spring only when bushes of yellow freesia and fruit trees are in bloom”. So, I will never, not even in thousands of years of living on this planet, give up on mixing old and new and thereby instilling some new life and beauty into natural details and the ways of being long forgotten or stomped over by other people’s feet, like the petite flowers that are here to whisper us gracious secrets about ourselves and about this big wide world, as well as about pretty little earthlings with stars of wonder and love jiggling in their eyes.

S.F.3.14. Yet, living and creating while being dedicated to mixing old and new is hard, just as every standing at a crossroads whereat different trends and eras meet, as hardly understandable to each other as they could be, though waiting for us to unite them, is. A sweet reminder of this problem comes from a Natasha Bedingfield’s song⁹⁰⁹, in which she sits on a rooftop, love notes dropping off her chest, and sings about her “trying to find the magic, trying to write a classic”, while “having trouble saying what I mean with dead poets and drum machines”, being apparently caught tangled in the labyrinthine mesh of crisscrossed classics and modernity. Eventually, she comes up with a beautiful outcry while sitting on a rooftop, “These words are my own, from my heart flow, I love you, I love you, I love you”, as if reminding us that even utterly simple words such as these need not necessarily be dead phrases and clichés for as long as they truly flow from our heart. In such a manner, the singer from Sussex secretly delivered us the recipe for making even the simplest things and expressions touchingly beautiful: by simply letting them emerge from the sincerest depths of the divine fountain that our heart is. Along the darkest hallways of my mind, this maxim reechoes the most touching line of Marcel Camus’ movie *Black Orpheus*⁹¹⁰, the melancholic musical theme from which, Luiz Bonfá’s *Manhã de Carnaval* a.k.a. *A Day in the Life of a Fool*, my Mom used to hum and reminisce over endlessly during her dreamy hours, coming from the mouth of Hermes as he consoles Orpheus grieving over dead Eurydice and telling him that now that he could see her voice, but not see her face, he is “poorer than the poorest black man”: “What’s left to be said is poor people’s words”. For, as this cinematic classic attempted to

show, the underworld is where labyrinthine intellects frenziedly roam in circles, where papers overflow dark chambers and atria and where pretentious spiritualists congregate, whereas where simple people smile and dance is where paradise is, meaning that the way we speak should also be as simple as riparian rivulets on a Sunday morning, though undyingly coming from the magic well of a scintillating heart. Now, when it comes to some cool mixing, record scratching and a fabulous footwork, in the twinkling of an eye I become teleported to the doorsteps of a dance club and the art of dewy-eyed deejaying venerated in it, that is, of playing music to people's ears that magically touches their souls, softens their hearts and lightens their elegantly gliding bodies. This art, like just about everything else in my personal universe, is co-creational down to its core, as the right playlist depends on the space and the distribution of people in it, the social context and connotation, the lighting and multiple other factors that are subject to far more variation than those accompanying most musicians on stage. Via the merits of the co-creational thesis, according to which the environmental traits define the right impulse of the subject in interaction with it and *vice versa*, I learned that there is an occasion for a pearllest and a most divine song to be "cast before swine" (Matthew 7:6) or dropped down the drain, straight into oblivion, just about as much as there is an occasion for the most monotonous and uninteresting tune to reverberate magically between the walls encompassing the speakers. Therefore, it is of vital importance to keep in mind at all times that there could not be a perfect predetermined recipe for creative expression and that we always need to adjust our creative moves to the features of the environment, not in terms of its shallow demands, of course, but in terms of the intuitively sensed spiritual gaps that the music could bridge, that is, not in terms of what the public *wants* to hear, but in terms of what it *needs* to hear. Now, recently I was a DJ at a party when one of the partiers came up to me, asking me if I could play some music that would be more fun to listen to. As a DJ, however, I try to play songs that convey important messages to the listeners by telling stories about their lives. "Burn down the disco, hang the blessed DJ, because the music that they constantly play, it says nothing to me about my life"⁹¹¹, as Morrissey sang, outlining some of the guiding lines in the world of deejaying for me. For, what the system science teaches us is that discotheques, palisades, pinecones, rosebuds, chipmunks and cracks in the pavement are equally rich sources of educational insights as classrooms and libraries. Hence, in addition to all the fun music played at an ideal party for me, I try to instill the element of seriousness in it as well. For, to be enlightened during dancing, to build ourselves from the inside, and not only to tend to release our tensions in a Freudian style, is what the aim of a true disco club experience should be, in my opinion. For, to construct anything in life, to reach a higher level of our consciousness, which ought to be an elemental purpose of dancing and partying, work is required, thermodynamically speaking. This means that building inner tensions and letting the energies rise from bottom to top and at the same time be dissipated, graciously, from top to bottom, transforming our bodies into conductors of an alternate current between the heavenly clouds that traverse our heads and stable grounds on which our feet firmly stand. Therefore, to release as much as to stress is what we would come up if we were to dissect the range of movements of a most blissful dancer imaginable to its basic systemic operations. Note that the reason why romanticism in music (think of Mahler or two Richards, Wagner and Strauss), in poetry and in general expression alike is so foreign to youngsters today is that their laidback attitude that praises relaxedness and stands in the way of any affected, overly emphasized emotionality is at variance with the basic proposition of romanticism, which is that only when we produce an inner tension that reaches high, high and ever higher, being akin to stretching the strings of our spirit all the way to the point of rupture, can we turn ourselves into a high-flying bird of

⁹¹¹ Listen to The Smiths' Panic at Hatful of Hollow record, Rough Trade (1984).

Paradise, a heavenly harp from which the mellow chirps that smoothen and soften the souls made jagged and rough over the course of living will be emitted all around. And until this sympathy for the authentic romanticists amongst us and the stress that they bring into the game, so to speak, is restored, all we have on the dance floor will be awkward and limply swinging bodies with no energy to move a grain of dust underneath their feet, let alone a star from the sky. This, finally, is where the right blend between the “dead poets and drum machines” lies. After all, the only beautiful way to have fun is to pervade each and every moment of it with a message of seriousness and reinforce these moments with threads of potent ethical or aesthetic insights, and *vice versa*: the ultimate seriousness lies in an eternal, divine joy that underlies the very existence. Virtuous humor always has an important and serious message hidden in it, while the ultimate knowing in this world at its end points to childish joyfulness and giggling smiles.

S.F.3.15. It was a day with the Sun giggling and the air shuddering with pure pleasantness when I met up with Ingrid to discuss how to release the little babies of my books from the harbor of my laptop and into the seas of the real life. It was ten years before I vowed for one final time never to make a conscious effort again, be it lifting a finger, to promote my books and push them toward the market. For, like children, now I know, while they are being raised and these books written, they would give the greatest bliss to the parent, that is, the writer, but only when they reach adulthood, twenty or thirty years after they were conceived, long after the irksome days and dark nights of the teenage years and the adolescence when the estrangement from them peaks, will they be able to give back tangible things back to their creator, and may so be, I say, with these letters piled in the sunset of an early spring day under a eucalyptus tree in the southern Californian shade that I, like in Balašević’s song⁹¹², am only beginning to understand. In view of this, why bothering with such a mediocre task as book promotion and marketing when all that is needed is to nurture these babies with zeal and love, and then, one day, when they turn into glorious ships, let them go into an open sea. “After you release music, it doesn’t belong to you anymore”⁹¹³, noted the American musician, Caroline Polachek, and indeed, on the day when these books will be published, the ties of attachment to them will be severed and they will be released, into a world of their own, and all their creator can do from then on, as with children who have finally, once and for all, come of age, is to dream up the paths of spiritual splendor before them, but without meddling with their independent strides. On this day of giggly sunshine, however, as soon as I entered the coffee house in which we met, on the corner of Guerrero and 18th, I realized it was a sign, a great one, and that I am on the right way, albeit not the rather shallow one I thought I would be pursuing that day. The name of the bar was Petra, and all the walls were decorated with the images of the city entirely built by engraving it onto a rocky mountain. Petra actually means “stone” in Greek, which explains the origins of this city in Jordan that still stands as one of the greatest marvels of the world. In fact, the symbol of a stone has meant enormously much to me throughout my life. Not only that in the days of my youth my friends used to call me a stoner, because of my tendency to completely freeze and turn into a stone at parties, just like Socrates allegedly did⁹¹⁴, deeply withdrawn in pondering ideas and visions that were flourishing inside of my head, still like a rock over which streams of graceful ideas were free to flow like waterfalls.

There are much greater things in life that stone symbolizes for me and there may be no wonder that my first home in the US was a stone's throw away from the woodlands that homed Oneida Indians, also known as People of the Upright Stone, the epithet they earned after they were chased by the enemy into a clearing within a forest and then magically disappeared, as if they had been turned into stones. It may also be no accident that the first and the only Indian chief headdress that I have gotten to wear, in the middle of the Adirondacks, surrounded by gazillion evergreen trees, all of whom whispered inaudible cosmic melodies of saintliness and salvation into the forest air, was the one that once belonged to the Wolf clan of Oneidas – with the Turtle and the Bear being the other two – all in regard to the meaning of my first name, Vuk, that is, Wolf. Members of the Wolf clan have been traditionally dedicated to adoption of foreigners from Europe; hence, the sense of security, happiness and being on the right path that washed over me as I stood on that glorious summer day with this honorary headdress on. Speaking of stones, the entire chapter in the previous book of mine was written so as to show how the whole Universe could be seen as resting in every tiny pebble. The story about the stonecutter I often cite I consider as one of the most beautiful ever written, and the same can be said for the short scene which involves a clown comforting and heartening poor Gelsomina with a stone in his hand in Fellini's *La Strada*, the movie that its creator was fondest of⁹¹⁵. During the famous scene, *Il Matto*⁹¹⁶, the clown from the circus troupe, just released from prison, proclaims timeless words adorned with sheer stardust, telling Gelsomina, "If you don't stay with him (brutish Zampanò), who will", for "everything in this world is useful for something... take a little stone, for example; even this little stone serves the purpose", showing how Christ-like creatures come in all breeds and shapes, from gritty fools and their gregarious trumpeting to secluded outsiders and their fey naiveté. In a likewise manner, I picked a stone in my writings to weave a story around it: that is, to show that the most ordinary stone can be seen as the peak of the Pyramid of Cheops, pointing at the greatest stellar heights and secrets to the uttermost beauty of being. Then, out of more than a hundred of SF neighborhoods, it was on a wooden bench in Stonestown Galleria that the Little Bear and I whispered marriage proposal to each other's ears. But the most important connections travel along the branches of the Father's side of my family tree. While my Mother, the closest thing to the innocent spirit of Gelsomina that I have known, coincidentally nicknamed Mina, was born as an Aquarius and her Dalmatian ancestors were primordially tied to water, with one of her father's brothers becoming a famous sailor and later writing sailing memoirs, my Father's ancestors were from Montenegro, the land of bare stone, whose name translates to "Black Mount", connoting the darkness and the heaviness that have taken over the spirits of its natives. My paternal grandfather's name was Petar, the word with roots in Greek and Latin words for stone, Petros and Petra, respectively, as I already mentioned. Having grown in the most impoverished district of Montenegro, called Lješanska nahija, whose name translates to "the county of corpses", and where "traditionally, the Dukes of the tribes came from the House of Uskoković"⁹¹⁷, he enrolled in an Orthodox Christian seminary at the age of 14, which sealed his fate and set his life on the trajectory toward a colossal fulfillment of this spirit of tragedy and of the etymological and figurative omens that had lain all around him. As a 35-year old monk he was sentenced to death at the very end of World War II, and executed by the firing squad in front of the eyes of his 16-year old daughter, my Father's sister, who died of

sadness two years later. Nowadays, owing to the outstanding willpower of the spirit that he exhibited during his harsh life, he has been declared a saint by the Serbian Orthodox Church, and his image has served as a powerful ideal and guidance for both me and the closest members of my family. Allegedly, he was offered to escape via a secret channel to the US the night before the shooting, but he refused to do so, determined to share fate with his fellow monks. “Just step over to a different line with captives”, it is said that he was told by the communist generalmajor Savo Burić, to which he immediately replied: “How easy it is to say so, but if you only knew hard it’d be to leave my brothers just like that.” And so he was shot on a meadow just outside of Kamnik, a Slovenian town, the name of which means the City of Stone (*Stein in Oberkrain* in German), because of large deposits of numerous minerals that it was founded upon. The moment when my Father and I went to that meadow for the first time, wiping the snow beneath our feet and realizing that we were standing right on the tiny and forgotten memorial, symbolically seen as the foundation of the existence of both of us, is an unforgettable one. I turned around and saw a great mountain behind me, and this image still stands firmly impressed in my mind. It is one of the moments in life when you feel as if the time has stopped, and you realize that you have just entered one of the stations on the endless train journey that your life is. The fuzzy images of the landscapes along the life path of ours, as seen through the window of our mind, become still and crystal clear at those moments. Now, the pathways of human fate are so miraculous that sometimes we look back and wonder at all the seemingly random, but in fact profoundly connected threads that our life has woven. Thereupon, accidentally or inconspicuously guided from the inside, my father decided to dedicate his professional career to Materials Science, probing the beautiful patterns that exist in solid matter. I still claim that scientific insights in this field can serve as inspiring metaphors in teaching ethical and aesthetical principles upon which humanity rests, and that chemistry is due to the metaphoric nature of scientific descriptions inevitably alchemical in a way. Gregory Bateson began his monumental *Mind and Nature*⁹¹⁸ with the story of him coming to a class, placing a crab and a seashell onto a table and showing to the students how they are connected to everything else via analogies or “patterns that connect”, to use his own terminology. Likewise, I have always dreamt of the day when I would enter a class, place a pebble on the table and begin drawing threads of thought that will convince everyone that one can read the secrets of the entire Universe, of life, ethics and aesthetics in that little stone. A grandiose task that is, but it is the one that I may be ready to dedicate my life to. Consequently, every now and then you will hear me dropping one or a few of analogies between physical chemistry of solid state and life in many of its aspects. But people are different, and it is through complementariness of predispositions of ours that we reach truly harmonious societies. Some people will thus have flowers, clouds, carrots, telephones or rainbows as the objects that will provide signs in their life, signs that will speak important messages for the paths that we/they ought to follow. There are certain objects, words, numbers and landscapes which naturally become impressed in our minds during our lives, as if angelically whispering to us that they are important and they ought to be remembered. And then later, when we found ourselves at an important crossroad in life, feeling as if a strange light shines through our mind and body, we may be able to see those same symbols around us and follow them towards the right path. Indeed, like the “rosebud” of Orson Welles’ *Citizen Kane*, a plain wooden sledge to which the mogul ascribed unexplainable meaning and value, even dying whispering its name, innumerable are objects or symbols that mysteriously thrill our instinctual self upon very glimpsing or visualizing them, subtly telling us that times will come when invoking them and/or choosing the path onto which they point will lead us to the lands of spiritual wellness and prosperity. Still,

⁹¹⁸ See Gregory Bateson’s *Mind and Nature*, Hampton Press, Cresskill, NJ (1979).

we should never lose out of sight the fact that each object, each human glance and each detail of the face of the world is abundant with these intricate messages that Nature strews around us while tirelessly guiding us by the hand to become a giggling Sun of joyful spirit one bright day.

S.F.3.16. However, presenting my works to the public can often have detrimental effects to the creative drive arising from the depths of my heart and mind, heart and mind that I see as two great supports for the strings of music of mixed science and poetry reverberating inside of me. When I played in the band, Silence at a Half-Star, there were moments of exhausted emptiness minutes after the concert was over, I remember. It was as if the immense wish to channel some mysterious enlightening energies from the celestial loci that lay far, far beyond me to the audience by means of my expressions on the stage wholly drained my heart and soul in the process and left me sitting listlessly, caged, mentally and emotionally exhausted on the stairs of the concert halls, as I would watch the audience retreat like a giant shadow. Then I came to realize that there may be a special feeling of emptiness arising in us in direct proportion with the magnitude of the responsibility-driven wonder over whether we have succeeded in our mission and conveyed something of colossal importance to the audience, following any live performance, be it a lecture, a theatrical play or a concert. When an interviewer asked Thom Yorke how he felt after *Kid A* was issued, he said: “The day the record was released I was returning home in a cab, and I cried”. I guess this is how a true artist intuitively feels that his long hours, days and years of work have finally born fruit. It is as if a postpartum depression hits one in those days, plunging one into a state of unexplainable melancholy, the feeling I most recently had after the work of my lab on an earthicle, a nanoparticle made to mimic the planet Earth in its stratified structure⁹¹⁹, saw the daylight after exactly three years of hard work. However, in spite of the accolades our works may gather by the peers, the public or the press, only the heart of an artist knows whether he has lived up to the missionary expectations that Nature has predisposed him to. No one else, not even millions of ecstatic fans,

⁹¹⁹ Vuk Uskoković, Sebastian Pernal, Victoria M. Wu – “Earthicle: The Design of a Conceptually New Type of Particle”, *ACS Applied Materials and Interfaces* 9 (2) 1305 – 1321 (2017). The idea of the earthicle came to me as I sat in the petite second floor lounge of Lincoln Hotel in Chicago, in limbo between the two professional appointments, one at University of California in San Francisco and one at University of Illinois in Chicago, waiting for my belongings to arrive from the West Coast, having become frozen somewhere around Mount Prospect after being caught in the polar vortex that brought the coldest days that Chicago had seen in forty years. It was to prove for one hundredth time that being on the road, belonging anywhere, finding oneself between stations, at a crossroads stands for the most creatively prospective standpoint in life. The world, as it were, always looks more beautiful when one watches it through an eye adjusted to impermanence of things, *i.e.*, from the angle of the Buddha’s man who hung off a cliff and reached out to a strawberry growing on its edge, then tasted it and concluded that it was the sweetest of them all. The sweetest it was just because his existence was hanging on a thread and the change from a status quo was imminent. And how imminent this fall would be in the case of myself, the inventor of the earthicle, only time would tell, and not too much of it. For, as it would soon be realized after the idea of the earthicle merely touched the paper in the form of few inarticulate scribbles, without even being tested for execution in the lab, let alone accomplished and reported to the scientific community, the birth of this idea indeed resembled the opening of a Pandora’s box. It was an idea I now see to have been confined to a closed chest, reserved only for gods to glimpse, and yet I somehow snuck through the garden and the balcony, past the guards of the holy palace protecting it and entered the room where it lay, then opened it with a magic key, stole it from the palace and handed it over to people, thus causing the outrage of gods, who would bless me with a series of misfortunes from that day on. These included my sitting in the aforementioned Chicago building, homeless, with no belongings, upon the delivery of this idea, then watching my Little Bear miscarry a little “halibut” and my most beloved soul, my mother pass to the Great Beyond in that very same year only, as well as a later loss of job, unemployment, humiliation at workplace, at social gatherings and in professional circles as a direct consequence of this work, and so on. For, all things considered, what mortal would dare to reproduce God’s creation on a finer scale and, even worse, hand it over to other mortals to play with but an irreverent, Luciferic soul?

would be able to tell you that. However, accepting their opinions of our own greatness might make us feel as if we have reached a mountain peak of our creativity, which may have devastating consequences for the latter. Then, we may begin to ponder on the verses compiled by the Croatian songwriter, Arsen Dedić, “My art has given me a peak from which I will fall”, and although it may feel solemn and inspiring to walk towards that peak, the question some may ask is whether we should set it realistically, low enough so that we can climb to it and then spread our creative voice for certain number of others to hear its message, or to endlessly strive for the stars and never look back to see how high we are, knowing that the peak has not been reached yet, but still letting out voice humbly and with no pretension reverberate far. In any case, once we say to ourselves that we have reached the top and that there is nothing else we could strive for, the creative drives inside us would drastically drop in intensity and decadence and decline would creep into our worldviews, popping up their lumpish heads from behind every corner of our experience. To maintain these drives, however, there always needs to be a mountaintop set in front of us, similar to the one drawn on the cover of Radiohead’s record *Kid A*. Only then may our artistic capacities be fully embodied in our works. Only while we are on a way towards some beautiful aims on the horizon of our being and knowledge, we spin the wheel of creativity that benefits the world. Hence, the old Indonesian metaphor of the mountain of life, the closer to the peak of which one is, the lesser the circle of congenial souls that share the living space with one and the greater the unbearable pressure of loneliness surrounding one⁹²⁰. Now, although much support can be gained by presenting our works to souls that deeply understand it, there may be nothing more disastrous for our creativity than presenting the pearls of our ideas to eyes that do not see in them any value. Typically three types of responses are invoked whenever we publicly present our works: (a) ignorance or ridicule of swine before which we, having likened ourselves unto a sun that shines its light onto everyone, without a prior thought, unreservedly tossed our pearls; (b) intense dislike; and (c) sympathy tending to grow into sheer adoration or awe. However, whatever the predominant response we tend to receive, presenting our works to others carries significant risks, regardless of whether the recipients are ignorant, sympathetic or plainly malicious minds. Troubles begin, namely, when we let our creativity be guided by the quality criteria we find in human minds that appreciate us so much or when we let the public disparagements discourage us and prompt the reorientation of the compass of our creativity in more conformist directions. Yet, the only true way of being an artist is to be one in an absolute honesty with one’s own heart. Thus, when people ask me who I write these words for, I think and I honestly say: “I have no idea”. They simply flow out of my mind and heart. It is as if I have become a channel through which a vibe from some transcendental planes of reality is being transmuted to words and I do not know if there will be ten or tens of millions of people reading them one day. But I write them with as much passion as if whole Cosmos is looking at me now, with all the stars giggling and twinkling in their sympathy with my artistic devotion. For hours and hours I may sit still, allowing my biophysical interior to dance wildly on the waves of exciting thoughts and if my neck becomes as stiff as a rock in the process and if my eyes become all nervy and hazy from my old-fashioned self’s managing the bibliographies manually in the 21st century, typing them letter by letter and thus engaging in a task as tedious and, to many, preposterous as Roy Lichenstein’s hand-painting dots that imitated the Ben-Day prints of newspaper images in the noble attempt to blend fine art and banal print imagery, the upscale and the trite, into one, I would tell myself that creating anything truly worthy in this world is always an ordeal and never a piece of cake, as it is always being done with tears, sweat, blood and, well, just a bit of chocolate. In Jacques Rivette’s *Beautiful Trouble*, there is a scene in which the

⁹²⁰ Watch the TV series *Departures: Indonesia*, created by Scott Wilson and Andre Dupuis (2010).

painter admits to his studio a young admirer of his work who stops by a canvas and notices that it is extraordinary, but the painter dismisses it by saying, “It’s nothing. There’s no blood in it”; likewise, I say, if there are no stains of blood on my work, including these pages blazing with the emotion, I deem it inferior in value. And so, like Yves Montand in Gillo Pontecorvo’s *La Grande Strada Azzurra*, diving on breath to the bottom of the sea to tie a rope around a sunken boat and bring it back to the surface, all until blood comes out of his lungs and stains the seawater, I will continue to engage with blood-drenched fervor in the most mundane tasks involved in composing these lines, from typing references letter by letter, without the help of a specialized software, to scanning the text with bloodshot eyes, deep into the night, to ensure that all sentences in it are tied well together and flow flawlessly to and from one another. In this computer age we have forgotten that for millennia writing was performed using pieces of chalk, that is, remnants of millions of years old marine microorganisms called coccolithophores, flight feathers from the wings of large birds and inks derived from burnt bones, hawthorn branches, tar, tannin from gallnuts and turpentine from the resin of pine trees, and pencils made of wood and carbon, a chemical element cycling from one form of life to another, with innumerable lives and deaths destined to be experienced by each and every atom of it on the planet. In other words, we have largely overlooked a literal sacrificial act that has been intrinsic to writing all this time, which is whence the folk saying that a pencil writes with its heart gains a broader meaning than it may seem at first, advising us that only if we approach writing with a bleeding heart could the words on the printed page soar the readers high into the sublime skies of their mental celestial spheres. No valuable journey presents an easy task and this applies to the majestic trip to the hub of our spirit too, wherefrom precious gems are to be dug, cut, forged and polished before being given to others as gifts to adorn the wallpapers of their soul with. As the Way of Love has suggested, we should find the way to think, feel and act in unison with the real self of ours and at the same time make it an aim to find the most beautiful guiding stars to hand to people around us. Thus, the first step is to satisfy the voice floating over the divine music of our spirit and drifting deep inside of us. Only then do we get the chance to present these well-crafted and precious pearls that shine through our spirit to the world. Thus, when I write, I write in concord with my inner voice, not paying attention to what anyone else will say. When Steve Albini was asked to name “the most destructive thing inhibiting modern music” and he responded by saying, “The most destructive thing a musician can do is start worrying about whether or not other people will like the music. F*** other people. They’re not in the band. Just make music that stimulates you and don’t second-guess yourself”⁹²¹, his opinion neatly reflected my own attitude with respect to writing. However, using this approach, I am aware that I am walking along a thin line. Should I start saying to myself, “I, I, I”, the words that one guru repeatedly mumbled to himself after he had heard that his disciples could walk on water by merely mentioning his name, and then tried to do the same but then drowned, I would be hanging on to my ego for a while, and eventually fall deep. But if I take the quality criteria of my own as representative of entire humanity, I become closely related to the latter, and my works will, hopefully, shine forth with meanings relevant to each and every one of us. So, even though my attention has been resting deep inside of me, often referring to “I”, not so as to self-praise but so as to accept the responsibility for the ideas offered and breathe a humane, personal and unpretentious note into them, all of this time I have kept the entire society encompassed by the scope of relevance of my ideas, quite often carrying out the most ordinary tasks with a mindset embracing the entire humanity and Universe with its third eye. I am absolutely aware that writing

⁹²¹ See I am Steve Albini, Ask Me Anything, Reddit (May 8, 2012), retrieved from http://www.reddit.com/r/IAMa/comments/td90c/i_am_steve_albini_ask_me_anything/?limit=500.

is a form of communication and aside from writing so as to sort out my thoughts, remind myself of inspiring threads of thought at later stages of my life and prevent their slipping away into the abysses of forgetfulness, I mainly write because someone somewhere will read these words and find them illuminating. In the spirit of the Talmudic clowns from one of the first passages that comprised a view into a mind flashing with a multitude of sparkly ideas bearing resemblance to the night sky overcrowded with stars that this book has been, Joseph Haydn once noted that a secret voice had whispered to him, “There are so few happy and contented peoples here below; grief and sorrow are always their lot; perhaps your labors will once be a source from which the careworn can derive a few moments’ rest and refreshment”⁹²², and by looking deep into the heart of drives behind my furiously typing these very words with a whole lot of frenzy, I could see similar cravings to uplift sad and drawn human spirits, to awaken them in the midst of enchanting landscapes of thought and instill the starry twinkles of wonder and the sunshine of love, the two greatest blessings in the Universe, in their hearts and minds. As I say, if only one person, a boy with eyes lit up by wonder on the other side of the world, one day finds this book covered with dust, resting in a corner of an antique bookstore, takes it home and finds in it an amusing source of enlightening messages that will change his life for good and from there on maybe even the pathways along which the world as a whole will develop through the delicate and untraceable chain of cause and effect and perhaps be saved from its constant fall from grace through the interstellar void, I would believe that my mission has been fulfilled. For this reason, that is, because I wish to communicate something of extraordinary importance to another, I do not write in a self-invented language, even though I often dream of it and even though I easily could, somewhat like Jónsi Birgisson, Elizabeth Fraser, Damo Suzuki or the Apostles on the day of Pentecost (Acts 2:1-13). Instead, I have adopted the rules of grammar and vocabulary from my social milieu, having been aware that there always needs to be a balance maintained between living in harmony with the inner Sun of spirit within us and living in conformity with the needs of the surrounding world and its loving creatures. It is this balance between individualism and collectivism, between I and Thou, that is intrinsic to the Way of Love.

S.F.3.17. This balance between individualism and collectivism, that is, subjectivism and objectivism, points at another important thing. It is that every benevolent judgment or critique of ours will reflect partly what is good for us and partly what is good for others. These two aspects of every opinion are, of course, interrelated, as we, as an individual, are a part of humanity, whereas the values of humanity have shaped our individual qualities, which means that humanity is within us as well, so to say. So, just as subjective and realistic features are inextricably entwined within every product of our perception or reflection, the same can be said for every critique we put forth. Hence, no matter how badly musical experts are eager to compile a perfect list of the best songs or records of the modern music, their attempts are predestined to be futile. Leaving aside subjective criteria, that is, evaluating the quality of songs while ignoring how profoundly they speak about the critic’s own life is both unrealistic and impossible. A Zen master would readily agree with this viewpoint and possibly offer us his own cryptically narrative version of it: “A man lost an axe. A young man passed by and he looked like a thief. Later, the axe was found. The same young man passed by and he looked like a decent fellow”⁹²³. Leaving aside the fact that each quality assessment is inescapably subjective, especially in arts, the reign of aesthetics, the impalpable and

⁹²² See David Hurwitz’s *Exploring Haydn: A Listener’s Guide to Music’s Boldest Innovator*, Amadeus Press, Pompton Plains, NJ (2005), pp. 55.

⁹²³ The story found in Benjamin Hoff’s *The Tao of Pooh and the Te of Piglet*, Egmont, London, UK (1992).

unquantifiable, in favor of beliefs in our ability to omnisciently assess the objective value of things around us, independently of subjective points of view, is thus as erroneous and indicative of fall from sublime clouds of wisdom and grace as it can be. For that reason, we can conclude that each such list speaks about the state of the world, objectively, as much as it speaks about the author himself. On one hand, there is an obvious similarity in “patterns” that comprise our beings, emotions and intellects, if we were to refer to Gregory Bateson’s terminology, and what enlightens one creature has a great chance to illuminate the mind of another; hence, the room for objective realism in any communications we conceive of, scientific, artistic or informal. On the other hand, however, just like different plants suck different mineral contents from the soil, so does thriving of one’s spirit imply absorption of vibes that are unique to one’s own nature, inherently special and incomparable to any other animate spirits in the Universe; hence, the space for subjectivism in any human creation or system of thought. Although the most fertile path rests in the middle, between the termini of absolute objectivism and solipsistic subjectivism, the frictions between proponents of these two extreme philosophies will always seem to have been interminable. Hence, to counteract the nitpicky critics on the objective side, ignorant to the subjective nature of artistic experience, one could hear fans every now and then yelping the same message as the one I heard from an anonymous online commentator, “Who cares about all the ‘experts’ announcing the best bands or records when I like one thing, you like another and someone else likes something completely different. Music is not a sport so that one should compete to be better than another. Music is a contest against oneself”⁹²⁴. Quite certainly, this casual pundit aimed to tell us that triumphing over one’s inability to find lovable traits in it all and, indeed, learn to love every song, every note and every creative movement in the world is the road along which we should travel when it comes to enjoying arts in this life. I may also add that songs adored by creatures dear to us will always tend to be more profoundly appreciated, which is the first step in our discovering a plethora of enriching messages therein, which we may have otherwise been blind to had we discarded them promptly as trivial or baffling. Or, songs heard in the midst of some enlightening moments, bringing back fond memories later, will likewise tend to give rise to a more blissful glow before the eyes of our heart than those heard in emotionally deprived states. Owing to our innate propensity to paint a rosier picture of the past in our memory than the real-life experiences were, even the songs irritating us every time we hear them on the radio today have a good chance of evoking blissful memories on a distant future day, which is an effect that directly contributes to this inescapable mingling of illogical subjectivities with any vain attempts to be perfectly objective in our assessments. What’s more, having brought to mind this tendency of songs to be like wine, the older, the better, all critics should know that things are understood best when we fluctuate between the state of immersion in them and the state of total distantness. This type of inconstant relationship, however, cannot be maintained with respect to all things and time is one of them, which is why many pieces of art gain their ageless value and become considered as signs of the times, windows through which their smell could be still sensed eons later, only after these times of theirs have passed. If this is indeed so, then trying to judge about their value before their time has run out must present an insult to a common critical sense, joining in the ranks of ridiculousness other attempts of ours to liberate judgments from any subjective influence. Consequently, in *A Thousand Clowns*, a play by Herb Gardner, the protagonist, a middle-aged man gripped by the Peter Pan syndrome and faced with losing a custody over his twelve-year old nephew due to his unconventional, though a hundred per cent benevolent behavior, stands on the fire escapes and

⁹²⁴ See comments to Aleksandar Dimitrijević’s Five Best Music Videos of the Pre-MTV Era, available at http://www.b92.net/kultura/komentari.php?nav_id=529350#rating (2011).

scolds about his nephew's coming up to him with a range of lists one day, fearing that his new family might be a bunch of list-makers too, so that he would eventually "learn to know everything before it happens, learn how to plan, learn how to be one of the nice dead people", thus highlighting the inherently hazardous nature of any list-making, in any of the contexts, in this universe, especially when the given lists cease to be casual subjective reminders for the self and become fences of the fortress of the mind, built and preserved so as to keep it within pathetically narrow and finite limits. On the other hand, of course, leaving aside the objective aesthetical criteria would turn the critic into a solipsistic and autistic mind, an epitome of the careless "anything goes" attitude of idle anarchism, unable or unwilling to provide useful musical advices to others and enrich their spirits thereby. Thus, using the language of the philosophy of phenomenism, I claim that every meaningful critical choice we make will be inter-subjective. Another problem is that with the passage of time the number of musical pieces that are "out there" increases, and it is less and less possible to plunge into all of them during one's lifetime and form a well-shaped opinion about what the most important pieces in this musical tree of creation are. Some modern journalist armadas, such as Pitchfork Media, already suffer from this problem, in my opinion⁹²⁵. The same

⁹²⁵ In a letter never sent to Pitchfork Media, in addition to outlining many masterful records that they have omitted from their compilations of best records, I have also pompously accused them of "not giving rise to heroes through their critical selection but to a generation of lame and listless escapist". On the other hand, I know that the spirit of heroism that I have been nourished with all through my formative days has never fully found grounds on the North American continent; thus, it is understandable that it stays unrecognized and unappreciated by these American critics. This also goes hand-in-hand with their neglect of numerous great musical pieces that originated on European soil. Musical works that adopted clichéd elements of the traditional European sound have been, on the other hand, often mistakenly embraced for their novelty. The example I often refer to in order to illustrate the latter occurrences is Ricardo Villalobos' highly esteemed *Fizheuer Zieheuer*, which presents a humdrum fusion of a stereotypical Balkan brass band with a minimal techno background. In a 2011 interview (<http://pitchfork.com/features/interviews/8019-bjork-15-years/>), Björk mentioned that "over the last 10 years, there have been so many incredible albums created in bedrooms by people who never would've gotten an album deal", and Pitchfork Media was established with the purpose of celebrating such homemade music that went even beyond the notion of independent sound. Yet, just as every thriving alternative trend sooner or later transforms into a mainstream one, calling for new opposing alternatives to it, the same thing has happened to the musical styles supported by Pitchfork Media. From probable early dreams of embracing the artistic outsiders, this troop of critics has become allured to the same traps that the mainstream critical circles have suffered from for, as it seems, ages: the tendency to value surface more than the essence. In the spirit of all hypocritical guardians of the gate, theirs have become closed to the inflow of wonderful new musical pieces that engrain the beauty of imperfections throughout all their layers, from promotion to arrangements to technicality, while, on the other hand, their mouths have been pompously filled with the words that insinuated celebration of the ideals of low-fi, homemade, organic approach to artistic creation. All these humble and yet lovely works have thus become rejected in favor of bland pieces that have merely managed to conform to the trends of indie culture, having polished and appealing clothing, while their essence has been oftentimes found rotting in greed and superficiality as much as that from which songs hearable on MTV, VH1 and Billboard lists is. The joke that the evolving music scene played on this influential armada of critics came from the unexpected confluence of their protégés and of those that they have abhorred and rejected as trifling mainstreamers, as exemplified by the way their fave, Kanye West led to straight to the doorstep of widely denounced Kim Kardashian or the way the styles of disparaged Lady Gaga and of their darling, Grimes, blended as soon as the latter emerged out of her cassette-player-holding-and-hoodie-wearing-and-video-self-directing phase and began to receive serious funding for making her music and videos, essentially from the Art Angels record onwards. To sum up, as of today, Pitchfork Media can be considered the mainstream of the sound culturally and stylistically alternative to the modern pop music. However, since no field of human creativity contains only two trends dialectically developing side by side, but ideally lets them branch into a multitude of dialectically opposing streams, the critics' ears should be open to the twitter of millions of novel sounds that come forth as subgenres and crossovers of the already existing trends. However, the human ability to cope with and grasp this countless plethora of artistic works is limited. Even when sounding at first like something already heard before, humans are able to mysteriously weave inspiring emotions into their music, which most often requires many hours of listening before it reveals their pearly signs in front of the listener's mind. Visions of the imagined beauty of music made by artists who

problem is persistent in sciences, as an increasing abundance of experimental data makes it ever more effort- and time-consuming to specialize in specific scientific fields and research topics, and yet keep in mind a bigger picture, that is, be a dolphin that happily leaps across the surface of knowledge, where everything appears as interconnected, and yet readily plunges into ocean depths, revealing sunken treasures and precious pearls of knowing. Sometimes I even feel that if anything besides the limits of the Earth's capacity to provide enough resources for the endless expansion of humanity will put brakes on the current exponential trend of the informational growth, it will be the inability of individual human minds to grasp the big picture of things and thus wisely influence the directions along which individual, specialized fields of human inquiry should move. Now, not only that the artistic pieces are nowadays too many to fit into one's lifetime of listening, but musical works are also not something that can be evaluated after the first listening. It takes living with them, letting them talk to us, in sad and joyful moments alike, and gently looking after them, just as we do would do with a living creature, giving them a chance to speak when we feel the right time has come, in order to understand their preciousness. I have seen people compiling gigantic lists, comprising more than a hundred records released in the current year, but this is not how profound critiques are constructed. Any list like this is predestined to be superficial and far from perfect because numerous attempts to penetrate into subtle meanings that truly great records abound with are required to understand their greatness. From my experience, I know that whenever I was prompted to add a record high on my list of the most impressive records for a given era immediately after listening to it for the first time, it had to be moved down rather than up on the list after a few additional listens and sometimes even taken off of it for good, reminding me over and over again that whatever appears catchy and attractive at first sight only rarely sustains its appeal in the long run. On the other hand, exclusively those records that invoked perplexity, that were not even half way through understood and not emotionally connected with at all after not one but many initial listens are nowadays found on the tops of the lists of my favorite records. They have slowly, step by step, made their way to the top, gradually revealing their greatness and timelessness in my eyes, reminding me that time is always required to show the true value of any products of human creativity. Or, as stressed out by Arthur Schopenhauer, "the more a man belongs to posterity, in other words, to humanity in general, the more of an alien he is to his contemporaries... the general history of art and literature shows that the highest achievements of the human mind are, as a rule, not favorably received at first; but remain in obscurity until they win notice from intelligence of a high order, by whose influence they are brought into a position which they then maintain, in virtue of the authority thus given them"⁹²⁶. Rainer Maria Rilke held that questions ought to be lived since only as such would they let the questioner one day evolve into their answers, and I concordantly claim that each record, that is, a piece of art in general, is a question that has to be lived for a long time and make friends with, bit by bit, before many of its secret treasures and signs become revealed to one. Impatience can thus be said to be one of the greatest enemies of creative criticism; in contrast, by abstaining from immediate judgments and rather letting our entire being reverberate with the dying waves of remembrance in the wake of experiencing artistic expressions is how we may arrive at superbly sophisticated insights regarding their genuine quality. The same approach I have applied to all other forms of art, of course; for

will never become popular and whose music quite often won't be heard outside of their bedroom, possibly sharing the fate with these very lines hidden from the view of hasty and casual readers, washes over me every time I attend a concert in a venue such as the Bottom of the Hill and gaze at the ravishing bronze statue of a Sphinx-like muse on the right-hand side of the stage and imagine the striking notes fly like planets and stars around her eyes.

⁹²⁶ See Arthur Schopenhauer's *Wisdom of Life*, Dover, New York, NY (1851).

example, watching movies is in my universe always followed by hours of tranquil meditation during which I permit them to freely breathe their vibe into my daily life, into every glance I take and every gesture I pull off, painting the chiaroscuro of the most ordinary details of the world with their unique crayons. Only then do they begin to subtly let me know how great they are, and no sooner than many days, months or even years later will they have a chance to become endowed with the laurel wreaths of fame and recognition in the cosmic pantheon living inside me. All of this explains why I point at the partially nonsensical nature of making annual lists of best records immediately at the end of the given year instead of waiting for a decade or a lifetime to do so, and do not become worried when my favorite artistic pieces become omitted from the top ten places on lists like these. Amazingly, I typically find my future favorite albums of the year located between 20th and 30th places on a list comprising 40 – 50 titles⁹²⁷. Remembering how OK Computer by Radiohead was selected as the 17th best record of 1997 by B92 radio station or how Frank Capra's *It's a Wonderful Life*, one of a few greatest films ever made, was announced as the 26th best movie in the year in which it was released, only one spot ahead of another Christmas movie, *Miracle on the 34th Street*, I have no doubts that far from the top of the "best of..." annual lists is where one would find works that would be declared as unequivocally acclaimed masterpieces on a distant future day. To pick a masterwork, therefore, one must go deep down on the list, just as the managers of New England Patriots went down to the 199th place on the 2000 NFL draft to pick Tom Brady, who would go on to set the all-time record in the number of Super Bowls won and become widely considered by the sports analysts as the greatest quarterback of all time. As I sit and write this at the edge of Joshua Tree National Park, where Gram Parsons spent the most delighted and final moments of his life, I am prompted to recall than not far from the 199th place, at the 195th to be exact, was how high Gram Parsons's chef-d'oeuvre, *Grievous Angel*, charted upon its release in 1974, only later to be inaugurated into a seminal crowning achievement of the so-called American cosmic music. This incapacity to discern true masterworks from simply solid or, as it is often the case, utterly trifling works, it should be noted, applies to lists compiled by critics, who may think of themselves and their criteria as independent, but who are never immune to pure marketing constraints⁹²⁸; if lists made by general public were concerned, I doubt that any of my favorite pieces could be found thereon at all, except at their very bottoms. When it comes to films, for example, with the exception of the rare oldies, which are seen and rated by those who specifically searched for them, any recent movies that I find artistically likable on, say, Netflix or Amazon Prime, are rated with no more than 1 – 2 out of 5 possible stars. Hence, instead of sitting in a regular cinema and watching a Hollywood blockbuster, I would always rather sneak into a cinematheque and watch a film from Jean-Luc Godard's political phase, so anticapitalistic that it renounced any form of exploitation, including that of being distributed to conventional

⁹²⁷ The influence of a personal deviation from the established critical taste may also play a role here, as exemplified by my finding the records positioned between the 80th and the 90th spots on the Mojo magazine's list of best albums ever released rivaled only by the first ten records on it. The Mojo list could be found here: www.rocklistmusic.co.uk/mojo.html.

⁹²⁸ Namely, not a single critic has enough time to listen to every single musical piece within a selected genre released in a year. As a result, she limits her choice based on marketing criteria, i.e., specific record labels, online promotion, venues at which the musicians performed or are based, etc. This is why different end-of-the-year lists compiled by different critics usually contain more or less the same entries, merely shuffled in order.

cinemas⁹²⁹, or a film made with a “no wave, only the ocean”⁹³⁰ state of mind like that described by the Welsh filmmaker, Sally Pearce, in an essay on her spending years documenting her search for Przewalski’s horses in the Chernobyl Exclusion Zone: “I am often asked to explain, as part of the process of taking a PhD, how my work is going to have impact. The idea that work must ‘impact’ fits in with a ‘top predator’ model of the artist. I prefer the idea of non-impactful influence - as a single starling influences ‘the breeze created by a thousand furiously flapping wings’⁹³¹ at the heart of a murmuration”⁹³². In search of restaurants, too, long time ago I have given up on going to those rated 4 or 4.5 stars on Yelp; instead, especially in a new town, away from SF, I tend to pick for dinner or lunch only eateries rated with no more than 3 out of 5 stars, right around the average grade that my students have assigned to my classes, the delivering of which I have been most satisfied with. On a side note, this reminds me of how today, as a professor and a leader of a lab, guided by the idea that the brightest gems of human intellect are always found far from the tops of the pyramid of social appreciation, I browse through the rosters of student applicants by looking strictly at those ranking in the B and C ranges of the GPA scale, having convinced myself that such students, familiar with failure, fare better in the world of scientific research wherein success is but a minor exception in a continuous stream of failures than those who have gotten used to success and success only. In the domain of arts, thus, long time ago I ceased to expect that I would find true gems at the very tops of the “best of” lists compiled by music critics, let alone those derived from the mediocre taste of the general audience. But such has been the nature of the human ability to sense beauty and true lines of progress ever since. Nowhere in the history were the most valuable pieces of human creativity celebrated as such in their own times. The same, as ever, can be said for scientific creativity as well, which is when I get reminded of what John Warner, one of the founders of Green Chemistry, told me as we were chatting in a café at the Mission Bay campus of UCSF: “Truly innovative discoveries are simply not accepted for publishing in today’s world. Only those that build on the preexisting paradigms and make merely tiny, incremental research steps, while precisely conforming to the technical presentational standards, make it through the peer-review procedure in top quality journals. This is why in search of truly inspiring papers I never go to the journals with the highest impact factors. I rather go to journals that have medium or low impact factors”. Comparing prestigious journals with “exclusive fashion brands marketed with a gimmick called ‘impact factor’”, the Nobel Prize laureate, Randy Schekman concordantly noticed that “just as Wall Street needs to break the hold of the bonus culture, which drives risk-taking that is rational for individuals but damaging to the financial system, so science must break the tyranny of the luxury journals; the result will be better research that better serves science and society”⁹³³. According to my father’s stories about science and life, these opinions would have been readily shared by his good friend and a pioneer in the field of high-temperature non-oxide ceramics, Gregory Valentinovich Samsonov, who used to claim that

he had found most satisfaction in publishing works not in the mainstream, high-impact journals that favor confirmations of the paradigm, but in obscure ones wherein peculiar ideas that sometimes border sheer craziness could be found, and especially so when the reviewers had come to be at odds with them, fervently opposing their release. I could not help but agree with this viewpoint, recalling how the most inspiring musical and visual artworks today come not from big musical and movie industries, but from small and independent labels. I am also artistically literate enough to remember how Napoleon III ordered collecting all the works rejected from the prestigious *Salon de Paris* exhibition of 1863, which included the early works of Manet, Cezanne, Pissarro, Guillaumin and others, and displaying them in a separate, so-called *Salon des Refusés* exhibition, thus creating a social momentum that brought the basic tenets of Impressionism to the daylight and enabled its propagation and, eventually, popularization. By 1880, Impressionism was the major artistic movement in Paris, where it became notable for its exclusiveness and unreceptivity to anything deviating from its technical premises, as the result of which the three major post-Impressionists, Cezanne, van Gogh and Gauguin, who set the foundations for cubism, expressionism and primitivism, respectively, all left Paris for remoter and more Arcadian sceneries to set up the bases from which they would revolutionize the world of arts: Cezanne moved back to his native town of Aix-en-Provence, van Gogh settled in Arles, while Gauguin sailed to the South Seas. I also remember that Raphael's most renowned pupil, Giulio Pippi had to go to the rather modest and rustic palace outside the town of Mantua, Palazzo del Te, to paint perhaps the most radical and imposing of all Renaissance frescoes, *The Fall of the Giants*, which questioned the principles of symmetry that the classical masters swore by, as well as that countless artists before and after had to express themselves through little popular channels and on small, independent labels in order to provide impetuses that would revitalize their arts and pave ways for trespassing everything in them that got stale by trite, overused convention. Consequently, it has been my conscious decision to make the journals with medium to low impact factors - where papers rejected from their more prominent counterparts land - the primary homes for my scientific and philosophical studies that strive to revolutionize their respective fields of knowledge. It is because, as I have come to conclude, in the spheres of mediocrity, where scam, lunacy, fraudulence and duplicity are interspersed with the moments of luminous lucidity, pioneering innovativeness and inspirational craziness in Albert Einstein's sense of the word, one finds the most precious and creative reports, the literal intellectual pearls. Moreover, not only have I always believed in the idea of "diamonds in the dust" and the inexplicable beauties that await those who find patience to browse through the piles of neglected, dusty stuff and learn to recognize invaluable preciousness, sheer diamonds, hidden in it, but I have also abhorred aristocratic elitism of any kind and strived to give to the poor with my acts and thus bridge the gap between the exalted and eminent and the underprivileged and humiliated of this world. Plus, I have known that willing to join the club of failed researchers is a path to a greater triumph for science than being subscribed to a company of those in whose hands everything works and appears flawless, the reason being my realization that perfection blocks the progress of scientific thought by requiring nothing much to be said about it, whereas failures open a plenty of room for ideas that question why the expectations and the methodologies failed and, in doing so, open the path forward for others to follow, if only imaginative thought and the powerful drive to express oneself are allowed to flourish inside one. The most illuminative papers are, thus, as I have always claimed, written with half-failed data, even though they are being destined to be accepted only by low-ranked journals in the field. On top of this, although most people nowadays wrongly rely on quantifiable parameters used to measure scientific productivity as indicators of one's creativity and successfulness, one should

always keep in mind that no quantity has ever been a direct and sole indicator of quality. In the world in which people in scientific circles measure each other's successfulness in terms of citation numbers, impact factors and Hirsch indices, we forget that Evariste Galois' h-index is 2 and that Albert Einstein's was only 4 in 1906, which was by the time he wrote and published his most influential works on the theories of relativity, the photoelectric effect and Brownian motion. Even the altmetrics score, which is considered by the librarians to be the most comprehensive contemporary indicator of the quality of scientific articles, taking into account their mentioning on various social media platforms, is far from being a solid indicator of the true quality of scientific studies. It, for example, equals only 3 for the seminal paper by Watson and Crick that contextualized the work on elucidation of the molecular structure of DNA done by them and Rosalind Franklin and hypothesized on the role of deoxyribose in defining the genetic makeup of biological organisms for the very first time⁹³⁴. It is, on the other hand, 7 times higher, equaling 21, for an ordinary perspective piece that emerged from the pen of George M. Whitesides⁹³⁵, thus serving more of an indicator of the perpetual validity of the old truism that popularity and the social buzz are rarely ever the indicators of the true quality of any human creations. Of course, in a social era where the shallow protégés of the entertainment industry, Katy Perry, Justin Bieber, Taylor Swift and Rihanna join the former US President, Barrack Obama among the five most followed people on Twitter⁹³⁶ and where the most popular video on the Internet is that for PSY's debilitating song known as Gangnam Style, this truism need not be questioned by any sentient creature. In contrast, since the most progressive ideas typically appear incomprehensible to the mediocre mainstreams, relatively long induction periods during which they gradually gain recognition and prominence tend to entail their exposition in reality. For example, in 1967, Steven Weinberg published the work in which he showed the possibility to theoretically unite the weak nuclear force and electromagnetic one, setting the foundations for what is now called the standard model in the elementary particle physics⁹³⁷. This paper was, however, at first not cited at all in the year in which it was released and in the following year, after which it was cited once per annum in 1969 and 1970, and then three times in 1971, before producing an avalanche of recognition that earned him the Nobel Prize in physics in 1979⁹³⁸. Mihajlo Idvorski Pupin, the recipient of 18 honorary doctorates and one of the most famous Serbian scientists and inventors, who patented some of the components of electrical circuits integrated in practically all electronic devices in use, including oscillating circuit, inductance coil and even voltage transformer, authored only 36 research papers during his scientific career that spanned nearly half a century at Columbia University in New York, which is an equal number that I, myself, an arduous advocate of the absence of correlations between quantity and quality as well as between quantity and the lack of quality, have published to date. Now, it should be noted that with evaluators of the quality of scientific output of the members of academia becoming increasingly aware of these demerits of oversimplified correlations between quantity and quality, we are now gradually approaching an opposite extreme, that is, a state wherein publishing dozens of papers annually in average journals, as it has been the case with me, for example, is considered as unfavorable for one's professional

reputation and progress on the academic ladder as publishing one paper every three years or so, as if it has become unquestionably taken for granted that the former, abundant output has to imply overambitious shallowness, not dedicated work and eruptive imagination, and that the latter, scarce output has to be the product of profound attention to detail and not of a creative block of a kind, obstacles posed by personal problems or, sometimes, sheer laziness. I, for one, always guided by the belief that there is no such thing as a negative result and that, given the public sources of funding for all our research in one way or the other, all data obtained in the lab are to be reported in journals or other publicly available repositories, honestly and unpretentiously, wrapped in interpretative clothes designed to fit to the best of our knowledge, have run into these problems as the result of my copious published opus, which has somehow been ascribed little value by those who have never read a single page from it, judging only based on the number of yearly publications and the reputation of the journals in which they were published. But then again, repeating a mantra that says something like “I won’t think of an elephant, I am not thinking about an elephant” is by no means a way to escape from the vision of an elephant we may fear in our thoughts and, similarly, consciously counteracting the idea of quantifiable quality is the way to merely make a full circle and fall into the very same trip from which we are trying to flee: the erroneous idea that qualities are quantifiable and that numbers or names, be they of institutions that the authors are affiliated with or of journals in which the studies are being published, could substitute a thorough reading and analysis of scientific papers, presentations and other reports. This custom of looking at the journal titles where one has published one’s work only to evaluate the quality of one’s scientific output is, of course, catastrophic in its essence and it reiterates my observation that there are no people with firmer and more copious prejudices than scientists, who should have been exemplars of unbiased, objective reasoning to the rest of the society. Moreover, place English sounding names, Ivy League institutions and a title of their work, hypothetic or real, published in an eminent journal side by side with names of, let’s say, African or Asian origin, affiliated with their native academic institutions and their work published in a relatively obscure journal and you will be amazed to notice the unfounded bias towards citing the former over the latter, clearly demonstrating how the measures of quality based on impact factors and other citation indexes are nothing but vicious circles whereby rich and renowned become ever richer and more renowned, while poor and neglected become more and more such with every spin of this illogical circle. Having submitted hundreds of scientific works for peer-review publication, I learned to accept that some of my most excellent studies would be routinely rejected by the reviewers, while some of the mediocre works which I contributed to with renowned names as virtual ghost coauthors would receive reviews in which it would be highlighted how it was “an elegant and insightful analysis... a very nice and important paper... data are convincing and well presented and the study is well executed”, prompting the editor to comment how “this is a rare accolade you should relish”⁹³⁹, and me to puzzlingly wonder where the world that we live in is heading to, spinning images of the most thoughtful and creative personalities living the last days of their lives unrecognized and in poverty, feeding pigeons with breadcrumbs and sleeping on park benches, although widely celebrated and built monuments to decades or centuries later, while sheer mediocrities have their arms triumphantly raised to the skies by the public. Like the Paris Salon in the 1800s, rejecting the works of anyone who challenged the dominant practices in visual arts, from Manet to Cezanne to Renoir to Pissarro, and letting geniï rust in the social gutters, so it is with the peer-review system in sciences today, where the most groundbreaking ideas and forms of expression are destined to have the gates shut before their faces and their creators to share the fate of countless minds before

⁹³⁹ Rosie Pyne, Journal Manager, Archives of Oral Biology, Personal Correspondence (October 4, 2010).

them that were too progressive for the mainstream and that were thus left out as rejects and scraps on the table. Speaking of crumbs, my work on the use of wild flowers plucked from the neighbor's garden, secretly, at night, as models for testing the biocompatibility and antibacterial activity of nanoparticles, carried out as the first project following my excommunication from academia in 2018, being my seminal children's science paper and containing in it the seed of the philosophy of poverty in science, which I would profess on many future occasions, was, for example, slashed for its "outlandish, flowery" language and called "the worst scientific paper"⁹⁴⁰, even though it will continue to be for a long, long time one of the papers that I have been most proud of. Other utterly innovative ideas I transmitted through scientific papers, be it the writing of a paper in the stream of consciousness style or promoting the concept of the earthicle as the world's first particle mimicking the structure of a celestial body, were equally met with avalanches of disapproval and derision. And once one realizes that the papers one considers as his greatest accomplishments because of their wit and innovativeness have been appreciated little or none by the scientific community, whereas one's mediocre papers are cited abundantly, as it has been the case with my scientific oeuvre, one cannot any longer have faith in the ability of humanity to discern wheat from tares and can only find solace in the bible, as it were, and in concordant points of view, which, themselves, are rare as diamonds in the dust, such as that aired by my instructor of quantum physics back in the late 1990s and, ironically, one of the most cited Serbian researchers, Ivan Gutman, as an answer to the question which of his papers he considered the most significant: "Can you imagine someone having ten children and you ask them which one of them is their favorite? Some of my works were cited hundreds of times. That has been most respected in our times. A few years ago, I made a list of my ten papers that, I thought, provided the greatest contribution to science. It was shown that some of them were not cited a single time"⁹⁴¹. On the other hand, what else to expect from a society that leaves not even science, that traditional bastion of originality, immune to collective idolization of the trend but the prompt silencing of any perspectives that deviate from the mainstream view? In science of the modern day, where most works could be anybody's, lacking a personal touch, and where there is at most a cosmetic difference in concept, methodology and style from one published work to another, even such horrendous practices as judging one's work based on the sheer number of citations, without flipping a single page of the author's work, become justified, prompting the inventive thinkers, including myself, to occasionally respond in the same way as Marshall McLuhan did during his cameo appearance in Woody Allen's *Annie Hall*, indignantly saying "You know nothing of my work" to the camera to embarrass an eloquent critic. Ironically, peer reviewers are the people who will most deeply dig into one's scientific work, yet these are the very same people who are usually biased and bigoted, irrationally favoring specific subjects, approaches, authors and affiliations over others and acting as cunning protectors

⁹⁴⁰ After deeming the paper lost and informing the journal of retracted submission, this review from the journal called *BioNanoscience* came unexpectedly, long after the paper was published in *ACS Applied Bio Materials* in 2020 and more than two and a half years after the submission date (March 27, 2019): "There is buried in this manuscript a scientific paper. However, the writing is among the most outlandish, flowery, and plainly weird. errors in English grammar, word use, and clarity of meaning are contained within every paragraph. Additionally, unjustified, inaccurate and overstated sentence are present throughout the manuscript. I do not wish to be hard on the authors but I have struggled with this paper in trying to understand as part of my review. This is the worst scientific paper I have every reviewed". *BioNanoScience*, Personal correspondence, October 24, 2021. To this ignorant reviewer's credit, (s)he did, albeit inadvertently, hint at one of the overarching goals of my scientific career, which is to create papers that bury the scientific paper of the present and past, along with all the cliches and convention that it has relied on over the last century.

⁹⁴¹ See Rake Filip Vukajlović's *Da li je SANU već sada glavna tvrđava antisrpstva?* *Glas Info* (2023), pp. 71 and 86, retrieved from <https://doi.org/10.5281/zenodo.7537122>.

of their position in the field more than the benevolent helping hands. And this is not even to mention their habitual ignorance of what a true review of another person's work is to be like. Namely, as if they have never read a single book review in their lives, they usually end up arrogantly telling the authors what to change in their manuscript⁹⁴² as if it was their own instead of commenting on its content, style, originality and countless other aspects of its quality, highlighting its merits and demerits side by side and only then suggesting revisions, albeit always at the authors' own discretion. Now, that everyone in the publishing world is aware of the brokenness of the peer-review system, which has been used in a virtually unchanged form since the mid-17th Century and the first issues of the Philosophical Transactions of the Royal Society and which, as we see, regularly leads to ditching of the most precious diamonds of thought due to their unusualness, I realized when Ashlie, Sebastian, Matthew and I, as a team presenting on pros and cons thereof before the leaders of the American Chemical Society⁹⁴³ asked them if anyone still believes that the peer-review system is good and not a single one of the dozens of attendees raised his hand, and yet no scientific publisher seems to be brave enough to fundamentally modify it in the direction of a less subjective and mediocrity-fostering model. Learning from art, as I have always claimed, would be beneficial in conceiving of more harmonious and accurate models for evaluating the quality of scientific work, particularly in the sense of creating a whole universe of critics parallel to the one where artists abide, so that conflicts of interest immanent in a model where scientists, inherently biased in their hungry quests to be the first to make a discovery, appraise each other's work, are minimized. For, compared to the art world where art critics, not artists, run journals, other periodicals and newspaper columns in the benevolent effort to separate the wheat from the chaff, in the science world it is scientists who edit, review and write for science journals, essentially advertising their own work and doing so usually to a very paltry effect, let alone running into countless conflicts of interest emerging from these mixed roles assigned to them. However, if a system of assessment in sciences were to be modeled after that existing in arts, through which science criticism would become a profession with a greater dignity and reputation than it has today, countless parallels with art criticism may be established, including a key one of relevance to this discussion, namely equating accessibility and the appeal to the masses with superficiality⁹⁴⁴, being the premise on the basis of which the numbers of citations and popularity in the field would be considered as most of the time inversely proportional to the lasting quality of one's work. Rather than using extremely simplistic criteria such as total citation numbers, journal impact factors, altmetric scores and the Hirsch index, as it is the case today, the critics would be impelled to read carefully, in detail, word by word, each scientific paper before they judge about its quality, just the way a film critic is obliged to watch each scene of a movie and ruminate at length over it before sitting down to pen a review of it, let alone constantly working

⁹⁴² As a trivial example, I paste here a recent review of one my papers that exemplifies this ill approach to reviewing: "1 The physicochemical characterization of superparamagnetic composite (SC) nanoparticles and calcium phosphate (CP) nanoparticles in culture medium of *D. melanogaster* should be performed. 2 How vancomycin were loaded on hydroxyapatite nanoparticles should be described in detail. 3 quantitative assay of nanoparticle across BBB and antibacterial efficiency in *D. melanogaster* with *P. aeruginosa* model should be performed. 4 However the nanoparticles across BBB, some image data of brain section such as TEM data should be provided". Chunying Chen, Co-Editor-in-Chief, NanoImpact, Personal correspondence (September 20, 2019).

⁹⁴³ This event occurred at the same American Chemical Society summer school at which I announced to the chief of the publication division that I dream of papers that would resemble Kerouac's *On the Road*. This dream of mine, which would come true a decade or so later from none other but my own pen, she dismissed on this midsummer day as the one of a lunatic.

⁹⁴⁴ See Christina Baker Kline's *Christina and Me, Down East* (July 2017), retrieved from <https://downeast.com/christina-and-me-christinas-world/>.

on their own knowledge by rereading their favorite and unequivocally monumental works from the history of science, in the same way a film critic would rewatch his favorite movies over and over again and read the literature on the history of his and other arts, lest the web of premises on the basis of which he engages in a constructive critique crumble due to dilapidation. In one such system of assessment, it would quickly become obvious that the most popular science, like pop music and Hollywood films, usually has a mediocre value compared to science standing in its shadow. Encountering the opinion about their work coming from the critics who got themselves thoroughly familiarized with its content and who have analyzed it in the context of the historic evolution of knowledge, these thinkers sidelined by the banks of the mainstream because of their being published in mediocre journals because of harboring thought that is too innovative to be understood by these mainstreamers would be less inclined than they are today, in this world of superficial assessment, to yell in the face of their assessors that Marshall McLuhan's remark: "You know nothing of my work!"⁹⁴⁵ Gradually, a global awareness would be raised that to be relentlessly rejected by the mainstream avenues is a necessary response to the attempt to disseminate the work of a highest quality and a most progressive character imaginable. To switch gears a little bit, aside from the fact that by its inherently biased and semi-corrupted nature, impregnated with dozens of conflicts of interest, the contemporary peer-review process favors reputable affiliations and renowned names in the field on the account of the little fish⁹⁴⁶, this routine rejection of the best of my pieces and the swift acceptance of the second-rate ones by peer reviewers has partly also been a continuation of insights I gained during my basic studies: namely, one may learn about a given subject phenomenally well and yet fail the exam, whereas even without touching the book one still has a chance to pass it. As the result of this, my first three grades in college, I remember, were three Ds, altogether spelling 666, the number of the beast, in the local grading system that ranks success on the scale of 6 to 10. Moreover, my cumulative GPA normalized to the US scale was only 2.87, the reason for which I could not care less about doctoral candidates' GPAs when I hired them for the first time, with my first PhD student, to everyone's amazement, happening to have the GPA of no more than 2.6⁹⁴⁷, less than even Steve Jobs' GPA of 2.65 at Cupertino's Homestead High School⁹⁴⁸. All this and much more I told my students during the first class on materials in biomedical engineering I held as a professor at the University of Illinois, just so that they could be aware that the world is intrinsically unjust and that grievances over grades, which the most inventive minds never paid much attention to anyway, is unnecessary as well as that the role of a teacher I gladly take in the academic setting, but not so much the role of a judge, given my belief that grading equals judging, which equals injustice, the reason for which I strive to live up to the premises of the Christ's description of his mission on Earth and nothing more than that: "I came not to judge the world, but to save the world" (John 12:47). In this holistically fractal reality wherein each piece contains the image of the whole inside it, each one the courses I deliver to my students deliberately acts as a miniature, kaleidoscopic reflection of life

⁹⁴⁵ See Douglas Coupland's *Marshall McLuhan: You Know Nothing of My Work!*, Atlas & Co., New York, NY (2010), pp. 118.

⁹⁴⁶ The following study supports this view: D. Murray, K. Siler, V. Lariviere, W. M. Chan, A. M. Collings, J. Raymond, C. R. Sugimoto – "Gender and International Diversity Improves Equity in Peer Review", bioRxiv 400515, doi: <https://doi.org/10.1101/400515>.

⁹⁴⁷ At most universities, the grade point average (GPA) of 3.5 is considered the minimum for admittance to the grad school, with the most prestigious ones usually enrolling only the candidates with GPAs higher than 3.9.

⁹⁴⁸ See Rosa Prince's *Apple Founder Steve Jobs 'Took Drugs and Abandoned His Family'*, *Telegraph* (February 10, 2012), retrieved from <http://www.telegraph.co.uk/technology/steve-jobs/9072749/Apple-founder-Steve-Jobs-took-drugs-and-abandoned-his-family.html>.

in its entirety, from the beginning to the end, and just as in life, where we are judged by people, not by gods, in such a warped manner that those emerging to the top, as a social crème, would never be considered immaculate or pleasing to the all-seeing Eye of divine Nature, who will have always favored those shoved into the shadow by the human judges blind to the shine of the sun of the human spirit from underneath the corporeal shells visible to the earthly eye, the same applies to the grades my students will receive at the end of the semester; if I were to search for diamonds among them, I would first look at those judged unfavorably rather than the straight As. All these little pieces of advice I hand out freely to them, like pearly drops of dew sublimating from the palms of my skyward hands, serve the purpose of liberating their juvenile minds from the terror of peer pressure and from subjugation to social standards that take away the soul from them and erase its stellar trails. All these instances of injustice that we are bound to face in life, hurting our sensitive selves down to the core, are, thus, not the reason to despair, I tell them, nor to feel depressed and dejected and wind down into an inexpressive cocoon. For, this intrinsic failure of other people to correctly estimate the quality of one's work is, in fact, an essential step on the ascent to the stellar spheres of creativity, for it teaches one to be true to oneself rather than guided by the desire to comply with social expectations and be liked by others, alongside making us aware of a fault in the structure of social reality, which we might have fallen into and completely vanished had we remained blind to it. Be that as it may, that one will be rewarded for one's achievements in life not for the most fabulous things one has done has thus stood as an undisputable remark in my head from the earliest age, building over time a mystical aura around me to prevent the dissipation of the focus, foster the inwardness and resound the echo of the divine voices rising from the depths of my soul. Thereupon, my response to people praising my science and wholly ignoring my philosophical discourses, including these very words, or the music I have made, could easily one day be the same one that the Hollywood movie director, Leo McCarey gave when in 1937 he received the Academy Award not for poignant *Make Way for Tomorrow*, the movie which Orson Wells said would make even a stone cry, but for a slapstick "lemonade" he directed the same year: "Thanks, but you gave it to me for the wrong picture". Getting back to music, I cannot help recalling how its history abounds with examples of artistic pieces that were considered as failures during their own times or immediately upon their release, but only to slowly gain popularity and end up being widely celebrated years or decades later. In fact, it may be a rule of thumb, certainly caused by the shortsightedness and superficiality of the critical opinion of an average human being, that only if an artistic work shows a gradual increase in the number of its supporters and devotees, rather than a short initial burst thereof, it will be eventually acclaimed as a truly valuable and progressive one. For example, Robert Schumann abandoned what became the traditional way to open piano concerts by the mid-19th Century – a conventional orchestral intro that ends with a half-cadence and opens space for a piano theme of its own – and decided to start off his piano concert in A minor with a simple sequence of notes that spelled the name of his beloved played on a flute and entail it with a lively communication between the solo instrument and the orchestra; yet, presumably owing to its exceptionally innovative structure, it faced disappointing critiques that called his work hardly graspable and pettily peculiar. Fast forward for a century and a half and in our hands is the prophetic drawing of two towers on the front cover of Wilco's 2001 record, *Yankee Hotel Foxtrot*, which was about to be released exactly on the 9/11 day; yet, the record company executives thought that the record would be a failure and suggested that the band release the album independently. Eventually, the record, one of the final verses of which posed the classic question "How can I get closer and be further away from the truth that proves it's beautiful to lie", as if grazing a sandy surface and uncovering the foundations of the

Way of Love, was rewarded by Pitchfork Media with 10.0 out of 10.0 points, thereby announcing it as a masterpiece, a sign of the times of a kind. Radiohead's *Kid A*, which was selected by Pitchfork Media as the best record of the first decade of the 21st Century, similarly received an avalanche of negative reviews upon its release. It was as if innumerable mediocre pop musicians and critics gathered to send out a collective voice declaring the record's worthlessness. Sharleen Spiteri of Texas openly wondered if Radiohead should have ever left their recording room – or was it the bedroom? - if the only thing they could deliver was “a dark and depressing, deeply alienating record”. Although ten years later Mark Beaumont, a critic for *Melody Maker*, still calls the record “willfully impenetrable, emotionally inaccessible, encased in opaque aspic”, he recognizes its immense importance by calling it “a cultural cornerstone” and recalls how “the A Kids looked to *Kid A*'s defiantly challenging and experimental stance for guidance, and then took to the internet, swarming around the prickly plaid of Pitchfork, creating the ever-churning blogosphere... A new cyberculture developed, and *Kid A* was its totem”, which is a step ahead from his accusing the band in 2000, right upon the release of the record, of having “created a monument of effect over content, a smothering cataclysm of sound and fury signifying precisely f*** all”⁹⁴⁹. As you could expect, this avalanche of negative critiques had lasted only until time proved itself as the best teacher and before some new or more experienced critics stepped on the scene and declared the record as a true masterpiece. Today, this record stands forth not only as a monumental sign of the times, an epitaph to both the classic and alternative guitar rock and a prelude to bedroom symphonies and a carrier of the spirit of liberation across ages to come, but its greatness is also conceptual, read in the way its final statement pulled the rug from under the richly adorned tower of sound that the band meticulously built over the years and let it crumble in seconds, never to be restored again. For, unlike most of their predecessors and contemporaries, Radiohead disobeyed the paradigm of their youth, which was that a good composition makes a good song and that complex arrangements can only diminish its innate beauty, the paradigm set forth by the Beatles, solidified by their followers and religiously respected by generations that have come after them. However, Radiohead insightfully recognized where the key innovation lies, quite unexpectedly given the massive failure of progressive rock only two decades ago, and went on to install their creative niche in song arrangements, dynamics and finest features rather than in the broad composition. And today, though the songwriting of, say, Guy Chadwick of the House of Love and of Thom Yorke of Radiohead is equally excellent, where do the House of Love sit in the popular music hall of fame, forgotten somewhere along its corridors because of their neglect to craft more dynamic song arrangements, and where do Radiohead lie, in clouds with critics debating whether it is soon enough to consider them the greatest rock band alive or the greatest rock band ever. *OK Computer* was the apparent peak in the band's development of a symphonic guitar sound that brought it fame, but *Kid A* finale crushed it into pieces in an act whose conceptual greatness is beyond words, destined to be slowly revealed, iota by iota as time goes by. After all, it is only time that slowly reveals greatness of artistic pieces. Quite often, they sound meaningless, insipid and boring to us upon first few or dozen times we listen to them, after which at the right moment in space and time, when stars of our spirit and the world seem to have aligned, we may suddenly start to feel as if our spirit has ingrained some of their notes and our inner world has begun to

⁹⁴⁹ The two reviews of *Kid A* by Marc Beaumont from 2000 and 2010 are available at <http://www.followmearound.com/presscuttings.php?year=2000&cutting=85> (2000) and http://m.guardian.co.uk/ms/p/gnm/op/s-29wdt6W0qauj41C1_S3Xg/view.m?id=15&gid=music/musicblog/2010/oct/11/radiohead-kid-a-10-years&cat=music (2010).

reflect the tiny twinkles of their essence. A similar although a bit less drastic thing happened with Radiohead's former record, *OK Computer*, which is nowadays considered as one of the greatest records ever made, but was right before its release informally labeled as a "commercial suicide" by the band's home record company, starting a chain reaction where other labels around the world began to downsize the estimated sales after listening to the record. *Time Out*, the landmark record by the Dave Brubeck Quartet that helped define the combination of coolness and cartoonish sweetness of the West Coast jazz, was released at the sole discretion of the Columbia records president at the given time, after receiving negative internal critiques because of the heavy usage of atypical meter signatures. I also recall Tricky's *Maxinquaye* being marked by an acclaimed Serbian critic, Petar Luković, with a sticker that said "elevator music", while Björk's *Post* was considered by him to be tunefully infantile⁹⁵⁰. Then, the aforementioned Chicago-based squadron of hunchbacked and bearded indie music critics, Pitchfork Media, gave once a scandalously negative review to Belle & Sebastian's landmark record and an exemplar as to how humane handclaps could beat techno beats on any given day⁹⁵¹, *The Boy With the Arab Strap*, rating it at 0.8 out of 10.0, accusing it for the criminal levels of mediocrity, calling the enchanting songs on it "so sticky they should be hanging from Ben Stiller's ear", and eventually adding that the record "should be used to batten down the crap song hatch"⁹⁵². Yet, all of these initial receptions I met with a smile, knowing that "to be an error & to be cast out is part of God's design", as William Blake, a poet who "remained an isolated and unknown figure from beginning to end – as shadowy to the outside world as the outside world was to him"⁹⁵³, pointed out, as well as that "the light shineth in darkness; and the darkness comprehended it not" (John 1:5), as the Biblical words *per se* remind us. Likewise, every time I come across closed doors and gates shut down at sight of myself, rejecting me and blocking me from passing through, I recall Bob Dylan's legendary remark that appears as the verse no. 69 in his *115th Dream*⁹⁵⁴, right after he was kicked out of "a house with the US flag upon display", a flag that, like every other flag, as Arthur Rimbaud had it, "heads for the squalid landscape"⁹⁵⁵: "You know that they refused Jesus too", to which the bouncer replies, "You're not him", neglecting to realize that the Christ's heart is in each and every one of us. Thousands of similar examples can be piled up at this point, of course. Be that as it may, although I also love making lists and endowing human works of art with imaginary stars, I always remember Voltaire's adage, "Better is the enemy of good"⁹⁵⁶. Thus I present these lists with a dose of

⁹⁵⁰ The reviews appeared in the magazine *Ritam* edited by Dragan Ambrozić around the time of the release of these records.

⁹⁵¹ If you were to ask me if I love electronic music, I, a raver at heart, having ridden in my imagination the purple strobe shafts in the empty airplane hangars of New Belgrade on the last night of summer of 1995, blinking in beat with Laurent Garnier's hypnotic onstage record spinning, would tell you that I do, but I would also tell you that the contemporary electronic music finds itself in the same rudimentary stage of development as a preverbal infant uttering random sounds just for the sake of experimenting with its vocal capabilities. Similarly, interesting sounds do evolve, resembling real words here and there, but I am afraid that we will have to wait a long time until meaningful sentences come out of electronic music records in the forms in which they would be comparable with harmonically and structurally richer compositions from other musical genres.

reservation, knowing how detrimental for our artistic senses can be the constant drive to compare the quality of one work against the other in a domain where quality is, ultimately, immeasurable. I am aware that these lists are inter-subjective and point this out on every occasion of presenting them. Each one of us is different, and our personal inclinations, defined by cultural, psychological and maybe even astrological backgrounds, complement each other. Hence, a work that might be regarded as uninteresting and not genuine at all by one person could lead another one to realize messages of great relevancy for one's life path therein. As per a popular adage, "sublime art provokes plebeian feelings in plebeian people", but even when it comes to artists and art critics with superbly sophisticated tastes, divergences of opinions are common, traceable to the inescapable subjectivity of the artistic experience. Yet, in the world invisibly poisoned by the tenets of objectivism, which we have seen to be in reality inseparable from constructivism that complements it, compilers of these lists mostly fail to realize the existence of these subjective selection criteria, quite similarly to the way scientists are nowadays largely blind to subjective effects of human anticipations, aspirations and countless prejudices and premises on the process of scientific discovery, and ignorantly announce them as objectively valid. Still, as I have always claimed, each list of this type tells us about the state of the world *per se* as much as it tells us about its creator; for, in the co-creational world we inhabit, everything we perceive or create is our own creation as much as it reflects the objective nature of reality. When people are allowed to choose facial features that they find appealing, one can almost always trace their choice back to the very same features that typified someone whom they have learned to love in life, whether it is one of their parents, a sibling or a person they have been in relationship with previously. Similarly, when critics become touched by a piece of art, one can always follow the subtle segments of the objects of their likings to origins that lie nowhere other but in the memory fountain of their former experience, be it melodic threads of notes that stir the emotional pot of their heart and trigger inspiring visions, beats that the rhythm of life in them finds fitting and revitalizing to sway in harmony with, or countless other structural characteristics that we could discern by dissecting the given piece to pieces. For example, the transition from a short and sharp major fourth to long and soft prime, so often hearable in the trumpeted poetry of Miles Dives⁹⁵⁷ and the one I used at the onset of the guitar solo in the song composed to my Mom's teenage verses, Beyond the Shades of Silence, evoking the melody of a childlike cry for the parent, may thus be found touching at all times by one person and comparatively dull by another. The color of the singer's voice is another thing that subconsciously divides casual listeners by taste; namely, coupling a hypothetical song to a voice whose spectrum of overtones instills assurance and braveness into the listener, simply because of matching the color of one's own vocal apparatus or of a person whom he has found comfort with, may render the song truly moving, whereas the identical song may be disinterestedly skipped by the listener when paired with a different kind of voice. Color of the singer's voice is, of course, only one out of many similarly subjective criteria that are hidden from the view of the critic because they are bricks of premises integrated within the invisible foundations of one's reasoning. Quality assessment in music or any other art thus requires critical looking at the evaluated piece from many different angles that belong to two overlapping contexts: objective and subjective. While the former comprises an endless array of images derived from our envisioning the whole history of the given art, the latter is composed of millions of subjective measures that are linked to the past, present and future of our very life. "You can't understand the people without

⁹⁵⁷ Listen, for example, to Miles Davis' Flamenco Sketches on Kind of Blue, Columbia (1959).

the ideas”⁹⁵⁸, the UC Berkeley professor of computer science, Christos Papadimitriou put it once as a reminder that whatever the opinions arise in one’s head about the qualities of people and their expressions, they will have always sprung forth from a pile of preconceptions assembled in one’s head, unique in its nature because of the unique history of cognitive perceptions of one’s being and of their processing via mental reflections. Knowing all of this, every time I would come up with one such list of best books, movies or records of a given genre or specific geographical origins, I would call it “the best of the world in my head”, partial and limited by default, accentuating its phenomenologically inter-subjective roots and immediately thereafter proceeding with looking back into epistemological grounds from which it sprang to life and analyzing my own intellectual predispositions, subconscious likings and emotional clouds onto which my mind leans in its dreaminess. This is also how we arrive at one of the most toxic traits of people endowed with knowledge and insight: the desire to adopt the position of an objective authority and from there preach about what they think is good or best for other people, inculcating their minds with instructions on how life should be lived. Hence, when someone comes to me with an allegedly perfect list, some of my questions are: “What do you want to have music convey to you? Freedom or love? Focusing your energy inwards or pushing the barriers of expression and releasing the inner shine of yours outwards? Travelling deep, plunging and focusing your mind into tiny details of the sound, or floating at the surface? Complicating your mindset and adding bricks to the piles of your knowing and feeling, or merely relaxing and releasing the tensions within yourself?” Now, each one of these questions is meant to make the compiler understand that our personal expectations and desires partly define qualities we find not only in artistic works but in experiential appearances in general. In addition, they subtly point at one of the basic problems that plagues the universe inhabited by the art critics of the modern day: indolence in attempting to define what constitutes likable features of artistic works and what does not. For, it is through systematic neglect of this fundamental question that our society has bred a plethora of music critics who would rarely ever give you a true musical reason for which they deem a certain piece amazing – except for a historical resemblance or extravagant descriptive vocabulary meant to evoke the feelings transmitted by the given work⁹⁵⁹ – or film critics who do not dare to enter the forbidden zone by trying to elucidate why a detail in choreography, lighting, scenery setting or montage is striking and unique among tens of thousands of similar works. The reason is, of course, that they do not even partially understand why some sensations invoke an aesthetic response in them, while others leave them indifferent. The indolence of theirs could be, however, justified by the fact that the theory of aesthetics, itself, which all art critics should be very well acquainted with, is not a very developed field, if not wholly stagnant since the times of Renaissance. Yet, the more the professional and the casual art critics succeed in shedding light on these criteria that are deeply rooted in our psyches, the less of the quarrels there will be between list-o-maniacs – “this is better”, “no, no, this is better”, and so forth. Still, for as long as these debates are held and participated in by those who do not have a slightest clue why a given piece of art can movingly resonate within one, but not within another, neither would these differences in opinion be possible to resolve nor would the given dialogues be illuminating for the debaters. At the end of the day, however, all

⁹⁵⁸ See Apostolos Doxiadis’ and Christos H. Papadimitriou’s *Logicomix: An Epic Search for Truth*”, Bloomsbury, New York, NY (2009), pp. 98.

⁹⁵⁹ Here lies a stunning discrepancy between the critiques of classical musical pieces and of the works from the modern, pop music genre: while the former are usually based on pure technical language with but sparse contextual, historical or emotive connections to drawn, the latter never discuss the harmonics and other technical specificities, limiting themselves to purely emotional analogies and raw historical parallels. But if they both learned from one another, the quality of their criticism would improve by infinite measures.

these discussions that aim for finding common aesthetic grounds will have to give way to the inherent differences in subjective inclinations of the eyes of beholders, so to say. The British optical artist, Bridget Riley thus recollected Samuel Beckett's claims that each artist is essentially a translator of scriptures that are to be discovered within the artist herself. For, these texts written on the wailing walls of our spirit are always both universally relevant and perfectly unique to each one of us. And whenever even a droplet of uniqueness is added to a sea of impersonal universality, an inimitably authentic blend is obtained. Or, as Bridget herself described it, "Why it should be that some people have this sort of text while others do not, and what 'meaning' it has, is not something which lends itself to argument. Nor is it up to the artist to decide how important it is, or what value it has for other people. To ascertain this is perhaps even beyond even the capacities of his own time"⁹⁶⁰. Last but not least, by analyzing this fundamental question more systematically we would also catch a glimpse of how often we are mere slaves of simple artistic trickery or completely subjective aesthetic preferences. In other words, we would become far more profound art critics, always keeping an eye on the dynamic balance between the subjective and the objective around which all things in existence fluctuate. There is no reason, then, for excluding science from this analogy that highlights subjective criteria as perpetually intermingled and interfused with the objective ones. Or, as Albert Einstein noticed, "There is no inductive method which could lead to the fundamental concepts of physics. Failure to understand this fact constituted the basic philosophical error of so many investigators of the nineteenth century". In other words, the basic propositions of scientific method and reasoning cannot be experimentally derived nor proved. They are preconceived, and experimental insights can only rest on them more or less stably, but it can never be shown that these premises are true and the perfect ones. In other words, pillars of faith are, verily, the foundations of science.

S.F.3.18. If I were asked to organize the way publishing market functions, I would initiate the building of a world online library where all works ever written could be found, and where each one of us would have an unlimited access thereto for free. After all, the very word "publishing" has the connotation of making something public, available to all, rather than only to a handful of privileged inhabitants of this planet. This way of thinking certainly places me and the muses of punk philosophy that charmingly wink at you from behind these statuesque letters along the line of endeavors of the modern Edupunks⁹⁶¹, who have fought to enable free access to all the university-based educational contents for all, thus potentiating education as a free choice rather than a privilege of those who can financially afford it. On the other, supply side of this free publishing pipeline, everyone would be invited to submit their works to this online library and have them published in the as-received form, exactly the way the author(s) wanted, without the necessary interventions of peer reviewers, which in their tendency to adjust the book style to the norms of ordinariness often liberate the works from thoughts and expressions that would have otherwise given it a unique spirit and a note of humaneness. In Jean-Luc Godard's *Contempt*, the movie made out of the feeling for the film industry suggested by its title, the artist forfeits his dreams and gives away his muse, just like Ulysses ditched Penelope for ten long years, to a personification of the raw money-centrism of the big fish in the pond, be they producers, editors,

⁹⁶¹ See Anya Kamenetz's *How Web-Savvy Edupunks Are Transforming American Higher Education*, *Fast Company* 138 (September 1, 2009), available at <http://www.fastcompany.com/magazine/138/who-needs-harvard.html?page=0%2C0>.

research funders or venture capitalists whose only consideration is marketability and profitability, only to be eventually faced with the fact that the works so dear to his heart turn dead if they only happen to be moved by the power of money and convention rather than by genuine trueness to oneself, along with cliché-shattering innovativeness, such as that which typified James Joyce's reflection on the Homer's epic. Similarly, by adjusting written or any other creative works to the stylistic demands and expectations of the audience, they often become stripped off of their essence. After all, despite the oft-exposed disbelief in the inability of most people, predominantly youngsters, to express anything of real-life importance in the written form and the mocking of "the college freshmen who think their late-night philosophizing worthy of posterity"⁹⁶², my disagreement with holders of these stances cannot be made stronger, as, for me, really, there is no person in this world whose opinions about life originating from the depths of his soul and distilled on a piece of paper or any other communication medium I would not be interested to hear. Failure to maintain this interest I would see as my failure to maintain faith in humanity as well as a failure to preserve the ability to sympathize with fellow beings, which, eventually, adds up to a failure in every other aspect of my spiritual growth. The only time such writings would be corrupted is when they do not come straight from the heart, but are guided instead by the desire to be liked by the editors and the peers and be published, regardless of what the released content is, which is when we may start to see the publication process as a Mephistophelean gate of a kind, the passage through which inherently corrupts the intersoular communications on the planet Earth. The outcome of passing through this gate for good after a career of letting other people's viewpoints and voices get aired through our creative work is, however, a state of unspeakable desperation, especially in the heads and hearts of those with equally unspeakable talents, which is very well summed in the lament of the artist confessing to the Zone about the relationship between him and the publishing house editors, peer-reviewers and other authorities in his field: "I wanted to change them, but they changed me to fit their image"⁹⁶³. After all, all these years spent in academia have made me aware that just as students corrupt the learning process when they identify success with getting a good grade on a test, the same fate awaits research efforts for which the sole aim is publication in a prestigious journal and reaping of the corresponding rewards afterwards as well as any other journeys whereon the journeymen become blinded by the destination and start paying no heeds to the beauties of the road around them. To be true to the divine depths of oneself thus holds a far greater weight in the universe of any truly creative persona in this world than respecting authorities up to the point of starting to think with their heads only. Knowing this, I always write to enkindle the bliss of the muses inhabiting my inner world, the goddesses of love and beauty infused in me throughout decades of motherly caring nurture, and never so as to merely satisfy the demands posed by my peers and authorities, whoever they may be. As authentically anarchistic as this approach is, it saves me from falling from grace in my creative endeavors and lets me remain resting on a celestial locus of attention and under the divine clouds of thought from which undying showers of inspiration dawn on me. In that sense, I fully agree with the Polish composer, Witold Lutosławski when he notices how "if I were to resign from following the voice of my imagined listener and try to guess the desires of real or actual listeners, I would be running the risk of introducing complete confusion into my work... In condemning myself by my own free will to forfeit this compass in favor of a chimera such as guessing the tastes and desires of others, I would

⁹⁶³ Watch *Stalker* directed by Andrei Tarkovsky (1979).

fall victim to the illusion that I were performing some service to my listeners; such procedure would essentially amount to deceiving these listeners, for the product of methods in which the supreme and decisive factor is not the conscience of the creator can only be false”⁹⁶⁴, a stance that is in direct agreement with the Way of Love, according to which the most brilliant expressions and the most endearing reaching out to neighboring hearts is carried out with our attention being meditatively withdrawn into the deepest orbits of our consciousness wherefrom impulses for purely divine actions that could light up the surrounding spirits in the blink of a starry eye are exhumed. In contrast, when we leave these idealistic insides for exteriors of our being, redirecting all of the rays of our attention to the outside world, our interactive creativity suffers, just about as much as our ability to awaken inner bliss by meditative means would dwindle had we redirected all our focus to our insides, while beginning to neglect the need to reach out to others in selfless care and genuine love. Moreover, writer’s block can be picturesquely defined as “the uneasy mix of your editor’s and writer’s voices fighting each other like bickering siblings in the back of the car”⁹⁶⁵, having a freezing effect on the flow of inspiration through our being. Hence, by removing the fake guardians of inertness and stagnancy that wear the dreadful uniforms of censorship or peer review, the road to far more authentic and inspiring ways of expression becomes clear ahead of us. Furthermore, the teachers of theatric arts, Anthony Frost and Ralph Yarrow have pointed out that improvisation and censorship stand on the opposite sides of the spectrum of human actions⁹⁶⁶, the former of which opens, while the latter constrains the scope of the shine of our genuine expressiveness; in this context, their insight implies that by abolishing any editing demands as well as the quiet pressure to conform to the style dictated by the authorities in the given field, the doors to blissfully inspiring ways of creative expression open in front of us. Of course, what would naturally result from one such freeness from any need to conform to preset standards of any type are fancifully wild and stylistically stunning expressions that tend to often appear as fusions of wholly unmixable features. In that sense, I am convinced that the future of publishing will witness a rise in the number of works that possess something that resembles childish drawings on C++ textbook pages, blending naturalness with a computational precision, flights of fancy and analytical seriousness, poetry and philosophy, just as music which infuses spontaneity, imperfections and white noise to it has been gaining popularity recently. Not that I am against the peer-review of works submitted for publishing, though, but quite opposite. A certain dose of über-critical elitism is required to lift the excellence from the sea of mediocrity to which it was born, lest in a hypothetical, perfectly democratic world we end up having papers on penile fracture and teenage acne top the list of the most valuable scientific studies, as it was the case with the ranking of peer-reviewed scientific articles published between 2010 and 2012 based on the number of tweets they had received⁹⁶⁷. This, of course, should be a constant reminder of the validity of Winston Churchill’s notion that “democracy is the worst form of government, except for all those other forms that have been tried from time to time”⁹⁶⁸, and that the only genuine form of giving to

⁹⁶⁸ From Winston Churchill’s Speech before the House of Commons on November 11, 1947.

the world is such that gives others what they need, not what they want. Secondly, peer-review, especially when blind and comprising a blunter critique of one's work than when it is not anonymous, helps in overcoming the constant tendency of the scientists – who, we know, should always strive for the ideals of objectivity - to become subdued to the curse of Pygmalion, that is, to fall in love with one's work to such an extent that any revisions and betterments of it become impossible. In that sense, one may go as far as to say that peer-review promotes humbleness among scientists and it does so significantly more than in professions in which people are used to receive sugarcoated praises both in the cases when their work has been excellent and in the cases when their work has been subpar. If we remember Aristotle's theory of syllogisms and its implying that it takes two disparate voices to produce a new idea, then peer-review can be thought of as a benevolent force that makes sure that the inner voice questioning logical statements brought about by our intellect and helping it sail uninterruptedly down the stream of creative thought does not subside. The third reason in favor of peer-review is tied to the fact that sharing one's works with other experienced and knowledgeable people in the field can lead to a precious feedback regarding important aspects of our work that may have fallen into our blind spots. Peer-review, to that end, teaches one that science is a social creation, which others ought to be free to craft with their questions and suggestions and which, as such, belongs to the world, as humbly as it can be, rather than to the lofty pantheon of one's ego. However, although I find great merit in questions and advices obtainable upon peer-review, what I, an antiauthoritarian thinker *par excellence*, am thoroughly against is rejection or forced modification of works based on these refereeing procedures. This philosophy of peer-review, according to which the reviewer should provide benevolent suggestions to the authors as to how to improve their studies or reports without insisting on making those changes, clashes with the dominant approach taken on by the reviewers of the modern day, which is to slay the papers in their hands into pieces with arrogant remarks and condition their acceptance by the authors' making those exact changes that he recommended. My way of peer-reviewing, in contrast, has been to provide a meaningful and benevolent review as if the reviewed paper was my own, but without slashing the sword and judging about its rejection or acceptance. In that sense, I have heartily boycotted any request to provide such, essentially editorial decisions on the acceptance or rejection of a paper as a peer-reviewer. Another reason why I have limited my influence on editorial decisions as a reviewer is because I believe that such decisions should fall in the domain of editors, themselves. Alas, the premises of today's largely capitalist world of science - where the governance of mainstream academic labs is in the hands of principal investigators who are nothing but efficient managers knowledgeable in fundraising and hiring the right people to work on research - have largely spilled over into the publishing domain, prompting the editors to relegate everything about the decision to reject, accept or request revisions in a paper to the peer-reviewers, without them having to look at the paper at all except for the 10 – 15 seconds it takes to ensure that the paper has sufficiently flashy figures. This would not be so unjust had it not been for the fact that reviewers, who play a key role in pointing out major or minor errors in manuscripts, do not go thoroughly unacknowledged and uncompensated for their work, as opposed to editors, who are often paid for their work, which, as we see, a simple computer algorithm could perform, let alone a person with no higher degree in science. Having acted as an editor, reviewer and contributor for dozens of major scientific journals, I know first-hand that reviewers never get thanked personally by the editors for their work and that their names are usually not even noticed by the editors in the electronic system for handling manuscripts, while editorial boards strictly congratulate amongst themselves strides such as an increase in the impact

factor of the journal⁹⁶⁹ or the signing for particularly notable publishers, reflecting the sad and disappointing, wholly exploitative state of affairs in today's science. As an editor, therefore, I have tried my best to bring more humanness and egalitarianism to the system by thanking the reviewers personally for their work, but also undertaking complementary reviews myself as an editor. This is all to say that I overwhelmingly share the radical publication philosophy with the founding editor-in-chief of the PPC Journal, Richard Nelson, who adopted absolute amateurism as his approach, quite like the one that typified the glorious dawn of the computer era itself and the birth and early growth of possibly every new discipline of science, art or technology, insisting that not only should editors walk to post offices and manually stick postmarks onto envelopes, but also that corrections of even the most blatant grammatical errors in papers should be at the discretion of the authors and should not be editorially insisted on, all for the sake of preserving the authenticity of the author's work and expression. Hence, the story goes that when nonnative English speakers begged him to employ a linguist who would correct the grammar in their papers, he responded by saying that "the readers of the PPC would mind an inadvertent change in the meaning more than an inadvertently misspelled word here and there"⁹⁷⁰, echoing the opinion of the South Korean artist, Kim Yong-Ik that "a good artwork is okay even if it's torn or soiled or broken"⁹⁷¹, if not the approach of many artists who deliberately wore, aged, scraped and peeled their works so as to make them more nostalgic, melancholic and, thus, beautiful. Moreover, many proud proponents of the peer-review model will readily notice how it excellently separates wheat from tar and prevents so-called crackpot contributions from ever reaching the publication daylight; however, what they overlook is that by standing at these crucial gates in the academic universe – the passing through which is a must to collect career points and claim tenure – and making it exceedingly difficult to publish, a great value is being attached to the very act of publishing, rather than to the core scientific results and ideas being published⁹⁷². Publishing houses, the middlemen in the process of communicating the results of scientific research to the outer world and a profiteer in their role of merely channeling knowledge, which ought to be free for all, from authors to the readers, clearly have a vested interest in this glorification of the publication process⁹⁷³, ignoring the fact that the genuine research of the wonders of Nature is being inherently corrupted by ascribing its ultimate aim to the release of its findings in a reputable journal. As a result, scientists, looking after ways to advance on the academic pyramid, are prompted to claim stellar, sensationalistic nature of their accomplishments and often turn to dishonest self-acclaim and sheer falsification to prove it, having found more merit in this superficial destination instead of the way that naturally leads to it. Like the shepherd who joked with the villagers by announcing the presence of a wolf and when a wolf truly arrived, no one believed him anymore, certain planetary provinces have lost a whole lot of credibility for the genuineness and veracity of their scientific

⁹⁷³ How profitable scientific publications are can be seen from the fact that, according to Madeleine Jacobs, 93 % of \$490 million of annual revenues of the American Chemical Society, which has an array of diversity programs and interests, stems from its publication business. Presented at the American Chemical Society Publications Graduate Student/Postdoc Summer Institute, Washington, DC (August 1, 2013).

findings in the eyes of many academicians because of their habit of claiming every single research adventure of theirs to have ended up successfully. With no appreciation for research failures in the scientific world, regardless of how precious the signs they leave on the sandy path of science might be for the future seekers of novel concepts and ideas, nothing other but one such state of affairs where wheat and tares seem impossible to separate from one another could be expected to have arisen. Even though I fully agree with Wilfred van Gunsteren of Swiss Federal Institute of Technology that “editors should allow for the concise reporting of negative results, because a research journal is not a newspaper, but rather a repository or databank of research ideas and knowledge”⁹⁷⁴, the world of science today mainly rests on the fearful assumption that only sensational findings or confirmations of the anticipated count, forgetting that every honest research path is strewn with as much success as failure as well as that the deviations from the reigning models of reality are the starting points of diversification and enrichment of our knowledge, which leads to biased and incomplete reports that conspicuously highlight the favorable results and hide the negative ones. And as the successful outcomes of scientific experimentation increasingly become inducible from ever tinier windows of boundary conditions, irreproducibility will abound more than ever before, entailing a wispy invitation to falsify the data or, at least, be consciously blind to one and open to other experimentally obtained figures and facts. As a matter of fact, a recent study has shown that the number of publications retracted from scientific journals due to alleged misconduct increased more than seventeen-fold from 2001 to 2011⁹⁷⁵. Coupled to the fact that advancements in academic career are conditioned by publication in reputable journals, this state of affairs will naturally lead to ever more thorough pervasion of scientific misconduct in the future, over and over again reminding us of how conditioning of human spirits leads to their poisoning with the virus of dishonesty, a very infectious one in its own, mental realm. For, when reports of immaculateness and omnipotence are spurred among the scientists, while honest expositions of failures and spots of ignorance are discouraged, nothing other could result but one such overly inflated and pretentious state of affairs, which sooner or later bursts like a puffed-up bubble, as exemplified by the recently noticed disparity between the predictions of the global market share of nanotechnologies in 2009 made by the National Science Foundation five years earlier and the true value estimated in 2011: \$1 trillion vs. \$11.7 billion, respectively⁹⁷⁶. All of this was, of course, caused by scientists in ravenous hunt for funding, intentionally pumping up the pompousness of their findings and the potentials of the proposed projects, only for these bubbles to deflate themselves when it turned out that the accomplishments they envisaged lay much farther ahead in time than what their pretentious selves, who have meanwhile “grabbed the money and run”, publicly presumed. Truly illuminating opinions, highlighting hurdles and gaps in our knowledge and methodologies, such as those that I have committed myself to exposing in my

⁹⁷⁴ See Wilfred F. van Gunsteren’s *The Seven Sins in Academic Behavior in the Natural Sciences*. *Angewandte Chemie International Edition* 52, 118–122 (2013). I can illustrate the benefit of having access to databanks of negative results with a simple, rather trivial example from my own research experience. Namely, once upon a time I gave myself the task of finding a chemical that would coagulate humic acid from DNA solutions. Since no published studies reported on this problematics *per se*, as a part of my regular literature search I started seeking reports on chemicals that flocculate humates and chemicals that do not coagulate DNA, the former of which was doable, but the latter of which was not, exactly because of the aversion of the scientific community to consider experiments that do not yield a desired effect, in this case binding, as significant. In addition to this, of course, precious research time would be saved if one could get informed through the databanks of negative data that particular experiments under consideration are not worth running.

⁹⁷⁵ See Virginia Gewin’s *Research: Uncovering Misconduct*, *Nature* 485, 137 – 139 (2012).

⁹⁷⁶ See my article entitled *Entering the Era of Nanoscience: Time to Be So Small* and published in *Journal of Biomedical Nanotechnology* in 2013.

critical reviews, opposing the trend of dull scientific reviews as rambling compilations of current achievements, have thus been seen as extremely unusual, practically craving to be heartlessly rejected by the reviewers, most of whom have gotten used to flatter oneself so as to boost their standing and reputation, going quite against the grain of humbleness that rests in the heart of the adventure of the mind that science and disregarding the fact that science advances forward only inasmuch as we first recognize the gaping abysses in our knowledge and only then dream up the inventive ways to transcend them, losing along the way the precious pearl of Nikola Tesla's saying that "our virtues and our failings are inseparable, like force and matter; when they separate, man is no more". In a similar spirit, many inhabitants of this stratum sadly seek approvals by the community and fame, as in every other social domain, rejoicing over diplomas handed to them and medals attached to their garments more than over moments of priceless wonder experienced in the lab setting, during their exploration of this fascinating universe, when all of these rewards should be seen as insignificant, petty signs of recognition on their road to stellar spheres and heavenly praise, the only one that matters at the end of the day. Crushing the gates of peer-review in a true anarchistic spirit thus proves as a way to save science from this rigid mechanism whereby works that speak against the conventional approach, whatever it may be, and clash with the reigning paradigms are greatly discouraged on the account of those that lay brick after brick on the basis of the already established and hundreds of times proven models. In essence, like the Serbian writer, Branko Ćopić, who, as the legend has it⁹⁷⁷, never closed a single door in his Belgrade apartment, assuming that he erased erroneous boundaries and installed the conditions for the rise of light and liberty thereby, I have always believed in open doors only, as exemplified by my fostering questioning and seeking instead of finalizing our answers and locking the gates of exploration, discovery and curious inspections of the reality. After all, to be a true Christian in one's heart one has to constantly live up to the norm "judge not, that ye be not judged" (Matthew 7:1) and never let faith in acceptance and embracement of it all into a grand unity by the home of our heart as what stands at the gates of Heaven slip off one's mind, as in accordance with the closing Biblical verses: "And the Spirit and the bride say, Come. And let him that heareth say, Come. And let him that is athirst come. And whosoever will, let him take the water of life freely" (Revelation 22:17). As they arrive a stone's throw away from the destination that was the ocean, a symbol of unity and acceptance of all things, Swan picks up a petite bouquet of flowers from the greasy floor of a subway train and hands it to Mercy⁹⁷⁸, right after her face transformed into the reddish Moon first and then into the Coney Island Ferris Wheel on my TV screen, saying how he hates to have things thrown to waste, neatly reflecting my approach to both (a) writing, as I have never ever let a single thought end up in waste after it was being transcribed into words, sometimes even spending hours to find home for it in the forest of symbols that my books are, and (b) publishing, as I would die trying to find merit in every single piece that I am being asked to give an opinion on and in the end always unreservedly saying a big fat Yes when I am being asked if it is publishable or not. As a reviewer for dozens of different journals, I have correspondingly tried to be as little of a judge and as much of a helping hand to the authors as I could be. I would read the reviewed manuscripts as if they were my own and recommend the very same changes that I would implement if they really happened to be my own papers. At the same time I would announce to the editors that they would not hear from me any suggestions as to whether these pieces are to be accepted or rejected. For, to the one wholly living up to the Christ's call, "I came not to judge the world, but to save the world" (John 12:47), it comes as natural to save the authors from unintentionally slipping into the waters

⁹⁷⁷ See Laura Barna's *Životi sljezove boje*, *Politika – Kultura, umetnost, nauka* (December 27, 2014), pp. 2.

⁹⁷⁸ Watch the movie *The Warriors* directed by Walter Hill (1979).

of erroneousness rather than to judge them from a lofty and arrogant perspective. For this reason, the peer-review model I enforced as the founding Editor-in-Chief of a journal focused on postdoctoral policies and affairs was based on a “rigorous, but nontraditional peer-review”. Namely, chosen experts in the field would still review the submitted papers and send their comments back to the authors, but the acceptance of the authors’ work would not be conditioned by their corrections in accordance with the reviewers’ remarks. To promote the interactive nature of the journal, every released paper is open for an online discussion; aware of this, the authors would typically be eager to correct their contributions with respect to the critical mistakes observed by the reviewers, while stylistic and structural suggestions would, on the other hand, solely fall into the realm of their personal preference. This advanced peer-review approach bears similarity to those already adopted by the preprint electronic server arXiv.org and the online journal Philica. Whereas in the former case all articles are accepted for publishing without any form of refereeing, in the latter case a dynamic and open peer-review policy is used in a way that any researcher is invited to review an article after its unconditional publishing, with the comments being displayed as an addendum to each paper. In a world which increasingly moves towards e-readers and paperless publishing, where online publication costs are next to zero, one such approach presents a logical move in the direction of surpassing the standard peer-review policies while ensuring an increased level of proliferation of breakthrough ideas or their nuclei. For, science has, first of all, ever since presented a collaborative effort on behalf of entire humanity. Secondly, most of the time scientific knowledge advances incrementally. These two premises can directly lead us towards the conclusion that providing conditions for free dissemination of knowledge and communication between scientists from all corners of the world is a necessity on which our planetary progress pivotally depends. Openness to share ideas in a timely manner, despite the inevitable errors that every single creative approach in life inadvertently commits, is a key prerequisite for the advancement of our knowledge, the concept that can be exemplified by the University of California scientist who decided in 2010 to keep his lab notebook open and available to everyone via Internet and who realized three years later that not scooping, as many of his skeptical colleagues expected, but phenomenal advices that helped him significantly improve his research resulted from this innovative way to communicate science and do so openly, with no restrictions or secret agendas⁹⁷⁹. A magnificent diversity of structures and approaches to discourse rather than their monotonous uniformity and dry, scholastic sterility are naturally fostered by means of one such progressive peer-review that closes no doors to anyone, along with a personal sense of responsibility for the released content. At the same time, the gate-guarding spirit of scientific judges, the arrogant executioners whose “face is always well hidden”, as in Bob Dylan’s A Hard Rain’s A-Gonna Fall, and who may have produced many a teardrop among the simple and angelically enthusiastic creatures of this world, the little ones of whom the Christ said, “Suffer little children, and forbid them not, to come unto me: for of such is the kingdom of heaven” (Matthew 19:14), is let gradually vanish in the air. In that sense, like the philosophy that I have proposed in the lines of this and other books of mine, the peer-review model that I have advocated and even managed to implement in reality is also based on the adoption of ancient religious principles, though balanced with a respect of the scientific tradition upon which we all, from the cosmonaut to the commoner, inescapably stand. In view of this, it comes as no surprise that although I have been a peer-reviewer for dozens of journals from the fields of physics, chemistry, social science and biomedicine, I have never rejected a single paper, firmly believing that all a reviewer can do is to cordially point out

⁹⁷⁹ See Virginia Gewin’s Turning Point: Carl Boettiger, *Nature* 493, 711 (2013), available at http://www.nature.com/naturejobs/science/articles/10.1038/nj7434-711a?WT.ec_id=NATUREjobs-20130207.

lines along which he would improve the work if it was his, although never insisting on this, let alone conditioning the acceptance of the work by corrections that are to be done in accordance with the given recommendations. After all, the authors are those who would regret one day if their works became released prematurely, with a plenty of mistakes and flaws therein. This, of course, does not account for the sad fact that most scientists pay more attention to the reputation and the impact factor of the journal where a work is published than to the quality of the work itself, which is a not-so-surprising corollary to the shallow value system predominant in the world today, the one in whose eyes the suit is more important than the heart and soul of the person coated by it. With science becoming increasingly swamped by the talk of the importance of soft skills, ever more a *tašna-mašna*⁹⁸⁰ domain where mellifluous eloquence and the appeal of one's personality, like in every service industry, are more vital success factors than the creativity of one's ideas and the inventiveness of the products of one's work, there is nothing more to expect than one such superficial evaluation of the scientific output. And when the typical evaluation of a scientist and his work is based on a 30-second glance of his institutional affiliations and journals where he got published rather than on an in-depth analysis of the real content of his work, this superficiality comes with a dangerous and depressing presupposition, which is that there can be no unique personality or style associated with individual scientists and their works, projecting an abominable form of inertness and uniformity on the scientific community and silently killing the rare creative voices nested somewhere in it. Still, hope lies in my heart that the day will come when the lasting quality of people's work will matter more than the name of the journal and the publisher that released it. As a matter of fact, one such all-accepting publishing system would naturally yield incentives that counteract the superficial assessments of the quality of someone's scientific work based on where one published his papers, enabling their facile substitution with more in-depth analyses of one's scientific performance and productivity. After all, despite the fact that I do consider my works quite valuable, I decided not to opt for their publication in the most prestigious journals. On one, more general side, I find a plenty of reason in the conscious boycotting of massive journals and publishing houses that act as parasitic middlemen in their profiting for mere release and copy editing of scientific papers, while their creators and especially the taxpayers who have funded the greatest part of the published research have to paradoxically pay into pockets of these prestigious publishers to access these very works⁹⁸¹. For, middlemen of all breeds, I know, from health insurance companies to real estate agencies to creditors and investors, would vanish in an instant in a world of political and social perfectness, whether it passes by the name of Thomas Moore's Utopia, Plato's Republic or the Christ's Kingdom of God, as they do so to the beat of my visionary heart recollecting the words of mighty Father Barry standing on the deck of a wrecked cargo ship on the waterfront eternalized by Elia Kazan as a symbol of the American struggle against the manipulation of man, a struggle whose cause, as of today, remains as lost as ever: "What does Christ think of the easy-money boys who do none of the work and take all of the gravy? And how does he feel about the fellows who wear a hundred-and-fifty dollar suits and diamond rings, on your union dues and your kickback money? And how does He, who spoke up without fear against every evil, feel about your silence? You want to know what's wrong with our waterfront? It's the love of a lousy buck. It's making the love of the lousy buck - the cushy job - more important than the love of man! It's forgetting that every fellow down here is your brother

⁹⁸⁰ Serbian phrase literally meaning "briefcase-necktie" and referring to vapid workplaces where the surface appeal is more important than the excellence of the essence.

⁹⁸¹ See Michael B. Eisen's Research Bought, Then Paid For, The New York Times (January 10, 2012); available at http://www.nytimes.com/2012/01/11/opinion/research-bought-then-paid-for.html?_r=1.

in Christ"! On the other, more personal side, this decision of mine was backed up by my being aware that the extensive revisions and restructurings, which the process of complying with the journal standards, editorial requirements and corrections insisted on by the reviewers would imply, would pull the soul out of these works. And one of the essential battles that I have been fighting in the scientific area has been exactly to institute freedom to express one's unique personality in the first and foremost form of scientific expression: scientific paper. This battle, of course, having its enemies as editors, publishers and peer reviewers, alongside armies of plagiarizers, will be won the moment we become able to do what seems impossible now: to deduce the author from the style of his expression, just as we can tell an Orson Welles' movie from the characteristic deep focus, the low angle of the camera, the shadowy background and the *film noir* suspense, a Beethoven's sonata from the exposition of a characteristic germ motive style, broad modulations and the overall concoction of the classically solemn and the romantically passionate, or a Gauguin's painting from his primitive figures, strong colors and the chromatic muteness achieved through the use of adjacent analogous colors. The proof that I was on the right track with the decision to release my works in smaller and less editorially oppressive journals could come from recalling how the best music of the modern day comes from small and independent labels, whereas most of the musicians embraced by gigantic musical industries have been forced into clichéd machinery of dressing their music up in expensive clothes of superbly sounding production and arrangements, while the harmonic essences of their songs are debilitating and the roots of artistic aspirations behind origins and performance of these songs are drowning in greed, hypocrisy and lies. Thereupon, I have opted for a compromise, aiming for average journals that could still claim a certain prestige in the field, but which are at the same time far from being considered as *crème de la crème*. This path that I have chosen when it came to release of my works, the children of my creativity, reminds me that not what is being placed on the pedestals of popularity, but what is made public quietly and without a big pomp, mainly by independent publishers or via free, online channels, is where my attention should be paid to. Small is truly beautiful, and one should every now and then remind one of immensely great and valuable insights that lie dormant in each detail of the world and every product of human creativity.

S.F.3.19. Moreover, not only that I sometimes passionately look for small and forgotten books or zines, the dustiest and cheapest ones hidden in the back of vintage bookstores, because I frequently find them immaculately inspiring, but I truly believe that each book can present a spiritually and cognitively elevating source of impressions for someone in this world. In the end, each one of us could be imagined as if positioned at a certain part of the ladder of ascending towards ever more beautiful heights of spirit. In this metaphor of mine, one always advances up by crossing one bar after another. Jumping is prevented, which means that if we want to give an incentive that will make someone ascend a bit up, we need to set our language and meanings of our expressions to the level corresponding to the bar that someone stands on and the bars that are immediately above him. "We cannot teach a pig how to sing, but we can only annoy it and ourselves with these attempts", some might say, while others, if not busy drawing references to Kohlberg's theory of stages of moral development or Kegan's theory of orders of consciousness, may quote a story about a donkey acting as a judge in a singing contest between a nightingale and a cuckoo. Namely, because he found the cuckoo's chirping sound easier to understand owing to a greater similarity with his own braying cries, the donkey picked the cuckoo as the winner⁹⁸², reminding us that speaking the language of beings that we try to communicate our message to rather than being

⁹⁸² See Stephen Johnson's *Mahler: His Life & Music*, Sourcebooks MediaFusion, Naperville, IL (2007), pp. 106.

sublime to our utmost capacities is a vital precondition for our communicational endeavors to succeed. Hence, it is a great teaching art to realize the level of advancement at which one currently is and transform our expressions so that they enlighten that other and make him understand the importance of climbing up the ladder. Communicating in a way that makes people invest some effort to comprehend our messages and yet do not become overwhelmed by the impossible task of grasping the ungraspable is also reminiscent of our throwing the ball to others. Should we tend to throw the ball too high in the air, the person that we communicate with in such a playful manner won't be able to catch it. Yet, it is by tossing the ball high enough to make him do some work and stretch his arms up while catching the ball and grasping our message that we engage in the most productive playful communication that we could envisage. Notice as a side note how this metaphor of friendly and mutually edifying shuttlecock is thoroughly opposite from the one present in the game of baseball where the aim of the pitcher is to throw the ball straight into the player and not a bit outside of his range, while making the ball as curvy and ungraspable as possible. The aim of the batter is, however, not to respond in a reciprocal manner, but to hit the ball as hard as possible, as far away from the pitcher as he could, and then run away. It is as if the competitive nature of the capitalist society, so deeply ingrained in the American culture, has thus found its neat metaphor in the game of baseball presented as such. Yet, in contrast to this monotonous sport, we can still have the vision of two pure and chaste spirits tossing the ball to each other, somewhat similar to the two sisters at the end of Steven Spielberg's *The Color Purple*. And once we master this art of throwing the ball to another, we would realize that we have attained nothing other but the balance of the Way of Love. For, only empathy that urges us to speak the language of others and make our guiding stars of thought understandable to all, juxtaposed with meditative withdrawnness that fosters us to craft ideas that would stand out with their uniqueness and originality can make us become a true master in communicating the celestially creative essence of our being to the world. Thence, we will neither conform ourselves to the values of the world nor speak in ways that would appear to others as obscure and unintelligible, but will harmonize common waves of clarity with outstanding and progressive streams of thought, letting new suns of understanding slowly arise behind the horizons of other people's minds, bringing new and wonderful daylights to their entire beings.

S.F.3.20. Yet, many profound visionaries who have looked so much ahead that they appeared as lunatics to their professional colleagues are aware that there is too little of time in each of our lives to slowly make ideas adopt the bar-by-bar trend through which they would be continuously presented as meaningful and relevant to their peers and contemporaries. So they often opt for presenting their ideas in the most advanced way, which, as we see, does not need to be the most progressive. In those cases, the acceptance of these works by their peer-reviewers may be so tremendously retarded that it might leave the author in a muddle of revising his own works for years and maybe even decades prior to having them published. A benefit of a freely accessible online library that would comprise all human works ever written, avidly dreamed of by Jorge Luis Borges, is that it would enable the option of publishing these works promptly, although with the possibility of subsequently revising them at any given time. In such a way, the author(s) would cease to be restrained by the lengthy revisions of their works which normally condition their release in press, and could instead move on to develop new ideas, making sure that their "chestnuts are not roasted too long in the fire and turned to charred embers"⁹⁸³, if we were to refer to Goethe's

⁹⁸³ See Johann Christian Lobe's *Conversations with Felix Mendelssohn*, In: *Mendelssohn and His World*, edited by R. Larry Todd, Princeton University Press, Princeton, NJ (1991), pp. 196.

metaphorically warning artists not to be obsessive about endlessly revising their works, but trust instead the whizz of the moment with which they were brought to reality from some sublime inspirational heights, like the classical fresco painters and muralists who worked on wet plasters but never dared to retouch them after they dried⁹⁸⁴. Or, as Pushkin said in verses that ended up comprising the preface to the complete collection of works by Dmitri Shostakovich, one of the most prolific composers of the 20th century: “I scribble a page in a single breath. I listen to my whistling with an accustomed ear. I torment the ears of the world around me. Then I get into print, and bang into oblivion!”⁹⁸⁵ A definitive upside of such an incessantly open and welcoming library of the world would be that after finishing the process of mapping out a single realm of ideas, the author would be able to discover some thoroughly new lands of written expression, which might turn out to be superior compared to those left behind with their publishing. Many authors, like me, never look back at their own works from the past, but as soon as they become published they turn themselves onto some new horizons. In a way, they must believe in Bob Dylan’s adage that “a song is something that walks by itself”⁹⁸⁶ and once their work of art is completed, it is sent into the world, like a baby after it has learned how to walk, talk, reason and love. In such a superb online library, however, the authors would be able to revise their works anytime they came up with an idea to do so, just as well as they would be free to ignore any requests to revise their works if they did not deem those revisions meaningful, just the way Piotr Illyich Tchaikovsky refused to revise his initially poorly received Piano Concerto in B minor⁹⁸⁷ and turned it into a timeless masterpiece thereby. Back to Dylan’s analogy, like a parent who periodically keeps in touch with his child and supplements it with precious advices, so would the author be able to modify his works for as long and in any way he wants. It is true that this would present a forest of writings in which one would often fall into despair because of not being able to reach a few decent works among a bunch of literal literary rubbish, but this could be all seen as merely a good base from which different writing categories based on good critique or stylistic selection criteria could be formed, thereby enabling a more facile search through this all-comprehensive library of humanity.

S.F.3.21. This library which all would be invited to contribute to by uploading their literary works, without conditioning their acceptance by submission to the terrors of censorship, copy-editing or peer-review, would present an anarchistic alternative to the way publishing businesses work today, as some may notice. If we approach pieces of art with profound beliefs that their subtly interwoven messages are inexhaustible and that “there is always more to the picture than meets the eye”, we would be sure that only the artist, himself, can deep inside of his heart know how good or bad his work of art has been as well as that no amount of external review can convince us in one way or the other. This is especially so since the world’s most creative artists have been so deeply plunged inside their own worlds that they have typically treated audiences as “but an accidental hum to

⁹⁸⁴ See the opening quote by the Mexican muralist, José Clemente Orozco in Edgardo Vega Yunqué’s *No Matter How Much You Promise to Cook or Pay the Rent You Blew It Cauze Bill Bailey Ain’t Never Coming Home Again*, Farrar, Straus and Giroux, New York, NY (2003).

⁹⁸⁷ Because it was not well received in his homeland, the first performance of this piano concerto in Russia was delayed and it ended up being premiered in Boston, MA, in October 1875.

art”⁹⁸⁸, knowing that the authenticity of expression can be achieved only insofar as one remains detached from the craving to satisfy anyone but one’s most intimate muses. For this reason, on the creative side of things the task of each artist is to stay true to oneself and resist falling into conformist traps, which is the path leading to none other but an enlightening liberation from ego, which, as we know⁹⁸⁹, always lurks in the appreciation of esteem enjoyed in the eyes of other people. At the same time, on the publishing side of things there can be no excuse for any amount or type of censorship that arrogant gate-guardians tend to pose in the way of these works to the social daylight. Benevolent reviewers may give an advice on how writings could be improved, but in no way could they have a final say about their acceptance or rejection. After all, we all see the world with different eyes and what may seem as expressions fully devoid of meaning to some people might enchant and crush other people’s hearts, turning them into stardust of love, while leaving the former creatures cold and indifferent. Draw a single line, thence, and no one will be able to tell how great your achievement in the eyes of the divine Universe has been, as I have always claimed. Although many would dare to accuse such works to be quasi-artistic and trivial, I will merely bring to mind the legendary story in which Chuang-Tzu was given golden coins, ancient treasures, servants and palaces to live in to draw a crab. It took him five years of demanding this and that before he finally took a brush and draw a crab in a single stroke. One sage is also known to have arrived at a king’s palace as the most renowned flutist in the kingdom, played a single tone and left. Without accompaniments, I imagine this sound to have been far, far simpler and minimal than that single keyboard G note played magnificently by Nancy Whang of LCD Soundsystem for the first couple of minutes of the band’s explosive live performance of All My Friends on the Jools Holland show in 2007⁹⁹⁰. For, if a simplest act conceivable is made with a thunderbolt of love and a sense of grand oneness illuminating one’s heart, I believe that it will continue to forever and ever either ostensibly inspire the world or mysteriously sow seeds of feeling and thought that will sprout and grow into fabulous forms of life. Albrecht Dürer, the 16th Century painter and the inventor of a magic square⁹⁹¹ which still amazes the mathematicians, the mystics and the laymen alike, thus observed once that “one man may sketch something with his pen on half a sheet of paper in one day, or may cut it into a tiny piece of wood with his little iron, and it turns out to be better and more artistic than another’s work at which its author labors with the utmost diligence for a whole year”⁹⁹². Bearing all this in mind, we could be sure that freedom to artistically express oneself presents a vital precondition for one’s creativity to flourish. Despite that, however, the way the publishing world is regulated today is such that gates are posed everywhere. Inspecting this realm more carefully, we could realize that the largely mediocre publishing filters let only easily digestible and unnaturally linear narratives and discourses pass through their screening process and emerge on the other, released side of the literary realm. Despite this, any such overly banal and plainly structured literary representation, without any surprising

⁹⁹¹ This order-4 magic square (the sum = 34) first appeared in 1514 on Dürer’s painting Melencolia I. The four numbers on its bottom are 1, 15, 14, 4, hiding letters of the alphabet that spell Albrecht’s initials (1 = A; 4 = D) as well as the year that this work was painted on (1514 AD).

⁹⁹² See the Wikipedia article on the life of Albrecht Dürer, available at http://en.wikipedia.org/wiki/Albrecht_D%C3%BCrer#cite_ref-20 (2011).

Little-Prince-like hops between remotest planets of thought, all in the spirit of Leonardo da Vinci's writings and those of innumerable other systemic thinkers who would wondrously fly on the wings of analogies from one experiential domain to another instead of staying locked within a single plane, is predestined to fail in its attempts to faithfully represent the natural stream of thought within our mental spheres. If we followed signals travelling along neurological pathways in the brain, we would realize that they constantly branch out in mysterious directions, while still making their way reliably from point A to point B, and the same can be said to be with the natural thinking process. Henceforth, we are free to hypothesize that inasmuch as the human thought is let follow its natural stream of consciousness, such as that which James Joyce attempted to capture in his later novels, and incessantly wander off the linear path does it have the chance to live up to the epithet of utterly creative. For, as the musicologist, Anthony Storr, pointed out, "We like to describe the processes of thought as continuous, as a 'train of thought' inexorably proceeding by logical steps to a new conclusion. Yet, what many thinkers describe is more like floundering about in a slough of perplexity, a jumble of incoherence, relieved by occasional flashes of illumination when a new pattern suddenly emerges. Ordered, coherent progression of thought is a retrospective falsification of what actually happens"⁹⁹³. Hence, without confusing the reader with swirls of mysterious and inherently chaotic thought, although revolving around focused rays of well crystallized, sunshiny ideas, no truly exciting writings could be produced. David Foster Wallace exemplifies an author who certainly understood the partial merits of constantly interrupting the reader in his threading a passage of thought by seeding his own discourses with footnotes whose volume most of the time surpasses the main body content⁹⁹⁴. Ray Fawkes went a step further by creating a graphic novel, *One Soul*⁹⁹⁵, in which each successive frame depicts a scene from life of one of the book's eighteen characters, yielding a sense of lyrical dizziness as they rotate in the reader's head and yet miraculously building a coherent whole, eventually delivering the promise inscribed in the very title of the story by reawakening a sense of wholeness and unity that encircles our seemingly tiny and isolated lives, or, as the author himself noted, a multitude of beings "scattered in union, united in isolation"⁹⁹⁶. Even as I write the very words that comprise this sentence I could be found first sitting in a tram, forced to change seats and stations every now and then, after which I am dashing typing these letters in-between juggling beakers and spinning Petri dishes in the lab, illustrating that distractions are a necessity in fertilizing our creativity along the right directions. As a matter of fact, my creativity in writing these pop artsy philosophical discourses spread its wings and soared high owing to its being constantly dragged in the opposite direction: that of dry, purely analytical and prosaic hard sciences. Finally, even while developing the concept of a free world library idea in this paragraph, I have made a meta-logical step beyond the plane of the given theme and wandered off into the realm of discussion over the vital role of distractions in fostering our creativity. Thereby, while touching and lighting up sparkles of millions of potential insights with the magic wand of thought expounded hereby, I also attempted to indicate that innumerable mildly chaotic works that will never make it to the publishing daylight may be even more inspiring than the routinely published works of the modern age, most of the time made sterile and deprived of the potential to powerfully inspire by being subdued to the requirements of perfect clarity for all. For, in general, intriguing perplexities drawn in front of the reader's mind

⁹⁹³ See Anthony Storr's *Music and the Mind*, Random House, New York, NY (1992), pp. 174.

⁹⁹⁶ *Ibid.*, pp. 162.

are always mixed with sunshiny clarity within all immaculately inspiring pieces of literary art. Just as we need to grasp chaotic and highly entropic pulses and use them as bricks for edifying the towers of our knowledge and being in the course of their evolution, so can we expect that the most enriching encounters between a human mind and a written source of information will be those whereby the reader is captivated not only by the crystal-clear insights found therein, but by the mystifying perplexities arrived at as well. After all, books in which all becomes immediately clear to us essentially confirm our knowledge; a prerequisite for our intellectual and spiritual advancement is, on the other hand, being perplexed by their contents at first. In view of that, we can be sure that in the dark cellars of repositories of books and memories alike, where chaos of uncertainties and seeds of clarity are mixed, the greatest ideas and works of art will always be found. If we are to satisfy Gustav Mahler's ideal of making artistic works that are reflections of literally everything, and fulfill James Joyce's dreams of finding a sequence of words that would be an epitome of the inner workings of the mind, we need to find a way to beautifully blend order and disorder, cohesiveness and chaos, to give up on the ideals of perfectly organized structure and intercept the train of our thoughts into millions of starry ideas scattered all over the night sky of our dreamy mind and of the pages of this book.

S.F.3.22. When asked how his movies relate to his life, the famous Japanese movie director, Akira Kurosawa said: "If you were to subtract my movies from my life, nothing would be left". What he wanted to say was that everything he had had been was inscribed in his movies. His entire life lay impressed in his artistic creations, and nothing was omitted⁹⁹⁷. Sometimes I too feel as if I am living in the same way; that is, by trying to put everything of value in the way I see the world into my writings and music. By including almost every single thought that flashes like a diamond on the screen of my mind with its merit and lucidity into my works, they may be seen not only as postmodernist spiritual self-help manuals, amusing system science books, genuine science fiction, books of contemporary alchemical recipes, poetic philosophical tomes, pop art diaries or 21st-Century-Nietzsche-meets-Emerson-and-Thoreau accounts, but as a sort of literary Bosnian pots too, if we were to refer to this Balkan stew, a culinary hodgepodge in which everything one can find in the fridge is thrown. By demonstrating the ability to find amazement in simplest and seemingly least interesting things and events that comprise the world of our experience and then unfold the relationships discerned therein into something of lasting importance, I aim to point at the cosmic relevancy of the most miniscule details of this infinitely wonderful world that we were born in. To spark the divine sense of Wonder in us and to use it as a spiral spring that could blast us off into the starry skies of thought, where we'd touch and embrace the suns of Love, the ultimate destination of every quest for sacred knowledge in this life, and then peacefully fall back to the ground, like an autumn leaf leisurely dropping from the tree to the floor, so as to disseminate this knowledge all over the world, thus presents the implicit mission of my writing endeavors. And when Richard E. Wentz compared the American writer, Loren Eiseley with Henry David Thoreau in a sense that "he takes the circumstances of whatever 'business' he is about as the occasion for new questioning, new searching for some sign, some glimpse into the meaning of the unknown that confronts him at every center of existence"⁹⁹⁸, he could have also neatly described my own approach to writing whereby a myriad of perspectives and insights is combined into a single epistemic pyramid whose tip points at the all-seeing Eye of Love as the force by means of which

⁹⁹⁷ See Akira Kurosawa's *Something Like an Autobiography*, Vintage, London, UK (1983).

⁹⁹⁸ See Richard E. Wentz's *The American Spirituality of Loren Eiseley*, *Christian Century* (April 25, 1984), available at <http://www.religion-online.org/showarticle.asp?title=1391>.

man becomes God and gods become Man. The aim is, of course, to place all of value from my mental universe into my books, all that could be a guiding star for humanity, and then close their pages and go out and play. In that sense, you can say that I write in order to put a full stop on my writing. But the story of the evolution of life and humanity reminds us that in no place could this stop ever be properly placed. The clash between our immense desire to place it - that is, to reach the final answer to the wonders of life - and Nature's masterful avoidance thereof is what moves the wheels of our evolution as sentient souls. A Lieh-Tzu's story, one of the most beautiful in compendiums and compendiums of the Taoist literature, goes like this: "Many inhabitants of the coast liked seagulls. Every morning they would enter the waters and swim towards an open sea to meet them. Hundreds of seagulls flocked about them. One day someone said: 'I am told that seagulls swim about with you; catch one or two so that I can play with them'. The next morning they headed towards the sea. The seagulls only wheeled about in the air and did not alight. In a perfect speech, there are no words. In a perfect act, there are no movements. What a wise man knows is a general locus"⁹⁹⁹. By subtly evading the human aspiration to grasp the most beautiful things in life, Nature resembles a rainbow, a blushful virgin, or the waves of the sea of Solaris, always close to us, sending us signals of gentle and soft sympathy and care, yet avoiding our touches with them. For, remember, this mysterious sea from another world, having revealed the dark features of the human mind as a response to the aggressive human explorations thereof, thus subtly telling the explorers that their worlds are being made of their spirits and *vice versa*, as in accordance with the co-creational thesis, enfolded the departing explorer's hands reached out to it in the end "without touching them... displaying a kind of cautious but not feral alertness, a curiosity avid for quick apprehension of a new, unexpected form, and regretful at having to retreat, unable to exceed the limits set by a mysterious law"¹⁰⁰⁰. If we were to magnify the neural network that our brains are made of, we would realize that, correspondingly, like the sea of Solaris, synapses linking individual neurons "hold each other's hands"¹⁰⁰¹, as the Spanish neurologist Santiago Ramón y Cajal formulated it, exchanging vital signals and impulses, though without ever coming to direct touch with each other, staying simultaneously close and apart at all times. And this combination of enticing intimacy and interstellar distantness is indeed the ideal Nature teaches us to attain in our behavior and thought. Miraculously, it is the essence of the Way of Love too: being warmheartedly close to the creatures of the world, shining and twinkling with the light of love to them, and yet staying enigmatic and mysteriously distant, just like stars in the sky. It is with this purpose in mind that Nature does not respond directly and openly to each and every question and craving of ours, but rather does it in her subtle, mysterious ways, as if knowing that a baby whose every cry is responded to will become a dull, dependent and, literally, babied adult, never advancing to the stage of a deep and selfless soul, while the one completely unattended and ignored would develop towards the opposite extreme of carelessness, coldness and indifference. Her method dominated by unpredictability, uncertainty and impossibility of figuring out the exact intentions and instructions of "the brain behind the wheels" instead creates the conditions for the growth of spirits who steadily walk along the Way of Love via their merit of being autonomous and empathically bonded to it all at the same time. Such enlightened creatures appear as if being close to us and everywhere around even when they are away, but also appear immersed into some

distant stars of fanciful thought even when they are here, right beside us. Should we become here all of the time, fully plunged into the eyes of another and neglecting the need to back up a bit and become equally immersed in our own heart and mind, while traversing the distant secrets of the Universe on the spaceship of an interstellar thought and having our dreamy eyes fixed on the clouds of “the eternal thought that levitates above the fortuitousness of life and inspires us with faith, hope and love”¹⁰⁰², our fall from grace would be inevitable. A similar outcome would result from an absentminded attitude of ours and a complete negligence of what is “right here, right now”. The Way of Love is all about the balance between being here and being there, being one with the beings around us while still being one with the infinitely deep ocean of our heart, at the depths of which many precious pearls and sunken treasures shimmer with love and grace.

S.F.3.23. Despite this never-ending story of progress in life, it is of vital importance to learn the art of invoking this nothingness in our mind and letting ourselves float with the streams of the world like a child, innocently and with an unspoiled, crystal clear faith. One of the essential feelings that Christianity preaches about is this nothingness, *via negativa*, attainable through repentance which renders our heart pure as white angelic wings and our mind light as a feather, ready to fly freely, like a bird, in its prayerful imagination. “The finite is annihilated in the presence of the infinite and becomes pure nothingness – so it is with our mind before God”¹⁰⁰³, Blaise Pascal, a devout Christian at heart, thus pointed out through a mathematical analogy, yielding a subtle hint at the sense of an overwhelming and, at times, unbearable nothingness descending on us as we approach the Divine and let it perfuse our whole spirit with the waves of cosmic bliss, dissolving our ego in a heartbeat, as if it were but a grain of salt dropped into Orinoco river. Here comes the story of a Taoist sage able to stay afloat in water by only gently gyrating his body with its flow and not doing absolutely anything with his arms or legs¹⁰⁰⁴, ascribing this lightness of being to his mind purified from petty thoughts that contaminate it like filth, floating freely on the waves of Tao, of an all-pervading cosmic energy that the mind sees itself as but an evanescent emanation of. “I’d like to discontinue to express myself the best that I could”¹⁰⁰⁵, says a voice patched over the captivating drum & bass beginnings of DJ Shadow’s seminal work, *Endtroducing*, before it concludes ecstatically that “music’s coming through”, suggesting that putting an end to our ego and abolishing the thoughts tied to the presumed existence of the self is a prelude to the rise of the expressions unsurmountable in their power. When the idea of the existence of the self separated from the rest of reality is annihilated, expressions that enchant and beautify the world in mysterious ways, divinest in essence, will be channeled out to the surface of our being, effortlessly, as if via a graceful glide on the winds of Tao, making even miracles happen from time to time. A concordant and routine exercise in Buddhism is an incessant perception of unison with every detail and creature of this world. *Tat tvam āsi* is the mantra which means “I am this and I am that” and serves the purpose of enlarging our little egotistic self to cosmic dimensions, essentially producing the same mind-broadening and self-integrating result as its opposite, that is, constantly telling to oneself “I am not this, I am not that, spirit is more than this, spirit is more than that”. This may be why e. e. cummings, the poet trained in meticulous dislocation of the syntax, married “anyone”

and “noone” in one of his most famous poems¹⁰⁰⁶, thus hinting at this very same horizon toward which coming close to everything in the world and backing away from it all takes us. In other words, attachment to everything equals nonattachment to anything, and by traveling in the direction of omnipresence we come the full circle and immerse ourselves into nullity of being; wholeness and nothingness are thus touching each other, and the path to infinity is circular, with plus and minus in sign meeting at one point, as Željko’s lucid theory showed me once. Filmmakers, for one, have known that keeping the camera focused on a single person for long enough awakens empathy with it amongst the watchers¹⁰⁰⁷ and presents a starting point for inducing the dissipation of the rays of their loving attention to the rest of the world, proving that if we go far enough in the direction of individuality we eventually arrive at the spirit of holy communion, and *vice versa*: a live scene from a busy New York street whereon rivers of pedestrians flow with no end in sight would build not a sense of belonging and communality among its viewers, but rather that of alienating solitariness and spiritual isolation from the rest of the world. To give another hypothetical example of this effect, I often invite the listeners to imagine a world in which everyone proclaimed oneself as an independent state with respect to all other creatures and countries. What would come out as a result of one such infinite chopping of planetary states is nothing but a feeling of interconnectedness of us all. In other words, whether we draw a hypothetical state border around each and every one or fully erase the state boundaries all over the planet, the result would be the same. Whether we infinitely travel in the direction of negating our dependence on anyone else and trying to gain new identities or in the direction of shattering boundaries and announcing our unity with it all and losing our identity thereby, if we travel far enough, we would return to the starting point of our journey. For, everything in life lies in circles wherein farthest extremes blend with each other. To be abandoned by it all is thus equal to being embraced by all things and the more we strive to become a perfect example of an expatriate with “no direction home”¹⁰⁰⁸, as Bob Dylan put it in his celebration of the lifestyle and attitude of a rolling stone, the closer we are to the ideal of becoming a perfect cosmopolitan for whom home is literally everywhere. Or, as said by Ingrid Bergman as an attempted incarnation of St. Francis of Assisi in post-war Rome of Roberto Rossellini’s *Europa ’51*, moments before she was to be locked up in a mental institution for good, like every true saint in the past, the present or the future, “Only he who is bound to nothing can be bound to every human being”. This thought, of course, sounds as if being pulled straight from Hegel’s *Science of Logic*, in which the German dialectician equalized pure being with its complete opposite, i.e., nothingness, having realized that pure being is devoid of all qualities, which is to say that it is the negation of all qualities and that “being is, in fact, nothing, and neither more nor less than nothing”¹⁰⁰⁹. Indeed, travelling far enough in a single direction does not make us fall off the edge of a planar world that people hypothesized to exist in the Dark Ages; rather, it makes us simply arrive at the starting place of our voyage. This, remember, is a classical systemic observation applicable to innumerable systems and situations. For example, it does not take to be an economic expert to realize that if one journeys far, far left, past the centralized communist governments, all until one enters the realm of utmost political anarchy, the line that divides this state from the far, far right wherein wild west capitalism reigns becomes very thin. For, if we head

in our leftist political inclinations so far as to cancel the very concept of government engrained in the heart of the modern society by means of our anarchistic strivings to abolish all the authoritatively imposed laws, we would be surprised to meet there our antipodes in terms of conservative libertarians who have achieved exactly the same, though starting from a different point of origin. Hence, it is no coincidence that the Wikipedia page on anarchism lists libertarianism as its closest cousin and that I find myself most at home with those political views that lie farthest from the moderate centrism, out there in the distance, where searchers of all times ventured to satisfy their inner yearnings for adventure and discovery. Anarchism, for this reason, is compatible with both radical communism and radical capitalism, but not with socialism, the bridge crossing these two extreme political philosophies, which, as we see, lie not on a straight line, but on a circle. How ironic it is then that the primary target of criticism of the anarchists of the world is none other but the American political system according to whose Constitution, which was written in the first place by people “afraid that a strong government would take away the rights people won in the Revolutionary War”¹⁰¹⁰, the government exists to “protect the rights that no government can take away”¹⁰¹¹, while “because the people voluntarily give up power to a government, they can take that power back”¹⁰¹². Some may even claim that reaching the destinations of an utmost social anarchy in our running away from the autocratic and monarchist social models would make us simply encircle the globe and arrive back to the tyrannical starting point of our journey, and the millennia old musings on the effects of a potential outbreak of anarchy taken from Plato’s Republic could be offered in their support: “The people chafe at the slightest suggestion of obedience and will not endure it. They finally pay no heed even to the laws written or unwritten, so that forsooth they may have no master anywhere over them. That is the fine and vigorous root from which tyranny grows. The probable outcome of too much freedom is too much slavery for the individual and the state; from the height of liberty they come to the fiercest extreme of servitude”¹⁰¹³. Quite in accord with the envisaged blending of far left and far right in the political realm, we can bring to mind the lucid comment offered by Mao Zedong during the meeting with Richard Nixon in Act I of the opera Nixon in China¹⁰¹⁴, equally shedding light on how the spectrum of political ideologies forms a circle rather than a straight line, so that the farthest extremes cannot be seen as widely separated in reality anymore: “Among the followers of Marx, the extreme left, the doctrinaires, tend to be fascist. True Marxism is called the far right by the extreme left. Occasionally, the true left calls a spade a spade and tells the left it’s right”. For example, if we hear the left accuse the right for inhumane social propositions that neglect the common good and spur devious self-centeredness, the libertarians on the right would have the right to notice that obligatory taxations imposed by the leftists are, in fact, what presumes the inherently evil and selfish nature of man, from whom higher powers must take lest he never share his wealth with the less fortunate ones, when a government-free social order would imply faith in the good of man and his ability to spontaneously steer the society toward horizons of happiness and prosperity for all, at which point one, having been spun in a bedazzling circle, would not know anymore who is left to the right and who is right to the left. Finally, this is the time to recapitulate Blaise Pascal’s belief

that “when we try to pursue virtues to either extreme, vices appear”¹⁰¹⁵, inspiring us to relinquish the idea of destinations reachable by striding forward and forward only, as in concert with the Little Prince’s idea of “getting nowhere by moving straight ahead only”¹⁰¹⁶, and to substitute these deceptive cravings with the quest for the journey’s end in every instance of our existence, for finding the ultimate goal in the journey itself on this sphere of reality whereon circumference is nowhere and the center is everywhere, as the French mathematician and theologian would further remind us. Thus, as we see, just like the progression of the day results in the rise of its antipode, night, just as deep inhalation leads to emptying of our lungs, and just as trying to stay awake for an indefinite period of time generates workings of the brain that begin to resemble a dreamy state with connections and visions randomly popping up on the screen of our mind, so does every reaching out to be everything, everything result in our entering the Zen state of *satori*, of illuminative nothingness, and *vice versa*. With one such identification with all beings and things around us, we discontinue being constrained within this tiny bottle of our self-consciousness and become immersed in an ocean of being. We are in everything and everything is in us during those enlightening moments. And yet, for the sake of nurturing our pragmatic creativity in this world we need to come back again to discerning ordinary details in the ordinary world of presumptions of ours. After all, that is what we have to learn in this life: to be one with every tiny thing, and yet to be one with everything, the whole world as we know it. To find enjoyment in things existing as separate from the rest of the world, all on their own, and yet to contemplate about the meaning of their existence only within a giant whole that is actually one being, one Gaia, one heartbeat, one big, big Love. Dragutin Gavrilović, the Serbian martyr who led the battalion that defended Belgrade against combined Austro-Hungarian, German and Bulgarian forces in October 1915, at the peak of World War I, told his soldiers prior to the battle that they did not exist anymore, that their names were erased from the list of survivors, and that they had nothing to lose. The courageous way in which they sacrificed their lives defending their hometown prompted the German general in charge of this invasive campaign, August von Mackensen, to erect a monument at the site of the battle and inscribe on it the following words: “We fought against an army of which we have heard only in legends”. Different times were those in the ethics of warfare, of course, when such expressions of cordial respect of the enemy appeared less odd than they would today. This could be exemplified by the decision of the Serbian army to not only cease fire for a day during its war with Bulgaria so that the Red Cross aid from Vienna could reach the wounded Bulgarian soldiers on the other side of the frontline, but also to add medication, beds and blankets from its own supplies to the aid, in yet another selfless act wherewith a deliberate loss has been turned into a triumph, an act in the honor of which a board with the inscription saying “Be as humane as Serbia was in 1885” now stands on the building of the International Red Cross in Geneva¹⁰¹⁷. The occasional kindness of the US Army to its adversaries aside, compare this act of graciousness to the Americans’ activating a hydrogen bomb only 800 meters away from the Nagasaki Medical College hospital, a historic site for the Japanese medical science, the one where the western medicine entered Japan through a contact with the Dutch enclave settled in this region centuries ago. Back to the chronology of World War I, even though an impression was that the Serbian soldiers lost the battle and then wholly perished during their retreat across the snowy

southern Serbian and Albanian mountains and valleys towards the island of Corfu, their triumphant spirit was sown all over the earth and could be felt in the air, everywhere, and how powerfully they bounced back, recuperated and morally toughened, carried on the wings of the heroic sacrifices made by their fellowmen. “Because the Serbian army no longer exists, and existent are only its miserable remains that fled into wild Albanian and Montenegrin mountains, where without food they would find sure death in this winter, all further operations are discontinued and no more reports will be sent out from the Balkan front”¹⁰¹⁸, stood written in the telegram sent out by the German forces to their headquarters on November 29, 1915, yet nothing could stand in the way of the fulfillment of one of the most fabulous and heroic stories that have ever befallen humanity. Miraculously, as it indeed happens in fairytales only, the Serbian army, a tiny David, so to speak, won the war against a mighty Goliath. Therefore, should we tell ourselves that we have ceased to exist, maybe by climbing to a cosmic panorama of being and setting the perspective of our mind to the Universe as a whole with all its merely felt or imagined distant times, planets or the whole new worlds, the lightness with which we would approach our acts in this world might begin to shine with an unforeseen and truly immaculate grace. Such may be the nature of every feeling of enlightenment: to find oneself standing at the line between the sense of being everything and the sense of being nothing. For, as we see, whether we venture far enough in one direction or in the direction of its opposite, we eventually arrive at the same locus; to disappear is to become omnipresent and *vice versa* in this reality where, as Željko would have had it, positive and negative infinites merge into one and the same, the insight upon which the egg-shaped ball of light residing in our chests, the ball we call soul, shivers and, then, smiles, differentiating not between infinite joy and infinite grief, for they both, as humans have hard time grasping, bring about equal bedazzling surges of light to it.

S.F.3.24. “It’s awesome. I mean, it’s like beyond words. You see so much you aren’t aware of”, were the words of an astonished Dutch tourist after visiting the tiny town of Tekapo in New Zealand, recently made popular as the first place on Earth in which all the artificial lights are kept shut down at night so as to let people enjoy the beauties of the starry sky. What this example shows us is how subtracting details from things and ideas we hand to others is sometimes the way to improve our understanding of each other. Leonardo da Vinci observed once that “the more thoroughly one describes, the more one confuses”, reminding us that there are limits in our drawing lines and connections with the purpose of enriching our explanations and making the transmission of meanings we have in mind to others perfect, beyond which the clarity of our expressions becomes diminished as we enter the waters of perplexing others deeper and deeper. Just as stars are laid out across the starry sky without connections between them, the same is with thoroughly inspiring sets of ideas. As individual ideas, they may be scattered across the maps and papers of this world, and yet it is these empty spaces between them that are crucial for fostering the reader’s evolution in understanding. It is these abysses of emptiness that invite one to search for the connection and eventually find it in an enlightening moment of understanding. Thus the interpreter builds bridges across these abysses, bridges that enable his happily twinkling walks from star to star. Had all the missing connections been drawn, no need for engaging one in a passionate quest for them would exist, which would eventually lead to the dulling and withering of the intellectual capabilities of ours. Such is the nature of life as well. Divine signs are dispersed everywhere, though always enwrapped in a sense of mystery, constantly instigating us to search for ever newer

¹⁰¹⁸ See Krf i Vido – 100 godina od iskrcavanja srpske vojske, B92 News (April 18, 2016), retrieved from http://www.b92.net/info/vesti/index.php?yyyy=2016&mm=04&dd=18&nav_category=12&nav_id=1121223.

meanings and ways to maintain stability in life. Only when we are lost could we be truly found, as the beautiful Biblical narrative about the prodigal son (Luke 15:11-32) tells us. The message is now clear: to make an explanation perfect, certain parts thereof ought to remain unsaid. In other words, a perfect explanation has to be imperfect in order to be truly perfect. Perfect education is, likewise, neither showing everything to those whom we teach: the correct path, method and aims, nor walking hand-in-hand with them on the way thereto. Instead, it is about sketching the paths that the little ones should spin in their dreams. It is about telling them stories that would enkindle their passions and imagination. An adventurous thirst for knowledge is thus awakened in them, and this burning heart of longings to know themselves, to know Nature and to turn themselves into a light for the salvation of revered humanity will drive them towards the Answer, being the drive in the course of which they may feel as if perplexedly personifying the questions posed by Michael Stipe at the beginning of a life-reflecting journey that one of the most beautiful pop records is, “Hey kids, where are you, nobody tells you what to do”¹⁰¹⁹, and yet, as in the beautiful Farid ad-Din Attar’s poem¹⁰²⁰ or Ivan Karamazov’s dream of the road of quadrillion kilometers¹⁰²¹, rest with their heart on a divine destination all of the time exactly because of incessantly remaining on the divine path to reach the Answer. Praying to attain oneness with the ideal of a celestial, perfect creature that rests within us like a mystical muse, sometimes covered with a haze of ignorance and sometimes sparkling with an intimate clarity, is what brings us closer to the aim itself, and is, of course, possible only insofar as the world is kept in an imperfect state, deviating from the most desirable state we would wish it to be in. “Infinite striving to be the best is man’s duty, and it is its own reward”, as Mahatma Gandhi claimed. The same principle of allowing imperfections to reign for the sake of perfection to be born can be said to apply to every aspect to human expression, to which end Haruki Murakami distilled the knowledge of generations of artists before and after him when he pointed out that authentic writing, writing capable of striking the chords of empathy between the writer and the reader, proceeds on the wings of intuition, with zero obsession with making the words and sentences perfect, and that, as such, it contrasts the so-called analytical writing, writing obsessed with perfection, constantly going back and forth between revisions and reassessments, albeit losing its empathic capacity in the process¹⁰²². This norm, standing in the way of endless corrections of what is being written, is what I must implement in my writings too, lest the soul thereof become dissipated in the wind. Of course, to a person who has become familiar with the tenets of jazz, punk, rock ‘n’ roll, divine oratories, improv theater and other performance arts, where freeness, novelties and exploration are favored over the compulsive repetitions of the inveterate, this does not come forth as a difficult task. Having had life, in all its splendor, teach me that less is more, I truly believe that in the near future, humanity will witness a rise in the aesthetics of minimalism in many areas of communication, from arts to sciences to everyday social interactions, all of which have been traditionally pervaded with the ideals to lay down all that one has and not keep anything secret. Hence, if I go back to the beginning of this passage, I may start rewriting it in a following way, all in the spirit of minimalism: “When the night falls in a little town of Tekapo, its inhabitants do not turn the indoor and outdoor lights on. People cut down on lighting up the things on Earth, but by doing so, they open beautiful views to the starry sky above.

¹⁰¹⁹ Listen to R.E.M.’s Drive on Automatic for the People, Warner Bros (1993).

¹⁰²² See Alison Flood’s Haruki Murakami Cautions Against Excluding Outsiders, *Guardian* (November 1, 2016), retrieved from <https://www.theguardian.com/books/2016/nov/01/haruki-murakami-hans-christian-anderdersen-prize-speech-outsiders>.

Hence, sometimes talking less and learning how to make use of silence is the way to open the views to an enlightening infinity of being”. But no, it’s not simple enough, I say. Let me try again. “In a little town on a little lake in New Zealand, when the night falls, nobody switches the lights on. And yet, these nobodies, little and humble as they are, point to the beautiful and immense cosmos surrounding them”. Of course, this is nowhere as minimalistic and powerful as my most favorite inscription on a single monument, findable on the southeastern side of the one raised in 1930 in honor of the major Serbian allies in World War I, the French, and placed in-between two arrays of proud cypresses in the park neighboring the Kalemegdan fortress in my hometown, Belgrade: *A la France*. Still, notice how the spirit of mellow, humble childishness has slowly started to palpitate inside out from this serene series of symbols. Presenting our ideas in simple ways does not make us appear smart in the eyes of the world, but quite the opposite: it serves the purpose of disgracing and diminishing our own importance in other people’s views. By doing so, we appear friendly and easily approachable to others, and thus break the barbed wired barriers that self-praising and self-glorifying attitudes implicit in extraordinarily intricate assertions pose between us and the world. Mixing this childish simplicity with scientific powers of a clear-cut, analytical discerning of things may be an aesthetic ideal of a postmodern intellectuality that peers right behind the horizons of the modern times. In future, we will undoubtedly witness an explosion of minimalistic trends, of presenting ideas in humble, juvenile and innocent ways, of creating scenes where “shifting your weight is a big deal”¹⁰²³, thereby revolutionizing many overly rigid spheres of communication. Of course, even then, there will always be those who would accuse a minimalist, neo-punk artist of mediocrity simply because of her sparse expressions, but they would miss the point by a million miles, just as much as all those who denounced John Bonham for drumming without the swing failed to see that this simplistic percussion technique was the key to endowing the sound of Led Zeppelin with a characteristic heaviness, which would serve as a predecessor for the entire heavy metal genre. Naturally, whenever we achieve an immense outcome with modest means, we may be tempted to think that more of the resources would yield even better results, but in reality more would very often be equivalent to less and less to more. When this is understood, a whole new reality dawns on us and a huge burden of expressions that tend to overwhelm and tire the recipient dissipates in the air. Simultaneously, the merits of vacancy, silence and an unsaid essence become implicitly acknowledged and allowed to find a way to our works. My bandmates and I knew this, and as a response to the world wherein the loudest ones would win all the trophies, we posed an ideal of meditation and quiet plunging into an eternal, impressionistic enjoyment of the beauty of being, naming our band Silence by a Crescent Star and laying young glistening moons on tops of our heads. Taoist painters glorified the empty patches on finished canvases as parts of theirs where the essence dwells. And everybody knows how for any conversation to be productive and inspiring, one ought not to avoid the precious moments of silence that are interspersed between the instances filled with verbal argumentations. “The one who conquers the world conquers it often by nonacting” (Tao-Te-Xing 48) is Lao-Tzu’s verse I often recall in productive moments of stillness in pure silence of being, as stars of the world and our thoughts are let spontaneously align on their skies. Should we avoid these silent moments and rush to fill them with whatever words occur to us, we may seriously threaten the inspirational character of any talking with others we engage ourselves into, and oftentimes damage the carpets of light sincerity upon which all inspiring conversations float. I am surely aware of the fact that

¹⁰²³ The phrase is attributed to the theatre director, Gregory Mosher, who has been very fond of minimalistic stage productions: “I really like it when shifting your weight onstage is a big deal”. See Terry McCabe’s *Mis-directing the Play: An Argument against Contemporary Theatre*, Ivan R. Dee, Chicago, IL (2001), pp. 15.

silence can sometimes be louder than the thunder, let alone words; in fact, as pointed out by Marco Tardelli, the scorer of arguably the most iconically celebrated World Cup goal in soccer history, in recollection of the moments preceding it, “There was a big silence that was making a big noise; sometimes silence can be louder than anything”¹⁰²⁴. Correspondingly, all of my talks comprise solemn moments of silence when the listeners are let reflect for a while, digest the messages in peace and inflate their intellectual spheres of curiosity and wonder. Taoist painters used to consider the empty spaces on a painting as the entrance to the cosmos of its meanings, Ralph Richardson used to claim that “acting lay in pauses”, and Franz Kafka strikingly observed how “the Sirens have a still more fatal weapon than their song, namely their silence”¹⁰²⁵. Claude Debussy perceived music as “the space between the notes”, Isaac Stern talked about “that little bit between each note – silences which give the form”, and I have equally seen the purpose of music as one of coloring and enlivening the silence upon which it floats. To me, the experience of listening to music has always been comparable to moving beyond the curtains of audible tones, penetrating through the sound waves into the layers of silence underneath, and sensing the beauty of it. In his poem *Via Negativa*, the Welsh poet, Ronald Stuart Thomas says: “Why no! I never thought other than that God is that great absence in our lives, the empty silence within, the place where we go seeking, not in hope to arrive or find. He keeps the interstices in our knowledge, the darkness between stars”¹⁰²⁶, and truly, my heart has always beaten faster as I would come close in my thoughts to navy blue underwater depths, secret tunnels, passages and closets, mystical pathways and fire escape stairs that open the way away from the ordinary and predictable impressions of ours into a beautiful world populated by starry wonder and cosmic love, wherein black-eyed angels could swim with us, as in Radiohead’s *Pyramid Song*¹⁰²⁷. Through these orphic stairs, through meditation and plunging into the sea of silence within, we reach the rooftops of our consciousness where all the stars and galaxies swirl in our eyes and our heart opens to the cosmic symphony of being. Just as the Dutch tourist from the beginning of this passage, we thence feel as a touristy angel who dropped down from the stars to blessedly walk across this planet and bring the stellar beauties to it, forever and ever remaining a heavenly child, shining forth with the purity of love and an impeccable, graceful honesty to the world. It is by going beyond words and meditatively jumping into the voids of our heart and mind that we find ourselves floating with the stars and feel as if we have been returned to a starry womb, to the very beginnings, swimming inside the sea in the belly of a starry-eyed angel, the sea which is one big teardrop, salty and beautiful, reminiscent of the melodies of joy and melancholy that the ocean of our heart will be singing during our dwelling in this world. “Connected to the moment it began”¹⁰²⁸, we thus return to the beginnings of it all and become one with a divinely childish and graceful muse concealed within the depths of our heart. It is thus that we release her to the absolute freedom of being. After being kept inside the cages of fear, rigid social norms and ill values, obstructing the natural flow of celestial beauty within us, we finally let it penetrate every cell of our being, becoming a divine child that is forever and ever to bless this world with the light of its starry heart. Now, in praise of this silence of being, I will make the following passage of this book perfectly empty. It will be pure silence and nothingness. It will be a ball of nil rolling through an empty space. It will be a void that invites you to look deep

into it and find greater, unforeseen meanings of life by looking through it and exiting on the other, more beautiful side of the mirror, as in Alice's adventures in Wonderland. And yet, in the middle of this nothingness, I will draw a line. For that is how the Universe began – with a horizontal line¹⁰²⁹. That is also how it will end, with yet another straight line¹⁰³⁰, making the entire existence of Cosmos as we know it, from the Big Bang to the Big Crunch, a single breath of divine Nature. Like this primal cosmic line in which the whole history and future of this planet and of hundreds of billions of galaxies scattered throughout the Universe is found, the yellow line that I will impress here will hide in it an infinite abundance of stories that reveal meanings of life. For, this is how it all had begun. “From one comes two, from two comes three, from three arise all things” (Tao-Te-Xing 42), as Lao-Tzu would have smilingly told us. After one of the lengthiest passages of the book, it is certainly refreshing to recall how simple things, from the lowliest lakeshore pebbles to the crumbliest seashells to the clammiest pinecones to starry twinkles, lying in the midst of it, right here, right now, are where the doors to the most enchanting secrets of the Universe ought to be sought.

S.F.3.25.

S.F.3.26. I believe it was Isaiah Berlin who started preparing for lectures by writing a few pages of text. As the lecture time would get close, he would gradually reduce the number of sentences on the paper. One by one, they would fall off, and he would be left with a single paragraph of the text. Right before he was about to enter the stage, he would stand behind the curtain staring at a single sentence. Eventually, he would throw even that single sentence in the garbage can and head out to face the audience. Similarly, when a student approached John Tresidder Sheppard after one of his lectures on the poetic colonnade that Homer's Iliad is, during which the King's College in Cambridge Provost impeccably traced the allegorical treasures of meaning of one event after another described in it, and asked for his notes, the professor smilingly nodded his head, uttered a quiet “certainly” and handed over to her a piece of paper on which it stood written only this: “Zeus Agamemnon Zeus”¹⁰³¹. As already stated in the Gospels, “When they bring you unto the synagogues, and unto magistrates, and powers, take ye no thought how or what thing ye shall answer, or what ye shall say: for the Holy Ghost shall teach you in the same hour what ye ought to say” (Luke 12:11-12). “You've got to learn your instrument. Then, you practice, practice, practice. And then, when you finally get up there on the bandstand, forget all that and just wail”, Charlie Parker said once, placing an epitaph on the tradition of robotically predetermined manners of communicating oneself and raising improvisational spontaneity, the spirit of the moment, jazzily joyous and weepingly sad at the same time, on the pedestal of ideal human expressions.

Rudolf Steiner was known for a similar habit of never preconceiving his lectures in advance and rather enjoying in the unforeseeable course that his unprepared, impromptu encounters with the audience would take¹⁰³², while the UK musician and the founder of the label Accidental Records, Matthew Herbert valued improvisatory musical effects accidentally arrived at so much that he composed a “contract for the composition of music (incorporating the manifesto of mistakes)” in which he stated that “the inclusion, development, propagation, existence, replication, acknowledgement, rights, patterns and beauty of what are commonly known as accidents, is encouraged; furthermore, they have equal rights within the composition as deliberate, conscious, or premeditated compositional actions or decisions”¹⁰³³. The same manifesto may be employed to describe the mumblecore genre of American indie movie scene, the first fresh thing to come out of it since the early directorial days of John Cassavetes, given that intrinsic to it is the fosterage of the idea of following the script, yet also incessantly improvising the dialogues, being the approach to which its films owe their captivating character. Gregory Bateson, one of my personal philosophical heroes, nurtured the same attitude of unrehearsed spontaneity during his presentations, and this is what one of his biographers had to say about it: “As always, he resisted preexisting structures (David Lipset has shown how this was a central theme in Bateson’s career), in this case a prepared lecture or even notes for a lecture. As always, he put himself at risk in front of an audience in a procedure that, as those who attended various of his public performances will remember, sometimes failed as didactic lectures. But at another level, as he would have characteristically put it, he risked nothing at all, for at this level he was illustrating something rather than talking about it. He was not being a lecturer, presenting material, but an exemplar, representing it. He was performing a ‘metalogue’, a communication whose form is meant to illustrate its content. What he was trying to illustrate, as always, was that authentic, minimally erroneous communication and thought is responsive to the moment, to the condition of the presenter, the state of his understanding of his problem, and his sense of the audience. This involved considerable risk, and required some sense of trust, usually amply justified, in his listeners. But it was not for everyone”¹⁰³⁴. To depart from the script or whatever else the prefabbed blueprint for our actions may be, as countless theater and film directors would agree - including Jean-Luc Godard, “for whom a script means that the scene in front of the camera has already been imagined fully and that there is no room for reality”¹⁰³⁵, the reason for which he “had always resisted producing a script for his movies, preferring instead to content himself with settings and characters for which he would provide lines written on set just before shooting”¹⁰³⁶ - is also to give a plenty of life to performance and to the audience. Such an approach based on spontaneity, intuitiveness and receptiveness for the tiniest feedback signals from the audience, an approach that is ready to change the very approach at any given moment of the lecture, naturally fosters a wide-awake perception among the listeners. Unlike overly prepared and thoroughly preconceived, robotized lectures which naturally put the audience to sleep, this attitude is the one that shakes the

listeners from their core, making them exclaim what I name “pow/wow/vow/bow”, a sigh of simultaneous bombastic amazement and an awakened prayerful devotion to the divine mission beating so clearly with music in their hearts in those moments. In such a manner, the audience is brought onto a transcendent edge of a cliff, over which they are invited to walk wordlessly, in awe and fear, learning quickly that their neglect of the call and staying sluggishly secluded would come at the price of the loss of a beautiful view spread before them, a view enjoyable only for as long as they trust me and walk in my footsteps, in trust and sympathy alike. Elvis Costello is only one out of many musicians who have had a similar approach when out there on the stage, “keeping the audience away from the comfort zone, in the proximity of danger, because that is where the best things happen”¹⁰³⁷, in the words of one of his musical companions. In fact, that this approach based on incessantly surprising the audience and putting it in an omnipotent state wherefrom everything seems possible is a feature of all the inspirational guides, be they teachers or rock stars, can be, aside from the classic Zen stories, also deduced from the words of Fernando Flores, whom many call a magician of transformation on stage: “When trust improves, the mood improves. Everyone feels more confident. One thing we need to do here is to produce despair – because despair produces reality. A feel-good style can be a symptom of unawareness or lack of caring. I’m showing you what your blindness looks like. Drop the idea that you have a map for the future, or that you need one. I want you to build your sense of curiosity. If you act as if you know everything when you meet with your customers, you’ll lose your job... We aren’t aware of the amount of self-deception and self-limitation that we collect in our personalities. I’m fighting for freedom, for breadth of being. I want to open up people’s moral imaginations – which will give them a strategic advantage in business, in politics, and in their personal lives... Great work is done by people who are not afraid to be great”¹⁰³⁸. Finally, after being accused that he is “dangerous” as a teacher and consultant due to his approach of shocking the system out of its arrogance, blindness and complacency, Fernando is said to have waved his hand and said, “That critic who thinks I’m dangerous, tell him that I don’t think I am dangerous enough”, sending forth a message that distantly echoes that exclaimed by the Slovenian philosopher, Slavoj Žižek when he was approached by an advice-seeking student: “Look at me, look at my ties, don’t you see that I’m mad? How can you even think about asking a mad man like me to help you”¹⁰³⁹? My approach to fostering independent creative thinking and enlightening the surrounding souls has ever since been infused with a similar dose of punchy, dynamistic liveliness that catapults the listeners and watchers from the safe shelters of habitual thinking and acting straight into epistemologically groundless and, I am free to say, stellar realms. These punches that make them see stars are, though, remember, always to be combined with an infinite, cosmic love flowing out of our heart for others to blissfully swim in if we are to attain the ideals of the most sublime educative acting imaginable.

S.F.3.27. However, despite being an energetic force that delivers awakening punches and starry surprises all over the place in the course of my lectures, I equally know that when the lecture time comes, the time to spend some time dwelling deep within the essence of my mind and heart has come as well. For, to have our actions resemble a majestic wheel of creativity, a carousel that lets

the listener spin on it, producing a starry dizziness, a firework of brilliant ideas in them, we need to make the center of ourselves immovable and as still as a placid sea. In other words, I need to find that silence within and reach a perfect tranquility and oneness with the center of my being. Thence, I withdraw myself in a sort of dynamic balance between meditation and contemplation. As a meditative experience, I invoke that silence and emptiness within my mind and heart, which helps me focus on the flow of ideas and smoothly expressing them. But without a contemplative experience, the overall preparation for the lecture or any other big time acting in front of others would be incomplete. And as contemplation I do not regard merely weaving the threads of logical thought, but also invoking the images from my memory that enkindle a flame of passion, grace and love inside of me and outline the way for me to become the way I envision the perfect I. Whereas a pure meditative attitude may overcome the natural fear of lecturing with unresponsive coldness and a nihilistic invocation of all-encompassing nothingness, this flame is the one that beats the stage-fright with a fire of love, inspiration and gracefulness, thereby channeling this inner commotion into an exciting performance. Through it we forge inspiring ideas that are to become the true guiding stars to help our mind in its meditative focus navigate the ships of ideas properly, towards the coast on which people from the audience are thirstily waiting for the goods of our thoughts to be delivered to them. These inspiring “guiding stars” in our mind are like beacons that throw light not only to small patches of the ocean water, but also to distant mountains at the ocean end. With them, it is as if we are standing on the ocean shore with a proud and distant sailor-like look that stares far away while our love for the ocean in front of us illuminates every part of it. And once we manage to shed light on something lying in the faraway distance, way beyond the curious looks of our audience, we automatically illuminate the grounds on which the dim lighthouses of their attention stand as well. As the Little Prince noticed, “The world looks beautiful because of a rose one cannot see”¹⁰⁴⁰.

S.F.3.28. “Hey man, slow down”, forever and ever ring the words from the finale of Radiohead’s OK Computer, reminding us of the Zen norm of being “quick but slow” in everything we do. Our mindsets ought to be dreamy and awake, pensive and alert, ponderous and reactive at the same time if we are to tap the waters of creativity from the divine and infinitely deep well of our spiritedness. Also, what the co-creational thesis advises us is to always keep in mind that it takes two creative forces to create truly anything in life. Mind and Nature are both included in drawing the results of our perception and, likewise, whatever we state in our daily communications becomes co-created by the other, interpreting side, and *vice versa*: whatever we get in touch with as someone else’s creative deeds becomes co-created with our interpretative reshaping thereof. So, whatever the ideas we are proclaiming, we need to be aware that enough space has to be left for the other side to reflect on the ideas being put forth. Speaking hastily so as to respect other people’s time is smart, but there has to be a limit to it; otherwise, we would end up speaking to ourselves only. And yet, in such a monologue, we would merely be able to prove our own smartness to ourselves. Blabbering too quickly would deprive the other side in conversation of the precious space of pure nothingness, which would eventually diminish their abilities to follow us and extract the sap of valuable meanings from our talk. That is why it is important not only to break the silence with our creative acts, but to modulate our acts with the moments of emptiness during which we could recollect our stance and yet leave the other side to reflect on what was being said. This is why my lectures resemble explosions of exciting ideas, but permeated with hollowness and slumber. And to instigate a dreamy introspectiveness, opening the ways inside, for the people in

¹⁰⁴⁰ See Antoine de Saint-Exupery’s *The Little Prince*, Mladost, Zagreb, Croatia (1943).

the audience to travel to meet their own self and edify their knowledge at the foundations of their being, and yet spurring an awakened perception by throwing arrows of information in exciting ways is a fantastic challenge. Another trick I use is to shift the audience's attention between diverse and oftentimes distant fields. Instead of following a presupposed path, which often leads to a drowsy perception and a tunnel vision, I make them move their heads left and right, as if watching a game of tennis. Not only do I always use my whole body in explaining ideas and intensively walk up and down along the podium in synchrony with the flow of points I try to get across, being the same principle that I employ in my classroom, where I instigate students to move around and mingle all of the time, as if at a party, rather than remaining seated in place, like statues, but the focus of my presentations, like this sentence, also tends to move between here and there, up and down, then 'round and around, making the audience pleasantly dizzy along the way. Whirling dervishes enter the state of trance by intensively spinning around their axes and the same effect of disorientation through which one miraculously orients oneself towards novel and previously unforeseen destinations of the spirit can result from this approach to inspirational lecturing. In walking down a path like that, I also stick to what Nele hollered at the end of his band's Greetings from the Safari Land: "I do not have a path, for in wandering I'm the world champ"¹⁰⁴¹. So, although I hold the vision of a road leading to wonderful sun-setting horizons of knowledge, I let myself unpredictably wander, instilling thereby lively spontaneity and inconstancy in my presentations. In research too, as well as in writing, as it is evident by tracing these lines, and finally in every aspect of life I equally slide down the tangents and tiptoe around the edges more often than I traverse systems by journeying down their main avenues and aortas; this, I know, endows my words and actions with an element of unpredictability and, thus, the ability to surprise and bedazzle. For, I know that a rise in the complexity of life is entailed by the gradually diminishing predictability in interacting with the systems in question, a statement of fact at which an anarchist in us may gleefully wink. For example, to grow well, most plants need water and sunshine; puppies, more complex in nature, need some food, water and a walk in the park here and there; to establish reliable action-reaction loops for human babies is, however, a challenge that no one has succeeded in yet and no one certainly will in the near or distant future, at least among us, the species of the same complexity, and not extraterrestrials or evolutionary more supreme earthlings endowed with far more advanced intelligence. Unpredictability is, therefore, a trait to cherish rather than to discard in our explorations of Nature; even more so because nothing but reiteration of preexisting paradigms would be the result of scientific research had it not been for the gift of unpredictability appearing every once in a while on our exploratory paths as a gate through which an inquisitive soul must pass before it arrives at the doorsteps of an exciting discovery. The greatest benefit of such a presentation method that heartily avoids the chasms of predictability by embracing an improvisational attitude thoroughly, from the head to the toe, from the mental to the bodily expressional spheres, a method that is quite unmethodical in its essence, is the moment of recognition of wide awake eyes in the audience, pulsating clemently, wiggling and whirling in wonder and twinkling like little stars with genuine, blessedly childish curiosity. In those moments, I feel as if I have lived up to the ideal with which I approach every performance of mine: that is, to create an entire starry sky in front of me, through which I could pleasantly walk and into which I could cheerfully dive.

¹⁰⁴¹ Listen to Zabranjeno Pušenje's Meteor on Pozdrav iz zemlje Safari, Diskoton, Sarajevo, Bosnia & Herzegovina (1987).

S.F.3.29. Preparing for a lecture is somewhat similar to preparing for a wonderful evening out. Hours before the show begins, looking at oneself in the mirror in a room or in the crimson-lit backstage, with “hey man, slow down” music drifting through the air, and the prayerful moment before the curtain finally falls and we get to face the audience, that glimpse of a second prior to our act, all carry sacred meanings to me, as they are ideally spent with the meditative feeling of entering the treasury of the spirit that the inner world of one is and boosting its shine from the inside out, pumping up our ego and getting it all set for its explosion into a myriad of starry signs that will dazzle the world with their ethereal beauties and then complete disappearance, as in accordance with David Thomas and Pere Ubu’s post-punk dictum, “Delay Centrifugal Destruct Factors for as long as possible then push the button”¹⁰⁴², while installing in ourselves the sense that “I am a superstar”, submitting every atom of our being to that mysterious “ongoing force of me” mentioned by Johnny Rotten as a single more revolutionary thing than the Sex Pistols¹⁰⁴³, though, remember, always remember, in parallel with arousing a colossal determination to give away this immaculate shine enkindled within our self to others and to the whole wide world that envelops us with the veil of unutterable mysteriousness. “A theater dressing room is a very special place; it’s where the act of theater begins”, the dancer, Martha Graham said, before gazing at her reflection in the mirror of this magic room, minutes prior to the performance, and announcing her fear that she would fail in striking that delicate balance between clarity and passion¹⁰⁴⁴. For, whether the technique and the discipline prevail over the naturalness and imagination or striving for the latter crumbles the solidity of the former edifices, the stage performance would suffer. Remembering this and descending deep below the surface strata of our consciousness, all until the touch with a divine aura of the self is being established, wherefrom sheer magic could start to flow to the surface of one’s being, freely and effortlessly, as if in a dream, must be performed during these primordial looks into the backstage mirror, lest the real performance, once it begins, collapse under our feet. And yet, in spite of the eruptive energies awakened within ourselves, which all sing odes of joy and freedom to the world, each one of these sacred moments prior to the “show” must be spiced with a zest of soft scariness, which tries to cocoon the self into an inactive ball of yarn, thus providing a balance akin to that between explosiveness and gravity that sustains the shine of a star. For, never forget that where fools rush in, angels fear to tread¹⁰⁴⁵. After all, treading through the world with genuine care illuminating our heart, deeply questioning each step of ours, as opposed to rushing forward inertly and heedlessly, like Pope’s fool, is what saves us from falling into abysses that hide in the place of blind spots of our reasoning and takes us by the hand in the direction of carving a stony statue of a Greek goddess out of our spirit. Sacredness and scariness thus normally go hand-in-hand, and things and situations in life which we are most afraid of are, in fact, the most rewarding and progressive ones to our spirits, be it approaching the cutest girl at a party or “sailing away” from this world. The link between inspirational lecturing and partying also lies in the sense of responsibility for the time that the audience or the people we go out with have dedicated to spend on us. This sense leads us to tend to lecture and party in a way that would make people leave the lecture halls or the party places feeling as if they had heard or seen

¹⁰⁴² See Nicholas Rombes’ *A Cultural Dictionary of Punk*, Continuum, New York, NY (2009), pp. 196.

¹⁰⁴³ *Ibid.*, pp. 175. The complete response Johnny Rotten gave to the Finnish television following a statement that “there had not been anything as revolutionary as the Sex Pistols” goes like this: “There *has* been something as revolutionary as the Sex Pistols. The ongoing force of me. And this you must never forget. I’m as relevant now and I was then. In fact more so. You need me. I don’t need you”.

¹⁰⁴⁴ Watch *Martha Graham: A Dancer’s World* directed by Nathan Kroll (1959).

something of an immense importance for their lives, which would keep on rolling the galactic disks of their minds and hearts and moving them towards ever more enchanting horizons of knowledge and being.

S.F.3.30. As I dressed myself up in extravagant, decadent and punk clothes and thereby shocked my academic fellows at one of the recent cocktail parties, I was asked for the reason for doing so by one of them. “I simply did not feel insecure enough today”, I replied. “That is why I opted for wearing this”. This line was meant to come as an edification of the premise that science is an ultimate adventure of the human mind that, as such, feeds of a sense of wonder, the pillared foundations of which are always intellectual uncertainties. This standpoint was epitomized in the following words by the Nobel Laureate, Jacques Lucien Monod: “In science, self-satisfaction is death. Personal self-satisfaction is the death of the scientist. Collective self-satisfaction is the death of the research. It is restlessness, anxiety, dissatisfaction, agony of mind that nourish science”. Indeed, once it becomes obvious that a sense of certainty and its execution in terms of drearily habitual existence has crept into us, we ought to know that steps were made that brought us closer to a boring and inherently uninspiring grownup dormant in us and far away from the image of the divine child as the stellar superego of ours, the sacred beginnings which our ends should strive to be one with. Although a fancy bubble of thought then simultaneously popped up amongst a crowd of clouds covering the blue sky of my mind, carrying a balloon of Bill Blass’ saying, “When in doubt, wear red”, which I have always seen as a reminder to dress up in those colors of spirit that maximize our sense of uncertainty, rather than boost self-confidence that permanently shuts many gates through which an inflow of inspiring ways of being and thought could enter our being, not a single additional word was said, as I left my peers to contemplate in silence the meaning of the message I tried to make across. All in all, I wanted to point out that too much self-confidence can be just about as damaging for one’s exhibitions of creativity as too much of insecurities, anxieties and fears can be. While in the former case we may end up acting insensitively and out-of-place, in the latter case we may wind up the essence of our spirit in a fearful cocoon with creative thinking and acting of ours thoroughly blocked and frozen. So, it is the balance between the two that ought to be nurtured within our being. After all, it is a tender battle between powerful determination to act in loving ways and sympathetic, sloppy insecurities that originate from overly respecting others that infuses the sparkles of grace in our personality. Imperfection is indeed the source of perfection.

S.F.3.31. From the first systematic studies on the health effects of calorie restriction diet carried out in the 1930s to dozens of their variations conducted during the following decades, they all indicated the same: namely, animals on such restricted dietary regimens exhibit increased longevity and tend to be in significantly better shape in their old age compared to their experimental counterparts who are let eat as much as they want all their lives. As a matter of fact, all of us could notice that whenever we fill our bellies up to their full capacity with food, the chemical storage of the energy from sunlight, we become drowsy and the clarity of our thinking and effectiveness at work become diminished. This clearly indicates that undergoing conditions that prevent us from reaching a perfect satisfaction of the moment are quite healthy and good for us in the long run. Having reached a perfect satisfaction in just about anything in life has devastating consequences for our creativity. Attaining all the aims we set in front of us would make the zealotry of our walking along the pathways of life whereupon we produce progressive steps for whole humanity wither and die. The same is with the art of lecturing. If we look after truly impressing the audience with our personal qualities, we should neither not preconceive our lecture at all nor overly prepare it so that it becomes delivered in a fully robotic fashion. This 50/50

preparation predisposes us to naturally wander after correct words and expressions during the talk, thereby inhaling novelty and a spark of the moment to it, which is vital for endowing it with charms of naturalness and keeping the audience receptive and awake. Half preconceived and half improvised is the recipe for every form of creative action. Alan Alda, an actor who has stood in-between the worlds of art and science and who is now teaching the art of communicating science at Stony Brook University, thus says: “I had been changed by improvising as a young actor. Everyone is; they become more charismatic, more watchable”¹⁰⁴⁶. In the final scene of *City Lights*, the thrilling movie that “flows as easily as water over pebbles”¹⁰⁴⁷ in the eyes of Alistair Cooke, it is said that the Little Tramp was not merely acting. As Chaplin himself remarked, “I’ve had that once or twice, he said... In *City Lights* just the last scene... I’m not acting.... Almost apologetic, standing outside myself and looking... It’s a beautiful scene, beautiful, and because it isn’t over-acted”¹⁰⁴⁸. Likewise, the most beautiful pieces of art have arisen through balanced imagining and preconceiving thereof on one side and letting them develop their own charm through accident, natural improvisation and unexpected input of natural circumstances of contributing creatures on the other. By fostering their improvisational elements, regular conversations could also be turned from those wherein both sides stick solely to their own stances and repeat things which they have already said innumerable times into mutually insightful encounters. That is, only after we let our opinions, the products of our thinking, be twisted and reshaped in conversations upon their being aired out loud could we turn them into wonderful opportunities for everyone to coevolve. In such a way, we open the door to a lecturing approach in which both the lecturer and the audience have something to learn during the lecturing course. For, openness to other people’s infusing the essence of their worldviews and sometimes even changing our values from deep inside is a trait of only the greatest masters on the lecturing stage and in the world of teaching and mentoring. After all, as the co-creational thesis and the Way of Love suggest, creativity is all about co-creation. Instead of attempting to thoroughly transform the blueprints of our imagination into reality, we should respect the side of natural spontaneity and let Nature instill some of her mysterious messages to works that are then always equally ours and hers. Trying to maintain control of every single aspect of any creative process could be seen from this perspective as devastatingly unnatural. Instead, needed is an attitude that readily gives away its creative powers in favor of empowering another and endowing him with the urge to get involved in creation in togetherness with one. Lest our tyrannical tendencies turn the echo of all creative voices around us into silence and we utter the cry of Wotan, the supreme God in Wagner’s *Ring of the Nibelung*, “With disgust I find myself in everything I create”¹⁰⁴⁹, we must learn how to open ourselves to the input of the fellow souls and gladly co-create our works with them. “Science cannot be built; it can only be grown”¹⁰⁵⁰, concordantly claimed the sociologist Leslie White and, indeed, nothing significant we create in life can be literally built in accordance with predesigned blueprints; rather, the process of shaping it to final forms must be a product of co-creation – unpredictable, nonlinear, infinitely potent, constantly ramifying in mysterious directions, fixing and advancing, not simply corroborating one’s being and knowledge, humbling in the most positive light and metaphorically representable

not by a predetermined destination, but by a long growth as well as by travelling, a way, every single point on which is an immediate gateway to the journey's purpose and end. In that sense, Emil M. Cioran's aforementioned questioning "the use of writing in order to say *exactly* what we had to say"¹⁰⁵¹, obliging the artist to express through his work both the intended and the inadvertent¹⁰⁵², can be understood as an implicit celebration of co-creation in perhaps every domain of human creativity. For, if writing, that single most solitary of all artistic endeavors and creative acts, is to be carried out by allowing a constant inflow of external sources of inspiration, resulting in works that constantly surprise us and serve as guides as much as plain mirrors of our feelings and thoughts, then the same must be expected for more complex and intrinsically collaborative displays of creativity too, ranging from research to teaching to filmmaking. There is no route to be taken other than the co-creative if we wish to ensure that the products of our work will captivate generations of interpreters with their inexhaustible meanings, resembling unfathomable fountains from which always novel and magically relevant insights will pour out and wash over their heads, from now until the end of time. Here the light becomes shone onto the remarkable opening line of Paul Klee's diary, which defined the German painter to such an extent that it made its way to his tombstone inscription too: "Here below I cannot be grasped at all"¹⁰⁵³. For, because the pinnacle of the creative process is creating in such a way that the created creates the creator inasmuch as the creator creates the created, the piece of art produced in one such inherently co-creative process must remain a mystery to the very human creator of it. The creative process as such becomes a ceaseless adventure into the unknown, an unending self-exploration, a question and a search rather than the precipitation of answers, "the Way", as Klee would have had it, for "after all, Becoming is superior to Being"¹⁰⁵⁴; herein, indeed, lies the magic of co-creation. To let our works craft us as we craft them, like M. C. Escher's two hands sketching each other, yielding books, songs, paintings, films or real-life expressions whose semantics would be as mysterious to us as it is to the rest of the world - in the same way Van Morrison described the music on Astral Weeks as "as baffling to him as to anyone else"¹⁰⁵⁵, having "no clue what the songs are about"¹⁰⁵⁶, given that they arose from a stream-of-consciousness frame of mind wherein preconceptions gave way to a stellar intuition - is indeed how the holiest and the most inspirational acts emerge from our being. "It wasn't till after I started painting him that I began finding out what a remarkable man he was"¹⁰⁵⁷, said Andrew Wyeth during his ruminations about one of his famous tempera portraits, *The Patriot*, and, indeed, as often as we, a genuine artist in the making, feel as if we instill life into the medium, we also get that magical feel that the medium, including Nature herself, instills life into us and change us down to our deepest cores, blessing us with the rise of awareness of the beauties resting in the objects of our art, which may have otherwise remained unnoticed. A channel and a receiver as much as a source and a point of origin

we feel we are when tuned to such a co-creational state of mind, the moment in which every last bit of the egocentric illusion that we are a sole creator, deserving a reward and recognition as such, disperses in the air and freedom for the flights of our spirit to truly astral spheres of experience could be declared. For, only through co-creation are we able to create works with infinite semantic layers, appearing as if gods made them and having the potential to amuse scholars attempting to interpret them for ages to come. After all, if the fact that the physical and psychological traits of a mammalian progeny are derived through a mishmash of the genetic makeup of its parents can teach us something, it is that the most blissful creative endeavors in the abstract realm too need to give away the cravings for perfect control and begin to follow the co-creative route by allowing a complementary creative source to be equally involved in defining their outcomes. In contrast, hermaphrodites among mammals and birds are the results of a pathological condition, just like the ceaselessly reproducing cells in malign tissues are, typically leading to infertility¹⁰⁵⁸, and the same consequence tends to await creative efforts that spring from the thirst to perfectly autonomously project one's visions onto the canvas of reality. Therefore, whatever we engage our creative powers in, let it be a circle cut in two, like the Greek letter θ transforming first into ε , having held its half into the hands of another, and then into \acute{o} , lifting the torch of his heart high in the air, like the constellation Orion, triumphantly and jubilantly, thus yielding a sequence of actions that reads $\theta\varepsilon\acute{o}$, that is, God.

S.F.3.32. Water, the synonym for flexibility and changeability, therefore, ought to always flow on top of the pebbles and stones of strong and willful determinateness in order to give rise to the most blissful charms of life. And when it comes to conceiving the recipe for exhibitions of utterly creative behavior, we should know that sometimes it requires “a little less conversation and a little more action”¹⁰⁵⁹, as one modernly revisited song suggests. Legend has it that the ancestral Bantu people greeted visitors with a phrase that literally meant “what do you dance”¹⁰⁶⁰ and during long hours of spiritually rectifying and rejuvenating ruminations I wonder whether the English phrase used on a similar occasion, “How do you do”, is but a degenerate form of this aboriginal saying, which once may have had a purpose by accurately accentuating the action as more important than the word and asking for an illuminative act to be performed by the responder to this greeting, but now remains a dead and futile expression, as no one anymore expects a move, not a word, to be dropped as a reply to it. Yet, it does not take the stroke of a genius to realize that word is but a vehicle for the delivery of an enlightening action rather than an aim in itself, in spite of the fact that, as we see, the word has a strange ability to corrupt our spirits when it is being given too much emphasis over the action that it describes. To avoid being caught in these chasms, we ought to keep in mind that moving beyond words should be the primary and the only reasonable purpose of the verbal expression. Drinking from the loving cup of this worldview, which places action far above the word on the ladder of significance for our task of learning how to elicit the divine powers dormant in us, makes us one step closer to becoming an angel on Earth. And with this dancing spirit infused in us, every gaze of ours will regain the magnetism lost in the world of lukewarm conversations and the ability to enthrall the audience and bring it to the edge of enlightenment with

even a single look or the snap of a finger, if needed. Hence, do not forget to show the audience and people in everyday communication some of that childlike directedness kept within you like the most precious treasures. Look up with a strong will to beautify and justify the world with your deeds, place that warrior stripe in your hair, and head on, your heart first, with the enlightening drive to “hold her and keep him strong”¹⁰⁶¹, in a perfect mixture of the gentle lovingness of a siren and the flaming strength of a Dragon.

S.F.3.33. And if someone observes that in merely deriving the already known ancient truths from all my discourses I am actually reinventing the wheel of creative being and may seem like the G. K. Chesterton’s English yachtsman who miscalculated his route and discovered England while thinking he discovered a new island in the South Sea¹⁰⁶², my answer would be that all the beautiful pieces of art present only shedding new lights at the ancient and everlasting truths. Made to face the criticism regarding the ostensible self-duplication of his works, which tended to highly resemble one another in numerous cinematic elements, the Japanese filmmaker, Yasujirō Ozu cheerfully resorted to the allegory of “a painter who keeps painting the same rose over and over again”¹⁰⁶³ or a tofu soup maker who makes one thing only – tofu soup, and I, myself, may also unashamedly confirm the repeatability of the central points of my discourses from one book to another, having always the same centers of gravity around which the orbits of my thinking are spun, thereby yielding new forms of the same old premises in each novel explication thereof. All my works are in this sense similar to the miracle Jesus carried out at the Galilean wedding (John 2:1-11), when he made the groom deliver a new wine at the beginning and an old one at the end, when everyone expected him to plan the things *vice versa*, that is, to bring out good and old wine at the start and then to start serving a less good wine later, after the attendees get tipsy. This may be only a metaphor of the ideal structure of our creative works permeated with meaningful messages. Namely, they may be supposed to start with new and modern things and end with the ancient and verified truths. Therefore, I did not let the words Igor Kononenko cold-bloodedly whispered to me, “They have merely rediscovered old truths using a new language”, crush a juvenile enthusiasm I experienced upon being introduced to the philosophy of constructivism for the first time. Notwithstanding that the time comes in the life of every erudite when every trendy movement becomes seen as a reiteration of an old message and but a new path to a mountaintop that has been around for ages, being the insight that is usually a sign that the time has come for knowledge to be lived and not only sought anymore, my reply could have been the well-known Biblical passage: “Every scribe which is instructed unto the kingdom of heaven is like unto a man that is an householder, which bringeth forth out of his treasure things new and old” (Matthew 13:52). Be that as it may, I would be happy if one day I look back at the reflection of my creative output and realize that I have always lived up to this ideal of blending the everlasting beauty of ancient perspectives with the visionary opening of novel and original expressions and points of view.

S.F.3.34. Hence, when people ask me what the most important and revolutionary record of the 21st Century is for me, without hesitating I point at Sigur Ros’ Takk. Not only does it present an

absolutely thrilling piece of art, but it can be also seen as a key sign to artists that subsist dazed and confused in many distant places of the world. In the era of globalization, when it may seem to many that the only way to create is to use the approaches and tools applied in the Western world, although delivering them in their own surrounding may at the same time seem illusory, they often find themselves lost at the splintered crossroad between the global trends and local interests. Some of them decide to play with the language of the modern world, thoroughly neglecting the respect of their own tradition, and some of them give up on modernizing their art and simply conform to the ears of the local masses. But some, like Sigur Ros, live up to the vision of standing at the crossroad while stretching their arms to both sides and bringing them closer together for the sake of everyone's enjoyment. In their sound, the native, ethno Icelandic sounds could be discerned as much as the new and progressive lines that originate from the streams of contemporary music. They speak the old truths using a new language, making their forgotten meanings familiar to the modern mind, and they also infuse the modern perspectives into old and often muddled ways of seeing things, rejuvenating them and instilling new life therein. They bring the entire world in their little villages and yet magnify the beauty that these little villages have possessed to global scales, for the entire world to see it. The same has to happen with every written wisdom, including religious works, if we are to see them being conveyed from one generation to another with a glistening enthusiasm. There need to be always new metaphors and meanings attached to religious stories if we are to retain their actuality and let them continue to be candidly carried by the modern kids inside their hearts, and not be rejected as being awfully outdated and obsolete. Henceforth, with one hand resting on the dusty monuments of the past and another hand stretched before us, reaching out to futuristic, stellar realms that surround us from all sides, always on the line of balance between the visionary drag forward and a cautious pull backward, moving back and forth like a spiral, the symbol of the Milky Way drawn out like a stellar line, the road to the stars, above our heads, is how we ought to creatively proceed forward in this life.

S.F.3.35. However, following oeuvres of fruitful artists, we can often recognize an earlier phase dominated by a quest to find a middle Way among many different streams and dominant trends in expression, and a later phase when the steps for new ways of expression are set forth. Ludwig van Beethoven can be an example as he stood as an excellent unifier in the era of classicism, and gave a great impulse for the then upcoming wave of romanticism. Of John Coltrane's *A Love Supreme*, the record often considered as the crown of jazz, in spite of its opening with a phrase copied directly from the opening of Sibelius' *Symphony No.5*, the following was said: "*A Love Supreme* blended it all into a mix that exposed the quartet's roots and influences: the propulsive, elevating effect of African polyrhythms, the lugubrious tempos of modal jazz, the wistful keening of Far Eastern folk music, the urgency of free jazz, the agitation of bebop, the familiar feel of the blues, the orgasmic release of gospel"¹⁰⁶⁴. Yet, by the time the record was released, the hype around jazz had begun to dwindle and subsequent free jazz works accomplished by Trane can be said to have provided a far greater influence on the contemporary sound than the Middle Way invoked in *A Love Supreme*. The Beatles and Radiohead could present additional examples derived from the modern soundscape. The former neatly combined the influences of the current era in their earlier phase, but only from *Revolver* on evolved into music of a truly new dimension. In the case of the latter, their second record, *The Bends*, provided a voice of generation that seemed as if brilliantly uniting many influences of the past. In doing so, an artist stands at the confluence of many rivers and

¹⁰⁶⁴ See Ashley Kahn's *A Love Supreme: The Story of John Coltrane's Signature Album*, Penguin Putnam, New York, NY (2002), pp. xvii.

builds a stream that unites all of them into a single flow. Ever since the art historians proposed the dichotomy between the French art after the Bourgeois Revolution, allowing itself to be influenced by Oriental, African and Pacific arts, and the German art, closing itself to foreign influences in an attempt to remain pure and ending up being drowned in the waves of destructive nationalism, this has become not only aesthetical, but also an ethical obligation on part of artists in search of new ways of expression. However, the record released half a decade later, *Kid A*, was the one that really opened new ways of expression. I do not claim, however, that it did not feed upon the trends of the present and past, but only that it provided more of foundations, rather than fruits, for the new ways of creation. And yet another important observation can be made at this point. It is that simple and minimalistic works are the ones that open new doors in the world of arts, rather than complexly crafted ones. The Beach Boys' *Pet Sounds*, Van Morrison's *Astral Weeks*, Captain Beefheart's *Trout Mask Replica*, the Beatles' *Sgt. Pepper's Lonely Hearts Club Band* or the A side of Marvin Gaye's *What's Going On* (unlike the heavily imitated B side) were apparently too intricate to be readily imitated and thus never managed to produce an avalanche of similar, trendy works, whereas minimalistic records, such as Massive Attack's *Blue Lines*, Joy Division's *Closer*, the only record by Velvet Underground & Nico (embracing minimalism not from the standpoint of the sound, of course, but rather from the chord progression point of view, when compared against their rock predecessors and, particularly, contemporaries), Sex Pistols' *Never Mind the Bullocks*, Public Enemy's *It Takes a Nation of Millions to Hold Us Back* (rather than *Fear of a Black Planet* that sought a crossover between hip hop and hard rock), Elvis Presley's first No.1 hit, *Heartbreak Hotel*, and Radiohead's *Kid A* were those that really provided roots and saps that many artists in transition from alternative waters to mainstreams subsequently used as foundations for their creations. One example only from the domain of visual arts I will give here, before returning to music, and it is that of Degas' and Toulouse-Lautrec's paintings of Parisian dancers: while their more complex works, such as Degas' *Dance Rose* or Toulouse-Lautrec's *Dancer in Her Dressing Room*, were too intricate to be emulated and turned trendy, it was Toulouse-Lautrec's minimalistic posters, starting with *Moulin Rouge: La Goulue*, that caused an avalanche of stylistic replications, up to the point that they became mainstream ways of designing posters, making their originals not exciting anymore to the eye of today's casual viewer uninformed about their historic meaning. Of course, double-edged swords as all keys to exceptionality are, strivings for minimalism in our expressions can lead us to either the realms of trifled ingenuity or of timeless awe: think of the music video for Pixies' *Velouria*¹⁰⁶⁵ as an illustration of the former and those made by Cat Power and Veliki Prezir for their songs *The Greatest*¹⁰⁶⁶ and *Suncokreti*¹⁰⁶⁷, respectively, as illustrations of the latter. Next, George Gershwin's *I Got Rhythm*, not any of the complex passages from his *Rhapsody in Blue*, served as a key compositional model to jazz musicians, particularly from the bebop era and beyond, and it is said that at least one third of all jazz compositions can be traced back to its simplistic rhythm and melody¹⁰⁶⁸. Now, one of my favorite examples of how minimalistic works stand on the crossroad between an old epoch in music and a new one takes me back to Ludwig van Beethoven's minimalistic opening movement of *Moonlight Sonata*; namely, out of all the elaborate and grandiose works of the German composer,

this simple and slow theme was the one that placed an epitaph on the era of classicism and marked the dawn of the glorious era of romanticism in music. This sonata, like another romantically flavored one preceding it, namely Sonata Pathétique, was composed during Beethoven's early phase, when his orchestral works, including symphonies, operas and concertos, but also string quartets, emulated his classical predecessors, mainly Mozart and Haydn. Meanwhile, it was in this compositionally simplest of musical forms of this early period, that is, piano sonatas, that the German composer set the foundation for the romantic sound, which he would bring to fruition in his later years. Another example from the realm of classical music is that of Igor Stravinsky's works from his neoclassical phase, in whose sound one could discern influences of classicism, romanticism, occasionally baroque and always a zest of Russian ethno phrases, as in his ballet *Pulcinella*, for example, all superimposed on the dissonant substratum of modernity. Despite being a mishmash of musical streams, this music did not manage to untie a new musical trend, a broad avenue to be followed by many, as it were; rather, it was the music of some of his early minimalistic contemporaries, from Philip Glass to Steve Reich to John Adams to Arvo Pärt to Henryk Górecki, the category in which Stravinsky's most influential piece, the *Rite of Spring*, partially belongs, that yielded an armada of faithful followers among composers of the 20th century. In view of this, although he infused fresh new life to Russian folklore, neoclassical Stravinsky, striding "through the galleries of an imaginary musical museum in order to scrutinize the great figures of the past in an attempt to discover the secret of their genius"¹⁰⁶⁹, may be even said to have failed in the task of uttermost importance that he, himself, ascribed to composers in general: "We have a single duty towards music, namely, to invent it"¹⁰⁷⁰. One can then also recall how not *Flamenco Sketches*, "a prismatic tune refracting a variety of influences (classical, impressionistic, exotic) into a haunting, pan-cultural theme covering a wide emotional range"¹⁰⁷¹, a tune that in spite of its minimalistic approach engrains a complex blend of modes ranging from "the familiar and pleasant (Ionian) to the more tension-creating (Mixolydian) to the foreign (Phrygian)"¹⁰⁷², but *Blue in Green* with its "brief, ten-bar structure – breaking the standard thirty-two or twelve-bar mold for jazz composition – and steadily flowing tempo, amplifying its perpetual-cycle effect"¹⁰⁷³, another, though far lesser minimalistic gem that decorates the Iberian arabesque that Miles Davis' *Kind of Blue* is, was the one that yielded a flood of imitators of its sound in its wake. These are only some of the reasons that explain why minimalism in music has always been infinitely impressive to me. Placing a cosmic strength and an everlasting depth into simple notes and words is what stands forth as an art worth admiring. When Thom Yorke sings *True Love Waits*, there is not much of instrumental richness hearable; however, the powerfulness of the song beats all the loud and overly packed and processed songs of the mainstream waves of the current era. It invites the listener to wake up into an honest, straightforward-looking punk attitude that deliberately delivers white doves of peace, love and masterful creativity to the stagnant and fusty social landscapes. Hence, the message is clear: finding inspiring middle Ways in arts using complex arrangements is a good way to give appreciation and meaning to the works of the people we have loved and respected in the present and past, but if we want to open new horizons and exciting future paths on the road of creative

development of the world, we should engage in “a slow burning of Icarus”¹⁰⁷⁴, as we are advised by the Californian girls who have “found bliss in ignorance”¹⁰⁷⁵, and aim for beautiful simplicity and genuine minimalism in our expressions.

S.F.3.36. Since the ancient times middle Ways have been praised by the sages as the only paths that should be looked after and followed in life. However, oftentimes it happens that such interbreeding of traits taken from multiple sides actually results in the least desirable combinations thereof. For example, recently I attended a conference, the topic of which was Where Materials Meet Biology¹⁰⁷⁶, an allusion to the most critical bridge that defines the success of the cutting-edge modern science: the one between Materials Science and Life Sciences. However, although I expected to recognize in the participants a blend of avid compassionateness that devotion to medicine can give rise to and an intellectual rigor that materials science can breathe into one, I experienced something completely different. Namely, it was the combination of fake professionalism, defended by expensive suits and well-crafted and cunning behavior adopted from the medical world on one side and lame rigidness and awkwardness adopted from the materials science world on another that was obvious in the participants’ personalities and approaches to expressing themselves. These insights rang a bell in my head and brought to memory the description of San Francisco City Hall at which I proudly married the Little Bear on an Indian Summer Sunday by Willis Polk, the architect who witnessed its construction: “A bastard combination of a Spanish clerestory crowned by an English cupola resting on a Franco-Roman base”¹⁰⁷⁷. All this the young architect took as a proof “that while San Francisco is a city that really discriminates between fake articles and genuine merit, it usually accepts the fake”¹⁰⁷⁸. Mentioning allegedly the artiest of all American cities, SF, we are free to muse over what once were genuine cravings to conceive of an authentic American city as the one that would rest on a middle ground between a rustic village and a flashy metropolis, possessing just about as much of the pastoral quietude of the former as of the brisk sci-fi vibe of the latter¹⁰⁷⁹. Perhaps that is, in part, why I, who have consciously owed my inclination to dialectic, bipolar states of mind to being crucified as a child between the Babylonian revelry of spirits, sinful and sane, that the city of Belgrade incarnated at the time and the pastoral placidity of the idyllic, suburban sceneries of Mala Moštanica, have found home in it and adored it from the very first day I stepped on its trembly grounds. Be that as it may, what eventually resulted from such blueprints were sprawling suburban settlements where mindsets embody all but the badly sought-after blend of the senses of little-town communality and urban wonder; rather, what has been given rise to in them, like in Ian Nairn’s Subtopia, “the annihilation of the difference by attempting to make one type of scenery standard”¹⁰⁸⁰ for all, “a drab new world where everything looks like the fringes of a town, every

¹⁰⁷⁹ In his book, *The Geography of Nowhere: The Rise and Decline of America’s Man-Made Landscape*, Touchstone, New York, NY (1994), pp. 39, James Howard Kunstler, for example, notices that “the suburban ‘development’ of today and the shopping smarm that clutters up so much of the landscape in between them, arose from the idea, rather peculiar to America, that neither the city nor the countryside was really a suitable place to live”.

¹⁰⁸⁰ See Ian Nairn’s *Subtopia*, from June 1955, *Architectural Review* (June 1, 1955), retrieved from <https://www.architectural-review.com/archive/ian-nairns-subtopia-from-june-1955>.

view exactly the same”¹⁰⁸¹, is a combination of self-centeredness and deadening dullness, which has turned people not into incarnations of twinkly stars that bravely pulsate with Love and Wonder, but into egotistic zombies that roam the Earth with no higher purpose, robots wound to the strident sound of self-interest, the first humans, before Germans and Swedes, that would assimilate to Godard’s Alphaville, that inhumane metropolis governed by a machine and inhabited by souls to whom wondrous glances, love and poetry all lost their meaning. This is, of course, not surprising to anyone familiar with Michel Foucault’s notion of heterotopia, a space acting as a mirror of the culture at large, whence American suburbia can be perceived as “a symbolic minefield, the mirror through which middle-class American culture casts its uneasy reflective gaze on itself”¹⁰⁸². And whenever the object and the image veritably mirror one another, it can be hardly told who is more actively shaping its reflection in the mirror: the object or the image. Likewise, when it is recognized that “the development and subsequent massive expansion of suburbia entailed the construction of not only a new kind of physical landscape, but new psychic and emotional landscapes as well”¹⁰⁸³, no doubt those where spaces between individuals, both emotional and physical, have reached gargantuan proportions, and where “our paths”, as Cerys Matthews had it, “they never meet”¹⁰⁸⁴, it is nearly impossible to tell whether human values rooted in the tradition of laissez-faire have found their neat reflection in the types of landscapes created around them more or less than these landscapes have shaped the human values into emanations of unprecedented individualism in the history of human race. Equally, this failed effort to bridge the urban with the rural through the concept of suburbia may inspire us to think of not only how unnoticeably we could bring wrong features of things combined into synergy during our quests for middle grounds, but also of how easily we could slip into reigns of trifled creativity should we blindly follow any conceptual recipes for success, from middle Ways to golden ratios to any trendy or self-conceived principles we may have begun to worship in the meantime. Ever since the 18th Century English poet, Edward Young delineated an inverse reciprocity between “composition by rule and the inspiration of genius”¹⁰⁸⁵ and thus revived the silent ruminations of Plato’s Ion, who had convinced Socrates that “genius is unconscious, or spontaneous, or a gift of nature: that ‘genius is akin to madness’”¹⁰⁸⁶, that artist must be “out of his mind”¹⁰⁸⁷, literally, when he performs in divine harmony and that he must choose “to be skilled or inspired”¹⁰⁸⁸ because “the greatest strength”, including the artistic, “is observed to have an element of limitation”¹⁰⁸⁹, this disparity between the conceptual method of creation and true art has been a point of constant return for artists, occasionally even swinging them to an extreme point where nihilistic madness that denounces any creative criteria and says Yea to it all began to reign in their lost minds. Asked “what is theory in musical composition”, Igor Stravinsky said, “Hindsight; it doesn’t exist”, reiterating this method-against-the-method stance wherefrom we clearly see that the time will come for each and every possible theoretical

concept to be intuitively applied in reality with a result that is pure bliss. Yet, hanging on to a single method, regardless of how broad and complex it may be, would be a mistake, and that includes the Middle Way approach occasionally celebrated in my airy-fairy head. In the domain of arts we can also always remind ourselves of the notorious crossovers of classical melodies and techno beats, presumably driven by the wish to bring seriousness of the past ages and hipness of the modernity close together and thus prevent pop music from becoming “art, either ‘intellectualized’ or proliferating into sheer ‘entertainment’”¹⁰⁹⁰, as Bruno Walter described the catastrophic branching of post-World War I arts, though in the end merely proving that the road to hell could indeed be paved by benevolent, but lukewarm, shortsighted and insensible intentions. A more delicate example that comes off the top of my head evokes the essence of the French New Wave in cinema; influenced by both Hollywood and Italian neo-realism, it emerged on the crossroad on which the passionate southern European mentalities converged with the solemn sublimity of their Anglo-Saxon compatriots. Yet, instead of picking up extraordinary emotionality of the former and blending it with Anglo-Saxon solemnity in its cinematic concoctions, this artistic movement disappointingly became focused on distilling rudeness and ferocity from the former and coldness and alienated animosity from the latter, falling flat on its face in my humble opinion. Therefore, in spite of Horace’s call for artists to dive deep and delve *in medias res*, that is, into the middle of things¹⁰⁹¹, and in spite of the fact that the most passable route for a ball to cross the opponent’s defense in the games of tennis doubles, soccer or basketball is right between the two defenders, I am warning you hereby of the potential distastefulness and sterilities that may result from the blind subservience to the concept of the middle Ways. This is all to say that whenever we are about to follow a middle Path, we should repeatedly revisit the correctness of our adopting one and discarding other features of the trails that we have combined and merged into a single novel approach. Middle Ways, as such, can therefore be twosome: on certain occasions they can present uninspiring and easily predictable unisons of relatively compatible perspectives, but in other cases they can present attempts at producing exciting and unexpected intersections of various perspectives. Whereas dealing with the former can be easy and pleasant, the latter ways abound with difficulties and challenges, but eventually produce much more creative satisfaction. In dedicating oneself to be on such middle Ways, to be a peacemaker and the force of unison between hardly compatible and practically hostile viewpoints, one resembles Krishna and Arjuna in the epic story of Bhagavad-Gita, who ride a chariot right between the two confronted armies and are challenged to avoid the arrows flying from both sides. The second source of difficulties lies in hardly being able to find the sense of belonging to any of the sides one relates to. By being a systemic thinker, one accepts to bear a cross of not belonging anywhere, of being heartily rejected by all sides that one has embraced in one’s attempts to produce beautiful middle grounds for all to thrive on. This explains why I have spent enormous amounts of time in finding suitable platforms for publishing my works, despite thousands of available magazines and journals. In the sphere of my idealizations and behavior I have regularly felt rejected by many trends of thinking and behaving simply because I have stood in the midst of all these streams, collecting what seemed to me as the most precious elements thereof and proposing middle Ways thereupon. I have always been accused of being too artistic for the scientist, too analytical for the artist, too metaphysical for the physicist, too scientific for the mystic, too idealistic for the realist, too realistic for the idealist, too poetic for the philosopher, too cerebral for the poet, too revolutionary for the

conformist, too respectful for the rebel, too ludicrous and silly for the geek and the nerd, too sporty and disciplined for the hipster and the punk, too European for the American, too American for the European, too left to the right and too right to the left, and so on, more often than not finding myself to be “an outsider among outsiders”¹⁰⁹² and thus, logically, having but a handful of audience that could sympathize with my ideas and style, the fruits of which have been ordained therefore to remain in the shadow, not in the limelight, forever more. Those willing to invest an effort to delve deep into the sea of semantics shimmering under these letters would get rewarded from this grasp of the middle ground, as they would find my tendency to sympathize with all and yet criticize all unreservedly extraordinarily liberating. However, such insightful souls represent a minority in today’s heavily polarized cultural climate where declaring a single point of view is usually sufficient to incite the listener to attach a myriad of other points of view to one and have one prejudicially, against one’s will, put into a particular sociological category. Bigoted minds, of course, sympathize better with those who do not deviate from the mainstreams that their conformist selves unquestionably follow, meaning that a hypothetical person who claims to be religious and, say, opposes abortion and drinks milk instead of beer, but is supportive of free sex and drugs and rock ‘n’ roll will create a fizzle in an ordinary person’s semantic apparatus, causing its sympathetic elements to break down and ensure that no social connection becomes established. Although one’s message can still find resonance within specific social circles even when one’s personality, taste and style of expression disobey these normative categories, as was the case with Morrissey, for whom it was said that “it was a time when everyone – artists and journalists – seemed to be asking the question (politically and sexually) ‘Whose side are you on?’, to which Morrissey insisted on being individual... a card-carrying member of nothing but his own cult of personality”¹⁰⁹³, more often than not one’s social influence will be greatly diluted and one would have to rely on very narrow and secretive channels to spread one’s influence to broader social milieus. Frank Zappa, for one, in my opinion, owed his lack of success in providing a nucleus for the evolution of pop rock music into something more complex and sublime to his authentic persona, which not only attempted to stand against the lies that pervade our social beings to the fullest of their extents¹⁰⁹⁴, but which, first and foremost, was a liberal, rule-shattering favorer of the discipline, too conservative for the liberal pop rock fan base and too liberal for the conservatives. Likewise, the story goes that Sergei Prokofiev’s lack of acceptance by the social scenes of New York and Paris, which were places where an ambitious artist would seek global breakthrough and recognition in the 1920s, was mostly due to the mishmash of values that he and his music represented, being modernist, classically lyrical and folkloric all at the same time¹⁰⁹⁵. Even after he began to frequently travel between the western Europe and his Russian homeland in the 1930s, he was ignored for some 15 years because he, in the words of his fellow composer Dmitri Shostakovich, “was an inveterate gambler who sat between two stools: in the west he was considered a Soviet and in Russia they welcomed him as a western guest”, and it was only after his settling permanently in Russia that his work began to be recognized as of major importance both in the west and in the east. And with my own clinging onto crossovers of innumerable influences on me as a human being, an artist and a scientist as if for dear life, there is nothing else but the logo so often ascribed to Zappa’s oeuvre that could be glued onto my forehead too: “The world isn’t ready for me yet”. I

know that the recognition of my works will have to suffer indefinitely as the result of my resolutely standing in the middle of many cultural streams and holding on to composite beliefs instead of belonging to an army of uniformed and unilateral opinions. “If a man has moderate basic principles, he will pass as I do: in France they consider him as little religious and in England as overly religious”¹⁰⁹⁶, correspondingly claimed Charles de Montesquieu, ringing bells of sympathy that remind of innumerable times I silently received the epithet of foreignness and sensed spirits I tried to connect to stepping away from me, making me pay the dear price of cut-and-dried turndowns for my dedication to standing tall on middle grounds in life. And whenever I begin to feel desperate about not being able to find “a place to fit where I can speak my mind”¹⁰⁹⁷ and about being destined to remain an outcast for ever and ever, even in this rapidly diversifying world, where there is, they say, a niche for everybody, I may find solace in the words Terry Johnson put in the mouth of Albert Einstein in his play, *Insignificance*: “In my lifetime I have been accused by the Swiss of being a German fascist, by the Germans of being a Zionist conspirator, and by the Americans of being a German fascist, a Zionist conspirator, and now a Soviet Communist. I have been an Internationalist and a diehard patriot. By two magazines in one week I was called a conscientious objector and a warmonger; both magazines were reviewing a speech I made to the Mozart Appreciation Society of New England”¹⁰⁹⁸. Like Einstein, regardless of where I ventured, be it on the map of science and its disciplines or the maps of arts, politics and lifestyle, more or less everyone, except a few sympathetic souls, has thought that I belong more to some other field, language or worldview. In 2009, for example, I submitted a critical review paper to a chemistry journal (*Journal of Nanoscience and Nanotechnology*), receiving a response from the Editor, saying that “we publish very high quality reviews with a full coverage of a particular topic, not philosophical articles”. But then when I submitted the same paper to a journal in philosophy of chemistry (*HYLE*), I received the following response from the Editorial office: “Although the paper raises several interesting epistemological issues, it is written from a chemical perspective exclusively for chemists and related scientists without any reference to philosophy. Thus I would recommend you to submit your manuscript to a chemistry journal”. And so, like George Boole, whose groundbreaking work in logic “laid the foundations for the information age”¹⁰⁹⁹, but remained unacknowledged and ignored for long periods of time because philosophers thought it was mathematics and mathematicians thought it was philosophy¹¹⁰⁰, the same fate of being misunderstood and cast off because of standing at the boundary between disciplines has awaited me too. Of course, that being rejected by guards guarding the mainstream communication channels is more of a sign that we are either far, far ahead of our times or a complete lunatic than an epitome of creativity can be illustrated by the result of the recent attempt of an anonymous person to send unsolicited masterpieces from the history of literature, including one of Jane Austen’s books where only names of the characters were changed, to conventional publishers: namely, less than 1 % of them found the books submitted interesting. When Bertrand Russell and Alfred North Whitehead submitted their groundbreaking work on mathematical logic, *Principia Mathematica*, to a

publisher, no reviewers for it could be found, so the publisher rejected the colossal piece, thinking that if no one wants to be paid to read it, no one would pay to read it either¹¹⁰¹. The authors were, however, given the option to pay to publish the piece, which they eventually did, not knowing that, despite its hardly penetrable symbolic language to the layman reader, the Modern Library would inaugurate it as one of a dozen or so of top nonfiction works of the 20th Century a hundred years later. There is absolutely no doubt that with their intricate and circumlocutory sentences that ask for a lifetime of rereading to be perfectly illuminated with the light of our reason, the works of classical European philosophers, from Kant's Critique of Pure Reason to Hegel's Phenomenology of Mind, would nowadays be routinely rejected as impenetrable and confounding by the mainstream publishers who, as we know, most of the time insist on approachability that almost insults the senses with its debilitating simplicity. Of course, that science deformed and vulgarized its language, which once used to be romantic, full of passion, poetry and rhetorical liberty, and now is bureaucratically boring, reflecting all but the enchanting powers of human wonder that drive the process of scientific discovery forward, could be easily seen after we browse through pieces of the scientific literature of the past, be it Leonardo's or Goethe's blending of lyrical and empirical on almost every single page of their treatises or the dizzyingly complex, 153-word long sentence, starting with a poetic remark, "That wonderful production of the human mind, the undulatory theory of light..."¹¹⁰², then crossing the territory of fundamental scientific insights before descending into philosophically profundity and emerging back into the light of poetry, with which Michael Faraday opened his seminal paper submitted to the Transactions of the Royal Society in 1856, the paper wherein he described the preparation of the first gold sols, which are stable to this very day and could be found on exhibit in the British Museum, all of which, including this very sentence and the composition it is a part of, would have been immediately tossed into a nearest trashcan by the journal editors of the modern day as a result of the unacceptability of their excursions into stylistic no-no lands. Even worse, if one were to start writing scientific or philosophical papers in an innovative manner, using the stream of consciousness style typified by disordered, truncated and grammatically incorrect sentences, such as those found in Jack Kerouac's *On the Road*, J. D. Salinger's *Catcher in the Rye* or James Joyce's *Ulysses*, all of which revolutionized the world of modern literature, the chances of their acceptance by any of the reputable journals would be equal to none. The Editor-in-chief of *Nature* journal claims that Watson's and Crick's famous paper¹¹⁰³ in which the foundations of the theory of genetic structure of biological organisms were laid out would not have passed the peer-review procedure had it been carried out nowadays due to a large number of approximations and hypotheses invoked in it. In such a manner, the groundbreaking report of Watson and Crick would have shared the fate of perhaps the most famous work to have been rejected by this journal: the one wherein Hans Krebs, in 1937, presented his discovery of the citric acid cycle¹¹⁰⁴, the complex molecular machinery for the conversion of glucose to energy utilized by the body, the discovery for which he would be awarded the Nobel Prize sixteen years later, despite having it published in the Dutch journal *Enzymologia*, whose impact factor is 0.86, instead of *Nature*, with the impact factor of 42.35. Gregor Mendel's seminal work on genetic heredity was published in the relatively obscure journal

of the Natural History Society of Brno, and not only did it receive poor reviews at the time, but it was also cited only 3 times in the 35 years following its release in 1866. Of such a low impact this paper was, in fact, that not even Charles Darwin heard of it¹¹⁰⁵, even though it was published at the time Darwin was at the peak of his intellectual powers, 7 years after the first edition of *On the Origin of Species*. Dick Feynman's essay entitled There's Plenty of Room at the Bottom, nowadays considered the beginning of nanotechnologies, was published in 1960 in Caltech's Science and Engineering magazine¹¹⁰⁶ that has no impact factor associated with it and that was at the time not distributed beyond its Pasadena campus except perhaps in a limited number of mails to its alumni. In 1952, a year before Watson and Crick published their seminal study of the structure of the DNA and the same year in which he was prosecuted for his homosexuality, Alan Turing published an equally revolutionary systems science study that presented a mathematical model describing how random fluctuations can cause the emergence of patterns and complex structures, including those typifying life, from the initial state of uniformity¹¹⁰⁷; however, the fact that this paper of his contained only six references, five of which were textbooks and only one of which was a canonical paper – to make things worse, it was published forty years earlier - would be enough to justify immediate rejection from the journal editors today. Experts also claim that Einstein's famous 1905 papers submitted to *Annalen der Physik*, as they were, written without any citations and submitted by an anonymous person in the world of physics, would also quickly end up in trash these days. Probably the most revolutionary of these papers, the so-called relativity paper did not only have little to do with its title, *On the Electrodynamics of Moving Bodies*, but it was also overly essayistic with its 30 printed pages of on-and-off “philosophical banter on the nature of certain physical concepts taken for granted by everyone”¹¹⁰⁸. Its other features that would immediately catch the attention of today's editors include the fact that it built its arguments on only one experiment, namely the generation of electric current in a wire loop moving in the magnetic field; the fact that its conclusions were at best vaguely related to the most significant findings, if not presenting a mere reiteration of the introduction; and, finally, the fact that it disregarded the standard structure of the scientific paper, giving the impression to the reader of 1905 that “the paper was written backwards”¹¹⁰⁹. In today's climate, a paper as odd in format and style as this paper was, even without taking into account the lunacy of the author's attempt to “overthrow the entire mechanics and electrodynamics”¹¹¹⁰, would not be even sent out for peer review, a stage before the acceptance of a paper for publication that, we know now, Einstein bypassed thanks to the rule employed by *Annalen der Physik* at the time: namely, if the author's initial publication was accepted by the journal after a detailed scrutiny, the author's following papers would be accepted upon receipt, without any refereeing. Finally, without proper experiments at hand to prove such rebellious hypotheses as Einstein's were, the fate of his 1905 papers is best summed by the words of the quantum physicist, Daniel Greenberger: “If Einstein were to send his paper to Physical Review today it would have almost no chance at all of being published. ‘Highly speculative!’ would be the referee report, a death shell to any paper. He would have to append it to an article on string theory,

or some other fad, and hope it wasn't noticed"¹¹¹¹. And indeed, only three decades later the monstrous climate favoring practical research at the cost of neglecting research questioning the fundamentals of the fabric of reality began to awake, prompting the rejection of Enrico Fermi's 1933 paper humbly titled *Tentative Theory of Beta Rays* in the first and *An attempt of a Theory of Beta Radiation* in the second version and postulating the existence of the weak interaction, one of four elementary physical forces, was rejected by *Nature* journal on the basis of its "containing speculations too remote from reality to be of interest to the reader"¹¹¹². Fermi eventually published the versions of his article in the Italian journal *Nuovo Cimento* and in the German journal *Zeitschrift für Physik*, but never in English, and yet this was sufficient to earn him the Nobel Prize in physics five years later¹¹¹³. "There are no quasi-crystals, only quasi-scientist"¹¹¹⁴, the words of Linus Pauling, directed to the work of Dan Shechtman at the time when he came to a rather inconclusive evidence on the existence of such unusually ordered solid symmetries, which were to earn him the Nobel Prize in 2011 despite his having to settle on the 218th most impactful journal in sciences, *Metallurgical and Materials Transactions A*, to publish his findings in and his dismissal from a research group to which he belonged at the time he openly expressed a belief in the existence of this strange form of matter, may then also begin to ring in our head, side by side with Paul Klee's adage that "genius is the error in the system"¹¹¹⁵, as well as the accusations of the lack of critical thinking I, myself, earned from the popular press¹¹¹⁶ for my work on the earthicle, the first nanoparticle modeled after the planet Earth, the work that was stunningly original in both its approach and outcome, yet it made me earn this epithet of a superficial, uncritical thinker, paradoxically in an era where 99.9 % of scientific studies are conceptual copies of one another and by people who, ironically, copied the criticism presented at another webpage¹¹¹⁷ and went on to derive this ghastly accusation. The case of Edward Jenner, a country doctor and the inventor of the first vaccine, is equally illustrative: his findings on the development of a vaccine for variola, the cause of smallpox, were too revolutionary to be accepted by the Royal Society and he had no choice but to self-publish them in 1798 at his own expense¹¹¹⁸. This paper is cited today as literally groundbreaking, having "changed the global course of history"¹¹¹⁹ and helped save millions of lives by globally eradicating smallpox over the course of the next 175 years, alongside providing foundations for the fields of immunology and vaccinology. It is often forgotten that in honor of

this self-published study on 23 case reports, all immunization agents are today known as “vaccines”. Next, probably the most famous namesake of mine, Vuk Stefanović Karadžić, the 19th Century linguist who reformed Serbian language, both lexically and literately, ran into similar problems when he attempted to publish his translation of Gospels, nowadays widely acclaimed as one of the most correct and sensible translations thereof among all languages¹¹²⁰. He was yet another martyr who decisively stood in-between two flames while dreaming of creating a language approachable to common, everyday people and simultaneously engraining subtle linguistic beauties in it, thus transcending the problems associated with the fact that language of his times was the privilege of the wealthy and the educated, whilst the majority of people were illiterate. Yet, rejected by both the Church and the state authorities because of a multitude of reasons, from his usage of new language which many considered simplistic and poor to allegedly producing an unrefined lexicological medley by borrowing terms from a variety of foreign languages and even introducing self-made words to it, Vuk eventually self-published his translation almost three decades after it had been written, in an Armenian monastery in Vienna, far, far away from his country. Still, it is an incessant story of humanity that the most advanced sources of creativity and spiritual light are refused by the society. What inspired me and soothed my own sense of permanent misplacement was knowing how it was the fate of innumerable trailblazing earthlings to find themselves in-between two fires, be seen as foreign to them and cold-bloodedly rejected, despite the fact that their cosmopolitan peacemaking drives predestined them to always seek these middle grounds and anchor their hearts thereto. T. S. Eliot is remembered to have described Blaise Pascal as “a man of the world among ascetics, and an ascetic among men of the world”, the epithet which undoubtedly rings the bells within the hearts of many progressive creatures of this world, perpetually torn between a sense of disappointment with the world that has not recognized the blazes of otherworldly creativities burning inside them and love for this very same world that has rejected them, the only power that could keep this divine fire inside them ablaze. After all, to be an innovative pioneer will always equal being an outsider and an alien, a lonely star, briefly glanced at, but only to be quickly tossed back to the sea by the neglectful and intellectually shortsighted eyes of the world. “And the light shineth in darkness; and the darkness comprehended it not” (John 1:5), as it is stands written in the Gospels. Hence, I have no doubt that it is the duty of all creatures dubbed with the spirit divine in this world to walk along these innovative but endlessly challenging middle Ways. And on the way to the holy horizons awaiting us at the end of our resolute walks, we may occasionally find comfort in the possibly utopian idea that the best thing the utterly progressive minds can do in the course of their lives, during which the public and the peers will always wonder whether they are genii or bluffers and never be able to figure out the correct answer, is to ignore this divided public opinion. As this bright vision further predicates, should they obsessively linger on this divide, they might end up being swallowed by it, but should they, detached from any sense of earthly accomplishments here and now, find it funny and focus on enlightening future generations of Earth, which will know the answer to this question, their battle will be won and the mission on Earth accomplished. And yet, forever and ever, this bright hope that this is the way to go will be underlain by the dark clouds of another, deeper and graver hope, which holds that only letting ourselves be crucified between these mutually opposing forces, ones spitting on us and others, far rarer, raising us into lordlier vistas of being, could lead to the accomplishment of our missions on Earth. And yet, as it is the case with all other questions that keep the world spinning and evolving toward ever more glorious destinations, neither can it ever

¹¹²⁰ See Vladimir Petrović’s Exceptionality (IV) Vuk’s Translation of the New Testament, B92 Blog, available at <http://blog.b92.net/text/18616/Izuzetnost-IV---Vukov-prevod-Novog-zaveta/> (September 8, 2011).

be figured out which of the two hopes reflects life more veritably and is to be embraced by our clingy selves, desperately in need of guidance, the guidance destined to come to us in fuzzy forms wherein yeses and noes merge with one another more often than not.

S.F.3.37. In view of these wobbly walks along the edges, solitary slides across the interfaces, sturdy standings at the intersections and hearts quaking at the crosses, I always remember how Belgrade, my hometown, the city in which I was born and in which I grew up for the first quarter of a century of my life, has ever since stood at the crossroads of various cultures and civilizations. It used to be positioned right at the boundary between Eastern and Western Roman Empire, influenced by the both¹¹²¹. With its foundations set within the boundaries of Vinča, the largest prehistoric civilization in Europe, by none other by the Celtic druids from the North, before being inhabited by a number of different tribes coming from all the cardinal directions, its site is possibly the richest crossroad of cultures in Europe. What is more, it has traditionally maintained a schizoid, love-hate relationships with powers that be, with cultures that dominated certain eras in the history of humanity, irately confronting them, but also eagerly absorbing their cultural influences and even shyly mimicking them. One such attitude is consequential to historically finding oneself sandwiched between two separate dominions, each aspiring to subject one to its influence. Naturally, finding oneself at the borderline that connects and separates two cultures subjects one to constant friction between them. Or, as observed by Hermann Hesse's *Steppenwolf*, "Human life is reduced to real suffering, to hell, only when two ages, two cultures and religions overlap"¹¹²². Therefore, it should not surprise us that Belgrade was battled over in approximately 120 wars, during which it was demolished more than 100 times and razed to the ground 44 times. For a long time it used to be considered as the outpost of Christianity and throughout certain periods of its history it was turned into a citadel to host the first line of defense against the intrusion of antichrists to the European mainland. Some of the crucial battles of Crusade Wars took place on its grounds, the reason for which more than once the church bells in Vatican rang at noon as a sign of support for the defenders of Christianity fortified in Belgrade¹¹²³. Between 1690 and 1790, the Habsburgs and the Ottomans unceasingly fought over it, razing it to the ground and raising it from ashes three times in those hundred years. A century or so later, on July 28, 1918, the Serbian flag was raised over the White House in Washington, DC¹¹²⁴ to commemorate "the fourth anniversary of the day when the gallant people of Serbia, rather than submit to the studied and ignoble exactions of a prearranged foe, were called upon by the war declaration of Austro-Hungary to defend their territory and their homes against an enemy bent on their destruction"¹¹²⁵ and honor their "valiantly and courageously opposing the forces of a country ten times greater in population and resources... determined to sacrifice everything for liberty and independence"¹¹²⁶, as it stood in the address by

¹¹²¹ Although Belgrade and Serbia embraced the orthodox Christianity through the influence of the Eastern Roman Empire, it is often forgotten that seventeen Roman emperors, the largest number outside of today's Italy, were born on the territory of today's Serbia.

¹¹²⁶ See Woodrow Wilson's message to the American people (July 1918), retrieved from <http://www.reddit.com/r/AskHistorians/comments/2c130o/>.

the US President at the time, Woodrow Wilson, remaining to this very day the only flag except the American to have been flown and allowed to wave to the world from that spot. For, World War I, the precursor of World War II, remember, began as a conflict between Serbia, the capital of which was Belgrade, and Austro-Hungary, in which the Allies picked the later-to-become triumphant, nonaggressive side of Serbia to stand on. The first Allied victory in this war was the one in August 1914, when the numerically inferior Serbian army managed to win the battle of Cer against the stronger and more superior Austro-Hungarian army and halt the first military campaign to invade and conquer Serbia in this war. Five hundred and twenty five years earlier, in 1389, at the Kosovo field, the Serbian army, likewise, repelled the militarily more powerful opponent, the army of the Ottoman Empire, and, despite the heavy losses, managed to provide the first major blow of the medieval Christendom to the so-called Sick Man of Europe and hamper the Islamist invasion of the continent. As a matter of fact, from the era when my hometown, Belgrade stood firmly on the fiery frontier between the Byzantine and the Western Roman Empires to the times when it was clinched between the Western Christendom and the Ottoman Empire to the second half of the 20th Century when Stalinists denounced it as a home to betrayers of the authentic communist values and ideals and when Che Guevara thought of the political stances founded in it as those of a “false communism”¹¹²⁷ while the NATO powers and its capitalist chieftains waited for the right moment to hammer it to pieces as yet another leprous hand of the Proletariat, the days when Yugoslavia, like a mermaid guiding a galley, paid no heed to these denunciations and effortlessly glided across the 20th Century seas, having found the right balance “between the glum strictures of Soviet socialism and the glamorous sense of freedom proffered by post-war America”¹¹²⁸, to this very day when its western neighbors see its culture as a breed of all that is rude and savagely in the Eastern Europeanism, heartlessly shoving it away from them, while its eastern neighbors see in it an Orthodox Christian tradition that sold itself to the devil of the West, Belgrade and the countries that it served as the capital of, Serbia, the Kingdom of Serbs, Croats and Slovenes and Yugoslavia in various of its forms and shapes, seem to have been everlastingly fulfilling the prophecy that came out of the pen of the most famous Serbian saint, St. Sava: “We are doomed by fate to be the East in the West and the West in the East, to acknowledge only heavenly Jerusalem beyond us, and here on earth – no one”. In addition to this dichotomy between the East and the West, I must always add another one that is so easily forgotten: the one between the North and the South, between the cold and sci-fi sublime northern mindsets to whom practicality matters most and the warm and emotional southern souls to whom dreaming with a fire in the heart is most important, between the birthplace of the machine and the birthplace of Renaissance, between the aesthetics of Ziggy Stardust and the aesthetics of Nessun Dorma, the dichotomy that, when superimposed to the former one yields a cross extending all across Europe and places my native region of the world in its center. On top of this, Belgrade was the birthplace of the largest prehistoric culture in Europe, and according to some historians¹¹²⁹, the lines and symbols that set the foundations of the Latin alphabet were drawn there during the Neolithic era. Illyrians, Thracians, Greeks, Celts, Romans, Goths, Franks, Habsburgs, Byzantines, Bulgarians, Ottomans, Bavarians, Gepids, Lombards,

¹¹²⁹ See, for example, the works of Toby Griffen at <http://www.fanad.net>. In the abstract for one of his works, “Deciphering the Vinča Script” (<http://www.fanad.net/vincascript.pdf>), he claims that “Vinča script was used in the Balkans in the fifth millennium BCE and represents the first attested writing, well before the developments in Sumer” (2007).

Huns, Avars, Austro-Hungarians and Slavs are only some of the cultures that settled for a while in the city and claimed it as their own. Belgrade, the capital of the westernmost Orthodox Christian country, has stood at a central geographical point, right at the boundary between the Balkan Peninsula and continental Europe, around which endless national and ethnic unions and divisions took place, in historic terms known as the phenomenon of balkanization. Due to its strategic location, always at a cultural crossroads of one kind or another, it has been attacked more than three times per century on average during its perpetually violent history, the inconstant skies over which, gloomy at one moment and glorious at another, reflect it nicely. Historically, Belgrade is the only capital in the world to have been attacked three times in the 20th Century by the world's greatest powers and empires: by the Austro-Hungarian Empire in 1914, by the German Reich in 1941 and by the United States and NATO in 1999, at the dusk of the second millennium and the dawn of the third one. In fact, having been bombed in late July 1914 by the Austro-Hungarian forces and in the spring of 1999 by NATO, Belgrade was both the first and the last European city to be bombed in the 20th Century¹¹³⁰. And this sense of collision of the brightest and the gloomiest, the most exalting and the most depressing that life has to offer has ever since loomed over the heads of this city's dwellers, tearing their souls apart and occasionally causing the great lights of the underlying divinity to emerge through these cracks and bedazzle the world. "If this vibrant city had not gone through its turbulent recent history (and still current reality), it would lose that tension that actually feeds its expression"¹¹³¹, as pointed out by Gabriel Radle of University of Notre Dame, hinting at the undying sense of confusion among the people of Belgrade as to where their cultural whereabouts are, spilling over naturally to equally paralyzing uncertainties over personal identities, before concluding that "Belgrade's coolness is partly built through the cultural negotiation that is going on between its past, present and future"¹¹³². Still, despite this perpetual sense of derailment, it is my hometown in the real sense of the word. After all, having grown up in a certain place, sooner or later you would realize that Noël Arnaud's maxim, "I am the space where I am"¹¹³³, is true and that you have begun to reflect the streets, the people and the overall spirit of this place in the very essence of your being and your personality. And so, I feel as the rustling cypresses in my backyard, dusty and smoggy boulevards and alleyways, its cracked and bumpy pavement and all its parks, streets, houses and facades now live deep inside of me. They have drawn the boundaries of my spirit. They are indeed who I am. And now, I believe that one of the reasons why I was born at this particular place in space and time was to show me that my missionary quest in this life was meant to be seeking for middle Ways. For example, looking east from the historic vista in space that Belgrade is, I could see the unexpressive man of the East with a plethora of spiritual treasures forged inside of him, but with mostly no knowledge on how to deliver these treasures outside in graceful and inspiring ways and bless the surrounding world thereby. Looking in the other direction, however, I could glimpse the man of the West, extraordinarily extrovert most of the time but with often too superficial and empty insides. What I have tried to accomplish with proposing the Way of Love has been essentially to spread one of my

arms to the Oriental introspectiveness and another to the Western culture of expressiveness, holding on to both and balancing myself well, standing thereby like a crucified Christ, sacrificing many amusing things I could have otherwise played with for the sake of elaborating this philosophy, as sacred and divine as it could be in my eyes, and bringing it to the face of the Earth. Speaking of Belgrade vistas, the most famous one is the monument to Victory on an old fortress which overlooks one of the biggest confluences of two rivers in Europe, Danube and Sava, and an island right in the middle of it. The statue popularly named Victor is a long column on top of which stands a boy holding a sword, the symbol of war, in one hand, and a dove, the symbol of peace, in another, gazing solemnly in the direction of the gorgeous scene of two great rivers coming together. Needless to add, another one of the crucial elements of the Philosophy of the Way has been to balance the principles of dialectics with those of love and devotion. To cultivate the freedom to be different, to be an intellectual and cultural rebel and lawbreaker that incessantly goes against the stream of common thinking on one side and to nourish the empathic drives to reach unison with innumerable other views of reality, to fully embrace our tradition with infinite respect, to be able to invoke the feel of sacred oneness in the presence of any creature of the world on the other is, in fact, one of the essential messages of the Way of Love, and this synchrony between connectedness and separateness, between being one and being different is intrinsic to the very symbol of the Way. Finally, rewinding the starry tracks of my memory, I recall that on the day I was born, my father was in Berlin, the only European capital besides Belgrade that was bombed and considered a martial opponent by the American forces. Yet, I was born in 1976, at the time right between the construction of the famous Berlin Wall and its marvelous hammering down for the sake of reestablishing victorious and peaceful unity once again. As I was transitioning from the safety of my mother's womb to the ventures of this sad and beautiful Earth, my father was passing from the East to the West Berlin and back, across the infamous Wall, sometimes alone and sometimes in the company of a family that lived around the Brandenburg Gate and got split into two by the imposition of this inhumane barrier, the symbol of the unfair divisions perpetually plaguing the human race. With an icon of a raging bear, the symbol of the city, hanging on the bedroom wall of our old family house in Zvezdara, Belgrade's neighborhood translatable as "the starry hill", "the hill of stars" or "home of the stars"¹¹³⁴, right over my dreamy head, I have always known that the mission in life reserved for myself, a tiny embryo of a star on the rise, is to tear down many dividing walls that cause endless wails, misfortunes and anomies, and, through the thunderous sound of their collapse, bring about the ways of unison, peace and salvation for all.

S.F.3.38. "This book of mine has little need of preface, for indeed it is 'all preface' from beginning to end", D'Arcy Wentworth Thompson said about his book *On Growth and Form*, which many regard as one of the finest pieces of the systems science literature ever released. Most of the time I feel the same way: as if everything I write is ideally meant to be a prelude to unforeseen great discoveries, an opening to new, sparkingly exciting fields of knowing and being that are yet to come, that are still beyond the horizons stretching out in front of us. Such an inherently preludial nature of my intellectual stances, resembling one standing in wonder and awe in front of a curtain being raised to display dizzying views of astonishing wonders of Nature and life, somewhat like Grace Kelly looking through the rear window at the moment when she finally accepted the truth that there was something fascinating going on behind the miniscule and seemingly negligible details her views of the world had caught, is in accordance with the ethical principle coined by

Heinz von Foerster: “Always act so as to increase the number of options”¹¹³⁵. If we live and act according to this maxim, we do nothing but mimic Nature in her doings, as every scientist knows that her answers to questions posed through our experiments are more often than not such that they fall into the fuzzy logical domain, in-between the Yes and the No, with the recent and perhaps the most popularized by all examples coming from the field of subatomic physics; namely, the long-awaited derivation of the mass of Higgs boson, often vulgarly referred to the God particle, involving thousands of physicists all over the world and gazillions of calculations and high-energy collisions, put it, at 129 GeV/c², right between the supersymmetry and the multiverse theories, confirming neither of the two and instigating none but an even more feverish quest for the perks and peculiarities of this superbly small world that we are all made of. Merely conforming to the language of Nature, ever since the ears eager to hear and absorb my messages began to multiply around me, I have been the proponent of never closing down and finalizing our quests, but endlessly opening new perspectives, being a light traveler always ready to step on to new lands and territories and climb to new panoramas of knowing with wide-open eyes of sheer optimism, while reaching out to meet the Sun of ultimate unity at the end of the road. Always an enemy of attitudes that tend to excessively prove one’s ideas and point and yell “I am right, I am right” I have vowed to be; for, “the stone which the builders refused is become the head stone of the corner” (Psalm 118:22). It is the ideal of disgracing myself, of placing my wondrous eyes below everyone else’s, like the sea into which all the rivers flow, that has been my guiding star in life. Tendencies to finalize one’s quests for ever brighter sunrises of knowledge should thus cede place to wishes to act so as to unstopably awaken new eyes of wonder. As the Serbian poet, Jovan Dučić picked flowers from Alpine meadows and gazed at the eyes of his Polish muse, “looking like two little northern lakes full of fish, which ceaselessly shimmer at the bottom, play on the surface, jump in the sun, running to all things unsolved and mysterious”¹¹³⁶, he scribbled down the following too: “Nothing more beautiful than her inquiring to a man whose wisdom is indeed neither in skepticism nor in *nihil admirare*, but who, contrarily, himself believes that there is much more of the new and unseen, and, moreover: that all is new and always unseen and unobserved in its fullness. And especially that always new eyes are in the man who knows how to think and knows how to see. People who no longer wonder, and do not peer into something for a hundred times, they are misers who have never really seen anything in this world”¹¹³⁷. Wake up, open up thy tired, slumbering eyes and look at the endless cosmos travelling towards ever more beautiful and fascinating expressions of divine creativity, is thus what the implicit message of all of my works has been. We should live our lives as preludes, not shutting doors to questioning and finalizing our quests, but living with a paradox, a question, and an unfinished poem deeply inscribed within our hearts. This explains why I have always been in love with the systemic approaches to describing Nature and life. For, they are devoid of recklessly proving theses placed forth. I have always seen something vulgar in proving one’s own stances, in trying one’s best to show that one’s correct. “By raising oneself versus others, the world seen from those eyes would look pitiful; but the world seen from the one who raises other people and the entire Nature above oneself is a wonderful place to thrive in”, is thus what I have proclaimed on one occasion. For, that is where the reigns of true spirituality

reside. And by leaving a gap of incompleteness in supporting my ideas, I have, in fact, always been leaving a place for people to awaken the most precious drives of human creativity, those that spur the listeners to set themselves on the sacred road of living for the sake of beautifying and enlightening others and passionately exploring the wonders of Nature. In a world where everything would be crystal clear and confirmed, the most essential qualities of Christianity – faith, hope and love – would be expelled, and this world itself would be left to slowly but surely rust and wither. Leaving something mysterious and incomplete in things being said is the path to enlightening the world. The most brilliant teachers have never said it all. They always leave something unsaid, so that the seas of wonder do not become dry and empty without ships of the disciples’ passion to discover being able to sail on. Teaching through offering parables and mysterious stories, just as the Christ did, has the purpose of fostering the disciples’ desire to make steps driven by their own creative curiosity and solve the problems posed in front of them, to unknot the knots thrown before their feet. “Don’t just tell me, make me care”, yelled Tim Miller at a recent presentation on presentations in name of the audience’s hearts that always, no matter what, silently beat with this message. And with us carefully leaning with our ears close to those hearts, whatever we do will awaken this care and passion that stand at the doorstep of their paths to creativity. For, the inner drive to bring light to the world around us is the first step towards all valuable achievements in life. Without the burning desire to succeed, we will never be able to become successful, no matter what we engage our creativity into. Should everything be revealed and perfectly well explained, drowsiness and passivity of the disciples’ spirits would result. Hence, I rarely prove my stances, and such an attitude has caused a plenty of obstacles to my attempts to establish authority within the scientific circles. For example, a paper I wrote some time ago with my Dad, in which we outlined the prosperous strategies for navigating science in the developing world, was rejected with the following remarks: “The descriptive method and the rather confusing self-made ‘theories’ leave very little room for the analysis... Facts, hypotheses and self-made theories on very different, non-relevant issues are gathered and mixed in the article”. And yet, what these judges know not is that I will never give up on writing in a majestically prelude and inspiringly prefacing manner. Even though I may know the answer, I may keep it concealed deep inside of me, knowing that only in such a way a dreamer’s passion and ardor could be awakened in the starry eyes of the little ones that twinkle with blessing carefulness and delightful curiosity, urging them to pine to embrace the entire Universe with their arms, hearts and minds, and while traveling there be the source of happiness and enlightenment for many other little creatures of the world in this never-ending fertilization of the divine, dreamer’s souls through touches of eternal beauty and love, the foundations of all education.

S.F.3.39. We live in times of big change. Such is the rate of change in the world around us, exponential and ever increasing¹¹³⁸, that even the words I write right here, right now, will probably be regarded as funnily obsolete in the future. Progressive features of communication of one day become seen as outdated on another one lying ahead on the track of time as the train of human history and evolution rolls forward. The incessant speeding up of this evolutionary train as it passes from one station to another in its streaming towards stages of ever greater sublimity and enlightenment of our consciousnesses implies that the time required for each one of these successive phase transitions to occur becomes lesser and lesser as time rolls by. This means that remarkable evolutionary steps won’t anymore need thousands of years or entire civilizations to

¹¹³⁸ See Ray Kurzweil’s *Human 2.0.*, *NewScientist* 32 – 37 (24 September 2005), and Mariya Ribalkina’s *Nanotechnologies for All*, *Nanotechnology News Network*, Moscow, Russia (2005).

turn into ashes and spring from them to occur; rather, we can expect our individual lifetimes to bear so much change that keeping up with the process would necessitate an incredible amount of intellectual effort and vigilance. This would also cause humans in fascinatingly different stages of ethical and aesthetical development to coexist side by side, all but profoundly understood by each other. With the futuristic bliss of visionary intelligence totally unrecognized by the majority of their contemporaries, some of these extraordinarily advanced creatures may stand in our vicinity and yet we may never bring into question their ordinariness or what may even seem to be mildly retarded cognitive capacities of theirs, as it usually happens. In any case, this inevitable process of change implies that what seems as intriguingly progressive and ahead of its times at this very moment will undoubtedly be looked at as horribly outdated and clichéd in the future. While thinkers such as Nietzsche or Thoreau were so much ahead of their times that they looked like lunatics to ordinary people, earthlings spinning thoughts that could have been found as amusing and enlightening by these two monumental thinkers or their likes could be found today in an average SF bar or a party thriving with smart hipsters and social dissenters, while Thoreaus and Nietzsches of the modern day walk amongst us misunderstood and neglected, enwrapping their ideas into some novel and unprecedentedly progressive languages and ways of expression. Yet, as I have proclaimed many times, this is not the reason for despair. Being free of the tendency to form fixed opinions and living the life of clear, untouched spirit that constantly evolves as it rides the cosmic rollercoaster of being is the way to go. For example, although we still live in times wherein poetry and science, the languages of inspiration and analyticity are strictly divided, it is only a matter of time when the gaps between them will be bridged. No doubt that everything I do contributes to building this bridge, tirelessly pointing that science is art and art is science, and that tearing ratio and aesthetics apart from each other breaks down the core of human creativity. Overwhelmed by a profound need to satisfy aesthetical criteria in anything creative I do, I spontaneously find myself living up to the guidepost placed on the roads to sublime philosophizing by Ludwig Wittgenstein: “Philosophy ought really to be written only as a form of poetry”¹¹³⁹. Martian Heidegger was equally of opinion that languages in use today are akin to a “used-up poem, from which there hardly resounds a call any longer”¹¹⁴⁰ and that they need to be onomatopoeic, melodic and evocative in the same extent as they present an analytical embedment of cravings for conceptual demonstration and proof: “Thinking in future will not be philosophy anymore. It ought to descend to simplicity of its foregoing essence. Thinking condenses language into simple narratives”¹¹⁴¹. In view of that, I was quite happy to notice that Columbia University in New York was opening a new Master’s program in Narrative in Medicine¹¹⁴², apparently realizing that a beautifully told story can facilitate the healing process in patients or, in other words, that the way one places meaningful things in words or images matters equally, if not more, as these underlying meanings. When the former British Chief Medical Officer, Kenneth Calman said that Danny Boyle’s *Trainspotting* proved to be more successful in the campaign against narcotics than billions of pounds of investment in dry medical ads, pamphlets, books and councils¹¹⁴³, he implicitly highlighted the craving for poets on behalf of the modern medicine, alongside impelling us to do all that we can to convey meanings to those whom we wish to edify in the most aesthetic verbal or

visual forms achievable. For, although we know that maps are essentially not territories, carefully looking at maps in this world almost always offers great ideas on how to chart the territories of our experience in ever more profound ways. We live through language and as much as we shape the language, it shapes us in return. After all, in this modern, civilized world, words and subtle bodily expressions have substituted swords, arrows and shields, which is why I have ever since seen one's use of language as a sword with which one clears paths through the social forests and fights battles to gain superiority over others, similarly as knights did in the dark ages. With words as swords, we can stun people and leave them in awe by pressing their throats therewith, but we can also use this sword to cut the indigestible things and make them our offerings to feed the spiritually hungry people of the world, or authoritatively point at the beauties of the starry sky using it. Consequently, people have frequently accused my writings of having too much of poetic and unneeded words in them. They have, however, assumed that their purpose is to merely convey the desired meanings, which is not. Just as we dress ourselves up before we go out and get a chance to intermingle with people and exchange ideas with them, we need to dress our writings up as well in decent and fine, but not necessarily sparkly and alluring lights. However, it is still the originality of the underlying ideas that defines the greatness and the lasting quality of these words. No amount of garnishing can help to make a superficial inner beauty valuable in the eyes of its true appreciators. Still, it is exactly what the modern pop culture dominated by overly processed and sophisticatedly arranged mediocre songs and other marketed articles is all about: enwrapping shallow essence, which oftentimes carries no enriching messages whatsoever, in an appealing luster. Yet, although products with little essential value may appear alluring and gracious when adorned using glossy and gleaming lights, their core will determine their lasting success, and if empty and rotten, which is often the case, its falling into oblivion is sure to be expected. On the other hand, those who tend to value essence up to the point when they start to exhibit zero dedication to surface detail should be reminded that thoughts without any attire on them are inconceivable, as every word carries an attire of its own. Hence, sometimes we can let our ideas enter the thoughts of others in minimalistic shapes, dressed only in bikinis or sundresses, but sometimes we want to show how much we care for both the essence and the surface appearance of our ideas by dolling them up, just as parents who love to see their children – and we should know that all the cosmic writers love their ideas and books as much as their children – in clean and shiny clothes. Furthermore, in my world, each written work of mine resembles a prayer. Hence, I place so much emphasis on these “additional and unneeded words” that in a poetic language express my awe in holding them. In the end, it is the feelings of hope, optimism and bright willfulness that stand at the basis of the creation of these ideas, and they ought to be equally pointed out in their apparent forms. As prayers, thus, my written words do not only tend to communicate naked ideas, but they present a talk with Nature. They do it by providing intellectual panoramas from which the ways of Nature would be seen in a miraculous light, inviting us to step upon them and breathlessly exhibit our creativity, once and for all, for the sake of their beautification.

S.F.3.40. The poetry and lyricism I instill into words that this and other books of mine are composed of present a natural complementary side of my professional devotion to scientific research. As my scientific work implies embracement of a strictly analytical mindset, I make up for this lack of free spirit in expression in these writings of mine. In that sense, I see myself as a kid dandling up and down in a forested park, amazed by the swinging greened landscape around him, enjoying in the butterflies of excitement flapping their wings inside of his sunny plexus. As I swing onto one side, the side of science, I immediately become dragged onto the other side, the

side of expressing beautiful visions and emotions, which I manage to do in my music and books. Whenever I extensively spend time working on scientific problems, solving complex equations and being immersed into waters of analytical reasoning, I feel the need to jump into the ocean of free expression of thought and feeling and enrich my books with a thought or two. But equally, whenever the clock strikes the end of a holiday time and I realize I have spent days working solely on my books, a need arises in me to engage my mind in weaving the webs of logical thought guided by the brilliant light of intelligence.

S.F.3.41. Yet, it is with much more patience and carefulness that I delve into the core of a lone star brewing with ideas that my mind is when I write down thoughts like these rather than when they are related to pure science. The latter sometimes resembles a mystery novel, a detective story, a James Bond movie or jazz themes *a la* Henry Mancini's Pink Panther theme, watering my mouth, tickling my curiosity and (strip)teasing my fancy, but rarely melting my heart with the warmhearted waves of sublime beauty and graceful love. Walking along these intellectual trails seemingly does not require one to use the eye of one's heart all of the time. When writing scientific manuscripts, I thus feel as if one, intuitive and lyrical hemisphere of my brain shuts itself to allow myself to draw lines of thought with perfect analytical clarity, though deprived of inspirational flights of passion and poetry. Yet, to combine ratio and rhyme in resonant proportion is what has revealed itself in my clairvoyant visions and dreams as a glass-bead-game mission to accomplish in life. For, if it made sense when the German musicologist, Carl Dahlhaus proclaimed triviality and the ensuing desecration of the cult of originality to be the real antipodes of poetry¹¹⁴⁴, then we should not be surprised that by shoving away any poetic elements of expression from its kingdom, science has automatically embraced the rule of triviality wherein being a bleak and unimaginative follower of the dominant doctrines and trends presents a more probable recipe for success than letting the wildest of imaginations and the windiest of passions take over one's being from the inside and transform one into a hurricane of creative energies and blow-away expressions that never ceases to seek ways to be true to one's cosmically unique self. Conversely, to save the modern science from this tyrannical reign of prosaic powers that tend to stifle the eruptions of creative expressions that crave to emerge on the surface of our beings is to breathe the poetic spirit into each and every scientific thought that we hand out to the world. However, it is a colossally challenging task to concoct what does not seem readily combinable at all, given the aversion to lyricism among the proponents of scientific and pragmatic thought and the fact that "the art of poetry does not follow the kind of reasoning common in the world of scholarship"¹¹⁴⁵. For, like water and oil, as my doctoral work on colloidal chemistry phenomena in reverse micelles taught me, mixing well only in the presence of a surface active agent, so-called surfactant or amphiphile, which is capable of reaching out to and interfacing with both the polar water phase and the nonpolar oil phase, thus effectively posing as a bridge between them, so do science and art combine into a harmonious whole only in the hands of the one capable of standing on the outside and being foreign to both, albeit intimately related thereto at the same time, an intrinsically dialectical stance that, I have known, only the Way of Love could instruct me how to adopt. And as you could guess, this and other books of mine have been the training grounds for this colossal endeavor of turning my writings into amphiphilic structures that stick to both science and poetry and speak the

¹¹⁴⁴ See Carl Dahlhaus' *Trivial Music (Trivialmusik)*: "Preface" and "Trivial Music and Aesthetic Judgment", In: *Bad Music: The Music We Love to Hate*, edited by Christopher Washburne and Maiken Derno, Routledge, New York, NY (1967), pp. 339.

¹¹⁴⁵ See Yasuichi Awakawa's *Zen Painting*, Kodansha International Ltd., Tokyo, Japan (1970), pp. 10.

languages of both with an immaculate fluency, an endeavor which obviously falls within the range of the Glass Bead Game. Henceforth, as I approach the screen and the keyboard to write these very words that decorate my free philosophical musings, I do it with a mindset that strives to satisfy the criteria of logicity, analyticity and conciseness as much as it unfolds the petals of my heart, unlocks the dam that blocked the flow of purifying emotional energy of the heart and releases itself to these uplifting streams of prayerfulness and rhythmicity, beginning to literally dance on the waves of lyrical thought conceived in its interior. It then partly follows the railway of logical thought like a train on its run through a prairie and partly lets the words and visions to be verbalized fall like droplets of a heavenly rain, unexpectedly and spontaneously, onto the screen of my mind. Hence, it is as if a switch exists in my brain, setting my mind to different modes of thought and approach to symbolic expression thereof depending on whether I am about to devote myself to science or to these very books of mine that revitalize my creativity in dealing with the former. Yet, although passion and love are inescapably posed as the foundations of true knowledge and the true success of scientific endeavors lies in relying on them, whenever we hit a crossroad and are forced to bring a decision, small or immense, most of the time we are implicitly forced by the norms of acceptable scientific conduct to leave love at home and use only our intellect in doing science. However, cultivating love whenever we perform routine operations that seemingly do not require any loving emotions to be breathed into is vital. For, that is how we build our inner nature that subtly and imperceptibly guides us along the trails of happiness. Through placing tinder of tender thoughts on the fire of love in our heart we sustain the foundations of our being, which hide the secret of the strength and beauty of every visible aspect of our being. During a casual chat before his lecture in one of the oldest amphitheatres on Parnassus Campus, Fernando Flores told me how the art of living reveals itself in the skill of performing tasks that appear in front of us only once, for the first and a last time. But without investing love in repetitive and seemingly boring tasks, there is a high chance that we would become frozen and would have no ideas whatsoever on how to approach and solve these one-time problems once they emerge. This viewpoint reminds me of the way in which I accompanied a discourse on the physical chemistry of phase transitions on one occasion: “How the system sets itself for the phase transition defines the state in which it will emerge on the other side. The phase transition itself is spontaneous”. It also brings back to mind Isaiah Berlin’s way of preparing for the lecture by working intensively on the talk for days and then erasing the prepared speech, line by line, passage by passage, all until nothing remained, and with such nothingness in mind entering the stage, letting the words spontaneously arise from one’s heart, as if knowing that years of crafting our heart on little things, on sparkles of love sent into the air on daily basis is what hides the key to successful and inspiring performance rather than extensive preparation on the basis of a loveless and careless life we might have led. Be that as it may, whereas I approach science with an easiness of mind, knowing that most of the time it is a simple, detective-like problem-solving game¹¹⁴⁶, the way I approach writing my books and these

¹¹⁴⁶ Not that I believe that science must be a detective-like game though. Quite contrary: I have done my fair share in expanding the rigid limits of science narrowed by those whose poetic and philosophical spirits withered long ago. But in the academic world of the modern day, anyone who goes beyond this cold and insipid detective-like approach to grasping and communicating science is bound to be seen as a heretic and its authorities will make sure that his days in it will have been numbered soon. And this is all in spite of the opinion of Norbert Wiener, the mathematician credited for coining the word “cybernetics” and the one who derived a witty equation that determines the most optimal age of a female partner (y) for a male of a particular age (x), $y = x/2 + 10$: “The present detective-mindedness of the lords of scientific administration is one of the chief reasons for the barrenness of so much present scientific work” (From: Norbert Wiener’s *The Human Use of Human Beings: Cybernetics and Society*, Free Association Books, London, UK (1950), pp. 189).

very words is incomparably more challenging to me. For, not only does writing these words in a satisfying way rely on intelligence, and not only does it rely on pure love and intuition, but even worse: to make these words appear satisfying to me, intelligent reasoning and streams of passion and love ought to be precisely and harmoniously intermingled. These words need to flow with grace and beauty, and yet to immaculately well carry the meanings I intend to convey. In that sense, I feel as if writing books like this one is my gift to the Gods, the only thing in my creative existence that truly counts, that will stay forever and ever inscribed in the library of an infinite Cosmos, and that it will be what my devotion to God and humanity will be judged based on one day. As my fingers alight on the keyboard, lightly, I enter the state of mind wherein what I want to say with all the reasonableness and logic that endow my mind is mixed with my establishing a vertical thread between me and the voice of the divine and letting the latter express itself as well through these words. Using two fingers only, the two indexes of my hands, as a sign that sweet sloppiness and the lack, not overabundance, of technique, in the spirit of punk philosophy, is the key to crafting and conveying a message that enlightens the world, I demolish any prefabricated rails for thought in my head and let my mind dance, unrestrainedly, having its moves transcribed into words along some mysterious mental channels engraved in me, all with the goal of consecrating the spirit of the world, whereon we all float uncontrollably, with one such expression, as pretentiously unpretentious as it can be. Therefore, ultimately, deep religiousness is what I perceive to be the quintessential force underlying my approach to writing. The kingdom of God, the vision of a world where poetry would be intrinsic to every linguistic and physical expression and where administrative dullness would be just a historical remnant of the past, of a backward world long, long gone, where freedom would reign and discipline would be imprisoned rather than the other way around and where life would be suffused with life rather than subdued to the ministry of death, is what rages inside me, with grace and fury, as I counteract with undying lyricism the bureaucratically prosaic language dominating today's academia, the language intrinsic not only to its administrative aspects, such as taskforce sheets, performance reviews and meeting minutes, but, even more critically, to scientific articles, lecture transcripts and course syllabi, the language that oppresses wild intellects and suffocates their creativity. Be that as it may, whereas I see myself walk with large steps, sometimes even marching, in the world of pure science, words in the books of mine are written with me softly stepping, without making any noise or a breeze, making each step with a great care, as if walking on eggs or the finest glass beads, the way of which, as you may know, I indeed pursue with all my heart. Such a way of gentleness and sophisticated tenderness undoubtedly fits my personal Virgo-like inclinations to tidiness and perfection, and stands forth as one along which I "separate Earth from Fire, the subtle from the gross, gently and with great ingenuity"¹¹⁴⁷ on the way to the great One.

S.F.3.42. Walking along the Glass Bead road is, however, harder and more laborious than it seems. Not only because it requires an additional dedication and effort to plunge into artistic, religious and philosophical waters to complement those which flow with interests of my hard scientific profession, but because of the risks to futilely stay on the surface without ever plunging deep enough into any of the specific and specialized fields of inquiry to be able to emerge on the surface with the pearls of original and novel insights that lie at the very seafloor. Another risky side of one's devotion to multi-, cross-, inter- and trans-disciplinary thinking is that, although these are the buzzwords of the day, funders of scientific proposals still prefer scientists with relatively

¹¹⁴⁷ See Hermes Trismegistus' Tabula Smaragdina (ca. 3000 BC), retrieved from <http://www.sofiatopia.org/equiaeon/emerald.htm>.

limited and narrowed degree of spreading out to other domains of human thinking, primarily because they still connect multiple paths one is interested in pursuing with signs of potential infidelity in future. Many people I have met in the realm of hard science were thus skeptical about my efficacy and the extent of the fruitfulness of my creativity in doing pure science, despite the fact that my work on each and every scientific project in the past resulted in higher than average productivity. From what I have seen in their eyes, I could tell that for many of them all of the philosophical and artistic achievements of mine were more of a con than a pro when it came to their appreciation of my scientific potentials. It is only a few chosen ones that knew how to recognize merits in combining artistic and intellectual potentials and see a true path forward in them. For all the others, I have often felt as if hiding my interests in what enwraps science with wider contextual meanings (that is, art, philosophy and metaphysics) would increase my chances of being accepted and given an opportunity to exhibit my scientific creativeness. Many of them feel that cultivating artistic mindsets, in fact, compromises the exactness and clarity of one's scientific expressions by forcing one to obey certain aesthetic standards, which, in their opinion, tends to warp the cold-bloodedly drawn line of pure scientific creation. Poetic expressions in science are also often misinterpreted as attempts to sell the points in question by appealing to the human heart, while betraying the cold, objectivistic path, liberated from emotional bias, that science is expected to follow in positivistic eyes. And yet, what I believe in is that science grows upon the foundations of ethics and aesthetics. First of all, seen as metaphors and not as the only truthful reflections of the objective reality independent of the subject's mind, as the co-creational thesis clearly tells us, scientific expressions can be identified as benevolent signs offered by humans to each other for the purpose of guiding each other towards horizons of ever more beautiful and wondrous living. Each scientific model, being a set of metaphors of a kind, is also inextricably related to the very lives of the scientists; for, through establishing analogies between our ordinary experiences and relationships that our imagination weaves in the natural systems described in concert with experimental insights, the line of scientific creation is being drawn. In view of that, by cultivating the artistic sense, an eye for the beauty in the world around us, we drive the wheels of scientific creativity in the right directions. By tending after satisfying the principles of aesthetics, many new doors leading to unforeseen insights in our doing pure science become open. This is why I will never give up not only on leaning my ears to the tremble of beauty in ordinary perceptions, seemingly distant from the world of science, so as to use it for directing my further research ways and conceiving ideas never thought of, but also on infusing the language of beauty, of poetry and elegance into every scientific note that I write.

S.F.3.43. It is, of course, not only the ideal of balancing science and poetics that my works live up to. They should be primarily seen as emblematic of the balance between physics and metaphysics. Whereas the former can be seen as a method for exploring the experiential reality at the level of its visible and palpable features, the latter deals with the invisible foundations of the physical method and the reality itself. And as William Kingsland, labeled as a rational mystic, argued, "All physics... when pushed far enough, must necessarily end in a metaphysical region. Matter can have no ultimate explanation in and by itself, or without its correlative, Mind or Consciousness"¹¹⁴⁸. On the other hand, continuous dwelling with our attention in the physical realm won't automatically lead us in the direction of meeting the invisible roots which support it; quite contrary, it is more probable that allures of the perceptual and the sensual will be so immense as to prevent our curiosity and senses to ever dig deeper into this hidden fountainhead thereof. Or, as put into words

¹¹⁴⁸ See William Kingsland's *The Physics of the Secret Doctrine*, Kessinger Publishing, Whitefish, MT (1910).

by Alan J. Perlis, “One does not learn computing by using a hand calculator, but one can forget arithmetic”. Likewise, merely living in a material world does not guarantee that we will become a master in utilizing the spiritual sources upon which the palpable world we inhabit rests. Yet, if we are to develop a truly supreme consciousness in this life, one eye of our mind should rest with its sunrises on the tangible and concrete, while the other pole of our mind should incessantly stretch its arms to the dark sides of the moon of reality, in which the ineffable and incommensurable qualities of the world lie. Just as in life where our attention ought to be partly oriented to the visible features of experiential appearances and partly to the invisible qualities of being, whatever else it is that we do, our awareness should be divided between a part following the traces of visible stems and fruits on one side and a part dwelling within the invisible roots on another. To satisfy this ideal, I have neatly balanced hard scientific creativity on one side and artistic and theosophical on the other. Whereas my scientific work has pragmatic attributes, my amateurish writings possess ethical, aesthetical and philosophic ones. However, recall that the word “amateur” has the root in the Latin word “*amare*”, which means “to love”. Hence, writings such as the one you are reading at this very moment are always done with immense outbursts of love and passion from my heart. Consequently, I have never written anything with an aim to get something material or spiritual in return. I am aware that should I desire to put a price tag on my writing efforts, the creative potentials and the power of the words I write down right here, right now, would slowly but surely vanish. This is, however, not to say that I do science with an opposite, politic and money-oriented state of mind. Quite contrary, even then I am aware that the only ways that lead to extraordinary discoveries and achievements are paved not with the greedy desire to attain professional recognition, material wealth or fame, but with a gigantic passion to reveal the mysteries of Nature and bring the healing lights and new means for the voice of divine to be heard on Earth. To the many a professor turned capitalists who ruthlessly exploit the student workforce to generate data that they use to travel the world and do exotic sightseeing and who have christened derogatorily not only my writing these words as an academician, secretly, but also my working on scientific projects with the passion of a steaming train in the days of my expulsion from academia and sitting, jobless and broke, at home a “hobby”, therefore, go my sincerest condolences because theirs is a path of soul-corroding hypocrisy. Sooner or later, it will become revealed to the world that by providing a peripheral input to the research performed, but scraping all the *crème*, the credit and the rewards for it, they have resembled “the king-types who would snatch the apple from your hands and claim to have grown it, even though what they had, had come to them intact, or been gained unfairly... and who, having seized the apple, would eat it so proudly, they seemed to think that not only had they grown it, but had invented the very idea of fruit, too”¹¹⁴⁹. Yes, the answer to the question why all this obsessive work with not even a penny of a reward in sight could be the same as that smuggled self-referentially by Rainer Weiner Fassbinder in *In a Year of 13 Moons* to the question “What makes you make so many films”, “It must be some kind of insanity”, but the psychological grounds underlying this approach to creative work, mind-blowingly frenzied and infinitely selfless, may easily be the only ones wherefrom something godly, something opening the doors in the darkest depths of the human psyche and enabling the in-and-out flow of energy that makes one whole and healthy in spirit can come to life. If this is so, then exclusively into the amateur, that is, the one approaching the creative tasks without even a slightest focus on obtaining any monetary or honorable compensations will Nature breathe its most magical powers, to which end the so-called “hobbyism” of my most creative engagements shall be the route to bringing the breath of the Divine to this corporeal realm eaten away by dullness, lukewarmth and fear. And if

¹¹⁴⁹ See George Saunders’ *Lincoln in the Bardo*, Random House, New York, NY (2017), pp. 308.

you ask me, over and over again, from now until the beginning of eternity, my advice will be the same: Love and Wonder ought to be placed, gently and caringly, at the bases of anything we do if we aim for true success, the success that is anchored neither in the mammon nor the approvals of the man, but in the godly praise, destined never to be heard.

S.F.3.44. And yet, placing things that are seemingly impossible to place side by side, reconciling the irreconcilable and bringing together the unthinkable is what typifies wonderful creative forces in life. Whenever anyone asks me about the secrets of creativity, I recollect an image of the train. Its huge inertia symbolizes how hard it is to start moving one's wheels of creativity, but when they start rolling, everything flows easier, and we can readily lie on top of it as it streams through the night air, seeping by the dazzling sounds of crickets and stars. But another thing the metaphor of the train embodies is that we always have to move along two parallel lines in order to live up to the miraculous potentials of our creativity. If were to write down the ultimate qualities of creative being, they would eventually fall down to being original, opening doors for novel ways of expression and thinking on one side, and yet taking all the great messages of the tradition on top of which we stand and giving new meanings thereto on the other side. Hence, looking back and looking forward at the same time is the key to exhibiting wonderful creativity. Only by resting the wheels of our heart on both of these tracks, a visionary, prophetic, wondering, opening and adventurous one on one side, and a loving, protective, enclosing and respectful one on the other do we have a chance to make the train of our creativity roll along the meadows of the world in all its charm and beauty. In other words, it is always living with paradoxes that crucify our being at the depths of our mind and heart that hides the key to a marvelous creativity. "When you come to a fork in the road, take it"¹¹⁵⁰, one of Yogi Berra's aphorisms says, ringing in precise accord with this point: not picking one option and discarding the alternatives, but becoming torn apart at a crossroads, reaching out to all routes with heart bursting into pieces and making the breakdown of the classical logic that does not allow us to be at multiple places at once our ultimate aim. For, it is always balancing qualities in life, like a juggling clown does, that rings the bells of divine, fanciful creativeness in us. Had we not had enough desire and determination to carry this cross of paradoxical encounters of seemingly conflicting and incompatible qualities and things in life, we would have already stepped onto one of the sides and thus bring the train of our creativity to a halt. And yet, being a passionate follower of single poles in life is normally the sign of ordinariness, whereas living up to Chuang-Tzu's premise that "Tao is not choosing amongst this or that; it is moving in synchrony with all of them and bringing them into unity", always attempting to find the Middle Way and be everything, everything, everything, is the magic carpet we fly to Heavens on. In a world where scientific opinions resonating with the agenda of one political fraction, regardless of how unbiased and liberated from any political ideologies they should be, become immediately discarded as irrelevant or untrue by the opposing fraction, what is there left for a holy man who craves to heal rather than hurt and who trusts everyone, I wonder, but to conceive of scientific ideas and models that bring all of these divided people together, in about the same way that the quantum theory of light proved both the Newtonian, particulate theory of light and Huygens' wave theory of light as correct or the way both the anthropocentric causes of global warming that the liberals advocate and natural ones falling back on Milanković's view of the planetary orbital effects on the Earth's climate that the conservatives could invoke can be brought together within single, unified worldviews. And yet, here, where we stand, "hundreds of doctrines step forward instead

¹¹⁵⁰ See Gabor L. Hornyak, John J. Moore, Harry F. Tibbals, Joydeep Dutta – "Introduction to Nanoscience & Nanotechnology", CRC Press, Boca Raton, FL (2009), pp. 179.

to look back, thus predestined never to unite... People celebrate what lies in the sphere of their knowledge, but disregard their dependence on what lies behind those boundaries... But if there were no other, there would not be me either”, as Chuang-Tzu further argued in an immaculate dialectical manner. So, turning around, looking back and smooching noses with the creatures of the world is the way forward, towards the orangey oracular, spectacularly blissful horizons of the mind, as much as riding off into the sunset of our own desolate thoughts is the way to ignite the glow of compassionate beauty for the world and throw ever more splendid and loving arms to embrace the whole of it. Likewise, kneeling down and wiping the dust off some ancient epitaphs of human creation and reading the concealed signs with pure, starry wonder in our eyes is what launches our spirit towards unforeseen futuristic travels, whereas being progressive and bravely entering where no human feet has ever stepped into is the way to look back, towards the foundations of it all, where beginnings and ends are merged into one, with love and grace that melt the steeliest and darkest gates of contempt and ignorance posed on the way thereto.

S.F.3.45. People in “despair” after helplessly trying to penetrate the multilayered meanings of my works have asked me why I write using such intricate expressions. Besides the complicated terminology I occasionally employ, the reason may lie in the systemic nature of my claims. For example, when I come across an idea which relates to a specific case, I use induction to find more of the similar cases and afterwards broaden the statement until I formulate a satisfying general case. Hence, I may notice a correlation between bees accidentally pollinating flowers while flying from one flower to another on a spring meadow with our inconspicuously sowing the invisible seeds of our inner qualities that make humans flourish from the inside as we travel from one being to another in our daily communications, for as long as we selflessly and devotedly suck nectar from the essence of the beings of the world for the sake of building something wonderful and greater than us. And then I will broaden this correlation into something that goes like this: “Phenomena that our experience is abundant with could be associated with each other using analogical correlations”. Hence, the secret is in the systemic, general character that my claims could be attributed with. Be that as it may, if not immediately understood, one has to live with these enigmatic and puzzling expressions, resembling mysterious Egyptian hieroglyphs. If our desire to illuminate them with the light of knowledge is great, the day will surely come when an enlightening moment of understanding will dawn on us.

S.F.3.46. Thence, whatever I do, I try to reveal as much as to leave things mysteriously concealed, knowing that such a nature of our expressions is naturally derived from the guidelines of the Way of Love. Every word I exclaim, every smile I crack, and every move I make thus radiate with a sense of deep mystery as much as with a sunshiny, all-revealing sincerity. Whenever we need to find a living example of such a powerful blend of meditative and self-absorbed mysteriousness on one side and trustful openness and interactive sincerity on the other we could look at children of the world. After chasing fifteen-month old Theo around the brown sofa in our living room for a while, with him becoming ever more delirious with every passing second of this game, I cannot tell anymore if he assumes the role of the chaser or the chased, for the two concepts, moving to and moving away, seem to be so neatly blended in his head that he could be said to truly walk along that thin line that separates the state of separation from the state of union, which I have called the Way of Love. Only as time goes by and they begin to approach maturity do the two poles that define the Way of Love begin to separate and the tension between the quest for independence and the cravings for empathic unison with adjacent hearts becomes more dramatic and discordant. But

in petite angels of this world, who have emerged straight from the heavenly loci of infinite pureness, these two, distantness and closeness, are kept so close together that they are being lived out as if they were one and the same. In the first couple of years of their lives, be they in the presence of their parents or in a room with other kids, where they are engaged in the so-called parallel play, obeying that inner guiding voice that illuminates their insides, yet simultaneously sympathizing with every wiggle or blink of their little peers, learning from one another, but without ever being influenced to the point of pliability or sheer submissiveness, the balance between individuality and communality is preserved by them with a stunning naturalness and to an immaculate degree. The result of this is that in my eyes these nestlings will have always resembled stars that light up the way for our weary and disoriented, spiritually adulterated souls. As they grow older and their infant purity starts to fade away and become replaced by the impure cunningness of cold maturity, they would change progressively and at one point they would find themselves right in-between, in touch with both this infinite pureness of the celestial child in them and the disgrace of the soiled slave of corrupt adulthood that they are in the process of becoming. At that particular moment in their evolution as a human being, when they are crucified between Heaven and Earth, like the Christ on the Cross, their creative potentials peak, which is a point that could be supported by numerous insights, ranging from (a) the fact that the creative output of modern musicians almost always drops in quality as they become more mature, with their debuts more often than not holding the greatest value in their oeuvres, to (b) the fact that the understanding of life in the 20th Century was revolutionized by the freedom given to youngsters to express themselves publicly and thus reshape the values of the whole humanity, the freedom unprecedented and unseen in the preceding centuries, and all the way to (c) Albert Einstein's belief that "a person who has not made his great contribution to science before the age of thirty will never do so", something that may have seemed fairly logical to the father of the theory of relativity, given that both he and his contemporaries made the greatest breakthroughs in quantum theory while in their twenties. Juvenile souls are especially keen on discerning obsolescence in the adults' modes of thinking and acting and, if allowed to be rebels that freely question the deepest premises embraced by the tradition, miracles could be made, which is exactly what the 20th Century, the century of incessant conceptual innovation in science and art, that is, not merely of making things faster, stronger and smoother through uninventive optimizations but of making them fundamentally and groundbreakingly different, was all about. On a side note, it is worth observing that if this interest in the reinvention of the form is neglected, which is exactly what we witness in the 21st Century, it is quite possible that arts - and with them the totality of human culture - will enter a new Dark Age, which, as the historians of art could remind us¹¹⁵¹, was not only a largely undocumented age - hence the darkness, of the record of it, as it were - but also an age that, despite its being 500 years long, yielded no distinct movement in art, but rather a plethora of conflicting styles, which clashed and mostly annihilated one another all until the end of this period, when they finally began to merge and produce something of a greater historical significance. And that this twilight of human culture will occur in a world diametrically opposite with respect to information dissemination from the one of medieval Europe is a paradox like no other, the explanation of which would undoubtedly lead to revisitation of the basic premises of the technological progress, including the question of how progressive this progress has really been if the content delivered by these new technologies is meager in quality compared to that lying inscribed in the library books all the world over and if kids these days use them mostly to exchange mundane observations and trifle ideological issues when they could be thinking and exchanging far greater ideas in and among

¹¹⁵¹ See E. H. Gombrich's *The Story of Art*, Fifteenth Edition, Phaidon Press, London, UK (1989), pp. 157.

themselves. Still, however superficial the thought processes streaming through the modern kids' heads these days may seem to the older generation, including the oft-observed ignorance of the history of art intrinsic to their artistic expressions and the oft-stated impossibility of their grasping this historic context because of its exponential expansion, it is these juvenile mindsets, regardless of how intellectually incapacitated or plainly ignorant they may be of this context, that will continue to produce the most magnificent works of art, the works that will be able to shake the whole humanity with the power that their pure hearts have unknowingly breathed into them. After all, without taking into account the exceptions of sages who have remained children at heart ever since the day they were born, if the journey of life tends to take most of us from the paradisiacal to the purgatorial realms of reality, then it is becoming likened unto children that is analogous to regaining the key that unlocks the gates of Paradise. Once we discover this key and restore a childlike consciousness in us, regardless of how old and weary our bodies may get, we can always remain a child to this world, even by holding the stance of Dora from Manuele Fior's Interview, destined for eternal youthfulness, even when the days of her youth would be long gone and she is a "very, very old woman"¹¹⁵², 130 years old, simply because "it's the world that's old (and false, stupid and meaningless, small obtuse poor unhappy tired finished)"¹¹⁵³. On top of this, since kiddies around us best illustrate the appearance of those whose minds journey along the stellar path of the Way of Love, we should seek no further proof that our striving with all our hearts to become like children is the only road leading to the kingdom of God, as the Christ would have readily reminded us (Matthew 18:3). With such a mix of mysteriousness and openness that resembles a half-lit star, the symbol me and my musician friends picked for the name of our band many years ago, I tickle people's fancy, awakening their sense of wonder and genuine desire to step up and face the mysteries of the world, although I still manage to glow with crystal clear directedness and dazzling clarity. In such a way, I spontaneously light up the way that leads them towards becoming children once again, enlivening that magic blend of Wonder and Love within their minds and hearts. Thus, this mysteriousness in us leads to enkindling the flame of wonder, of genuine curiosity and a drive to explore the world, without which children would never learn how to coordinate themselves in the world of their experience and without which the train of our cosmic evolution would be momentarily halted. On the other side, the pole of trustful openness naturally induces the flow of Love within other people's spirit, awakening the streams of empathy that vitalize and beautify their beings inside of them. And such is the nature of the Way of Love – to be meditatively closed, enwrapped into one's thoughts and feelings, carefully forging precious insights and feelings, and yet to shine, shine, shine to the world, strewing it with pearly treasures forged by our heart. Consequently, I know that simultaneously being in agreement and being in disagreement, conforming and being unique and original, offering our works as half-moons with one side sparkling with luminescent understanding while the other side is dark, obscure and mystical is the way to go. Many are people who try their best to conform to other people's opinions and be accepted by the world at every cost, nodding their own heads to everything they say in public and fearing any incongruity with their ideas, but inappropriateness of such an approach is immense. For, by doing so, one inflexibly does not let oneself evolve through dialectical confrontations of opinions, and thus blocks one's own intellectual and spiritual progress. In addition, guided by the intentions to conform to values, standards and opinions of others, one spontaneously prompts those around him too to behave insincerely, in a fake manner, always pretending to be in agreement, even though they would have readily opposed one. Yet, fruitfulness

¹¹⁵² See Manuele Fior's *The Interview*, Fantagraphics Books, Seattle, WA (2013), pp. 153.

¹¹⁵³ *Ibid.*, pp. 94 – 95.

comes out of fiery critiques of our own works, for it is them that enable us to elevate our own creative abilities. Admirations of our works tend to induce drowsiness of our spirit, making us feel as if we have attained everything there is to be attained, even though it is always far from the truth. Only when we are open to be knocked out by arguments will our eyes beautifully illuminate the true path forward in front of ourselves.

S.F.3.47. Firmly believing in the benefits of the dialectical approach to the enrichment of our knowledge and being, on one hand I rejoice, rather than retreat, in view of other people's attempts to knock me down with honestly expressed opinions that differ from mine, while on the other hand I tend to stun people around me with contrasting argumentations for and against. This, however, I see as a natural consequence of the fact that things in life are always grey and never black and white, and that, therefore, the only ethical way of offering our opinions about them is to equally acknowledge their favorable and adverse sides rather than solely focus on one or the other with a whole lot of bias. In one of the memorable scenes from Yasujirō Ozu's movie *Early Summer*, a woman points at a balloon flying up into the sky and rejoices over good fortune that its upward journey into the heavens symbolizes, to which her husband, sitting next to her on the pavement of a Tokyo park, gravely notices how a child, who had lost the balloon, must sob his heart out somewhere in the distance, subtly paying the viewers' attention to the fact that any single phenomenon can be viewed in a twofold manner: as salutary and as unfortunate, all at the same time. Needless to add, failing to recognize both of these sides when expounding any given point of view stands for a great ethical fallacy. In spite of this, the world today, from its political elites to the philistine peasantry, is still predominantly inclined to salute one side and demonize the other, without ever highlighting the unconstructive traits of the former and virtuous traits of the latter, thus contributing to the unending cycle of victimizations and adversities that spring from them. To counteract this irrational and intrinsically destructive approach to exposition of opinions, both pros and cons are always placed side by side in practically any elaborate argumentation that comes out of my mouth. At times I would even divide my written views into two contradictory voices and let them combat one another with fierce arguments, all in order to show that there are neither perfectly perfect nor perfectly imperfect stances in life, that is, that there is a flaw in the heart of even the most seemingly spotless solutions suggested, just as much as there are always traces of merit in even the most ostensibly erroneous paths proposed. This approach I see not only as an ethical demand for truly sane explication of one's opinions, but as a balance that naturally instills a peace of mind in one, letting the streams of unilateral stances, always blind to one reasonable thing or the other that favor their opposites, drown in the tempest of unfounded passions. After all, as members of the academic community, which has held the lantern of reason before the council of humanity for centuries, we ought to have grown immune to the pitfalls of indoctrinated, lopsided thinking and be always a steward of a middle way stance of one way or the other. Hence, when it comes to the way the publishing realm works today, on one hand I perfectly agree with what has recently been written about the inherent flaws of the peer-review model: "Nature, the grande dame of science journals, stated in a 2006 editorial, 'Scientists understand that peer review *per se* provides only a minimal assurance of quality, and that the public conception of peer review as a stamp of authentication is far from the truth'. What's more, the peer-review process often pressures researchers to shy away from striking out in genuinely new directions, and instead to build on the findings of their colleagues (that is, their potential reviewers) in ways that only seem like

breakthroughs... that are really just dubious and conflicting variations on a theme”¹¹⁵⁴. On the other hand, however, even though I am thoroughly for open, censorship-free publishing of scientific ideas and results, I have always pointed out that one of the upsides of the classical, peer-review method behind publishing scientific results lies in the possibilities to enrich one’s work through confrontations with reviewers’ critiques. It is true that reviewers who were particularly keen to point out what seemed to them as flaws and obscurities in my reasoning oftentimes attempted to ignorantly ruin the smooth flows and immaculate structures of my papers. And the flow in my writing is as important as the soul of man is to shamans and sorcerers, for it is that secret force that, together with the rhythm and the melody of the words, brings the reader somewhere around halfway into the piece into a state of complete absorption, such that he may look around and all that he would see are cosmos and the stars, given that the magic of the written word has completely consumed his entire being. However, by tending to pose themselves as impermeable gates to one’s manifestation of scientific creativity, they often resemble Mephistophelian forces that “act with malicious intentions in mind, yet helplessly make others discover light”¹¹⁵⁵. By recklessly trying to knock the reviewed authors down, they are often merely shedding incentives that will improve the authors’ scientific approaches and eventually make their papers stronger. On the other hand, simply letting the authors pass through the peer-review procedure may leave them ignorant about the mistakes they had made, which they may, after the publishing process is done, regret about. Besides, as Christophe Chabouté’s depiction of a strange and lonesome creature who lives solitarily atop a lighthouse and finds amusement in reading randomly picked words from a dictionary¹¹⁵⁶ may instruct us, when we have no other people to bounce our opinions against and receive their criticism, positive or negative, anything, even this random of a text selection as represented by Chabouté, will do. There is an immense freedom, of course, gained by breaking the bonds that tie us to the opinions of other people with regard to our work, but this freedom is a double-edged sword: just as well as it may give our work a boost and expand its breadth toward infinity if the core of it remains solidly anchored to the bedrock of prior social interaction, it may also disconnect it from the ground and have it fly away, into the stratosphere, like a helium balloon, destined never to return back to earth. This is to say that, just as the Way of Love insinuates, it is in the balance between accepting and repulsing, opening and guarding, absorbing and reflecting, saying yes and saying no that one sustains the music of life, arising from back and forth movements of the earthly hearts, and thus fosters the magnificent creativity of one’s surrounding.

S.F.3.48. Be that as it may, facing desperate criticism of our work, in which it is being misunderstood, misrepresented and understated, should not produce indignation and resentment in us. To ameliorate these feelings one only needs to look at the history of human creativity, and everything will become clear. The most advanced and nowadays critically acclaimed pieces of art were typically heavily underestimated by their contemporaries, and rarely found words of praise. Their authors had to wait for the latter for decades or even centuries. And yet, desperately waiting for it, many people, like Friedrich Nietzsche, Vincent Van Gogh or Edgar Allan Poe, lost their minds. Many others, being aware that the most progressive human minds are rarely recognized

¹¹⁵⁴ See David H. Freedman’s Lies, Damned Lies, and Medical Science, *The Atlantic* 76 – 86 (November 2010), pp.84.

¹¹⁵⁵ The modified quote is a reference to Mephistopheles’ description of himself in Goethe’s *Faust*, the description Mikhail Bulgakov used as the epigraph for his novel, *The Master and Margarita*: ““Say at last – who art thou?” ‘That Power I serve which wills forever evil yet does forever good’” (Translated by Michael Glenny, Collins and Harvill Press, London, UK (1940)).

¹¹⁵⁶ See Christophe Chabouté’s *Alone*, Translated by Ivanka Hannenberger, Gallery 13, New York, NY (2008).

during their lifetimes, intentionally abridged their lives so as to achieve fame. This is why I claim that we should always point our finger at the Heavens above and dedicate our works thereto, carefully avoiding any attachment of the driving forces of our creativity to other people's words of scorn or admiration. In fact, no matter how much people are shocked by the shortsightedness of judges appointed to speak on behalf of the voice of conscientiousness of humanity, rejecting the most progressive products of human creativity and slamming the doors in front the most visionary human minds is such a firmly established rule in our world that a ready acceptance of these progressive works is what should be considered as surprising. Hence, whenever our works face too much of an approval in the world around us, we should be sure that we have done something wrong along the way. For, living truly in accordance with the guidelines of divine creativity implies that our beings and our works would be longed to be burnt at the stake by many. In the course of their lifetimes, these utterly advanced creative personalities would typically have only a modest number of followers, albeit incredibly faithful and earnest, truly apostolic ones. The Christ, for one, brought about a fascinating new way of being, overturning the hypocritical religiousness that dominated his times, during which words and superficial acts had come to be seen as more meaningful than the waves of invisible and ineffable love underlying them. Despite the progressiveness of his visions and acts, he was crucified, as ever by the joint decision of the masses and the Caesars, and the memory of his greatness remained vivid only in the minds of a few chosen ones who had witnessed this greatness. Still, these dormant sprouts slowly flourished into the strongest religious stream ever witnessed on Earth, reminding me of that solitary flute as the only instrument that survives the onslaught of thunderous sounds heard midway through the first movement of Bruckner's 8th Symphony, playing "orchestral tutti over tolling, funereal tattoos in the trumpets and chromatic sighs in the basses"¹¹⁵⁷ from which another sweeping sonorous tidal wave would be built so as to wash the listener with its mighty groove and power to move to an even greater extent than before this transitioning of a broad and boisterous avenue into a tiny, tapered alleyway. The Serbian writer of Hungarian descent, Danilo Kiš, similarly claimed to have had only thirty-six readers, who, in order to dig deep into and understand his literature, had to be equally passionate as him¹¹⁵⁸, and yet this narrow channel gradually grew into "the way which leadeth unto life" (Matthew 7:14), turning him into one of the most popular literary figures in Europe in the second half of the 20th Century. Another example that emerged from my time spent in the company of Nobel Laureates comes from one of the winners of this prestigious prize, the Hungarian-American chemist, George Andrew Olah. A brilliant exemplar of modesty and an infinitely inspiring spiritedness that spins the wheels of the evolution of the world he was in my eyes for the few hours I spent in his humble presence. For instance, unlike many other famous scientists I met and invited for plenary talks, he accepts invitations for lectures only from students and pays by himself for the entirety of costs for each one of his trips. Like the Patriarch of the Serbian Orthodox Church in the 1990s, Pavle, who not only drew his own calendar and manually fixed his shaggy shoes but also used to ride on trams and buses even in his 80s, hunchbacked and severely weakened by the old age, wishing to share the transportation means with the poorest of his people, and quite in the way my parents taught me too, always sitting in the front seat of a cab and striking up a cordial conversation with the cab driver, so as to avoid appearing lofty and disrespectful by slumping onto the back seat, George Olah also rides in the front seat of a taxi, a

choice as rare as beautiful in the dreadfully arrogant world of the current epoch. I also saw him carefully pick the tiniest sandwich on the plate as well as humbly assert that “most of his ideas never worked” and that “he knows nothing about chemistry”, incessantly negating any competence of his with charm of a deep sea creature that always carries an enlivening dolphin’s smile on his face and thus walks across the face of this world not as one of citizen Kanes who had lost their kingdoms and now roam around dressed as clowns, but as a true king among ordinary people, pawns and clowns. Be that as it may, he told me how in 1994 he received two letters in a matter of six weeks: the first one was the decision of the NIH to discontinue the funding of his work after 35 years because of his old age and disbelief that he would ever again be able to contribute to any significant success in research, whereas the second one was the decision to cancel the former decision. As you can guess, what came in-between was nothing else but the award from the Swedish Academy of Sciences. The same can be realized by comparing what the critics nowadays estimate as the most important records of the modern music with the critical assessments at the times when these same records were released¹¹⁵⁹. Innumerable are records that received lukewarm critiques immediately upon their release, but are nowadays almost strictly raved about by the art critics. For example, the Beach Boys’ *Pet Sounds*, an album whose aural magic has remain unsurpassed in the realm of pop music ever since its release in 1966 and which topped the most elaborate list of best records of the modern music compiled so far¹¹⁶⁰, “received a lukewarm public reception” upon its release, “was underappreciated in its time” and “was once an album relegated to the cutout bins”¹¹⁶¹. So intense was this denouncement of *Pet Sounds* by the “fun, fun, fun”-demanding fans, by the critics and by the average radio listener that the band had no choice but to decline the invitation to perform at the 1967 Monterey Pop Festival along with the Beatles, the Doors, Jefferson Airplane, Jimi Hendrix, the Byrds, and the Mamas and the Papas. Since “disciples of San Francisco’s flourishing psychedelic music scene viewed their non-rebellious, apolitical reputation with condescension”¹¹⁶², the band opted not to share the fate of Bob Dylan at the Newport Folk Festival in 1965, right after the prodigy from Duluth, Minnesota embraced the sound of electric guitars, began to focus on introspective song themes and left his folk roots behind. Namely, as Dylan was on the stage, presenting his groundbreaking musical achievements, there was a flurry of boos and hostility in the audience, whereas infuriated Pete Seeger, the organizer of the event, ended up kicking his feet, flailing his arms, and looking for an axe to cut the wires on Dylan’s instruments. “He was so upset that he threatened to pull out the entire electrical wiring system, but Cooler heads cautioned that plunging the audience into the dark might cause a real riot”, says Robert Shelton in his close description of the event¹¹⁶³. This also brings to mind the movie *Little Miss Sunshine*, which ends with a similar onstage performance of our petite heroine, the one with honesty enkindling a sunshine of spirit around her heart, shocking the audience, making the spectators jump out of their seats in protest and leave the hall thoroughly disgusted, while the witchy organizer runs to the backstage to pull the curtain down and stop the performance and the previously dysfunctional family, which has been on the road throughout the whole movie, journeying in their yellow van to California, the Golden Coast, passing through the land of the

phony, superficial and deceitful, happily uniting in spirit and dancing in togetherness all over that stage. The lifelong importance and a secret guidance that this final scene may have yielded to myself, engraining the beauty of rebellion against hypocrisy and lameness of the modern society, which I vowed to bring forth with every creative act of mine, with every word I proclaim, is best illustrated by telling you how only a few hours before my first flight from Belgrade to San Francisco I began to watch *Little Miss Sunshine*, but then discontinued it and played *Electric Dreams*, the movie which sparked my childish imagination about SF, Golden Gate Bridge, music and computers when I first watched it as a 13-year old boy, never thinking that I would end up living in Nob Hill, only a few blocks away from the corner of Mason and Clay where Miles and Madeline lived. Funnily, many times during my lectures or other exhibitions of creativity, there are mediocrity-fostering organizers who rush to the backstage to lower the deafening thunder that my expressions produce. Yet, when I see people with a glistening excitement in their eyes and others showing flashes of anger and protest afterwards, I know that I am on a good way. For, all exceptional, truly creative and original people, those who were opening doors for the release of magnificent potentials of human beings, were equally loved and hated by their contemporaries. If our prime desire is to safely conform to other people's opinions, we will never make anything extraordinary in this world nor will our creativity and the very being be remembered for their enlightening glows. Everything we say will fall in the range of mediocre values and will quickly be erased from people's memory with the passage of time. Speaking of this lame leaning onto other people's walls of authorities and thus diverting the erection of our spirit towards heavenly skies above our heads, I bring to mind a sentence that magically popped up in my head as I woke up from a long tsetse-fly sleep, as I love to call it: "Life should be its own weight and not measured against someone else's". This subconscious saying made of the bricks of my dreams rather than sane reflections, as all else in this book is, was there to remind me of the losses of creative energy that we endure as we tilt our being in the horizontal directions by egotistically measuring ourselves against others¹¹⁶⁴ and thence either subjecting others to spiritually sadistic control of our own being if they are found to lie below us on the scale of power or masochistically and unquestioningly following their guidance if they are sensed to occupy greater vistas on this pyramid of human power. Yet, it is thus that we lose the vertical connection with the divine powers that loom over our heads, which disables us from bouncing off the ground below us in the spirit of the art of Tai-Chi and taking off, lightly and carelessly, upwardly and fancifully, like a bird of paradise. Be that as it may, nowadays it is hard to find a list of best records of the modern music that does not place Dylan's *Highway 61 Revisited* among the top ten, usually a bit higher than the place occupied by the epitome of punk record excellence, *Never Mind the Bullocks* by the Sex Pistols, whose final live appearance, at the Winterland Ballroom in SF on January 14, 1978, was equally denounced by the critics and described by Legs McNeil, the editor of the *Punk* magazine¹¹⁶⁵, and others as "the worst rock 'n' roll show ever... a zombie performance, people who were already dead, reanimated for a while, going through their motions"¹¹⁶⁶. Decades later, a punk chronologist, Nicholas Rombes saw in this final act of the founders of the punk movement a sprout of loyalty of the band to their ethos of anarchistic destruction of any methods, rules or principles and noticed

¹¹⁶⁴ "Comparing ourselves to others is a key driver of unhappiness", says Daniel Gulati in his essay *Facebook is Making Us Miserable*, Harvard Business Review Blog Network (December 9, 2011), available at http://blogs.hbr.org/cs/2011/12/facebook_is_making_us_miserabl.html.

that once the shocking outbursts of the spirit of revolt that the punk movement based itself on became popular and lost its edge, an authentic punk band had no other choice but to annihilate itself: “The final Sex Pistols concert effectively put an end to the notoriety of punk’s method of provocation... In confirming the public’s expectation, the Sex Pistols also destroyed them. They were against method. Which meant they had no choice but to destroy themselves”¹¹⁶⁷. It is also worth mentioning that when the Clash opened for the Sex Pistols during one of their London gigs, they received equally negative critiques and, notably, one of the journalists in the audience remarked that since they regard themselves to be a garage band, they should go back to their garage and leave the car engine running¹¹⁶⁸, being a comment that inspired the band to write the memorable ending of their debut record¹¹⁶⁹, which is nowadays also frequently placed among a hundred or so of the most important records of the modern music. All the thoughts piled up here actually suggest that not only does the failure in the eyes of critics usually entail all the utterly progressive acts, but, conversely, deliberately making our performances a failure can also set the grounds for a long-term success. In fact, the inextricable connection between readiness to undergo financial failure and be a subject of ridicule by the mainstream critics on one side and eagerness to create truly progressive and boundary-shifting works of art on the other has been illustrated by Charles Eidsvik’s noticing how “the history of film as an art is mainly a history of films that lose money”¹¹⁷⁰, a correlation applicable to a far wider domain of human creativity than mere filmmaking. For example, so ahead of his time was the Viennese visual artist, Gustav Klimt that more than half a century before the hippie revolution, in 1902, he painted what still constitutes arguably the best psychedelic posters of all times and yet in their own times these so-called Faculty paintings of his used to be both damned and denounced as bad art and were even the subject of a lecture on art entitled “What is Ugly?” Indeed, from unconventional El Greco, the Greek visual artist who refused to belong to any school and was called “a mad painter” by his contemporaries, wholly unappreciated by the critics during his lifetime, to Franz Schubert’s final, ninth symphony, the orchestral prelude to the age of romanticism, shedding the technicality and formality of classicism in favor of the emotional trueness and harmonic and rhythmical freeness, sonically stretching the score along the seabed of the soul toward infinity, switching from minor to major scales midway through the movements and emphasizing the beauty of simple, oftentimes single-tone “melodic” lines, yet being rejected by the famous *Gesellschaft der Musikfreunde* in Vienna and denied any performance, like most of his works during his short life¹¹⁷¹, having to wait for ten years after the composer’s death to be discovered by Robert Schumann and arranged a premiere in Leipzig¹¹⁷², to Ludwig van Beethoven’s Great Fugue, so innovative and ahead of its times with its cross-rhythms and dissonances, announcing the arrival of contemporary music almost an entire century ahead, the reason for which Igor Stravinsky considered it “an absolutely contemporary

piece of music that will be contemporary forever”, though still being called “indecipherable, uncorrected horror” by Louis Spohr and “a confusion of Babel... incomprehensible, like Chinese” by other major critics upon its release in 1827, to Vincent Van Gogh who managed to sell only one out of 900 paintings he made during his lifetime, primarily because they were deemed “too dark” for the brightness that the fad of Impressionism embraced, to Claude Monet and other impressionists whose lavishing painting style was earlier too shocking for the academic realists, to Richard Strauss’ *Salome*, an opera wherein even the original performer for *Salome* refused to dance one of the controversial dances, to the uproar of the audience shocked by the expressionism and experimentalism of Arnold Schoenberg’s first string quartet and first chamber symphony premiered in Vienna in 1905 and played during the “scandal” concert in the same city in March 1913, respectively, to Igor Stravinsky’s *Rite of Spring* that produced a riot of dissatisfaction after its premiere in Paris in May 1913, to the poetry and prose of Kenji Miyazawa, whose only a handful of works got self-published during his lifetime, only to be discovered and released posthumously, leading gradually to his becoming one of the most popular authors of children’s books in today’s Japan, to D. W. Griffith’s movie *Intolerance*, released three years later and being pilloried by both the critics and the audiences because of its innovative, intercepted storytelling, to Jean Renoir’s movies that now top many lists of the best movies ever made, including *Rules of the Game*, whose distribution was prohibited by the French government before being reinstated as a cinematic masterpiece twenty years later, and *Grand Illusion* – the humanistic masterpiece that, unlike the former work wherein perpetual misunderstandings between social classes, whereby the privileged are pushed down the abysses by the simpletons, is highlighted, the theme so dear to the French hearts ever since the times of Bourgeois Revolution, reverts this thesis and majestically breaks the interclass barriers and crushes the walls raised by intercultural prejudices – banned first by the Nazis and then by the French authorities, with the movie prints being systematically seized and destroyed by both before they were rediscovered in 1958, restored and rereleased in the 1960s, nowadays considered a universally acclaimed *tour de force*, to Frank Capra’s Christmas classic, *It’s a Wonderful Life* that was a major box office flop following its release, premiered to a range of dismissive reviews, including the very FBI’s accusation of the moviemakers for exposing communist beliefs by portraying one of the bankers¹¹⁷³ as a scrooge and an upper class as despicable¹¹⁷⁴, earning only one Academy Award and that “for the development of a new method of simulating falling snow on motion picture sets”¹¹⁷⁵, before reinstating itself no less than half a century later at the top of the lists of best movies ever made, to Alfred Hitchcock’s *Vertigo*, the movie that echoes the vibe of the Beach Boys’ *Caroline No* all throughout its thrilling texture, shrugged off by the majority of critics after its San Francisco premiere in 1958 for being “bogged down in a maze of devilishly farfetched detail”¹¹⁷⁶, the same feature for which it is heralded today as the most artistic work of the director popularly known as the master of suspense, to the Beach Boys’ *Pet Sounds*, the epic record closed by the elegy about *Caroline*, an ephemeral girl who said “you’d never change, but that’s not true”¹¹⁷⁷, criticized by the band’s record company, Capitol, for

¹¹⁷³ Remember that the main protagonist of the movie, *George Bailey*, was a banker too.

not being commercial enough to enable continued “promotion of the stereotype that the band had become”¹¹⁷⁸, the company that sought more of the profit-making No.1 hits than art that goes beyond the boundaries of ordinariness, to the landmark, nowadays unequivocally praised record, the Velvet Underground & Nico, which was marked as failure after its initial release, which took a decade before the first positive reviews of it were published and which peaked at the 129th place of the US Billboard list in 2013, 46 years after its release, in the meantime causing the breakup of the band’s relationship with its producer, Andy Warhol and the female vocalist, Nico because of Lou Reed’s frustration with this lack of immediate success¹¹⁷⁹, to the debut and, personally speaking, the best record by the Smiths, whose opening song, Reel Around the Fountain was refused from being played at radio stations¹¹⁸⁰ because its opening line, “it’s time the tale were told of how you took a child and you made him old” the British conservative critics misperceived as the band’s support of child abuse after tying it to the last song of the record, Suffer Little Children, sung from the perspective of the Moors murderer, to the debut record by the Stone Roses, which dropped out of Top 40 a week after its release in May 1989¹¹⁸¹, only to eventually receive a cult status and be declared “the greatest album ever” by the NME in 2000, the history of human culture has comprised countless examples of artists and works of art that were derailed, ridiculed and even officially banned because of being overly progressive and ungraspable by the mediocre mainstreams of their times. Conversely, ever since the dawn of human race, the path of the least resistance towards gaining reputation and accolade from the critics and contemporaries has been open for works far less innovative and boundary-shifting than the truly groundbreaking creations that were ignorantly shoved into the gutters of the world and left in the dark, far from the limelight of the popular attention, waiting patiently to be rediscovered by some more sensible quality assessors of the future. So, whenever someone taps you on the shoulder and overly praises your works, recall how Judas Iscariot revealed Jesus as the Christ to the Roman soldiers with a kiss (Matthew 26:48-49). In contrast, “Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake. Rejoice, and be exceeding glad: for great is your reward in heaven: for so persecuted they the prophets which were before you” (Matthew 5:11-12). Thereupon, not only do I restrain from talking and acting mellifluously, but upon encountering words of admiration for our works I advise suspicion rather than allowing our ego to be fed thereby and pumped up like a balloon, a balloon that will, sooner or later, painfully burst. In case you reach the top in whatever you do too quickly, be aware that there are more profound and diligent people journeying along the same track and that your place is most probably undeserved. Be prepared thence to take off the crown people have put on you while rewarding you for your accomplishments, and hand it to someone else. After all, finding ourselves on the top can be very dangerous for maintaining our creativity. For, once we have nowhere to climb anymore, and once the only direction in which we could see something is down, below us, the only logical path for us to take would be to slide down. Being on the road, looking at the mountaintops ahead

¹¹⁷⁸ This is according to Al Jardine, a founding member of the Beach Boys. Watch the documentary movie *Beach Boys: Endless Harmony* (2000).

¹¹⁷⁹ The band was so ahead of its times that it was expelled in December 1965 even by the owners of a venue called Café Bizarre in downtown New York, specifically Greenwich Village, perhaps the most progressive spot in America at that time, after playing Black Angel’s Death Song, a song that eventually made it to the Velvet Underground & Nico record produced by Andy Warhol. See the Mojo Hall of Fame 100, retrieved from <http://www.rocklistmusic.co.uk/mojo.html> (November 2003).

of us and dreaming of the perfect fulfillment is thus a true blessing, irrespective of the extent to which we may think that reaching the aims we keep in front of ourselves would be desirable. To make us a true messenger of the word of God, God intentionally keeps us away from the top. All artists should remember that whenever they feel a spark of resentment in them because of witnessing mediocrities being crowned and strewed with praises, whereby the true kings are dying alone and forgotten, amidst oak trees and bluebirds, in this hypocritical, shortsighted and superficial world of ours. And yet, like little babies that require their parents' care when they are little, but then unstoppably grow up into self-supporting, independent creatures, our pieces of art will somehow find the way to enlighten human lives even if we fly away and left them alone in this world. Angelic guarding hands of Nature will always be upon them.

S.F.3.49. Henceforth, I have always claimed that my books are like children to me. When a philosopher is immature, his mindset is, more or less, infertile and unable to give rise to great ideas in written form. Although these may appear like starry flashes here and there, the bases of his knowledge would lack the ability to recognize the important and novel aspects thereof that would be worth capturing and accentuating. His knowledge on how best to transform them into a written form would also be far from perfect. However, as our experience in pondering over the nature of experience grows, so does our philosophical fertility. Still, just as delivering a baby in labor is a hard process, the same can be said for the process of yielding valuable ideas in lasting, linguistic forms and compiling them into consistent and well-structured wholes. In this process, it is worth recalling the words of Arthur Schopenhauer, who observed once how a sort of a law of gravity applies to the writing process, according to which the ideas fall down on paper much easier than they are lifted up during their interpretation and understanding. This warns us about the dangers of writing down our thoughts in an overly complicated manner, which would disable others from launching them as powerful rockets from the paper and bringing them into their airy reigns of thoughts and ideas. Be that as it may, once the ideas are placed on paper, they are given their own existence, which is from there on independent of their author as a parent of a kind. Once written in ink, the umbilical cord is cut and these ideas are let live their own lives in the space of mind of the Universe and minds of millions of their actual and future interpreters, each with a million ways of interpreting each and every one of them, from one moment of their transient existence to the next. As for books as children of a kind, I refer to the fact that when children are small, they require their parents' attention and care. But when they grow up and become big enough, one has to believe that they can find the way of their own to overwhelm the world with the starry luster of beauty instilled into them. Despite having troubles with publishing these words, I deem that once the time for the books of mine to be illuminated by the daylights of human awareness comes, they will find their way thereto without their author's help. Until then, I will be dedicated to the art of crafting them with as much passion and diligence as a human can invest in a task, sharing the approach with that of Bill Evans before he became known for his masterful piano playing style and technique: "Ultimately I came to the conclusion that all I must do is take care of the music, even if I do it in a closet. And if I really do that, somebody's gonna come and open the door of the closet and say, 'Hey, we're looking for you'"¹¹⁸². "If you build it, they will come", the anonymous verse now begins to ring around my head and traverse it in seismic waves, reminding me to focus on the beauty of writing itself instead of running out to loudly announce its importance and value to the public. Any bitterness or resentment over the lack of recognition for my works thus become washed away, in the blink of an eye, knowing that, sooner or later, "the time will come to give

¹¹⁸² Watch Bill Evans: Time Remembered directed by Bruce Spiegel (2015).

what's mine"¹¹⁸³, instilling in me an utterly pure state of mind, untainted by the foul thought of reward. For, the essence and the foundations have always been what mattered most. "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you" (Matthew 6:33), as proclaimed by the Christ. Or, as put into words by the Serbian folk singer, Toma Zdravković, when a fellow vocalist, Miroslav Ilić asked him what he was planning to do "when this gig was over": "How can this gig be over? What is there to be over? 'Cause I neither can nor know how to do anything else - but music. From her and for her I live"¹¹⁸⁴. With a similar interest in the essence and essence only and a disinterest in anything lying on the surface, from the advertisement to the cosmetics to the profit from it, I approach the writing of these words, which is as essential for my being as the air to breathe. Although I know that I will be punished by humanity because of this seeking the kingdom of God before anything else (Matthew 6:33), as it were, the hope, albeit the only evil to not have escaped Zeus' gift box when Pandora closed its lid, is that the blessings will be dropped on me, like the droplets of a summer rain, from the seats of power reigning over greater spiritual heights of this queer reality through which our lurid souls roam.

S.F.3.50. At the same time, just as I have often been hesitant to give life to a new earthling because I could never resolve whether I would face it with pleasures of living or with the agonies of dying, as if tempted by the famous dialogue between King Midas and fiendish Silenus¹¹⁸⁵, I have often wondered if writing down the precious thoughts we come up to in our contemplations is equal to giving life to them or merely killing them, as Meša Selimović observed¹¹⁸⁶. It must be no wonder then that pronunciation of the word "diary" begins with the word "die", I have thought at times, as if this is secretly telling us that something invaluablely precious, belonging to the intimate world of ineffable emotions and memories, has to die in us in order to be given a verbal form. On one hand, living with beautiful thoughts and ideals confined within ourselves, with our mind churning and processing them into ever more beautiful expressions and endowing them with ever broader meanings, enriches us from inside, and the moment we release them onto a piece of paper, we feel a certain emptiness inside. There is some beauty in living with these thoughts, cultivating and nurturing them from the inside, just like a Mother does to her children prior to letting them be free in the big, big world outside. When Wittgenstein mentioned in the preface to his legendary tractate

¹¹⁸³ Listen to Neil Young & Crazy Horse's Thrasher on Rust Never Sleeps, Reprise (1979).

¹¹⁸⁵ This story, as taken from Friedrich Nietzsche's *The Birth of Tragedy* was placed by Otto Rank as a prologue to his *Birth of a Hero*: "King Midas had haunted for the wise Silenus, the companion of Dionysus, for a long time in the woods without catching him. But when he finally fell into his hands, the King asked: 'What is the very best and the most preferable thing for Man?' The demon remained silent, stubborn, and motionless; until he was finally compelled by the King, and then broke out into shrill laughter, uttering these words: 'Miserable, ephemeral species, children of chance and of hardship, why do you compel me to tell you what is the most profitable for you not to hear? The very best is quite unattainable for you: it is, not to be born, not to exist, to be Nothing. But the next best for you is – to die soon'. This final line rings in accord with the wish expressed by Omar Khayyam in his *Ruba'iyat*: "Nothing could be better in this ruined lodging than not to have come, not to be, not to go" (*The Ruba'iyat of Omar Khayyam*, Stanza 17, Translated by Peter Avery and John Heath-Stubbs, Penguin, New York, NY (12th Century AD), pp. 50). The story also immediately brings to mind Cydippe's praying to Hera to grant her two sons, Kleobis and Biton the greatest possible blessing for their ordeal of pulling their mother's cart to a temple lying on the top of a steep hill at Delphi. These prayers the Greek goddess answered by giving them the gift of death and ordaining that the two brothers would die in their sleep. No wonder a true hero has to find an answer to this question of a Sphinx if he wants to become one.

¹¹⁸⁶ See Meša Selimović's *Death and the Dervish*, pp. 8, Translated by Bogdan Rakić, Stephen M. Dickey, Northwestern University Press, Chicago, IL (1996).

that “in order to draw a limit to thinking, we need to think both sides to it”¹¹⁸⁷, trying to tell us that comprehensive explanations of anything in life ought to refer to two sides, typically a system and its surrounding, as the angels trumpeting around the throne of co-creational thesis would readily agree with, he implicitly identified the act of explaining with “drawing a limit to thinking”. Henceforth, whenever we come to a fixed conclusion about anything and on top of that crave to inscribe our insights in the form of some perennial figures of thought, the feeling is that we have built a wall to surround our spirit with, limiting our views of some enchanting and spiritually gratifying horizons. For, as Wittgenstein would have further added, “the limits/horizons of my language are the limits/horizons of my world”¹¹⁸⁸, reminding us that only by erasing any linguistic structures that block the views of endlessly extending landscapes of divine being around us can we reach the ideals of enlightening, all-encompassing vision that typified sages of the world. Finally, this brings to mind the story about Chuang-Tzu and the butterfly. It is not the one where heralds of the king came by to ask him to be a minister, to which the sage invoked a thousands of years old butterfly standing statuesquely in the king’s castle, carefully protected in a precious treasure box but unable to fly, and compared it with the one in their sight, flapping its wings in the mud, asking the heralds what butterfly they think Chuang-Tzu would like to be. When they looked at each other and uttered, “The one flapping its wings in the mud”, the sage swiftly dismissed them, adding that he would like to be one too, and continued fishing¹¹⁸⁹. Rather, it is the story wherein Chuang-Tzu was asked by an esteemed monarch to draw a butterfly in his honor. Chuang-Tzu agreed but asked for five years, a house at the seaside and a handful of handmaids. When the five years have passed, he asked for another five years. Finally, after ten years, he picked a pen, drew a butterfly in a single stroke and it ended up being a drawing that many people of his time marveled over with hearts ruptured and made wide open with the waves of aesthetic pleasure. Generations of Zen painters and calligraphists that followed, in fact, including Hakuin, Tōrei, Jiun, Meigetsu and Sengai, to name but a few, took this minimalist approach to heart and often painted their ink paintings in single strokes, the favorites being, of course, those of *ensō*, or a circle, the symbolic representation of enlightenment, the ultimately pure, open and free state of mind from which divine action can originate, without any physical or mental obstructions. What this cosmic sage and his followers wanted to tell us is that living with our precious thoughts patiently ripening within, letting them mature and sprout into trees that will offer its fruits through the birdhouse of our heart, rather than hurryingly finalizing and inscribing them so as to reap the worldly rewards, is the key to outmost outbursts of creativity in this life. When these sublime stages of spiritual maturity are reached, the simplest gesture or a creative act, somewhat like the circle drawn by Giotto, in a matter of seconds, with a single move of his arm and without any compasses, with which he amazed Pope Benedict and won the audition for an artist to paint a mosaic above the entrance to the St. Peter’s Basilica in Vatican¹¹⁹⁰, or the famous three parallel lines that Apelles and Protogenes drew on top of each other on an empty canvas and produced beauty that brought them to tears, creating a minimalist piece “for a long time admired by connoisseurs, who contemplated it with as much pleasure as if, instead of some barely visible lines, it had contained

representations of gods and goddesses”¹¹⁹¹, would be enough to enlighten the world. Yet, despite it all, there is a certain relief only an artist may know of that follows embodiment of his thoughts, sensations and visions in lasting forms, as it makes possible his standing on the edge of new cliffs of progressive contemplation, facing more intricate and rewarding horizons of thought and eventually gracefully riding off into the sunset of wonderful being rather than merely dreaming of it and sketching it while standing on the cloud of inspiring thought.

S.F.3.51. When people ask me what the secret of creativity is, I tell them that, more than anything, it is a great desire to achieve an aim set forth in your mind. And if this hypothetical aim is to enrich others, then the whole Nature will move in concert with our creative efforts so as to open the doors that will lead to accomplishments of our aspirations. But this desire has to be so great as to cast a blinding light onto many other things that may normally distract our attention. So great, in fact, that it could be seen as the emanation of an obsessive-compulsive disorder of a kind, which many geni that endowed human civilization with awesome artistic and scientific gifts are said to have been prone to, the one, though, that does not lead to repetitive and debilitating behavior, but brings a whole lot of creative yield by urging one to hypnotically and devotedly impress every single worthy thought into a lasting and memorable form. Thus, the creative frame of mind, the way I see it, presents a meditative state in which one’s focus (and the most realistic definition of meditation is the state of mind typified by a prolonged focus thereof - a poet in me would add that such focus is the one that penetrates through the clouds of verbal thoughts and the shallow emotional cyclones to face the daystar of Divine Being that is present in all things and that one, ultimately, is in a clear and radiant light that wipes the sinful dust off the mirror of one’s soul and bring it closer to the ideal of shining like the Sun to the world) to achieve given aims cancels out all the distracting minor thoughts that, like flies, uselessly buzz across the space of one’s mind. This mental state is, however, not closed and unreceptively barbed-wired against an inflow of intuitive impulses; rather, it is like a cup formed by two hands touching the palms of each other, yet being open at the top, allowing for heavenly, but not earthly, signs to be scattered gracefully, like a flower dust from another world, all over the floor of one’s mind. Then we may feel as if we have finally immersed our mind into a pure and divine cloud, from which inspiring thoughts will fall on us like the droplets of warm summer rain. For, we need to breathe, think and walk with every step of ours the creative deeds that we so intensely, with all our heart, crave to achieve.

S.F.3.52. One of the regular pathways artists have taken to ensure a sustained enthusiasm and the glow of a great desire to enlighten the world with their creations is an incessant change. Some of the most productive artists that immediately come to mind have rarely produced successive pieces of art that carried a similar voice or message. Instead, they have incessantly strived to express themselves by new means and tell new stories to the world, thereby rejuvenating their creative core with every new endeavor. I, myself, have also looked out for a change of my artistic approaches after each one of my works was finished. I have, therefore, intensively wondered what will come after this particular book is done. How will I find new ways to express myself and not repeat what was said before? Unless we become a language poet and begin to relentlessly break the concepts of grammar and typography, language will always be a limited tool in our hands owing to the rigid rules that it is subject to, I have thought. And yet, I have always been enchanted

¹¹⁹¹ The story was originally told by Pliny and could be found in Guillaume Apollinaire’s *On the Subject of Modern Painting* (1912), a segment of which is available at http://rodcorp.typepad.com/rodcorp/2003/10/giottos_circle_.html.

by the beauty of simplicity, but never collected enough courage to plunge into the sea of simple and unpretentious expressions, probably afraid that my ability to analytically probe matters in life with great clarity could not be expressed properly that way. I have secretly thought that an unusual combination of scientific and poetic senses of mine will be best reflected in a forest of farfetched expressions. On the other hand, I did not learn English while being immersed in natural conversations, simplistic in nature, nor did I grow up exposed to English phrases as a mother tongue, that is, having it spoken to, as a baby, softly by my mother; rather, I learned it somewhat by being enrolled in extracurricular courses and attending ten years of study in elementary, middle and high schools and two more years in college, but mostly by listening to songs, watching movies and reading scientific and philosophical articles. Aside from scaring me with the idea that I would never be able to express myself with the same level of fondness and to touch people's hearts deeply by using this second language of mine and making me worried as to what the world will turn into when most English-speaking people on Earth would have become acquainted with the soul of this language by hearing phrases spoken in violent movies and sung in starstruck songs rather than by being lulled to sleep by one's mother humming lullabies in it, this has predisposed me to write in what seems as a very complex style to a native speaker, while appearing as a humble and unpretentious approach to me. Still, I have always been aware of the complex appearance of the linguistically embodied ideas of mine and have passionately sought for the ways to simplify them and not lose any of their sophisticated richness and intricacy thereby. Then an unexpected discovery came knocking at my door. As I stopped over at Needles & Pens, my favorite SF bookstore, while it was still over on 16th Street, a stone's throw away from Mission Dolores, to buy Cindy Crabb's collection of zines named Doris, I accidentally grazed two postcards from under the counter, and they fell on the floor. As I know everything can be a sign, I picked them up from the ground and looked at what they were saying. There was a drawing of a boy riding a monocycle with two words only: "Miss You". Wittgenstein said how everything a man has ever known could be said in three words, but the words I had just found might have beaten even that. Not only did these words say how we should see a miss pageant in other people because seeing beauty in others is what makes ourselves beautiful and by crowning others with a shiny luster, we, ourselves, would inconspicuously build a glowing aura of light to shield and protect us in this life. More importantly, a symbolism of the Way lay hidden in these words. Just like the simultaneous separation and connectedness is embedded in the symbol of the Way, being distant and yet craving to get in touch with another stands implicit in these two words. In addition, a simultaneous sadness and joyful streaming forward, so as to plunge in the galaxy pools that are eyes of the loved ones, is inscribed in these words. Throwing threads of love and yet discreetly and subtly backing away, towards the heart of ours while letting others develop individually, can be also recognized there, standing side by side. Being one with others and yet being all alone, which is the crucial paradox of the Way of Love, shines forth as we write these words on the sand beneath our feet. Be that as it may, reading the Cindy's zine, I felt like Brian Wilson upon hearing She's Leaving Home by the Beatles and deciding to set his whole studio on fire because, my disagreement with him notwithstanding, everything he had done until then appeared worthless to him in comparison with the magic of the Beatles' tune. I felt wholly crushed by the powerfulness of Cindy's extraordinarily simple, yet immaculately arranged words. I felt as if the semantics of the mysterious acronym, Y.T.T.E., that another fellow San Franciscan poet of all things, like myself, Achilles Rizzoli, labeled his inks with washed over me in an instant: Yield To Total Elation¹¹⁹². For, so many glistening qualities are embedded in her writing style, recognizable to sensitive minds and hearts

¹¹⁹² Watch Yield to Total Elation: The Life and Art of Achilles Rizzoli directed by Pat Ferrero (2000).

only. There is humbleness reflected in simple and unpretentious sentences. There is a vintage-like modesty reflected in everything that has been written using an old typing machine. There is an authentically San Franciscan, DIY aesthetics engrained in her style, serving as an unassailable source of inspiration in my own searching for an authentic expression in the sphere of science. Her writings also possess the heartbreaking sincerity of a diary, instilling eagerness in the reader to discard any desires to pretend, to try hard to fit and prove oneself, and be instead simply true to oneself and others. In that sense, her writings fall along the line of the postmodern trend that comic book artists have particularly embraced, and it is the one of writing about one's own life in the style of a diary, as honestly and self-critically as possible, thereby opening many eyes to wonderful insights and many hearts to inflow and outflow of warmhearted emotions. The following definition of postmodern literature neatly describes this form of writing wherein, as in accordance with Heinz von Foerster's equalizing philosophy with autobiography¹¹⁹³, the elements of a diary and of a generally relevant thread of thoughts that appeal to every member of humanity are entwined, the approach exemplifiable by the most awarded comic book up to this date, Art Spiegelman's *Maus*: "The lines between autobiography and fiction are deliberately blurred, and the narrator comments on his own existence as an unreliable narrator"¹¹⁹⁴. The dark side of the engagement in this form of narration is that accusations of narcissism will always hang around the corner, such as those of an actor directed at the screenwriter in her own autobiographical play, calling her a crybaby with a "whole self-image wrapped up in this grand notion you have of yourself as a writer and yet you're incapable of writing about anything except yourself; now, is that writing or is that just publicly crying"¹¹⁹⁵? My response to such denunciations would, depending on the mood, be either a claim that such a personal storytelling style in the sphere of academic writing is, in fact, revolutionarily humble when one takes into account the complete abandonment of subjective points of view and reference points in favor of cold and also irrational objectivism across the scientific literature, or a careless whistle of the Beach Boys' *Hang On to Your Ego* in the indicter's ear. Therefore, when I or anyone else narrating in such a fashion is accused of narcissism and attacked by the spears of words similar to those with which the intellectually pedant critic, Daumier, from Fellini's autobiographically fictive cinematic masterpiece, *8½*, criticized the filmmaking protagonist, Guido Anselmi, "This is just another film about your childhood... your main problem is the film lacks ideas, it has no philosophical base, it's merely a series of senseless episodes"¹¹⁹⁶, let us laugh and hand them our hands as an invitation to a dance, just as Guido did at the very end of *8½* to the actors as persons from his real life, so as to signify the erasure of the line that separates art from life and their blending in bliss. Or, we could recollect the story about Jean Sibelius' insisting that all the windows in his house be closed while he composed music, lest the birds' twitter enter his composition¹¹⁹⁷, all with the purpose of reassuring ourselves of the naturalness with which descriptions of daily events, characters and observations should be mingled with complex abstractions in our sciences, arts and philosophies. Like the authors of a graphic novel about the

quest for the foundations of mathematics in the 19th and the 20th Century¹¹⁹⁸ alternating back and forth between portraying themselves in an idyllic Greek town as planning to write the given book and portraying Bertrand Russell portray the history of logic, the main content of the book, in an oratorical flashback, pulling the reader into a similar state in which Victoria found herself this morning when she woke up and told me that she dreamt in her sleep of not being able to sleep, a whirlpool of a liar's paradox of a kind, evoking Chuang-Tzu's waking up from a dream in which he dreamt that he was a butterfly and was not able to tell anymore if he'd been a man dreaming to be a butterfly or a butterfly dreaming that very moment of being a man; for life and the dreams of life must be made one if we are to convert these blissful visions to reality, which is, of course, the point of it all, the reason for which the two must be entwined around each other like the braids of a breadbasket in our storytelling. Yet, as I read somewhere, the hardest thing for a writer is to write about one's own life when one is not a celebrity of any kind. Yet, this has exactly been the task many artists and thinkers, from the ancient Greek philosophers to Cindy, me and a plethora of fanzine and graphic novel artists, embraced. Cindy, who had begun writing and publishing Doris while living in the Bay Area¹¹⁹⁹, has doubtlessly succeeded in writing about daily matters in a warmhearted, amusing and invisibly white-dove-message-carrying ways. "She makes writing about the simplest and most common things resonate with universal understanding", stands written on the cover page of her collection¹²⁰⁰. There is much passion and craze in her writing, as seen from the way her words are spread along different directions, breaking the rules of well-aligned text and proper grammar, as if she is a punk painting rebellious, but beautiful and profound messages on the city facades. She intentionally misspells words, gives herself a freedom to start a new sentence with sometimes a capital and sometimes a small letter, and so on. There is some golden childishness in her expressions too, which can be seen from the way her writings naturally instigate one to read slowly, word by word, and let each one of them reverberate with patience and carefulness along the swollen walls of one's heart. There is also a whole lot of braveness in her writings, as she intentionally uses astonishingly simple expressions, which obviously could not be marketable and made widely popular in these times. But, I believe the time will come when her works will be considered a classic, reflecting and opening whole new avenues and trends in aesthetic criteria of thinking and behaving. As a matter of fact, I have repeatedly claimed that 10 to 20 years from now, when anarchism becomes the mainstream philosophy of the mind, when the most progressive amongst us begin to talk about the golden age of royalism, autarchy and orthodoxy, when indie, organic, free-spirited puerility of ultra-simplistic expressions and hand-drawn schemes start to pervade even the most administrative and scientifically complex forests of symbols, and when even the traditionally rigid and uptight style of expression in the kingdom of science becomes toppled over in order to allow for the beating of its heart to begin to echo the beating of the drum of her ideal of providing an educational experience by feeling "more like a wise friend opening up to you rather than an authority talking at you"¹²⁰¹, Doris will claim the title of an established artist *par excellence*. Finally, her works are not sold for profit. Cindy's zines are sold for two dollars each, which hardly surpasses the production costs, revealing the lack of

hypocrisy and a great ethics standing at the foundations of her creativity. Where copyright restrictions ought to be placed, right before the first page, she says: “All rights reserved, whatever that means. I probably won’t care if you do whatever you want with it”. Impressed by all of this, I have told myself that simplicity, sincerity, and goodness pave the way for the future, and have quickly urged myself to at least start adding the following anti-copyright line at the end of all of my outgoing email messages: “This communication and any attachments may be reproduced by anyone through any methods imaginable and must enter the world with great love and care; under no circumstances shall any monetary gain result from these endeavors”¹²⁰². Delicately pinpointed with this brief line is, of course, the belief that creative work aimed at benefitting oneself rather than the world as a whole or some petite creature dear to us is inherently corrupted and will never attain the peaks of sublime spotlessness, which will always be reserved exclusively for those who approach the creative process with angelic selflessness and sacred wishes to save the poor ones of this world with the fruits of their labor. A similar means to framing one’s intentions was employed by CrimethInc., the anarchist association that defines itself as “not any ideology or value system or lifestyle, but rather a way of challenging all ideologies and value systems and lifestyles – and, for the advanced agent, a way of making all ideologies, value systems, and lifestyles challenging”. In an opening to their attempt at a praise of ultimately selfless, dialectical criticism, *Days of War, Nights of Love*, they placed the following copyright statement: “No rights reserved. All parts of this book may be reproduced and transmitted in any form by any means, electronic or mechanical, especially including photocopying if it is done at the expense of some unsuspecting corporation. Other recommended methods include broadcasting readings over pirate radio, reprinting tracts in unwary newspapers and just signing your own name to this and publishing it as your own work”¹²⁰³. Besides, not only would the attachment of materialistic rewards and interests to the writing of these words corrupt the pureness of the mysterious essence wherefrom they emerge and land on the computer screen, but, remembering the SF and Berkeley writers of the hippie era, who, in the words of Philip K. Dick¹²⁰⁴, wrote passionately and ambitiously, but deliberately refused to turn their writings into an economic activity of any kind, I have decided to make these words freely available to all, lest their creation become an act of hypocrisy for betraying this authentic aspect of the SF culture. In the spirit of Bill Watterson, who has refused to license his comic book characters, Calvin & Hobbes, of artists who opted for the free distribution of their works and of rare scientists who decided not to patent their inventions, including Howard Florey who refused to patent the method for mass production of penicillin in the 1940s and Jonas Salk who, a decade later, when asked whether he would patent the polio vaccine he had discovered, responded with the famous “Could you patent the sun?”¹²⁰⁵ remark and gracefully threw the estimated \$7 billion

¹²⁰⁵ The CBS Television interview was conducted by Edward R. Murrow and broadcasted as a part of *See It Now* (April 12, 1955). The excerpt is available at <https://www.youtube.com/watch?v=erHXKP386Nk>. Here it should be noted that the National Foundation for Infantile Paralysis, a.k.a. the March of Dimes Foundation, did explore the option of patenting the polio vaccine through its lawyers, but this is supposed to be only because the Foundation had shared the vaccine formulation and production process protocols with several pharmaceutical companies for free by then and only wanted to ensure that no companies would engage in the practice of making unlicensed, low-quality versions of the vaccine. See Brian Palmer’s *Jonas Salk: Good at Virology, Bad at Economics*, *Slate* (April 13, 2014), retrieved from <https://slate.com/technology/2014/04/the-real-reasons-jonas-salk-didnt-patent-the-polio-vaccine.html>.

to the wind out of his pockets thereby¹²⁰⁶, I have followed the same principle: dedicating all the products of my work and the praises that it has received to the great tradition of human reason and effort on top of which I have stood. I have always taken this tradition to be a sacred pedestal to which my prayers for the fruitfulness of my dedication to creative work that combines science, philosophy and art should be directed, a true shoulders of a Gaia giant from which I am able to see the world from a sublime, aerial perspective and realize its wonders in full blossom and charm.

S.F.3.53. In fact, when it comes to writing, I have always, more than anything, believe it or not, valued simplicity. All my works were intended to follow the trend of starting with simple views, things and expressions, then slowly entering an adventurous jungle of complex, intertwined and hardly extricable relationships, although eventually ending up in pure and untainted simplicity of thinking and being that would resemble the aims found right at the beginnings of our journey. As such, they were supposed to reflect the nature of human lifetimes and quests for knowledge. A Zen master thus described his spiritual ascension with the following words: “Before I began to study Zen, mountains were mountains and rivers were rivers; when I entered the study of Zen, mountains ceased to be mountains and rivers ceased to be rivers; but after I mastered the art of Zen, mountains became mountains and rivers became rivers again”. The fact that we proceed from simplicity to perplexity on our way to enlightenment is also quite in concert with what Ludwig Wittgenstein observed and certainly engrained in the flow of his legendary tractate: “Philosophy unties knots in our thinking; hence its results must be simple; but philosophizing has to be as complicated as the knots it unties”¹²⁰⁷. St. John of the Cross likewise wrote about the “dark night of the soul” as the stage of perplexity and spiritual roaming through which all saints pass on their way to enlightenment. For, such is inevitably the nature of every progress in life. We always have to cross over dangerous cliffs, forests or seas on our adventurous ways to novel, advanced states of being and knowledge. And as Gustav Mahler always thought that his works, in their grandiose character, were meant to reflect the whole Nature, the same is with my works. They all need to reflect what they talk about in each aspect of their structure, from the way the words in a sentence flow to the way paragraphs and chapters build the spirit of the whole, lest I be justifiably called a hypocrite because of preaching one thing and embodying another. “Everything, everything”¹²⁰⁸, was the notable reply of the musical megalomaniac born on the colder side of the Alps from the one I had extensively gazed at while conceiving the tenets of the Philosophy of the Way when he was being asked what his symphonies were meant to articulate and each sentence comprising this or any other works of mine, in a similar fashion, aspires to be like the unfathomably deep persona that haunts my dreams of enchanted living, giving to another as much as it could, shining forth like a sun of illuminative ideas, all the while taking the reader on a seemingly never-ending joyride through the starlit avenues of human reason, full of surprises and expressive like a bomb, yet always remaining mysterious and enigmatic, veiled by a shade of secrecy, thus being a petite

¹²⁰⁶ See Amar Prabhu’s How Much Money Did Jonas Salk Potentially Forfeit by Not Patenting the Polio Vaccine?, Forbes (August 9, 2012), available at <http://www.forbes.com/sites/quora/2012/08/09/how-much-money-did-jonas-salk-potentially-forfeit-by-not-patenting-the-polio-vaccine/>. Note the irony, so typical of the new-generation liberals, of having this webpage more crowded with ads than any I had seen in recent times upon revisiting it in January 2021, when I worked on a paper with the working version title of Nanomedicine for the Poor: A Lost Cause or an Idea whose Time Has Yet to Come, which I planned to end with the famous line from Jonas Salk: “Could you patent the Sun?”.

incarnation of the Way of Love, the ideal which all of this is ultimately about, and a necessity in the world of writing, lest our expressions are let intrinsically diverge from their soul and turn into instances of literate hypocrisy, that is, phony preachers that walk not their talk. At the end of the day, things around us, be they natural or human creations talk to us not only with their explicable attributes, but implicitly too, by means of their figures and forms pronounced at various scales. For example, a recent study¹²⁰⁹ has shown that more than 90 % of what humans grasp in verbal communication as information comes not from worded meanings, but from body language and the intonation of the voice. Likewise, whatever we come across on daily basis strews us with a far greater plethora of implicit information than the explicit one. Therefore, the metaphor of a glacier whose largest segment stays submerged under water is employable in depicting any observable phenomena. This explains why we sometimes become unexplainably impressed by writings, poems or songs which may sound to foreign ears essentially the same as innumerable other similar works that previously appeared uninteresting to us. For, a much greater source of impression of anything in the world around us lies within immediately invisible planes of their existence and origins rather than within their qualities that become apparent at first sight. For this reason, producing a discourse on aesthetics, while sticking onto dry language that borders sheer administrative level of expressional excitement, which undoubtedly includes this very sentence, tells something about the incompleteness of the author's approach. For, the conception and the composition of the overall structure of a written work speak to the reader, to a large extent implicitly though, as much as the meaning of the words employed does. Henceforth, to truly live up to the ideals of conveying to the reader a set of ideals faithfully, these very ideals ought to be imaginatively ingrained on multiple structural levels of the given work, which is, needless to say, the task on which more authors fail than succeed. For example, Eric Lyle's book about the secret history of San Francisco¹²¹⁰ contains overly clear and conventionally structured sentences, going quite against the grain of the punk message that the author intended to convey, when a beat style with endlessly enduring sentences or the one typified with broken and explosively short sentences would have been more suitable for the overall spirit that the work was meant to express. For, neither has in punk music been a place for technically virtuous showoffs nor for commercially pretending, overly polished production¹²¹¹, and so could we be sure that the usage of sophisticated verbosity and elegant eloquence for the purpose of celebrating punk cannot be its authentic form of expression. "Take *The Patriot*. I could refine it more, smooth it out. But I don't want to take away from the certain dirtiness I felt in that man – of tobacco juice and stain and sweat. If you clean it up, get analytical, all the subtle emotion that caught you first goes sailing out the window"¹²¹², Andrew Wyeth noted in the attempt to explain his decision not to overly refine the look of his *Patriot*, highlighting along the way this necessity for the work of art to be imperfect, off-balance and dirty whenever the subject it portrays has these very same qualities. Henceforth, to depict the inherent grittiness of punk music and culture in a language that is academically sophisticated is to be sinfully disloyal to the subject of one's work and to one's profession as a writer in just about the same way as fashionistas and producers that congregated around Billy Idol in the early 1980s defied his punk music and personality by making them excessively pop and polished. In contrast to Eric Lyle's failure to create a book that is faithful to its punk-advocating

message at all of its levels, when Bob Fosse states through the mouth of his jazz choreographer, Joe Gideon, that “this is a rough cut, unfinished” during the scene of chase of a half-dead protagonist through forbidden hospital corridors, he reflects a more profound understanding of style, where, as noticed, the semantic points must be reinforced at every level of the artistic edifice. Likewise, in his painting *Ballet de Papa Chrysanthème*, Henri de Toulouse-Lautrec’s made the initially sparse line used to depict the dancers’ silhouettes dissolve toward the abandoned edges of the canvas, thus liberating the line fully as a way of depicting the freeness that any genuine and inspirational dance must invoke, if not the pure, meditative state of mind untainted by any verbal thought process as the one that all masterful dancers head to in their dancing bliss. Similarly, I have always thought that Fellini could have made his characteristically crazy, tracking-shot, plot-detached social scenes, where characters move in and out of view for minutes at a time, fuller with life and energy in *8½* than in *La Dolce Vita* - if for nothing else, then for more experience he piled in the three years of filmmaking between the two movies – but he, I believe, wisely and deliberately opted for the opposite, having made such scenes in *La Dolce Vita* much livelier to fit the “sweet life” vibe of the theme of the movie and darker and more listless in *8½* to reflect the creativity crisis and the mild depression experienced by the protagonist. Hence, when Jimmy Nail places an empty stanza, with no lyrics at all, after the “I can make you happy, it’s easier than it seems, I’m gonna ambush you at sundown, gonna give you cowboys dreams” line in his *Cowboy Dreams*¹²¹³, so as not only to portray the act of hiding behind something, but also “ambush” the listener and surprise her with an unexpected act, albeit actless in its essence, it is the type of emptiness that we should remember to integrate in our creative works every time we feel that filling all the gaps in them would make their structures disloyal to the overarching message. One of my favorite positive examples along this line of effort comes from Nicolas Poussin’s mid-17th Century painting titled *Landscape with the Ashes of Phocion*, in which the French-Italian painter portrayed a scene where the widow of Phocion, an Athenian general famous for his forthrightness and condemned to death as an alleged traitor, cremates her husband’s corpse clandestinely in an equally secretive manner, showing the tiny figures of the widow and her companion, who has just heard rustling in the woods, partially immersed in the shadow and eclipsed by the rather indifferent cityscape in the back. The darker notes also comply with the dark story depicted, contrasting the emphasis on color among Poussin’s contemporaries, including, most notably, Peter Paul Rubens. Importantly as well, with this congruence between the narrative and the painting motif, a unique style was created, different from the trends reigning in the Baroque and in the earlier eras, which was to render landscapes only about landscapes and to place any storytelling to the forefront of the viewer’s attention. In contrast, in this painting by Poussin, the storytelling is intense, yet incredibly subtle and also deliberately subdued by the landscape, so as to show “majestic impassiveness in the face of the pointless actions of humankind”¹²¹⁴. Another one of my favorite example may be the Cure’s arguably best record to date, *Disintegration*, a piece of art that exposes the idea of dissipation of the self into a void following a breakup, a lasting separation from a beloved soul or her death, taking on the final question of the Beach Boys’ *Pet Sounds*, “Could we ever bring them back once they have gone”¹²¹⁵, and elaborating it musically from one out of an infinite number of angles. Namely, although one may be tempted to criticize the record because of a lack of instrumental multidimensionality and the missing lyrical outbursts of elation that typified some of the band’s earlier and later masterpieces, from *In Between Days* to *High* to *A Letter To Elise*, the point is that

¹²¹⁵ Listen to the Beach Boys’ *Caroline No* on *Pet Sounds*, Capitol (1966).

the feeling of disintegration would not have been authentically represented had all these elements been integrated into the record's sound. Lest it be an exercise in hypocrisy because of failing to live structurally up to its systemic premises, the record must integrate in every aspect of itself the overall point that it is trying to make as a whole. If it were about transformation from darkness to light, then it should ideally reflect this line of development in its structure, just the way, for example, the melodic transformation intrinsic to Schoenberg's *Transfigured Night* reflected veritably the transfiguration that Dehmel's eponymous poem to which this piece was composed had been about. But if it is about death and disintegration, then it must be antilife; it must deliberately lack the kicks that life is about and that human music has traditionally aspired to convey; it must unswervingly sink into the dark depths of emotional depression; it must, as it does, resemble a flat, lackluster aural surface, craving to be expanded into a vast, overwhelming, three-dimensional sound space, but never allowing that to happen, eventually expiring the way the world ends in T. S. Eliot's poetry, "not with a bang but a whimper"¹²¹⁶. To that end, this record, in the farthest back of which lies a spark able to illuminate the whole cosmos, even through the thick dark layers of the sound standing between it and the listener, demonstrates that sometimes, conceptually speaking, it takes making a bad record for a good record to be made. How erring can turn out to be far more correct than being correct is also exemplified by an essay entitled *Broken Glass* and written by one of my students; in it, he, advertently or not, used broken English to talk about the broken glass, which other instructors may have found inappropriate and worth reprimanding, but which I found to be irresistibly lovely and ingeniously true to the subject of the paper. In contrast, to rely on verbal pedantry to describe the beauty of the broken glass would be unfaithful to the overall point attempted to be illustrated. A related example coming from my academic oeuvre may be that of my review article on glassy carbon, which I deliberately opened with a lengthy, convoluted, complex sentence so as to reflect the enigmatic complexity of this material: "Ever since the early hints at its existence from the 1930s and the 1940s, the seminal research on it by Rosalind E. Franklin in the 1940s, the first reported manufacture in an academic journal by Yamada and Sato in 1962 and the first application in electrochemistry by Yoshimori *et al.* and Zittel and Miller in 1964, glassy carbon has baffled materials scientists with its structural intricacies"¹²¹⁷. For, when the paper is about a material that mesmerizes with its intricate structure, then the structure of the sentences describing it should be equally intricate, lest the sin of literate adultery and betrayal of the whole by its parts be committed. Another common occurrence of the intrinsic infidelity of a congregation of the parts to the spirit of the whole relates to people who are prone to write about love merely on the map, that is, without instilling love in every breath of the words comprising their works. In that sense, I have claimed that if I decide to write about the balance of love and reason or of poetry and scientificity, those balances will have to be implicit in every detail of the given works. Otherwise, I could consider myself as nothing but an ordinary Pharisee. Lest I fall in the category of lifelessly dry philosophers of which Emil Cioran said the following, "I turned my back to philosophy when I was incapable to discover in Kant any shred of humanly weakness, or an authentic accent of sadness; neither in Kant nor at other philosophers. Against music, mysticism, or poetry, the philosophical activity is a degraded fire of life, revealing suspicious depths, and these do not lure anyone but the shy and lukewarm natures. Otherwise, philosophy – an impersonal commotion, a refuge around the anemic ideas – constitutes the

¹²¹⁶ See T. S. Eliot's *The Hollow Men* (1925); available at <http://aduni.org/~heather/occs/honors/Poem.htm>.

recourse for all those who avoid the unbridled exuberance of life”¹²¹⁸, with my philosophical writings I thus strived to create not Babel towers using bricks of words and the mortar of logic, but fireworks of poetry, the flows of verbal music that magically heal their recipient and illuminate the roads to salvation, whatever it may mean, with the lights of evocations lit in front of her starry eyes. Torn between the sentences that sound as if a whole universe has been packed in them, that surprise with strangeness and that make one’s eyes go over and over again over them in the attempt to connect all the semantic threads hanging loosely from them and the sentences that are streamlined, conventional and that become swiftly and shallowly glanced over and never again returned to, I have boldly embraced the former in my writing style and, despite the practical impossibility of bringing them close to the readers’ hearts, have regretted not even an iota for this stylistic choice of mine. Thus I found extreme joy in reading the following reviewer’s report on my essay on the conceptual art of the films of Jean-Luc Godard, the art that, like science I have aspired to create, always implicitly questions the conventions and other premises of the given art in addition to connecting to the consumer on the aesthetic, emotional and/or moral planes: “Your work is an intriguing yet also frustrating piece. It is at times eloquent and at others ungrammatical, rhetorically confusing/confused, and a maybe even a bit silly. It wants to be a piece of criticism/research into the whole Godard canon, and yet it decries traditional scholarship and even an orderly approach to its material. The problem is that this approach - a rambling, circuitous discussion, drawing perspectives from Godard’s conversations and a few interviews - isn’t real research. It is a record of a thoughtful encounter with the director’s work, a love-poem to the director, and it’s nicely illustrated to boot”¹²¹⁹. For, how else should one faithfully write about Jean-Luc Godard, a man who crushed the film language of his times and the filmmaking conventions into pieces and whose storytelling was utterly convoluted and incoherent, if not by writing in a grammatically broken manner, by questioning the medium, that is, the academic writing and ruthlessly exposing everything stale and clichéd in it? What made me most glad was that one such review could have easily been applied to Godard’s films *per se* in the era in which they were released, and from the metalogical standpoint elaborated earlier, that should be the exact nature of a faithful essay on this subject. Likewise, I am certain that this and other works of mine are describable by many in the exact same way an Entertainment Weekly film critic described Terrence Malick’s *Song to Song*, that is, as “the cinematic equivalent of a Trump press conference - incoherent, disconnected, self-interrupting, obsessed with pointless minutiae and crammed full of odd, limp stabs at profundity from a closed-off man who apparently has no ability to edit or accept constructive criticism”¹²²⁰, but if such and similar pillories are the cost of being innovative, experimenting with the form and maybe even creating a new language, which would always be initially incomprehensible to the masses, then let it be, I says. At the same time, however, all this deliberate convolutedness aside, if my philosophy of life stems from the authentically Christian aesthetics of poverty, of adding by subtracting, of gaining by giving away, then, I often wonder, my scribomaniacal habit of composing convoluted sentences that reach farther than the farthest end of the universe must be seen as equivalent to American pizzerias’ betrayal of the original idea of pizza as a poor man’s dish, a meal where gastronomic abundance should be reached through scarcity of ingredients, each of which is to highlight the taste of the dough rather than obscure it,

¹²¹⁸ See Béla Hamvas’ *Anthologia Humana: 5000 Years of Wisdom*, Dereta, Belgrade. Serbia (1948), pp. 291.

¹²¹⁹ Gerald Duchovnay, Professor of English and Film Studies, Texas A&M University, Personal Correspondence (December 11, 2018).

in a similar way as our expressions are to highlight the beauty of the everlasting spiritual substratum of reality rather than hide it from our view and promote false materialism instead. On the other hand, to adopt a style without freely pointing out its deficiencies and serving as its most direct critic is an incomplete effort at creation in this world whereat nothing is perfect and yet everything is self-referential. Therefore, just as Morrissey denounced plagiarism in Cemetery Gates¹²²¹ while ripping a tune from William Keighley's The Man Who Came to Dinner off of its entre stanza¹²²², making the whole denouncement and all the world's hypocrisies with it, inevitably present in every author's approach, funny, to say the least, so is my fondness of lengthy and twisted sentences, behind which looms the craving to turn everything dry and administratively soulless in this world, starting from language, into poetry, not going to be without flaws marked in them by their very exponent, that is, myself. For, when it comes to simplicity in expression, I do nurture a secret love affair with it, but I do also regard it as the greatest challenge for every artist. It is easy to be wise in amending the complexities of the world. But being innovative and creative while escaping the traps of backward, debilitating simplicity through a simple talk is a highest mastery. Short sentences, just like simple thoughts, can almost offend the readers and listeners if they merely state ordinary truths, somewhat similar to an overly simple talk at a conference. In that case, people in the audience may merely ask themselves, "Why is he telling us so, we already know that". But if you speak in intricate and enigmatic terms, using words and expressions that only a handful of chosen ones can understand, the less advanced portion of the audience would feel as if they are wasting their time, because of not being able to follow you. These are the two extremes, Scylla and Charybdis of a kind, and the real art of presenting one's thoughts in either written or oral forms is navigating between them. Hence the utility of Gary Provost's popular advice: "This sentence has five words. Here are five more words. Five-word sentences are fine. But several together become monotonous. Listen to what is happening. The writing is getting boring. The sound of it drones. It's like a stuck record. The ear demands some variety. Now listen. I vary the sentence length, and I create music. Music. The writing sings. It has a pleasant rhythm, a lilt, a harmony. I use short sentences. And I use sentences of medium length. And sometimes, when I am certain the reader is rested, I will engage him with a sentence of considerable length, a sentence that burns with energy and builds with all the impetus of a crescendo, the roll of the drums, the crash of the cymbals—sounds that say listen to this, it is important"¹²²³. Its celebration of versatility aside, it, however, ignores that a work composed of strictly short sentences would be as dull as an average young adult fiction novel, whereas a hypothetical work composed of long sentences only, resembling in rhythm the final one in the quoted passage, could be as exciting as the wildest poetry, for what it ignores is the power of comma, the punctuation mark that has both the stillness of the full stop and the flow of a space sign, usable to denote any point in the fuzzy space between these two extremes. One thing to keep in mind, though, when crafting the sentence length for verbal statements is the difference between the spoken and the written word. For

¹²²¹ Listen to the Smiths' Cemetery Gates on the Queen is Dead, Rough Trade (1985).

¹²²² "All those people, all those lives, where are they now? Here was a woman who once lived and loved, full of the same passions, fears, jealousies, hates... and what remains of it now? I want to cry", says the song from the film, while Morrissey's lyrics state, "All those people, all those lives, where are they now? With loves and hates and passions just like mine, they were born and then they lived and then they died. It seems so unfair, I want to cry". See Countdown: 10 Lyrics Morrissey Stole From Elsewhere, retrieved from <https://www.morrissey-solo.com/threads/countdown-10-lyrics-morrissey-stole-from-elsewhere.96174/> (2009).

¹²²³ See the Reddit thread titled Does Reading More Often Help Your Writing Style?, retrieved from https://www.reddit.com/r/books/comments/5t7qb8/does_reading_more_often_help_your_writing_style/ (February 11, 2017)

example, whereas writings allow their readers to reread each of the sentences multiple times and are, as such, open to more complex presentations of thought, spoken word travels through the air without offering the option for the listeners to play it back in real time; consequently, it naturally calls for simpler and more colloquial methods of presenting our scientific results or ideas. Therefore, just the way critics often talk about Sonny Rollins the performer and Sonny Rollins the recorder as two distinct personas between whom a definite line could be drawn¹²²⁴, they can also talk about me as a lecturer and an orator in one person and as a writer in another, for the languages I use in these two separate verbal domains to convey my message are thoroughly different. What is more, when it comes to exploring Nature and human experience, the simpler it gets, at the end of the day, the more complex it gets too. All the simple descriptions hide an underlying complexity, and *vice versa*. A vital feature of every truly valuable and aesthetic explanation is the balance between simplicity and intricateness it must engrain. This is why profound thinkers the world over have drawn the lines of complexity in the midst of a gripping explanatory simplicity, as well as pointed at a charming and relieving simplicity in situations colored with a stupefying complexity of impressions.

S.F.3.54. This may explain why I have lately been avoiding bookstores and libraries. For, no matter how irrelevant for the constellations of my thoughts a given text may seem to be, its reading will always produce at least a few starry insights that will impel new and original ideas to spring from the cosmic dust in my celestial mental sphere and begin to orbit the sun of my philosophy, craving to be transformed into sentences that will embellish this or any other book of mine. Sometimes, when my intellect is in a fancily playful mood, I may indulge in a game whose aim is to find a book on a library shelf whose topic is most distant from the sphere of my interests and see if there will be anything to inspire me to edify the royal palaces of my philosophy in it. And, as a rule, there always turns out to be something in it to intrigue my curiosity and serve as a metaphorical or substantive source of inspiration. Everything, truly everything I read thus inspires me to construct novel ideas. Which is why I feel at times as if I have become gifted with the life of Mary of Bethany of a kind, who'd, remember, be as useful as her hardworking sister Martha doing nothing but kneeling down and watching the world with great devotion (Luke 10:38-42). For, so do I arrive at the most illuminating ideas doing the least illuminating things, be it reading newspapers, watching kitschy shows on telly, juggling the ball aimlessly, facing faces with the jaw-dropped face of a mutinous changeling, opening random books at random places and then inspecting the first glimpsed sentence from a myriad of angles, as if it was a diamond of a kind in the hands of the most nitpicky jeweler, spinning in circles like a dervish in ecstasy, standing mesmerized before the dance of shadows and sunlight in my backyard or the climbing columns of ants on the crumbly façade of my childhood home, or simply leaning my eyes and my ears on the sight and sound of divine mystery that pervades all things, the reason for which I was being cited in my young days as a boy who had claimed to be feeling most useful doing nothing. This is to say that ever since my early days I have demonstrated an inclination towards becoming a systemic thinker and a scientist, the one capable of discovering infinitely illuminating insights in seemingly the least exciting segments of our physical worlds and never ever being bored inspecting the finest details of it. Namely, the metaphoric reasoning which I explained elsewhere works through associations and parallels. In that respect, no matter what the relationship that we read about is, it can lead to insights and thoughts about some distant and seemingly completely unrelated systems. Hence, I have always imagined writing a whole book about endless impressions, associations and

¹²²⁴ Watch Robert Mugge's Saxophone Colossus, a documentary about Sonny Rollins (1986).

metaphoric parallels found in a simple seashore pebble. Still, looking at the world with the babies of my books held in my arms, feeling obligated to nourish them with fresh ideas and make them grow into ever greater epistemic edifices, is horribly tiring at times. One of the main protagonists of John Trank's movie *Chronicle* carries a video camera everywhere with him in order to capture every single image projected on the panel of his perception on the celluloid tape, clinging to a similar artistic burden as the one I have held for many, many years. At one point in the movie, he faces a question whether such a commitment poses a barrier between him and the world, and I have often concordantly thought of the walls over which I have had to jump in order to interact freely with the surrounding creatures while observing reality with devotion to transfuse all the valuable insights arisen in me into lines and pages of this and other books of mine. So frequently I have dreamt how liberating it would feel should I decide to put away this burdensome creative dedication of mine and begin to once more fly freely across experiential skies, just as I did in the days of my carefree childhood and adolescence. Henceforth, I often feel as if enough is enough. For, there are literally showers of ideas coming down on me on some days. Tied to my creative urge to impress them thought by thought, star by star onto pages of this and other books of mine, this rain of ideas that falls on me from the great heights, from the clouds where thoughtfulness of mine covers the incessant shine of the spirit divine and yet manages to produce precious droplets of rain that will water the thirsty soil of the world around me, implies a never-ending creative process, an endless run of the starry train of thoughts linked to each other by metaphors and analogies. Resultantly, what emerges are inscriptions of inspiring thoughts which then resemble a starry sky twinkling with cleverness and joy, well deserving the name given to this very book: *A Peer into a Cosmos of Starry Thoughts*. No matter how much I try to escape these cerebral spells of rain of ideation gathering like divine clouds above my head, I cannot help it. For, anything I do to run away from potential sources of inspiration – staring at celestial ceilings, climbing the cherry trees, running across moonlit rooftops, reading barely intelligible computer language books before bedtime, browsing through literary topics hardly relatable to the systemic principles of my personal philosophy, from chess magazines to gardening handbooks to kite-knitting manuals to geological atlases to archeologies of watercraft to various poetics of space, trying to produce a sense of semantic void in my head in the spirit of abstract expressionism, meditating in silence or dancing like a dervish, dizzily and dazzlingly – the links to rousing new ideas miraculously appear on the screen of my mind. For, once our philosophies are built on principles that resemble the Road to Rome, which all other roads lead to, or the Confucian thread of thought that is tied to all other threads in the Universe, any relationship we observe in the domain of our experience, irrespective of how seemingly miniscule it is, has a chance to be facilely transported via a starry train of analogies to the heart of our philosophy where it will be used as a precious brick to fortify our knowledge. Yet, after a while, I get to feel like the princess from a fairytale in which she turned to gold everything she touched. At first, that power seemed fascinating and priceless, but then it turned into terror when she realized she could not touch anything at all without turning it into a still object. In a similar way I see my quests for wisdom. The results thereof seem to be reflected in my creative ability to see endless sources of inspiration in minute objects in life. I have thus been able to transform the most modest and seemingly unpublishable scientific results into attractive ones due to this ability to weave a context in which these results would be seen as enormously meaningful, somewhat similar to Scheherazade's enchanting storytelling. But then, was it Simone Weil who said once that we should be careful about the dreams and wishes we nurture in us, because when they come true one day, we may regret we have ever craved so? The grannie from *A Star is Born* made a similar point when she taught her star-struck sweetheart that

each dream having come true carries a heartache with it. This is to say that every dream arisen along the corridors of our mind reshuffles its pathways in the direction of their coming true; the same applies to our childhood dreams, most of which we have forgotten in spite of their being invisibly seeded in our psyches for a very long time. For, whatever we dream of, the intelligent machinery of natural processes around us starts to mysteriously work towards their fulfillment, as I have come to believe. For example, the reason why we live in a world largely dominated by egos clashing behind each corner could be found in the dreams of importance spun in the childish heads of human creatures. Or, the reason why there are both peaceful prosperities and violent animosities in the world is because cravings for both secretly sprout in the heads of our neighbors. For this reason, sometimes I feel as if our physical beings float in togetherness on a spiritual sea of a kind, to and from which the mercurial sprites of our dreams, hopes and visions fly. The whole life could be consequently seen as a miraculous projector of a confronted multitude of human dreams. Some seemingly great dreams may become extinguished by immenseness of other people's conflicting dreams, whereby others may be small, miniscule and humble, but with their perseverance and the divine guidance that pervades them may still become miraculously fulfilled. When I was little, I had dreams just like everyone else. Some of these dreams could not be immediately fulfilled, and it would take years until the path of life leads us to face them in reality. When I was a kid, out of an incredible number of touristy books my Dad brought home from his travels, the one attracting my attention most was the one about the city of San Francisco¹²²⁵, "a city of the individual, of rebels and romantics, and where inhibitions are frowned upon"¹²²⁶. I would feel a strange and unexplainable attraction to it, and as if absorbing a rejuvenating and mystical energy of a kind, I would open it underneath the blanket and read it throughout the night. I do not remember many things from that book, though. I remember, however, pictures of the ocean with the dunes and yellowish shrubbery on the sandy shores, a clown dressed in funny colors, playing tons of instruments at once, a cable car rolling towards Marina, a few redwood trees and giant sequoias with a girl in amazement, resembling Kim Novak in *Vertigo*, touching one of them while gazing at the sky, and, finally, a road with the yellow striped line in the middle, stretching through a deserted Californian land. And, indeed, here I am, one day driving past the Golden Gate Bridge and toward the Marin County ridges, the Cypress Point of Muir Woods and the steps from which Madeleine leaped into the Pacific to act as a sign of the quest for liberation of the actor from the neocolonial oppression of filmmaking industry in a masterful analogy employed by her creator, Alfred Hitchcock, in a self-reflexive critique of cinema like the one I have vowed to create in the world of science; next day down the rocky shoreline of Point Lobos, that "crowded chaos of cliffs rises abruptly from the water, crowned by extraordinary trees, carpeted with wild flowers, slashed by gorges at the bottom of which gleams water of translucent sapphire and emerald; threaded by narrow, slippery paths twisting among the tree trunks and over the torturous rocks, some of them old Indian trails along the face of the cliff where in shallow smoke-blackened caves lie piles of shining particles that once were clam and mussel shells, detritus of Indian feasts of happy memory"¹²²⁷; a day later down the Turtle Rock hills of Orange County toward endless strawberry

¹²²⁷ The quote is by Ethel Rose, the wife of the Californian Impressionist painter, Guy Rose. See William H. Gerdts' Images of "The Land of Sunshine": California Impressionism, In: *All Things Bright & Beautiful: California Impressionist Paintings from the Irvine Museum*, edited by William H. Gerdts, The Irvine Museum, Irvine, CA (1998), pp. 84.

fields below, with an elated heart, the taste of tiramisu on my lips and a hello from a brunette butterfly received along the way, to the sound of the Velvet Underground blazing from the speakers and exactly “\$26 in my hands”¹²²⁸, knowing that a coincidence like this cannot be but a sign that I journey along the right way; and then back by the Big Sur cliffs washed over by the colossal waves and embodying a prayer of the land, a prayer hearable when I lean my heart thereto, piercing through the evening fog and haze and reaching stars nested over our starstruck heads. Coming to America and driving lightheartedly along its endless freeways with the yellow line stretching through the middle, the image concordant with the Philosophy of the Way that I have held anchored to the seafloor of the ocean of my heart, with the wind blowing through my hair, streaming for the starry skylines, was one of the dreams of my childhood and, lo, all the things in my life have led towards its coming true.

America vs. Europe as being vs. becoming and acting vs. dreaming

S.F.4.1. Since the history of the North American (or simply American in the further text) culture has begun with the journey of Europeans away from their warm hearths and the home soil and into the unknown of a promised land, it should not be surprising that the whole following discourse will revolve around an insight of how the typical European mindsets could be marked with the attributes of staying, dreaming and becoming, whereas the North American mindsets equal those of traveling, moving and being. In view of this, the Biblical story that describes Moses’ leading Israelites out of Egypt and into the Promised Land carries a useful metaphor for the starting point of our discussion. “He rebuked the Red sea also, and it was dried up: so he led them through the depths, as through the wilderness” (Psalms 106:9), the Biblical poet describes the moment when Moses parted the waters of the Red Sea in two walls and allowed his followers to cross it. What this parable has reminded me of ever since is that in order to triumphantly emerge on the other side of the troubled waters of intellectual challenges we face in life, we need to start with the proposition of a broad and general polarity. It is as if nonpolar molecules of hydrogen in oxygen held in our hands are thereby allowed to merge and yield polar water and, thence, all life around us, whereby, though, one precious oxygen atom, carrying with it an indescribable beauty of being, will fly away, into the air, never to be captured and brought onto the plate of our philosophizing again. Yin and Yang, thus, have to be defined in all their unnatural extremes before we are able to describe all emanations of life by referring to their balance. Every complex system of knowledge thus begins with a rough dichotomy and it is not an accident that beginning “from scratch” is the phrase that signifies a true beginning of one’s physical creation or contemplation. The drawing of a line that divides a full uniformity into two poles is the first step in the evolution of systems of knowledge. Or, as claimed by Leonardo da Vinci, “the prime image was but a single line, tangential to one man’s shadow shed on the wall by the Sun”. The Renaissance master may have wished to tell us millions of things with this allegorical imagery, including that the creation begins from a single line drawn as an aureole around the creator’s reflection in the world, with the artist’s turning his back to the sun and face to the shadowy features of the realm of not transcendental truths, but evanescent appearances. Then, “*nulla dies sine linea*”, Pliny the Elder claimed in a quote that could be a powerful drive for one’s diligence, telling us that a line, a division, a polarity ought to be drawn every day¹²²⁹, for that is how human knowledge advances forward. Constructivist cognitive

¹²²⁸ Listen to the Velvet Underground’s I’m Waiting for the Man on the Velvet Underground & Nico, Verve (1966).

¹²²⁹ “every day... write down at least one beautiful thing you have seen or felt or heard. and tell someone. even if it’s just someone inside yourself”, says Doris. See Doris #25 by Cindy Crabb, PO Box 29, Athens, OH (2010), pp. 21.

scientists would remind us that when a baby draws the first line between the self and the world is when the evolution of its knowledge starts. However, all of us are aware that dividing uniformity into a black and a white pole and basing all our subsequent explanations on referring to these poles is often too simplistic and almost vulgar in intellectual terms. Innumerable misleading and naïve representations of worldly events and circumstances result from dichotomizing the latter into black and white extremes, without acknowledging complex colorfulness and various shades of grayness that comprise both of the poles in question. Having experienced on my own skin the preposterousness of accusing a whole nation and each and every one of its members for crimes committed by a handful of people in the name of this nation, I am fully aware of demerits that unduly prejudicial generalizations and silly stereotyping can cause. I need not be reminded that fascism, the evil my tyrannical ancestors gave their lives to resist, flourishes on the back of the premise that “all of them are the same”¹²³⁰, the premise that has no room in any truly humane philosophy of life. To avoid slipping into domain of backward crudeness in thinking that endowed our cavemen predecessors, coming up with a bone in one’s hands to whom was said to provoke either an instinct of seeing one as a feeder if bone was recognized as a food or a bully if bone happened to be discerned as a bludgeon¹²³¹, we need to learn how to co-creatively color the attributes of reality with a variety of nuances rather than producing a false black and white reality in our head. This is all to say that the tree of knowledge has to be ramified from this basic division on if we are to make our knowledge intricate enough to reflect the complexity of Nature and experience. Yet, just like the first notes of jazz, rock and even Renaissance chamber music were conceived and dropped mainly for pleasure of the senses, having little artistic value initially, only later to gain a profoundly inventive impulse, so may be with each and every system of knowledge upon its birth from a chaos of disarrayed visions and thoughts, including the chapter that is about to begin to roll like an Indian summer train across the pages of this book. The harsh polarity proposed and elaborated here may indeed seem astonishingly simple, though hope on behalf of its creator is that scanning line by line of the following treatise would eventually build a more thrilling epistemological edifice in the reader’s eyes than it may seem to be at first. Besides, in the light of Orson Welles’ insistence to produce black and white pictures in order for the images to have a large depth of field¹²³², uncreatable as such in color, hope remains that the portrayal of unfathomable semantic depths will be more doable if we draw sharp polarities and heavy contrasts, albeit unnatural and unreal at times, than if we were to dilute them in a variety of colors. Federico Fellini would boldly augment Welles’ reservations about color picture by stating that “making films in color is an impossible operation; cinema is movement; color immobility; to try to blend these two artistic expressions is a desperate ambition”¹²³³, wherefrom emerges the naïve hope that by drawing the content of this chapter in starkly distinct black and white, the reader won’t merely cursorily scan and shallowly grasp the thoughts comprising it; he would be profoundly moved by their stern imagery. And so, in the contemplation that is about to follow, I decided to limit myself to playing with black and white pieces of a puzzle that represent the modern forms of Americanism and Europeanism, respectively. Others may as well find different dichotomies to be represented

by the traits I ascribed to these two poles while drawing them on the opposite sides of the imaginary weight balance I have carried in the arms of my contemplative spirit, be it Germanic and Slavic mentalities, capitalist and socialist mindsets, Western and Southern Europeanism, and so on. It is all fine, for I accredit no particular form of finality or ultimate seriousness to the dichotomy I propose hereby. It is more of an intellectual game wherein a broad and overly simplified polarity, from which branching out of innumerable wonderful ideas can originate, is drawn with lazily leisured eyes drowsy after a summery slumber. And that extraordinarily broad dichotomies such as the one playfully proposed here can indeed capture millions of randomly swirling hearts in the nets of enlightenment and build bridges of understanding between alienated cultural coasts is neatly exemplified by the parallels and dividing lines drawn between the East and the West in the works by the Japanese theologian, D. T. Suzuki¹²³⁴. Although they are all but applicable in the description of each and every member of the two traditions due to their overly generalized nature, they have still managed to be eye-opening to the majority of readers. Of course, any time an inference is drawn, including a dichotomy such as this one, it will be in human nature to preposterously broaden the conditions of its validity, as exemplified by a story in which two commoners and a prudent man travel on a train down the Scottish countryside and notice a black sheep through the window, whereupon the first character concludes that “all sheep in Scotland are black”, the second character corrects him, saying that “there is at least one sheep in Scotland that is black”, and the third character, dropping down his wistful gazes from a nearby cloud and lifting his chin from the palms of his hands in which it was lazily nested, remembering all the while how Vermeer named his most famous sitter “a girl with *a* pearl earring” just because the view from which he painted her made it impossible to tell whether she wore the other earring too, softly says: “In Scotland there is at least one meadow on which there is at least one sheep whose at least one half of the body is black”. Likewise, to take on any dichotomy literally is to confuse the map with the territory and neglect that it is but a model used to vaguely, albeit constructively, portray a single aspect of reality from a single bird’s-eye view angle. The habit of producing bafflingly simplified categorizations can be furthermore said to be as American as the fireworks on 4th of July¹²³⁵, for from Hollywood movies and their unrealistic divisions of characters to strictly good and bad, with rarely ever any natural personas to be found in-between, all so as to make the message of the movies accessible to the averagely attentive and insightful audience, to bestselling literary works that reiterate equally naïve dichotomies and insult the naturally inquisitive human mind with their linear and predictably drawn lines of thought, to scientific imagery often dumbed down to the level of unsophisticated models that frantically resist any intrusion of causal feedback loops and other elements of fuzzy logic, which are so true to life, examples of it abound everywhere. My being prompted to conceive of a discourse based on such terribly broad categorization on the American continent should not be seen as exceedingly surprising then. Still, being aware of the dangers that these dumb-down dichotomies bear and yet knowing that we need to look deep into the abyss in order to face the truth, like a shaman I will keep on dancing around them and let the words that broaden and ramify them into a wondrous tree of aesthetic visions and ethical ideas magically

¹²³⁴ See, for example, Daisetz Teitaro Suzuki’s *Mysticism: Christian and Buddhist*, Routledge, New York, NY, or *Zen Buddhism and Psychoanalysis*, Nolit, Belgrade, Serbia (1960).

¹²³⁵ When I think about July 4, however, it is quieter and more remote images than the fireworks celebrating America’s independence day that come to mind. One of them is the magnificent fresco decorating the dome over the altar of the the old sacristy in the Basilica of San Lorenzo in Florence, attributed to Giuliano d’Arrigo and representing the map of the sky over Florence exactly the way it looked on July 4, 1442. Why this date was chosen to adorn the dome, like the Pazzi chapel of the Basilica di Santa Croce also in Florence later on, no historian has figured out yet. See Stefano Zuffi’s *Color in Art*, Abrams, New York, NY (2012), pp. 201-203.

emanate from my mind. Hoping to produce an effect on the reader similar to that accomplished by D. T. Suzuki, in the discussion that follows the most advanced, starlit expressions of Americanism and Europeanism will be placed side by side, like the parallel splints of a single railway track, as we let the train of our thoughts travel along them. After all, as of 150 million years ago, when the Old World of Europe and Africa and the New World of America used to be conjoined along an infernal volcanic chain and when the surface of today's New York City had lain below a 13 kilometers tall mountain range, these two continents have been moving away from each other at a finite pace, which today equals about 2 cm per year, expanding the vastness of the Atlantic Ocean between them ever more with each passing moment of our lives, and if this geological fact evokes something in my head, it is, first and foremost, a striking awareness of the polarity that must exist between the two, the polarity that I will try to elucidate on the following pages of this book. If I happen to seem to the reader as more stringent in criticizing Americanism, while being naively soft and cordial with the choice of words on my native culture, this is partly so because mine is a beautiful tradition lying among the ruins, so to say, a dying culture of a kind in the global village largely conquered by what has been known for quite some time as the Western values and lifestyles. Stellar Americanism is, on the other hand, still positioned on the frontier of the global cultural progress and, for better or worse, almost unequivocally accepted as an exemplar worth striving to attain. As such, it demands harsh criticism, for only in such a way can we outline the way forward, beyond its phony features that suffocate, rather than foster, the spreading of the angelic wings of human creativity. Any criticism in passages that follow, of course, should be taken as constructive remarks provided in good faith, with the cordial wish that every dark blot of reprimand painted across the face of America here be used as the starting point of a discourse that would heal these shady spots and purify the soul of this country, alongside that of the entire interconnected globe with it. Conversely, should anyone find in this benevolent criticism the source for rationalizing anger that feeds to a vengeful physical aggression, know that I estrange myself from such sentiments in the severest ways possible. Likewise, if these words ever become used as a basis for justifying right-wing anti-American autocracies, such as those sprouting all across Eastern Europe in the second half of 2010s, from Russia to my home country of Serbia, then this chapter better be burned than allowed to proliferate publicly. For, it is the hope for peace and a better world, where all weapon would be melted in a foundry for life and science and art would be the king and the queen, that has been the motivation behind laying these words on the printed page, ever so zealously and yet ever so uproariously. And just like no man is said to have given a critique of the Serbian society, culture and politics harsh and immaculate enough as Archibald Reiss¹²³⁶, a forensic scientist sent on a mission to Serbia during World War I, before falling in love with her and staying therein for the rest of his life, the most acute accounts of social states of affairs are, as a rule, given by those who step into them from some faraway lands, seeing them with fresh new eyes, untainted by falsities typifying the natives, just as I, myself, have hopefully been in relation to that earthly goddess called America of which I write here. Partly, however, this is also explained by the fact that this discourse, which will propose a blatantly simple dichotomy and playfully jump from one side to the other and back, all until the feelings of revulsion among the reader are turned into sympathy and then to sheer adoration, indeed echoes Bob Dylan's

¹²³⁶ See Archibald Reiss' *Listen, Serbs!*, Zlaja, Belgrade, Serbia (1928). The likes of Rebecca West's *Black Lamb and Grey Falcon* (Random House, New York, NY, 1941) or Åsne Seierstad's *With Their Backs to the World: Portraits from Serbia* (Basic Books, New York, NY, 2006) are other books confirming the unwritten rule that foreign eyes see local affairs in the clearest light.

homesick blues¹²³⁷ half a century later, having been written in the moments of heartrending homesickness and similitude between the state of my mind and the emotion conveyable by the image of the Christ on the cross, crucified between two orthogonal directions and exactly therefore giving rise to the otherworldly shine of divine spirit dwelling within each and every one of us. Thereupon, while letting these winged words fly out of my soul and find a temporary home on these pages, I frequently woke up at night wondering *which life is realer*, the one thriving in the paradisiacal places of my nativity, where the last crumbs of bread and cheese would be collected for a next-day meal, where I would hug and kiss and leap through the air like a pan with the magic flute, making circles around the sun of my parents in love like a happy satellite, where people with signs of suffering incised on their faces wonder and repent almost every second of their lives, where things and relationships try to be fixed, rather than disposed of and cold-handedly replaced, where little things matter, be they a bird's flight, a cloud's shape, the right place for clothes to be hanged or the right angle for a window to be kept open at, and where intimacy between neighbors, which would have surely been seen as an intrusive nosiness by my western pals, prevails over introspective closeness, or the one existing in this Brave New World where pampering overabundance of material wealth reigns, where icy handshakes and self-interests govern social relationships and drive people's reaching out to one another, where plasticity, awkwardness and emotional retraction are the norms and geniality, graceful meekness and intimacy the creepy intruders, where human spirits are seen gliding through space confined in untouchable auras that spell seclusion and where affected politeness is valued more than the unconstrained eruptions of genuine cordiality. In these hours of feeling unbearably torn apart between these two worlds, belonging to none and to both at the same time, I found partial solace in telling myself that standing on crossroads like these must be a precondition for our bearing dazzling thoughts, emotions or any other forms by which we express ourselves to the world. Unsurprisingly, since dialectics can bear but bare dialectics, what came out of these midnight ruminations of mine was an intensely dichotomized worldview offered here to inspire or infuriate, depending on the reader's call. Now, to counteract the naively generalized descriptions of the world to which not only Americans, but humans in general are susceptible by habit and by their deeply engrained urge to explain social affairs, one is often confronted on the American soil with the enforcements of equally imperfect beliefs that everyone is the same, one more star, like any other, drawn on a piece of linen, but never actually fostered to live up to its genuine and unique potentials, strangely neglecting that both reckless stereotyping and intentional blindness to cultural and genetic differences and predispositions are irrationally extreme in their nature. This counterpoint of equality so bluntly fostered by the American liberals, mainly to avoid multiethnic and racial frictions and conflicts, is still somewhat akin to attempts to wholly ruin the towers of Babel that abound all around us instead of using them as pragmatic observation points to see the vast lands in the midst of which they were built in clearer light, the mission which this chapter was written to fulfill. Again, I am quite aware that an overt simplification such as the one that presents the starting point of the following discourse will cause many readers to protest, but I advise them not to take it too seriously. I steer clear of generalizations too, but, as I have just explained, every form of knowledge starts to develop by proposing a broad and rough generalization. The French poet, Charles Péguy recognized that clean hands are only of those who do not use them¹²³⁸, and, indeed, only if we were to give up thinking and turn our minds into blank whiteboards would we avoid the process of drawing an

¹²³⁷ Listen to Bob Dylan's Subterranean Homesick Blues on Bringing It All Back Home, Columbia Records (1965).

¹²³⁸ See André Vauchez's Francis of Assisi: The Life and Afterlife of a Medieval Saint, Yale University Press, New Haven, CN (2009), pp. xiii.

oversimplified dichotomy that entails the beginning of every conceptualization. Along the way, of course, many a reader will feel slighted upon interpreting these vestigial generalizations literally, but at the same time only a reader who has never produced such an incredible amount of creative output in as short of the period of time and with no monetary considerations whatsoever as it has been the case with the words spilled here from the syphon of my soul will not sympathize with the inevitable failings and eddies of contradictions arising amidst sallies of inspirational ideas. And although I am aware that the things are neither here nor anywhere else in life thoroughly black and white, I will remain like a child, deeply engaged in playing with this black-and-white puzzle, knowing that many wonderful insights could be awakened in me and you alike in its course.

S.F.4.2. Lao-Tzu's sacred man never leaves the interior of his room, but knows everything about the world around him (Tao-Te-Xing XLVII). The secular man, however, cannot live up to this premise and must ceaselessly be on the road if he wishes to preserve the tortuous features of wisdom inside his cranium. In life, thus, I see travelling as a necessity and wholeheartedly embrace the opening line from *La Grande Bellezza*, borrowed from Céline's *Journey to the End of the Night*: "To travel is very useful, it makes the imagination work, the rest is just delusion and pain". And how essential my writing of these words as one such traveler for life is in the context of this discourse is best illustrated by the words impressed in the preface to the autobiography of yet another Serbian scientist and an immigrant to the US, Mihajlo Pupin, the words which could have easily come out of my own mouth at this very moment: "Why should a scientist who started his career as a Serbian immigrant speak of the idealism in American science when there are so many native-born American scientists who know more about this subject than I do? Those who have read my narrative so far can answer this question. I shall only point out now that there are certain psychological elements in the question which justify me in the belief that occasionally an immigrant can see things which escape the attention of the native"¹²³⁹. To be on the road, in my universe of thought, is thus a precondition for being alive, in the truest and all possible figurative senses conceivable. In view of this, I spent a whole lot of time arguing about the ubiquitous meaning of the blind spot effect. Namely, every observational perspective, perceptive or intellectual, comprises a blind spot, analogous to the invisible area in the visual field where the optical nerve hits retina. Not only do we not see this blind spot area, but we do not even see that we do not see it. Hence, a traveler setting off to see a new land does not only learn about the new places, but heads off to learn as much about the place of his origins. "What should they know of England who only England know"¹²⁴⁰, Rudyard Kipling asked once, prompting us to realize that constantly moving to and fro in relation to objects and living beings of the world that are subjects of our attention is a vital precondition for sustaining our ability to keep on discovering ever newer features worth endless amazement in them and never become blind to their qualities, as would certainly happen had we ceaselessly kept them in our sight. Lest we become one of those drowsy spirits that "sit around, ignore, till someone goes away", epitomized in the finale of Prefab Sprout's *Steve McQueen*¹²⁴¹, or a person evoked by the cab driver in the last, wintriest vignette of Jim Jarmusch's *Night on Earth*, cursed to be overwhelmed by the preciousness of things only after they become permanently removed from their worlds, we must move out of sight of things and creatures that impress us with their beauties and charms, regardless of how heartbreaking those moves may be for us, before we fall in their warm embraces once more, and continue this game of approaching

¹²⁴¹ Listen to Prefab Sprout's *When the Angels on Steve McQueen*, Kitchenware (1985).

and distancing indefinitely, remaining to be on the road to and fro for good. Complementing this viewpoint, a recent research in cognitive science has shown that the impression of traversing great physical or mental distances during problem-solving walks increases the creativity of our performance of the given tasks¹²⁴². This is all to say that temporarily leaving places, objects, signs and beings of the world sometimes presents the best way of meeting them and learning about their innermost secrets. Which is what the essential point of the Way of Love is – a permanent dance between blending with and distancing from the beings of the world enfolded by the waves of love and wonder emanating from the heart of ours. Not permanently facing the creatures we love, but rather alternately uniting our hearts with them and then running away, or playing peek-a-boo therewith at all the communicational levels, if you wish, is what maximizes our love and creativity in relationships with them. Hence, quite often in life it is refraining from the urge to gaze directly at the face of an endearing creature that opens the path for us all to the bright fields of happiness, as the story of Orpheus who looked back at the face of Eurydice prematurely and thus made her vanish in the dark distance of the underworld illustrates, bringing us over to the thought of the pilot and the poet, Antoine Saint-Exupery: “Love does not consist in gazing at each other, but in looking outward together in the same direction”. For, in life it is neither symbiotically sticking to creatures and objects that we worship from the depths of our hearts nor ceaselessly retreating away from them and into the desolation rows of the world of our fancy that presents the way to awaken the celestial creative powers dormant in our beings. Rather, the key lies in alternately moving to in empathy and fro in exploratory cravings to be unique and step where no man has been before; hence, the striking conceptual impression of Jacopo Pontormo’s Visitation, depicting Virgin Mary pregnant with Jesus and St. Elizabeth pregnant with St. John the Baptist cordially greeting each other, while their very same figures, albeit somewhat younger, stare into an empty space and watch the watcher of the painting, implicitly demonstrating that through a balance between looking into the heart of things that lie at the center of our attention and looking away, into the remotest stellar spaces, is the most magnificent perception in this life being given rise to. And as the Way of Love can attest to with its generality that encompasses it all, from the littlest atoms and cells to the most grandiose human creatures and stars, moving back and forth with respect to hearts whose rivers of love lie in confluence with ours, alternately touching them with an intimate delicacy and temporarily retreating beyond some stellar horizons, is how the waves that come to compose the enchanting cosmic music of life are brought into being.

S.F.4.3. And so, just before I was about to move to the US for the second time¹²⁴³, after a one-year academic stint as a researcher in upstate New York, Epstein’s acquaintance asked me in a stuffy and scrubby Belgrade bar on Galsworthy Street, on the night I reignited sparkles of teenage romance, how I felt about that. As usual, I raised my glance to the upper left corner of my visual field and after a few seconds of weaving that invisible thread acting as a vertical line of inspiration between me and the heavens, I replied: “Well, you know, I feel like Odysseus in a way”. Not that I was planning on swiftly reaching my destination, then wage wars on this distant island for a decade before starting my journey back home, the one which would last for yet another decade

¹²⁴² See Robert Reid’s How Travel Makes You Smarter, Sexier and More Productive, Lonely Planet Blog (June 17, 2011), and the paper referred to in it: Yaacov Trope and Nira Liberman – “Construal-Level Theory of Psychological Distance”, *Psychological Review* 117 (2) 440 – 463 (2010). Available at <http://inside-digital.blog.lonelyplanet.com/2011/06/17/how-travel-makes-you-smarter-sexier-and-more-productive/>

¹²⁴³ This was right before I was about to move to San Francisco, in October 2007. Before that, I spent a year in upstate New York, from April 2006 to April 2007.

and turn out to be the real odyssey of my lifetime, just as it was for Odysseus in Homer's epic. Rather, when Odysseus set off to the island inhabited by beautiful sirens that attracted the travelers on boat with their songs, only to capture and tear them apart in the end, he was aware of the dangers. He said to his fellow boatmen to tie him to the mast of the ship and steer away from the island. He knew that he would become enchanted by the sirens' songs to such an extent that he would kick and scream, asking for his release and steering of the boat to the island, and so he instructed the boatmen to fill their ears with beeswax so as to be deaf both to his calls and the sweet songs of the sirens. If I had fellow travelers on my side, I would have undoubtedly told them the same. This is because we are always shaped in part by our innate nature and in part by the way we are nurtured. "Iron sharpeneth iron; so a man sharpeneth the countenance of his friend... As in water face to face, so the heart of man to man" (Proverbs 27:17...27:19), the Bible says, reminding us that we could never close the gates of our heart to the inflow of the values of the society. Even earthquakes on one planetary body are influenced by the gravity of another, let alone the deepest cognitive traits of man by those of the social niche to which he belongs. Not only that living under one of the most totalitarian European regimes of the 20th Century taught me with crystal clarity that the opinion of the majority could be effortlessly crafted by means of mass media, but I am also aware that "the only given is the way of taking"¹²⁴⁴, as Roland Barthes pointed out. That is, the way I see it, it is deeply inscribed in the human nature to spontaneously adopt environmental traits, which in the case of grownups may be merely an extension of learning by imitation that every infant quite obviously engages oneself in. Chemists might remind us that even the most state-of-the-art techniques for organic synthesis that are now used to create myriads of new compounds each day were developed in attempts to recreate natural products in the lab¹²⁴⁵. Likewise, imitation can be said to present an inescapable phase on every path to originality just about as much as the creation of new knowledge is possible only on top of the body of an old knowledge crafted earlier. In fact, the ability to adapt by reflecting the features of our environment has been a vital cognitive tool that ensured our survival as species over eons. Of course, like any other tool, this evolutionary gift is a double-edged sword too since as soon as circumstances transform from erratic to favorable, the curse of comfort starts to creep up on its holders and seize their whole beings by its drowsy clutches, as they begin to resemble the vacuum-cleaning creature from the Beatles' animated movie, Yellow Submarine, who, having sucked all in its sight, turns to its own tail, sucks it and the rest of itself too and disappears, or a frog cooking in a slowly heated pan, insensitive to the small gradient of temperature, the analogy that neatly portrays our civilization at this very point of time in its ignoring the ominous signs on the road to climatic disaster that it inertly journeys on. Hence, whatever the environment we are surrounded with, it silently, slowly and imperceptibly modifies who we are and how we see the world. It is as if *Zeitgeist*, the vibe of the current times emitted by the global consciousness, unstopably penetrates our being where it merges with our innate predispositions and drives, making us crucified on this crossroad where the external and the internal coalesce, with our being busy sending traffic both ways, knowing that such must be the way to stand firmly and securely on the edge called the Way of Love wherefrom outbursts of stellar creativity would spontaneously emerge from our heart and be dissipated like divine stardust in all directions. Now, the fact that we cannot do anything against this intrusion of the social spirit within our being has been particularly scary to me at times, as I saw helplessness of my will implicitly cocooned within it. Recollecting two parting lovers in Alain

Resnais' 1959 movie *Hiroshima, My Love*, telling each other the names of the native cities that they found themselves to be, Hiroshima and Nevers, we could be certain that whatever the city or other social milieu we have lived in for a while, its culture, energy and attitude have surely partially penetrated our entire being and made us begin to spontaneously reflect its spirit. After all, the local and the global ceaselessly mirror and co-create each other's essence in this fractal universe of ours. This is what allows the slime mold to instruct on the optimal layout for the railway system of Tokyo¹²⁴⁶ and the arrangement of stars in celestial constellations to predict the normalities and abnormalities amongst the neural connections in the human brain. Many friends who I separated from on crossroads of life once had hearts beating with the same melodies as those ringing within the temple of my own prayerful heart, but spending time in artistic circles on one side and in classrooms, conferences and labs on another shaped our traits in quite different manners afterwards. This propensity for change through the adoption of social traits wholly foreign to us by dwelling in their milieus for long enough is particularly pronounced in America, the land of "a rush and a push"¹²⁴⁷ wherein the newcomer often feels as if stranded on an avenue crowded with people, all streaming in one direction without ever looking sideways or back, giving one a sense that if one only stopped, he would be stomped over, for which reason he walks and walks and walks, so as to survive, developing along the way the behavioral and mental traits of these automata allured to the false gods of success, automata spinning the wheel of economy like hamsters in a cage running after a carrot. Having become convinced in this inevitable nature of change that immersion in any society brings, no matter how desolate and disconnected from it we choose to be, before I left my country I gave myself a vow that I would come back because "my home is where I belong". That has ever since seemed to me the only place where I could end my road just like Don Quixote ended his, with peace and satisfaction washing down my heart. The Biblical words, "The wicked flee when no man pursueth: but the righteous are bold as a lion" (Proverbs 28:1), then became intensively spun in my head, tempting me to rethink my decision to permanently leave my home country with the roar of a lion inside my chest. And yet, after spending some time in San Francisco, I would find myself crying in the dream in which I saw myself deported back to Belgrade. But then again, after coming to Belgrade and spending some time there with my family, my attachment thereto would start to grow strong, and I would eventually find myself over and over again repeating the verses of the legendary Psalm 137 in my head: "If I forget thee, O Jerusalem, let my right hand forget her cunning. If I do not remember thee, let my tongue cleave to the roof of my mouth; if I prefer not Jerusalem above my chief joy" (Psalm 137:5-6). The despondency would start to grow in my heart and, at first, melodies pouring out of it would begin to echo weariness and gloom, like the Wailers' ode to the sound of slavery a.k.a. *Catch a Fire*¹²⁴⁸, even when attempting to radiate joy and joy only. Then, with the sound of Guillemots' *Little Bear* in my ears¹²⁴⁹, leaning onto the sunlit wall next to which my Mother had sat like a daydreaming lotus and rested her careworn eyes on the Sun setting behind the city of Herceg-Novi and sending delightful shimmers over the surface of the Adriatic, I'd sobbingly give myself a vow

¹²⁴⁸ Listen to the originally released version of the Wailers' *Catch a Fire* (1973) produced by Chris Blackwell and overdubbed by Wayne Perkins rather than to the subsequently released original, so-called Jamaican version of the record.

¹²⁴⁹ Listen to Guillemots' *Little Bear on Through the Windowpane*, Polydor (2006).

never ever to forget and leave my family, my homeland, my people behind, lest my arms wither, the solar plexus shrivel and heart wilt. And back on the American continent, my soul would over and over again release the cry Kate Bush uttered over the backdrop of a Bulgarian choir in one of the climactic moments of *Hounds of Love*, in the dead of a humid night, right after she stepped from her car in the middle of a highway spanning the deserted and apocalyptically desolate American land: “Why did I go? Why did I go?”¹²⁵⁰ On certain days the voice heard in the head of Vincent, the Argentine expatriate from Peter de Mendelssohn’s *Marianne of My Youth*, echoed all through my insides too, “Travel, travel, murmured the wild wind in the crowns of the trees; stay, stay, whispered the warm air around his cheeks and hands”¹²⁵¹, and I felt the sense of being torn apart between the yearnings to explore new lands and cultures and the attachment to my family and the place of my nativity, wherein every object stood as an adornment on the scenery of my spirit, growing to such an unbearable extent as to literally break my heart and crack my soul to produce a shattered *mélange*, like a piece of the starry sky. On one hand I felt as if “the sun of the foreign sky won’t warm me like this one warms”¹²⁵², as the Serbian poet, Aleksa Šantić put it in his poem *Stay Here*, while on the other hand the urge to move ceaselessly, sensing that “to live in one land is captivity... change is the nursery of music, joy, life and eternity”¹²⁵³, streamed unstoppably through every vas and vein of my being, dissipating the confetti of cosmopolitanism all over and around it. And so, in this splendid, yet heartrending partition of my being between the place I have always considered my home and the new world I have settled in, I have begun to resemble the crucified Christ in my eyes. Yet, this inner division that was crumbling and breaking my being in two, leaving me levitating over an abyss created by an open split between the spirits of cosmopolitanism and expatriation, between belonging everywhere and belonging nowhere, might be how the mountainous creativity of mine would get to be exhibited, I occasionally thought. Of course, with the extraordinarily uncommon multiplicity of backgrounds, including that of a Serbian wunderkind born and raised in Belgrade, to a poetess and a materials scientist, having grown amidst thousands of science, philosophy and yoga books, then lived through the plight of destitution and war as a teenager while playing in a post-rock band, devouring music from Gustav Mahler to Ben Webster to Sonic Youth, dancing the nights away to “girls who like boys to be girls, who do boys like they’re girls, who do girls like they’re boys”¹²⁵⁴ and other Britpop gems, later naming my daughter after a Cocteau Twins song, then becoming a scientist and expatriate in the western world who would try to enlighten all the things dark and musty in the world of science and become the first to treat scientific paper as a medium for artistic expression, I knew that resonance with more than a handful of souls will be nearly impossible to achieve, yet this standing on a crossroad that no one has stood before would always be a driver for creative expression like no other. In these musings of mine, I have found solace and amusement in self-identifications like those of the Cherokee artist, Jimmie Durham, when he refused to provide the proof of his membership of a Native American tribe and got kicked out of the gallery where his works were on display: “The US Congress recently passed a law which states that American Indian artists and galleries which show their work must present government-authorized documentation of the artist’s ‘Indian-ness’. Personally, I do not much like Congress, and feel that they do not have American

¹²⁵⁰ Listen to Kate Bush’s *Hello Earth* on *Hounds of Love*, EMI (1985).

Indians' interest at heart. Nevertheless, to protect myself and the gallery from Congressional wrath, I hereby swear to the truth of the following statement: I am a full-blood contemporary artist, of the sub-group (of clan) called sculptors. I am not an American Indian, nor have I ever seen or sworn loyalty to India. I am not a Native 'American', nor do I feel that 'America' has a right to either name me or un-name me. I have previously stated that I should be considered a mixed-blood: that is, I claim to be a male but in fact only one of my parents was male"¹²⁵⁵. "I'm just a red nigger who love the sea, I had a sound colonial education, I have Dutch, nigger, and English in me, and either I'm nobody, or I'm a nation"¹²⁵⁶, Derek Walcott further poetized, whispering to my ears under a blanket of stars and an array of swaying cedars "heavenly leaping or to guard a grave"¹²⁵⁷ that whenever we feel crucified at the core of our being, as if a grand railway crossroad rests within our heart, with the intersecting tracks taking us to diametrically opposite destinations, to heavenliest of the heavenly on one side and to the earthliest of the earthly on the other, the doors for exhibiting a majestic creativity of ours become open, releasing the luster of the cosmopolitan treasures of our spirit in all their splendor and charm to the daylight of being.

S.F.4.4. When Nikola Tesla was about to leave Belgrade for good and set off to America to bring electric lights to the face of the world and illuminate the majestic dance of the Earth across infinitely vast cosmic spaces, he stood at the central train station, it was June 1, 1892, and he proclaimed the following touching words: "There is something within me that might be illusion as it is often the case with delighted young people, but if I would be fortunate to achieve some of my ideals, it would be on the behalf of the whole of humanity. If those hopes would become fulfilled, the most exciting thought would be that it is a deed of a Serb"¹²⁵⁸. These words have presented a powerful sign of what true patriotism ought to be like; namely, only when one is rooted in the love of one's land and yet wholly devotes one's creativity to entire humanity can one justify one's love of a nation. Like a tree that needs to be rooted firmly in a piece of local land in order to reaching out with its branches to every piece of the sky arching over it and like the Little Prince whose ability to spark Love and Wonder in the desolate and dispirited dwellers of the planets he occasions during his empathic interstellar journey can subsist only on the basis of his immense devotion to a rose on his home planet, so may our becoming a son of the world, to whom no artificial boundaries mean anything and who rejoices in rapture in the face of worldly diversities, be conditioned by our being anchored in love to something little, local and, usually, very, very lonely. To be a cosmopolitan that journeys forward along a progressive, stellar path and yet to be one who never forgets the old and rusty foundations of one's origins is thus the way I have vowed to follow. And yet, to find peace between these two powerful poles that our being would be stretched between is not an easy task. For one, conceiving of a patriotic narrative that will not be misinterpreted as a nationalistic one is a battle lost before it has even begun. As accusatory arrows of malice fly around one's head in the wake of such misinterpretations, one will experience a constant pull toward two extremes, one being the Scylla of the inclination to adopt toxically nationalistic views and other
